Among Crustacea, there were the shells of Crabs and Lobsters, often bleached quite white high up the beach; Sea or Beach Fleas (*Amphipoda*); and the cases of the Horse-shoe Crab, or Saucepan Fish (*Limulus Polyphoemus*), of which we saw many alive on the Bay side, where they feed pigs on them. Their tails were used as arrow-heads by the Indians.

Of Radiata, there were the Sea Chestnut or Egg (*Echinus granulatus*), commonly divested of its spines; flat circular shells (*Scutella parma*?) covered with chocolate-colored spines, but becoming smooth and white, with five petal-like figures; a few Star-fishes or Five-fingers (*Asterias rubens*); and Sun-fishes or Sea-jellies (*Aurelio*).

There was also at least one species of Sponge.

The plants which I noticed here and there on the pure sandy shelf, between the ordinary high-water mark and the foot of the bank, were Sea Rocket (*Cakile Americana*), Saltwort (*Salsola kali*), Sea Sandwort (*Honkenya peploides*), Sea Burdock (*Xanthium echinatum*), Sea-side Spurge (*Euphorbia polygonifolia*); also, Beach Grass (*Arundo*, *Psamma*, or *Calamagrostis arenaria*), Sea-side Golden-rod (*Solidago sempervirens*), and the Beach Pea (*Lathyrus maritimus*).

Sometimes we helped a wrecker turn over a larger log than usual, or we amused ourselves with rolling stones down the bank, but we rarely could make one reach the water, the beach was so soft and wide; or we bathed in some shallow within a bar, where the sea covered us with sand at every flux, though it was quite cold and windy. The ocean there is commonly but a tantalizing prospect in hot weather, for with all that water before you, there is, as we were afterward told, no bathing on the Atlantic side, on account of the undertow and the rumor of sharks. At the lighthouse both in Eastham and Truro, the only houses quite on the shore, they declared, the next year, that they would not bathe there "for any sum," for they sometimes saw the sharks tossed up and quiver for a moment on the sand. Others laughed at these stories, but perhaps they could afford to because they never bathed anywhere. One old wrecker told us that he killed a regular man-eating shark fourteen feet long, and hauled him out with his oxen, where we had bathed; and another, that his father caught a smaller one of the same kind that was stranded there, by standing him up on his snout so that the waves could not take him. They will tell you tough stories of sharks all over the Cape, which I do not presume to doubt utterly, — how they will sometimes upset a boat, or tear it in pieces, to get at the man in it. I can easily believe in the undertow, but I have no doubt that one shark in a dozen years is enough to keep up the reputation of a beach a hundred miles long. I should add, however, that in July we walked on the bank here a quarter of a mile parallel with a fish about six feet in length, possibly a shark, which was prowling slowly along within two rods of the shore. It was of a pale brown color, singularly film-like and indistinct in the water, as if all nature abetted this child of ocean, and showed many darker transverse bars or rings whenever it came to the surface. It is well known that different fishes even of the same species are colored by the water they inhabit. We saw it go into a little cove or bathing-tub, where we had just been bathing, where the water was only four or five feet deep at that time, and after exploring it go slowly out again; but we continued to bathe there, only observing first from the bank if the cove was preoccupied. We thought that the water was fuller of life, more aerated perhaps than that of the Bay, like soda-water, for we were as particular as young salmon, and the expectation of encountering a shark did not subtract anything from its life-giving qualities.

Sometimes we sat on the wet beach and watched the beach birds, sand-pipers, and others, trotting along close to each wave, and waiting for the sea to cast up their breakfast. The former (*Charadrius melodus*) ran with great rapidity and then stood stock still remarkably erect and hardly to be distinguished from the beach. The wet sand was covered with small skipping Sea Fleas, which apparently make a part of their food. These last are the little scavengers of the beach, and are so numerous that they will devour large fishes, which have been cast up, in a very short time. One little bird not larger than a sparrow, — it may have been a Phalarope. — would alight on the turbulent surface where the breakers were five or six feet high, and float buoyantly there like a duck, cunningly taking to its wings and lifting itself a few feet through the air over the foaming crest of each breaker, but sometimes outriding safely a considerable

billow which hid it some seconds, when its instinct told it that it would not break. It was a little creature thus to sport with the ocean, but it was as perfect a success in its way as the breakers in theirs. There was also an almost uninterrupted line of coots rising and falling with the waves, a few rods from the shore, the whole length of the Cape. They made as constant a part of the ocean's border as the pads or pickerel-weed do of that of a pond. We read the following as to the Storm Petrel (*Thalassidroma Wilsonii*), which is seen in the Bay as well as on the outside. "The feathers on the breast of the Storm Petrel are, like those of all swimming birds, water-proof; but substances not susceptible of being wetted with water are, for that very reason, the best fitted for collecting oil from its surface. That function is performed by the feathers on the breast of the Storm Petrels as they touch on the surface; and though that may not be the only way in which they procure their food, it is certainly that in which they obtain great part of it. They dash along till they have loaded their feathers and then they pause upon the wave and remove the oil with their bills."

Thus we kept on along the gently curving shore, seeing two or three miles ahead at once, — along this ocean side-walk, where there was none to turn out for, with the middle of the road the highway of nations on our right, and the sand cliffs of the Cape on our left. We saw this forenoon a part of the wreck of a vessel, probably the Franklin, a large piece fifteen feet square, and still freshly painted. With a grapple and a line we could have saved it, for the waves repeatedly washed it within cast, but they as often took it back. It would have been a lucky haul for some poor wrecker, for I have been told that one man who paid three or four dollars for a part of the wreck of that vessel, sold fifty or sixty dollars' worth of iron out of it. Another, the same who picked up the Captain's valise with the memorable letter in it, showed me, growing in his garden, many pear and plum trees which washed ashore from her, all nicely tied up and labelled, and he said that he might have got five hundred dollars' worth; for a Mr. Bell was importing the nucleus of a nursery to be established near Boston. His turnip-seed came from the same source. Also valuable spars from the same vessel and from the Cactus lay in his yard. In short the inhabitants visit the beach to see what they have caught as regularly as a fisherman his weir or a lumberer his boom; the Cape is their boom. I heard of one who had recently picked up twenty barrels of apples in good condition, probably a part of a deck load thrown over in a storm.

Though there are wreck-masters appointed to look after valuable property which must be advertised, yet undoubtedly a great deal of value is secretly carried off. But are we not all wreckers contriving that some treasure may be washed up on our beach, that we may secure it, and do we not infer the habits of these Nauset and Barnegat wreckers from the common modes of getting a living?

The sea, vast and wild as it is, bears thus the waste and wrecks of human art to its remotest shore. There is no telling what it may not vomit up. It lets nothing lie; not even the giant clams which cling to its bottom. It is still heaving up the tow-cloth of the Franklin, and perhaps a piece of some old pirate's ship, wrecked more than a hundred years ago, comes ashore to-day. Some years since, when a vessel was wrecked

here which had nutmegs in her cargo, they were strewn all along the beach, and for a considerable time were not spoiled by the salt water. Soon afterward, a fisherman caught a cod which was full of them. Why, then, might not the Spice-Islanders shake their nutmeg trees into the ocean, and let all nations who stand in need of them pick them up? However, after a year, I found that the nutmegs from the Franklin had become soft.

You might make a curious list of articles which fishes have swallowed, — sailors' open clasp-knives, and bright tin snuff-boxes, not knowing what was in them, — and jugs, and jewels, and Jonah. The other day I came across the following scrap in a newspaper.

“A Religious Fish. — A short time ago, mine host Stewart, of the Denton Hotel, purchased a rock-fish, weighing about sixty pounds. On opening it he found in it a certificate of membership of the M. E. Church, which we read as follows: —

Member

Methodist E. Church.

Founded A. D. 1784.

Quarterly Ticket.

18

Minister.

‘For our light affliction, which is but for a moment, worketh for us a far more exceeding and eternal weight of glory.’— “2 Cor. iv. 17.

‘O what are all my sufferings here,  
If, Lord, thou count me meet  
With that enraptured host t’ appear,  
And worship at thy feet!’

“The paper was of course in a crumpled and wet condition, but on exposing it to the sun, and ironing the kinks out of it, it became quite legible. — Denton (Md.) Journal.”

From time to time we saved a wreck ourselves, a box or barrel, and set it on its end, and appropriated it with crossed sticks; and it will lie there perhaps, respected by brother wreckers, until some more violent storm shall take it, really lost to man until wrecked again. We also saved, at the cost of wet feet only, a valuable cord and buoy, part of a seine, with which the sea was playing, for it seemed ungracious to refuse the least gift which so great a personage offered you. We brought this home and still use it for a garden line. I picked up a bottle half buried in the wet sand, covered with barnacles, but stoppered tight, and half full of red ale, which still smacked of juniper, — all that remained I fancied from the wreck of a rowdy world, — that great salt sea on the one hand, and this little sea of ale on the other, preserving their separate characters. What if it could tell us its adventures over countless ocean waves! Man would not be man through such ordeals as it had passed. But as I poured it slowly out on to the sand, it seemed to me that man himself was like a half-emptied bottle of pale ale, which Time had drunk so far, yet stoppered tight for a while, and drifting about

in the ocean of circumstances; but destined ere long to mingle with the surrounding waves, or be spilled amid the sands of a distant shore.

In the summer I saw two men fishing for Bass hereabouts. Their bait was a bullfrog, or several small frogs in a bunch, for want of squid. They followed a retiring wave and whirling their lines round and round their heads with increasing rapidity, threw them as far as they could into the sea; then retreating, sat down, flat on the sand, and waited for a bite. It was literally (or littorally) walking down to the shore, and throwing your line into the Atlantic. I should not have known what might take hold of the other end, whether Proteus or another. At any rate, if you could not pull him in, why, you might let him go without being pulled in yourself. And they knew by experience that it would be a Striped Bass, or perhaps a Cod, for these fishes play along near the shore.

From time to time we sat under the lee of a sand-hill on the bank, thinly covered with coarse Beach-grass, and steadily gazed on the sea, or watched the vessels going south, all Blessings of the Bay of course. We could see a little more than half a circle of ocean, besides the glimpses of the Bay which we got behind us; the sea there was not wild and dreary in all respects, for there were frequently a hundred sail in sight at once on the Atlantic. You can commonly count about eighty in a favorable summer day and pilots sometimes land and ascend the bank to look out for these which require their services. These had been waiting for fair weather, and had come out of Boston Harbor together. The same is the case when they have been assembled in the Vineyard Sound, so that you may see but few one day, and a large fleet the next. Schooners with many jibs and stay-sails crowded all the sea road; square-rigged vessels with their great height and breadth of canvas were ever and anon appearing out of the far horizon, or disappearing and sinking into it; here and there a pilot-boat was towing its little boat astern toward some distant foreigner who had just fired a gun, the echo of which along the shore sounded like the caving of the bank. We could see the pilot looking through his glass toward the distant ship which was putting back to speak with him. He sails many a mile to meet her; and now she puts her sails aback, and communicates with him alongside, — sends some important message to the owners, and then bids farewell to these shores for good and all; or, perchance a propeller passed and made fast to some disabled craft, or one that had been becalmed, whose cargo of fruit might spoil. Though silently, and for the most part incommunicatively, going about their business, they were, no doubt, a source of cheerfulness and a kind of society to one another.

Unloading the day's catch

To-day it was the Purple Sea, an epithet which I should not before have accepted. There were distinct patches of the color of a purple grape with the bloom rubbed off. But first and last the sea is of all colors. Well writes Gilpin concerning "the brilliant hues which are continually playing on the surface of a quiet ocean," and this was not too turbulent at a distance from the shore. "Beautiful," says he, "no doubt in a high degree are those glimmering tints which often invest the tops of mountains; but they are mere coruscations compared with these marine colors, which are continually varying and shifting into each other in all the vivid splendor of the rainbow, through the space

often of several leagues.” Commonly, in calm weather, for half a mile from the shore, where the bottom tinges it, the sea is green, or greenish, as are some ponds; then blue for many miles, often with purple tinges, bounded in the distance by a light almost silvery stripe; beyond which there is generally a dark-blue rim, like a mountain-ridge in the horizon, as if, like that, it owed its color to the intervening atmosphere. On another day it will be marked with long streaks, alternately smooth and rippled, light-colored and dark, even like our inland meadows in a freshet, and showing which way the wind sets.

Thus we sat on the foaming shore, looking on the wine-colored ocean, —

[Greek: Thin eph alos pliês oroôn epi oinopa ponton.]

Here and there was a darker spot on its surface, the shadow of a cloud, though the sky was so clear that no cloud would have been noticed otherwise, and no shadow would have been seen on the land, where a much smaller surface is visible at once. So, distant clouds and showers may be seen on all sides by a sailor in the course of a day, which do not necessarily portend rain where he is. In July we saw similar dark-blue patches where schools of Menhaden rippled the surface, scarcely to be distinguished from the shadows of clouds. Sometimes the sea was spotted with them far and wide, such is its inexhaustible fertility. Close at hand you see their back fin, which is very long and sharp, projecting two or three inches above water. From time to time also we saw the white bellies of the Bass playing along the shore.

It was a poetic recreation to watch those distant sails steering for half-fabulous ports, whose very names are a mysterious music to our ears: Fayal, and Babelmandel, ay, and Chagres, and Panama, — bound to the famous Bay of San Francisco, and the golden streams of Sacramento and San Joaquin, to Feather River and the American Fork, where Sutter’s Fort presides, and inland stands the City de los Angeles. It is remarkable that men do not sail the sea with more expectation. Nothing remarkable was ever accomplished in a prosaic mood. The heroes and discoverers have found true more than was previously believed, only when they were expecting and dreaming of something more than their contemporaries dreamed of, or even themselves discovered, that is, when they were in a frame of mind fitted to behold the truth. Referred to the world’s standard, they are always insane. Even savages have indirectly surmised as much. Humboldt, speaking of Columbus approaching the New World, says: “The grateful coolness of the evening air, the ethereal purity of the starry firmament, the balmy fragrance of flowers, wafted to him by the land breeze, all led him to suppose (as we are told by Herrera, in the Decades) that he was approaching the garden of Eden, the sacred abode of our first parents. The Orinoco seemed to him one of the four rivers which, according to the venerable tradition of the ancient world, flowed from Paradise, to water and divide the surface of the earth, newly adorned with plants.” So even the expeditions for the discovery of El Dorado, and of the Fountain of Youth, led to real, if not compensatory discoveries.

We discerned vessels so far off, when once we began to look, that only the tops of their masts in the horizon were visible, and it took a strong intention of the eye,

and its most favorable side, to see them at all, and sometimes we doubted if we were not counting our eyelashes. Charles Darwin states that he saw, from the base of the Andes, "the masts of the vessels at anchor in the bay of Valparaiso, although not less than twenty-six geographical miles distant," and that Anson had been surprised at the distance at which his vessels were discovered from the coast, without knowing the reason, namely, the great height of the land and the transparency of the air. Steamers may be detected much farther than sailing vessels, for, as one says, when their hulls and masts of wood and iron are down, their smoky masts and streamers still betray them; and the same writer, speaking of the comparative advantages of bituminous and anthracite coal for war-steamers, states that, "from the ascent of the columns of smoke above the horizon, the motions of the steamers in Calais Harbor [on the coast of France] are at all times observable at Ramsgate [on the English coast], from the first lighting of the fires to the putting out at sea; and that in America the steamers burning the fat bituminous coal can be tracked at sea at least seventy miles before the hulls become visible, by the dense columns of black smoke pouring out of their chimneys, and trailing along the horizon."

Though there were numerous vessels at this great distance in the horizon on every side, yet the vast spaces between them, like the spaces between the stars, far as they were distant from us, so were they from one another, — nay, some were twice as far from each other as from us, — impressed us with a sense of the immensity of the ocean, the "unfruitful ocean," as it has been called, and we could see what proportion man and his works bear to the globe. As we looked off, and saw the water growing darker and darker and deeper and deeper the farther we looked, till it was awful to consider, and it appeared to have no relation to the friendly land, either as shore or bottom, — of what use is a bottom if it is out of sight, if it is two or three miles from the surface, and you are to be drowned so long before you get to it, though it were made of the same stuff with your native soil? — over that ocean, where, as the Veda says, "there is nothing to give support, nothing to rest upon, nothing to cling to," I felt that I was a land animal. The man in a balloon even may commonly alight on the earth in a few moments, but the sailor's only hope is that he may reach the distant shore. I could then appreciate the heroism of the old navigator. Sir Humphrey Gilbert, of whom it is related that, being overtaken by a storm when on his return from America, in the year 1583, far northeastward from where we were, sitting abaft with a book in his hand, just before he was swallowed up in the deep, he cried out to his comrades in the Hind, as they came within hearing, "We are as near to Heaven by sea as by land." I saw that it would not be easy to realize.

On Cape Cod, the next most eastern land you hear of is St. George's Bank (the fishermen tell of "Georges," "Cashus," and other sunken lands which they frequent). Every Cape man has a theory about George's Bank having been an island once, and in their accounts they gradually reduce the shallowness from six, five, four, two fathoms, to somebody's confident assertion that he has seen a mackerel-gull sitting; on a piece of dry land there. It reminded me, when I thought of the shipwrecks which had taken

place there, of the Isle of Demons, laid down off this coast in old charts of the New World. There must be something monstrous, methinks, in a vision of the sea bottom from over some bank a thousand miles from the shore, more awful than its imagined bottomlessness; a drowned continent, all livid and frothing at the nostrils, like the body of a drowned man, which is better sunk deep than near the surface.

I have been surprised to discover from a steamer the shallowness of Massachusetts Bay itself. Off Billingsgate Point I could have touched the bottom with a pole, and I plainly saw it variously shaded with sea-weed, at five or six miles from the shore. This is "The Shoal-ground of the Cape," it is true, but elsewhere the bay is not much deeper than a country pond. We are told that the deepest water in the English Channel between Shakespeare's Cliff and Cape Grinéz, in France, is one hundred and eighty feet; and Guyot says that "the Baltic Sea has a depth of only one hundred and twenty feet between the coasts of Germany and those of Sweden," and "the Adriatic between Venice and Trieste has a depth of only one hundred and thirty feet." A pond in my native town, only half a mile long, is more than one hundred feet deep.

The ocean is but a larger lake. At midsummer you may sometimes see a strip of glassy smoothness on it, a few rods in width and many miles long, as if the surface there were covered with a thin pellicle of oil, just as on a country pond; a sort of stand-still, you would say, at the meeting or parting of two currents of air (if it does not rather mark the unrippled steadiness of a current of water beneath), for sailors tell of the ocean and land breeze meeting between the fore and aft sails of a vessel, while the latter are full, the former being suddenly taken aback. Daniel Webster, in one of his letters describing blue-fishing off Martha's Vineyard, referring to those smooth places, which fishermen and sailors call "slicks," says: "We met with them yesterday, and our boatman made for them, whenever discovered. He said they were caused by the blue-fish chopping up their prey. That is to say, those voracious fellows get into a school of menhaden, which are too large to swallow whole, and they bite them into pieces to suit their tastes. And the oil from this butchery, rising to the surface, makes the 'slick.'" "

Yet this same placid Ocean, as civil now as a city's harbor, a place for ships and commerce, will ere long be lashed into sudden fury, and all its caves and cliffs will resound with tumult. It will ruthlessly heave these vessels to and fro, break them in pieces in its sandy or stony jaws, and deliver their crews to sea-monsters. It will play with them like sea-weed, distend them like dead frogs, and carry them about, now high, now low, to show to the fishes, giving them a nibble. This gentle Ocean will toss and tear the rag of a man's body like the father of mad bulls, and his relatives may be seen seeking the remnants for weeks along the strand. From some quiet inland hamlet they have rushed weeping to the unheard-of shore, and now stand uncertain where a sailor has recently been buried amid the sandhills.

It is generally supposed that they who have long been conversant with the Ocean can foretell by certain indications, such as its roar and the notes of sea-fowl, when it will change from calm to storm; but probably no such ancient mariner as we dream of

exists; they know no more, at least, than the older sailors do about this voyage of life on which we are all embarked. Nevertheless, we love to hear the sayings of old sailors, and their accounts of natural phenomena, which totally ignore, and are ignored by, science; and possibly they have not always looked over the gunwale so long in vain. Kalm repeats a story which was told him in Philadelphia by a Mr. Cock, who was one day sailing to the West Indies in a small yacht, with an old man on board who was well acquainted with those seas. "The old man sounding the depth, called to the mate to tell Mr. Cock to launch the boats immediately, and to put a sufficient number of men into them, in order to tow the yacht during the calm, that they might reach the island before them as soon as possible, as within twenty-four hours there would be a strong hurricane. Mr. Cock asked him what reasons he had to think so; the old man replied that, on sounding, he saw the lead in the water at a distance of many fathoms more than he had seen it before; that therefore the water was become clear all of a sudden, which he looked upon as a certain sign of an impending hurricane in the sea." The sequel of the story is that, by good fortune and by dint of rowing they managed to gain a safe harbor before the hurricane had reached its height; but it finally raged with so much violence that not only many ships were lost and houses unroofed, but even their own vessel in harbor was washed so far on shore that several weeks elapsed before it could be got off.

The Greeks would not have called the ocean [Greek: atrnletos,] or unfruitful, though it does not produce wheat, if they had viewed it by the light of modern science; for naturalists now assert that "the sea, and not the land, is the principal seat of life," — though not of vegetable life. Darwin affirms that "our most thickly inhabited forests appear almost as deserts when we come to compare them with the corresponding regions of the ocean." Agassiz and Gould tell us that "the sea teems with animals of all classes, far beyond the extreme point of flowering plants"; but they add that "experiments of dredging in very deep water have also taught us that the abyss of the ocean is nearly a desert";— "so that modern investigations," to quote the words of Desor, "merely go to confirm the great idea which was vaguely anticipated by the ancient poets and philosophers, that the Ocean is the origin of all things." Yet marine animals and plants hold a lower rank in the scale of being than land animals and plants. "There is no instance known," says Desor, "of an animal becoming aquatic in its perfect state, after having lived in its lower stage on dry land." but as in the case of the tadpole, "the progress invariably points towards the dry land." In short, the dry land itself came through and out of the water in its way to the heavens, for, "in going back through the geological ages, we come to an epoch when, according to all appearances, the dry land did not exist, and when the surface of our globe was entirely covered with water." We looked on the sea, then, once more, not as [Greek: atrnletos,] or unfruitful, but as it has been more truly called, the "laboratory of continents."

Though we have indulged in some placid reflections of late, the reader must not forget that the dash and roar of the waves were incessant. Indeed, it would be well if he were to read with a large conch-shell at his ear. But notwithstanding that it was

very cold and windy to-day, it was such a cold as we thought would not cause one to take cold who was exposed to it, owing to the saltness of the air and the dryness of the soil. Yet the author of the old Description of Wellfleet says: "The atmosphere is very much impregnated with saline particles, which, perhaps, with the great use of fish, and the neglect of cider and spruce-beer, may be a reason why the people are more subject to sore mouths and throats than in other places."

## VII. ACROSS THE CAPE

When we have returned from the seaside, we sometimes ask ourselves why we did not spend more time in gazing at the sea; but very soon the traveller does not look at the sea more than at the heavens. As for the interior, if the elevated sand-bar in the midst of the ocean can be said to have any interior, it was an exceedingly desolate landscape, with rarely a cultivated or cultivable field in sight. We saw no villages, and seldom a house, for these are generally on the Bay side. It was a succession of shrubby hills and valleys, now wearing an autumnal tint. You would frequently think, from the character of the surface, the dwarfish trees, and the bearberries around, that you were on the top of a mountain. The only wood in Eastham was on the edge of Wellfleet. The pitch-pines were not commonly more than fifteen or eighteen feet high. The larger ones covered with lichens, — often hung with the long gray *Usnea*. There is scarcely a white-pine on the forearm of the Cape. Yet in the northwest part of Eastham, near the Camp Ground, we saw, the next summer, some quite rural, and even sylvan retreats, for the Cape, where small rustling groves of oaks and locusts and whispering pines, on perfectly level ground, made a little paradise. The locusts, both transplanted and growing naturally about the houses there, appeared to flourish better than any other tree. There were thin belts of wood in Wellfleet and Truro, a mile or more from the Atlantic, but, for the most part, we could see the horizon through them, or, if extensive, the trees were not large. Both oaks and pines had often the same flat look with the apple-trees. Commonly, the oak woods twenty-five years old were a mere scraggy shrubbery nine or ten feet high, and we could frequently reach to their topmost leaf. Much that is called "woods" was about half as high as this, — only patches of shrub-oak, bayberry, beach-plum, and wild roses, overrun with woodbine. When the roses were in bloom, these patches in the midst of the sand displayed such a profusion of blossoms, mingled with the aroma of the bayberry, that no Italian or other artificial rose-garden could equal them. They were perfectly Elysian, and realized my idea of an oasis in the desert. Huckleberry-bushes were very abundant, and the next summer they bore a remarkable quantity of that kind of gall called Huckleberry-apple, forming quite handsome though monstrous blossoms. But it must be added, that this shrubbery swarmed with wood-ticks, sometimes very troublesome parasites, and which it takes very horny fingers to crack.

A Truro footpath

The inhabitants of these towns have a great regard for a tree, though their standard for one is necessarily neither large nor high; and when they tell you of the large trees that once grew here, you must think of them, not as absolutely large, but large compared with the present generation. Their "brave old oaks," of which they speak with so much respect, and which they will point out to you as relics of the primitive forest, one hundred or one hundred and fifty, ay, for aught they know, two hundred years old, have a ridiculously dwarfish appearance, which excites a smile in the beholder. The largest and most venerable which they will show you in such a case are, perhaps, not more than twenty or twenty-five feet high. I was especially amused by the Lilliputian old oaks in the south part of Truro. To the inexperienced eye, which appreciated their proportions only, they might appear vast as the tree which saved his royal majesty, but measured, they were dwarfed at once almost into lichens which a deer might eat up in a morning. Yet they will tell you that large schooners were once built of timber which grew in Wellfleet. The old houses also are built of the timber of the Cape; but instead of the forests in the midst of which they originally stood, barren heaths, with poverty-grass for heather, now stretch away on every side. The modern houses are built of what is called "dimension timber," imported from Maine, all ready to be set up, so that commonly they do not touch it again with an axe. Almost all the wood used for fuel is imported by vessels or currents, and of course all the coal. I was told that probably a quarter of the fuel and a considerable part of the lumber used in North Truro was drift-wood. Many get all their fuel from the beach.

Of birds not found in the interior of the State, — at least in my neighborhood, — I heard, in the summer, the Black-throated Bunting (*Fringilla Americana*) amid the shrubbery, and in the open land the Upland Plover (*Totanus Bartramius*), whose quivering notes were ever and anon prolonged into a clear, somewhat plaintive, yet hawk-like scream, which sounded at a very indefinite distance. The bird may have been in the next field, though it sounded a mile off.

To-day we were walking through Truro, a town of about eighteen hundred inhabitants. We had already come to Pamet River, which empties into the Bay. This was the limit of the Pilgrims' journey up the Cape from Provincetown, when seeking a place for settlement. It rises in a hollow within a few rods of the Atlantic, and one who lives near its source told us that in high tides the sea leaked through, yet the wind and waves preserve intact the barrier between them, and thus the whole river is steadily driven westward butt-end foremost, — fountain-head, channel, and light-house at the mouth, all together.

Early in the afternoon we reached the Highland Light, whose white tower we had seen rising out of the bank in front of us for the last mile or two. It is fourteen miles from the Nauset Lights, on what is called the Clay Pounds, an immense bed of clay abutting on the Atlantic, and, as the keeper told us, stretching quite across the Cape, which is here only about two miles wide. We perceived at once a difference in the soil, for there was an interruption of the desert, and a slight appearance of a sod under our feet, such as we had not seen for the last two days.

After arranging to lodge at the light-house, we rambled across the Cape to the Bay, over a singularly bleak and barren-looking country, consisting of rounded hills and hollows, called by geologists diluvial elevations and depressions, — a kind of scenery which has been compared to a chopped sea, though this suggests too sudden a transition. There is a delineation of this very landscape in Hitchcock's Report on the Geology of Massachusetts, a work which, by its size at least, reminds one of a diluvial elevation itself. Looking southward from the light-house, the Cape appeared like an elevated plateau, sloping very regularly, though slightly, downward from the edge of the bank on the Atlantic side, about one hundred and fifty feet above the ocean, to that on the Bay side. On traversing this we found it to be interrupted by broad valleys or gullies, which become the hollows in the bank when the sea has worn up to them. They are commonly at right angles with the shore, and often extend quite across the Cape. Some of the valleys, however, are circular, a hundred feet deep without any outlet, as if the Cape had sunk in those places, or its sands had run out. The few scattered houses which we passed, being placed at the bottom of the hollows for shelter and fertility, were, for the most part, concealed entirely, as much as if they had been swallowed up in the earth. Even a village with its meeting-house, which we had left little more than a stone's throw behind, had sunk into the earth, spire and all, and we saw only the surface of the upland and the sea on either hand. When approaching it, we had mistaken the belfry for a summer-house on the plain. We began to think that we might tumble into a village before we were aware of it, as into an ant-lion's hole, and be drawn into the sand irrecoverably. The most conspicuous objects on the land were a distant windmill, or a meeting-house standing alone, for only they could afford to occupy an exposed place. A great part of the township, however, is a barren, heath-like plain, and perhaps one third of it lies in common, though the property of individuals. The author of the old "Description of Truro," speaking of the soil, says: "The snow, which would be of essential service to it provided it lay level and covered the ground, is blown into drifts and into the sea." This peculiar open country, with here and there a patch of shrubbery, extends as much as seven miles, or from Pamet River on the south to High Head on the north, and from Ocean to Bay. To walk over it makes on a stranger such an impression as being at sea, and he finds it impossible to estimate distances in any weather. A windmill or a herd of cows may seem to be far away in the horizon, yet, after going a few rods, he will be close upon them. He is also deluded by other kinds of mirage. When, in the summer, I saw a family a-blueberrying a mile off, walking about amid the dwarfish bushes which did not come up higher than their ankles, they seemed to me to be a race of giants, twenty feet high at least.

The highest and sandiest portion next the Atlantic was thinly covered with Beach-grass and Indigo-weed. Next to this the surface of the upland generally consisted of white sand and gravel, like coarse salt, through which a scanty vegetation found its way up. It will give an ornithologist some idea of its barrenness if I mention that the next June, the month of grass. I found a night-hawk's eggs there, and that almost any square rod thereabouts, taken at random, would be an eligible site for such a deposit.

The kildeer-plover, which loves a similar locality, also drops its eggs there, and fills the air above with its din. This upland also produced *Cladonia* lichens, poverty-grass, savory-leaved aster (*Diplopappus linariifolius*), mouse-ear, bear-berry, &c. On a few hillsides the savory-leaved aster and mouse-ear alone made quite a dense sward, said to be very pretty when the aster is in bloom. In some parts the two species of poverty-grass (*Hudsonia tomentosa* and *ericoides*), which deserve a better name, reign for miles in littli hemispherical tufts or islets, like moss, scattered over the waste. They linger in bloom there till the middle of July. Occasionally near the beach these rounded beds, as also those of the sea-sandwort (*Honkenya peploides*), were filled with sand within an inch of their tops, and were hard, like large ant-hills, while the surrounding sand was soft. In summer, if the poverty-grass grows at the head of a Hollow looking toward the sea, in a bleak position where the wind rushes up, the northern or exposed half of the tuft is sometimes all black and dead like an oven-broom, while the opposite half is yellow with blossoms, the whole hillside thus presenting a remarkable contrast when seen from the poverty-stricken and the flourishing side. This plant, which in many places would be esteemed an ornament, is here despised by many on account of its being associated with barrenness. It might well be adopted for the Barnstable coat-of-arms, in a field sableux. I should be proud of it. Here and there were tracts of Beach-grass mingled with the Sea-side Goldenrod and Beach-pea, which reminded us still more forcibly of the ocean.

Truro meeting-house on the hill

We read that there was not a brook in Truro. Yet there were deer here once, which must often have panted in vain; but I am pretty sure that I afterward saw a small fresh-water brook emptying into the south side of Pamet River, though I was so heedless as not to taste it. At any rate, a little boy near by told me that he drank at it. There was not a tree as far as we could see, and that was many miles each way, the general level of the upland being about the same everywhere. Even from the Atlantic side we overlooked the Bay, and saw to Manomet Point in Plymouth, and better from that side because it was the highest. The almost universal bareness and smoothness of the landscape were as agreeable as novel, making it so much the more like the deck of a vessel. We saw vessels sailing south into the Bay, on the one hand, and north along the Atlantic shore, on the other, all with an aft wind.

The single road which runs lengthwise the Cape, now winding over the plain, now through the shrubbery which scrapes the wheels of the stage, was a mere cart-track in the sand, commonly without any fences to confine it, and continually changing from this side to that, to harder ground, or sometimes to avoid the tide. But the inhabitants travel the waste here and there pilgrim-wise and staff in hand, by narrow footpaths, through which the sand flows out and reveals the nakedness of the land. We shuddered at the thought of living there and taking our afternoon walks over those barren swells, where we could overlook every step of our walk before taking it, and would have to pray for a fog or a snow-storm to conceal our destiny. The walker there must soon eat his heart.

In the north part of the town there is no house from shore to shore for several miles, and it is as wild and solitary as the Western Prairies — used to be. Indeed, one who has seen every house in Truro will be surprised to hear of the number of the inhabitants, but perhaps five hundred of the men and boys of this small town were then abroad on their fishing grounds. Only a few men stay at home to till the sand or watch for blackfish. The farmers are fishermen-farmers and understand better ploughing the sea than the land. They do not disturb their sands much, though there is a plenty of sea-weed in the creeks, to say nothing of blackfish occasionally rotting the shore. Between the Pond and East Harbor Village there was an interesting plantation of pitch-pines, twenty or thirty acres in extent, like those which we had already seen from the stage. One who lived near said that the land was purchased by two men for a shilling or twenty-five cents an acre. Some is not considered worth writing a deed for. This soil or sand, which was partially covered with poverty and beach grass, sorrel, &c., was furrowed at intervals of about four feet and the seed dropped by a machine. The pines had come up admirably and grown the first year three or four inches, and the second six inches and more. Where the seed had been lately planted the white sand was freshly exposed in an endless furrow winding round and round the sides of the deep hollows, in a vertical spiral manner, which produced a very singular effect, as if you were looking into the reverse side of a vast banded shield. This experiment, so important to the Cape, appeared very successful, and perhaps the time will come when the greater part of this kind of land in Barnstable County will be thus covered with an artificial pine forest, as has been done in some parts of France. In that country 12,500 acres of downs had been thus covered in 1811 near Bayonne. They are called pignadas, and according to Loudon “constitute the principal riches of the inhabitants, where there was a drifting desert before.” It seemed a nobler kind of grain to raise than corn even.

A herd of cows

A few years ago Truro was remarkable among the Cape towns for the number of sheep raised in it; but I was told that at this time only two men kept sheep in the town, and in 1855, a Truro boy ten years old told me that he had never seen one. They were formerly pastured on the unfenced lands or general fields, but now the owners were more particular to assert their rights, and it cost too much for fencing. The rails are cedar from Maine, and two rails will answer for ordinary purposes, but four are required for sheep. This was the reason assigned by one who had formerly kept them for not keeping them any longer. Fencing stuff is so expensive that I saw fences made with only one rail, and very often the rail when split was carefully tied with a string. In one of the villages I saw the next summer a cow tethered by a rope six rods long, the rope long in proportion as the feed was short and thin. Sixty rods, ay, all the cables of the Cape, would have been no more than fair. Tethered in the desert for fear that she would get into Arabia Felix! I helped a man weigh a bundle of hay which he was selling to his neighbor, holding one end of a pole from which it swung by a steel-yard hook, and this was just half his whole crop. In short, the country looked so barren

that I several times refrained from asking the inhabitants for a string or a piece of wrapping-paper, for fear I should rob them, for they plainly were obliged to import these things as well as rails, and where there were no newsboys, I did not see what they would do for waste paper.

The objects around us, the make-shifts of fishermen ashore, often made us look down to see if we were standing on terra firma. In the wells everywhere a block and tackle were used to raise the bucket, instead of a windlass, and by almost every house was laid up a spar or a plank or two full of auger-holes, saved from a wreck. The windmills were partly built of these, and they were worked into the public bridges. The light-house keeper, who was having his barn shingled, told me casually that he had made three thousand good shingles for that purpose out of a mast. You would sometimes see an old oar used for a rail. Frequently also some fair-weather finery ripped off a vessel by a storm near the coast was nailed up against an outhouse. I saw fastened to a shed near the lighthouse a long new sign with the words "ANGLO SAXON" on it in large gilt letters, as if it were a useless part which the ship could afford to lose, or which the sailors had discharged at the same time with the pilot. But it interested somewhat as if it had been a part of the Argo, clipped off in passing through the Symplegades.

To the fisherman, the Cape itself is a sort of store-ship laden with supplies, — a safer and larger craft which carries the women and children, the old men and the sick; and indeed sea-phrases are as common on it as on board a vessel. Thus is it ever with a sea-going people. The old Northmen used to speak of the "keel-ridge" of the country, that is, the ridge of the Doffrafield Mountains, as if the land were a boat turned bottom up. I was frequently reminded of the Northmen here. The inhabitants of the Cape are often at once farmers and sea-rovers; they are more than vikings or kings of the bays, for their sway extends over the open sea also. A farmer in Wellfleet, at whose house I afterward spent a night, who had raised fifty bushels of potatoes the previous year, which is a large crop for the Cape, and had extensive salt-works, pointed to his schooner, which lay in sight, in which he and his man and boy occasionally ran down the coast a-trading as far as the Capes of Virginia. This was his market-cart, and his hired man knew how to steer her. Thus he drove two teams a-field,

"ere the high seas appeared

Under the opening eyelids of the mom."

Though probably he would not hear much of the "gray fly" on his way to Virginia.

A great proportion of the inhabitants of the Cape are always thus abroad about their teaming on some ocean highway or other, and the history of one of their ordinary trips would cast the Argonautic expedition into the shade. I have just heard of a Cape Cod captain who was expected home in the beginning of the winter from the West Indies, but was long since given up for lost, till his relations at length have heard with joy, that, after getting within forty miles of Cape Cod light, he was driven back by nine successive gales to Key West, between Florida and Cuba, and was once again shaping his course for home. Thus he spent his winter. In ancient times the adventures of these two or three men and boys would have been made the basis of a myth, but

now such tales are crowded into a line of shorthand signs, like an algebraic formula in the shipping news. "Wherever over the world," said Palfrey in his oration at Barnstable, "you see the stars and stripes floating, you may have good hope that beneath them some one will be found who can tell you the soundings of Barnstable, or Wellfleet, or Chatham Harbor."

I passed by the home of somebody's (or everybody's) Uncle Bill, one day over on the Plymouth shore. It was a schooner half keeled-up on the mud: we aroused the master out of a sound sleep at noonday, by thumping on the bottom of his vessel till he presented himself at the hatchway, for we wanted to borrow his clam-digger. Meaning to make him a call, I looked out the next morning, and lo! he had run over to "the Pines" the evening before, fearing an easterly storm. He outrode the great gale in the spring of 1851, dashing about alone in Plymouth Bay. He goes after rockweed, lighters vessels, and saves wrecks. I still saw him lying in the mud over at "the Pines" in the horizon, which place he could not leave if he would till flood tide. But he would not then probably. This waiting for the tide is a singular feature in life by the sea-shore. A frequent answer is, "Well! you can't start for two hours yet." It is something new to a landsman, and at first he is not disposed to wait. History says that "two inhabitants of Truro were the first who adventured to the Falkland Isles in pursuit of whales. This voyage was undertaken in the year 1774, by the advice of Admiral Montague of the British navy, and was crowned with success."

At the Pond Village we saw a pond three eighths of a mile long densely filled with cat-tail flags, seven feet high, — enough for all the coopers in New England.

#### Pond Village

The western shore was nearly as sandy as the eastern, but the water was much smoother, and the bottom was partially covered with the slender grass-like seaweed (*Zostera*), which we had not seen on the Atlantic side; there were also a few rude sheds for drying fish on the beach there, which made it appear less wild. In the few marshes on this side we afterward saw Samphire, Rosemary, and other plants new to us inlanders.

In the summer and fall sometimes, hundreds of blackfish (the Social Whale, *Globicephalus Melas* of De Kay; called also Black Whale-fish, Howling Whale, Bottlehead, etc.), fifteen feet or more in length, are driven ashore in a single school here. I witnessed such a scene in July, 1855. A carpenter who was working at the lighthouse arriving early in the morning remarked that he did not know but he had lost fifty dollars by coming to his work; for as he came along the Bay side he heard them driving a school of blackfish ashore, and he had debated with himself whether he should not go and join them and take his share, but had concluded to come to his work. After breakfast I came over to this place, about two miles distant, and near the beach met some of the fishermen returning from their chase. Looking up and down the shore, I could see about a mile south some large black masses on the sand, which I knew must be blackfish, and a man or two about them. As I walked along towards them I soon came to a huge carcass whose head was gone and whose blubber had been stripped off some

weeks before; the tide was just beginning to move it, and the stench compelled me to go a long way round. When I came to Great Hollow I found a fisherman and some boys on the watch, and counted about thirty blackfish, just killed, with many lance wounds, and the water was more or less bloody around. They were partly on shore and partly in the water, held by a rope round their tails till the tide should leave them. A boat had been somewhat stove by the tail of one. They were a smooth shining black, like India-rubber, and had remarkably simple and lumpish forms for animated creatures, with a blunt round snout or head, whale-like, and simple stiff-looking flippers. The largest were about fifteen feet long, but one or two were only five feet long, and still without teeth. The fisherman slashed one with his jackknife, to show me how thick the blubber was, — about three inches; and as I passed my finger through the cut it was covered thick with oil. The blubber looked like pork, and this man said that when they were trying it the boys would sometimes come round with a piece of bread in one hand, and take a piece of blubber in the other to eat with it, preferring it to pork scraps. He also cut into the flesh beneath, which was firm and red like beef, and he said that for his part he preferred it when fresh to beef. It is stated that in 1812 blackfish were used as food by the poor of Bretagne. They were waiting for the tide to leave these fishes high and dry, that they might strip off the blubber and carry it to their try-works in their boats, where they try it on the beach. They get commonly a barrel of oil, worth fifteen or twenty dollars, to a fish. There were many lances and harpoons in the boats, — much slenderer instruments than I had expected. An old man came along the beach with a horse and wagon distributing the dinners of the fishermen, which their wives had put up in little pails and jugs, and which he had collected in the Pond Village, and for this service, I suppose, he received a share of the oil. If one could not tell his own pail, he took the first he came to.

As I stood there they raised the cry of “another school,” and we could see their black backs and their blowing about a mile northward, as they went leaping over the sea like horses. Some boats were already in pursuit there, driving them toward the beach. Other fishermen and boys running up began to jump into the boats and push them off from where I stood, and I might have gone too had I chosen. Soon there were twenty-five or thirty boats in pursuit, some large ones under sail, and others rowing with might and main, keeping outside of the school, those nearest to the fishes striking on the sides of their boats and blowing horns to drive them on to the beach. It was an exciting race. If they succeed in driving them ashore each boat takes one share, and then each man, but if they are compelled to strike them off shore each boat’s company take what they strike. I walked rapidly along the shore toward the north, while the fishermen were rowing still more swiftly to join their companions, and a little boy who walked by my side was congratulating himself that his father’s boat was beating another one. An old blind fisherman whom we met, inquired, “Where are they? I can’t see. Have they got them?” In the mean while the fishes had turned and were escaping northward toward Provincetown, only occasionally the back of one being seen. So the nearest crews were compelled to strike them, and we saw several boats soon made

fast, each to its fish, which, four or five rods ahead, was drawing it like a race-horse straight toward the beach, leaping half out of water, blowing blood and water from its hole, and leaving a streak of foam behind. But they went ashore too far north for us, though we could see the fishermen leap out and lance them on the sand. It was just like pictures of whaling which I have seen, and a fisherman told me that it was nearly as dangerous. In his first trial he had been much excited, and in his haste had used a lance with its scabbard on, but nevertheless had thrust it quite through his fish.

I learned that a few days before this one hundred and eighty blackfish had been driven ashore in one school at Eastham, a little farther south, and that the keeper of Billingsgate Point light went out one morning about the same time and cut his initials on the backs of a large school which had run ashore in the night, and sold his right to them to Provincetown for one thousand dollars, and probably Provincetown made as much more. Another fisherman told me that nineteen years ago three hundred and eighty were driven ashore in one school at Great Hollow. In the Naturalists' Library, it is said that, in the winter of 1809-10, one thousand one hundred and ten "approached the shore of Hralfiord, Iceland, and were captured." De Kay says it is not known why they are stranded. But one fisherman declared to me that they ran ashore in pursuit of squid, and that they generally came on the coast about the last of July.

About a week afterward, when I came to this shore, it was strewn, as far as I could see with a glass, with the carcasses of blackfish stripped of their blubber and their heads cut off; the latter lying higher up. Walking on the beach was out of the question on account of the stench. Between Provincetown and Truro they lay in the very path of the stage. Yet no steps were taken to abate the nuisance, and men were catching lobsters as usual just off the shore. I was told that they did sometimes tow them out and sink them; yet I wondered where they got the stones to sink them with. Of course they might be made into guano, and Cape Cod is not so fertile that her inhabitants can afford to do without this manure, — to say nothing of the diseases they may produce.

After my return home, wishing to learn what was known about the Blackfish, I had recourse to the reports of the zoological surveys of the State, and I found that Storer had rightfully omitted it in his Report on the Fishes, since it is not a fish; so I turned to Emmons's Report of the Mammalia, but was surprised to find that the seals and whales were omitted by him, because he had had no opportunity to observe them. Considering how this State has risen and thriven by its fisheries. — that the legislature which authorized the Zoological Survey sat under the emblem of a codfish, — that Nantucket and New Bedford are within our limits, — that an early riser may find a thousand or fifteen hundred dollars' worth of blackfish on the shore in a morning, — that the Pilgrims saw the Indians cutting up a blackfish on the shore at Eastham, and called a part of that shore "Grampus Bay," from the number of blackfish they found there, before they got to Plymouth, — and that from that time to this these fishes have continued to enrich one or two counties almost annually, and that their decaying carcasses were now poisoning the air of one county for more than thirty miles, — I

thought it remarkable that neither the popular nor scientific name was to be found in a report on our mammalia, — a catalogue of the productions of our land and water.

We had here, as well as all across the Cape, a fair view of Provincetown, five or six miles distant over the water toward the west, under its shrubby sand-hills, with its harbor now full of vessels whose masts mingled with the spires of its churches, and gave it the appearance of a quite large seaport town.

The inhabitants of all the lower Cape towns enjoy thus the prospect of two seas. Standing on the western or larboard shore, and looking; across to where the distant mainland looms, they can say. This is Massachusetts Bay; and then, after an hour's sauntering walk, they may stand on the starboard side, beyond which no land is seen to loom, and say, This is the Atlantic Ocean.

On our way back to the lighthouse, by whose white-washed tower we steered as securely as the mariner by its light at night, we passed through a graveyard, which apparently was saved from being blown away by its slates, for they had enabled a thick bed of huckleberry-bushes to root themselves amid the graves. We thought it would be worth the while to read the epitaphs where so many were lost at sea; however, as not only their lives, but commonly their bodies also, were lost or not identified, there were fewer epitaphs of this sort than we expected, though there were not a few. Their graveyard is the ocean. Near the eastern side we started up a fox in a hollow, the only kind of wild quadruped, if I except a skunk in a salt-marsh, that we saw in all our walk (unless painted and box tortoises may be called quadrupeds). He was a large, plump, shaggy fellow, like a yellow dog, with, as usual, a white tip to his tail, and looked as if he fared well on the Cape. He cantered away into the shrub-oaks and bayberry-bushes which chanced to grow there, but were hardly high enough to conceal him. I saw another the next summer leaping over the top of a beach-plum a little farther north, a small arc of his course (which I trust is not yet run), from which I endeavored in vain to calculate his whole orbit: there were too many unknown attractions to be allowed for. I also saw the exuviae of a third fast sinking into the sand, and added the skull to my collection. Hence I concluded that they must be plenty thereabouts; but a traveller may meet with more than an inhabitant, since he is more likely to take an unfrequented route across the country. They told me that in some years they died off in great numbers by a kind of madness, under the effect of which they were seen whirling round and round as if in pursuit of their tails. In Crantz's account of Greenland, he says: "They (the foxes) live upon birds and their eggs, and, when they can't get them, upon crowberries, mussels, crabs, and what the sea casts out."

Just before reaching the light-house, we saw the sun set in the Bay, — for standing on that narrow Cape was, as I have said, like being on the deck of a vessel, or rather at the masthead of a man-of-war, thirty miles at sea, though we knew that at the same moment the sun was setting behind our native hills, which were just below the horizon in that direction. This sight drove everything else quite out of our heads, and Homer and the Ocean came in again with a rush, —

[Greek: En d epeſ Ôkeanô lamron phaos êelioio,]

the shining torch of the sun fell into the ocean.

## VIII. THE HIGHLAND LIGHT

This light-house, known to mariners as the Cape Cod or Highland Light, is one of our "primary sea-coast lights," and is usually the first seen by those approaching the entrance of Massachusetts Bay from Europe. It is forty-three miles from Cape Ann Light, and forty-one from Boston Light. It stands about twenty rods from the edge of the bank, which is here formed of clay. I borrowed the plane and square, level and dividers, of a carpenter who was shingling a barn near by, and using one of those shingles made of a mast, contrived a rude sort of quadrant, with pins for sights and pivots, and got the angle of elevation of the Bank opposite the light-house, and with a couple of cod-lines the length of its slope, and so measured its height on the shingle. It rises one hundred and ten feet above its immediate base, or about one hundred and twenty-three feet above mean low water. Graham, who has carefully surveyed the extremity of the Cape, makes it one hundred and thirty feet. The mixed sand and clay lay at an angle of forty degrees with the horizon, where I measured it, but the clay is generally much steeper. No cow nor hen ever gets down it. Half a mile farther south the bank is fifteen or twenty-five feet higher, and that appeared to be the highest land in North Truro. Even this vast clay bank is fast wearing away. Small streams of water trickling down it at intervals of two or three rods, have left the intermediate clay in the form of steep Gothic roofs fifty feet high or more, the ridges as sharp and rugged-looking as rocks; and in one place the bank is curiously eaten out in the form of a large semicircular crater.

Dragging a dory up on the beach

According to the light-house keeper, the Cape is wasting here on both sides, though most on the eastern. In some places it had lost many rods within the last year, and, ere long, the light-house must be moved. We calculated, from his data, how soon the Cape would be quite worn away at this point, "for," said he, "I can remember sixty years back." We were even more surprised at this last announcement, — that is, at the slow waste of life and energy in our informant, for we had taken him to be not more than forty, — than at the rapid wasting of the Cape, and we thought that he stood a fair chance to outlive the former.

Between this October and June of the next year I found that the bank had lost about forty feet in one place, opposite the light-house, and it was cracked more than forty feet farther from the edge at the last date, the shore being strewn with the recent rubbish. But I judged that generally it was not wearing away here at the rate of more than six feet annually. Any conclusions drawn from the observations of a few years or one generation only are likely to prove false, and the Cape may balk expectation by its durability. In some places even a wrecker's foot-path down the bank lasts several years. One old inhabitant told us that when the light-house was built, in 1798, it was

calculated that it would stand forty-five years, allowing the bank to waste one length of fence each year, "but," said he, "there it is" (or rather another near the same site, about twenty rods from the edge of the bank).

The sea is not gaining on the Cape everywhere, for one man told me of a vessel wrecked long ago on the north of Provincetown whose "bones" (this was his word) are still visible many rods within the present line of the beach, half buried in sand. Perchance they lie alongside the timbers of a whale. The general statement of the inhabitants is that the Cape is wasting on both sides, but extending itself on particular points on the south and west, as at Chatham and Monomoy Beaches, and at Billingsgate, Long, and Race Points. James Freeman stated in his day that above three miles had been added to Monomoy Beach during the previous fifty years, and it is said to be still extending as fast as ever. A writer in the Massachusetts Magazine, in the last century, tells us that "when the English first settled upon the Cape, there was an island off Chatham, at three leagues' distance, called Webbs' Island, containing twenty acres, covered with red-cedar or savin. The inhabitants of Nantucket used to carry wood from it"; but he adds that in his day a large rock alone marked the spot, and the water was six fathoms deep there. The entrance to Nauset Harbor, which was once in Eastham, has now travelled south into Orleans. The islands in Wellfleet Harbor once formed a continuous beach, though now small vessels pass between them. And so of many other parts of this coast.

Perhaps what the Ocean takes from one part of the Cape it gives to another, — robs Peter to pay Paul. On the eastern side the sea appears to be everywhere encroaching on the land. Not only the land is undermined, and its ruins carried off by currents, but the sand is blown from the beach directly up the steep bank where it is one hundred and fifty feet high, and covers the original surface there many feet deep. If you sit on the edge you will have ocular demonstration of this by soon getting your eyes full. Thus the bank preserves its height as fast as it is worn away. This sand is steadily travelling westward at a rapid rate, "more than a hundred yards," says one writer, within the memory of inhabitants now living; so that in some places peat-meadows are buried deep under the sand, and the peat is cut through it; and in one place a large peat-meadow has made its appearance on the shore in the bank covered many feet deep, and peat has been cut there. This accounts for that great pebble of peat which we saw in the surf. The old oysterman had told us that many years ago he lost a "crittur" by her being mired in a swamp near the Atlantic side east of his house, and twenty years ago he lost the swamp itself entirely, but has since seen signs of it appearing on the beach. He also said that he had seen cedar stumps "as big as cart-wheels"(!) on the bottom of the Bay, three miles off Billingsgate Point, when leaning over the side of his boat in pleasant weather, and that that was dry land not long ago. Another told us that a log canoe known to have been buried many years before on the Bay side at East Harbor in Truro, where the Cape is extremely narrow, appeared at length on the Atlantic side, the Cape having rolled over it, and an old woman said, — "Now, you see, it is true what I told you, that the Cape is moving."

The bars along the coast shift with every storm, and in many places there is occasionally none at all. We ourselves observed the effect of a single storm with a high tide in the night, in July, 1855. It moved the sand on the beach opposite the light-house to the depth of six feet, and three rods in width as far as we could see north and south, and carried it bodily off no one knows exactly where, laying bare in one place a large rock five feet high which was invisible before, and narrowing the beach to that extent. There is usually, as I have said, no bathing on the back-side of the Cape, on account of the undertow, but when we were there last, the sea had, three months before, cast up a bar near this lighthouse, two miles long and ten rods wide, over which the tide did not flow, leaving a narrow cove, then a quarter of a mile long, between it and the shore, which afforded excellent bathing. This cove had from time to time been closed up as the bar travelled northward, in one instance imprisoning four or five hundred whiting and cod, which died there, and the water as often turned fresh, and finally gave place to sand. This bar, the inhabitants assured us, might be wholly removed, and the water six feet deep there in two or three days.

The light-house keeper said that when the wind blowed strong on to the shore, the waves ate fast into the bank, but when it blowed off they took no sand away; for in the former case the wind heaped up the surface of the water next to the beach, and to preserve its equilibrium a strong undertow immediately set back again into the sea which carried with it the sand and whatever else was in the way, and left the beach hard to walk on; but in the latter case the undertow set on and carried the sand with it, so that it was particularly difficult for shipwrecked men to get to land when the wind blowed on to the shore, but easier when it blowed off. This undertow, meeting the next surface wave on the bar which itself has made, forms part of the dam over which the latter breaks, as over an upright wall. The sea thus plays with the land holding a sand-bar in its mouth awhile before it swallows it, as a cat plays with a mouse; but the fatal gripe is sure to come at last. The sea sends its rapacious east wind to rob the land, but before the former has got far with its prey, the land sends its honest west wind to recover some of its own. But, according to Lieutenant Davis, the forms, extent, and distribution of sand-bars and banks are principally determined, not by winds and waves but by tides.

Our host said that you would be surprised if you were on the beach when the wind blew a hurricane directly on to it, to see that none of the drift-wood came ashore, but all was carried directly northward and parallel with the shore as fast as a man can walk, by the inshore current, which sets strongly in that direction at flood tide. The strongest swimmers also are carried along with it, and never gain an inch toward the beach. Even a large rock has been moved half a mile northward along-the beach. He assured us that the sea was never still on the back-side of the Cape, but ran commonly as high as your head, so that a great part of the time you could not launch a boat there, and even in the calmest weather the waves run six or eight feet up the beach, though then you could get off on a plank. Champlain and Pourtrincourt could not land here in 1606, on account of the swell (*la houlle*), yet the savages came off to them in

a canoe. In the *Sieur de la Borde's* "Relation des Caraïbes," my edition of which was published at Amsterdam in 1711, at page 530 he says: —

"Couroumon a Caraïbe, also a star [i.e. a god], makes the great lames á la mer, and overturns canoes. Lames á la mer are the long vagues which are not broken (*entre-coupées*), and such as one sees come to land all in one piece, from one end of a beach to another, so that, however little wind there may be, a shallop or a canoe could hardly land (*aborder terre*) without turning over, or being filled with water."

But on the Bay side the water even at its edge is often as smooth and still as in a pond. Commonly there are no boats used along this beach. There was a boat belonging to the Highland Light which the next keeper after he had been there a year had not launched, though he said that there was good fishing just off the shore. Generally the Life Boats cannot be used when needed. When the waves run very high it is impossible to get a boat off, however skilfully you steer it, for it will often be completely covered by the curving edge of the approaching breaker as by an arch, and so filled with water, or it will be lifted up by its bows, turned directly over backwards, and all the contents spilled out. A spar thirty feet long is served in the same way.

I heard of a party who went off fishing back of Wellfleet some years ago, in two boats, in calm weather, who, when they had laden their boats with fish, and approached the land again, found such a swell breaking on it, though there was no wind, that they were afraid to enter it. At first they thought to pull for Provincetown, but night was coming on, and that was many miles distant. Their case seemed a desperate one. As often as they approached the shore and saw the terrible breakers that intervened, they were deterred. In short, they were thoroughly frightened. Finally, having thrown their fish overboard, those in one boat chose a favorable opportunity, and succeeded, by skill and good luck, in reaching the land, but they were unwilling to take the responsibility of telling the others when to come in, and as the other helmsman was inexperienced, their boat was swamped at once, yet all managed to save themselves.

Much smaller waves soon make a boat "nail-sick," as the phrase is. The keeper said that after a long and strong blow there would be three large waves, each successively larger than the last, and then no large ones for some time, and that, when they wished to land in a boat, they came in on the last and largest wave. Sir Thomas Browne (as quoted in Brand's *Popular Antiquities*, p. 372), on the subject of the tenth wave being "greater or more dangerous than any other," after quoting Ovid, —

"Qui venit hic fluctus, fluctus supereminet omnes  
Posterior nono est, undecimo que prior," —

says, "Which, notwithstanding, is evidently false; nor can it be made out either by observation either upon the shore or the ocean, as we have with diligence explored in both. And surely in vain we expect regularity in the waves of the sea, or in the particular motions thereof, as we may in its general reciprocations, whose causes are constant, and effects therefore correspondent; whereas its fluctuations are but motions subservient, which winds, storms, shores, shelves, and every interjacency, irregulates."

We read that the Clay Pounds, were so called "because vessels have had the misfortune to be pounded against it in gales of wind," which we regard as a doubtful derivation. There are small ponds here, upheld by the clay, which were formerly called the Clay Pits. Perhaps this, or Clay Ponds, is the origin of the name. Water is found in the clay quite near the surface; but we heard of one man who had sunk a well in the sand close by, "till he could see stars at noonday," without finding any. Over this bare Highland the wind has full sweep. Even in July it blows the wings over the heads of the young turkeys, which do not know enough to head against it; and in gales the doors and windows are blown in, and you must hold on to the lighthouse to prevent being blown into the Atlantic. They who merely keep out on the beach in a storm in the winter are sometimes rewarded by the Humane Society. If you would feel the full force of a tempest, take up your residence on the top of Mount Washington, or at the Highland Light, in Truro.

It was said in 1794 that more vessels were cast away on the east shore of Truro than anywhere in Barnstable County. Notwithstanding that this light-house has since been erected, after almost every storm we read of one or more vessels wrecked here, and sometimes more than a dozen wrecks are visible from this point at one time. The inhabitants hear the crash of vessels going to pieces as they sit round their hearths, and they commonly date from some memorable shipwreck. If the history of this beach could be written from beginning to end, it would be a thrilling page in the history of commerce.

Truro was settled in the year 1700 as Dangerfield. This was a very appropriate name, for I afterward read on a monument in the graveyard, near Pamet River, the following inscription: —

Sacred  
to the memory of  
57 citizens of Truro,  
who were lost in seven  
vessels, which  
foundered at sea in  
the memorable gale  
of Oct. 3d, 1841

Their names and ages by families were recorded on different sides of the stone. They are said to have been lost on George's Bank, and I was told that only one vessel drifted ashore on the backside of the Cape, with the boys locked into the cabin and drowned. It is said that the homes of all were "within a circuit of two miles." Twenty-eight inhabitants of Dennis were lost in the same gale; and I read that "in one day, immediately after this storm, nearly or quite one hundred bodies were taken up and buried on Cape Cod." The Truro Insurance Company failed for want of skippers to take charge of its vessels. But the surviving inhabitants went a-fishing again the next year as usual. I found that it would not do to speak of shipwrecks there, for almost

every family has lost some of its members at sea. "Who lives in that house?" I inquired. "Three widows," was the reply. The stranger and the inhabitant view the shore with very different eyes. The former may have come to see and admire the ocean in a storm; but the latter looks on it as the scene where his nearest relatives were wrecked. When I remarked to an old wrecker partially blind, who was sitting on the edge of the bank smoking a pipe, which he had just lit with a match of dried beach-grass, that I supposed he liked to hear the sound of the surf, he answered: "No, I do not like to hear the sound of the surf." He had lost at least one son in "the memorable gale," and could tell many a tale of the shipwrecks which he had witnessed there.

In the year 1717, a noted pirate named Bellamy was led on to the bar off Wellfleet by the captain of a snow which he had taken, to whom he had offered his vessel again if he would pilot him into Provincetown Harbor. Tradition says that the latter threw over a burning tar-barrel in the night, which drifted ashore, and the pirates followed it. A storm coming on, their whole fleet was wrecked, and more than a hundred dead bodies lay along the shore. Six who escaped shipwreck were executed. "At times to this day" (1793), says the historian of Wellfleet, "there are King William and Queen Mary's coppers picked up, and pieces of silver called cob-money. The violence of the seas moves the sands on the outer bar, so that at times the iron caboose of the ship [that is, Bellamy's] at low ebbs has been seen." Another tells us that, "For many years after this shipwreck, a man of a very singular and frightful aspect used every spring and autumn to be seen travelling on the Cape, who was supposed to have been one of Bellamy's crew. The presumption is that he went to some place where money had been secreted by the pirates, to get such a supply as his exigencies required. When he died, many pieces of gold were found in a girdle which he constantly wore."

An old wrecker at home

As I was walking on the beach here in my last visit, looking for shells and pebbles, just after that storm, which I have mentioned as moving the sand to a great depth, not knowing but I might find some cob-money, I did actually pick up a French crown piece, worth about a dollar and six cents, near high-water mark, on the still moist sand, just under the abrupt, caving base of the bank. It was of a dark slate color, and looked like a flat pebble, but still bore a very distinct and handsome head of Louis XV., and the usual legend on the reverse. *Sit Nomen Domini Benedictum* (Blessed be the Name of the Lord), a pleasing sentiment to read in the sands of the sea-shore, whatever it might be stamped on, and I also made out the date, 1741. Of course, I thought at first that it was that same old button which I have found so many times, but my knife soon showed the silver. Afterward, rambling on the bars at low tide, I cheated my companion by holding up round shells (*Scutelloe*) between my fingers, whereupon he quickly stripped and came off to me.

In the Revolution, a British ship of war called the *Somerset* was wrecked near the Clay Pounds, and all on board, some hundreds in number, were taken prisoners. My informant said that he had never seen any mention of this in the histories, but that at

any rate he knew of a silver watch, which one of those prisoners by accident left there, which was still going to tell the story. But this event is noticed by some writers.

The next summer I saw a sloop from Chatham dragging for anchors and chains just off' this shore. She had her boats out at the work while she shuffled about on various tacks, and, when anything was found, drew up to hoist it on board. It is a singular employment, at which men are regularly hired and paid for their industry, to hunt to-day in pleasant weather for anchors which have been lost, — the sunken faith and hope of mariners, to which they trusted in vain; now, perchance, it is the rusty one of some old pirate's ship or Norman fisherman, whose cable parted here two hundred years ago; and now the best bower anchor of a Canton or a California ship, which has gone about her business. If the roadsteads of the spiritual ocean could be thus dragged, what rusty flukes of hope deceived and parted chain-cables of faith might again be windlassed aboard! enough to sink the finder's craft, or stock new navies to the end of time. The bottom of the sea is strewn with anchors, some deeper and some shallower, and alternately covered and uncovered by the sand, perchance with a small length of iron cable still attached, — to which where is the other end? So many uncompleted tales to be continued another time. So, if we had diving-bells adapted to the spiritual deeps, we should see anchors with their cables attached, as thick as eels in vinegar, all wriggling vainly toward their holding-ground. But that is not treasure for us which another man has lost; rather it is for us to seek what no other man has found or can find, — not be Chatham men, dragging for anchors.

The annals of this voracious beach! who could write them, unless it were a shipwrecked sailor? How many who have seen it have seen it only in the midst of danger and distress, the last strip of earth which their mortal eyes beheld. Think of the amount of suffering which a single strand has witnessed. The ancients would have represented it as a sea-monster with open jaws, more terrible than Scylla and Charybdis. An inhabitant of Truro told me that about a fortnight after the St. John was wrecked at Cohasset he found two bodies on the shore at the Clay Pounds. They were those of a man, and a corpulent woman. The man had thick boots on, though his head was off, but "it was alongside." It took the finder some weeks to get over the sight. Perhaps they were man and wife, and whom God had joined the ocean currents had not put asunder. Yet by what slight accidents at first may they have been associated in their drifting. Some of the bodies of those passengers were picked up far out at sea, boxed up and sunk; some brought ashore and buried. There are more consequences to a shipwreck than the underwriters notice. The Gulf Stream may return some to their native shores, or drop them in some out-of-the-way cave of Ocean, where time and the elements will write new riddles with their bones. — But to return to land again.

In this bank, above the clay, I counted in the summer, two hundred holes of the Bank Swallow within a space six rods long, and there were at least one thousand old birds within three times that distance, twittering over the surf. I had never associated them in my thoughts with the beach before. One little boy who had been a-birds-nesting had got eighty swallows' eggs for his share! Tell it not to the Humane Society. There were

many young birds on the clay beneath, which had tumbled out and died. Also there were many Crow-blackbirds hopping about in the dry fields, and the Upland Plover were breeding close by the light-house. The keeper had once cut off one's wing while mowing, as she sat on her eggs there. This is also a favorite resort for gunners in the fall to shoot the Golden Plover. As around the shores of a pond are seen devil's-needles, butterflies, etc., so here, to my surprise, I saw at the same season great devil's-needles of a size proportionably larger, or nearly as big as my finger, incessantly coasting up and down the edge of the bank, and butterflies also were hovering over it, and I never saw so many dorr-bugs and beetles of various kinds as strewn the beach. They had apparently flown over the bank in the night, and could not get up again, and some had perhaps fallen into the sea and were washed ashore. They may have been in part attracted by the light-house lamps.

The Clay Pounds are a more fertile tract than usual. We saw some fine patches of roots and corn here. As generally on the Cape, the plants had little stalk or leaf, but ran remarkably to seed. The corn was hardly more than half as high as in the interior, yet the ears were large and full, and one farmer told us that he could raise forty bushels on an acre without manure, and sixty with it. The heads of the rye also were remarkably large. The Shadbush (*Amelanchier*), Beach Plums, and Blueberries (*Vaccinium Pennsylvanicum*), like the apple-trees and oaks, were very dwarfish, spreading over the sand, but at the same time very fruitful. The blueberry was but an inch or two high, and its fruit often rested on the ground, so that you did not suspect the presence of the bushes, even on those bare hills, until you were treading on them. I thought that this fertility must be owing mainly to the abundance of moisture in the atmosphere, for I observed that what little grass there was was remarkably laden with dew in the morning, and in summer dense imprisoning fogs frequently last till midday, turning one's beard into a wet napkin about his throat, and the oldest inhabitant may lose his way within a stone's throw of his house or be obliged to follow the beach for a guide. The brick house attached to the light-house was exceedingly damp at that season, and, writing-paper lost all its stiffness in it. It was impossible to dry your towel after bathing, or to press flowers without their mildewing. The air was so moist that we rarely wished to drink, though we could at all times taste the salt on our lips. Salt was rarely used at table, and our host told us that his cattle invariably refused it when it was offered them, they got so much with their grass and at every breath, but he said that a sick horse or one just from the country would sometimes take a hearty draught of salt water, and seemed to like it and be the better for it.

It was surprising to see how much water was contained in the terminal bud of the sea-side golden-rod, standing in the sand early in July, and also how turnips, beets, carrots, etc., flourished even in pure sand. A man travelling by the shore near there not long before us noticed something green growing in the pure sand of the beach, just at high-water mark, and on approaching found it to be a bed of beets flourishing vigorously, probably from seed washed out of the Franklin. Also beets and turnips came up in the sea-weed used for manure in many parts of the Cape. This suggests

how various plants may have been dispersed over the world to distant islands and continents. Vessels, with seeds in their cargoes, destined for particular ports, where perhaps they were not needed, have been cast away on desolate islands, and though their crews perished, some of their seeds have been preserved. Out of many kinds a few would find a soil and climate adapted to them, become naturalized, and perhaps drive out the native plants at last, and so fit the land for the habitation of man. It is an ill wind that blows nobody any good, and for the time lamentable shipwrecks may thus contribute a new vegetable to a continent's stock, and prove on the whole a lasting blessing to its inhabitants. Or winds and currents might effect the same without the intervention of man. What indeed are the various succulent plants which grow on the beach but such beds of beets and turnips, sprung originally from seeds which perhaps were cast on the waters for this end, though we do not know the Franklin which they came out of? In ancient times some Mr. Bell (?) was sailing this way in his ark with seeds of rocket, salt-wort, sandwort, beachgrass, samphire, bayberry, poverty-grass, etc., all nicely labelled with directions, intending to establish a nursery somewhere; and did not a nursery get established, though he thought that he had failed?

About the light-house I observed in the summer the pretty *Polygala polygama*, spreading ray-wise flat on the ground, white pasture thistles (*Cirsium pumilum*), and amid the shrubbery the *Smilax glauca*, which is commonly said not to grow so far north; near the edge of the banks about half a mile southward, the broom crow-berry (*Empetrum Conradii*), for which Plymouth is the only locality in Massachusetts usually named, forms pretty green mounds four or five feet in diameter by one foot high, — soft, springy beds for the wayfarer. I saw it afterward in Provincetown, but prettiest of all the scarlet pimpernel, or poor-man's weather-glass (*Anagallis arvensis*), greets you in fair weather on almost every square yard of sand. From Yarmouth, I have received the *Chrysopsis falcata* (golden aster), and *Vaccinium stamineum* (Deerberry or Squaw Huckleberry), with fruit not edible, sometimes as large as a cranberry (Sept. 7).

#### The Highland Light

The Highland Light-house, where we were staying, is a substantial-looking building of brick, painted white, and surmounted by an iron cap. Attached to it is the dwelling of the keeper, one story high, also of brick, and built by government. As we were going to spend the night in a light-house, we wished to make the most of so novel an experience, and therefore told our host that we would like to accompany him when he went to light up. At rather early candle-light he lighted a small Japan lamp, allowing it to smoke rather more than we like on ordinary occasions, and told us to follow him. He led the way first through his bedroom, which was placed nearest to the light-house, and then through a long, narrow, covered passage-way, between whitewashed walls like a prison entry, into the lower part of the light-house, where many great butts of oil were arranged around; thence we ascended by a winding and open iron stairway, with a steadily increasing scent of oil and lamp-smoke, to a trap-door in an iron floor, and through this into the lantern. It was a neat building, with everything in apple-pie order, and no danger of anything; rusting there for want of oil. The light consisted

of fifteen argand lamps, placed within smooth concave reflectors twenty-one inches in diameter, and arranged in two horizontal circles one above the other, facing every way excepting directly down the Cape. These were surrounded, at a distance of two or three feet, by large plate-glass windows, which defied the storms, with iron sashes, on which rested the iron cap. All the iron work, except the floor, was painted white. And thus the light-house was completed. We walked slowly round in that narrow space as the keeper lighted each lamp in succession, conversing with him at the same moment that many a sailor on the deep witnessed the lighting of the Highland Light. His duty was to fill and trim and light his lamps, and keep bright the reflectors. He filled them every morning, and trimmed them commonly once in the course of the night. He complained of the quality of the oil which was furnished. This house consumes about eight hundred gallons in a year, which cost not far from one dollar a gallon; but perhaps a few lives would be saved if better oil were provided. Another light-house keeper said that the same proportion of winter-strained oil was sent to the southernmost light-house in the Union as to the most northern. Formerly, when this light-house had windows with small and thin panes, a severe storm would sometimes break the glass, and then they were obliged to put up a wooden shutter in haste to save their lights and reflectors, — and sometimes in tempests, when the mariner stood most in need of their guidance, they had thus nearly converted the light-house into a dark lantern, which emitted only a few feeble rays, and those commonly on the land or lee side. He spoke of the anxiety and sense of responsibility which he felt in cold and stormy nights in the winter; when he knew that many a poor fellow was depending on him, and his lamps burned dimly, the oil being chilled. Sometimes he was obliged to warm the oil in a kettle in his house at midnight, and fill his lamps over again, — for he could not have a fire in the light-house, it produced such a sweat on the windows. His successor told me that he could not keep too hot a fire in such a case. All this because the oil was poor. The government lighting the mariners on its wintry coast with summer-strained oil, to save expense! That were surely a summer-strained mercy.

This keeper's successor, who kindly entertained me the next year stated that one extremely cold night, when this and all the neighboring lights were burning summer oil, but he had been provident enough to reserve a little winter oil against emergencies, he was waked up with anxiety, and found that his oil was congealed, and his lights almost extinguished; and when, after many hours' exertion, he had succeeded in replenishing his reservoirs with winter oil at the wick end, and with difficulty had made them burn, he looked out and found that the other lights in the neighborhood, which were usually visible to him, had gone out, and he heard afterward that the Pamet River and Billingsgate Lights also had been extinguished.

Our host said that the frost, too, on the windows caused him much trouble, and in sultry summer nights the moths covered them and dimmed his lights; sometimes even small birds flew against the thick plate glass, and were found on the ground beneath in the morning with their necks broken. In the spring of 1855 he found nineteen small yellow-birds, perhaps goldfinches or myrtle-birds, thus lying dead around the light-

house; and sometimes in the fall he had seen where a golden plover had struck the glass in the night, and left the down and the fatty part of its breast on it.

Thus he struggled, by every method, to keep his light shining before men. Surely the light-house keeper has a responsible, if an easy, office. When his lamp goes out, he goes out; or, at most, only one such accident is pardoned.

I thought it a pity that some poor student did not live there, to profit by all that light, since he would not rob the mariner. "Well," he said, "I do sometimes come up here and read the newspaper when they are noisy down below." Think of fifteen argand lamps to read the newspaper by! Government oil! — light, enough, perchance, to read the Constitution by! I thought that he should read nothing less than his Bible by that light. I had a classmate who fitted for college by the lamps of a light-house, which was more light, we think, than the University afforded.

When we had come down and walked a dozen rods from the light-house, we found that we could not get the full strength of its light on the narrow strip of land between it and the shore, being too low for the focus, and we saw only so many feeble and rayless stars; but at forty rods inland we could see to read, though we were still indebted to only one lamp. Each reflector sent forth a separate "fan" of light, — one shone on the windmill, and one in the hollow, while the intervening spaces were in shadow. This light is said to be visible twenty nautical miles and more from an observer fifteen feet above the level of the sea. We could see the revolving light at Race Point, the end of the Cape, about nine miles distant, and also the light on Long Point, at the entrance of Provincetown Harbor, and one of the distant Plymouth Harbor Lights, across the Bay, nearly in a range with the last, like a star in the horizon. The keeper thought that the other Plymouth Light was concealed by being exactly in a range with the Long Point Light. He told us that the mariner was sometimes led astray by a mackerel fisher's lantern, who was afraid of being run down in the night, or even by a cottager's light, mistaking them for some well-known light on the coast, and, when he discovered his mistake, was wont to curse the prudent fisher or the wakeful cottager without reason.

Though it was once declared that Providence placed this mass of clay here on purpose to erect a light-house on, the keeper said that the light-house should have been erected half a mile farther south, where the coast begins to bend, and where the light could be seen at the same time with the Nauset Lights, and distinguished from them. They now talk of building one there. It happens that the present one is the more useless now, so near the extremity of the Cape, because other light-houses have since been erected there.

Among the many regulations of the Light-house Board, hanging against the wall here, many of them excellent, perhaps, if there were a regiment stationed here to attend to them, there is one requiring the keeper to keep an account of the number of vessels which pass his light during the day. But there are a hundred vessels in sight at once, steering in all directions, many on the very verge of the horizon, and he must have more eyes than Argus, and be a good deal farther-sighted, to tell which are passing

his light. It is an employment in some respects best suited to the habits of the gulls which coast up and down here, and circle over the sea.

I was told by the next keeper, that on the 8th of June following, a particularly clear and beautiful morning, he rose about half an hour before sunrise, and having a little time to spare, for his custom was to extinguish his lights at sunrise, walked down toward the shore to see what he might find. When he got to the edge of the bank he looked up, and, to his astonishment, saw the sun rising, and already part way above the horizon. Thinking that his clock was wrong, he made haste back, and though it was still too early by the clock, extinguished his lamps, and when he had got through and come down, he looked out the window, and, to his still greater astonishment, saw the sun just where it was before, two-thirds above the horizon. He showed me where its rays fell on the wall across the room. He proceeded to make a fire, and when he had done, there was the sun still at the same height. Whereupon, not trusting to his own eyes any longer, he called up his wife to look at it, and she saw it also. There were vessels in sight on the ocean, and their crews, too, he said, must have seen it, for its rays fell on them. It remained at that height for about fifteen minutes by the clock, and then rose as usual, and nothing else extraordinary happened during that day. Though accustomed to the coast, he had never witnessed nor heard of such a phenomenon before. I suggested that there might have been a cloud in the horizon invisible to him, which rose with the sun, and his clock was only as accurate as the average; or perhaps, as he denied the possibility of this, it was such a looming of the sun as is said to occur at Lake Superior and elsewhere. Sir John Franklin, for instance, says in his Narrative, that when he was on the shore of the Polar Sea, the horizontal refraction varied so much one morning that "the upper limb of the sun twice appeared at the horizon before it finally rose."

He certainly must be a son of Aurora to whom the sun looms, when there are so many millions to whom it glooms rather, or who never see it till an hour after it has risen. But it behooves us old stagers to keep our lamps trimmed and burning to the last, and not trust to the sun's looming.

This keeper remarked that the centre of the flame should be exactly opposite the centre of the reflectors, and that accordingly, if he was not careful to turn down his wicks in the morning, the sun falling on the reflectors on the south side of the building would set fire to them, like a burning-glass, in the coldest day, and he would look up at noon and see them all lighted! When your light is ready to give light, it is readiest to receive it, and the sun will light it. His successor said that he had never known them to blaze in such a case, but merely to smoke.

I saw that this was a place of wonders. In a sea turn or shallow fog while I was there the next summer, it being clear overhead, the edge of the bank twenty rods distant, appeared like a mountain pasture in the horizon. I was completely deceived by it, and I could then understand why mariners sometimes ran ashore in such cases, especially in the night, supposing it to be far away, though they could see the land. Once since this, being in a large oyster boat two or three hundred miles from here, in a dark night,

when there was a thin veil of mist on land and water, we came so near to running on to the land before our skipper was aware of it, that the first warning was my hearing the sound of the surf under my elbow. I could almost have jumped ashore, and we were obliged to go about very suddenly to prevent striking. The distant light for which we were steering, supposing it a light-house five or six miles off, came through the cracks of a fisherman's bunk not more than six rods distant.

The keeper entertained us handsomely in his solitary little ocean house. He was a man of singular patience and intelligence, who, when our queries struck him, rung as clear as a bell in response. The light-house lamps a few feet distant shone full into my chamber, and made it as bright as day, so I knew exactly how the Highland Light bore all that night, and I was in no danger of being wrecked. Unlike the last, this was as still as a summer night. I thought, as I lay there, half awake and half asleep, looking upward through the window at the lights above my head, how many sleepless eyes from far out on the Ocean stream — mariners of all nations spinning their yarns through the various watches of the night — were directed toward my couch.

The light-house has since been rebuilt, and shows a Fresnel light.

## IX. THE SEA AND THE DESERT

The light-house lamps were still burning, though now with a silvery lustre, when I rose to see the sun come out of the Ocean; for he still rose eastward of us; but I was convinced that he must have come out of a dry bed beyond that stream, though he seemed to come out of the water.

“The sun once more touched the fields,  
Mounting to heaven from the fair flowing  
Deep-running Ocean.”

Now we saw countless sails of mackerel fishers abroad on the deep, one fleet in the north just pouring round the Cape, another standing down toward Chatham, and our host's son went off to join some lagging member of the first which had not yet left the Bay.

Before we left the light-house we were obliged to anoint our shoes faithfully with tallow, for walking on the beach, in the salt water and the sand, had turned them red and crisp. To counterbalance this, I have remarked that the seashore, even where muddy, as it is not here, is singularly clean; for notwithstanding the spattering of the water and mud and squirting of the clams while walking to and from the boat, your best black pants retain no stain nor dirt, such as they would acquire from walking in the country.

We have heard that a few days after this, when the Provincetown Bank was robbed, speedy emissaries from Provincetown made particular inquiries concerning us at this light-house. Indeed, they traced us all the way down the Cape, and concluded that we came by this unusual route down the back-side and on foot, in order that we might

discover a way to get off with our booty when we had committed the robbery. The Cape is so long and narrow, and so bare withal, that it is wellnigh impossible for a stranger to visit it without the knowledge of its inhabitants generally, unless he is wrecked on to it in the night. So, when this robbery occurred, all their suspicions seem to have at once centred on us two travellers who had just passed down it. If we had not chanced to leave the Cape so soon, we should probably have been arrested. The real robbers were two young men from Worcester County who travelled with a centre-bit, and are said to have done their work very neatly. But the only bank that we pried into was the great Cape Cod sand-bank, and we robbed it only of an old French crown piece, some shells and pebbles, and the materials of this story.

Again we took to the beach for another day (October 13), walking along the shore of the resounding sea, determined to get it into us. We wished to associate with the Ocean until it lost the pond-like look which it wears to a country-man. We still thought that we could see the other side. Its surface was still more sparkling than the day before, and we beheld “the countless smilings of the ocean waves”; though some of them were pretty broad grins, for still the wind blew and the billows broke in foam along the beach. The nearest beach to us on the other side, whither we looked, due east, was on the coast of Galicia, in Spain, whose capital is Santiago, though by old poets’ reckoning it should have been Atlantis or the Hesperides; but heaven is found to be farther west now. At first we were abreast of that part of Portugal entre Douro e Mino, and then Galicia and the port of Pontevedra opened to us as we walked along; but we did not enter, the breakers ran so high. The bold headland of Cape Finisterre, a little north of east, jugged toward us next, with its vain brag, for we flung back,— “Here is Cape Cod, — Cape Land’s-Beginning.” A little indentation toward the north, — for the land loomed to our imaginations by a common mirage, — we knew was the Bay of Biscay, and we sang: —

“There we lay, till next day.

In the Bay of Biscay O!”

A little south of east was Palos, where Columbus weighed anchor, and farther yet the pillars which Hercules set up; concerning which when we inquired at the top of our voices what was written on them, — for we had the morning sun in our faces, and could not see distinctly, — the inhabitants shouted *Ne plus ultra* (no more beyond), but the wind bore to us the truth only, *plus ultra* (more beyond), and over the Bay westward was echoed *ultra* (beyond). We spoke to them through the surf about the Far West, the true *Hesperia*, [Greek: *eô peras*] or end of the day, the This Side Sundown, where the sun was extinguished in the Pacific, and we advised them to pull up stakes and plant those pillars of theirs on the shore of California, whither all our folks were gone, — the only *ne plus ultra* now. Whereat they looked crestfallen on their cliffs, for we had taken the wind out of all their sails.

We could not perceive that any of their leavings washed up here, though we picked up a child’s toy, a small dismantled boat, which may have been lost at Pontevedra.

The Cape became narrower and narrower as we approached its wrist between Truro and Provincetown, and the shore inclined more decidedly to the west. At the head of East Harbor Creek, the Atlantic is separated but by half a dozen rods of sand from the tide-waters of the Bay. From the Clay Pounds the bank flatted off for the last ten miles to the extremity at Race Point, though the highest parts, which are called "islands" from their appearance at a distance on the sea, were still seventy or eighty feet above the Atlantic, and afforded a good view of the latter, as well as a constant view of the Bay, there being no trees nor a hill sufficient to interrupt it. Also the sands began to invade the land more and more, until finally they had entire possession from sea to sea, at the narrowest part. For three or four miles between Truro and Provincetown there were no inhabitants from shore to shore, and there were but three or four houses for twice that distance.

As we plodded along, either by the edge of the ocean, where the sand was rapidly drinking up the last wave that wet it, or over the sand-hills of the bank, the mackerel fleet continued to pour round the Cape north of us, ten or fifteen miles distant, in countless numbers, schooner after schooner, till they made a city on the water. They were so thick that many appeared to be afoul of one another; now all standing on this tack, now on that. We saw how well the New-Englanders had followed up Captain John Smith's suggestions with regard to the fisheries, made in 1616, — to what a pitch they had carried "this contemptible trade of fish," as he significantly styles it, and were now equal to the Hollanders whose example he holds up for the English to emulate; notwithstanding that "in this faculty," as he says, "the former are so naturalized, and of their vents so certainly acquainted, as there is no likelihood they will ever be paralleled, having two or three thousand busses, flat-bottoms, sword-pinks, todes, and such like, that breeds them sailors, mariners, soldiers, and merchants, never to be wrought out of that trade and fit for any other." We thought that it would take all these names and more to describe the numerous craft which we saw. Even then, some years before our "renowned sires" with their "peerless dames" stepped on Plymouth Rock, he wrote, "Newfoundland doth yearly freight neir eight hundred sail of ships with a silly, lean, skinny, poor-john, and cor fish," though all their supplies must be annually transported from Europe. Why not plant a colony here then, and raise those supplies on the spot? "Of all the four parts of the world," says he, "that I have yet seen, not inhabited, could I have but means to transport a colony, I would rather live here than anywhere. And if it did not maintain itself, were we but once indifferently well fitted, let us starve." Then "fishing before your doors," you "may every night sleep quietly ashore, with good cheer and what fires you will, or, when you please, with your wives and family." Already he anticipates "the new towns in New England in memory of their old," — and who knows what may be discovered in the "heart and entrails" of the land, "seeing even the very edges," etc., etc.

Towing along shore

All this has been accomplished, and more, and where is Holland now? Verily the Dutch have taken it. There was no long interval between the suggestion of Smith and the eulogy of Burke.

Still one after another the mackerel schooners hove in sight round the head of the Cape, "whitening all the sea road," and we watched each one for a moment with an undivided interest. It seemed a pretty sport. Here in the country it is only a few idle boys or loafers that go a-fishing on a rainy day; but there it appeared as if every able-bodied man and helpful boy in the Bay had gone out on a pleasure excursion in their yachts, and all would at last land and have a chowder on the Cape. The gazetteer tells you gravely how many of the men and boys of these towns are engaged in the whale, cod, and mackerel fishery, how many go to the banks of Newfoundland, or the coast of Labrador, the Straits of Belle Isle or the Bay of Chaleurs (Shalore the sailors call it); as if I were to reckon up the number of boys in Concord who are engaged during the summer in the perch, pickerel, bream, hornpout, and shiner fishery, of which no one keeps the statistics, — though I think that it is pursued with as much profit to the moral and intellectual man (or boy), and certainly with less danger to the physical one.

One of my playmates, who was apprenticed to a printer, and was somewhat of a wag, asked his master one afternoon if he might go a-fishing, and his master consented. He was gone three months. When he came back, he said that he had been to the Grand Banks, and went to setting type again as if only an afternoon had intervened.

I confess I was surprised to find that so many men spent their whole day, ay, their whole lives almost, a-fishing. It is remarkable what a serious business men make of getting their dinners, and how universally shiftlessness and a grovelling taste take refuge in a merely ant-like industry. Better go without your dinner, I thought, than be thus everlastingly fishing for it like a cormorant. Of course, viewed from the shore, our pursuits in the country appear not a whit less frivolous.

I once sailed three miles on a mackerel cruise myself. It was a Sunday evening after a very warm day in which there had been frequent thunder-showers, and I had walked along the shore from Cohasset to Duxbury. I wished to get over from the last place to Clark's Island, but no boat could stir, they said, at that stage of the tide, they being left high on the mud. At length I learned that the tavern-keeper, Winsor, was going out mackerelling with seven men that evening, and would take me. When there had been due delay, we one after another straggled down to the shore in a leisurely manner, as if waiting for the tide still, and in India-rubber boots, or carrying our shoes in our hands, waded to the boats, each of the crew bearing an armful of wood, and one a bucket of new potatoes besides. Then they resolved that each should bring one more armful of wood, and that would be enough. They had already got a barrel of water, and had some more in the schooner. We shoved the boats a dozen rods over the mud and water till they floated, then rowing half a mile to the vessel climbed aboard, and there we were in a mackerel schooner, a fine stout vessel of forty-three tons, whose name I forget. The baits were not dry on the hooks. There was the mill in which they

ground the mackerel, and the trough to hold it, and the long-handled dipper to cast it overboard with; and already in the harbor we saw the surface rippled with schools of small mackerel, the real *Scomber vernalis*. The crew proceeded leisurely to weigh anchor and raise their two sails, there being a fair but very slight wind; — and the sun now setting clear and shining on the vessel after the thundershowers, I thought that I could not have commenced the voyage under more favorable auspices. They had four dories and commonly fished in them, else they fished on the starboard side aft where their fines hung ready, two to a man. The boom swung round once or twice, and Winsor cast overboard the foul juice of mackerel mixed with rain-water which remained in his trough, and then we gathered about the helmsman and told stories. I remember that the compass was affected by iron in its neighborhood and varied a few degrees. There was one among us just returned from California, who was now going as passenger for his health and amusement. They expected to be gone about a week, to begin fishing the next morning, and to carry their fish fresh to Boston. They landed me at Clark's Island, where the Pilgrims landed, for my companions wished to get some milk for the voyage. But I had seen the whole of it. The rest was only going to sea and catching the mackerel. Moreover, it was as well that I did not remain with them, considering the small quantity of supplies they had taken.

Now I saw the mackerel fleet on its fishing-ground, though I was not at first aware of it. So my experience was complete.

It was even more cold and windy to-day than before, and we were frequently glad to take shelter behind a sand-hill. None of the elements were resting. On the beach there is a ceaseless activity, always something going on, in storm and in calm, winter and summer, night and day. Even the sedentary man here enjoys a breadth of view which is almost equivalent to motion. In clear weather the laziest may look across the Bay as far as Plymouth at a glance, or over the Atlantic as far as human vision reaches, merely raising his eyelids; or if he is too lazy to look after all, he can hardly help hearing the ceaseless dash and roar of the breakers. The restless ocean may at any moment cast up a whale or a wrecked vessel at your feet. All the reporters in the world, the most rapid stenographers, could not report the news it brings. No creature could move slowly where there was so much life around. The few wreckers were either going or coming, and the ships and the sand-pipers, and the screaming gulls overhead; nothing stood still but the shore. The little beach-birds trotted past close to the water's edge, or paused but an instant to swallow their food, keeping time with the elements. I wondered how they ever got used to the sea, that they ventured so near the waves. Such tiny inhabitants the land brought forth! except one fox. And what could a fox do, looking on the Atlantic from that high bank? What is the sea to a fox? Sometimes we met a wrecker with his cart and dog, — and his dog's faint bark at us wayfarers, heard through the roaring of the surf, sounded ridiculously faint. To see a little trembling dainty-footed cur stand on the margin of the ocean, and ineffectually bark at a beach-bird, amid the roar of the Atlantic! Come with design to bark at a whale, perchance! That sound will do for farmyards. All the dogs looked out of place there, naked and

as if shuddering at the vastness; and I thought that they would not have been there had it not been for the countenance of their masters. Still less could you think of a cat bending her steps that way, and shaking her wet foot over the Atlantic; yet even this happens sometimes, they tell me. In summer I saw the tender young of the Piping Plover, like chickens just hatched, mere pinches of down on two legs, running in troops, with a faint peep, along the edge of the waves. I used to see packs of half-wild dogs haunting the lonely beach on the south shore of Staten Island, in New York Bay, for the sake of the carrion there cast up; and I remember that once, when for a long time I had heard a furious barking in the tall grass of the marsh, a pack of half a dozen large dogs burst forth on to the beach, pursuing a little one which ran straight to me for protection, and I afforded it with some stones, though at some risk to myself; but the next day the little one was the first to bark at me. under these circumstances I could not but remember the words of the poet: —

“Blow, blow, thou winter wind,  
Thou art not so unkind  
As his ingratitude;  
Thy tooth is not so keen,  
Because thou art not seen,  
Although thy breath be rude.

“Freeze, freeze, thou bitter sky,  
Thou dost not bite so nigh  
As benefits forgot;  
Though thou the waters warp,  
Thy sting is not so sharp  
As friend remembered not.”

Sometimes, when I was approaching the carcass of a horse or ox which lay on the beach there, where there was no living creature in sight, a dog would unexpectedly emerge from it and slink away with a mouthful of offal.

The sea-shore is a sort of neutral ground, a most advantageous point from which to contemplate this world. It is even a trivial place. The waves forever rolling to the land are too far-travelled and untamable to be familiar. Creeping along the endless beach amid the sun-squall and the foam, it occurs to us that we, too, are the product of sea-slime.

It is a wild, rank place, and there is no flattery in it. Strewn with crabs, horse-shoes, and razor-clams, and whatever the sea casts up, — a vast morgue, where famished dogs may range in packs, and crows come daily to glean the pittance which the tide leaves them. The carcasses of men and beasts together lie stately up upon its shelf, rotting and bleaching in the sun and waves, and each tide turns them in their beds, and tucks fresh sand under them. There is naked Nature, inhumanly sincere, wasting no thought on man, nibbling at the cliffy shore where gulls wheel amid the spray.

We saw this forenoon what, at a distance, looked like a bleached log with a branch still left on it. It proved to be one of the principal bones of a whale, whose carcass,

having been stripped of blubber at sea and cut adrift, had been washed up some months before. It chanced that this was the most conclusive evidence which we met with to prove, what the Copenhagen antiquaries assert, that these shores were the Furdustrandas which Thorhall, the companion of Thorfinn during his expedition to Vinland in 1007. sailed past in disgust. It appears that after they had left the Cape and explored the country about Straum-Fiordr (Buzzards' Bay!), Thorhall, who was disappointed at not getting any wine to drink there, determined to sail north again in search of Vinland. Though the antiquaries have given us the original Icelandic. I prefer to quote their translation, since theirs is the only Latin which I know to have been aimed at Cape Cod.

“Cum parati erant, sublato  
velo, cecinit Thorhallus:  
Eò redeamus, ubi conterranei  
sunt nostri! faciamus aliter,  
expansi arenosi peritum,  
lata navis explorare curricula:  
dum procellam incitantes gladii  
moræ impatientes, qui terram  
collaudant, Furdustrandas  
inhabitant et coquunt balænas.”

In other words: “When they were ready and their sail hoisted, Thorhall sang: Let us return thither where our fellow-countrymen are. Let us make a bird skilful to fly through the heaven of sand, to explore the broad track of ships; while warriors who impel to the tempest of swords, who praise the land, inhabit Wonder-Strands, and cook whales.” And so he sailed north past Cape Cod, as the antiquaries say, “and was shipwrecked on to Ireland.”

Though once there were more whales cast up here, I think that it was never more wild than now. We do not associate the idea of antiquity with the ocean, nor wonder how it looked a thousand years ago, as we do of the land, for it was equally wild and unfathomable always. The Indians have left no traces on its surface, but it is the same to the civilized man and the savage. The aspect of the shore only has changed. The ocean is a wilderness reaching round the globe, wilder than a Bengal jungle, and fuller of monsters, washing the very wharves of our cities and the gardens of our sea-side residences. Serpents, bears, hyenas, tigers, rapidly vanish as civilization advances, but the most populous and civilized city cannot scare a shark far from its wharves. It is no further advanced than Singapore, with its tigers, in this respect. The Boston papers had never told me that there were seals in the harbor. I had always associated these with the Esquimaux and other outlandish people. Yet from the parlor windows all along the coast you may see families of them sporting on the flats. They were as strange to me as the merman would be. Ladies who never walk in the woods, sail over the sea. To go to sea! Why, it is to have the experience of Noah, — to realize the deluge. Every vessel is an ark.

We saw no fences as we walked the beach, no birchen riders, highest of rails, projecting into the sea to keep the cows from wading round, nothing to remind us that man was proprietor of the shore. Yet a Truro man did tell us that owners of land on the east side of that town were regarded as owning the beach, in order that they might have the control of it so far as to defend themselves against the encroachments of the sand and the beach-grass, — for even this friend is sometimes regarded as a foe; but he said that this was not the case on the Bay side. Also I have seen in sheltered parts of the Bay temporary fences running to low-water mark, the posts being set in sills or sleepers placed transversely.

After we had been walking many hours, the mackerel fleet still hovered in the northern horizon nearly in the same direction, but farther off, hull down. Though their sails were set they never sailed away, nor yet came to anchor, but stood on various tacks as close together as vessels in a haven, and we in our ignorance thought that they were contending patiently with adverse winds, beating eastward; but we learned afterward that they were even then on their fishing-ground, and that they caught mackerel without taking in their mainsails or coming to anchor, “a smart breeze” (thence called a mackerel breeze) “being,” as one says, “considered most favorable” for this purpose. We counted about two hundred sail of mackerel fishers within one small arc of the horizon, and a nearly equal number had disappeared southward. Thus they hovered about the extremity of the Cape, like moths round a candle; the lights at Race Point and Long Point being bright candles for them at night, — and at this distance they looked fair and white, as if they had not yet flown into the light, but nearer at hand afterward, we saw how some had formerly singed their wings and bodies.

A village seems thus, where its able-bodied men are all ploughing the ocean together, as a common field. In North Truro the women and girls may sit at their doors, and see where their husbands and brothers are harvesting their mackerel fifteen or twenty miles off, on the sea, with hundreds of white harvest wagons, just as in the country the farmers’ wives sometimes see their husbands working in a distant hillside field. But the sound of no dinner-horn can reach the fisher’s ear.

Having passed the narrowest part of the waist of the Cape, though still in Truro, for this township is about twelve miles long on the shore, we crossed over to the Bay side, not half a mile distant, in order to spend the noon on the nearest shrubby sand-hill in Provincetown, called Mount Ararat, which rises one hundred feet above the ocean. On our way thither we had occasion to admire the various beautiful forms and colors of the sand, and we noticed an interesting mirage, which I have since found that Hitchcock also observed on the sands of the Cape. We were crossing a shallow valley in the Desert, where the smooth and spotless sand sloped upward by a small angle to the horizon on every side, and at the lowest part was a long chain of clear but shallow pools. As we were approaching these for a drink in a diagonal direction across the valley, they appeared inclined at a slight but decided angle to the horizon, though they were plainly and broadly connected with one another, and there was not the least ripple to suggest a current; so that by the time we had reached a convenient

part of one we seemed to have ascended several feet. They appeared to lie by magic on the side of the vale, like a mirror left in a slanting position. It was a very pretty mirage for a Provincetown desert, but not amounting to what, in Sanscrit, is called "the thirst of the gazelle," as there was real water here for a base, and we were able to quench our thirst after all.

Professor Rafn, of Copenhagen, thinks that the mirage which I noticed, but which an old inhabitant of Provincetown, to whom I mentioned it, had never seen nor heard of, had something to do with the name "Furdustrandas," i.e. Wonder-Strands, given, as I have said, in the old Icelandic account of Thorfinn's expedition to Vinland in the year 1007, to a part of the coast on which he landed. But these sands are more remarkable for their length than for their mirage, which is common to all deserts, and the reason for the name which the Northmen them-selves give,— "because it took a long time to sail by them," — is sufficient and more applicable to these shores. However, if you should sail all the way from Greenland to Buzzards' Bay along the coast, you would get sight of a good many sandy beaches. But whether Thorfinn saw the mirage here or not, Thor-eau, one of the same family, did; and perchance it was because Lief the Lucky had, in a previous voyage, taken Thor-er and his people off the rock in the middle of the sea, that Thor-eau was born to see it.

This was not the only mirage which I saw on the Cape. That half of the beach next the bank is commonly level, or nearly so, while the other slopes downward to the water. As I was walking upon the edge of the bank in Wellfleet at sundown, it seemed to me that the inside half of the beach sloped upward toward the water to meet the other, forming a ridge ten or twelve feet high the whole length of the shore, but higher always opposite to where I stood; and I was not convinced of the contrary till I descended the bank, though the shaded outlines left by the waves of a previous tide but half-way down the apparent declivity might have taught me better. A stranger may easily detect what is strange to the oldest inhabitant, for the strange is his province. The old oysterman, speaking of gull-shooting, had said that you must aim under, when firing down the bank.

A neighbor tells me that one August, looking through a glass from Naushon to some vessels which were sailing along near Martha's Vineyard, the water about them appeared perfectly smooth, so that they were reflected in it, and yet their full sails proved that it must be rippled, and they who were with him thought that it was mirage, i.e. a reflection from a haze.

From the above-mentioned sand-hill we over-looked Provincetown and its harbor, now emptied of vessels, and also a wide expanse of ocean. As we did not wish to enter Provincetown before night, though it was cold and windy, we returned across the Deserts to the Atlantic side, and walked along the beach again nearly to Race Point, being still greedy of the sea influence. All the while it was not so calm as the reader may suppose, but it was blow, blow, blow, — roar, roar, roar, — tramp, tramp, tramp, — without interruption. The shore now trended nearly east and west.

Before sunset, having already seen the mackerel fleet returning into the Bay, we left the sea-shore on the north of Provincetown, and made our way across the Desert to the eastern extremity of the town. From the first high sand-hill, covered with beach-grass and bushes to its top, on the edge of the desert, we overlooked the shrubby hill and swamp country which surrounds Provincetown on the north, and protects it, in some measure, from the invading sand. Notwithstanding the universal barrenness, and the contiguity of the desert, I never saw an autumnal landscape so beautifully painted as this was. It was like the richest rug imaginable spread over an uneven surface; no damask nor velvet, nor Tyrian dye or stuffs, nor the work of any loom, could ever match it. There was the incredibly bright red of the Huckleberry, and the reddish brown of the Bayberry, mingled with the bright and living green of small Pitch-Pines, and also the duller green of the Bayberry, Boxberry, and Plum, the yellowish green of the Shrub-oaks, and the various golden and yellow and fawn-colored tints of the Birch and Maple and Aspen, — each making its own figure, and, in the midst, the few yellow sand-slides on the sides of the hills looked like the white floor seen through rents in the rug. Coming from the country as I did, and many autumnal woods as I had seen, this was perhaps the most novel and remarkable sight that I saw on the Cape. Probably the brightness of the tints was enhanced by contrast with the sand which surrounded this tract. This was a part of the furniture of Cape Cod. We had for days walked up the long and bleak piazza which runs along her Atlantic side, then over the sanded floor of her halls, and now we were being introduced into her boudoir. The hundred white sails crowding round Long Point into Provincetown Harbor, seen over the painted hills in front, looked like toy ships upon a mantel-piece.

The peculiarity of this autumnal landscape consisted in the lowness and thickness of the shrubbery, no less than in the brightness of the tints. It was like a thick stuff of worsted or a fleece, and looked as if a giant could take it up by the hem, or rather the tasselled fringe which trailed out on the sand, and shake it, though it needed not to be shaken. But no doubt the dust would fly in that case, for not a little has accumulated underneath it. Was it not such an autumnal landscape as this which suggested our high-colored rugs and carpets? Hereafter when I look on a richer rug than usual, and study its figures, I shall think, there are the huckleberry hills, and there the denser swamps of boxberry and blueberry: there the shrub-oak patches and the bayberries, there the maples and the birches and the pines. What other dyes are to be compared to these? They were warmer colors than I had associated with the New England coast.

After threading a swamp full of boxberry, and climbing several hills covered with shrub-oaks, without a path, where shipwrecked men would be in danger of perishing in the night, we came down upon the eastern extremity of the four planks which run the whole length of Provincetown street. This, which is the last town on the Cape, lies mainly in one street along the curving beach fronting the southeast. The sand-hills, covered with shrubbery and interposed with swamps and ponds, rose immediately behind it in the form of a crescent, which is from half a mile to a mile or more wide in the middle, and beyond these is the desert, which is the greater part of its territory,

stretching to the sea on the east and west and north. The town is compactly built in the narrow space, from ten to fifty rods deep, between the harbor and the sand-hills, and contained at that time about twenty-six hundred inhabitants. The houses, in which a more modern and pretending style has at length prevailed over the fisherman's hut, stand on the inner or plank side of the street, and the fish and store houses, with the picturesque-looking windmills of the Salt-works, on the water side. The narrow portion of the beach between, forming the street, about eighteen feet wide, the only one where one carriage could pass another, if there was more than one carriage in the town, looked much "heavier" than any portion of the beach or the desert which we had walked on, it being above the reach of the highest tide, and the sand being kept loose by the occasional passage of a traveller. We learned that the four planks on which we were walking had been bought by the town's share of the Surplus Revenue, the disposition of which was a bone of contention between the inhabitants, till they wisely resolved thus to put it under foot. Yet some, it was said, were so provoked because they did not receive their particular share in money, that they persisted in walking in the sand a long time after the sidewalk was built. This is the only instance which I happen to know in which the surplus revenue proved a blessing to any town. A surplus revenue of dollars from the treasury to stem the greater evil of a surplus revenue of sand from the ocean. They expected to make a hard road by the time these planks were worn out. Indeed, they have already done so since we were there, and have almost forgotten their sandy baptism.

As we passed along we observed the inhabitants engaged in curing either fish or the coarse salt hay which they had brought home and spread on the beach before their doors, looking as yellow as if they had raked it out of the sea. The front-yard plots appeared like what indeed they were, portions of the beach fenced in, with Beach-grass growing in them, as if they were sometimes covered by the tide. You might still pick up shells and pebbles there. There were a few trees among the houses, especially silver abeles, willows, and balm-of-Gileads; and one man showed me a young oak which he had transplanted from behind the town, thinking it an apple-tree. But every man to his trade. Though he had little woodcraft, he was not the less weatherwise, and gave us one piece of information; viz., he had observed that when a thunder-cloud came up with a flood-tide it did not rain. This was the most completely maritime town that we were ever in. It was merely a good harbor, surrounded by land dry, if not firm, — an inhabited beach, whereon fishermen cured and stored their fish, without any back country. When ashore the inhabitants still walk on planks. A few small patches have been reclaimed from the swamps, containing commonly half a dozen square rods only each. We saw one which was fenced with four lengths of rail; also a fence made wholly of hogshead-staves stuck in the ground. These, and such as these, were all the cultivated and cultivable land in Provincetown. We were told that there were thirty or forty acres in all, but we did not discover a quarter part so much, and that was well dusted with sand, and looked as if the desert was claiming it. They are now turning some of their swamps into Cranberry Meadows on quite an extensive scale.

A cranberry meadow

Yet far from being out of the way. Provincetown is directly in the way of the navigator, and he is lucky who does not run afoul of it in the dark. It is situated on one of the highways of commerce, and men from all parts of the globe touch there in the course of a year.

The mackerel fleet had nearly all got in before us, it being Saturday night, excepting that division which had stood down towards Chatham in the morning; and from a hill where we went to see the sun set in the Bay we counted two hundred goodly looking schooners at anchor in the harbor at various distances from the shore, and more were yet coming round the Cape. As each came to anchor, it took in sail and swung round in the wind, and lowered its boat. They belonged chiefly to Wellfleet, Truro, and Cape Ann. This was that city of canvas which we had seen hull down in the horizon. Near at hand, and under bare poles, they were unexpectedly black-looking vessels, [Greek: melaiuai nêes.] A fisherman told us that there were fifteen hundred vessels in the mackerel fleet, and that he had counted three hundred and fifty in Provincetown Harbor at one time. Being obliged to anchor at a considerable distance from the shore on account of the shallowness of the water, they made the impression of a larger fleet than the vessels at the wharves of a large city. As they had been manoeuvring out there all day seemingly for our entertainment, while we were walking north-westward along the Atlantic, so now we found them flocking into Provincetown Harbor at night, just as we arrived, as if to meet us, and exhibit themselves close at hand. Standing by Race Point and Long Point with various speed, they reminded me of fowls coming home to roost.

These were genuine New England vessels. It is stated in the Journal of Moses Prince, a brother of the annalist, under date of 1721, at which time he visited Gloucester, that the first vessel of the class called schooner was built at Gloucester about eight years before, by Andrew Robinson; and late in the same century one Cotton Tufts gives us the tradition with some particulars, which he learned on a visit to the same place. According to the latter, Robinson having constructed a vessel which he masted and rigged in a peculiar manner, on her going off the stocks a bystander cried out, "O, how she scoons!" whereat Robinson replied, "A schooner let her be!" "From which time," says Tufts, "vessels thus masted and rigged have gone by the name of schooners; before which, vessels of this description were not known in Europe." (See Mass. Hist. Coll., Vol. IX., 1st Series, and Vol. I., 4th Series.) Yet I can hardly believe this, for a schooner has always seemed to me — the typical vessel.

According to C. E. Potter of Manchester, New Hampshire, the very word schooner is of New England origin, being from the Indian schoon or scoot, meaning to rush, as Schoodic, from scoot and anke, a place where water rushes. N. B. Somebody of Gloucester was to read a paper on this matter before a genealogical society, in Boston, March 3, 1859, according to the Boston Journal, q. v.

Nearly all who come out must walk on the four planks which I have mentioned, so that you are pretty sure to meet all the inhabitants of Provincetown who come out

in the course of a day, provided you keep out yourself. This evening the planks were crowded with mackerel fishers, to whom we gave and from whom we took the wall, as we returned to our hotel. This hotel was kept by a tailor, his shop on the one side of the door, his hotel on the other, and his day seemed to be divided between carving meat and carving broadcloth.

The next morning, though it was still more cold and blustering than the day before, we took to the Deserts again, for we spent our days wholly out of doors, in the sun when there was any, and in the wind which never failed. After threading the shrubby hill country at the southwest end of the town, west of the Shank-Painter Swamp, whose expressive name — for we understood it at first as a landsman naturally would — gave it importance in our eyes, we crossed the sands to the shore south of Race Point and three miles distant, and thence roamed round eastward through the desert to where we had left the sea the evening before. We travelled five or six miles after we got out there, on a curving line, and might have gone nine or ten, over vast platters of pure sand, from the midst of which we could not see a particle of vegetation, excepting the distant thin fields of Beach-grass, which crowned and made the ridges toward which the sand sloped upward on each side; — all the while in the face of a cutting wind as cold as January; indeed, we experienced no weather so cold as this for nearly two months afterward. This desert extends from the extremity of the Cape, through Provincetown into Truro, and many a time as we were traversing it we were reminded of “Riley’s Narrative” of his captivity in the sands of Arabia, notwithstanding the cold. Our eyes magnified the patches of Beach-grass into cornfields in the horizon, and we probably exaggerated the height of the ridges on account of the mirage. I was pleased to learn afterward, from Kalm’s Travels in North America, that the inhabitants of the Lower St. Lawrence call this grass (*Calamagrostis arenaria*), and also Sea-lyme grass (*Elymus arenarius*), seigle de mer; and he adds, “I have been assured that these plants grow in great plenty in Newfoundland, and on other North American shores; the places covered with them looking, at a distance, like cornfields; which might explain the passage in our northern accounts [he wrote in 1749] of the excellent wine land [Vinland det goda, Translator], which mentions that they had found whole fields of wheat growing wild.”

The Beach-grass is “two to four feet high, of a seagreen color,” and it is said to be widely diffused over the world. In the Hebrides it is used for mats, pack-saddles, bags, hats, etc.; paper has been made of it at Dorchester in this State, and cattle eat it when tender. It has heads somewhat like rye, from six inches to a foot in length, and it is propagated both by roots and seeds. To express its love for sand, some botanists have called it *Psamma arenaria*, which is the Greek for sand, qualified by the Latin for sandy, — or sandy sand. As it is blown about by the wind, while it is held fast by its roots, it describes myriad circles in the sand as accurately as if they were made by compasses.

It was the dreariest scenery imaginable. The only animals which we saw on the sand at that time were spiders, which are to be found almost everywhere whether on snow or ice-water or sand, — and a venomous-looking, long, narrow worm, one of the

myriapods, or thousand-legs. We were surprised to see spider-holes in that flowing sand with an edge as firm as that of a stoned well.

In June this sand was scored with the tracks of turtles both large and small, which had been out in the night, leading to and from the swamps. I was told by a *terroe filius* who has a "farm" on the edge of the desert, and is familiar with the fame of Provincetown, that one man had caught twenty-five snapping-turtles there the previous spring. His own method of catching them was to put a toad on a mackerel-hook and cast it into a pond, tying the line to a stump or stake on shore. Invariably the turtle when hooked crawled up the line to the stump, and was found waiting there by his captor, however long afterward. He also said that minks, muskrats, foxes, coons, and wild mice were found there, but no squirrels. We heard of sea-turtle as large as a barrel being found on the beach and on East Harbor marsh, but whether they were native there, or had been lost out of some vessel, did not appear. Perhaps they were the Salt-water Terrapin, or else the Smooth Terrapin, found thus far north. Many toads were met with where there was nothing but sand and beach-grass. In Truro I had been surprised at the number of large light-colored toads everywhere hopping over the dry and sandy fields, their color corresponding to that of the sand. Snakes also are common on these pure sand beaches, and I have never been so much troubled by mosquitoes as in such localities. At the same season strawberries grew there abundantly in the little hollows on the edge of the desert standing amid the beach-grass in the sand, and the fruit of the shadbush or *Amelanchier*, which the inhabitants call Josh-pears (some think from juicy?), is very abundant on the hills. I fell in with an obliging man who conducted me to the best locality for strawberries. He said that he would not have shown me the place if he had not seen that I was a stranger, and could not anticipate him another year; I therefore feel bound in honor not to reveal it. When we came to a pond, he being the native did the honors and carried me over on his shoulders, like Sindbad. One good turn deserves another, and if he ever comes our way I will do as much for him.

In one place we saw numerous dead tops of trees projecting through the otherwise uninterrupted desert, where, as we afterward learned, thirty or forty years before a flourishing forest had stood, and now, as the trees were laid bare from year to year, the inhabitants cut off their tops for fuel.

We saw nobody that day outside of the town; it was too wintry for such as had seen the Backside before, or for the greater number who never desire to see it, to venture out; and we saw hardly a track to show that any had ever crossed this desert. Yet I was told that some are always out on the Back-side night and day in severe weather, looking for wrecks, in order that they may get the job of discharging the cargo, or the like, — and thus shipwrecked men are succored. But, generally speaking, the inhabitants rarely visit these sands. One who had lived in Provincetown thirty years told me that he had not been through to the north side within that time. Sometimes the natives themselves come near perishing by losing their way in snow-storms behind the town.

The wind was not a Sirocco or Simoon, such as we associate with the desert, but a New England northeaster, — and we sought shelter in vain under the sand-hills, for it blew all about them, rounding them into cones, and was sure to find us out on whichever side we sat. From time to time we lay down and drank at little pools in the sand, filled with pure fresh water, all that was left, probably, of a pond or swamp. The air was filled with dust like snow, and cutting sand which made the face tingle, and we saw what it must be to face it when the weather was drier, and, if possible, windier still, — to face a migrating sand-bar in the air, which has picked up its duds and is off, — to be whipped with a cat, not o' nine-tails, but of a myriad of tails, and each one a sting to it. A Mr. Whitman, a former minister of Wellfleet, used to write to his inland friends that the blowing sand scratched the windows so that he was obliged to have one new pane set every week, that he might see out.

On the edge of the shrubby woods the sand had the appearance of an inundation which was overwhelming them, terminating in an abrupt bank many feet higher than the surface on which they stood, and having partially buried the out-side trees. The moving sand-hills of England, called Dunes or Downs, to which these have been likened, are either formed of sand cast up by the sea, or of sand taken from the land itself in the first place by the wind, and driven still farther inward. It is here a tide of sand impelled by waves and wind, slowly flowing from the sea toward the town. The northeast winds are said to be the strongest, but the northwest to move most sand, because they are the driest. On the shore of the Bay of Biscay many villages were formerly destroyed in this way. Some of the ridges of beach-grass which we saw were planted by government many years ago, to preserve the harbor of Provincetown and the extremity of the Cape. I talked with some who had been employed in the planting. In the "Description of the Eastern Coast," which I have already referred to, it is said: "Beach-grass during the spring and summer grows about two feet and a half. If surrounded by naked beach, the storms of autumn and winter heap up the sand on all sides, and cause it to rise nearly to the top of the plant. In the ensuing spring the grass mounts anew; is again covered with sand in the winter; and thus a hill or ridge continues to ascend as long as there is a sufficient base to support it, or till the circumscribing sand, being also covered with beach-grass, will no longer yield to the force of the winds." Sand-hills formed in this way are sometimes one hundred feet high and of every variety of form, like snow-drifts, or Arab tents, and are continually shifting. The grass roots itself very firmly. When I endeavored to pull it up, it usually broke off ten inches or a foot below the surface, at what had been the surface the year before, as appeared by the numerous offshoots there, it being a straight, hard, round shoot, showing by its length how much the sand had accumulated the last year; and sometimes the dead stubs of a previous season were pulled up with it from still deeper in the sand, with their own more decayed shoot attached, — so that the age of a sand-hill, and its rate of increase for several years, is pretty accurately recorded in this way.

The sand dunes drifting in upon the trees

Old Gerard, the English herbalist, says, p. 1250: "I find mention in Stowe's Chronicle, in Anno 1555, of a certain pulse or pease, as they term it, wherewith the poor people at that time, there being a great dearth, were miraculously helped: he thus mentions it. In the month of August (saith he), in Suffolke, at a place by the sea side all of hard stone and pibble, called in those parts a shelf, lying between the towns of Orford and Aldborough, where neither grew grass nor any earth was ever seen; it chanced in this barren place suddenly to spring up without any tillage or sowing, great abundance of peason, whereof the poor gathered (as men judged) above one hundred quarters, yet remained some ripe and some blossoming, as many as ever there were before: to the which place rode the Bishop of Norwich and the Lord Willoughby, with others in great number, who found nothing but hard, rocky stone the space of three yards under the roots of these peason, which roots were great and long, and very sweet." He tells us also that Gesner learned from Dr. Cajus that there were enough there to supply thousands of men. He goes on to say that "they without doubt grew there many years before, but were not observed till hunger made them take notice of them, and quickened their invention, which commonly in our people is very dull, especially in finding out food of this nature. My worshipful friend Dr. Argent hath told me that many years ago he was in this place, and caused his man to pull among the beach with his hands, and follow the roots so long until he got some equal in length unto his height, yet could come to no ends of them." Gerard never saw them, and is not certain what kind they were.

In Dwight's Travels in New England it is stated that the inhabitants of Truro were formerly regularly warned under the authority of law in the month of April yearly, to plant beachgrass, as elsewhere they are warned to repair the highways. They dug up the grass in bunches, which were afterward divided into several smaller ones, and set about three feet apart, in rows, so arranged as to break joints and obstruct the passage of the wind. It spread itself rapidly, the weight of the seeds when ripe bending the heads of the grass, and so dropping directly by its side and vegetating there. In this way, for instance, they built up again that part of the Cape between Truro and Provincetown where the sea broke over in the last century. They have now a public road near there, made by laying sods, which were full of roots, bottom upward and close together on the sand, double in the middle of the track, then spreading brush evenly over the sand on each side for half a dozen feet, planting beachgrass on the banks in regular rows, as above described, and sticking a fence of brush against the hollows.

The attention of the general government was first attracted to the danger which threatened Cape Cod Harbor from the inroads of the sand, about thirty years ago, and commissioners were at that time appointed by Massachusetts, to examine the premises. They reported in June, 1825, that, owing to "the trees and brush having been cut down, and the beach-grass destroyed on the seaward side of the Cape, opposite the Harbor," the original surface of the ground had been broken up and removed by the wind toward the Harbor, — during the previous fourteen years, — over an extent of "one half a mile in breadth, and about four and a half miles in length." — "The space where a few years

since were some of the highest lands on the Cape, covered with trees and bushes," presenting "an extensive waste of undulating sand"; — and that, during the previous twelve months, the sand "had approached the Harbor an average distance of fifty rods, for an extent of four and a half miles!" and unless some measures were adopted to check its progress, it would in a few years destroy both the harbor and the town. They therefore recommended that beach-grass be set out on a curving line over a space ten rods wide and four and a half miles long, and that cattle, horses, and sheep be prohibited from going abroad, and the inhabitants from cutting the brush.

I was told that about thirty thousand dollars in all had been appropriated to this object, though it was complained that a great part of this was spent foolishly, as the public money is wont to be. Some say that while the government is planting beach-grass behind the town for the protection of the harbor, the inhabitants are rolling the sand into the harbor in wheelbarrows, in order to make house-lots. The Patent-Office has recently imported the seed of this grass from Holland, and distributed it over the country, but probably we have as much as the Hollanders.

Thus Cape Cod is anchored to the heavens, as it were, by a myriad little cables of beach-grass, and, if they should fail, would become a total wreck, and erelong go to the bottom. Formerly, the cows were permitted to go at large, and they ate many strands of the cable by which the Cape is moored, and well-nigh set it adrift, as the bull did the boat which was moored with a grass rope; but now they are not permitted to wander.

A portion of Truro which has considerable taxable property on it has lately been added to Provincetown, and I was told by a Truro man that his townsmen talked of petitioning the legislature to set off the next mile of their territory also to Provincetown, in order that she might have her share of the lean as well as the fat, and take care of the road through it; for its whole value is literally to hold the Cape together, and even this it has not always done. But Provincetown strenuously declines the gift.

The wind blowed so hard from the northeast that, cold as it was, we resolved to see the breakers on the Atlantic side, whose din we had heard all the morning; so we kept on eastward through the Desert, till we struck the shore again northeast of Provincetown, and exposed ourselves to the full force of the piercing blast. There are extensive shoals there over which the sea broke with great force. For half a mile from the shore it was one mass of white breakers, which, with the wind, made such a din that we could hardly hear ourselves speak. Of this part of the coast it is said: "A northeast storm, the most violent and fatal to seamen, as it is frequently accompanied with snow, blows directly on the land: a strong current sets along the shore; add to which that ships, during the operation of such a storm, endeavor to work northward, that they may get into the bay. Should they be unable to weather Race Point, the wind drives them on the shore, and a shipwreck is inevitable. Accordingly, the strand is everywhere covered with the fragments of vessels." But since the Highland Light was erected, this part of the coast is less dangerous, and it is said that more shipwrecks occur south of that light, where they were scarcely known before.

The white breakers on the Atlantic side

This was the stormiest sea that we witnessed, — more tumultuous, my companion affirmed, than the rapids of Niagara, and, of course, on a far greater scale. It was the ocean in a gale, a clear, cold day, with only one sail in sight, which labored much, as if it were anxiously seeking a harbor. It was high tide when we reached the shore, and in one place, for a considerable distance, each wave dashed up so high that it was difficult to pass between it and the bank. Further south, where the bank was higher, it would have been dangerous to attempt it. A native of the Cape has told me that, many years ago, three boys, his playmates, having gone to this beach in Wellfleet to visit a wreck, when the sea receded ran down to the wreck, and when it came in ran before it to the bank, but the sea following fast at their heels, caused the bank to cave and bury them alive.

It was the roaring sea, [Greek: thalassa êchêessa, —  
amphi de t akrai

Êiones booôsin, erenomenês alos exô.]

And the summits of the bank

Around resound, the sea being vomited forth.

As we stood looking on this scene we were gradually convinced that fishing here and in a pond were not, in all respects, the same, and that he who waits for fair weather and a calm sea may never see the glancing skin of a mackerel, and get no nearer to a cod than the wooden emblem in the State House.

Having lingered on the shore till we were well-nigh chilled to death by the wind, and were ready to take shelter in a Charity-house, we turned our weather-beaten faces toward Provincetown and the Bay again, having now more than doubled the Cape.

I. e. a vessel.

The sea, which is arched over its sandy bottom like a heaven.

Battle.

## X. PROVINCETOWN

Early the next morning I walked into a fish-house near our hotel, where three or four men were engaged in trundling out the pickled fish on barrows, and spreading them to dry. They told me that a vessel had lately come in from the Banks with forty-four thousand codfish. Timothy Dwight says that, just before he arrived at Provincetown, “a schooner come in from the Great Bank with fifty-six thousand fish, almost one thousand five hundred quintals, taken in a single voyage; the main deck being, on her return, eight inches under water in calm weather.” The cod in this fish-house, just out of the pickle, lay packed several feet deep, and three or four men stood on them in cowhide boots, pitching them on to the barrows with an instrument which had a single iron point. One young man, who chewed tobacco, spat on the fish repeatedly. Well, sir, thought I, when that older man sees you he will speak to you. But presently I saw the

older man do the same thing. It reminded me of the figs of Smyrna. "How long does it take to cure these fish? I asked.

"Two good drying days, sir," was the answer.

I walked across the street again into the hotel to breakfast, and mine host inquired if I would take "hashed fish or beans." I took beans, though they never were a favorite dish of mine. I found next summer that this was still the only alternative proposed here, and the landlord was still ringing the changes on these two words. In the former dish there was a remarkable proportion of fish. As you travel inland the potato predominates. It chanced that I did not taste fresh fish of any kind on the Cape, and I was assured that they were not so much used there as in the country. That is where they are cured, and where, sometimes, travellers are cured of eating them. No fresh meat was slaughtered in Provincetown, but the little that was used at the public houses was brought from Boston by the steamer.

In Provincetown harbor

A great many of the houses here were surrounded by fish-flakes close up to the sills on all sides, with only a narrow passage two or three feet wide, to the front door; so that instead of looking out into a flower or grass plot, you looked on to so many square rods of cod turned wrong side outwards. These parterres were said to be least like a flower-garden in a good drying day in mid-summer. There were flakes of every age and pattern, and some so rusty and overgrown with lichens that they looked as if they might have served the founders of the fishery here. Some had broken down under the weight of successive harvests. The principal employment of the inhabitants at this time seemed to be to trundle out their fish and spread them in the morning, and bring them in at night. I saw how many a loafer who chanced to be out early enough got a job at wheeling out the fish of his neighbor who was anxious to improve the whole of a fair day. Now, then, I knew where salt fish were caught. They were everywhere lying on their backs, their collar-bones standing out like the lapels of a man-o'-war-man's jacket, and inviting all things to come and rest in their bosoms; and all things, with a few exceptions, accepted the invitation. I think, by the way, that if you should wrap a large salt fish round a small boy, he would have a coat of such a fashion as I have seen many a one wear to muster. Salt fish were stacked up on the wharves, looking like corded wood, maple and yellow birch with the bark left on. I mistook them for this at first, and such in one sense they were, — fuel to maintain our vital fires, — an eastern wood which grew on the Grand Banks. Some were stacked in the form of huge flower-pots, being laid in small circles with the tails outwards, each circle successively larger than the preceding until the pile was three or four feet high, when the circles rapidly diminished, so as to form a conical roof. On the shores of New Brunswick this is covered with birch-bark, and stones are placed upon it, and being thus rendered impervious to the rain, it is left to season before being packed for exportation.

It is rumored that in the fall the cows here are sometimes fed on cod's-heads! The godlike part of the cod, which, like the human head, is curiously and wonderfully made, forsooth has but little less brain in it, — coming; to such an end I to be craunched by

cows I I felt my own skull crack from sympathy. What if the heads of men were to be cut off to feed the cows of a superior order of beings who inhabit the islands in the ether? Away goes your fine brain, the house of thought and instinct, to swell the cud of a ruminant animal! — However, an inhabitant assured me that they did not make a practice of feeding cows on cod's-heads; the cows merely would eat them sometimes; but I might live there all my days and never see it done. A cow wanting salt would also sometimes lick out all the soft part of a cod on the flakes. This he would have me believe was the foundation of this fish-story.

It has been a constant traveller's tale and perhaps slander, now for thousands of years, the Latins and Greeks have repeated it, that this or that nation feeds its cattle, or horses, or sheep, on fish, as may be seen in Oelian and Pliny, but in the Journal of Nearchus, who was Alexander's admiral, and made a voyage from the Indus to the Euphrates three hundred and twenty-six years before Christ, it is said that the inhabitants of a portion of the intermediate coast, whom he called Ichthyophagi or Fish-eaters, not only ate fishes raw and also dried and pounded in a whale's vertebra for a mortar and made into a paste, but gave them to their cattle, there being no grass on the coast; and several modern travellers — Braybosa, Niebuhr, and others — make the same report. Therefore in balancing the evidence I am still in doubt about the Provincetown cows. As for other domestic animals. Captain King in his continuation of Captain Cook's Journal in 1779, says of the dogs of Kamtschatka, "Their food in the winter consists entirely of the heads, entrail, and backbones of salmon, which are put aside and dried for that purpose; and with this diet they are fed but sparingly." (Cook's Journal, Vol. VII., p. 315.)

As we are treating of fishy matters, let me insert what Pliny says, that "the commanders of the fleets of Alexander the Great have related that the Gedrosi, who dwell on the banks of the river Arabis, are in the habit of making the doors of their houses with the jaw-bones of fishes, and raftering the roofs with their bones." Strabo tells the same of the Ichthyophagi. "Hardouin remarks that the Basques of his day were in the habit of fencing their gardens with the ribs of the whale, which sometimes exceeded twenty feet in length; and Cuvier says that at the present time the jaw-bone of the whale is used in Norway for the purpose of making beams or posts for buildings." (Bohn's ed., trans, of Pliny, Vol. II., p. 361.) Herodotus says the inhabitants on Lake Prasias in Thrace (living on piles) "give fish for fodder to their horses and beasts of burden."

Provincetown was apparently what is called a flourishing town. Some of the inhabitants asked me if I did not think that they appeared to be well off generally. I said that I did, and asked how many there were in the almshouse. "O, only one or two, infirm or idiotic," answered they. The outward aspect of the houses and shops frequently suggested a poverty which their interior comfort and even richness disproved. You might meet a lady daintily dressed in the Sabbath morning, wading in among the sandhills, from church, where there appeared no house fit to receive her, yet no doubt the interior of the house answered to the exterior of the lady. As for the interior of the inhabitants I am still in the dark about it. I had a little intercourse with some whom I met in the

street, and was often agreeably disappointed by discovering the intelligence of rough, and what would be considered unpromising specimens. Nay, I ventured to call on one citizen the next summer, by special invitation. I found him sitting in his front doorway, that Sabbath evening, prepared for me to come in unto him; but unfortunately for his reputation for keeping open house, there was stretched across his gateway a circular cobweb of the largest kind and quite entire. This looked so ominous that I actually turned aside and went in the back way.

This Monday morning was beautifully mild and calm, both on land and water, promising us a smooth passage across the Bay, and the fishermen feared that it would not be so good a drying day as the cold and windy one which preceded it. There could hardly have been a greater contrast. This was the first of the Indian summer days, though at a late hour in the morning we found the wells in the sand behind the town still covered with ice, which had formed in the night. What with wind and sun my most prominent feature fairly cast its slough. But I assure you it will take more than two good drying days to cure me of rambling. After making an excursion among the hills in the neighborhood of the Shank-Painter Swamp, and getting a little work done in its line, we took our seat upon the highest sand-hill overlooking the town, in mid-air, on a long plank stretched across between two hillocks of sand, where some boys were endeavoring in vain to fly their kite; and there we remained the rest of that forenoon looking out over the placid harbor, and watching for the first appearance of the steamer from Wellfleet, that we might be in readiness to go on board when we heard the whistle off Long Point.

We got what we could out of the boys in the meanwhile. Provincetown boys are of course all sailors and have sailors' eyes. When we were at the Highland Light the last summer, seven or eight miles from Provincetown Harbor, and wished to know one Sunday morning if the *Olata*, a well-known yacht, had got in from Boston, so that we could return in her, a Provincetown boy about ten years old, who chanced to be at the table, remarked that she had. I asked him how he knew. "I just saw her come in," said he. When I expressed surprise that he could distinguish her from other vessels so far, he said that there were not so many of those two-topsail schooners about but that he could tell her. Palfrey said, in his oration at Barnstable, the duck does not take to the water with a surer instinct than the Barnstable boy. [He might have said the Cape Cod boy as well.] He leaps from his leading-strings into the shrouds, it is but a bound from the mother's lap to the masthead. He boxes the compass in his infant soliloquies. He can hand, reef, and steer by the time he flies a kite.

This was the very day one would have chosen to sit upon a hill overlooking sea and land, and muse there. The mackerel fleet was rapidly taking its departure, one schooner after another, and standing round the Cape, like fowls leaving their roosts in the morning to disperse themselves in distant fields. The turtle-like sheds of the salt-works were crowded into every nook in the hills, immediately behind the town, and their now idle windmills lined the shore. It was worth the while to see by what coarse and simple chemistry this almost necessary of life is obtained, with the sun

for journeyman, and a single apprentice to do the chores for a large establishment. It is a sort of tropical labor, pursued too in the sunniest season; more interesting than gold or diamond-washing, which, I fancy, it somewhat resembles at a distance. In the production of the necessaries of life Nature is ready enough to assist man. So at the potash works which I have seen at Hull, where they burn the stems of the kelp and boil the ashes. Verily, chemistry is not a splitting of hairs when you have got half a dozen raw Irishmen in the laboratory. It is said, that owing to the reflection of the sun from the sand-hills, and there being absolutely no fresh water emptying into the harbor, the same number of superficial feet yields more salt here than in any other part of the county. A little rain is considered necessary to clear the air, and make salt fast and good, for as paint does not dry, so water does not evaporate in dog-day weather. But they were now, as elsewhere on the Cape, breaking up their salt-works and selling them for lumber.

From that elevation we could overlook the operations of the inhabitants almost as completely as if the roofs had been taken off. They were busily covering the wicker-worked flakes about their houses with salted fish, and we now saw that the back yards were improved for this purpose as much as the front; where one man's fish ended another's began. In almost every yard we detected some little building from which these treasures were being trundled forth and systematically spread, and we saw that there was an art as well as a knack even in spreading fish, and that a division of labor was profitably practised. One man was withdrawing his fishes a few inches beyond the nose of his neighbor's cow which had stretched her neck over a paling to get at them. It seemed a quite domestic employment, like drying clothes, and indeed in some parts of the county the women take part in it.

I noticed in several places on the Cape a sort of clothes-flakes. They spread brush on the ground, and fence it round, and then lay their clothes on it, to keep them from the sand. This is a Cape Cod clothes-yard.

The sand is the great enemy here. The tops of some of the hills were enclosed and a board put up, forbidding all persons entering the enclosure, lest their feet should disturb the sand, and set it a-blowing or a-sliding. The inhabitants are obliged to get leave from the authorities to cut wood behind the town for fish-flakes, bean-poles, pea-brush, and the like, though, as we were told, they may transplant trees from one part of the township to another without leave. The sand drifts like snow, and sometimes the lower story of a house is concealed by it, though it is kept off by a wall. The houses were formerly built on piles, in order that the driving sand might pass under them. We saw a few old ones here still standing on their piles, but they were boarded up now, being protected by their younger neighbors. There was a school-house, just under the hill on which we sat, filled with sand up to the tops of the desks, and of course the master and scholars had fled. Perhaps they had imprudently left the windows open one day, or neglected to mend a broken pane. Yet in one place was advertised "Fine sand for sale here," — I could hardly believe my eyes, — probably some of the street sifted, — a good instance of the fact that a man confers a value on the most worthless

thing by mixing himself with it, according to which rule we must have conferred a value on the whole back-side of Cape Cod; — but I thought that if they could have advertised “Fat Soil,” or perhaps “Fine sand got rid of,” ay, and “Shoes emptied here,” it would have been more alluring. As we looked down on the town, I thought that I saw one man, who probably lived beyond the extremity of the planking, steering and tacking for it in a sort of snow-shoes, but I may have been mistaken. In some pictures of Provincetown the persons of the inhabitants are not drawn below the ankles, so much being supposed to be buried in the sand. Nevertheless, natives of Provincetown assured me that they could walk in the middle of the road without trouble even in slippers, for they had learned how to put their feet down and lift them up without taking in any sand. One man said that he should be surprised if he found half a dozen grains of sand in his pumps at night, and stated, moreover, that the young ladies had a dexterous way of emptying their shoes at each step, which it would take a stranger a long time to learn. The tires of the stage-wheels were about five inches wide; and the wagon-tires generally on the Cape are an inch or two wider, as the sand is an inch or two deeper than elsewhere. I saw a baby’s wagon with tires six inches wide to keep it near the surface. The more tired the wheels, the less tired the horses. Yet all the time that we were in Provincetown, which was two days and nights, we saw only one horse and cart, and they were conveying a coffin. They did not try such experiments there on common occasions. The next summer I saw only the two-wheeled horse-cart which conveyed me thirty rods into the harbor on my way to the steamer. Yet we read that there were two horses and two yoke of oxen here in 1791, and we were told that there were several more when we were there, beside the stage team. In Barber’s Historical Collections, it is said, “So rarely are wheel-carriages seen in the place that they are a matter of some curiosity to the younger part of the community. A lad who understood navigating the ocean much better than land travel, on seeing a man driving a wagon in the street, expressed his surprise at his being able to drive so straight without the assistance of a rudder.” There was no rattle of carts, and there would have been no rattle if there had been any carts. Some saddle-horses that passed the hotel in the evening merely made the sand fly with a rustling sound like a writer sanding his paper copiously, but there was no sound of their tread. No doubt there are more horses and carts there at present, A sleigh is never seen, or at least is a great novelty on the Cape, the snow being either absorbed by the sand or blown into drifts.

Nevertheless, the inhabitants of the Cape generally do not complain of their “soil,” but will tell you that it is good enough for them to dry their fish on.

Notwithstanding all this sand, we counted three meeting-houses, and four school-houses nearly as large, on this street, though some had a tight board fence about them to preserve the plot within level and hard. Similar fences, even within a foot of many of the houses, gave the town a less cheerful and hospitable appearance than it would otherwise have had. They told us that, on the whole, the sand had made no progress for the last ten years, the cows being no longer permitted to go at large, and every means being taken to stop the sandy tide.

In 1727 Provincetown was "invested with peculiar privileges." for its encouragement. Once or twice it was nearly abandoned; but now lots on the street fetch a high price, though titles to them were first obtained by possession and improvement, and they are still transferred by quitclaim deeds merely, the township being the property of the State. But though lots were so valuable on the street, you might in many places throw a stone over them to where a man could still obtain land, or sand, by squatting on or improving it.

Provincetown — A bit of the village from the wharf

Stones are very rare on the Cape. I saw a very few small stones used for pavements and for bank walls, in one or two places in my walk, but they are so scarce that, as I was informed, vessels have been forbidden to take them from the beach for ballast, and therefore their crews used to land at night and steal them. I did not hear of a rod of regular stone wall below Orleans. Yet I saw one man underpinning a new house in Eastham with some "rocks," as he called them, which he said a neighbor had collected with great pains in the course of years, and finally made over to him. This I thought was a gift worthy of being recorded, — equal to a transfer of California "rocks," almost. Another man who was assisting him, and who seemed to be a close observer of nature, hinted to me the locality of a rock in that neighborhood which was "forty-two paces in circumference and fifteen feet high," for he saw that I was a stranger, and, probably, would not carry it off. Yet I suspect that the locality of the few large rocks on the forearm of the Cape is well known to the inhabitants generally. I even met with one man who had got a smattering of mineralogy, but where he picked it up I could not guess. I thought that he would meet with some interesting geological nuts for him to crack, if he should ever visit the mainland, Cohasset, or Marblehead for instance.

The well stones at the Highland Light were brought from Hingham, but the wells and cellars of the Cape are generally built of brick, which also are imported. The cellars, as well as the wells, are made in a circular form, to prevent the sand from pressing in the wall. The former are only from nine to twelve feet in diameter, and are said to be very cheap, since a single tier of brick will suffice for a cellar of even larger dimensions. Of course, if you live in the sand, you will not require a large cellar to hold your roots. In Provincetown, when formerly they suffered the sand to drive under their houses, obliterating all rudiments of a cellar, they did not raise a vegetable to put into one. One farmer in Wellfleet, who raised fifty bushels of potatoes, showed me his cellar under a corner of his house, not more than nine feet in diameter, looking like a cistern: but he had another of the same size under his barn.

You need dig only a few feet almost anywhere near the shore of the Cape to find fresh water. But that which we tasted was invariably poor. though the inhabitants called it good, as if they were comparing it with salt water. In the account of Truro, it is said. "Wells dug near the shore are dry at low water, or rather at what is called young flood, but are replenished with the flowing of the tide," — the salt water, which is lowest in the sand, apparently forcing the fresh up. When you express your surprise at the greenness of a Provincetown garden on the beach, in a dry season, they will

sometimes tell you that the tide forces the moisture up to them. It is an interesting fact that low sand-bars in the midst of the ocean, perhaps even those which are laid bare only at low tide, are reservoirs of fresh water at which the thirsty mariner can supply himself. They appear, like huge sponges, to hold the rain and dew which fall on them, and which, by capillary attraction, are prevented from mingling with the surrounding brine.

The Harbor of Provincetown — which, as well as the greater part of the Bay, and a wide expanse of ocean, we overlooked from our perch — is deservedly famous. It opens to the south, is free from rocks, and is never frozen over. It is said that the only ice seen in it drifts in sometimes from Barnstable or Plymouth. Dwight remarks that “The storms which prevail on the American coast generally come from the east; and there is no other harbor on a windward shore within two hundred miles.” J. D. Graham, who has made a very minute and thorough survey of this harbor and the adjacent waters, states that “its capacity, depth of water, excellent anchorage, and the complete shelter it affords from all winds, combine to render it one of the most valuable ship harbors on our coast.” It is the harbor of the Cape and of the fishermen of Massachusetts generally. It was known to navigators several years at least before the settlement of Plymouth. In Captain John Smith’s map of New England, dated 1614, it bears the name of Milford Haven, and Massachusetts Bay that of Stuard’s Bay. His Highness, Prince Charles, changed the name of Cape Cod to Cape James; but even princes have not always power to change a name for the worse, and as Cotton Mather said, Cape Cod is “a name which I suppose it will never lose till shoals of codfish be seen swimming on its highest hills.”

Many an early voyager was unexpectedly caught by this hook, and found himself embayed. On successive maps, Cape Cod appears sprinkled over with French, Dutch, and English names, as it made part of New France, New Holland, and New England. On one map Provincetown Harbor is called “Fuic (bownet?) Bay,” Barnstable Bay “Staten Bay,” and the sea north of it “Mare del Noort,” or the North Sea. On another, the extremity of the Cape is called “Staten Hoeck,” or the States Hook. On another, by Young, this has Noord Zee, Staten hoeck or Hit hoeck, but the copy at Cambridge has no date; the whole Cape is called “Niew Hollant,” (after Hudson); and on another still, the shore between Race Point and Wood End appears to be called “Bevechier.” In Champlain’s admirable Map of New France, including the oldest recognizable map of what is now the New England coast with which I am acquainted, Cape Cod is called C. Blan (i.e. Cape White), from the color of its sands, and Massachusetts Bay is Baye Blanche. It was visited by De Monts and Champlain in 1605, and the next year was further explored by Poitricourt and Champlain. The latter has given a particular account of these explorations in his “Voyages,” together with separate charts and soundings of two of its harbors, — Malle Barre, the Bad Bar (Nauset Harbor?), a name now applied to what the French called Cap Baturier; and Port Fortune, apparently Chatham Harbor. Both these names are copied on the map of “Novi Belgii,” in Ogilvy’s America. He also describes minutely the manners and customs of the savages,

and represents by a plate the savages surprising the French and killing five or six of them. The French afterward killed some of the natives, and wished, by way of revenge, to carry off some and make them grind in their hand-mill at Port Royal.

It is remarkable that there is not in English any adequate or correct account of the French exploration of what is now the coast of New England, between 1604 and 1608, though it is conceded that they then made the first permanent European settlement on the continent of North America north of St. Augustine. If the lions had been the painters it would have been otherwise. This omission is probably to be accounted for partly by the fact that the early edition of Champlain's "Voyages" had not been consulted for this purpose. This contains by far the most particular, and, I think, the most interesting chapter of what we may call the Ante-Pilgrim history of New England, extending to one hundred and sixty pages quarto; but appears to be unknown equally to the historian and the orator on Plymouth Rock. Bancroft does not mention Champlain at all among the authorities for De Monts's expedition, nor does he say that he ever visited the coast of New England. Though he bore the title of pilot to De Monts, he was, in another sense, the leading spirit, as well as the historian of the expedition. Holmes, Hildreth, and Barry, and apparently all our historians who mention Champlain, refer to the edition of 1632, in which all the separate charts of our harbors, etc., and about one-half the narrative, are omitted; for the author explored so many lands afterward that he could afford to forget a part of what he had done. Hildreth, speaking of De Monts's expedition, says that "he looked into the Penobscot [in 1605], which Pring had discovered two years before," saying nothing about Champlain's extensive exploration of it for De Monts in 1604 (Holmes says 1608, and refers to Purchas); also that he followed in the track of Pring along the coast "to Cape Cod, which he called Malabarre." (Haliburton had made the same statement before him in 1829. He called it Cap Blanc, and Malle Barre (the Bad Bar) was the name given to a harbor on the east side of the Cape). Pring says nothing about a river there. Belknap says that Weymouth discovered it in 1605. Sir F. Gorges, says, in his narration (Maine Hist. Coll., Vol. II., p. 19), 1658, that Pring in 1606 "made a perfect discovery of all the rivers and harbors." This is the most I can find. Bancroft makes Champlain to have discovered more western rivers in Maine, not naming the Penobscot; he, however, must have been the discoverer of distances on this river (see Belknap, p. 147). Pring was absent from England only about six months, and sailed by this part of Cape Cod (Malabarre) because it yielded no sassafras, while the French, who probably had not heard of Pring, were patiently for years exploring the coast in search of a place of settlement, sounding and surveying its harbors.

John Smith's map, published in 1616, from observations in 1614-15, is by many regarded as the oldest map of New England. It is the first that was made after this country was called New England, for he so called it; but in Champlain's "Voyages," edition 1613 (and Lescarbot, in 1612, quotes a still earlier account of his voyage), there is a map of it made when it was known to Christendom as New France, called *Carte Géographique de la Nouvelle Franse faitte par le Sieur de Champlain Saint Tongois*

Cappitaine ordinaire pour le roi en la Marine, — fait l'en 1612, from his observations between 1604 and 1607; a map extending from Labrador to Cape Cod and westward to the Great Lakes, and crowded with information, geographical, ethnographical, zoölogical, and botanical. He even gives the variation of the compass as observed by himself at that date on many parts of the coast. This, taken together with the many separate charts of harbors and their soundings on a large scale, which this volume contains, — among the rest. Qui ni be quy (Kennebec), Chouacoit R. (Saco R.), Le Beau port, Port St. Louis (near Cape Ann), and others on our coast, — but which are not in the edition of 1632, makes this a completer map of the New England and adjacent northern coast than was made for half a century afterward, almost, we might be allowed to say, till another Frenchman, Des Barres, made another for us, which only our late Coast Survey has superseded. Most of the maps of this coast made for a long time after betray their indebtedness to Champlain. He was a skilful navigator, a man of science, and geographer to the King of France. He crossed the Atlantic about twenty times, and made nothing of it; often in a small vessel in which few would dare to go to sea today; and on one occasion making the voyage from Tadoussac to St. Malo in eighteen days. He was in this neighborhood, that is, between Annapolis, Nova Scotia, and Cape Cod, observing the land and its inhabitants, and making a map of the coast, from May, 1604, to September, 1607, or about three and a half years, and he has described minutely his method of surveying harbors. By his own account, a part of his map was engraved in 1604 (?). When Pont-Grave and others returned to France in 1606, he remained at Port Royal with Poitricourt, "in order," says he, "by the aid of God, to finish the chart of the coasts which I had begun"; and again in his volume, printed before John Smith visited this part of America, he says: "It seems to me that I have done my duty as far as I could, if I have not forgotten to put in my said chart whatever I saw, and give a particular knowledge to the public of what had never been described nor discovered so particularly as I have done it, although some other may have heretofore written of it; but it was a very small affair in comparison with what we have discovered within the last ten years."

It is not generally remembered, if known, by the descendants of the Pilgrims, that when their forefathers were spending their first memorable winter in the New World, they had for neighbors a colony of French no further off than Port Royal (Annapolis, Nova Scotia), three hundred miles distant (Prince seems to make it about five hundred miles); where, in spite of many vicissitudes, they had been for fifteen years. They built a grist-mill there as early as 1606; also made bricks and turpentine on a stream, Williamson says, in 1606. De Monts, who was a Protestant, brought his minister with him, who came to blows with the Catholic priest on the subject of religion. Though these founders of Acadie endured no less than the Pilgrims, and about the same proportion of them — thirty-five out of seventy-nine (Williamson's Maine says thirty-six out of seventy) — died the first winter at St. Croix, 1604-5, sixteen years earlier, no orator, to my knowledge, has ever celebrated their enterprise (Williamson's History of Maine does considerably), while the trials which their successors and descendants

endured at the hands of the English have furnished a theme for both the historian and poet. (See Bancroft's *History* and Longfellow's *Evangeline*.) The remains at their fort at St. Croix were discovered at the end of the last century, and helped decide where the true St. Croix, our boundary, was.

The very gravestones of those Frenchmen are probably older than the oldest English monument in New England north of the Elizabeth Islands, or perhaps anywhere in New England, for if there are any traces of Gosnold's storehouse left, his strong works are gone. Bancroft says, advisedly, in 1834, "It requires a believing eye to discern the ruins of the fort"; and that there were no ruins of a fort in 1837. Dr. Charles T. Jackson tells me that, in the course of a geological survey in 1827, he discovered a gravestone, a slab of trap rock, on Goat Island, opposite Annapolis (Port Royal), in Nova Scotia, bearing a Masonic coat-of-arms and the date 1606, which is fourteen years earlier than the landing of the Pilgrims. This was left in the possession of Judge Haliburton, of Nova Scotia.

There were Jesuit priests in what has since been called New England, converting the savages at Mount Desert, then St. Savior, in 1613, — having come over to Port Royal in 1611, though they were almost immediately interrupted by the English, years before the Pilgrims came hither to enjoy their own religion. This according to Champlain. Charlevoix says the same; and after coming from France in 1611, went west from Port Royal along the coast as far as the Kennebec in 1612, and was often carried from Port Royal to Mount Desert.

Indeed, the Englishman's history of New England commences only when it ceases to be New France. Though Cabot was the first to discover the continent of North America, Champlain, in the edition of his "Voyages" printed in 1632, after the English had for a season got possession of Quebec and Port Royal, complains with no little justice: "The common consent of all Europe is to represent New France as extending at least to the thirty-fifth and thirty-sixth degrees of latitude, as appears by the maps of the world printed in Spain, Italy, Holland, Flanders, Germany, and England, until they possessed themselves of the coasts of New France, where are Acadie, the Etchemins (Maine and New Brunswick), the Almouchicoids (Massachusetts?), and the Great River St. Lawrence, where they have imposed, according to their fancy, such names as New England, Scotland, and others; but it is not easy to efface the memory of a thing which is known to all Christendom."

That Cabot merely landed on the uninhabitable shore of Labrador, gave the English no just title to New England, or to the United States, generally, any more than to Patagonia. His careful biographer (Biddle) is not certain in what voyage he ran down the coast of the United States as is reported, and no one tells us what he saw. Miller, in the *New York Hist. Coll.*, Vol. I., p. 28, says he does not appear to have landed anywhere. Contrast with this Verrazzani's tarrying fifteen days at one place on the New England coast, and making frequent excursions into the interior thence. It chanced that the latter's letter to Francis I., in 1524, contains "the earliest original account extant of the Atlantic coast of the United States"; and even from that time the northern part

of it began to be called La Terra Francese, or French Land. A part of it was called New Holland before it was called New England. The English were very back-ward to explore and settle the continent which they had stumbled upon. The French preceded them both in their attempts to colonize the continent of North America (Carolina and Florida, 1562-4), and in their first permanent settlement (Port Royal, 1605); and the right of possession, naturally enough, was the one which England mainly respected and recognized in the case of Spain, of Portugal, and also of France, from the time of Henry VII.

The explorations of the French gave to the world the first valuable maps of these coasts. Denys of Honfleur made a map of the Gulf of St. Lawrence in 1506. No sooner had Cartier explored the St. Lawrence, in 1535, than there began to be published by his countrymen remarkably accurate charts of that river as far up as Montreal. It is almost all of the continent north of Florida that you recognize on charts for more than a generation afterward, — though Verrazzani's rude plot (made under French auspices) was regarded by Hackluyt, more than fifty years after his voyage (in 1524), as the most accurate representation of our coast. The French trail is distinct. They went measuring and sounding, and when they got home had something to show for their voyages and explorations. There was no danger of their charts being lost, as Cabot's have been.

The most distinguished navigators of that day were Italians, or of Italian descent, and Portuguese. The French and Spaniards, though less advanced in the science of navigation than the former, possessed more imagination and spirit of adventure than the English, and were better fitted to be the explorers of a new continent even as late as 1751.

This spirit it was which so early carried the French to the Great Lakes and the Mississippi on the north, and the Spaniard to the same river on the south. It was long before our frontiers reached their settlements in the west, and a voyageur or coureur de bois is still our conductor there. Prairie is a French word, as Sierra is a Spanish one. Augustine in Florida, and Santa Fe in New Mexico, both built by the Spaniards, are considered the oldest towns in the United States. Within the memory of the oldest man, the Anglo-Americans were confined between the Appalachian Mountains and the sea, "a space not two hundred miles broad," while the Mississippi was by treaty the eastern boundary of New France. (See the pamphlet on settling the Ohio, London, 1763, bound up with the travels of Sir John Bartram.) So far as inland discovery was concerned, the adventurous spirit of the English was that of sailors who land but for a day, and their enterprise the enterprise of traders. Cabot spoke like an Englishman, as he was, if he said, as one reports, in reference to the discovery of the American Continent, when he found it running toward the north, that it was a great disappointment to him, being in his way to India; but we would rather add to than detract from the fame of so great a discoverer.

Samuel Penhallow, in his history (Boston, 1726), p. 51, speaking of "Port Royal and Nova Scotia," says of the last that its "first seizure was by Sir Sebastian Cobbet for the crown of Great Britain, in the reign of King Henry VII.; but lay dormant till the

year 1621," when Sir William Alexander got a patent of it, and possessed it some years; and afterward Sir David Kirk was proprietor of it, but ere long, "to the surprise of all thinking men, it was given up unto the French."

Even as late as 1633 we find Winthrop, the first Governor of the Massachusetts Colony, who was not the most likely to be misinformed, who, moreover, has the fame, at least, of having discovered Wachusett Mountain (discerned it forty miles inland), talking about the "Great Lake" and the "hideous swamps about it," near which the Connecticut and the "Potomack" took their rise; and among the memorable events of the year 1642 he chronicles Darby Field, an Irishman's expedition to the "White hill," from whose top he saw eastward what he "judged to be the Gulf of Canada," and westward what he "judged to be the great lake which Canada River comes out of," and where he found much "Muscovy glass," and "could rive out pieces of forty feet long and seven or eight broad." While the very inhabitants of New England were thus fabling about the country a hundred miles inland, which was a terra incognita to them, — or rather many years before the earliest date referred to, — Champlain, the first Governor of Canada, not to mention the inland discoveries of Cartier, Roberval, and others, of the preceding century, and his own earlier voyage, had already gone to war against the Iroquois in their forest forts, and penetrated to the Great Lakes and wintered there, before a Pilgrim had heard of New England.

In Champlain's "Voyages," printed in 1613, there is a plate representing a fight in which he aided the Canada Indians against the Iroquois, near the south end of Lake Champlain, in July, 1609, eleven years before the settlement of Plymouth. Bancroft says he joined the Algonquins in an expedition against the Iroquois, or Five Nations, in the northwest of New York. This is that "Great Lake," which the English, hearing some rumor of from the French, long after, locate in an "Imaginary Province called Laconia, and spent several years about 1630 in the vain attempt to discover." (Sir Ferdinand Gorges, in *Maine Hist. Coll.*, Vol. II., p. 68.) Thomas Morton has a chapter on this "Great Lake." In the edition of Champlain's map dated 1632, the Falls of Niagara appear; and in a great lake northwest of Mer Douce (Lake Huron) there is an island represented, over which is written, "Isle ou il y a une mine de cuivre,"— "Island where there is a mine of copper." This will do for an offset to our Governor's "Muscovy Glass." Of all these adventures and discoveries we have a minute and faithful account, giving facts and dates as well as charts and soundings, all scientific and Frenchman-like, with scarcely one fable or traveller's story.

Probably Cape Cod was visited by Europeans long before the seventeenth century. It may be that Cabot himself beheld it. Verrazzani, in 1524, according to his own account, spent fifteen days on our coast, in latitude 41 degrees 40 minutes (some suppose in the harbor of Newport), and often went five or six leagues into the interior there, and he says that he sailed thence at once one hundred and fifty leagues northeasterly, always in sight of the coast. There is a chart in Hackluyt's "Divers Voyages," made according to Verrazzani's plot, which last is praised for its accuracy by Hackluyt, but I cannot

distinguish Cape Cod on it, unless it is the "C. Arenas," which is in the right latitude, though ten degrees west of "Claudia," which is thought to be Block Island.

The "Biographic Universelle" informs us that "An ancient manuscript chart drawn in 1529 by Diego Ribeiro, a Spanish cosmographer, has preserved the memory of the voyage of Gomez [a Portuguese sent out by Charles the Fifth]. One reads in it under (au dessous) the place occupied by the States of New York, Connecticut, and Rhode Island, Terre d'Etienne Gomez, qu'il découvrit en 1525 (Land of Etienne Gomez, which he discovered in 1525)." This chart, with a memoir, was published at Weimar in the last century.

Jean Alphonse, Roberval's pilot in Canada in 1642, one of the most skilful navigators of his time, and who has given remarkably minute and accurate direction for sailing up the St. Lawrence, showing that he knows what he is talking about, says in his "Routier" (it is in Hackluyt), "I have been at a bay as far as the forty-second degree, between Norimbegue [the Penobscot?] and Florida, but I have not explored the bottom of it, and I do not know whether it passes from one land to the other," i.e. to Asia. ("J'ai été à une Baye jusques par les 42 degres entre la Norimbegue et la Floride; mais je n'en ai pas cherché le fond, et ne sçais pas si elle passe d'une terre à l'autre.") This may refer to Massachusetts Bay, if not possibly to the western inclination of the coast a little farther south. When he says, "I have no doubt that the Norimbegue enters into the river of Canada," he is perhaps so interpreting some account which the Indians had given respecting the route from the St. Lawrence to the Atlantic by the St. John, or Penobscot, or possibly even the Hudson River.

We hear rumors of this country of "Norumbega" and its great city from many quarters. In a discourse by a great French sea-captain in Ramusio's third volume (1556-65), this is said to be the name given to the land by its inhabitants, and Verrazzani is called the discoverer of it; another in 1607 makes the natives call it, or the river, Aguncia. It is represented as an island on an accompanying chart. It is frequently spoken of by old writers as a country of indefinite extent, between Canada and Florida, and it appears as a large island with Cape Breton at its eastern extremity, on the map made according to Verrazzani's plot in Hackluyt's "Divers Voyages." These maps and rumors may have been the origin of the notion, common among the early settlers, that New England was an island. The country and city of Norumbega appear about where Maine now is on a map in Ortelius ("Theatrum Orbis Terrarum," Antwerp, 1570), and the "R. Grande" is drawn where the Penobscot or St. John might be.

In 1604, Champlain being sent by the Sieur de Monts to explore the coast of Norumbegue, sailed up the Penobscot twenty-two or twenty-three leagues from "Isle Haute," or till he was stopped by the falls. He says: "I think that this river is that which many pilots and historians call Norumbegue, and which the greater part have described as great and spacious, with numerous islands; and its entrance in the forty-third or forty-third and one half or, according to others, the forty-fourth degree of latitude, more or less." He is convinced that "the greater part" of those who speak of a great city there

have never seen it, but repeat a mere rumor, but he thinks that some have seen the mouth of the river since it answers to their description.

Under date of 1607 Champlain writes: "Three or four leagues north of the Cap de Poitrancourt [near the head of the Bay of Fundy in Nova Scotia] we found a cross, which was very old, covered with moss and almost all decayed, which was an evident sign that there had formerly been Christians there."

Also the following passage from Lescarbot will show how much the neighboring coasts were frequented by Europeans in the sixteenth century. Speaking of his return from Port Royal to France in 1607, he says: "At last, within four leagues of Campseau [the Gut of Canso], we arrived at a harbor [in Nova Scotia], where a worthy old gentleman from St. John de Lus, named Captain Savale, was fishing, who received us with the utmost courtesy. And as this harbor, which is small, but very good, has no name, I have given it on my geographical chart the name of Savalet. [It is on Champlain's map also.] This worthy man told us that this voyage was the forty-second which he had made to those parts, and yet the Newfoundlanders [Terre neuviens] make only one a year. He was wonderfully content with his fishery, and informed us that he made daily fifty crowns' worth of cod, and that his voyage would be worth ten thousand francs. He had sixteen men in his employ; and his vessel was of eighty tons, which could carry a hundred thousand dry cod." (*Histoire de la Nouvelle France*, 1612.) They dried their fish on the rocks on shore.

The "Isola della Rena" (Sable Island?) appears on the chart of "Nuova Francia" and Norumbega, accompanying the "Discourse" above referred to in Ramusio's third volume, edition 1556-65. Champlain speaks of there being at the Isle of Sable, in 1604, "grass pastured by oxen (boeufs) and cows which the Portuguese carried there more than sixty years ago," i.e. sixty years before 1613; in a later edition he says, which came out of a Spanish vessel which was lost in endeavoring to settle on the Isle of Sable; and he states that De la Roche's men, who were left on this island seven years from 1598, lived on the flesh of these cattle which they found "en quantie)," and built houses out of the wrecks of vessels which came to the island ("perhaps Gilbert's"), there being no wood or stone. Lescarbot says that they lived "on fish and the milk of cows left there about eighty years before by Baron de Leri and Saint Just." Charlevoix says they ate up the cattle and then lived on fish. Haliburton speaks of cattle left there as a rumor. De Leri and Saint Just had suggested plans of colonization on the Isle of Sable as early as 1515 (1508?) according to Bancroft, referring to Charlevoix. These are but a few of the instances which I might quote.

Cape Cod is commonly said to have been discovered in 1602. We will consider at length under what circumstances, and with what observation and expectations, the first Englishmen whom history clearly discerns approached the coast of New England. According to the accounts of Archer and Brereton (both of whom accompanied Gosnold), on the 26th of March, 1602, old style. Captain Bartholomew Gosnold set sail from Falmouth, England, for the North part of Virginia, in a small bark called the Concord, they being in all, says one account, "thirty-two persons, whereof eight mariners

and sailors, twelve purposing upon the discovery to return with the ship for England, the rest remain there for population." This is regarded as "the first attempt of the English to make a settlement within the limits of New England." Pursuing a new and a shorter course than the usual one by the Canaries, "the 14th of April following" they had sight of Saint Mary's, an island of the Azores. As their sailors were few and "none of the best" (I use their own phrases), and they were "going upon an unknown coast," they were not "overbold to stand in with the shore but in open weather"; so they made their first discovery of land with the lead. The 23d of April the ocean appeared yellow, but on taking up some of the water in a bucket, "it altered not either in color or taste from the sea azure." The 7th of May they saw divers birds whose names they knew, and many others in their "English tongue of no name." The 8th of May "the water changed to a yellowish green, where at seventy fathoms" they "had ground." The 9th, they had upon their lead "many glittering stones,"— "which might promise some mineral matter in the bottom." The 10th, they were over a bank which they thought to be near the western end of St. John's Island, and saw schools of fish. The 12th, they say, "continually passed fleeting by us sea-oare, which seemed to have their movable course towards the northeast." On the 13th, they observed "great beds of weeds, much wood, and divers things else floating by," and "had smelling of the shore much as from the southern Cape and Andalusia in Spain." On Friday, the 14th, early in the morning they descried land on the north, in the latitude of forty-three degrees, apparently some part of the coast of Maine. Williamson (History of Maine) says it certainly could not have been south of the central Isle of Shoals. Belknap inclines to think it the south side of Cape Ann. Standing fair along by the shore, about twelve o'clock the same day, they came to anchor and were visited by eight savages, who came off to them "in a Biscay shallop, with sail and oars,"— "an iron grapple, and a kettle of copper." These they at first mistook for "Christians distressed." One of them was "apparelled with a waistcoat and breeches of black serge, made after our sea-fashion, hoes and shoes on his feet; all the rest (saving one that had a pair of breeches of blue cloth) were naked." They appeared to have had dealings with "some Basques of St. John de Luz, and to understand much more than we," say the English, "for want of language, could comprehend." But they soon "set sail westward, leaving them and their coast." (This was a remarkable discovery for discoverers.)

"The 15th day," writes Gabriel Archer, "we had again sight of the land, which made ahead, being as we thought an island, by reason of a large sound that appeared westward between it and the main, for coming to the west end thereof, we did perceive a large opening, we called it Shoal Hope. Near this cape we came to anchor in fifteen fathoms, where we took great store of cod-fish, for which we altered the name and called it Cape Cod. Here we saw skulls of her-ring, mackerel, and other small fish, in great abundance. This is a low sandy shoal, but without danger; also we came to anchor again in sixteen fathoms, fair by the land in the latitude of forty-two degrees. This Cape is well near a mile broad, and lieth northeast by east. The captain went here ashore, and found the ground to be full of peas, strawberries, whortleberries, etc.,

as then unripe, the sand also by the shore somewhat deep; the firewood there by us taken in was of cypress, birch, witch-hazel, and beach. A young Indian came here to the captain, armed with his bow and arrows, and had certain plates of copper hanging at his ears; he showed a willingness to help us in our occasions.”

“The 16th we trended the coast southerly, which was all champaign and full of grass, but the islands somewhat woody.”

Or, according to the account of John Brereton, “riding here,” that is, where they first communicated with the natives, “in no very good harbor, and withal doubting the weather, about three of the clock the same day in the afternoon we weighed, and standing southerly off into sea the rest of that day and the night following, with a fresh gale of wind, in the morning we found ourselves embayed with a mighty headland; but coming to an anchor about nine of the clock the same day, within a league of the shore, we hoisted out the one half of our shallop, and Captain Bartholomew Gosnold, myself and three others, went ashore, being a white sandy and very bold shore; and marching all that afternoon with our muskets on our necks, on the highest hills which we saw (the weather very hot), at length we perceived this headland to be parcel of the main, and sundry islands lying almost round about it; so returning towards evening to our shallop (for by that time the other part was brought ashore and set together), we espied an Indian, a young man of proper stature, and of a pleasing countenance, and after some familiarity with him, we left him at the sea side, and returned to our ship, where in five or six hours’ absence we had pestered our ship so with codfish, that we threw numbers of them overboard again; and surely I am persuaded that in the months of March, April, and May, there is upon this coast better fishing, and in as great plenty, as in Newfoundland; for the skulls of mackerel, herrings, cod, and other fish, that we daily saw as we went and came from the shore, were wonderful,” etc.

“From this place we sailed round about this headland, almost all the points of the compass, the shore very bold; but as no coast is free from dangers, so I am persuaded this is as free as any. The land somewhat low, full of goodly woods, but in some places plain.”

It is not quite clear on which side of the Cape they landed. If it was inside, as would appear from Brereton’s words, “From this place we sailed round about this headland almost all the points of the compass,” it must have been on the western shore either of Truro or Wellfleet. To one sailing south into Barnstable Bay along the Cape, the only “white, sandy, and very bold shore” that appears is in these towns, though the bank is not so high there as on the eastern side. At a distance of four or five miles the sandy cliffs there look like a long fort of yellow sandstone, they are so level and regular, especially in Wellfleet, — the fort of the land defending itself against the encroachments of the Ocean. They are streaked here and there with a reddish sand as if painted. Farther south the shore is more flat, and less obviously and abruptly sandy, and a little tinge of green here and there in the marshes appears to the sailor like a rare and precious emerald. But in the Journal of Pring’s Voyage the next year (and Salterne, who was with Pring, had accompanied Gosnold) it is said, “Departing hence

[i.e. from Savage Rocks] we bore unto that great gulf which Captain Gosnold overshot the year before.”

So they sailed round the Cape, calling the southeasterly extremity “Point Cave,” till they came to an island which they named Martha’s Vineyard (now called No Man’s Land), and another on which they dwelt awhile, which they named Elizabeth’s Island, in honor of the Queen, one of the group since so called, now known by its Indian name Cuttyhunk. There they built a small storehouse, the first house built by the English in New England, whose cellar could recently still be seen, made partly of stones taken from the beach. Bancroft says (edition of 1837), the ruins of the fort can no longer be discerned. They who were to have remained becoming discontented, all together set sail for England with a load of sassafras and other commodities, on the 18th of June following.

The next year came Martin Pring, looking for sassafras, and thereafter they began to come thick and fast, until long after sassafras had lost its reputation.

These are the oldest accounts which we have of Cape Cod, unless, perchance. Cape Cod is, as some suppose, the same with that “Kial-ar-nes” or Keel-Cape, on which, according to old Icelandic manuscripts, Thorwald, son of Eric the Red, after sailing many days southwest from Greenland, broke his keel in the year 1004; and where, according to another, in some respects less trustworthy manuscript, Thor-finn Karlsefue (“that is, one who promises or is destined to be an able or great man”; he is said to have had a son born in New England, from whom Thorwaldsen the sculptor was descended), sailing past, in the year 1007, with his wife Gudrida, Snorre Thorbrandson, Biarne Grinolfson, and Thorhall Garnlason, distinguished Norsemen, in three ships containing “one hundred and sixty men and all sorts of live stock” (probably the first Norway rats among the rest), having the land “on the right side” of them, “roved ashore,” and found “Or-oeffi (trackless deserts),” and “Strand-ir lang-ar ok sand-ar (long narrow beaches and sand-hills),” and “called the shores Furdustrand-ir (Wonder-Strands), because the sailing by them seemed long.”

According to the Icelandic manuscripts, Thorwald was the first, then, — unless possibly one Biarne Heriulfson (i.e. son of Heriulf) who had been seized with a great desire to travel, sailing from Iceland to Greenland in the year 986 to join his father who had migrated thither, for he had resolved, says the manuscript, “to spend the following winter, like all the preceding ones, with his father,” — being driven far to the southwest by a storm, when it cleared up saw the low land of Cape Cod looming faintly in the distance; but this not answering to the description of Greenland, he put his vessel about, and, sailing northward along the coast, at length reached Greenland and his father. At any rate, he may put forth a strong claim to be regarded as the discoverer of the American continent.

These Northmen were a hardy race, whose younger sons inherited the ocean, and traversed it without chart or compass, and they are said to have been “the first who learned the art of sailing on a wind.” Moreover, they had a habit of casting their doorposts overboard and settling wherever they went ashore. But as Biarne, and Thorwald,

and Thorfinn have not mentioned the latitude and longitude distinctly enough, though we have great respect for them as skilful and adventurous navigators, we must for the present remain in doubt as to what capes they did see. We think that they were considerably further north.

If time and space permitted, I could present the claims of other several worthy persons. Lescarbot, in 1609, asserts that the French sailors had been accustomed to frequent the Newfoundland Banks from time immemorial, "for the codfish with which they feed almost all Europe and supply all sea-going vessels," and accordingly "the language of the nearest lands is half Basque"; and he quotes Postel, a learned but extravagant French author, born in 1510, only six years after the Basques, Bretons, and Normans are said to have discovered the Grand Bank and adjacent islands, as saying, in his *Charte Géographique*, which we have not seen: "Terra haec ob lucrosissimam piscationis utilitatem summa litterarum memoria a Gallis adiri solita, et ante mille sexcentos annos frequentari solita est; sed eo quod sit urbibus inculta et vasta, spreta est." "This land, on account of its very lucrative fishery, was accustomed to be visited by the Gauls from the very dawn of history, and more than sixteen hundred years ago was accustomed to be frequented; but because it was unadorned with cities, and waste, it was despised."

It is the old story. Bob Smith discovered the mine, but I discovered it to the world. And now Bob Smith is putting in his claim.

But let us not laugh at Postel and his visions. He was perhaps better posted up than we; and if he does seem to draw the long bow, it may be because he had a long way to shoot, — quite across the Atlantic. If America was found and lost again once, as most of us believe, then why not twice? especially as there were likely to be so few records of an earlier discovery. Consider what stuff history is made of, — that for the most part it is merely a story agreed on by posterity. Who will tell us even how many Russians were engaged in the battle of the Chernaya, the other day? Yet no doubt, Mr. Scriblerus, the historian, will fix on a definite number for the schoolboys to commit to their excellent memories. What, then, of the number of Persians at Salamis? The historian whom I read knew as much about the position of the parties and their tactics in the last-mentioned affair, as they who describe a recent battle in an article for the press now-a-days, before the particulars have arrived. I believe that, if I were to live the life of mankind over again myself (which I would not be hired to do), with the *Universal History* in my hands, I should not be able to tell what was what.

Earlier than the date Postel refers to, at any rate. Cape Cod lay in utter darkness to the civilized world, though even then the sun rose from eastward out of the sea every day, and, rolling over the Cape, went down westward into the Bay. It was even then Cape and Bay, — ay, the Cape of Codfish, and the Bay of the Massachusetts, perchance.

Quite recently, on the 11th of November, 1620, old style, as is well known, the Pilgrims in the *Mayflower* came to anchor in Cape Cod harbor. They had loosed from Plymouth, England, the 6th of September, and, in the words of "Mourts' Relation,"

“after many difficulties in boisterous storms, at length, by God’s providence, upon the 9th of November, we espied land, which we deemed to be Cape Cod, and so afterward it proved. Upon the 11th of November we came to anchor in the bay, which is a good harbor and pleasant bay, circled round except in the entrance, which is about four miles over from land to land, compassed about to the very sea with oaks, pines, juniper, sassafras, and other sweet wood. It is a harbor wherein a thousand sail of ships may safely ride. There we relieved ourselves with wood and water, and refreshed our people, while our shallop was fitted to coast the bay, to search for an habitation.” There we put up at Fuller’s Hotel, passing by the Pilgrim House as too high for us (we learned afterward that we need not have been so particular), and we refreshed ourselves with hashed fish and beans, beside taking in a supply of liquids (which were not intoxicating), while our legs were refitted to coast the back-side. Further say the Pilgrims: “We could not come near the shore by three quarters of an English mile, because of shallow water; which was a great prejudice to us; for our people going on shore were forced to wade a bow-shot or two in going aland, which caused many to get colds and coughs; for it was many times freezing cold weather.” They afterwards say: “It brought much weakness amongst us”; and no doubt it led to the death of some at Plymouth.

The harbor of Provincetown is very shallow near the shore, especially about the head, where the Pilgrims landed. When I left this place the next summer, the steamer could not get up to the wharf, but we were carried out to a large boat in a cart as much as thirty rods in shallow water, while a troop of little boys kept us company, wading around, and thence we pulled to the steamer by a rope. The harbor being thus shallow and sandy about the shore, coasters are accustomed to run in here to paint their vessels, which are left high and dry when the tide goes down.

It chanced that the Sunday morning that we were there, I had joined a party of men who were smoking and lolling over a pile of boards on one of the wharves (*nihil humanum a me*, etc.), when our landlord, who was a sort of tithing-man, went off to stop some sailors who were engaged in painting their vessel. Our party was recruited from time to time by other citizens, who came rubbing their eyes as if they had just got out of bed; and one old man remarked to me that it was the custom there to lie abed very late on Sunday, it being a day of rest. I remarked that, as I thought, they might as well let the men paint, for all us. It was not noisy work, and would not disturb our devotions. But a young man in the company, taking his pipe out of his mouth, said that it was a plain contradiction of the law of God, which he quoted, and if they did not have some such regulation, vessels would run in there to tar, and rig, and paint, and they would have no Sabbath at all. This was a good argument enough, if he had not put it in the name of religion. The next summer, as I sat on a hill there one sultry Sunday afternoon the meeting-house windows being open, my meditations were interrupted by the noise of a preacher who shouted like a boatswain, profaning the quiet atmosphere, and who, I fancied, must have taken off his coat. Few things

could have been more disgusting or disheartening. I wished the tithing-man would stop him.

The day of rest

The Pilgrims say: "There was the greatest store of fowl that ever we saw."

We saw no fowl there, except gulls of various kinds; but the greatest store of them that ever we saw was on a flat but slightly covered with water on the east side of the harbor, and we observed a man who had landed there from a boat creeping along the shore in order to get a shot at them, but they all rose and flew away in a great scattering flock, too soon for him, having apparently got their dinners, though he did not get his.

It is remarkable that the Pilgrims (or their reporter) describe this part of the Cape, not only as well wooded, but as having a deep and excellent soil, and hardly mention the word sand. Now what strikes the voyager is the barrenness and desolation of the land. They found "the ground or earth sand-hills, much like the downs in Holland, but much better the crust of the earth, a spit's depth, excellent black earth." We found that the earth had lost its crust, — if, in-deed, it ever had any, — and that there was no soil to speak of. We did not see enough black earth in Provincetown to fill a flower-pot, unless in the swamps. They found it "all wooded with oaks, pines, sassafras, juniper, birch, holly, vines, some ash, walnut; the wood for the most part open and without underwood, fit either to go or ride in." We saw scarcely anything high enough to be called a tree, except a little low wood at the east end of the town, and the few ornamental trees in its yards, — only a few small specimens of some of the above kinds on the sand-hills in the rear; but it was all thick shrubbery, without any large wood above it, very unfit either to go or ride in. The greater part of the land was a perfect desert of yellow sand, rippled like waves by the wind, in which only a little Beach-grass grew here and there. They say that, just after passing the head of East Harbor Creek, the boughs and bushes "tore" their "very armor in pieces" (the same thing happened to such armor as we wore, when out of curiosity we took to the bushes); or they came to deep valleys, "full of brush, wood-gaile, and long grass," and "found springs of fresh water."

For the most part we saw neither bough nor bush, not so much as a shrub to tear our clothes against if we would, and a sheep would lose none of its fleece, even if it found herbage enough to make fleece grow there. We saw rather beach and poverty-grass, and merely sorrel enough to color the surface. I suppose, then, by Woodgaile they mean the Bay berry.

All accounts agree in affirming that this part of the Cape was comparatively well wooded a century ago. But notwithstanding the great changes which have taken place in these respects, I cannot but think that we must make some allowance for the greenness of the Pilgrims in these matters, which caused them to see green. We do not believe that the trees were large or the soil was deep here. Their account may be true particularly, but it is generally false. They saw literally, as well as figuratively, but one side of the Cape. They naturally exaggerated the fairness and attractiveness of the

land, for they were glad to get to any land at all after that anxious voyage. Everything appeared to them of the color of the rose, and had the scent of juniper and sassafras. Very different is the general and off-hand account given by Captain John Smith, who was on this coast six years earlier, and speaks like an old traveller, voyager, and soldier, who had seen too much of the world to exaggerate, or even to dwell long, on a part of it. In his "Description of New England," printed in 1616, after speaking of Accomack, since called Plymouth, he says: "Cape Cod is the next presents itself, which is only a headland of high hills of sand, overgrown with shrubby pines, hurts [i.e. whorts, or whortleberries], and such trash, but an excellent harbor for all weathers. This Cape is made by the main sea on the one side, and a great bay on the other, in form of a sickle." Champlain had already written, "Which we named Cap Blanc (Cape White), because they were sands and downs (sables et dunes) which appeared thus."

When the Pilgrims get to Plymouth their reporter says again, "The land for the crust of the earth is a spit's depth," — that would seem to be their recipe for an earth's crust,— "excellent black mould and fat in some places." However, according to Bradford himself, whom some consider the author of part of "Mourt's Relation," they who came over in the *Fortune* the next year were somewhat daunted when "they came into the harbor of Cape Cod, and there saw nothing but a naked and barren place." They soon found out their mistake with respect to the goodness of Plymouth soil. Yet when at length, some years later, when they were fully satisfied of the poorness of the place which they had chosen, "the greater part," says Bradford, "consented to a removal to a place called Nausett," they agreed to remove all together to Nauset, now Eastham, which was jumping out of the frying-pan into the fire; and some of the most respectable of the inhabitants of Plymouth did actually remove thither accordingly.

It must be confessed that the Pilgrims possessed but few of the qualities of the modern pioneer. They were not the ancestors of the American backwoodsmen. They did not go at once into the woods with their axes. They were a family and church, and were more anxious to keep together, though it were on the sand, than to explore and colonize a New World. When the above-mentioned company removed to Eastham, the church at Plymouth was left, to use Bradford's expression, "like an ancient mother grown old, and forsaken of her children." Though they landed on Clark's Island in Plymouth harbor, the 9th of December (O. S.), and the 16th all hands came to Plymouth, and the 18th they rambled about the mainland, and the 19th decided to settle there, it was the 8th of January before Francis Billington went with one of the master's mates to look at the magnificent pond or lake now called "Billington Sea," about two miles distant, which he had discovered from the top of a tree, and mistook for a great sea. And the 7th of March "Master Carver with five others went to the great ponds which seem to be excellent fishing," both which points are within the compass of an ordinary afternoon's ramble, — however wild the country. It is true they were busy at first about their building, and were hindered in that by much foul weather; but a party of emigrants to California or Oregon, with no less work on their hands, — and more hostile Indians, — would do as much exploring the first afternoon, and the *Sieur de*

Champlain would have sought an interview with the savages, and examined the country as far as the Connecticut, and made a map of it, before Billington had climbed his tree. Or contrast them only with the French searching for copper about the Bay of Fundy in 1603, tracing up small streams with Indian guides. Nevertheless, the Pilgrims were pioneers and the ancestors of pioneers, in a far grander enterprise.

By this time we saw the little steamer Naushon entering the harbor, and heard the sound of her whistle, and came down from the hills to meet her at the wharf. So we took leave of Cape Cod and its inhabitants. We liked the manners of the last, what little we saw of them, very much. They were particularly downright and good-humored. The old people appeared remarkably well preserved, as if by the saltiness of the atmosphere, and after having once mistaken, we could never be certain whether we were talking to a coeval of our grandparents, or to one of our own age. They are said to be more purely the descendants of the Pilgrims than the inhabitants of any other part of the State. We were told that "sometimes, when the court comes together at Barnstable, they have not a single criminal to try, and the jail is shut up." It was "to let" when we were there. Until quite recently there was no regular lawyer below Orleans. Who then will complain of a few regular man-eating sharks along the back-side?

One of the ministers of Truro, when I asked what the fishermen did in the winter, answered that they did nothing but go a-visiting, sit about and tell stories, — though they worked hard in summer. Yet it is not a long vacation they get. I am sorry that I have not been there in the winter to hear their yarns. Almost every Cape man is Captain of some craft or other, — every man at least who is at the head of his own affairs, though it is not every one that is, for some heads have the force of Alpha privative, negating all the efforts which Nature would fain make through them. The greater number of men are merely corporals. It is worth the while to talk with one whom his neighbors address as Captain, though his craft may have long been sunk, and he may be holding by his teeth to the shattered mast of a pipe alone, and only gets half-seas-over in a figurative sense, now. He is pretty sure to vindicate his right to the title at last, — can tell one or two good stories at least.

For the most part we saw only the back-side of the towns, but our story is true as far as it goes. We might have made more of the Bay side, but we were inclined to open our eyes widest at the Atlantic. We did not care to see those features of the Cape in which it is inferior or merely equal to the mainland, but only those in which it is peculiar or superior. We cannot say how its towns look in front to one who goes to meet them; we went to see the ocean behind them. They were merely the raft on which we stood, and we took notice of the barnacles which adhered to it, and some carvings upon it.

Before we left the wharf we made the acquaintance of a passenger whom we had seen at the hotel. When we asked him which way he came to Provincetown, he answered that he was cast ashore at Wood End, Saturday night, in the same storm in which the St. John was wrecked. He had been at work as a carpenter in Maine, and took passage for Boston in a schooner laden with lumber. When the storm came up, they endeavored

to get into Provincetown harbor. "It was dark and misty," said he, "and as we were steering for Long Point Light we suddenly saw the land near us, — for our compass was out of order, — varied several degrees [a mariner always casts the blame on his compass], — but there being a mist on shore, we thought it was farther off than it was, and so held on, and we immediately struck on the bar. Says the Captain, 'We are all lost.' Says I to the Captain, 'Now don't let her strike again this way; head her right on.' The Captain thought a moment, and then headed her on. The sea washed completely over us, and wellnigh took the breath out of my body. I held on to the running rigging, but I have learned to hold on to the standing rigging the next time." "Well, were there any drowned?" I asked. "No; we all got safe to a house at Wood End, at midnight, wet to our skins, and half frozen to death." He had apparently spent the time since playing checkers at the hotel, and was congratulating himself on having beaten a tall fellow-boarder at that game. "The vessel is to be sold at auction to-day," he added. (We had heard the sound of the crier's bell which advertised it.) "The Captain is rather down about it, but I tell him to cheer up and he will soon get another vessel."

At that moment the Captain called to him from the wharf. He looked like a man just from the country, with a cap made of a woodchuck's skin, and now that I had heard a part of his history, he appeared singularly destitute, — a Captain without any vessel, only a great-coat! and that perhaps a borrowed one! Not even a dog followed him; only his title stuck to him. I also saw one of the crew. They all had caps of the same pattern, and wore a subdued look, in addition to their naturally aquiline features, as if a breaker — a "comber" — had washed over them. As we passed Wood End, we noticed the pile of lumber on the shore which had made the cargo of their vessel.

About Long Point in the summer you commonly see them catching lobsters for the New York market, from small boats just off the shore, or rather, the lobsters catch themselves, for they cling to the netting on which the bait is placed of their own accord, and thus are drawn up. They sell them fresh for two cents apiece. Man needs to know but little more than a lobster in order to catch him in his traps. The mackerel fleet had been getting to sea, one after another, ever since midnight, and as we were leaving the Cape we passed near to many of them under sail, and got a nearer view than we had had; — half a dozen red-shirted men and boys, leaning over the rail to look at us, the skipper shouting back the number of barrels he had caught, in answer to our inquiry. All sailors pause to watch a steamer, and shout in welcome or derision. In one a large Newfoundland dog put his paws on the rail and stood up as high as any of them, and looked as wise. But the skipper, who did not wish to be seen no better employed than a dog, rapped him on the nose and sent him below. Such is human justice! I thought I could hear him making an effective appeal down there from human to divine justice. He must have had much the cleanest breast of the two.

A Provincetown fishing-vessel

Still, many a mile behind us across the Bay, we saw the white sails of the mackerel fishers hovering round Cape Cod, and when they were all hull-down, and the low extremity of the Cape was also down, their white sails still appeared on both sides of

it, around where it had sunk, like a city on the ocean, proclaiming the rare qualities of Cape Cod Harbor. But before the extremity of the Cape had completely sunk, it appeared like a filmy sliver of land lying flat on the ocean, and later still a mere reflection of a sand-bar on the haze above. Its name suggests a homely truth, but it would be more poetic if it described the impression which it makes on the beholder. Some capes have peculiarly suggestive names. There is Cape Wrath, the northwest point of Scotland, for instance; what a good name for a cape lying far away dark over the water under a lowering sky!

Mild as it was on shore this morning, the wind was cold and piercing on the water. Though it be the hottest day in July on land, and the voyage is to last but four hours, take your thickest clothes with you, for you are about to float over melted icebergs. When I left Boston in the steamboat on the 25th of June the next year, it was a quite warm day on shore. The passengers were dressed in their thinnest clothes, and at first sat under their umbrellas, but when we were fairly out on the Bay, such as had only their coats were suffering with the cold, and sought the shelter of the pilot's house and the warmth of the chimney. But when we approached the harbor of Provincetown, I was surprised to perceive what an influence that low and narrow strip of sand, only a mile or two in width, had over the temperature of the air for many miles around. We penetrated into a sultry atmosphere where our thin coats were once more in fashion, and found the inhabitants sweltering.

Leaving far on one side Manomet Point in Plymouth and the Scituate shore, after being out of sight of land for an hour or two, for it was rather hazy, we neared the Cohasset Rocks again at Minot's Ledge, and saw the great Tupelo-tree on the edge of Scituate, which lifts its dome, like an umbelliferous plant, high over the surrounding forest, and is conspicuous for many miles over land and water. Here was the new iron light-house, then unfinished, in the shape of an egg-shell painted red, and placed high on iron pillars, like the ovum of a sea monster floating on the waves, — destined to be phosphorescent. As we passed it at half-tide we saw the spray tossed up nearly to the shell. A man was to live in that egg-shell day and night, a mile from the shore. When I passed it the next summer it was finished and two men lived in it, and a light-house keeper said that they told him that in a recent gale it had rocked so as to shake the plates off the table. Think of making your bed thus in the crest of a breaker! To have the waves, like a pack of hungry wolves, eying you always, night and day, and from time to time making a spring at you, almost sure to have you at last. And not one of all those voyagers can come to your relief, — but when your light goes out, it will be a sign that the light of your life has gone out also. What a place to compose a work on breakers! This light-house was the cynosure of all eyes. Every passenger watched it for half an hour at least; yet a colored cook belonging to the boat, whom I had seen come out of his quarters several times to empty his dishes over the side with a flourish, chancing to come out just as we were abreast of this light, and not more than forty rods from it, and were all gazing at it, as he drew back his arm, caught sight of it, and with surprise exclaimed, "What's that?" He had been employed on this boat for a year,

and passed this light every weekday, but as he had never chanced to empty his dishes just at that point, had never seen it before. To look at lights was the pilot's business; he minded the kitchen fire. It suggested how little some who voyaged round the world could manage to see. You would almost as easily believe that there are men who never yet chanced to come out at the right time to see the sun. What avails it though a light be placed on the top of a hill, if you spend all your life directly under the hill? It might as well be under a bushel. This light-house, as is well known, was swept away in a storm in April, 1851, and the two men in it, and the next morning not a vestige of it was to be seen from the shore.

A Hull man told me that he helped set up a white-oak pole on Minot's Ledge some years before. It was fifteen inches in diameter, forty-one feet high, sunk four feet in the rock, and was secured by four guys, — but it stood only one year. Stone piled up cob-fashion near the same place stood eight years.

When I crossed the Bay in the Melrose in July, we hugged the Scituate shore as long as possible, in order to take advantage of the wind. Far out on the Bay (off this shore) we scared up a brood of young ducks, probably black ones, bred hereabouts, which the packet had frequently disturbed in her trips. A townsman, who was making the voyage for the first time, walked slowly round into the rear of the helmsman, when we were in the middle of the Bay, and looking out over the sea, before he sat down there, remarked with as much originality as was possible for one who used a borrowed expression, "This is a great country." He had been a timber merchant, and I afterwards saw him taking the diameter of the mainmast with his stick, and estimating its height. I returned from the same excursion in the Olata, a very handsome and swift-sailing yacht, which left Provincetown at the same time with two other packets, the Melrose and Frolic. At first there was scarcely a breath of air stirring, and we loitered about Long Point for an hour in company, — with our heads over the rail watching the great sand-circles and the fishes at the bottom in calm water fifteen feet deep. But after clearing the Cape we rigged a flying-jib, and, as the Captain had prophesied, soon showed our consorts our heels. There was a steamer six or eight miles northward, near the Cape, towing a large ship toward Boston. Its smoke stretched perfectly horizontal several miles over the sea, and by a sudden change in its direction, warned us of a change in the wind before we felt it. The steamer appeared very far from the ship, and some young men who had frequently used the Captain's glass, but did not suspect that the vessels were connected, expressed surprise that they kept about the same distance apart for so many hours. At which the Captain dryly remarked, that probably they would never get any nearer together. As long as the wind held we kept pace with the steamer, but at length it died away almost entirely, and the flying-jib did all the work. When we passed the light-boat at Minot's Ledge, the Melrose and Frolic were just visible ten miles astern.

Consider the islands bearing the names of all the saints, bristling with forts like chestnuts-burs, or echinidoe, yet the police will not let a couple of Irishmen have a private sparring-match on one of them, as it is a government monopoly; all the great

seaports are in a boxing attitude, and you must sail prudently between two tiers of stony knuckles before you come to feel the warmth of their breasts.

The Bermudas are said to have been discovered by a Spanish ship of that name which was wrecked on them, "which till then," says Sir John Smith, "for six thousand years had been nameless." The English did not stumble upon them in their first voyages to Virginia; and the first Englishman who was ever there was wrecked on them in 1593. Smith says, "No place known hath better walls nor a broader ditch." Yet at the very first planting of them with some sixty persons, in 1612, the first Governor, the same year, "built and laid the foundation of eight or nine forts." To be ready, one would say, to entertain the first ship's company that should be next shipwrecked on to them. It would have been more sensible to have built as many "Charity-houses." These are the vexed Bermoothees.

Our great sails caught all the air there was, and our low and narrow hull caused the least possible friction. Coming up the harbor against the stream we swept by everything. Some young men returning from a fishing excursion came to the side of their smack, while we were thus steadily drawing by them, and, bowing, observed, with the best possible grace, "We give it up." Yet sometimes we were nearly at a standstill. The sailors watched (two) objects on the shore to ascertain whether we advanced or receded. In the harbor it was like the evening of a holiday. The Eastern steamboat passed us with music and a cheer, as if they were going to a ball, when they might be going to — Davy's locker.

I heard a boy telling the story of Nix's mate to some girls as we passed that spot. That was the name of a sailor hung there, he said.— "If I am guilty, this island will remain; but if I am innocent it will be washed away," and now it is all washed away!

Next (?) came the fort on George's Island. These are bungling contrivances: not our fortes but our foibles. Wolfe sailed by the strongest fort in North America in the dark, and took it.

I admired the skill with which the vessel was at last brought to her place in the dock, near the end of Long Wharf. It was candle-light, and my eyes could not distinguish the wharves jutting out towards us, but it appeared like an even line of shore densely crowded with shipping. You could not have guessed within a quarter of a mile of Long Wharf. Nevertheless, we were to be blown to a crevice amid them, — steering right into the maze. Down goes the mainsail, and only the jib draws us along. Now we are within four rods of the shipping, having already dodged several outsiders; but it is still only a maze of spars, and rigging, and hulls, — not a crack can be seen. Down goes the jib, but still we advance. The Captain stands aft with one hand on the tiller, and the other holding his night-glass, — his son stands on the bowsprit straining his eyes, — the passengers feel their hearts halfway to their mouths, expecting a crash. "Do you see any room there?" asks the Captain, quietly. He must make up his mind in five seconds, else he will carry away that vessel's bowsprit, or lose his own. "Yes, sir, here is a place for us"; and in three minutes more we are fast to the wharf in a little gap between two bigger vessels.

And now we were in Boston. Whoever has been down to the end of Long Wharf, and walked through Quincy Market, has seen Boston.

Boston, New York, Philadelphia, Charleston, New Orleans, and the rest, are the names of wharves projecting into the sea (surrounded by the shops and dwellings of the merchants), good places to take in and to discharge a cargo (to land the products of other climes and load the exports of our own). I see a great many barrels and fig-drums, — piles of wood for umbrella-sticks, — blocks of granite and ice, — great heaps of goods, and the means of packing and conveying them, — much wrapping-paper and twine, — many crates and hogsheads and trucks, — and that is Boston. The more barrels, the more Boston. The museums and scientific societies and libraries are accidental. They gather around the sands to save carting. The wharf-rats and customhouse officers, and broken-down poets, seeking a fortune amid the barrels. Their better or worse lyceums, and preachings, and doctorings, these, too, are accidental, and the malls of commons are always small potatoes. When I go to Boston, I naturally go straight through the city (taking the Market in my way), down to the end of Long Wharf, and look off, for I have no cousins in the back alleys, — and there I see a great many countrymen in their shirt-sleeves from Maine, and Pennsylvania, and all along shore and in shore, and some foreigners beside, loading and unloading and steering their teams about, as at a country fair.

When we reached Boston that October, I had a gill of Provincetown sand in my shoes, and at Concord there was still enough left to sand my pages for many a day; and I seemed to hear the sea roar, as if I lived in a shell, for a week afterward.

The places which I have described may seem strange and remote to my townsmen, — indeed, from Boston to Provincetown is twice as far as from England to France; yet step into the cars, and in six hours you may stand on those four planks, and see the Cape which Gosnold is said to have discovered, and which I have so poorly described. If you had started when I first advised you, you might have seen our tracks in the sand, still fresh, and reaching all the way from the Nauset Lights to Race Point, some thirty miles, — for at every step we made an impression on the Cape, though we were not aware of it, and though our account may have made no impression on your minds. But what is our account? In it there is no roar, no beach-birds, no tow-cloth.

We often love to think now of the life of men on beaches, — at least in midsummer, when the weather is serene; their sunny lives on the sand, amid the beach-grass and the bayberries, their companion a cow, their wealth a jag of driftwood or a few beach-plums, and their music the surf and the peep of the beach-bird.

We went to see the Ocean, and that is probably the best place of all our coast to go to. If you go by water, you may experience what it is to leave and to approach these shores; you may see the Stormy Petrel by the way, [Greek: *thalassodroma*,] running over the sea, and if the weather is but a little thick, may lose sight of the land in mid-passage. I do not know where there is another beach in the Atlantic States, attached to the mainland, so long, and at the same time so straight, and completely uninterrupted by creeks or coves or fresh-water rivers or marshes; for though there may be clear places

on the map, they would probably be found by the foot traveller to be intersected by creeks and marshes; certainly there is none where there is a double way, such as I have described, a beach and a bank, which at the same time shows you the land and the sea, and part of the time two seas. The Great South Beach of Long Island, which I have since visited, is longer still without an inlet, but it is literally a mere sandbar, exposed, several miles from the Island, and not the edge of a continent wasting before the assaults of the Ocean. Though wild and desolate, as it wants the bold bank, it possesses but half the grandeur of Cape Cod in my eyes, nor is the imagination contented with its southern aspect. The only other beaches of great length on our Atlantic coast, which I have heard sailors speak of, are those of Barnegat on the Jersey shore, and Currituck between Virginia and North Carolina; but these, like the last, are low and narrow sandbars, lying off the coast, and separated from the mainland by lagoons. Besides, as you go farther south, the tides are feebler, and cease to add variety and grandeur to the shore. On the Pacific side of our country also no doubt there is good walking to be found; a recent writer and dweller there tells us that "the coast from Cape Disappointment (or the Columbia River) to Cape Flattery (at the Strait of Juan de Fuca) is nearly north and south, and can be travelled almost its entire length on a beautiful sand-beach," with the exception of two bays, four or five rivers, and a few points jutting into the sea. The common shell-fish found there seem to be often of corresponding types, if not identical species, with those of Cape Cod. The beach which I have described, however, is not hard enough for carriages, but must be explored on foot. When one carriage has passed along, a following one sinks deeper still in its rut. It has at present no name any more than fame. That portion south of Nauset Harbor is commonly called Chatham Beach. The part in Eastham is called Nauset Beach, and off Wellfleet and Truro the Back-side, or sometimes, perhaps, Cape Cod Beach. I think that part which extends without interruption from Nauset Harbor to Race Point should be called Cape Cod Beach, and do so speak of it.

One of the most attractive points for visitors is in the northeast part of Wellfleet, where accommodations (I mean for men and women of tolerable health and habits) could probably be had within half a mile of the sea-shore. It best combines the country and the seaside. Though the Ocean is out of sight, its faintest murmur is audible, and you have only to climb a hill to find yourself on its brink. It is but a step from the glassy surface of the Herring Ponds to the big Atlantic Pond where the waves never cease to break. Or perhaps the Highland Light in Truro may compete with this locality, for there, there is a more uninterrupted view of the Ocean and the Bay, and in the summer there is always some air stirring on the edge of the bank there, so that the inhabitants know not what hot weather is. As for the view, the keeper of the light, with one or more of his family, walks out to the edge of the bank after every meal to look off, just as if they had not lived there all their days. In short, it will wear well. And what picture will you substitute for that, upon your walls? But ladies cannot get down the bank there at present without the aid of a block and tackle.

Most persons visit the sea-side in warm weather, when fogs are frequent, and the atmosphere is wont to be thick, and the charm of the sea is to some extent lost. But I suspect that the fall is the best season, for then the atmosphere is more transparent, and it is a greater pleasure to look out over the sea. The clear and bracing air, and the storms of autumn and winter even, are necessary in order that we may get the impression which the sea is calculated to make. In October, when the weather is not intolerably cold, and the landscape wears its autumnal tints, such as, methinks, only a Cape Cod landscape ever wears, especially if you have a storm during your stay, — that I am convinced is the best time to visit this shore. In autumn, even in August, the thoughtful days begin, and we can walk anywhere with profit. Beside, an outward cold and dreariness, which make it necessary to seek shelter at night, lend a spirit of adventure to a walk.

The time must come when this coast will be a place of resort for those New-Englanders who really wish to visit the sea-side. At present it is wholly unknown to the fashionable world, and probably it will never be agreeable to them. If it is merely a ten-pin alley, or a circular railway, or an ocean of mint-julep, that the visitor is in search of, — if he thinks more of the wine than the brine, as I suspect some do at Newport, — I trust that for a long time he will be disappointed here. But this shore will never be more attractive than it is now. Such beaches as are fashionable are here made and unmade in a day, I may almost say, by the sea shifting its sands. Lynn and Nantasket! this bare and bended arm it is that makes the bay in which they lie so snugly. What are springs and waterfalls? Here is the spring of springs, the waterfall of waterfalls. A storm in the fall or winter is the time to visit it; a light-house or a fisherman's hut the true hotel. A man may stand there and put all America behind him.

It is remarkable that the first, if not the only, part of New England which Cartier saw was Vermont (he also saw the mountains of New York), from Montreal Mountain, in 1535, sixty-seven years before Gosnold saw Cape Cod. If seeing is discovering, — and that is all that it is proved that Cabot knew of the coast of the United States, — then Cartier (to omit Verrazani and Gomez) was the discoverer of New England rather than Gosnold, who is commonly so styled.

“Savage Rock,” which some have supposed to be, from the name, the Salvages, a ledge about two miles off Rockland, Cape Ann, was probably the Nubble, a large, high rock near the shore, on the east side of York Harbor, Maine. The first land made by Gosnold is presumed by experienced navigators to be Cape Elizabeth, on the same coast. (See Babson's History of Gloucester, Massachusetts.)

- CHAPTER III. ST. ANNE
- CHAPTER IV. THE WALLS OF QUEBEC
- CHAPTER V. THE SCENERY OF QUEBEC; AND THE RIVER ST. LAWRENCE

The first edition

## A YANKEE IN CANADA

New England is by some affirmed to be an island, bounded on the north with the River Canada (so called from Monsieur Cane). — Josselyn's Rarities.

And still older, in Thomas Morton's "New English Canaan," published in 1632, it is said, on page 97, "From this Lake [Erocoise] Northwards is derived the famous River of Canada, so named, of Monsier de Cane, a French Lord, who first planted a colony of French in America."

## CHAPTER I. CONCORD TO MONTREAL

I fear that I have not got much to say about Canada, not having seen much; what I got by going to Canada was a cold. I left Concord, Massachusetts, Wednesday morning, September 25th, 1850, for Quebec. Fare, seven dollars there and back; distance from Boston, five hundred and ten miles; being obliged to leave Montreal on the return as soon as Friday, October 4th, or within ten days. I will not stop to tell the reader the names of my fellow-travelers; there were said to be fifteen hundred of them. I wished

only to be set down in Canada, and take one honest walk there as I might in Concord woods of an afternoon.

The country was new to me beyond Fitchburg. In Ashburnham and afterward, as we were whirled rapidly along, I noticed the woodbine (*Ampelopsis quinquefolia*), its leaves now changed, for the most part on dead trees, draping them like a red scarf. It was a little exciting, suggesting bloodshed, or at least a military life, like an epaulet or sash, as if it were dyed with the blood of the trees whose wounds it was inadequate to stanch. For now the bloody autumn was come, and an Indian warfare was waged through the forest. These military trees appeared very numerous, for our rapid progress connected those that were even some miles apart. Does the woodbine prefer the elm? The first view of Monadnock was obtained five or six miles this side of Fitzwilliam, but nearest and best at Troy and beyond. Then there were the Troy cuts and embankments. Keene Street strikes the traveler favorably, it is so wide, level, straight, and long. I have heard one of my relatives, who was born and bred there, say that you could see a chicken run across it a mile off. I have also been told that when this town was settled they laid out a street four rods wide, but at a subsequent meeting of the proprietors one rose and remarked, "We have plenty of land, why not make the street eight rods wide?" and so they voted that it should be eight rods wide, and the town is known far and near for its handsome street. It was a cheap way of securing comfort, as well as fame, and I wish that all new towns would take pattern from this. It is best to lay our plans widely in youth, for then land is cheap, and it is but too easy to contract our views afterward. Youths so laid out, with broad avenues and parks, that they may make handsome and liberal old men! Show me a youth whose mind is like some Washington city of magnificent distances, prepared for the most remotely successful and glorious life after all, when those spaces shall be built over and the idea of the founder be realized. I trust that every New England boy will begin by laying out a Keene Street through his head, eight rods wide. I know one such Washington city of a man, whose lots as yet are only surveyed and staked out, and, except a cluster of shanties here and there, only the Capitol stands there for all structures, and any day you may see from afar his princely idea borne coachwise along the spacious but yet empty avenues. Keene is built on a remarkably large and level interval, like the bed of a lake, and the surrounding hills, which are remote from its street, must afford some good walks. The scenery of mountain towns is commonly too much crowded. A town which is built on a plain of some extent, with an open horizon, and surrounded by hills at a distance, affords the best walks and views.

As we travel northwest up the country, sugar maples, beeches, birches, hemlocks, spruce, butternuts, and ash trees prevail more and more. To the rapid traveler the number of elms in a town is the measure of its civility. One man in the cars has a bottle full of some liquor. The whole company smile whenever it is exhibited. I find no difficulty in containing myself. The Westmoreland country looked attractive. I heard a passenger giving the very obvious derivation of this name, Westmore-land, as if it were purely American, and he had made a discovery; but I thought of "my cousin

Westmoreland" in England. Every one will remember the approach to Bellows Falls, under a high cliff which rises from the Connecticut. I was disappointed in the size of the river here; it appeared shrunk to a mere mountain-stream. The water was evidently very low. The rivers which we had crossed this forenoon possessed more of the character of mountain-streams than those in the vicinity of Concord, and I was surprised to see everywhere traces of recent freshets, which had carried away bridges and injured the railroad, though I had heard nothing of it. In Ludlow, Mount Holly, and beyond, there is interesting mountain scenery, not rugged and stupendous, but such as you could easily ramble over, — long, narrow, mountain vales through which to see the horizon. You are in the midst of the Green Mountains. A few more elevated blue peaks are seen from the neighborhood of Mount Holly; perhaps Killington Peak is one. Sometimes, as on the Western Railroad, you are whirled over mountainous embankments, from which the scared horses in the valleys appear diminished to hounds. All the hills blush; I think that autumn must be the best season to journey over even the Green Mountains. You frequently exclaim to yourself, What red maples! The sugar maple is not so red. You see some of the latter with rosy spots or cheeks only, blushing on one side like fruit, while all the rest of the tree is green, proving either some partiality in the light or frosts or some prematurity in particular branches. Tall and slender ash trees, whose foliage is turned to a dark mulberry color, are frequent. The butternut, which is a remarkably spreading tree, is turned completely yellow, thus proving its relation to the hickories. I was also struck by the bright yellow tints of the yellow birch. The sugar maple is remarkable for its clean ankle. The groves of these trees looked like vast forest sheds, their branches stopping short at a uniform height, four or five feet from the ground, like eaves, as if they had been trimmed by art, so that you could look under and through the whole grove with its leafy canopy, as under a tent whose curtain is raised.

As you approach Lake Champlain you begin to see the New York mountains. The first view of the lake at Vergennes is impressive, but rather from association than from any peculiarity in the scenery. It lies there so small (not appearing in that proportion to the width of the State that it does on the map), but beautifully quiet, like a picture of the Lake of Lucerne on a music-box, where you trace the name of Lucerne among the foliage; far more ideal than ever it looked on the map. It does not say, "Here I am, Lake Champlain," as the conductor might for it, but having studied the geography thirty years, you crossed over a hill one afternoon and beheld it. But it is only a glimpse that you get here. At Burlington you rush to a wharf and go on board a steamboat, two hundred and thirty-two miles from Boston. We left Concord at twenty minutes before eight in the morning, and were in Burlington about six at night, but too late to see the lake. We got our first fair view of the lake at dawn, just before reaching Plattsburg, and saw blue ranges of mountains on either hand, in New York and in Vermont, the former especially grand. A few white schooners, like gulls, were seen in the distance, for it is not waste and solitary like a lake in Tartary; but it was such a view as leaves not much to be said; indeed, I have postponed Lake Champlain to another day.

The oldest reference to these waters that I have yet seen is in the account of Cartier's discovery and exploration of the St. Lawrence in 1535. Samuel Champlain actually discovered and paddled up the lake in July, 1609, eleven years before the settlement of Plymouth, accompanying a war-party of the Canadian Indians against the Iroquois. He describes the islands in it as not inhabited, although they are pleasant, — on account of the continual wars of the Indians, in consequence of which they withdraw from the rivers and lakes into the depths of the land, that they may not be surprised. "Continuing our course," says he, "in this lake, on the western side, viewing the country, I saw on the eastern side very high mountains, where there was snow on the summit. I inquired of the savages if those places were inhabited. They replied that they were, and that they were Iroquois, and that in those places there were beautiful valleys and plains fertile in corn, such as I have eaten in this country, with an infinity of other fruits." This is the earliest account of what is now Vermont.

The number of French-Canadian gentlemen and ladies among the passengers, and the sound of the French language, advertised us by this time that we were being whirled towards some foreign vortex. And now we have left Rouse's Point, and entered the Sorel River, and passed the invisible barrier between the States and Canada. The shores of the Sorel, Richelieu, or St. John's River are flat and reedy, where I had expected something more rough and mountainous for a natural boundary between two nations. Yet I saw a difference at once, in the few huts, in the pirogues on the shore, and as it were, in the shore itself. This was an interesting scenery to me, and the very reeds or rushes in the shallow water and the tree-tops in the swamps have left a pleasing impression. We had still a distant view behind us of two or three blue mountains in Vermont and New York. About nine o'clock in the forenoon we reached St. John's, an old frontier post three hundred and six miles from Boston, and twenty-four from Montreal. We now discovered that we were in a foreign country, in a station-house of another nation. This building was a barn-like structure, looking as if it were the work of the villagers combined, like a log house in a new settlement. My attention was caught by the double advertisements in French and English fastened to its posts, by the formality of the English, and the covert or open reference to their queen and the British lion. No gentlemanly conductor appeared, none whom you would know to be the conductor by his dress and demeanor; but ere long we began to see here and there a solid, red-faced, burly-looking Englishman, a little puffy perhaps, who made us ashamed of ourselves and our thin and nervous countrymen, — a grandfatherly personage, at home in his greatcoat, who looked as if he might be a stage proprietor, certainly a railroad director, and knew, or had a right to know, when the cars did start. Then there were two or three pale-faced, black-eyed, loquacious Canadian-French gentlemen there, shrugging their shoulders; pitted as if they had all had the small-pox. In the meanwhile some soldiers, redcoats, belonging to the barracks near by, were turned out to be drilled. At every important point in our route the soldiers showed themselves ready for us; though they were evidently rather raw recruits here, they manœuvred far better than our soldiers; yet, as usual, I heard some Yankees talk as if they were no great shakes, and they

had seen the Acton Blues manœuvre as well. The officers spoke sharply to them, and appeared to be doing their part thoroughly. I heard one suddenly coming to the rear, exclaim, "Michael Donouy, take his name!" though I could not see what the latter did or omitted to do. It was whispered that Michael Donouy would have to suffer for that. I heard some of our party discussing the possibility of their driving these troops off the field with their umbrellas. I thought that the Yankee, though undisciplined, had this advantage at least, that he especially is a man who, everywhere and under all circumstances, is fully resolved to better his condition essentially, and therefore he could afford to be beaten at first; while the virtue of the Irishman, and to a great extent the Englishman, consists in merely maintaining his ground or condition. The Canadians here, a rather poor-looking race, clad in gray homespun, which gave them the appearance of being covered with dust, were riding about in caleches and small one-horse carts called charettes. The Yankees assumed that all the riders were racing, or at least exhibiting the paces of their horses, and saluted them accordingly. We saw but little of the village here, for nobody could tell us when the cars would start; that was kept a profound secret, perhaps for political reasons; and therefore we were tied to our seats. The inhabitants of St. John's and vicinity are described by an English traveler as "singularly unprepossessing," and before completing his period he adds, "besides, they are generally very much disaffected to the British crown." I suspect that that "besides" should have been a because.

At length, about noon, the cars began to roll towards La Prairie. The whole distance of fifteen miles was over a remarkably level country, resembling a Western prairie, with the mountains about Chambly visible in the northeast. This novel but monotonous scenery was exciting. At La Prairie we first took notice of the tinned roofs, but above all of the St. Lawrence, which looked like a lake; in fact it is considerably expanded here; it was nine miles across diagonally to Montreal. Mount Royal in the rear of the city, and the island of St. Helen's opposite to it, were now conspicuous. We could also see the Sault St. Louis about five miles up the river, and the Sault Norman still farther eastward. The former are described as the most considerable rapids in the St. Lawrence; but we could see merely a gleam of light there as from a cobweb in the sun. Soon the city of Montreal was discovered with its tin roofs shining afar. Their reflections fell on the eye like a clash of cymbals on the ear. Above all the church of Notre Dame was conspicuous, and anon the Bonsecours market-house, occupying a commanding position on the quay, in the rear of the shipping. This city makes the more favorable impression from being approached by water, and also being built of stone, a gray limestone found on the island. Here, after traveling directly inland the whole breadth of New England, we had struck upon a city's harbor, — it made on me the impression of a seaport, — to which ships of six hundred tons can ascend, and where vessels drawing fifteen feet lie close to the wharf, five hundred and forty miles from the Gulf, the St. Lawrence being here two miles wide. There was a great crowd assembled on the ferry-boat wharf and on the quay to receive the Yankees, and flags of all colors were streaming from the vessels to celebrate their arrival. When the gun

was fired, the gentry hurraed again and again, and then the Canadian caleche-drivers, who were most interested in the matter, and who, I perceived, were separated from the former by a fence, hurraed their welcome; first the broadcloth, then the homespun.

It was early in the afternoon when we stepped ashore. With a single companion, I soon found my way to the church of Notre Dame. I saw that it was of great size and signified something. It is said to be the largest ecclesiastical structure in North America, and can seat ten thousand. It is two hundred and fifty-five and a half feet long, and the groined ceiling is eighty feet above your head. The Catholic are the only churches which I have seen worth remembering, which are not almost wholly profane. I do not speak only of the rich and splendid like this, but of the humblest of them as well. Coming from the hurraing mob and the rattling carriages, we pushed aside the listed door of this church, and found ourselves instantly in an atmosphere which might be sacred to thought and religion, if one had any. There sat one or two women who had stolen a moment from the concerns of the day, as they were passing; but, if there had been fifty people there, it would still have been the most solitary place imaginable. They did not look up at us, nor did one regard another. We walked softly down the broad aisle with our hats in our hands. Presently came in a troop of Canadians, in their homespun, who had come to the city in the boat with us, and one and all kneeled down in the aisle before the high altar to their devotions, somewhat awkwardly, as cattle prepare to lie down, and there we left them. As if you were to catch some farmer's sons from Marlborough, come to cattle-show, silently kneeling in Concord meeting-house some Wednesday! Would there not soon be a mob peeping in at the windows? It is true, these Roman Catholics, priests and all, impress me as a people who have fallen far behind the significance of their symbols. It is as if an ox had strayed into a church and were trying to bethink himself. Nevertheless, they are capable of reverence; but we Yankees are a people in whom this sentiment has nearly died out, and in this respect we cannot bethink ourselves even as oxen. I did not mind the pictures nor the candles, whether tallow or tin. Those of the former which I looked at appeared tawdry. It matters little to me whether the pictures are by a neophyte of the Algonquin or the Italian tribe. But I was impressed by the quiet, religious atmosphere of the place. It was a great cave in the midst of a city; and what were the altars and the tinsel but the sparkling stalactites, into which you entered in a moment, and where the still atmosphere and the sombre light disposed to serious and profitable thought? Such a cave at hand, which you can enter any day, is worth a thousand of our churches which are open only Sundays, hardly long enough for an airing, and then filled with a bustling congregation, — a church where the priest is the least part, where you do your own preaching, where the universe preaches to you and can be heard. I am not sure but this Catholic religion would be an admirable one if the priest were quite omitted. I think that I might go to church myself some Monday, if I lived in a city where there was such a one to go to. In Concord, to be sure, we do not need such. Our forests are such a church, far grander and more sacred. We dare not leave our meeting-houses open for fear they would be profaned. Such a cave, such a shrine, in one of our groves, for

instance, how long would it be respected? for what purposes would it be entered, by such baboons as we are? I think of its value not only to religion, but to philosophy and to poetry; besides a reading-room, to have a thinking-room in every city! Perchance the time will come when every house even will have not only its sleeping-rooms, and dining-room, and talking-room or parlor, but its thinking-room also, and the architects will put it into their plans. Let it be furnished and ornamented with whatever conduces to serious and creative thought. I should not object to the holy water, or any other simple symbol, if it were consecrated by the imagination of the worshipers.

I heard that some Yankees bet that the candles were not wax, but tin. A European assured them that they were wax; but, inquiring of the sexton, he was surprised to learn that they were tin filled with oil. The church was too poor to afford wax. As for the Protestant churches, here or elsewhere, they did not interest me, for it is only as caves that churches interest me at all, and in that respect they were inferior.

Montreal makes the impression of a larger city than you had expected to find, though you may have heard that it contains nearly sixty thousand inhabitants. In the newer parts, it appeared to be growing fast like a small New York, and to be considerably Americanized. The names of the squares reminded you of Paris, — the Champ de Mars, the Place d'Armes, and others, — and you felt as if a French revolution might break out any moment. Glimpses of Mount Royal rising behind the town, and the names of some streets in that direction, make one think of Edinburgh. That hill sets off this city wonderfully. I inquired at a principal bookstore for books published in Montreal. They said that there were none but school-books and the like; they got their books from the States. From time to time we met a priest in the streets, for they are distinguished by their dress, like the civil police. Like clergymen generally, with or without the gown, they made on us the impression of effeminacy. We also met some Sisters of Charity, dressed in black, with Shaker-shaped black bonnets and crosses, and cadaverous faces, who looked as if they had almost cried their eyes out, their complexions parboiled with scalding tears; insulting the daylight by their presence, having taken an oath not to smile. By cadaverous I mean that their faces were like the faces of those who have been dead and buried for a year, and then untombed, with the life's grief upon them, and yet, for some unaccountable reason, the process of decay arrested.

“Truth never fails her servant, sir, nor leaves him

With the day's shame upon him.”

They waited demurely on the sidewalk while a truck laden with raisins was driven in at the seminary of St. Sulpice, never once lifting their eyes from the ground.

The soldier here, as everywhere in Canada, appeared to be put forward, and by his best foot. They were in the proportion of the soldiers to the laborers in an African ant-hill. The inhabitants evidently rely on them in a great measure for music and entertainment. You would meet with them pacing back and forth before some guard-house or passage-way, guarding, regarding, and disregarding all kinds of law by turns, apparently for the sake of the discipline to themselves, and not because it was important to exclude anybody from entering that way. They reminded me of the men who are

paid for piling up bricks and then throwing them down again. On every prominent ledge you could see England's hands holding the Canadas, and I judged by the redness of her knuckles that she would soon have to let go. In the rear of such a guard-house, in a large graveled square or parade ground, called the Champ de Mars, we saw a large body of soldiers being drilled, we being as yet the only spectators. But they did not appear to notice us any more than the devotees in the church, but were seemingly as indifferent to fewness of spectators as the phenomena of nature are, whatever they might have been thinking under their helmets of the Yankees that were to come. Each man wore white kid gloves. It was one of the most interesting sights which I saw in Canada. The problem appeared to be how to smooth down all individual protuberances or idiosyncrasies, and make a thousand men move as one man, animated by one central will; and there was some approach to success. They obeyed the signals of a commander who stood at a great distance, wand in hand; and the precision, and promptness, and harmony of their movements could not easily have been matched. The harmony was far more remarkable than that of any choir or band, and obtained, no doubt, at a greater cost. They made on me the impression, not of many individuals, but of one vast centipede of a man, good for all sorts of pulling down; and why not then for some kinds of building up? If men could combine thus earnestly, and patiently, and harmoniously to some really worthy end, what might they not accomplish? They now put their hands, and partially perchance their heads together, and the result is that they are the imperfect tools of an imperfect and tyrannical government. But if they could put their hands and heads and hearts and all together, such a coöperation and harmony would be the very end and success for which government now exists in vain, — a government, as it were, not only with tools, but stock to trade with.

I was obliged to frame some sentences that sounded like French in order to deal with the market-women, who, for the most part, cannot speak English. According to the guidebook the relative population of this city stands nearly thus: two fifths are French-Canadian; nearly one fifth British-Canadian; one and a half fifths English, Irish, and Scotch; somewhat less than one half fifth Germans, United States people, and others. I saw nothing like pie for sale, and no good cake to put in my bundle, such as you can easily find in our towns, but plenty of fair-looking apples, for which Montreal Island is celebrated, and also pears cheaper and I thought better than ours, and peaches, which, though they were probably brought from the South, were as cheap as they commonly are with us. So imperative is the law of demand and supply that, as I have been told, the market of Montreal is sometimes supplied with green apples from the State of New York some weeks even before they are ripe in the latter place. I saw here the spruce wax which the Canadians chew, done up in little silvered papers, a penny a roll; also a small and shriveled fruit which they called cerises, mixed with many little stems, somewhat like raisins, but I soon returned what I had bought, finding them rather insipid, only putting a sample in my pocket. Since my return, I find on comparison that it is the fruit of the sweet viburnum (*Viburnum Lentago*), which with us rarely holds on till it is ripe.

I stood on the deck of the steamer John Munn, late in the afternoon, when the second and third ferry-boats arrived from La Prairie, bringing the remainder of the Yankees. I never saw so many caleches, cabs, charettes, and similar vehicles collected before, and doubt if New York could easily furnish more. The handsome and substantial stone quay which stretches a mile along the riverside and protects the street from the ice was thronged with the citizens who had turned out on foot and in carriages to welcome or to behold the Yankees. It was interesting to see the caleche-drivers dash up and down the slope of the quay with their active little horses. They drive much faster than in our cities. I have been told that some of them come nine miles into the city every morning and return every night, without changing their horses during the day. In the midst of the crowd of carts, I observed one deep one loaded with sheep with their legs tied together, and their bodies piled one upon another, as if the driver had forgotten that they were sheep and not yet mutton, — a sight, I trust, peculiar to Canada, though I fear that it is not.

## CHAPTER II. QUEBEC AND MONTMORENCI

About six o'clock we started for Quebec, one hundred and eighty miles distant by the river; gliding past Longueuil and Boucherville on the right, and Pointe aux Trembles, "so called from having been originally covered with aspens," and Bout de l'Isle, or the end of the island, on the left. I repeat these names not merely for want of more substantial facts to record, but because they sounded singularly poetic to my ears. There certainly was no lie in them. They suggested that some simple, and, perchance, heroic human life might have transpired there. There is all the poetry in the world in a name. It is a poem which the mass of men hear and read. What is poetry in the common sense, but a string of such jingling names? I want nothing better than a good word. The name of a thing may easily be more than the thing itself to me. Inexpressibly beautiful appears the recognition by man of the least natural fact, and the allying his life to it. All the world reiterating this slender truth, that aspens once grew there; and the swift inference is that men were there to see them. And so it would be with the names of our native and neighboring villages, if we had not profaned them.

The daylight now failed us, and we went below; but I endeavored to console myself for being obliged to make this voyage by night, by thinking that I did not lose a great deal, the shores being low and rather unattractive, and that the river itself was much the more interesting object. I heard something in the night about the boat being at William Henry, Three Rivers, and in the Richelieu Rapids, but I was still where I had been when I lost sight of Pointe aux Trembles. To hear a man who has been waked up at midnight in the cabin of a steamboat inquiring, "Waiter, where are we now?" is as if, at any moment of the earth's revolution round the sun, or of the system round its centre, one were to raise himself up and inquire of one of the deck hands, "Where are we now?"

I went on deck at daybreak, when we were thirty or forty miles above Quebec. The banks were now higher and more interesting. There was an “uninterrupted succession of whitewashed cottages,” on each side of the river. This is what every traveler tells. But it is not to be taken as an evidence of the populousness of the country in general, hardly even of the river-banks. They have presented a similar appearance for a hundred years. The Swedish traveler and naturalist Kalm, who descended the river in 1749, says, “It could really be called a village, beginning at Montreal and ending at Quebec, which is a distance of more than one hundred and eighty miles; for the farmhouses are never above five arpents, and sometimes but three asunder, a few places excepted.” Even in 1684 Hontan said that the houses were not more than a gunshot apart at most. Ere long we passed Cape Rouge, eight miles above Quebec, the mouth of the Chaudière on the opposite or south side; New Liverpool Cove with its lumber-rafts and some shipping; then Sillery and Wolfe’s Cove and the Heights of Abraham on the north, with now a view of Cape Diamond, and the citadel in front. The approach to Quebec was very imposing. It was about six o’clock in the morning when we arrived. There is but a single street under the cliff on the south side of the cape, which was made by blasting the rocks and filling up the river. Three-story houses did not rise more than one fifth or one sixth the way up the nearly perpendicular rock, whose summit is three hundred and forty-five feet above the water. We saw, as we glided past, the sign on the side of the precipice, part way up, pointing to the spot where Montgomery was killed in 1775. Formerly it was the custom for those who went to Quebec for the first time to be ducked, or else pay a fine. Not even the Governor-General escaped. But we were too many to be ducked, even if the custom had not been abolished.

Here we were, in the harbor of Quebec, still three hundred and sixty miles from the mouth of the St. Lawrence, in a basin two miles across, where the greatest depth is twenty-eight fathoms, and though the water is fresh, the tide rises seventeen to twenty-four feet, — a harbor “large and deep enough,” says a British traveler, “to hold the English navy.” I may as well state that, in 1844, the county of Quebec contained about forty-five thousand inhabitants (the city and suburbs having about forty-three thousand), — about twenty-eight thousand being Canadians of French origin; eight thousand British; over seven thousand natives of Ireland; one thousand five hundred natives of England; the rest Scotch and others. Thirty-six thousand belong to the Church of Rome.

Separating ourselves from the crowd, we walked up a narrow street, thence ascended by some wooden steps, called the Break-neck Stairs, into another steep, narrow, and zigzag street, blasted through the rock, which last led through a low, massive stone portal, called Prescott Gate, the principal thoroughfare into the Upper Town. This passage was defended by cannon, with a guard-house over it, a sentinel at his post, and other soldiers at hand ready to relieve him. I rubbed my eyes to be sure that I was in the Nineteenth Century, and was not entering one of those portals which sometimes adorn the frontispieces of new editions of old black-letter volumes. I thought it would be a good place to read Froissart’s Chronicles. It was such a reminiscence of the Middle

Ages as Scott's novels. Men apparently dwelt there for security! Peace be unto them! As if the inhabitants of New York were to go over to Castle William to live! What a place it must be to bring up children! Being safe through the gate, we naturally took the street which was steepest, and after a few turns found ourselves on the Durham Terrace, a wooden platform on the site of the old castle of St. Louis, still one hundred and fifteen feet below the summit of the citadel, overlooking the Lower Town, the wharf where we had landed, the harbor, the Isle of Orleans, and the river and surrounding country to a great distance. It was literally a splendid view. We could see, six or seven miles distant, in the northeast, an indentation in the lofty shore of the northern channel, apparently on one side of the harbor, which marked the mouth of the Montmorenci, whose celebrated fall was only a few rods in the rear.

At a shoe-shop, whither we were directed for this purpose, we got some of our American money changed into English. I found that American hard money would have answered as well, excepting cents, which fell very fast before their pennies, it taking two of the former to make one of the latter, and often the penny, which had cost us two cents, did us the service of one cent only. Moreover, our robust cents were compelled to meet on even terms a crew of vile half-penny tokens, and Bungtown coppers, which had more brass in their composition, and so perchance made their way in the world. Wishing to get into the citadel, we were directed to the Jesuits' Barracks, — a good part of the public buildings here are barracks, — to get a pass of the Town Major. We did not heed the sentries at the gate, nor did they us, and what under the sun they were placed there for, unless to hinder a free circulation of the air, was not apparent. There we saw soldiers eating their breakfasts in their mess-room, from bare wooden tables in camp fashion. We were continually meeting with soldiers in the streets, carrying funny little tin pails of all shapes, even semicircular, as if made to pack conveniently. I supposed that they contained their dinners, — so many slices of bread and butter to each, perchance. Sometimes they were carrying some kind of military chest on a sort of bier or hand-barrow, with a springy, undulating, military step, all passengers giving way to them, even the charette-drivers stopping for them to pass, — as if the battle were being lost from an inadequate supply of powder. There was a regiment of Highlanders, and, as I understood, of Royal Irish, in the city; and by this time there was a regiment of Yankees also. I had already observed, looking up even from the water, the head and shoulders of some General Poniatowsky, with an enormous cocked hat and gun, peering over the roof of a house, away up where the chimney caps commonly are with us, as it were a caricature of war and military awfulness; but I had not gone far up St. Louis Street before my riddle was solved, by the apparition of a real live Highlander under a cocked hat, and with his knees out, standing and marching sentinel on the ramparts, between St. Louis and St. John's Gate. (It must be a holy war that is waged there.) We stood close by without fear and looked at him. His legs were somewhat tanned, and the hair had begun to grow on them, as some of our wise men predict that it will in such cases, but I did not think they were remarkable in any respect. Notwithstanding all his warlike gear, when I inquired of him

the way to the Plains of Abraham, he could not answer me without betraying some bashfulness through his broad Scotch. Soon after, we passed another of these creatures standing sentry at the St. Louis Gate, who let us go by without shooting us, or even demanding the countersign. We then began to go through the gate, which was so thick and tunnel-like as to remind me of those lines in Claudian's "Old Man of Verona," about the getting out of the gate being the greater part of a journey; — as you might imagine yourself crawling through an architectural vignette at the end of a black-letter volume. We were then reminded that we had been in a fortress, from which we emerged by numerous zigzags in a ditch-like road, going a considerable distance to advance a few rods, where they could have shot us two or three times over, if their minds had been disposed as their guns were. The greatest, or rather the most prominent, part of this city was constructed with the design to offer the deadest resistance to leaden and iron missiles that might be cast against it. But it is a remarkable meteorological and psychological fact, that it is rarely known to rain lead with much violence, except on places so constructed. Keeping on about a mile we came to the Plains of Abraham, — for having got through with the Saints, we came next to the Patriarchs. Here the Highland regiment was being reviewed, while the band stood on one side and played — methinks it was *La Claire Fontaine*, the national air of the Canadian French. This is the site where a real battle once took place, to commemorate which they have had a sham fight here almost every day since. The Highlanders manoeuvred very well, and if the precision of their movements was less remarkable, they did not appear so stiffly erect as the English or Royal Irish, but had a more elastic and graceful gait, like a herd of their own red deer, or as if accustomed to stepping down the sides of mountains. But they made a sad impression on the whole, for it was obvious that all true manhood was in the process of being drilled out of them. I have no doubt that soldiers well drilled are, as a class, peculiarly destitute of originality and independence. The officers appeared like men dressed above their condition. It is impossible to give the soldier a good education without making him a deserter. His natural foe is the government that drills him. What would any philanthropist who felt an interest in these men's welfare naturally do, but first of all teach them so to respect themselves that they could not be hired for this work, whatever might be the consequences to this government or that? — not drill a few, but educate all. I observed one older man among them, gray as a wharf-rat, and supple as the devil, marching lock-step with the rest, who would have to pay for that elastic gait.

We returned to the citadel along the heights, plucking such flowers as grew there. There was an abundance of succory still in blossom, broad-leaved goldenrod, buttercups, thorn bushes, Canada thistles, and ivy, on the very summit of Cape Diamond. I also found the bladder campion in the neighborhood. We there enjoyed an extensive view, which I will describe in another place. Our pass, which stated that all the rules were "to be strictly enforced," as if they were determined to keep up the semblance of reality to the last gasp, opened to us the Dalhousie Gate, and we were conducted over the citadel by a bare-legged Highlander in cocked hat and full regimentals. He told us

that he had been here about three years, and had formerly been stationed at Gibraltar. As if his regiment, having perchance been nestled amid the rocks of Edinburgh Castle, must flit from rock to rock thenceforth over the earth's surface, like a bald eagle, or other bird of prey, from eyrie to eyrie. As we were going out, we met the Yankees coming in, in a body headed by a red-coated officer called the commandant, and escorted by many citizens, both English and French-Canadian. I therefore immediately fell into the procession, and went round the citadel again with more intelligent guides, carrying, as before, all my effects with me. Seeing that nobody walked with the red-coated commandant, I attached myself to him, and though I was not what is called well-dressed, he did not know whether to repel me or not, for I talked like one who was not aware of any deficiency in that respect. Probably there was not one among all the Yankees who went to Canada this time, who was not more splendidly dressed than I was. It would have been a poor story if I had not enjoyed some distinction. I had on my "bad-weather clothes," like Olaf Trygvesson the Northman, when he went to the Thing in England, where, by the way, he won his bride. As we stood by the thirty-two-pounder on the summit of Cape Diamond, which is fired three times a day, the commandant told me that it would carry to the Isle of Orleans, four miles distant, and that no hostile vessel could come round the island. I now saw the subterranean or rather "casemated" barracks of the soldiers, which I had not noticed before, though I might have walked over them. They had very narrow windows, serving as loop-holes for musketry, and small iron chimneys rising above the ground. There we saw the soldiers at home and in an undress, splitting wood, — I looked to see whether with swords or axes, — and in various ways endeavoring to realize that their nation was now at peace with this part of the world. A part of each regiment, chiefly officers, are allowed to marry. A grandfatherly, would-be witty Englishman could give a Yankee whom he was patronizing no reason for the bare knees of the Highlanders, other than oddity. The rock within the citadel is a little convex, so that shells falling on it would roll toward the circumference, where the barracks of the soldiers and officers are; it has been proposed, therefore, to make it slightly concave, so that they may roll into the centre, where they would be comparatively harmless; and it is estimated that to do this would cost twenty thousand pounds sterling. It may be well to remember this when I build my next house, and have the roof "all correct" for bomb-shells.

At mid-afternoon we made haste down Sault-au-Matelot Street, towards the Falls of Montmorenci, about eight miles down the St. Lawrence, on the north side, leaving the further examination of Quebec till our return. On our way, we saw men in the streets sawing logs pit-fashion, and afterward, with a common wood-saw and horse, cutting the planks into squares for paving the streets. This looked very shiftless, especially in a country abounding in water-power, and reminded me that I was no longer in Yankeeland. I found, on inquiry, that the excuse for this was that labor was so cheap; and I thought, with some pain, how cheap men are here! I have since learned that the English traveler Warburton remarked, soon after landing at Quebec, that everything was cheap there but men. That must be the difference between going thither from

New and from Old England. I had already observed the dogs harnessed to their little milk-carts, which contain a single large can, lying asleep in the gutters regardless of the horses, while they rested from their labors, at different stages of the ascent in the Upper Town. I was surprised at the regular and extensive use made of these animals for drawing not only milk but groceries, wood, etc. It reminded me that the dog commonly is not put to any use. Cats catch mice; but dogs only worry the cats. Kalm, a hundred years ago, saw sledges here for ladies to ride in, drawn by a pair of dogs. He says, "A middle-sized dog is sufficient to draw a single person, when the roads are good;" and he was told by old people that horses were very scarce in their youth, and almost all the land-carriage was then effected by dogs. They made me think of the Esquimaux, who, in fact, are the next people on the north. Charlevoix says that the first horses were introduced in 1665.

We crossed Dorchester Bridge, over the St. Charles, the little river in which Cartier, the discoverer of the St. Lawrence, put his ships, and spent the winter of 1535, and found ourselves on an excellent macadamized road, called Le Chemin de Beauport. We had left Concord Wednesday morning, and we endeavored to realize that now, Friday morning, we were taking a walk in Canada, in the Seigniorship of Beauport, a foreign country, which a few days before had seemed almost as far off as England and France. Instead of rambling to Flint's Pond or the Sudbury meadows, we found ourselves, after being a little detained in cars and steamboats, — after spending half a night at Burlington, and half a day at Montreal, — taking a walk down the bank of the St. Lawrence to the Falls of Montmorenci and elsewhere. Well, I thought to myself, here I am in a foreign country; let me have my eyes about me, and take it all in. It already looked and felt a good deal colder than it had in New England, as we might have expected it would. I realized fully that I was four degrees nearer the pole, and shuddered at the thought; and I wondered if it were possible that the peaches might not be all gone when I returned. It was an atmosphere that made me think of the fur-trade, which is so interesting a department in Canada, for I had for all head-covering a thin palm-leaf hat without lining, that cost twenty-five cents, and over my coat one of those unspeakably cheap, as well as thin, brown linen sacks of the Oak Hall pattern, which every summer appear all over New England, thick as the leaves upon the trees. It was a thoroughly Yankee costume, which some of my fellow-travelers wore in the cars to save their coats a dusting. I wore mine, at first, because it looked better than the coat it covered, and last, because two coats were warmer than one, though one was thin and dirty. I never wear my best coat on a journey, though perchance I could show a certificate to prove that I have a more costly one, at least, at home, if that were all that a gentleman required. It is not wise for a traveler to go dressed. I should no more think of it than of putting on a clean dicky and blacking my shoes to go a-fishing; as if you were going out to dine, when, in fact, the genuine traveler is going out to work hard, and fare harder, — to eat a crust by the wayside whenever he can get it. Honest traveling is about as dirty work as you can do, and a man needs a pair of overalls for it. As for blacking my shoes in such a case, I should as soon think of blacking my

face. I carry a piece of tallow to preserve the leather and keep out the water; that's all; and many an officious shoe-black, who carried off my shoes when I was slumbering, mistaking me for a gentleman, has had occasion to repent it before he produced a gloss on them.

My pack, in fact, was soon made, for I keep a short list of those articles which, from frequent experience, I have found indispensable to the foot-traveler; and, when I am about to start, I have only to consult that, to be sure that nothing is omitted, and, what is more important, nothing superfluous inserted. Most of my fellow-travelers carried carpet-bags, or valises. Sometimes one had two or three ponderous yellow valises in his clutch, at each hitch of the cars, as if we were going to have another rush for seats; and when there was a rush in earnest, — and there were not a few, — I would see my man in the crowd, with two or three affectionate lusty fellows along each side of his arm, between his shoulder and his valises, which last held them tight to his back, like the nut on the end of a screw. I could not help asking in my mind, What so great cause for showing Canada to those valises, when perhaps your very nieces had to stay at home for want of an escort? I should have liked to be present when the custom-house officer came aboard of him, and asked him to declare upon his honor if he had anything but wearing apparel in them. Even the elephant carries but a small trunk on his journeys. The perfection of traveling is to travel without baggage. After considerable reflection and experience, I have concluded that the best bag for the foot-traveler is made with a handkerchief, or, if he study appearances, a piece of stiff brown paper, well tied up, with a fresh piece within to put outside when the first is torn. That is good for both town and country, and none will know but you are carrying home the silk for a new gown for your wife, when it may be a dirty shirt. A bundle which you can carry literally under your arm, and which will shrink and swell with its contents. I never found the carpet-bag of equal capacity which was not a bundle of itself. We styled ourselves the Knights of the Umbrella and the Bundle; for, wherever we went, whether to Notre Dame or Mount Royal or the Champ de Mars, to the Town Major's or the Bishop's Palace, to the Citadel, with a bare-legged Highlander for our escort, or to the Plains of Abraham, to dinner or to bed, the umbrella and the bundle went with us; for we wished to be ready to digress at any moment. We made it our home nowhere in particular, but everywhere where our umbrella and bundle were. It would have been an amusing circumstance, if the mayor of one of those cities had politely asked us where we were staying. We could only have answered that we were staying with his honor for the time being. I was amused when, after our return, some green ones inquired if we found it easy to get accommodated; as if we went abroad to get accommodated, when we can get that at home.

We met with many charettes, bringing wood and stone to the city. The most ordinary-looking horses traveled faster than ours, or perhaps they were ordinary-looking because, as I am told, the Canadians do not use the curry-comb. Moreover, it is said that on the approach of winter their horses acquire an increased quantity of hair, to protect them from the cold. If this be true, some of our horses would make

you think winter were approaching, even in midsummer. We soon began to see women and girls at work in the fields, digging potatoes alone, or bundling up the grain which the men cut. They appeared in rude health, with a great deal of color in their cheeks, and, if their occupation had made them coarse, it impressed me as better in its effects than making shirts at fourpence apiece, or doing nothing at all — unless it be chewing slate-pencils — with still smaller results. They were much more agreeable objects, with their great broad-brimmed hats and flowing dresses, than the men and boys. We afterwards saw them doing various other kinds of work; indeed, I thought that we saw more women at work out of doors than men. On our return, we observed in this town a girl, with Indian boots nearly two feet high, taking the harness off a dog.

The purity and transparency of the atmosphere were wonderful. When we had been walking an hour, we were surprised, on turning round, to see how near the city, with its glittering tin roofs, still looked. A village ten miles off did not appear to be more than three or four. I was convinced that you could see objects distinctly there much farther than here. It is true the villages are of a dazzling white, but the dazzle is to be referred, perhaps, to the transparency of the atmosphere as much as to the whitewash.

We were now fairly in the village of Beauport, though there was still but one road. The houses stood close upon this, without any front yards, and at an angle with it, as if they had dropped down, being set with more reference to the road which the sun travels. It being about sundown, and the falls not far off, we began to look round for a lodging, for we preferred to put up at a private house, that we might see more of the inhabitants. We inquired first at the most promising-looking houses, — if, indeed, any were promising. When we knocked, they shouted some French word for come in, perhaps *Entrez*, and we asked for a lodging in English; but we found, unexpectedly, that they spoke French only. Then we went along and tried another house, being generally saluted by a rush of two or three little curs, which readily distinguished a foreigner, and which we were prepared now to hear bark in French. Our first question would be “*Parlez-vous Anglais?*” but the invariable answer was “*Non, monsieur;*” and we soon found that the inhabitants were exclusively French Canadians, and nobody spoke English at all, any more than in France; that, in fact, we were in a foreign country, where the inhabitants uttered not one familiar sound to us. Then we tried by turns to talk French with them, in which we succeeded sometimes pretty well, but for the most part pretty ill. “*Pouvez-vous nous donner un lit cette nuit?*” we would ask, and then they would answer with French volubility, so that we could catch only a word here and there. We could understand the women and children generally better than the men, and they us; and thus, after a while, we would learn that they had no more beds than they used.

So we were compelled to inquire, “*Y a-t-il une maison publique ici?*” (*auberge* we should have said, perhaps, for they seemed never to have heard of the other), and they answered at length that there was no tavern, unless we could get lodgings at the mill, *le moulin*, which we had passed; or they would direct us to a grocery, and almost every house had a small grocery at one end of it. We called on the public notary or village

lawyer, but he had no more beds nor English than the rest. At one house there was so good a misunderstanding at once established through the politeness of all parties, that we were encouraged to walk in and sit down, and ask for a glass of water; and having drunk their water, we thought it was as good as to have tasted their salt. When our host and his wife spoke of their poor accommodations, meaning for themselves, we assured them that they were good enough, for we thought that they were only apologizing for the poorness of the accommodations they were about to offer us, and we did not discover our mistake till they took us up a ladder into a loft, and showed to our eyes what they had been laboring in vain to communicate to our brains through our ears, that they had but that one apartment with its few beds for the whole family. We made our adieus forthwith, and with gravity, perceiving the literal signification of that word. We were finally taken in at a sort of public house, whose master worked for Patterson, the proprietor of the extensive sawmills driven by a portion of the Montmorenci stolen from the fall, whose roar we now heard. We here talked, or murdered, French all the evening, with the master of the house and his family, and probably had a more amusing time than if we had completely understood one another. At length they showed us to a bed in their best chamber, very high to get into, with a low wooden rail to it. It had no cotton sheets, but coarse, home-made, dark-colored linen ones. Afterward, we had to do with sheets still coarser than these, and nearly the color of our blankets. There was a large open buffet loaded with crockery in one corner of the room, as if to display their wealth to travelers, and pictures of Scripture scenes, French, Italian, and Spanish, hung around. Our hostess came back directly to inquire if we would have brandy for breakfast. The next morning, when I asked their names, she took down the temperance pledges of herself and husband and children, which were hanging against the wall. They were Jean Baptiste Binet and his wife, Geneviève Binet. Jean Baptiste is the sobriquet of the French Canadians.

After breakfast we proceeded to the fall, which was within half a mile, and at this distance its rustling sound, like the wind among the leaves, filled all the air. We were disappointed to find that we were in some measure shut out from the west side of the fall by the private grounds and fences of Patterson, who appropriates not only a part of the water for his mill, but a still larger part of the prospect, so that we were obliged to trespass. This gentleman's mansion-house and grounds were formerly occupied by the Duke of Kent, father to Queen Victoria. It appeared to me in bad taste for an individual, though he were the father of Queen Victoria, to obtrude himself with his land titles, or at least his fences, on so remarkable a natural phenomenon, which should, in every sense, belong to mankind. Some falls should even be kept sacred from the intrusion of mills and factories, as water privileges in another than the millwright's sense. This small river falls perpendicularly nearly two hundred and fifty feet at one pitch. The St. Lawrence falls only one hundred and sixty-four feet at Niagara. It is a very simple and noble fall, and leaves nothing to be desired; but the most that I could say of it would only have the force of one other testimony to assure the reader that it is there. We looked directly down on it from the point of a projecting rock, and saw far

below us, on a low promontory, the grass kept fresh and green by the perpetual drizzle, looking like moss. The rock is a kind of slate, in the crevices of which grew ferns and goldenrods. The prevailing trees on the shores were spruce and arbor-vitæ, — the latter very large and now full of fruit, — also aspens, alders, and the mountain-ash with its berries. Every emigrant who arrives in this country by way of the St. Lawrence, as he opens a point of the Isle of Orleans, sees the Montmorenci tumbling into the Great River thus magnificently in a vast white sheet, making its contribution with emphasis. Roberval's pilot, Jean Alphonse, saw this fall thus, and described it, in 1542. It is a splendid introduction to the scenery of Quebec. Instead of an artificial fountain in its square, Quebec has this magnificent natural waterfall, to adorn one side of its harbor. Within the mouth of the chasm below, which can be entered only at ebb-tide, we had a grand view at once of Quebec and of the fall. Kalm says that the noise of the fall is sometimes heard at Quebec, about eight miles distant, and is a sign of a northeast wind. The side of this chasm, of soft and crumbling slate too steep to climb, was among the memorable features of the scene. In the winter of 1829 the frozen spray of the fall, descending on the ice of the St. Lawrence, made a hill one hundred and twenty-six feet high. It is an annual phenomenon which some think may help explain the formation of glaciers.

In the vicinity of the fall we began to notice what looked like our red-fruited thorn bushes, grown to the size of ordinary apple trees, very common, and full of large red or yellow fruit, which the inhabitants called pommettes, but I did not learn that they were put to any use.

### CHAPTER III. ST. ANNE

By the middle of the forenoon, though it was a rainy day, we were once more on our way down the north bank of the St. Lawrence, in a northeasterly direction, toward the Falls of St. Anne, which are about thirty miles from Quebec. The settled, more level, and fertile portion of Canada East may be described rudely as a triangle, with its apex slanting toward the northeast, about one hundred miles wide at its base, and from two to three or even four hundred miles long, if you reckon its narrow northeastern extremity; it being the immediate valley of the St. Lawrence and its tributaries, rising by a single or by successive terraces toward the mountains on either hand. Though the words Canada East on the map stretch over many rivers and lakes and unexplored wildernesses, the actual Canada, which might be the colored portion of the map, is but a little clearing on the banks of the river, which one of those syllables would more than cover. The banks of the St. Lawrence are rather low from Montreal to the Richelieu Rapids, about forty miles above Quebec. Thence they rise gradually to Cape Diamond, or Quebec. Where we now were, eight miles northeast of Quebec, the mountains which form the northern side of this triangle were only five or six miles distant from the river, gradually departing farther and farther from it, on the west, till they reach the Ottawa,

and making haste to meet it on the east, at Cape Tourmente, now in plain sight about twenty miles distant. So that we were traveling in a very narrow and sharp triangle between the mountains and the river, tilted up toward the mountains on the north, never losing sight of our great fellow-traveler on our right. According to Bouchette's Topographical Description of the Canadas, we were in the Seigniorship of the Côte de Beaupré, in the county of Montmorenci, and the district of Quebec, — in that part of Canada which was the first to be settled, and where the face of the country and the population have undergone the least change from the beginning, where the influence of the States and of Europe is least felt, and the inhabitants see little or nothing of the world over the walls of Quebec. This Seigniorship was granted in 1636, and is now the property of the Seminary of Quebec. It is the most mountainous one in the province. There are some half a dozen parishes in it, each containing a church, parsonage-house, gristmill, and several sawmills. We were now in the most westerly parish, called Ange Gardien, or the Guardian Angel, which is bounded on the west by the Montmorenci. The north bank of the St. Lawrence here is formed on a grand scale. It slopes gently, either directly from the shore or from the edge of an interval, till, at the distance of about a mile, it attains the height of four or five hundred feet. The single road runs along the side of the slope two or three hundred feet above the river at first, and from a quarter of a mile to a mile distant from it, and affords fine views of the north channel, which is about a mile wide, and of the beautiful Isle of Orleans, about twenty miles long by five wide, where grow the best apples and plums in the Quebec district.

Though there was but this single road, it was a continuous village for as far as we walked this day and the next, or about thirty miles down the river, the houses being as near together all the way as in the middle of one of our smallest straggling country villages, and we could never tell by their number when we were on the skirts of a parish, for the road never ran through the fields or woods. We were told that it was just six miles from one parish church to another. I thought that we saw every house in Ange Gardien. Therefore, as it was a muddy day, we never got out of the mud, nor out of the village, unless we got over the fence; then, indeed, if it was on the north side, we were out of the civilized world. There were sometimes a few more houses near the church, it is true, but we had only to go a quarter of a mile from the road, to the top of the bank, to find ourselves on the verge of the uninhabited, and, for the most part, unexplored wilderness stretching toward Hudson's Bay. The farms accordingly were extremely long and narrow, each having a frontage on the river. Bouchette accounts for this peculiar manner of laying out a village by referring to "the social character of the Canadian peasant, who is singularly fond of neighborhood," also to the advantage arising from a concentration of strength in Indian times. Each farm, called *terre*, he says, is, in nine cases out of ten, three arpents wide by thirty deep, that is, very nearly thirty-five by three hundred and forty-nine of our rods; sometimes one half arpent by thirty, or one to sixty; sometimes, in fact, a few yards by half a mile. Of course it costs more for fences. A remarkable difference between the Canadian and the New England character appears from the fact that, in 1745, the French government were obliged to

pass a law forbidding the farmers or censitaires building on land less than one and a half arpents front by thirty or forty deep, under a certain penalty, in order to compel emigration, and bring the seigneur's estates all under cultivation; and it is thought that they have now less reluctance to leave the paternal roof than formerly, "removing beyond the sight of the parish spire, or the sound of the parish bell." But I find that in the previous or seventeenth century, the complaint, often renewed, was of a totally opposite character, namely, that the inhabitants dispersed and exposed themselves to the Iroquois. Accordingly, about 1664, the king was obliged to order that "they should make no more clearings except one next to another, and that they should reduce their parishes to the form of the parishes in France as much as possible." The Canadians of those days, at least, possessed a roving spirit of adventure which carried them further, in exposure to hardship and danger, than ever the New England colonist went, and led them, though not to clear and colonize the wilderness, yet to range over it as *coureurs de bois*, or runners of the woods, or, as Hontan prefers to call them, *coureurs de risques*, runners of risks; to say nothing of their enterprising priesthood; and Charlevoix thinks that if the authorities had taken the right steps to prevent the youth from ranging the woods (*de courir les bois*), they would have had an excellent militia to fight the Indians and English.

The road in this clayey-looking soil was exceedingly muddy in consequence of the night's rain. We met an old woman directing her dog, which was harnessed to a little cart, to the least muddy part of it. It was a beggarly sight. But harnessed to the cart as he was, we heard him barking after we had passed, though we looked anywhere but to the cart to see where the dog was that barked. The houses commonly fronted the south, whatever angle they might make with the road; and frequently they had no door nor cheerful window on the road side. Half the time they stood fifteen to forty rods from the road, and there was no very obvious passage to them, so that you would suppose that there must be another road running by them. They were of stone, rather coarsely mortared, but neatly whitewashed, almost invariably one story high and long in proportion to their height, with a shingled roof, the shingles being pointed, for ornament, at the eaves, like the pickets of a fence, and also one row halfway up the roof. The gables sometimes projected a foot or two at the ridge-pole only. Yet they were very humble and unpretending dwellings. They commonly had the date of their erection on them. The windows opened in the middle, like blinds, and were frequently provided with solid shutters. Sometimes, when we walked along the back side of a house which stood near the road, we observed stout stakes leaning against it, by which the shutters, now pushed half open, were fastened at night; within, the houses were neatly ceiled with wood not painted. The oven was commonly out of doors, built of stone and mortar, frequently on a raised platform of planks. The cellar was often on the opposite side of the road, in front of or behind the houses, looking like an ice-house with us, with a lattice door for summer. The very few mechanics whom we met had an old-Bettyish look, in their aprons and *bonnets rouges* like fools' caps. The men wore commonly the same *bonnet rouge*, or red woolen or worsted cap, or sometimes blue

or gray, looking to us as if they had got up with their night-caps on, and, in fact, I afterwards found that they had. Their clothes were of the cloth of the country, *étouffe du pays*, gray or some other plain color. The women looked stout, with gowns that stood out stiffly, also, for the most part, apparently of some home-made stuff. We also saw some specimens of the more characteristic winter dress of the Canadian, and I have since frequently detected him in New England by his coarse gray homespun capote and picturesque red sash, and his well-furred cap, made to protect his ears against the severity of his climate.

It drizzled all day, so that the roads did not improve. We began now to meet with wooden crosses frequently, by the roadside, about a dozen feet high, often old and toppling down, sometimes standing in a square wooden platform, sometimes in a pile of stones, with a little niche containing a picture of the Virgin and Child, or of Christ alone, sometimes with a string of beads, and covered with a piece of glass to keep out the rain, with the words, *Pour la Vierge*, or *INRI*, on them. Frequently, on the cross-bar, there would be quite a collection of symbolical knickknacks, looking like an Italian's board; the representation in wood of a hand, a hammer, spikes, pincers, a flask of vinegar, a ladder, etc., the whole, perchance, surmounted by a weathercock; but I could not look at an honest weathercock in this walk without mistrusting that there was some covert reference in it to St. Peter. From time to time we passed a little one-story chapel-like building, with a tin-roofed spire, a shrine, perhaps it would be called, close to the path-side, with a lattice door, through which we could see an altar, and pictures about the walls; equally open, through rain and shine, though there was no getting into it. At these places the inhabitants kneeled and perhaps breathed a short prayer. We saw one schoolhouse in our walk, and listened to the sounds which issued from it; but it appeared like a place where the process, not of enlightening, but of obfuscating the mind was going on, and the pupils received only so much light as could penetrate the shadow of the Catholic Church. The churches were very picturesque, and their interior much more showy than the dwelling-houses promised. They were of stone, for it was ordered, in 1699, that that should be their material. They had tinned spires, and quaint ornaments. That of Ange Gardien had a dial on it, with the Middle Age Roman numerals on its face, and some images in niches on the outside. Probably its counterpart has existed in Normandy for a thousand years. At the church of Château Richer, which is the next parish to Ange Gardien, we read, looking over the wall, the inscriptions in the adjacent churchyard, which began with *Ici gît* or *Repose*, and one over a boy contained *Priez pour lui*. This answered as well as *Père la Chaise*. We knocked at the door of the curé's house here, when a sleek, friar-like personage, in his sacerdotal robe, appeared. To our "*Parlez-vous Anglais?*" even he answered, "*Non, monsieur;*" but at last we made him understand what we wanted. It was to find the ruins of the old château. "*Ah! oui! oui!*" he exclaimed, and, donning his coat, hastened forth, and conducted us to a small heap of rubbish which we had already examined. He said that fifteen years before, it was plus considérable. Seeing at that moment three little red birds fly out of a crevice in the ruins, up into an *arbor-vitæ* tree which

grew out of them, I asked him their names, in such French as I could muster, but he neither understood me nor ornithology; he only inquired where we had *appris à parler Français*; we told him, *dans les États-Unis*; and so we bowed him into his house again. I was surprised to find a man wearing a black coat, and with apparently no work to do, even in that part of the world.

The universal salutation from the inhabitants whom we met was *bon jour*, at the same time touching the hat; with *bon jour*, and touching your hat, you may go smoothly through all Canada East. A little boy, meeting us, would remark, "*Bon jour, monsieur; le chemin est mauvais*" (Good morning, sir; it is bad walking). Sir Francis Head says that the immigrant is forward to "appreciate the happiness of living in a land in which the old country's servile custom of touching the hat does not exist," but he was thinking of Canada West, of course. It would, indeed, be a serious bore to be obliged to touch your hat several times a day. A Yankee has not leisure for it.

We saw peas, and even beans, collected into heaps in the fields. The former are an important crop here, and, I suppose, are not so much infested by the weevil as with us. There were plenty of apples, very fair and sound, by the roadside, but they were so small as to suggest the origin of the apple in the crab. There was also a small, red fruit which they called *snells*, and another, also red and very acid, whose name a little boy wrote for me, "*pinbéna*." It is probably the same with, or similar to, the *pembina* of the *voyageurs*, a species of *viburnum*, which, according to Richardson, has given its name to many of the rivers of Rupert's Land. The forest trees were spruce, *arbor-vitæ*, firs, birches, beeches, two or three kinds of maple, basswood, wild cherry, aspens, etc., but no pitch pines (*Pinus rigida*). I saw very few, if any, trees which had been set out for shade or ornament. The water was commonly running streams or springs in the bank by the roadside, and was excellent. The parishes are commonly separated by a stream, and frequently the farms. I noticed that the fields were furrowed or thrown into beds seven or eight feet wide to dry the soil.

At the *Rivière du Sault à la Puce*, which, I suppose, means the River of the Fall of the Flea, was advertised in English, as the sportsmen are English, "The best Snipe-shooting grounds," over the door of a small public house. These words being English affected me as if I had been absent now ten years from my country, and for so long had not heard the sound of my native language, and every one of them was as interesting to me as if I had been a snipe-shooter, and they had been snipes. The *prunella*, or self-heal, in the grass here, was an old acquaintance. We frequently saw the inhabitants washing or cooking for their pigs, and in one place hackling flax by the roadside. It was pleasant to see these usually domestic operations carried on out of doors, even in that cold country.

At twilight we reached a bridge over a little river, the boundary between *Château Richer* and *St. Anne*, *le premier pont de Ste. Anne*, and at dark the church of *La Bonne Ste. Anne*. Formerly vessels from France, when they came in sight of this church, gave "a general discharge of their artillery," as a sign of joy that they had escaped all the dangers of the river. Though all the while we had grand views of the adjacent country

far up and down the river, and, for the most part, when we turned about, of Quebec in the horizon behind us, and we never beheld it without new surprise and admiration; yet, throughout our walk, the Great River of Canada on our right hand was the main feature in the landscape, and this expands so rapidly below the Isle of Orleans, and creates such a breadth of level horizon above its waters in that direction, that, looking down the river as we approached the extremity of that island, the St. Lawrence seemed to be opening into the ocean, though we were still about three hundred and twenty-five miles from what can be called its mouth.

When we inquired here for a *maison publique* we were directed apparently to that private house where we were most likely to find entertainment. There were no guideboards where we walked, because there was but one road; there were no shops nor signs, because there were no artisans to speak of, and the people raised their own provisions; and there were no taverns, because there were no travelers. We here bespoke lodging and breakfast. They had, as usual, a large, old-fashioned, two-storied box stove in the middle of the room, out of which, in due time, there was sure to be forthcoming a supper, breakfast, or dinner. The lower half held the fire, the upper the hot air, and as it was a cool Canadian evening, this was a comforting sight to us. Being four or five feet high it warmed the whole person as you stood by it. The stove was plainly a very important article of furniture in Canada, and was not set aside during the summer. Its size, and the respect which was paid to it, told of the severe winters which it had seen and prevailed over. The master of the house, in his long-pointed red woolen cap, had a thoroughly antique physiognomy of the old Norman stamp. He might have come over with Jacques Cartier. His was the hardest French to understand of any we had heard yet, for there was a great difference between one speaker and another, and this man talked with a pipe in his mouth beside, — a kind of tobacco French. I asked him what he called his dog. He shouted Brock! (the name of the breed). We like to hear the cat called *min*, “*Min! min! min!*” I inquired if we could cross the river here to the Isle of Orleans, thinking to return that way when we had been to the falls. He answered, “*S’il ne fait pas un trop grand vent*” (If there is not too much wind). They use small boats, or *pirogues*, and the waves are often too high for them. He wore, as usual, something between a moccasin and a boot, which he called *bottes Indiennes*, Indian boots, and had made himself. The tops were of calf or sheepskin, and the soles of cowhide turned up like a moccasin. They were yellow or reddish, the leather never having been tanned nor colored. The women wore the same. He told us that he had traveled ten leagues due north into the bush. He had been to the Falls of St. Anne, and said that they were more beautiful, but not greater, than *Montmorenci*, *plus beau, mais non plus grand, que Montmorenci*. As soon as we had retired, the family commenced their devotions. A little boy officiated, and for a long time we heard him muttering over his prayers.

In the morning, after a breakfast of tea, maple-sugar, bread and butter, and what I suppose is called *potage* (potatoes and meat boiled with flour), the universal dish as we found, perhaps the national one, I ran over to the Church of La Bonne Ste. Anne, whose *matin bell* we had heard, it being Sunday morning. Our book said that this

church had "long been an object of interest, from the miraculous cures said to have been wrought on visitors to the shrine." There was a profusion of gilding, and I counted more than twenty-five crutches suspended on the walls, some for grown persons, some for children, which it was to be inferred so many sick had been able to dispense with; but they looked as if they had been made to order by the carpenter who made the church. There were one or two villagers at their devotions at that early hour, who did not look up, but when they had sat a long time with their little book before the picture of one saint, went to another. Our whole walk was through a thoroughly Catholic country, and there was no trace of any other religion. I doubt if there are any more simple and unsophisticated Catholics anywhere. Emery de Caen, Champlain's contemporary, told the Huguenot sailors that "Monseigneur the Duke de Ventadour (Viceroy) did not wish that they should sing psalms in the Great River."

On our way to the falls, we met the habitans coming to the Church of La Bonne Ste. Anne, walking or riding in charettes by families. I remarked that they were universally of small stature. The toll-man at the bridge over the St. Anne was the first man we had chanced to meet, since we left Quebec, who could speak a word of English. How good French the inhabitants of this part of Canada speak, I am not competent to say; I only know that it is not made impure by being mixed with English. I do not know why it should not be as good as is spoken in Normandy. Charlevoix, who was here a hundred years ago, observes, "The French language is nowhere spoken with greater purity, there being no accent perceptible;" and Potherie said "they had no dialect, which, indeed, is generally lost in a colony."

The falls, which we were in search of, are three miles up the St. Anne. We followed for a short distance a foot-path up the east bank of this river, through handsome sugar maple and arbor-vitæ groves. Having lost the path which led to a house where we were to get further directions, we dashed at once into the woods, steering by guess and by compass, climbing directly through woods a steep hill, or mountain, five or six hundred feet high, which was, in fact, only the bank of the St. Lawrence. Beyond this we by good luck fell into another path, and following this or a branch of it, at our discretion, through a forest consisting of large white pines, — the first we had seen in our walk, — we at length heard the roar of falling water, and came out at the head of the Falls of St. Anne. We had descended into a ravine or cleft in the mountain, whose walls rose still a hundred feet above us, though we were near its top, and we now stood on a very rocky shore, where the water had lately flowed a dozen feet higher, as appeared by the stones and driftwood, and large birches twisted and splintered as a farmer twists a withe. Here the river, one or two hundred feet wide, came flowing rapidly over a rocky bed out of that interesting wilderness which stretches toward Hudson's Bay and Davis's Straits. Ha-ha Bay, on the Saguenay, was about one hundred miles north of where we stood. Looking on the map, I find that the first country on the north which bears a name is that part of Rupert's Land called East Main. This river, called after the holy Anne, flowing from such a direction, here tumbled over a precipice, at present by three channels, how far down I do not know, but far enough for all our purposes, and

to as good a distance as if twice as far. It matters little whether you call it one, or two, or three hundred feet; at any rate, it was a sufficient water privilege for us. I crossed the principal channel directly over the verge of the fall, where it was contracted to about fifteen feet in width, by a dead tree which had been dropped across and secured in a cleft of the opposite rock, and a smaller one a few feet higher, which served for a hand-rail. This bridge was rotten as well as small and slippery, being stripped of bark, and I was obliged to seize a moment to pass when the falling water did not surge over it, and midway, though at the expense of wet feet, I looked down probably more than a hundred feet, into the mist and foam below. This gave me the freedom of an island of precipitous rock by which I descended as by giant steps, — the rock being composed of large cubical masses, clothed with delicate close-hugging lichens of various colors, kept fresh and bright by the moisture, — till I viewed the first fall from the front, and looked down still deeper to where the second and third channels fell into a remarkably large circular basin worn in the stone. The falling water seemed to jar the very rocks, and the noise to be ever increasing. The vista down-stream was through a narrow and deep cleft in the mountain, all white suds at the bottom; but a sudden angle in this gorge prevented my seeing through to the bottom of the fall. Returning to the shore, I made my way down-stream through the forest to see how far the fall extended, and how the river came out of that adventure. It was to clamber along the side of a precipitous mountain of loose mossy rocks, covered with a damp primitive forest, and terminating at the bottom in an abrupt precipice over the stream. This was the east side of the fall. At length, after a quarter of a mile, I got down to still water, and, on looking up through the winding gorge, I could just see to the foot of the fall which I had before examined; while from the opposite side of the stream, here much contracted, rose a perpendicular wall, I will not venture to say how many hundred feet, but only that it was the highest perpendicular wall of bare rock that I ever saw. In front of me tumbled in from the summit of the cliff a tributary stream, making a beautiful cascade, which was a remarkable fall in itself, and there was a cleft in this precipice, apparently four or five feet wide, perfectly straight up and down from top to bottom, which, from its cavernous depth and darkness, appeared merely as a black streak. This precipice is not sloped, nor is the material soft and crumbling slate as at Montmorenci, but it rises perpendicular, like the side of a mountain fortress, and is cracked into vast cubical masses of gray and black rock shining with moisture, as if it were the ruin of an ancient wall built by Titans. Birches, spruces, mountain-ashes with their bright red berries, arbor-vitæ, white pines, alders, etc., overhung this chasm on the very verge of the cliff and in the crevices, and here and there were buttresses of rock supporting trees part way down, yet so as to enhance, not injure, the effect of the bare rock. Take it altogether, it was a most wild and rugged and stupendous chasm, so deep and narrow, where a river had worn itself a passage through a mountain of rock, and all around was the comparatively untrudged wilderness.

This was the limit of our walk down the St. Lawrence. Early in the afternoon we began to retrace our steps, not being able to cross the north channel and return by

the Isle of Orleans, on account of the trop grand vent, or too great wind. Though the waves did run pretty high, it was evident that the inhabitants of Montmorenci County were no sailors, and made but little use of the river. When we reached the bridge between St. Anne and Château Richer, I ran back a little way to ask a man in the field the name of the river which we were crossing, but for a long time I could not make out what he said, for he was one of the more unintelligible Jacques Cartier men. At last it flashed upon me that it was La Rivière au Chien, or the Dog River, which my eyes beheld, which brought to my mind the life of the Canadian voyageur and coureur de bois, a more western and wilder Arcadia, methinks, than the world has ever seen; for the Greeks, with all their wood and river gods, were not so qualified to name the natural features of a country as the ancestors of these French Canadians; and if any people had a right to substitute their own for the Indian names, it was they. They have preceded the pioneer on our own frontiers, and named the prairie for us. La Rivière au Chien cannot, by any license of language, be translated into Dog River, for that is not such a giving it to the dogs, and recognizing their place in creation, as the French implies. One of the tributaries of the St. Anne is named La Rivière de la Rose; and farther east are La Rivière de la Blondelle and La Rivière de la Friponne. Their very rivière meanders more than our river.

Yet the impression which this country made on me was commonly different from this. To a traveler from the Old World, Canada East may appear like a new country, and its inhabitants like colonists, but to me, coming from New England and being a very green traveler withal, — notwithstanding what I have said about Hudson's Bay, — it appeared as old as Normandy itself, and realized much that I had heard of Europe and the Middle Ages. Even the names of humble Canadian villages affected me as if they had been those of the renowned cities of antiquity. To be told by a habitant, when I asked the name of a village in sight, that it is St. Feréol or St. Anne, the Guardian Angel or the Holy Joseph's; or of a mountain, that it was Bélange or St. Hyacinthe! As soon as you leave the States, these saintly names begin. St. Johns is the first town you stop at (fortunately we did not see it), and thenceforward, the names of the mountains, and streams, and villages reel, if I may so speak, with the intoxication of poetry, — Chambly, Longueuil, Pointe aux Trembles, Bartholomy, etc., etc.; as if it needed only a little foreign accent, a few more liquids and vowels perchance in the language, to make us locate our ideals at once. I began to dream of Provence and the Troubadours, and of places and things which have no existence on the earth. They veiled the Indian and the primitive forest, and the woods toward Hudson's Bay were only as the forests of France and Germany. I could not at once bring myself to believe that the inhabitants who pronounced daily those beautiful and, to me, significant names lead as prosaic lives as we of New England. In short, the Canada which I saw was not merely a place for railroads to terminate in and for criminals to run to.

When I asked the man to whom I have referred, if there were any falls on the Rivière au Chien, — for I saw that it came over the same high bank with the Montmorenci and St. Anne, — he answered that there were. How far? I inquired. “Trois quatres

lieue.” How high? “Je pense-quatrevingt-dix pieds;” that is, ninety feet. We turned aside to look at the falls of the Rivière du Sault à la Puce, half a mile from the road, which before we had passed in our haste and ignorance, and we pronounced them as beautiful as any that we saw; yet they seemed to make no account of them there, and, when first we inquired the way to the falls, directed us to Montmorenci, seven miles distant. It was evident that this was the country for waterfalls; that every stream that empties into the St. Lawrence, for some hundreds of miles, must have a great fall or cascade on it, and in its passage through the mountains was, for a short distance, a small Saguenay, with its upright walls. This fall of La Puce, the least remarkable of the four which we visited in this vicinity, we had never heard of till we came to Canada, and yet, so far as I know, there is nothing of the kind in New England to be compared with it. Most travelers in Canada would not hear of it, though they might go so near as to hear it. Since my return I find that in the topographical description of the country mention is made of “two or three romantic falls” on this stream, though we saw and heard of but this one. Ask the inhabitants respecting any stream, if there is a fall on it, and they will perchance tell you of something as interesting as Bashpish or the Catskill, which no traveler has ever seen, or if they have not found it, you may possibly trace up the stream and discover it yourself. Falls there are a drug, and we became quite dissipated in respect to them. We had drunk too much of them. Beside these which I have referred to, there are a thousand other falls on the St. Lawrence and its tributaries which I have not seen nor heard of; and above all there is one which I have heard of, called Niagara, so that I think that this river must be the most remarkable for its falls of any in the world.

At a house near the western boundary of Château Richer, whose master was said to speak a very little English, having recently lived at Quebec, we got lodging for the night. As usual, we had to go down a lane to get round to the south side of the house, where the door was, away from the road. For these Canadian houses have no front door, properly speaking. Every part is for the use of the occupant exclusively, and no part has reference to the traveler or to travel. Every New England house, on the contrary, has a front and principal door opening to the great world, though it may be on the cold side, for it stands on the highway of nations, and the road which runs by it comes from the Old World and goes to the far West; but the Canadian’s door opens into his backyard and farm alone, and the road which runs behind his house leads only from the church of one saint to that of another. We found a large family, hired men, wife, and children, just eating their supper. They prepared some for us afterwards. The hired men were a merry crew of short, black-eyed fellows, and the wife a thin-faced, sharp-featured French-Canadian woman. Our host’s English staggered us rather more than any French we had heard yet; indeed, we found that even we spoke better French than he did English, and we concluded that a less crime would be committed on the whole if we spoke French with him, and in no respect aided or abetted his attempts to speak English. We had a long and merry chat with the family this Sunday evening in their spacious kitchen. While my companion smoked a pipe and parlez-vous’d with one

party, I parleyed and gesticulated to another. The whole family was enlisted, and I kept a little girl writing what was otherwise unintelligible. The geography getting obscure, we called for chalk, and the greasy oiled table-cloth having been wiped, — for it needed no French, but only a sentence from the universal language of looks on my part, to indicate that it needed it, — we drew the St. Lawrence, with its parishes, thereon, and thenceforward went on swimmingly, by turns handling the chalk and committing to the table-cloth what would otherwise have been left in a limbo of unintelligibility. This was greatly to the entertainment of all parties. I was amused to hear how much use they made of the word *oui* in conversation with one another. After repeated single insertions of it, one would suddenly throw back his head at the same time with his chair, and exclaim rapidly, “*Oui! oui! oui! oui!*” like a Yankee driving pigs. Our host told us that the farms thereabouts were generally two acres or three hundred and sixty French feet wide, by one and a half leagues (?), or a little more than four and a half of our miles deep. This use of the word acre as long measure arises from the fact that the French acre or arpent, the arpent of Paris, makes a square of ten perches, of eighteen feet each, on a side, a Paris foot being equal to 1.06575 English feet. He said that the wood was cut off about one mile from the river. The rest was “bush,” and beyond that the “Queen’s bush.” Old as the country is, each landholder bounds on the primitive forest, and fuel bears no price. As I had forgotten the French for sickle, they went out in the evening to the barn and got one, and so clenched the certainty of our understanding one another. Then, wishing to learn if they used the cradle, and not knowing any French word for this instrument, I set up the knives and forks on the blade of the sickle to represent one; at which they all exclaimed that they knew and had used it. When snells were mentioned they went out in the dark and plucked some. They were pretty good. They said they had three kinds of plums growing wild, — blue, white, and red, the two former much alike and the best. Also they asked me if I would have des *pommes*, some apples, and got me some. They were exceedingly fair and glossy, and it was evident that there was no worm in them; but they were as hard almost as a stone, as if the season was too short to mellow them. We had seen no soft and yellow apples by the roadside. I declined eating one, much as I admired it, observing that it would be good *dans le printemps*, in the spring. In the morning when the mistress had set the eggs a-frying she nodded to a thick-set, jolly-looking fellow, who rolled up his sleeves, seized the long-handled griddle, and commenced a series of revolutions and evolutions with it, ever and anon tossing its contents into the air, where they turned completely topsy-turvy and came down t’other side up; and this he repeated till they were done. That appeared to be his duty when eggs were concerned. I did not chance to witness this performance, but my companion did, and he pronounced it a masterpiece in its way. This man’s farm, with the buildings, cost seven hundred pounds; some smaller ones, two hundred.

In 1827, Montmorenci County, to which the Isle of Orleans has since been added, was nearly as large as Massachusetts, being the eighth county out of forty (in Lower

Canada) in extent; but by far the greater part still must continue to be waste land, lying as it were under the walls of Quebec.

I quote these old statistics, not merely because of the difficulty of obtaining more recent ones, but also because I saw there so little evidence of any recent growth. There were in this county, at the same date, five Roman Catholic churches, and no others, five cures and five presbyteries, two schools, two corn-mills, four sawmills, one carding-mill, — no medical man or notary or lawyer, — five shopkeepers, four taverns (we saw no sign of any, though, after a little hesitation, we were sometimes directed to some undistinguished hut as such), thirty artisans, and five river crafts, whose tonnage amounted to sixty-nine tons! This, notwithstanding that it has a frontage of more than thirty miles on the river, and the population is almost wholly confined to its banks. This describes nearly enough what we saw. But double some of these figures, which, however, its growth will not warrant, and you have described a poverty which not even its severity of climate and ruggedness of soil will suffice to account for. The principal productions were wheat, potatoes, oats, hay, peas, flax, maple-sugar, etc., etc.; linen cloth, or *étouffe du pays*, flannel, and homespun, or *petite étouffe*.

In Lower Canada, according to Bouchette, there are two tenures, — the feudal and the *socage*. Tenanciers, censitaires, or holders of land en *roture* pay a small annual rent to the seigneurs, to which “is added some articles of provision, such as a couple of fowls, or a goose, or a bushel of wheat.” “They are also bound to grind their corn at the *moulin banal*, or the lord’s mill, where one fourteenth part of it is taken for his use” as toll. He says that the toll is one twelfth in the United States where competition exists. It is not permitted to exceed one sixteenth in Massachusetts. But worse than this monopolizing of mill rents is what are called *lods et ventes*, or *mutation fines*, — according to which the seigneur has “a right to a twelfth part of the purchase-money of every estate within his seigniority that changes its owner by sale.” This is over and above the sum paid to the seller. In such cases, moreover, “the lord possesses the *droit de retrait*, which is the privilege of preemption at the highest bidden price within forty days after the sale has taken place,” — a right which, however, is said to be seldom exercised. “Lands held by Roman Catholics are further subject to the payment to their curates of one twenty-sixth part of all the grain produced upon them, and to occasional assessments for building and repairing churches,” etc., — a tax to which they are not subject if the proprietors change their faith; but they are not the less attached to their church in consequence. There are, however, various modifications of the feudal tenure. Under the *socage* tenure, which is that of the townships or more recent settlements, English, Irish, Scotch, and others, and generally of Canada West, the landholder is wholly unshackled by such conditions as I have quoted, and “is bound to no other obligations than those of allegiance to the king and obedience to the laws.” Throughout Canada “a freehold of forty shillings yearly value, or the payment of ten pounds rent annually, is the qualification for voters.” In 1846 more than one sixth of the whole population of Canada East were qualified to vote for members of Parliament, — a greater proportion than enjoy a similar privilege in the United States.

The population which we had seen the last two days — I mean the habitans of Montmorenci County — appeared very inferior, intellectually and even physically, to that of New England. In some respects they were incredibly filthy. It was evident that they had not advanced since the settlement of the country, that they were quite behind the age, and fairly represented their ancestors in Normandy a thousand years ago. Even in respect to the common arts of life, they are not so far advanced as a frontier town in the West three years old. They have no money invested in railroad stock, and probably never will have. If they have got a French phrase for a railroad, it is as much as you can expect of them. They are very far from a revolution, have no quarrel with Church or State, but their vice and their virtue is content. As for annexation, they have never dreamed of it; indeed, they have not a clear idea what or where the States are. The English government has been remarkably liberal to its Catholic subjects in Canada, permitting them to wear their own fetters, both political and religious, as far as was possible for subjects. Their government is even too good for them. Parliament passed “an act [in 1825] to provide for the extinction of feudal and seigniorial rights and burdens on lands in Lower Canada, and for the gradual conversion of those tenures into the tenure of free and common socage,” etc. But as late as 1831, at least, the design of the act was likely to be frustrated, owing to the reluctance of the seigniors and peasants. It has been observed by another that the French Canadians do not extend nor perpetuate their influence. The British, Irish, and other immigrants, who have settled the townships, are found to have imitated the American settlers and not the French. They reminded me in this of the Indians, whom they were slow to displace, and to whose habits of life they themselves more readily conformed than the Indians to theirs. The Governor-General Denouville remarked, in 1685, that some had long thought that it was necessary to bring the Indians near them in order to Frenchify (franciser) them, but that they had every reason to think themselves in an error; for those who had come near them and were even collected in villages in the midst of the colony had not become French, but the French who had haunted them had become savages. Kalm said, “Though many nations imitate the French customs, yet I observed, on the contrary, that the French in Canada, in many respects, follow the customs of the Indians, with whom they converse every day. They make use of the tobacco-pipes, shoes, garters, and girdles of the Indians. They follow the Indian way of making war with exactness; they mix the same things with tobacco [he might have said that both French and English learned the use itself of this weed of the Indian]; they make use of the Indian bark-boats, and row them in the Indian way; they wrap square pieces of cloth round their feet instead of stockings; and have adopted many other Indian fashions.” Thus, while the descendants of the Pilgrims are teaching the English to make pegged boots, the descendants of the French in Canada are wearing the Indian moccasin still. The French, to their credit be it said, to a certain extent respected the Indians as a separate and independent people, and spoke of them and contrasted themselves with them as the English have never done. They not only went to war with them as allies, but they lived at home with them as neighbors. In 1627 the

French king declared "that the descendants" of the French, settled in New France, "and the savages who should be brought to the knowledge of the faith, and should make profession of it, should be counted and reputed French born (Naturels François); and as such could emigrate to France, when it seemed good to them, and there acquire, will, inherit, etc., etc., without obtaining letters of naturalization." When the English had possession of Quebec, in 1630, the Indians, attempting to practice the same familiarity with them that they had with the French, were driven out of their houses with blows; which accident taught them a difference between the two races, and attached them yet more to the French. The impression made on me was that the French Canadians were even sharing the fate of the Indians, or at least gradually disappearing in what is called the Saxon current.

The English did not come to America from a mere love of adventure, nor to truck with or convert the savages, nor to hold offices under the crown, as the French to a great extent did, but to live in earnest and with freedom. The latter overran a great extent of country, selling strong water, and collecting its furs, and converting its inhabitants, — or at least baptizing its dying infants (enfants moribonds), — without improving it. First went the *coureur de bois* with the *eau de vie*; then followed, if he did not precede, the heroic missionary with the *eau d'immortalité*. It was freedom to hunt, and fish, and convert, not to work, that they sought. Hontan says that the *coureurs de bois* lived like sailors ashore. In no part of the Seventeenth Century could the French be said to have had a foothold in Canada; they held only by the fur of the wild animals which they were exterminating. To enable the poor *seigneurs* to get their living, it was permitted by a decree passed in the reign of Louis the Fourteenth, in 1685, "to all nobles and gentlemen settled in Canada, to engage in commerce, without being called to account or reputed to have done anything derogatory." The reader can infer to what extent they had engaged in agriculture, and how their farms must have shone by this time. The New England youth, on the other hand, were never *coureurs de bois* nor *voyageurs*, but backwoodsmen and sailors rather. Of all nations the English undoubtedly have proved hitherto that they had the most business here.

Yet I am not sure but I have most sympathy with that spirit of adventure which distinguished the French and Spaniards of those days, and made them especially the explorers of the American Continent, — which so early carried the former to the Great Lakes and the Mississippi on the north, and the latter to the same river on the south. It was long before our frontiers reached their settlements in the West. So far as inland discovery was concerned, the adventurous spirit of the English was that of sailors who land but for a day, and their enterprise the enterprise of traders.

There was apparently a greater equality of condition among the habitans of Montmorenci County than in New England. They are an almost exclusively agricultural, and so far independent population, each family producing nearly all the necessaries of life for itself. If the Canadian wants energy, perchance he possesses those virtues, social and others, which the Yankee lacks, in which case he cannot be regarded as a poor man. 69

## CHAPTER IV. THE WALLS OF QUEBEC

After spending the night at a farmhouse in Château Richer, about a dozen miles northeast of Quebec, we set out on our return to the city. We stopped at the next house, a picturesque old stone mill, over the Chipré, — for so the name sounded, — such as you will nowhere see in the States, and asked the millers the age of the mill. They went upstairs to call the master; but the crabbed old miser asked why we wanted to know, and would tell us only for some compensation. I wanted French to give him a piece of my mind. I had got enough to talk on a pinch, but not to quarrel, so I had to come away, looking all I would have said. This was the utmost incivility we met with in Canada. In Beauport, within a few miles of Quebec, we turned aside to look at a church which was just being completed, — a very large and handsome edifice of stone, with a green bough stuck in its gable, of some significance to Catholics. The comparative wealth of the Church in this country was apparent; for in this village we did not see one good house besides. They were all humble cottages; and yet this appeared to me a more imposing structure than any church in Boston. But I am no judge of these things.

Reëntering Quebec through St. John's Gate, we took a caleche in Market Square for the Falls of the Chaudière, about nine miles southwest of the city, for which we were to pay so much, besides forty sous for tolls. The driver, as usual, spoke French only. The number of these vehicles is very great for so small a town. They are like one of our chaises that has lost its top, only stouter and longer in the body, with a seat for the driver where the dasher is with us, and broad leather ears on each side to protect the riders from the wheel and keep children from falling out. They had an easy jaunting look, which, as our hours were numbered, persuaded us to be riders. We met with them on every road near Quebec these days, each with its complement of two inquisitive-looking foreigners and a Canadian driver, the former evidently enjoying their novel experience, for commonly it is only the horse whose language you do not understand; but they were one remove further from him by the intervention of an equally unintelligible driver. We crossed the St. Lawrence to Point Levi in a French-Canadian ferry-boat, which was inconvenient and dirty, and managed with great noise and bustle. The current was very strong and tumultuous; and the boat tossed enough to make some sick, though it was only a mile across; yet the wind was not to be compared with that of the day before, and we saw that the Canadians had a good excuse for not taking us over to the Isle of Orleans in a pirogue, however shiftless they may be for not having provided any other conveyance. The route which we took to the Chaudière did not afford us those views of Quebec which we had expected, and the country and inhabitants appeared less interesting to a traveler than those we had seen. The Falls of the Chaudière are three miles from its mouth on the south side of the St. Lawrence. Though they were the largest which I saw in Canada, I was not proportionately interested by them, probably from satiety. I did not see any peculiar propriety in the name Chaudière, or caldron. I saw here the most brilliant rainbow

that I ever imagined. It was just across the stream below the precipice, formed on the mist which this tremendous fall produced; and I stood on a level with the keystone of its arch. It was not a few faint prismatic colors merely, but a full semicircle, only four or five rods in diameter, though as wide as usual, so intensely bright as to pain the eye, and apparently as substantial as an arch of stone. It changed its position and colors as we moved, and was the brighter because the sun shone so clearly and the mist was so thick. Evidently a picture painted on mist for the men and animals that came to the falls to look at; but for what special purpose beyond this, I know not. At the farthest point in this ride, and when most inland, unexpectedly at a turn in the road we descried the frowning citadel of Quebec in the horizon, like the beak of a bird of prey. We returned by the river road under the bank, which is very high, abrupt, and rocky. When we were opposite to Quebec, I was surprised to see that in the Lower Town, under the shadow of the rock, the lamps were lit, twinkling not unlike crystals in a cavern, while the citadel high above, and we, too, on the south shore, were in broad daylight. As we were too late for the ferry-boat that night, we put up at a maison de pension at Point Levi. The usual two-story stove was here placed against an opening in the partition shaped like a fireplace, and so warmed several rooms. We could not understand their French here very well, but the potage was just like what we had had before. There were many small chambers with doorways, but no doors. The walls of our chamber, all around and overhead, were neatly ceiled, and the timbers cased with wood unpainted. The pillows were checkered and tasseled, and the usual long-pointed red woolen or worsted nightcap was placed on each. I pulled mine out to see how it was made. It was in the form of a double cone, one end tucked into the other; just such, it appeared, as I saw men wearing all day in the streets. Probably I should have put it on if the cold had been then, as it is sometimes there, thirty or forty degrees below zero.

When we landed at Quebec the next morning a man lay on his back on the wharf, apparently dying, in the midst of a crowd and directly in the path of the horses, groaning, "O ma conscience!" I thought that he pronounced his French more distinctly than any I heard, as if the dying had already acquired the accents of a universal language. Having secured the only unengaged berths in the Lord Sydenham steamer, which was to leave Quebec before sundown, and being resolved, now that I had seen somewhat of the country, to get an idea of the city, I proceeded to walk round the Upper Town, or fortified portion, which is two miles and three quarters in circuit, alone, as near as I could get to the cliff and the walls, like a rat looking for a hole; going round by the southwest, where there is but a single street between the cliff and the water, and up the long wooden stairs, through the suburbs northward to the King's Woodyard, which I thought must have been a long way from his fireplace, and under the cliffs of the St. Charles, where the drains issue under the walls, and the walls are loopholed for musketry; so returning by Mountain Street and Prescott Gate to the Upper Town. Having found my way by an obscure passage near the St. Louis Gate to the glacis on the north of the citadel proper, — I believe that I was the only visitor

then in the city who got in there, — I enjoyed a prospect nearly as good as from within the citadel itself, which I had explored some days before. As I walked on the glacis I heard the sound of a bagpipe from the soldiers' dwellings in the rock, and was further soothed and affected by the sight of a soldier's cat walking up a cleated plank into a high loophole designed for mus-catry, as serene as Wisdom herself, and with a gracefully waving motion of her tail, as if her ways were ways of pleasantness and all her paths were peace. Scaling a slat fence, where a small force might have checked me, I got out of the esplanade into the Governor's Garden, and read the well-known inscription on Wolfe and Montcalm's monument, which for saying much in little, and that to the purpose, undoubtedly deserved the prize medal which it received: —

MORTEM . VIRTUS . COMMUNEM .  
FAMAM . HISTORIA .  
MONUMENTUM . POSTERITAS .  
DEDIT

(Valor gave them one death, history one fame, posterity one monument.) The Government Garden has for nosegays, amid kitchen vegetables, beside the common garden flowers, the usual complement of cannon directed toward some future and possible enemy. I then returned up St. Louis Street to the esplanade and ramparts there, and went round the Upper Town once more, though I was very tired, this time on the inside of the wall; for I knew that the wall was the main thing in Quebec, and had cost a great deal of money, and therefore I must make the most of it. In fact, these are the only remarkable walls we have in North America, though we have a good deal of Virginia fence, it is true. Moreover, I cannot say but I yielded in some measure to the soldier instinct, and, having but a short time to spare, thought it best to examine the wall thoroughly, that I might be the better prepared if I should ever be called that way again in the service of my country. I committed all the gates to memory, in their order, which did not cost me so much trouble as it would have done at the hundred-gated city, there being only five; nor were they so hard to remember as those seven of Boeotian Thebes; and, moreover, I thought that, if seven champions were enough against the latter, one would be enough against Quebec, though he bore for all armor and device only an umbrella and a bundle. I took the nunneries as I went, for I had learned to distinguish them by the blinds; and I observed also the foundling hospitals and the convents, and whatever was attached to, or in the vicinity of the walls. All the rest I omitted, as naturally as one would the inside of an inedible shell-fish. These were the only pearls, and the wall the only mother-of-pearl for me. Quebec is chiefly famous for the thickness of its parietal bones. The technical terms of its conchology may stagger a beginner a little at first, such as banlieue, esplanade, glacis, ravelin, cavalier, etc., etc., but with the aid of a comprehensive dictionary you soon learn the nature of your ground. I was surprised at the extent of the artillery barracks, built so long ago, — Casernes Nouvelles, they used to be called, — nearly six hundred feet in length by forty in depth, where the sentries, like peripatetic philosophers, were so absorbed in thought as not to notice me when I passed in and out at the gates. Within are “small

arms of every description, sufficient for the equipment of twenty thousand men," so arranged as to give a startling coup d'œil to strangers. I did not enter, not wishing to get a black eye; for they are said to be "in a state of complete repair and readiness for immediate use." Here, for a short time, I lost sight of the wall, but I recovered it again on emerging from the barrack yard. There I met with a Scotchman who appeared to have business with the wall, like myself; and, being thus mutually drawn together by a similarity of tastes, we had a little conversation *sub moenibus*, that is, by an angle of the wall, which sheltered us. He lived about thirty miles northwest of Quebec; had been nineteen years in the country; said he was disappointed that he was not brought to America after all, but found himself still under British rule and where his own language was not spoken; that many Scotch, Irish, and English were disappointed in like manner, and either went to the States or pushed up the river to Canada West, nearer to the States, and where their language was spoken. He talked of visiting the States some time; and, as he seemed ignorant of geography, I warned him that it was one thing to visit the State of Massachusetts, and another to visit the State of California. He said it was colder there than usual at that season, and he was lucky to have brought his thick togue, or frock-coat, with him; thought it would snow, and then be pleasant and warm. That is the way we are always thinking. However, his words were music to me in my thin hat and sack.

At the ramparts on the cliff near the old Parliament House I counted twenty-four thirty-two-pounders in a row, pointed over the harbor, with their balls piled pyramid-wise between them, — there are said to be in all about one hundred and eighty guns mounted at Quebec, — all which were faithfully kept dusted by officials, in accordance with the motto, "In time of peace prepare for war;" but I saw no preparations for peace: she was plainly an uninvited guest.

Having thus completed the circuit of this fortress, both within and without, I went no farther by the wall for fear that I should become wall-eyed. However, I think that I deserve to be made a member of the Royal Sappers and Miners.

In short, I observed everywhere the most perfect arrangements for keeping a wall in order, not even permitting the lichens to grow on it, which some think an ornament; but then I saw no cultivation nor pasturing within it to pay for the outlay, and cattle were strictly forbidden to feed on the glacis under the severest penalties. Where the dogs get their milk I don't know, and I fear it is bloody at best.

The citadel of Quebec says, "I will live here, and you shan't prevent me." To which you return, that you have not the slightest objection; live and let live. The Martello towers looked, for all the world, exactly like abandoned windmills which had not had a grist to grind these hundred years. Indeed, the whole castle here was a "folly," — England's folly, — and, in more senses than one, a castle in the air. The inhabitants and the government are gradually waking up to a sense of this truth; for I heard something said about their abandoning the wall around the Upper Town, and confining the fortifications to the citadel of forty acres. Of course they will finally reduce their intrenchments to the circumference of their own brave hearts.

The most modern fortifications have an air of antiquity about them; they have the aspect of ruins in better or worse repair from the day they are built, because they are not really the work of this age. The very place where the soldier resides has a peculiar tendency to become old and dilapidated, as the word barrack implies. I couple all fortifications in my mind with the dismantled Spanish forts to be found in so many parts of the world; and if in any place they are not actually dismantled, it is because that there the intellect of the inhabitants is dismantled. The commanding officer of an old fort near Valdivia in South America, when a traveler remarked to him that, with one discharge, his gun-carriages would certainly fall to pieces, gravely replied, "No, I am sure, sir, they would stand two." Perhaps the guns of Quebec would stand three. Such structures carry us back to the Middle Ages, the siege of Jerusalem, and St. Jean d'Acre, and the days of the Bucaniers. In the armory of the citadel they showed me a clumsy implement, long since useless, which they called a Lombard gun. I thought that their whole citadel was such a Lombard gun, fit object for the museums of the curious. Such works do not consist with the development of the intellect. Huge stone structures of all kinds, both in their erection and by their influence when erected, rather oppress than liberate the mind. They are tombs for the souls of men, as frequently for their bodies also. The sentinel with his musket beside a man with his umbrella is spectral. There is not sufficient reason for his existence. Does my friend there, with a bullet resting on half an ounce of powder, think that he needs that argument in conversing with me? The fort was the first institution that was founded here, and it is amusing to read in Champlain how assiduously they worked at it almost from the first day of the settlement. The founders of the colony thought this an excellent site for a wall, — and no doubt it was a better site, in some respects, for a wall than for a city, — but it chanced that a city got behind it. It chanced, too, that a Lower Town got before it, and clung like an oyster to the outside of the crags, as you may see at low tide. It is as if you were to come to a country village surrounded by palisades in the old Indian fashion, — interesting only as a relic of antiquity and barbarism. A fortified town is like a man cased in the heavy armor of antiquity, with a horse-load of broadswords and small arms slung to him, endeavoring to go about his business. Or is this an indispensable machinery for the good government of the country? The inhabitants of California succeed pretty well, and are doing better and better every day, without any such institution. What use has this fortress served, to look at it even from the soldiers' point of view? At first the French took care of it; yet Wolfe sailed by it with impunity, and took the town of Quebec without experiencing any hindrance at last from its fortifications. They were only the bone for which the parties fought. Then the English began to take care of it. So of any fort in the world, — that in Boston Harbor, for instance. We shall at length hear that an enemy sailed by it in the night, for it cannot sail itself, and both it and its inhabitants are always benighted. How often we read that the enemy occupied a position which commanded the old, and so the fort was evacuated! Have not the schoolhouse and the printing-press occupied a position which commands such a fort as this?

However, this is a ruin kept in remarkably good repair. There are some eight hundred or thousand men there to exhibit it. One regiment goes bare-legged to increase the attraction. If you wish to study the muscles of the leg about the knee, repair to Quebec. This universal exhibition in Canada of the tools and sinews of war reminded me of the keeper of a menagerie showing his animals' claws. It was the English leopard showing his claws. Always the royal something or other; as at the menagerie, the Royal Bengal Tiger. Silliman states that "the cold is so intense in the winter nights, particularly on Cape Diamond, that the sentinels cannot stand it more than one hour, and are relieved at the expiration of that time;" "and even, as it is said, at much shorter intervals, in case of the most extreme cold." What a natural or unnatural fool must that soldier be — to say nothing of his government — who, when quicksilver is freezing and blood is ceasing to be quick, will stand to have his face frozen, watching the walls of Quebec, though, so far as they are concerned, both honest and dishonest men all the world over have been in their beds nearly half a century, — or at least for that space travelers have visited Quebec only as they would read history! I shall never again wake up in a colder night than usual, but I shall think how rapidly the sentinels are relieving one another on the walls of Quebec, their quicksilver being all frozen, as if apprehensive that some hostile Wolfe may even then be scaling the Heights of Abraham, or some persevering Arnold about to issue from the wilderness; some Malay or Japanese, perchance, coming round by the northwest coast, have chosen that moment to assault the citadel! Why, I should as soon expect to find the sentinels still relieving one another on the walls of Nineveh, which have so long been buried to the world. What a troublesome thing a wall is! I thought it was to defend me, and not I it! Of course, if they had no wall, they would not need to have any sentinels.

You might venture to advertise this farm as well fenced with substantial stone walls (saying nothing about the eight hundred Highlanders and Royal Irish who are required to keep them from toppling down); stock and tools to go with the land if desired. But it would not be wise for the seller to exhibit his farm-book.

Why should Canada, wild and unsettled as it is, impress us as an older country than the States, unless because her institutions are old? All things appeared to contend there, as I have implied, with a certain rust of antiquity, such as forms on old armor and iron guns, — the rust of conventions and formalities. It is said that the metallic roofs of Montreal and Quebec keep sound and bright for forty years in some cases. But if the rust was not on the tinned roofs and spires, it was on the inhabitants and their institutions. Yet the work of burnishing goes briskly forward. I imagined that the government vessels at the wharves were laden with rottenstone and oxalic acid, — that is what the first ship from England in the spring comes freighted with, — and the hands of the Colonial legislature are cased in wash-leather. The principal exports must be gunny bags, verdigris, and iron rust. Those who first built this fort, coming from Old France with the memory and tradition of feudal days and customs weighing on them, were unquestionably behind their age; and those who now inhabit and repair it are behind their ancestors or predecessors. Those old chevaliers thought

that they could transplant the feudal system to America. It has been set out, but it has not thriven. Notwithstanding that Canada was settled first, and, unlike New England, for a long series of years enjoyed the fostering care of the mother country; notwithstanding that, as Charlevoix tells us, it had more of the ancient noblesse among its early settlers than any other of the French colonies, and perhaps than all the others together, there are in both the Canadas but 600,000 of French descent to-day, — about half so many as the population of Massachusetts. The whole population of both Canadas is but about 1,700,000 Canadians, English, Irish, Scotch, Indians, and all, put together! Samuel Laing, in his essay on the Northmen, to whom especially, rather than the Saxons, he refers the energy and indeed the excellence of the English character, observes that, when they occupied Scandinavia, “each man possessed his lot of land without reference to, or acknowledgment of, any other man, without any local chief to whom his military service or other quit-rent for his land was due, — without tenure from, or duty or obligation to, any superior, real or fictitious, except the general sovereign. The individual settler held his land, as his descendants in Norway still express it, by the same right as the King held his crown, by udal right, or adel, — that is, noble right.” The French have occupied Canada, not udally, or by noble right, but feudally, or by ignoble right. They are a nation of peasants.

It was evident that, both on account of the feudal system and the aristocratic government, a private man was not worth so much in Canada as in the United States; and, if your wealth in any measure consists in manliness, in originality and independence, you had better stay here. How could a peaceable, freethinking man live neighbor to the Forty-ninth Regiment? A New-Englander would naturally be a bad citizen, probably a rebel, there, — certainly if he were already a rebel at home. I suspect that a poor man who is not servile is a much rarer phenomenon there and in England than in the Northern United States. An Englishman, methinks, — not to speak of other European nations, — habitually regards himself merely as a constituent part of the English nation; he is a member of the royal regiment of Englishmen, and is proud of his company, as he has reason to be proud of it. But an American — one who has made a tolerable use of his opportunities — cares, comparatively, little about such things, and is advantageously nearer to the primitive and the ultimate condition of man in these respects. It is a government, that English one, — like most other European ones, — that cannot afford to be forgotten, as you would naturally forget it; under which one cannot be wholesomely neglected, and grow up a man and not an Englishman merely, — cannot be a poet even without danger of being made poet-laureate! Give me a country where it is the most natural thing in the world for a government that does not understand you to let you alone. One would say that a true Englishman could speculate only within bounds. (It is true the Americans have proved that they, in more than one sense, can speculate without bounds.) He has to pay his respects to so many things, that, before he knows it, he may have paid away all he is worth. What makes the United States government, on the whole, more tolerable — I mean for us lucky white men — is the fact that there is so much less of government with us. Here it is only once

in a month or a year that a man needs remember that institution; and those who go to Congress can play the game of the Kilkenny cats there without fatal consequences to those who stay at home, their term is so short; but in Canada you are reminded of the government every day. It parades itself before you. It is not content to be the servant, but will be the master; and every day it goes out to the Plains of Abraham or to the Champ de Mars and exhibits itself and toots. Everywhere there appeared an attempt to make and to preserve trivial and otherwise transient distinctions. In the streets of Montreal and Quebec you met not only with soldiers in red, and shuffling priests in unmistakable black and white, with Sisters of Charity gone into mourning for their deceased relative, — not to mention the nuns of various orders depending on the fashion of a tear, of whom you heard, — but youths belonging to some seminary or other, wearing coats edged with white, who looked as if their expanding hearts were already repressed with a piece of tape. In short, the inhabitants of Canada appeared to be suffering between two fires, — the soldiery and the priesthood. 85

## **CHAPTER V. THE SCENERY OF QUEBEC; AND THE RIVER ST. LAWRENCE**

About twelve o'clock this day, being in the Lower Town, I looked up at the signal-gun by the flagstaff on Cape Diamond, and saw a soldier up in the heavens there making preparations to fire it, — both he and the gun in bold relief against the sky. Soon after, being warned by the boom of the gun to look up again, there was only the cannon in the sky, the smoke just blowing away from it, as if the soldier, having touched it off, had concealed himself for effect, leaving the sound to echo grandly from shore to shore, and far up and down the river. This answered the purpose of a dinner-horn.

There are no such restaurants in Quebec or Montreal as there are in Boston. I hunted an hour or two in vain in this town to find one, till I lost my appetite. In one house, called a restaurant, where lunches were advertised, I found only tables covered with bottles and glasses innumerable, containing apparently a sample of every liquid that has been known since the earth dried up after the flood, but no scent of solid food did I perceive gross enough to excite a hungry mouse. In short, I saw nothing to tempt me there, but a large map of Canada against the wall. In another place I once more got as far as the bottles, and then asked for a bill of fare; was told to walk up stairs; had no bill of fare, nothing but fare. "Have you any pies or puddings?" I inquired, for I am obliged to keep my savageness in check by a low diet. "No, sir; we've nice mutton-chop, roast beef, beefsteak, cutlets," and so on. A burly Englishman, who was in the midst of the siege of a piece of roast beef, and of whom I have never had a front view to this day, turned half round, with his mouth half full, and remarked, "You'll find no pies nor puddings in Quebec, sir; they don't make any here." I found that it was even so, and therefore bought some musty cake and some fruit in the

open market-place. This market-place by the waterside, where the old women sat by their tables in the open air, amid a dense crowd jabbering all languages, was the best place in Quebec to observe the people; and the ferry-boats, continually coming and going with their motley crews and cargoes, added much to the entertainment. I also saw them getting water from the river, for Quebec is supplied with water by cart and barrel. This city impressed me as wholly foreign and French, for I scarcely heard the sound of the English language in the streets. More than three fifths of the inhabitants are of French origin; and if the traveler did not visit the fortifications particularly, he might not be reminded that the English have any foothold here; and, in any case, if he looked no farther than Quebec, they would appear to have planted themselves in Canada only as they have in Spain at Gibraltar; and he who plants upon a rock cannot expect much increase. The novel sights and sounds by the waterside made me think of such ports as Boulogne, Dieppe, Rouen, and Havre-de-Grâce, which I have never seen; but I have no doubt that they present similar scenes. I was much amused from first to last with the sounds made by the charette and caleche drivers. It was that part of their foreign language that you heard the most of, — the French they talked to their horses, — and which they talked the loudest. It was a more novel sound to me than the French of conversation. The streets resounded with the cries, “Qui donc!” “Marche tôt!” I suspect that many of our horses which came from Canada would prick up their ears at these sounds. Of the shops, I was most attracted by those where furs and Indian works were sold, as containing articles of genuine Canadian manufacture. I have been told that two townsmen of mine, who were interested in horticulture, traveling once in Canada, and being in Quebec, thought it would be a good opportunity to obtain seeds of the real Canada crookneck squash. So they went into a shop where such things were advertised, and inquired for the same. The shopkeeper had the very thing they wanted. “But are you sure,” they asked, “that these are the genuine Canada crookneck?” “Oh, yes, gentlemen,” answered he, “they are a lot which I have received directly from Boston.” I resolved that my Canada crookneck seeds should be such as had grown in Canada.

Too much has not been said about the scenery of Quebec. The fortifications of Cape Diamond are omnipresent. They preside, they frown over the river and surrounding country. You travel ten, twenty, thirty miles up or down the river’s banks, you ramble fifteen miles amid the hills on either side, and then, when you have long since forgotten them, perchance slept on them by the way, at a turn of the road or of your body, there they are still, with their geometry against the sky. The child that is born and brought up thirty miles distant, and has never traveled to the city, reads his country’s history, sees the level lines of the citadel amid the cloud-built citadels in the western horizon, and is told that that is Quebec. No wonder if Jacques Cartier’s pilot exclaimed in Norman French, “Que bec!” (What a beak!) when he saw this cape, as some suppose. Every modern traveler involuntarily uses a similar expression. Particularly it is said that its sudden apparition on turning Point Levi makes a memorable impression on him who arrives by water. The view from Cape Diamond has been compared by Eu-

ropean travelers with the most remarkable views of a similar kind in Europe, such as from Edinburgh Castle, Gibraltar, Cintra, and others, and preferred by many. A main peculiarity in this, compared with other views which I have beheld, is that it is from the ramparts of a fortified city, and not from a solitary and majestic river cape alone, that this view is obtained. I associate the beauty of Quebec with the steel-like and flashing air, which may be peculiar to that season of the year, in which the blue flowers of the succory and some late goldenrods and buttercups on the summit of Cape Diamond were almost my only companions, — the former bluer than the heavens they faced. Yet even I yielded in some degree to the influence of historical associations, and found it hard to attend to the geology of Cape Diamond or the botany of the Plains of Abraham. I still remember the harbor far beneath me, sparkling like silver in the sun, the answering highlands of Point Levi on the southeast, the frowning Cap Tourmente abruptly bounding the seaward view far in the northeast, the villages of Lorette and Charlesbourg on the north, and, further west, the distant Val Cartier, sparkling with white cottages, hardly removed by distance through the clear air, — not to mention a few blue mountains along the horizon in that direction. You look out from the ramparts of the citadel beyond the frontiers of civilization. Yonder small group of hills, according to the guide-book, forms “the portal of the wilds which are trodden only by the feet of the Indian hunters as far as Hudson’s Bay.” It is but a few years since Bouchette declared that the country ten leagues north of the British capital of North America was as little known as the middle of Africa. Thus the citadel under my feet, and all historical associations, were swept away again by an influence from the wilds and from Nature, as if the beholder had read her history, — an influence which, like the Great River itself, flowed from the Arctic fastnesses and Western forests with irresistible tide over all.

The most interesting object in Canada to me was the River St. Lawrence, known far and wide, and for centuries, as the Great River. Cartier, its discoverer, sailed up it as far as Montreal in 1535, — nearly a century before the coming of the Pilgrims; and I have seen a pretty accurate map of it so far, containing the city of “Hochelaga” and the river “Saguenay,” in Ortelius’s *Theatrum Orbis Terrarum*, printed at Antwerp in 1575, — the first edition having appeared in 1570, — in which the famous cities of “Norumbega” and “Orsinora” stand on the rough-blocked continent where New England is to-day, and the fabulous but unfortunate Isle of Demons, and Frisland, and others, lie off and on in the unfrequented sea, some of them prowling near what is now the course of the Cunard steamers. In this ponderous folio of the “Ptolemy of his age,” said to be the first general atlas published after the revival of the sciences in Europe, only one page of which is devoted to the topography of the *Novus Orbis*, the St. Lawrence is the only large river, whether drawn from fancy or from observation, on the east side of North America. It was famous in Europe before the other rivers of North America were heard of, notwithstanding that the mouth of the Mississippi is said to have been discovered first, and its stream was reached by Soto not long after; but the St. Lawrence had attracted settlers to its cold shores long before the Mississippi, or

even the Hudson, was known to the world. Schoolcraft was misled by Gallatin into saying that Narvaez discovered the Mississippi. De Vega does not say so. The first explorers declared that the summer in that country was as warm as France, and they named one of the bays in the Gulf of St. Lawrence the Bay of Chaleur, or of warmth; but they said nothing about the winter being as cold as Greenland. In the manuscript account of Cartier's second voyage, attributed by some to that navigator himself, it is called "the greatest river, without comparison, that is known to have ever been seen." The savages told him that it was the "chemin du Canada," — the highway to Canada, — "which goes so far that no man had ever been to the end that they had heard." The Saguenay, one of its tributaries, which the panorama has made known to New England within three years, is described by Cartier, in 1535, and still more particularly by Jean Alphonse, in 1542, who adds, "I think that this river comes from the sea of Cathay, for in this place there issues a strong current, and there runs there a terrible tide." The early explorers saw many whales and other sea-monsters far up the St. Lawrence. Champlain, in his map, represents a whale spouting in the harbor of Quebec, three hundred and sixty miles from what is called the mouth of the river; and Charlevoix takes his reader to the summit of Cape Diamond to see the "porpoises, white as snow," sporting on the surface of the harbor of Quebec. And Boucher says in 1664, "from there [Tadoussac] to Montreal is found a great quantity of Marsouins blancs." Several whales have been taken pretty high up the river since I was there. P. A. Gosse, in his "Canadian Naturalist," p. (London, 1840), speaks of "the white dolphin of the St. Lawrence (*Delphinus Canadensis*)," as considered different from those of the sea. "The Natural History Society of Montreal offered a prize, a few years ago, for an essay on the Cetacea of the St. Lawrence, which was, I believe, handed in." In Champlain's day it was commonly called "the Great River of Canada." More than one nation has claimed it. In Ogilby's "America of 1670," in the map *Novi Belgii*, it is called "De Groote River van Niew Nederlandt." It bears different names in different parts of its course, as it flows through what were formerly the territories of different nations. From the Gulf to Lake Ontario it is called at present the St. Lawrence; from Montreal to the same place it is frequently called the Cateriaqui; and higher up it is known successively as the Niagara, Detroit, St. Clair, St. Mary's, and St. Louis rivers. Humboldt, speaking of the Orinoco, says that this name is unknown in the interior of the country; so likewise the tribes that dwell about the sources of the St. Lawrence have never heard the name which it bears in the lower part of its course. It rises near another father of waters, — the Mississippi, — issuing from a remarkable spring far up in the woods, called Lake Superior, fifteen hundred miles in circumference; and several other springs there are thereabouts which feed it. It makes such a noise in its tumbling down at one place as is heard all round the world. Bouchette, the Surveyor-General of the Canadas, calls it "the most splendid river on the globe;" says that it is two thousand statute miles long (more recent geographers make it four or five hundred miles longer); that at the Rivière du Sud it is eleven miles wide; at the Traverse, thirteen; at the Paps of Matane, twenty-five; at the Seven Islands, seventy-three; and at its mouth, from Cape Rosier to the

Mingan Settlements in Labrador, near one hundred and five (?) miles wide. According to Captain Bayfield's recent chart it is about ninety-six geographical miles wide at the latter place, measuring at right angles with the stream. It has much the largest estuary, regarding both length and breadth, of any river on the globe. Humboldt says that the River Plate, which has the broadest estuary of the South American rivers, is ninety-two geographical miles wide at its mouth; also he found the Orinoco to be more than three miles wide at five hundred and sixty miles from its mouth; but he does not tell us that ships of six hundred tons can sail up it so far, as they can up the St. Lawrence to Montreal, — an equal distance. If he had described a fleet of such ships at anchor in a city's port so far inland, we should have got a very different idea of the Orinoco. Perhaps Charlevoix describes the St. Lawrence truly as the most navigable river in the world. Between Montreal and Quebec it averages about two miles wide. The tide is felt as far up as Three Rivers, four hundred and thirty-two miles, which is as far as from Boston to Washington. As far up as Cap aux Oyes, sixty or seventy miles below Quebec, Kalm found a great part of the plants near the shore to be marine, as glasswort (*Salicornia*), seaside pease (*Pisum maritimum*), sea-milkwort (*Glaux*), beach-grass (*Psamma arenaria*), seaside plantain (*Plantago maritima*), the sea-rocket (*Bunias cakile*), etc.

The geographer Guyot observes that the Marañon is three thousand miles long, and gathers its waters from a surface of a million and a half square miles; that the Mississippi is also three thousand miles long, but its basin covers only from eight to nine hundred thousand square miles; that the St. Lawrence is eighteen hundred miles long, and its basin covers more than a million square miles (Darby says five hundred thousand); and speaking of the lakes, he adds, "These vast fresh-water seas, together with the St. Lawrence, cover a surface of nearly one hundred thousand square miles, and it has been calculated that they contain about one half of all the fresh water on the surface of our planet." But all these calculations are necessarily very rude and inaccurate. Its tributaries, the Ottawa, St. Maurice, and Saguenay, are great rivers themselves. The latter is said to be more than one thousand (?) feet deep at its mouth, while its cliffs rise perpendicularly an equal distance above its surface. Pilots say there are no soundings till one hundred and fifty miles up the St. Lawrence. The greatest sounding in the river, given on Bayfield's chart of the gulf and river, is two hundred and twenty-eight fathoms. McTaggart, an engineer, observes that "the Ottawa is larger than all the rivers in Great Britain, were they running in one." The traveler Grey writes: "A dozen Danubes, Rhines, Taguses, and Thameses would be nothing to twenty miles of fresh water in breadth [as where he happened to be], from ten to forty fathoms in depth." And again: "There is not perhaps in the whole extent of this immense continent so fine an approach to it as by the river St. Lawrence. In the Southern States you have, in general, a level country for many miles inland; here you are introduced at once into a majestic scenery, where everything is on a grand scale, — mountains, woods, lakes, rivers, precipices, waterfalls."

We have not yet the data for a minute comparison of the St. Lawrence with the South American rivers; but it is obvious that, taking it in connection with its lakes, its estuary, and its falls, it easily bears off the palm from all the rivers on the globe; for though, as Bouchette observes, it may not carry to the ocean a greater volume of water than the Amazon and Mississippi, its surface and cubic mass are far greater than theirs. But, unfortunately, this noble river is closed by ice from the beginning of December to the middle of April. The arrival of the first vessel from England when the ice breaks up is, therefore, a great event, as when the salmon, shad, and alewives come up a river in the spring to relieve the famishing inhabitants on its banks. Who can say what would have been the history of this continent if, as has been suggested, this river had emptied into the sea where New York stands!

After visiting the Museum and taking one more look at the wall, I made haste to the Lord Sydenham steamer, which at five o'clock was to leave for Montreal. I had already taken a seat on deck, but finding that I had still an hour and a half to spare, and remembering that large map of Canada which I had seen in the parlor of the restaurant in my search after pudding, and realizing that I might never see the like out of the country, I returned thither, asked liberty to look at the map, rolled up the mahogany table, put my handkerchief on it, stood on it, and copied all I wanted before the maid came in and said to me standing on the table, "Some gentlemen want the room, sir;" and I retreated without having broken the neck of a single bottle, or my own, very thankful and willing to pay for all the solid food I had got. We were soon abreast of Cap Rouge, eight miles above Quebec, after we got under weigh. It was in this place, then called Fort du France Roy, that the Sieur de Roberval with his company, having sent home two of his three ships, spent the winter of 1542-43. It appears that they fared in the following manner (I translate from the original): "Each mess had only two loaves, weighing each a pound, and half a pound of beef. They ate pork for dinner, with half a pound of butter, and beef for supper, with about two handfuls of beans without butter. Wednesdays, Fridays, and Saturdays they ate salted cod, and sometimes green, for dinner, with butter; and porpoise and beans for supper. Monsieur Roberval administered good justice, and punished each according to his offense. One, named Michel Gaillon, was hung for theft; John of Nantes was put in irons and imprisoned for his fault; and others were likewise put in irons; and many were whipped, both men and women; by which means they lived in peace and tranquillity." In an account of a voyage up this river, printed in the Jesuit Relations in the year 1664, it is said: "It was an interesting navigation for us in ascending the river from Cap Tourmente to Quebec, to see on this side and on that, for the space of eight leagues, the farms and the houses of the company, built by our French, all along these shores. On the right, the seigniories of Beauport, of Notre Dame des Anges; and on the left, this beautiful Isle of Orleans." The same traveler names among the fruits of the country observed at the Isles of Richelieu, at the head of Lake St. Peter, "kinds (des espèces) of little apples or haws (senelles), and of pears, which only ripen with the frost."

Night came on before we had passed the high banks. We had come from Montreal to Quebec in one night. The return voyage, against the stream, takes but an hour longer. Jacques Cartier, the first white man who is known to have ascended this river, thus speaks of his voyage from what is now Quebec to the foot of Lake St. Peter, or about half-way to Montreal: "From the said day, the 19th, even to the 28th of the said month [September, 1535], we had been navigating up the said river without losing hour or day, during which time we had seen and found as much country and lands as level as we could desire, full of the most beautiful trees in the world," which he goes on to describe. But we merely slept and woke again to find that we had passed through all that country which he was eight days in sailing through. He must have had a troubled sleep. We were not long enough on the river to realize that it had length; we got only the impression of its breadth, as if we had passed over a lake a mile or two in breadth and several miles long, though we might thus have slept through a European kingdom. Being at the head of Lake St. Peter, on the above-mentioned 28th of September, dealing with the natives, Cartier says: "We inquired of them by signs if this was the route to Hochelaga [Montreal]; and they answered that it was, and that there were yet three days' journeys to go there." He finally arrived at Hochelaga on the 2d of October.

When I went on deck at dawn we had already passed through Lake St. Peter, and saw islands ahead of us. Our boat advancing with a strong and steady pulse over the calm surface, we felt as if we were permitted to be awake in the scenery of a dream. Many vivacious Lombardy poplars along the distant shores gave them a novel and lively, though artificial, look, and contrasted strangely with the slender and graceful elms on both shores and islands. The church of Varennes, fifteen miles from Montreal, was conspicuous at a great distance before us, appearing to belong to, and rise out of, the river; and now, and before, Mount Royal indicated where the city was. We arrived about seven o'clock, and set forth immediately to ascend the mountain, two miles distant, going across lots in spite of numerous signs threatening the severest penalties to trespassers, past an old building known as the MacTavish property, — Simon MacTavish, I suppose, whom Silliman refers to as "in a sense the founder of the Northwestern Company." His tomb was behind in the woods, with a remarkably high wall and higher monument. The family returned to Europe. He could not have imagined how dead he would be in a few years, and all the more dead and forgotten for being buried under such a mass of gloomy stone, where not even memory could get at him without a crowbar. Ah! poor man, with that last end of his! However, he may have been the worthiest of mortals for aught that I know. From the mountain-top we got a view of the whole city; the flat, fertile, extensive island; the noble sea of the St. Lawrence swelling into lakes; the mountains about St. Hyacinthe, and in Vermont and New York; and the mouth of the Ottawa in the west, overlooking that St. Anne's where the voyageur sings his "parting hymn," and bids adieu to civilization, — a name, thanks to Moore's verses, the most suggestive of poetic associations of any in Canada. We, too, climbed the hill which Cartier, first of white men, ascended, and

named Mont-real (the 3d of October, O. S., 1535), and, like him, "we saw the said river as far as we could see, grand, large, et spacieux, going to the southwest," toward that land whither Donnacona had told the discoverer that he had been a month's journey from Canada, where there grew "force Canelle et Girofle," much cinnamon and cloves, and where also, as the natives told him, were three great lakes and afterward une mer douce, — a sweet sea, — de laquelle n'est mention avoir vu le bout, of which there is no mention to have seen the end. But instead of an Indian town far in the interior of a new world, with guides to show us where the river came from, we found a splendid and bustling stone-built city of white men, and only a few squalid Indians offered to sell us baskets at the Lachine Railroad Depot, and Hochelaga is, perchance, but the fancy name of an engine company or an eating-house.

#### Montreal from Mount Royal

We left Montreal Wednesday, the 2d of October, late in the afternoon. In the La Prairie cars the Yankees made themselves merry, imitating the cries of the charette-drivers to perfection, greatly to the amusement of some French-Canadian travelers, and they kept it up all the way to Boston. I saw one person on board the boat at St. Johns, and one or two more elsewhere in Canada, wearing homespun gray greatcoats, or capotes, with conical and comical hoods, which fell back between their shoulders like small bags, ready to be turned up over the head when occasion required, though a hat usurped that place now. They looked as if they would be convenient and proper enough as long as the coats were new and tidy, but would soon come to have a beggarly and unsightly look, akin to rags and dust-holes. We reached Burlington early in the morning, where the Yankees tried to pass off their Canada coppers, but the newsboys knew better. Returning through the Green Mountains, I was reminded that I had not seen in Canada such brilliant autumnal tints as I had previously seen in Vermont. Perhaps there was not yet so great and sudden a contrast with the summer heats in the former country as in these mountain valleys. As we were passing through Ashburnham, by a new white house which stood at some distance in a field, one passenger exclaimed, so that all in the car could hear him, "There, there's not so good a house as that in all Canada!" I did not much wonder at his remark, for there is a neatness, as well as evident prosperity, a certain elastic easiness of circumstances, so to speak, when not rich, about a New England house, as if the proprietor could at least afford to make repairs in the spring, which the Canadian houses do not suggest. Though of stone, they are no better constructed than a stone barn would be with us; the only building, except the château, on which money and taste are expended, being the church. In Canada an ordinary New England house would be mistaken for the château, and while every village here contains at least several gentlemen or "squires," there there is but one to a seigniory.

I got home this Thursday evening, having spent just one week in Canada and traveled eleven hundred miles. The whole expense of this journey, including two guide-books and a map, which cost one dollar twelve and a half cents, was twelve dollars

seventy-five cents. I do not suppose that I have seen all British America; that could not be done by a cheap excursion, unless it were a cheap excursion to the Icy Sea, as seen by Hearne or Mackenzie, and then, no doubt, some interesting features would be omitted. I wished to go a little way behind the word Canadense, of which naturalists make such frequent use; and I should like still right well to make a longer excursion on foot through the wilder parts of Canada, which perhaps might be called Iter Canadense.

THE END

# The Essays

Studying at Harvard College between 1833 and 1837, Thoreau lived in Hollis Hall and took courses in rhetoric, classics, philosophy, mathematics and science. A legend proposes that he refused to pay the five-dollar fee for a Harvard diploma.

# AULUS PERSIUS FLACCUS

IF you have imagined what a divine work is spread out for the poet, and approach this author too, in the hope of finding the field at length fairly entered on, you will hardly dissent from the words of the prologue,

“Ipse semipaganus Ad sacra Vatum carmen affero nostrum .”

Here is none of the interior dignity of Virgil, nor the elegance and fire of Horace, nor will any Sibyl be needed to remind you, that from those older Greek poets, there is a sad descent to Persius . Scarcely can you distinguish one harmonious sound, amid this unmusical bickering with the follies of men.

One sees how music has its place in thought, but hardly as yet in language. When the Muse arrives, we wait for her to remould language, and impart to it her own rhythm. Hitherto the verse groans and labors with its load, but goes not forward blithely, singing by the way. The best ode may be parodied, indeed is itself a parody, and has a poor and trivial sound, like a man stepping on the rounds of a ladder. Homer, and Shakspeare, and Milton, and Marvel, and Wordsworth, are but the rustling of leaves and crackling of twigs in the forest, and not yet the sound of any bird. The Muse has never lifted up her voice to sing. Most of all satire will not be sung. A Juvenal or Persius do not marry music to their verse, but are measured faultfinders at best ; stand but just outside the faults they condemn, and so are concerned rather about the monster they have escaped, than the fair prospect before them. Let them live on an age, not a secular one, and they will have travelled out of his shadow and harm's way, and found other objects to ponder. As long as there is nature, the poet is, as it were, Itarticeps crimints . One sees not but he had best let bad take care of itself, and have to do only with what is beyond suspicion . If you light on the least vestige of truth, and it is the weight of the whole body still which stamps the faintest trace, an eternity will not suffice to extol it, while no evil is so huge, but you grudge to bestow on it a moment of hate. Truth never turns to rebuke falsehood; her own straightforwardness is the severest correction. Horace would not have written satire so well, if he had not been inspired by it, as by a passion, and fondly cherished his vein. In his odes, the love always exceeds the hate, so that the severest satire still sings itself, and the poet is satisfied, though the folly be not corrected . A sort of necessary order in the development of Genius is, first, Complaint ; second, Plaint ; third, Love. Complaint, which is the condition of Persius, lies not in the province of poetry. Ere long the enjoyment of a superior good would have changed his disgust into regret.

We can never have much sympathy with the complainer ; for after searching nature through, we conclude he must be both plaintiff and defendant too, and so had best come to a settlement without a hearing. I know not but it would be truer to say, that the highest strain of the muse is essentially plaintive. The saint's are still tears of joy. But the divinest poem, or the life of a great man, is the severest satire ; as impersonal as nature herself, and like the sighs of her winds in the woods, which convey ever a slight reproof to the hearer. The greater the genius, the keener the edge of the satire. Hence have we to do only with the rare and fragmentary traits, which least belong to Persius, or, rather, are the properest utterance of his muse ; since that which he says best at any time is what he can best say at all times. The Spectators and Ramblers have not failed to cull some quotable sentences from this garden too, so pleasant is it to meet even the most familiar truths in a new dress, when, if our neighbor had said it, we should have passed it by as hackneyed. Out of these six satires, you may perhaps select some twenty lines, which fit so well as many thoughts, that they will recur to the scholar almost as readily as a natural image; though when translated into familiar language, they lose that insular emphasis, which fitted them for quotation. Such lines as the following no translation can render commonplace. Contrasting the man of true religion with those, that, with jealous privacy, would fain carry on a secret commerce with the gods, he says,

“*Hand cuivis promptum est, murmurque humilesque Tollere susurros de templis ; et aperto vivere voto.*”

To the virtuous man, the universe is the only sanctum sanctorum, and the penetralia of the temple are the broad noon of his existence. Why should he betake himself to a subterranean crypt, as if it were the only holy ground in all the world he had left unprofaned? The obedient soul would only the more discover and familiarize things, and escape more and more into light and air, as having henceforth done with secrecy, so that the universe shall not seem open enough for it. At length, is it neglectful even of that silence which is consistent with true modesty, but by its independence of all confidence in its disclosures, makes that which it imparts so private to the hearer, that it becomes the care of the whole world that modesty be not infringed. To the man who cherishes a secret in his breast, there is a still greater secret unexplored. Our most indifferent acts may be matter for secrecy, but whatever we do with the utmost truthfulness and integrity, by virtue of its pureness, must be transparent as light. In the third satire he asks,

“*Est aliquid quo tendis, et in quod dirigis arcum  
An passim sequeris corvos, testave, lutove,  
Securus quo per ferat, atque ex tempore vivis?*”

Language seems to have justice done it, but is obviously cramped and narrowed in its significance, when any meanness is described. The truest construction is not put upon it. What may readily be fashioned into a rule of wisdom, is here thrown in the teeth of the sluggard, and constitutes the front of his offence. Universally, the innocent man will come forth from the sharpest inquisition and lecturings, the combined din of

reproof and commendation, with a faint sound of eulogy in his ears. Our vices lie ever in the direction of our virtues, and in their best estate are but plausible imitations of the latter.

Falsehood never attains to the dignity of entire falseness, but is only an inferior sort of truth; if it were more thoroughly false, it would incur danger of becoming true.

“Securus quo pes ferat, atque ex tempore vivit,

is then the motto of a wise man. For first, as the subtle discernment of the language would have taught us, with all his negligence he is still secure; but the sluggard, notwithstanding his heedlessness, is insecure. The life of a wise man is most of all extemporaneous, for he lives out of an eternity that includes all time. He is a child each moment and reflects wisdom. The far darting thought of the child’s mind tarries not for the development of manhood ; it lightens itself, and needs not draw down lightning from the clouds. When we bask in a single ray from the mind of Zoroaster, we see how all subsequent time has been an idler, and has no apology for itself. But the cunning mind travels farther back than Zoroaster each instant, and comes quite down to the present with its revelation . All the thrift and industry of thinking give no man any stock in life ; his credit with the inner world is no better, his capital no larger. He must try his fortune again today as yesterday. All questions rely on the present for their solution. Time measures nothing but itself: The word that is written may be postponed, but not that on the life. If this is what the occasion says, let the occasion say it. From a real sympathy, all the world is forward to prompt him who gets up to live without his creed in his pocket. In the fifth satire, which is the best, I find,

“Stat contra ratio, et recretam garrit in aurem.

Ne liceat facere id, quod quis vitiabit agendo.”

Only they who do not see how anything might be better done are forward to try their hand on it . Even the master workman must be encouraged by the reflection, that his awkwardness will be incompetent to do that harm, to which his skill may fail to do justice. Here is no apology for neglecting to do many things from a sense of our incapacity, -for what deed does not fall maimed and imperfect from our hands?-but only a warning to bungle less. The satires of Persius are the farthest possible from inspired; evidently a chosen, not imposed subject. Perhaps I have given him credit for more earnestness than is apparent; but certain it is, that that which alone we can call Persius, which is forever independent and consistent, was in earnest, and so sanctions the sober consideration of all. The artist and his work are not to be separated. The most wilfully foolish man cannot stand aloof from his folly, but the deed and the doer together make ever one sober fact . The buffoon may not bribe you to laugh always at his grimaces; they shall sculpture themselves in Egyptian granite, to stand heavy as the pyramids on the ground of his character.

# THE SERVICE

## I. Qualities of the Recruit

Spes sibi quisque.

Virgil

Each one his own hope.

The brave man is the elder son of creation, who has stepped buoyantly into his inheritance, while the coward, who is the younger, waiteth patiently till he decease. He rides as wide of this earth's gravity as a star, and by yielding incessantly to all the impulses of the soul, is constantly drawn upward and becomes a fixed star. His bravery deals not so much in resolute action, as healthy and assured rest; its palmy state is a staying at home and compelling alliance in all directions. So stands his life to heaven, as some fair sunlit tree against the western horizon, and by sunrise is planted on some eastern hill, to glisten in the first rays of the dawn. The brave man braves nothing, nor knows he of his bravery. He is that sixth champion against Thebes, whom, when the proud devices of the rest have been recorded, the poet describes as "bearing a full-orbed shield of solid brass,"

"But there was no device upon its circle,  
For not to seem just but to be is his wish."

He does not present a gleaming edge to ward off harm, for that will oftenest attract the lightning, but rather is the all-pervading ether, which the lightning does not strike but purify. So is the profanity of his companion as a flash across the face of his sky, which lights up and reveals its serene depths. Earth cannot shock the heavens, but its dull vapor and foul smoke make a bright cloud spot in the ether, and anon the sun, like a cunning artificer, will cut and paint it, and set it for a jewel in the breast of the sky.

His greatness is not measurable; not such a greatness as when we would erect a stupendous piece of art, and send far and near for materials, intending to lay the foundations deeper, and rear the structure higher than ever; for hence results only a remarkable bulkiness without grandeur, lacking those true and simple proportions which are independent of size. He was not builded by that unwise generation that would fain have reached the heavens by piling one brick upon another; but by a far wiser, that builded inward and not outward, having found out a shorter way, through the observance of a higher art. The Pyramids some artisan may measure with his line; but if he gives you the dimensions of the Parthenon in feet and inches, the figures will not embrace it like a cord, but dangle from its entablature like an elastic drapery.

His eye is the focus in which all the rays, from whatever side, are collected; for, itself being within and central, the entire circumference is revealed to it. Just as we scan the whole concave of the heavens at a glance, but can compass only one side of the pebble at our feet. So does his discretion give prevalence to his valor. "Discretion is the wise man's soul" says the poet. His prudence may safely go many strides beyond the utmost rashness of the coward; for, while he observes strictly the golden mean, he seems to run through all extremes with impunity. Like the sun, which, to the poor worldling, now appears in the zenith, now in the horizon, and again is faintly reflected from the moon's disk, and has the credit of describing an entire great circle, crossing the quinoctial and solstitial colures, — without detriment to his steadfastness or mediocrity. The golden mean, in ethics, as in physics, is the centre of the system, and that about which all revolve; and, though to a distant and plodding planet it be the uttermost extreme, yet one day, when that planet's year is complete, it will be found to be central. They who are alarmed lest Virtue should so far demean herself as to be extremely good, have not yet wholly embraced her, but described only a slight arc of a few seconds about her; and from so small and ill-defined a curvature, you can calculate no centre whatever; but their mean is no better than meanness, nor their medium than mediocrity.

The coward wants resolution, which the brave man can do without. He recognizes no faith but a creed, thinking this straw, by which he is moored, does him good service, because his sheet-anchor does not drag. "The house-roof fights with the rain; he who is under shelter does not know it." In his religion the ligature, which should be muscle and sinew, is rater like that thread which the accomplices of Cylon held in their hands, when they went abroad from the temple of Minerva, — the other end being attached to the statue of the goddess. But frequently, as in their case, the thread breaks, being stretched; and he is left without an asylum.

The divinity in man is the true vestal fire of the temple, which is never permitted to go out, but burns as steadily, and with as pure a flame, on the obscure provincial altars as in Numa's temple at Rome. In the meanest are all the materials of manhood, only they are not rightly disposed. We say, justly, that the weak person is "flat," — for, like all flat substances, he does not stand in the direction of his strength, that is, on his edge, but affords a convenient surface to put upon. He slides all the way through life. Most things are strong in one direction; a straw longitudinally; a board in the direction of its edge; a knee transversely to its grain; but the brave man is a perfect sphere, which cannot fall on its flat side, and is equally strong every way. The coward is wretchedly spheroidal at best, too much educated or drawn out on one side, and depressed on the other; or may be likened to a hollow sphere, whose disposition of matter is best when the greatest bulk is intended.

We shall not attain to be spherical by lying on one or the other side for an eternity, but only by resigning ourselves implicitly to the law of gravity in us, shall we find our axis coincident with the celestial axis, and by revolving incessantly through all circles, acquire a perfect sphericity. Mankind, like the earth, revolve mainly from west to east, and so are flattened at the pole. But does not philosophy give hint of a movement

commencing to be rotary at the poles too, which in a millennium will have acquired increased rapidity, and help restore an equilibrium? And when at length every star in the nebulae and Milky Way has looked down with mild radiance for a season, exerting its whole influence as the polar star, the demands of science will in some degree be satisfied.

The grand and majestic have always somewhat of the undulatoriness of the sphere. It is the secret of majesty in the rolling gait of the elephant, and of all grace in action and in art. Always the line of beauty is a curve. When with pomp a huge sphere is drawn along the streets, by the efforts of a hundred men, I seem to discover each striving to imitate its gait, and keep step with it, — if possible to swell to its own diameter. But onward it moves, and conquers the multitude with its majesty. What shame, then, that our lives, which might so well be the source of planetary motion, and sanction the order of the spheres, should be full of abruptness and angularity, so as not to roll nor move majestically!

The Romans “made Fortune surname to Fortitude,” for fortitude is that alchemy that turns all things to good fortune. The man of fortitude, whom the Latins called fortis is no other than that lucky person whom fors favors, or vir summae fortis. If we will, every bark may “carry Cæsar and Cæsar’s fortune.” For an impenetrable shield, stand inside yourself; he was no artist, but an artisan, who first made shields of brass. For armor of proof, mea virtute me involvo, — I wrap myself in my virtue;

“Tumble me down, and I will sit  
Upon my ruins, smiling yet.”

If you let a single ray of light through the shutter, it will go on diffusing itself without limit till it enlighten the world; but the shadow that was never so wide at first, as rapidly contracts till it comes to naught. The shadow of the moon, when it passes nearest the sun, is lost in space ere it can reach our earth to eclipse it. Always the System shines with uninterrupted light; for as the sun is so much larger than any planet, no shadow can travel far into space. We may bask always in the light of the System, always may step back out of the shade. No man’s shadow is as large as his body, if the rays make a right angle with the reflecting surface. Let our lives be passed under the equator, with the sun in the meridian.

There is no ill which may not be dissipated like the dark, if you let in a stronger light upon it. Overcome evil with good. Practice no such narrow economy as they, whose bravery amounts to no more light than a farthing candle, before which most objects cast a shadow wider than themselves.

Nature refuses to sympathize with our sorrow; she has not provided for, but by a thousand contrivances against it: she has bevelled the margin of the eyelids, that the tears may not overflow on the cheeks. It was a conceit of Plutarch, accounting for the preference given to signs observed on the left hand, that men may have thought “things terrestrial and mortal directly over against heavenly and divine thing, and do conjecture that the things which to us are on the left hand, the gods send down from their right hand.” If we are not blind, we shall see how a right hand is stretched over all,

— as well the unlucky as the lucky, — and that the ordering Soul is only right-handed, distributing with one palm all our fates.

What first suggested that necessity was grim, and made fate to be so fatal? The strongest is always the least violent. Necessity is my eastern cushion on which I recline. My eye revels in its prospect as in the summer haze. I ask no more but to be left alone with it. It is the bosom of time and the lap of eternity. To be necessary is to be needful, and necessity is only another name for inflexibility of good. How I welcome my grim fellow, and walk arm in arm with him. Let me too be such a Necessity as he! I love him, he is so flexile, and yields to me as the air to my body. I leap and dance in his midst, and play with his beard till he smiles. I greet thee, my elder brother! who with thy touch ennoblest all things. Then is holiday when naught intervenes betwixt me and thee. Must it be so, — then is it good. The stars are thy interpreters to me.

Over Greece hangs the divine necessity, ever a mellower heaven of itself; whose light gilds the Acropolis and a thousand fanes and groves.

## II. What Music Shall We Have?

Each more melodious note I hear  
Brings this reproach to me,  
That I alone afford the ear,  
Who would the music be.

The brave man is the sole patron of music; he recognizes it for his mother tongue; a more mellifluous and articulate language than words, in comparison with which, speech is recent and temporary. It is his voice. His language must have the same majestic movement and cadence that philosophy assigns to the heavenly bodies. The steady flux of his thought constitutes time in music. The universe falls in and keeps pace with it, which before proceeded singly and discordant. Hence are poetry and song. When Bravery first grew afraid and went to war, it took Music along with it. The soul is delighted still to hear the echo of her own voice. Especially the soldier insists on agreement and harmony always. To secure these he falls out. Indeed, it is that friendship there is in war that makes it chivalrous and heroic. It was the dim sentiment of a noble friendship for the purest soul the world has seen, that gave to Europe a crusading era. War is but the compelling of peace. If the soldier marches to the sack of a town, he must be preceded by drum and trumpet, which shall identify his cause with the accordant universe. All things thus echo back his own spirit, and thus the hostile territory is preoccupied for him. He is no longer insulated, but infinitely related and familiar. The roll-call musters for him all the forces of Nature.

There is as much music in the world as virtue. In a world of peace and love music would be the universal language, and men greet each other in the fields in such accents as a Beethoven now utters at rare intervals from a distance. All things obey music as they obey virtue. It is the herald of virtue. It is God's voice. In it are the centripetal and centrifugal forces. The universe needed only to hear a divine melody, that every star might fall into its proper place, and assume its true sphericity. It entails a surpassing affluence on the meanest thing; riding over the heads of sages, and soothing the din of

philosophy. When we listen to it we are so wise that we need not to know. All sounds, and more than all, silence, do fife and drum for us. The least creaking doth whet all our senses, and emit a tremulous light, like the aurora borealis, over things. As polishing expresses the vein in marble, and the grain in wood, so music brings out what of heroic lurks anywhere. It is either a sedative or a tonic to the soul.

I read that "Plato thinks the gods never gave men music, the science of melody and harmony, for mere delectation or to tickle the ear; but that the discordant parts of the circulations and beauteous fabric of the soul, and that of it that roves about the body, and many times for want of tune and air, breaks forth into many extravagances and excesses, might be sweetly recalled and artfully wound up to their former consent and agreement."

A sudden burst from a horn startles us, as if one had rashly provoked a wild beast. We admire his boldness; he dares wake the echoes which he cannot put to rest. The sound of a bugle in the stillness of the night sends forth its voice to the farthest stars, and marshals them in new order and harmony. Instantly it finds a fit sounding-board in the heavens. The notes flash out on the horizon like heat lightning, quickening the pulse of creation. The heavens say, Now is this my own earth.

To the sensitive soul the Universe has her own fixed measure, which is its measure also, and as this, expressed in the regularity of its pulse, is inseparable from a healthy body, so is its healthiness dependent on the regularity of its rhythm. In all sounds the soul recognizes its own rhythm, and seeks to express its sympathy by a correspondent movement of the limbs. When the body marches to the measure of the soul, then is true courage and invincible strength. The coward would reduce this thrilling sphere-music to a universal wail, — this melodious chant to a nasal cant. He thinks to conciliate all hostile influences by compelling his neighborhood into a partial concord with himself; but his music is no better than a jingle, which is akin to a jar, — jars regularly recurring. He blows a feeble blast of slender melody, because Nature can have no more sympathy with such a soul than it has of cheerful melody in itself. Hence hears he no accordant note in the universe, and is a coward, or consciously outcast and deserted man. But the brave man, without drum or trumpet, compels concord everywhere, by the universality and tunefulness of his soul.

Let not the faithful sorrow that he has no ear for the more fickle and subtle harmonies of creation, if he be awake to the slower measure of virtue and truth. If his pulse does not beat in unison with the musician's quips and turns, it accords with the pulse-beat of the ages.

A man's life should be a stately march to an unheard music; and when to his fellows it may seem irregular and inharmonious, he will be stepping to a livelier measure, which only his nicer ear can detect. There will be no halt ever, but at most a marching on his post, or such a pause as is richer than any sound, when the deeper melody is no longer heard, but implicitly consented to with the whole life and being. He will take a false step never, even in the most arduous circumstances; for then the music will not fail to swell into greater volume, and rule the movement it inspired.

### III. Not How Many, But Where the Enemy Are

— What's brave, what's noble,

Let's do it after the high Roman fashion.

Shakespeare

When my eye falls on the stupendous masses of the clouds, tossed into such irregular greatness across the cope of my sky, I feel that their grandeur is thrown away on the meanness of my employments. In vain the sun, thro' morning and noon rolls defiance to man, and, as he sinks behind his cloudy fortress in the west, challenges him to equal greatness in his career; but from his humbleness he looks up to the domes and minarets and gilded battlements of the Eternal City, and is content to be a suburban dweller outside the walls. We look in vain over earth for a Roman greatness, to take up the gantlet which the heavens throw down. Idomeneus would not have demurred at the freshness of the last morning that rose to us, as unfit occasion to display his valor in; and of some such evening as this, methinks, that Grecian fleet came to anchor in the bay of Aulis. Would that it were to us the eve of a more than ten years' war, — a tithe of whose exploits, and Achillean withdrawals, and godly interferences, would stock a library of Iliads.

Better that we have some of that testy spirit of knight errantry, and if we are so blind as to think the world is not rich enough nowadays to afford a real foe to combat, with our trusty swords and double-handed maces, hew and mangle some unreal phantom of the brain. In the pale and shivering fogs of the morning, gathering them up betimes, and withdrawing sluggishly to their daylight haunts, I see Falsehood sneaking from the full blaze of truth, and with good relish could do execution on their rearward ranks, with the first brand that came to hand. We too are such puny creatures as to be put to flight by the sun, and suffer our ardor to grow cool in proportion as his increases; our own short-lived chivalry sounds a retreat with the fumes and vapors of the night; and we turn to meet mankind, with its meek face preaching peace, and such non-resistance as the chaff that rides before the whirlwind.

Let not our Peace be proclaimed by the rust on our swords, or our inability to draw them from their scabbards; but let her at least have so much work on her hands as to keep those swords bright and sharp. The very dogs that bay the moon from farmyards o' these nights, do evince more heroism than is tamely barked forth in all the civil exhortations and war sermons of the age. And that day and night, which should be set down indelibly in men's hearts, must be learned from the pages of our almanack. One cannot wonder at the owlish habits of the race, which does not distinguish when its day ends and night begins; for as night is the season of rest, it would be hard to say when its toil ended and its rest began. Not to it

— returns

Day, or the sweet approach of even or morn,  
Or sight of vernal bloom, or summer's rose,  
Or flocks or herds, or human face divine;  
But cloud instead, and ever-during dark  
Surrounds.

And so the time lapses without epoch or era, and we know some half-score of mornings and evenings by tradition only. Almost the night is grieved and leaves her tears on the forelock of day, that men will not rush to her embrace, and fulfil at length the pledge so forwardly given in the youth of time. Men are a circumstance to themselves, instead of causing the universe to stand around, the mute witness of their manhood, and the stars to forget their sphere music and chant an elegiac strain, that heroism should have departed out of their ranks and gone over to humanity.

It is not enough that our life is an easy one; we must live on the stretch, retiring to our rest like soldiers on the eve of a battle, looking forward with ardor to the strenuous sortie of the morrow. "Sit not down in the popular seats and common level of virtues, but endeavor to make them heroic. Offer not only peace-offerings but holocausts unto God." To the brave soldier the rust and leisure of peace are harder than the fatigues of war. As our bodies court physical encounters, and languish in the mild and even climate of the tropics, so our souls thrive best on unrest and discontent. The soul is a sterner master than any King Frederick, for a true bravery would subject our bodies to rougher usage than even a grenadier could withstand. We too are dwellers within the purlieu of the camp. When the sun breaks through the morning mist, I seem to hear the din of war louder than when his chariot thundered on the plains of Troy. The thin fields of vapor, spread like gauze over the woods, form extended lawns whereon high tournament is held;

Before each van  
Prick forth the aery knights, and couch their spears,  
Till thickest legions close.

It behoves us to make life a steady progression, and not be defeated by its opportunities. The stream which first fell a drop from heaven, should be filtered by events till it burst out into springs of greater purity, and extract a diviner flavor from the accidents through which it passes. Shall man wear out sooner than the sun? and not rather dawn as freshly, and with such native dignity stalk down the hills of the East into the bustling vale of life, with as lofty and serene a countenance to roll onward through midday, to a yet fairer and more promising setting? In the crimson colors of the west I discern the budding hues of dawn. To my western brother it is rising pure and bright as it did to me; but only the evening exhibits in the still rear of day, the beauty which through morning and noon escaped me. Is not that which we call the gross atmosphere of evening the accumulated deed of the day, which absorbs the rays of beauty, and shows more richly than the naked promise of the dawn? Let us look

to it that by earnest toil in the heat of the noon, we get ready a rich western blaze against the evening.

Nor need we fear that the time will hang heavy when our toil is done; for our task is not such a piece of day-labor, that a man must be thinking what he shall do next for a livelihood, — but such, that as it began in endeavor, so will it end only when no more in heaven or on earth remains to be endeavored. Effort is the prerogative of virtue. Let not death be the sole task of life, — the moment when we are rescued from death to life, and set to work, — if indeed that can be called a task which all things do but alleviate. Nor will we suffer our hands to lose one jot of their handiness by looking behind to a mean recompense; knowing that our endeavor cannot be thwarted, nor we be cheated of our earnings unless by not earning them. It concerns us, rather, to be somewhat here present, than to leave something behind us; for, if that were to be considered, it is never the deed men praise, but some marble or canvas, which are only a staging to the real work. The hugest and most effective deed may have no sensible result at all on earth, but may paint itself in the heavens with new stars and constellations. When in rare moments our whole being strives with one consent, which we name a yearning, we may not hope that our work will stand in any artist's gallery on earth. The bravest deed, which for the most part is left quite out of history, — which alone wants the staleness of a deed done, and the uncertainty of a deed doing, — is the life of a great man. To perform exploits is to be temporarily bold, as becomes a courage that ebbs and flows, — the soul, quite vanquished by its own deed, subsiding into indifference and cowardice; but the exploit of a brave life consists in its momentary completeness.

Every stroke of the chisel must enter our own flesh and bone; he is a mere idolater and apprentice to art who suffers it to grate dully on marble. For the true art is not merely a sublime consolation and holiday labor, which the gods have given to sickly mortals; but such a masterpiece as you may imagine a dweller on the tablelands of central Asia might produce, with threescore and ten years for canvas, and the faculties of a man for tools, — a human life; wherein you might hope to discover more than the freshness of Guido's Aurora, or the mild light of Titian's landscapes, — no bald imitation nor even rival of Nature, but rather the restored original of which she is the reflection. For such a masterpiece as this, whole galleries of Greece and Italy are a mere mixing of colors and preparatory quarrying of marble.

Of such sort, then, be our crusade, — which, while it inclines chiefly to the hearty good will and activity of war, rather than the insincerity and sloth of peace, will set an example to both of calmness and energy; — as unconcerned for victory as careless of defeat, — not seeking to lengthen our term of service, nor to cut it short by a reprieve, — but earnestly applying ourselves to the campaign before us. Nor let our warfare be a boorish and uncourteous one, but a higher courtesy attend its higher chivalry, — though not to the slackening of its tougher duties and severer discipline. That so our camp may be a palæstra, wherein the dormant energies and affections of men may tug and wrestle, not to their discomfiture, but to their mutual exercise and development.

What were Godfrey and Gonsalvo unless we breathed a life into them and enacted their exploits as a prelude to our own? The Past is the canvas on which our idea is painted, — the dim prospectus of our future field. We are dreaming of what we are to do. Methinks I hear the clarion sound, and clang of corselet and buckler, from many a silent hamlet of the soul. The signal gun has long since sounded, and we are not yet on our posts. Let us make such haste as the morning, and such delay as the evening.

# NATURAL HISTORY OF MASSACHUSETTS

Books of natural history make the most cheerful winter reading. I read in Audubon with a thrill of delight, when the snow covers the ground, of the magnolia, and the Florida keys, and their warm sea-breezes; of the fence-rail, and the cotton-tree, and the migrations of the rice-bird; of the breaking up of winter in Labrador, and the melting of the snow on the forks of the Missouri; and owe an accession of health to these reminiscences of luxuriant nature.

Within the circuit of this plodding life,  
 There enter moments of an azure hue,  
 Untarnished fair as is the violet  
 Or anemone, when the spring strews them  
 By some meandering rivulet, which make  
 The best philosophy untrue that aims  
 But to console man for his grievances.  
 I have remembered when the winter came,  
 High in my chamber in the frosty nights,  
 When in the still light of the cheerful moon,  
 On every twig and rail and jutting spout,  
 The icy spears were adding to their length  
 Against the arrows of the coming sun,  
 How in the shimmering noon of summer past  
 Some unrecorded beam slanted across  
 The upland pastures where the Johnswort grew;  
 Or heard, amid the verdure of my mind,  
 The bee's long smothered hum, on the blue flag  
 Loitering amidst the mead; or busy rill,  
 Which now through all its course stands still and dumb  
 Its own memorial, — purling at its play  
 Along the slopes, and through the meadows next,  
 Until its youthful sound was hushed at last  
 In the staid current of the lowland stream;  
 Or seen the furrows shine but late upturned,  
 And where the fieldfare followed in the rear,  
 When all the fields around lay bound and hoar  
 Beneath a thick integument of snow.  
 So by God's cheap economy made rich  
 To go upon my winter's task again.

I am singularly refreshed in winter when I hear of service-berries, poke-weed, juniper. Is not heaven made up of these cheap summer glories? There is a singular health in those words, Labrador and East Main, which no desponding creed recognizes. How much more than Federal are these States. If there were no other vicissitudes than the seasons, our interest would never tire. Much more is adoin than Congress wots of. What journal do the persimmon and the buckeye keep, and the sharp-shinned hawk? What is transpiring from summer to winter in the Carolinas, and the Great Pine Forest, and the Valley of the Mohawk? The merely political aspect of the land is never very cheering; men are degraded when considered as the members of a political organization. On this side all lands present only the symptoms of decay. I see but Bunker Hill and Sing-Sing, the District of Columbia and Sullivan's Island, with a few

avenues connecting them. But paltry are they all beside one blast of the east or the south wind which blows over them.

In society you will not find health, but in nature. Unless our feet at least stood in the midst of nature, all our faces would be pale and livid. Society is always diseased, and the best is the most so. There is no scent in it so wholesome as that of the pines, nor any fragrance so penetrating and restorative as the life-everlasting in high pastures. I would keep some book of natural history always by me as a sort of elixir, the reading of which should restore the tone of the system. To the sick, indeed, nature is sick, but to the well, a fountain of health. To him who contemplates a trait of natural beauty no harm nor disappointment can come. The doctrines of despair, of spiritual or political tyranny or servitude, were never taught by such as shared the serenity of nature. Surely good courage will not flag here on the Atlantic border, as long as we are flanked by the Fur Countries. There is enough in that sound to cheer one under any circumstances. The spruce, the hemlock, and the pine will not countenance despair. Methinks some creeds in vestries and churches do forget the hunter wrapped in furs by the Great Slave Lake, and that the Esquimaux sledges are drawn by dogs, and in the twilight of the northern night, the hunter does not give over to follow the seal and walrus on the ice. They are of sick and diseased imaginations who would toll the world's knell so soon. Cannot these sedentary sects do better than prepare the shrouds and write the epitaphs of those other busy living men? The practical faith of all men belies the preacher's consolation. What is any man's discourse to me, if I am not sensible of something in it as steady and cheery as the creak of crickets? In it the woods must be relieved against the sky. Men tire me when I am not constantly greeted and refreshed as by the flux of sparkling streams. Surely joy is the condition of life. Think of the young fry that leap in ponds, the myriads of insects ushered into being on a summer evening, the incessant note of the hyla with which the woods ring in the spring, the nonchalance of the butterfly carrying accident and change painted in a thousand hues upon its wings, or the brook minnow stoutly stemming the current, the lustre of whose scales worn bright by the attrition is reflected upon the bank.

We fancy that this din of religion, literature, and philosophy, which is heard in pulpits, lyceums, and parlors, vibrates through the universe, and is as catholic a sound as the creaking of the earth's axle; but if a man sleep soundly, he will forget it all between sunset and dawn. It is the three-inch swing of a pendulum in a cupboard, which the great pulse of nature vibrates by and through each instant. When we lift our eyelids and open our ears, it disappears with smoke and rattle like the cars on a railroad. When I detect a beauty in any of the recesses of nature, I am reminded, by the serene and retired spirit in which it requires to be contemplated, of the inexpressible privacy of a life, — how silent and unambitious it is. The beauty there is in mosses must be considered from the holiest, quietest nook. What an admirable training is science for the more active warfare of life. Indeed, the unchallenged bravery, which these studies imply, is far more impressive than the trumpeted valor of the warrior. I am pleased to learn that Thales was up and stirring by night not unfrequently, as his

astronomical discoveries prove. Linnaeus, setting out for Lapland, surveys his “comb” and “spare shirt,” “leathern breeches” and “gauze cap to keep off gnats,” with as much complacency as Bonaparte a park of artillery for the Russian campaign. The quiet bravery of the man is admirable. His eye is to take in fish, flower, and bird, quadruped and biped. Science is always brave, for to know, is to know good; doubt and danger quail before her eye. What the coward overlooks in his hurry, she calmly scrutinizes, breaking ground like a pioneer for the array of arts that follow in her train. But cowardice is unscientific; for there cannot be a science of ignorance. There may be a science of bravery, for that advances; but a retreat is rarely well conducted; if it is, then is it an orderly advance in the face of circumstances.

But to draw a little nearer to our promised topics. Entomology extends the limits of being in a new direction, so that I walk in nature with a sense of greater space and freedom. It suggests besides, that the universe is not rough-hewn, but perfect in its details. Nature will bear the closest inspection; she invites us to lay our eye level with the smallest leaf, and take an insect view of its plain. She has no interstices; every part is full of life. I explore, too, with pleasure, the sources of the myriad sounds which crowd the summer noon, and which seem the very grain and stuff of which eternity is made. Who does not remember the shrill roll-call of the harvest fly? There were ears for these sounds in Greece long ago, as Anacreon’s ode will show.

“We pronounce thee happy, Cicada,  
For on the tops of the trees,  
Drinking a little dew,  
Like any king thou singest,  
For thine are they all,  
Whatever thou seest in the fields,  
And whatever the woods bear.  
Thou art the friend of the husbandmen,  
In no respect injuring any one;  
And thou art honored among men,  
Sweet prophet of summer.  
The Muses love thee,  
And Phoebus himself loves thee,  
And has given thee a shrill song;  
Age does not wrack thee,  
Thou skilful, earthborn, song-loving,  
Unsuffering, bloodless one;  
Almost thou art like the gods.”

In the autumn days, the creaking of crickets is heard at noon over all the land, and as in summer they are heard chiefly at nightfall, so then by their incessant chirp they usher in the evening of the year. Nor can all the vanities that vex the world alter one whit the measure that night has chosen. Every pulse-beat is in exact time with the

cricket's chant and the tickings of the deathwatch in the wall. Alternate with these if you can.

About two hundred and eighty birds either reside permanently in the State, or spend the summer only, or make us a passing visit. Those which spend the winter with us have obtained our warmest sympathy. The nut-hatch and chickadee flitting in company through the dells of the wood, the one harshly scolding at the intruder, the other with a faint lisping note enticing him on; the jay screaming in the orchard; the crow cawing in unison with the storm; the partridge, like a russet link extended over from autumn to spring, preserving unbroken the chain of summers; the hawk with warrior-like firmness abiding the blasts of winter; the robin [Footnote: A white robin, and a white quail have occasionally been seen. It is mentioned in Audubon as remarkable that the nest of a robin should be found on the ground; but this bird seems to be less particular than most in the choice of a building spot. I have seen its nest placed under the thatched roof of a deserted barn, and in one instance, where the adjacent country was nearly destitute of trees, together with two of the phoebe, upon the end of a board in the loft of a saw-mill, but a few feet from the saw, which vibrated several inches with the motion of the machinery.] and lark lurking by warm springs in the woods; the familiar snow-bird culling a few seeds in the garden, or a few crumbs in the yard; and occasionally the shrike, with heedless and unfrozen melody bringing back summer again; —

His steady sails he never furls  
At any time o' year,  
And perching now on Winter's curls,  
He whistles in his ear.

As the spring advances, and the ice is melting in the river, our earliest and straggling visitors make their appearance. Again does the old Teian poet sing, as well for New England as for Greece, in the

#### RETURN OF SPRING.

“Behold, how Spring appearing,  
The Graces send forth roses;  
Behold, how the wave of the sea  
Is made smooth by the calm;  
Behold, how the duck dives;  
Behold, how the crane travels;  
And Titan shines constantly bright.  
The shadows of the clouds are moving;  
The works of man shine;  
The earth puts forth fruits;  
The fruit of the olive puts forth.  
The cup of Bacchus is crowned,  
Along the leaves, along the branches,  
The fruit, bending them down, flourishes.”

The ducks alight at this season in the still water, in company with the gulls, which do not fail to improve an east wind to visit our meadows, and swim about by twos and threes, pluming themselves, and diving to peck at the root of the lily, and the cranberries which the frost has not loosened. The first flock of geese is seen beating to north, in long harrows and waving lines; the gingle of the song-sparrow salutes us from the shrubs and fences; the plaintive note of the lark comes clear and sweet from the meadow; and the bluebird, like an azure ray, glances past us in our walk. The fish-hawk, too, is occasionally seen at this season sailing majestically over the water, and he who has once observed it will not soon forget the majesty of its flight. It sails the air like a ship of the line, worthy to struggle with the elements, falling back from time to time like a ship on its beam ends, and holding its talons up as if ready for the arrows, in the attitude of the national bird. It is a great presence, as of the master of river and forest. Its eye would not quail before the owner of the soil, but make him feel like an intruder on its domains. And then its retreat, sailing so steadily away, is a kind of advance. I have by me one of a pair of ospreys, which have for some years fished in this vicinity, shot by a neighboring pond, measuring more than two feet in length, and six in the stretch of its wings. Nuttall mentions that "The ancients, particularly Aristotle, pretended that the ospreys taught their young to gaze at the sun, and those who were unable to do so were destroyed. Linnaeus even believed, on ancient authority, that one of the feet of this bird had all the toes divided, while the other was partly webbed, so that it could swim with one foot, and grasp a fish with the other." But that educated eye is now dim, and those talons are nerveless. Its shrill scream seems yet to linger in its throat, and the roar of the sea in its wings. There is the tyranny of Jove in its claws, and his wrath in the erectile feathers of the head and neck. It reminds me of the Argonautic expedition, and would inspire the dullest to take flight over Parnassus.

The booming of the bittern, described by Goldsmith and Nuttall, is frequently heard in our fens, in the morning and evening, sounding like a pump, or the chopping of wood in a frosty morning in some distant farm-yard. The manner in which this sound is produced I have not seen anywhere described. On one occasion, the bird has been seen by one of my neighbors to thrust its bill into the water, and suck up as much as it could hold, then raising its head, it pumped it out again with four or five heaves of the neck, throwing it two or three feet, and making the sound each time.

At length the summer's eternity is ushered in by the cackle of the flicker among the oaks on the hill-side, and a new dynasty begins with calm security.

In May and June the woodland quire is in full tune, and given the immense spaces of hollow air, and this curious human ear, one does not see how the void could be better filled.

Each summer sound  
Is a summer round.

As the season advances, and those birds which make us but a passing visit depart, the woods become silent again, and but few feathers ruffle the drowsy air. But the

solitary rambler may still find a response and expression for every mood in the depths of the wood.

Sometimes-I hear the veery's[+] clarion,  
Or brazen trump of the impatient jay,  
And in secluded woods the chickadee  
Doles out her scanty notes, which sing the praise  
Of heroes, and set forth the loveliness  
Of virtue evermore.

[Footnote +: This bird, which is so well described by Nuttall, but is apparently unknown by the author of the Report, is one of the most common in the woods in this vicinity, and in Cambridge I have heard the college yard ring with its trill. The boys call it "yorrick," from the sound of its querulous and chiding note, as it flits near the traveller through the underwood. The cowbird's egg is occasionally found in its nest, as mentioned by Audubon.]

The phoebe still sings in harmony with the sultry weather by the brink of the pond, nor are the desultory hours of noon in the midst of the village without their minstrel.

Upon the lofty elm-tree sprays  
The vireo rings the changes sweet,  
During the trivial summer days,  
Striving to lift our thoughts above the street.

With the autumn begins in some measure a new spring. The plover is heard whistling high in the air over the dry pastures, the finches flit from tree to tree, the bobolinks and flickers fly in flocks, and the goldfinch rides on the earliest blast, like a winged hyla peeping amid the rustle of the leaves. The crows, too, begin now to congregate; you may stand and count them as they fly low and straggling over the landscape, singly or by twos and threes, at intervals of half a mile, until a hundred have passed.

I have seen it suggested somewhere that the crow was brought to this country by the white man; but I shall as soon believe that the white man planted these pines and hemlocks. He is no spaniel to follow our steps; but rather flits about the clearings like the dusky spirit of the Indian, reminding me oftener of Philip and Powhatan, than of Winthrop and Smith. He is a relic of the dark ages. By just so slight, by just so lasting a tenure does superstition hold the world ever; there is the rook in England, and the crow in New England.

Thou dusky spirit of the wood,  
Bird of an ancient brood,  
Flitting thy lonely way,  
A meteor in the summer's day,  
From wood to wood, from hill to hill,  
Low over forest, field, and rill,  
What wouldst thou say?  
Why shouldst thou haunt the day?  
What makes thy melancholy float?  
What bravery inspires thy throat,  
And bears thee up above the clouds,  
Over desponding human crowds,  
Which far below  
Lay thy haunts low?

The late walker or sailor, in the October evenings, may hear the murmurings of the snipe, circling over the meadows, the most spirit-like sound in nature; and still later in the autumn, when the frosts have tinged the leaves, a solitary loon pays a visit to our retired ponds, where he may lurk undisturbed till the season of moulting is passed, making the woods ring with his wild laughter. This bird, the Great Northern Diver, well deserves its name; for when pursued with a boat, it will dive, and swim like a fish under water, for sixty rods or more, as fast as a boat can be paddled, and its pursuer, if he would discover his game again, must put his ear to the surface to hear where it comes up. When it comes to the surface, it throws the water off with one shake of its wings, and calmly swims about until again disturbed.

These are the sights and sounds which reach our senses oftenest during the year. But sometimes one hears a quite new note, which has for background other Carolinas and Mexicos than the books describe, and learns that his ornithology has done him no service.

It appears from the Report that there are about forty quadrupeds belonging to the State, and among these one is glad to hear of a few bears, wolves, lynxes, and wildcats.

When our river overflows its banks in the spring, the wind from the meadows is laden with a strong scent of musk, and by its freshness advertises me of an unexplored wildness. Those backwoods are not far off then. I am affected by the sight of the cabins of the musk-rat, made of mud and grass, and raised three or four feet along the river, as when I read of the barrows of Asia. The musk-rat is the beaver of the settled States. Their number has even increased within a few years in this vicinity. Among the rivers which empty into the Merrimack, the Concord is known to the boatmen as a dead stream. The Indians are said to have called it Musketaquid, or Prairie River. Its current being much more sluggish, and its water more muddy than the rest, it abounds more in fish and game of every kind. According to the History of the town, "The fur-trade was here once very important. As early as 1641, a company was formed in the colony, of which Major Willard of Concord was superintendent, and had the

exclusive right to trade with the Indians in furs and other articles; and for this right they were obliged to pay into the public treasury one twentieth of all the furs they obtained." There are trappers in our midst still, as well as on the streams of the far West, who night and morning go the round of their traps, without fear of the Indian. One of these takes from one hundred and fifty to two hundred musk-rats in a year, and even thirty-six have been shot by one man in a day. Their fur, which is not nearly as valuable as formerly, is in good condition in the winter and spring only; and upon the breaking up of the ice, when they are driven out of their holes by the water, the greatest number is shot from boats, either swimming or resting on their stools, or slight supports of grass and reeds, by the side of the stream. Though they exhibit considerable cunning at other times, they are easily taken in a trap, which has only to be placed in their holes, or wherever they frequent, without any bait being used, though it is sometimes rubbed with their musk. In the winter the hunter cuts holes in the ice, and shoots them when they come to the surface. Their burrows are usually in the high banks of the river, with the entrance under water, and rising within to above the level of high water. Sometimes their nests, composed of dried meadow grass and flags, may be discovered where the bank is low and spongy, by the yielding of the ground under the feet. They have from three to seven or eight young in the spring.

Frequently, in the morning or evening, a long ripple is seen in the still water, where a musk-rat is crossing the stream, with only its nose above the surface, and sometimes a green bough in its mouth to build its house with. When it finds itself observed, it will dive and swim five or six rods under water, and at length conceal itself in its hole, or the weeds. It will remain under water for ten minutes at a time, and on one occasion has been seen, when undisturbed, to form an air-bubble under the ice, which contracted and expanded as it breathed at leisure. When it suspects danger on shore, it will stand erect like a squirrel, and survey its neighborhood for several minutes, without moving.

In the fall, if a meadow intervene between their burrows and the stream, they erect cabins of mud and grass, three or four feet high, near its edge. These are not their breeding-places, though young are sometimes found in them in late freshets, but rather their hunting-lodges, to which they resort in the winter with their food, and for shelter. Their food consists chiefly of flags and fresh-water muscles, the shells of the latter being left in large quantities around their lodges in the spring.

The Penobscot Indian wears the entire skin of a musk-rat, with the legs and tail dangling, and the head caught under his girdle, for a pouch, into which he puts his fishing tackle, and essences to scent his traps with.

The bear, wolf, lynx, wildcat, deer, beaver, and marten, have disappeared; the otter is rarely if ever seen here at present; and the mink is less common than formerly.

Perhaps of all our untamed quadrupeds, the fox has obtained the widest and most familiar reputation, from the time of Pilpay and Aesop to the present day. His recent tracks still give variety to a winter's walk. I tread in the steps of the fox that has gone before me by some hours, or which perhaps I have started, with such a tiptoe of expectation, as if I were on the trail of the Spirit itself which resides in the wood,

and expected soon to catch it in its lair. I am curious to know what has determined its graceful curvatures, and how surely they were coincident with the fluctuations of some mind. I know which way a mind wended, what horizon it faced, by the setting of these tracks, and whether it moved slowly or rapidly, by their greater or less intervals and distinctness; for the swiftest step leaves yet a lasting trace. Sometimes you will see the trails of many together, and where they have gambolled and gone through a hundred evolutions, which testify to a singular listlessness and leisure in nature.

When I see a fox run across the pond on the snow, with the carelessness of freedom, or at intervals trace his course in the sunshine along the ridge of a hill, I give up to him sun and earth as to their true proprietor. He does not go in the sun, but it seems to follow him, and there is a visible sympathy between him and it. Sometimes, when the snow lies light, and but five or six inches deep, you may give chase and come up with one on foot. In such a case he will show a remarkable presence of mind, choosing only the safest direction, though he may lose ground by it. Notwithstanding his fright, he will take no step which is not beautiful. His pace is a sort of leopard canter, as if he were in nowise impeded by the snow, but were husbanding his strength all the while. When the ground is uneven, the course is a series of graceful curves, conforming to the shape of the surface. He runs as though there were not a bone in his back. Occasionally dropping his muzzle to the ground for a rod or two, and then tossing his head aloft, when satisfied of his course. When he comes to a declivity, he will put his forefeet together, and slide swiftly down it, shoving the snow before him. He treads so softly that you would hardly hear it from any nearness, and yet with such expression that it would not be quite inaudible at any distance.

\* \* \* \* \*

Of fishes, seventy-five genera and one hundred and seven species are described in the Report. The fisherman will be startled to learn that there are but about a dozen kinds in the ponds and streams of any inland town; and almost nothing is known of their habits. Only their names and residence make one love fishes. I would know even the number of their fin-rays, and how many scales compose the lateral line. I am the wiser in respect to all knowledges, and the better qualified for all fortunes, for knowing that there is a minnow in the brook. Methinks I have need even of his sympathy, and to be his fellow in a degree.

I have experienced such simple delight in the trivial matters of fishing and sporting, formerly, as might have inspired the muse of Homer or Shakspeare; and now, when I turn the pages and ponder the plates of the Angler's Souvenir, I am fain to exclaim, —

“Can these things be,  
And overcome us like a summer's cloud?”

Next to nature, it seems as if man's actions were the most natural, they so gently accord with her. The small seines of flax stretched across the shallow and transparent parts of our river, are no more intrusion than the cobweb in the sun. I stay my boat in midcurrent, and look down in the sunny water to see the civil meshes of his nets, and

wonder how the blustering people of the town could have done this elvish work. The twine looks like a new river weed, and is to the river as a beautiful memento of man's presence in nature, discovered as silently and delicately as a footprint in the sand.

When the ice is covered with snow, I do not suspect the wealth under my feet; that there is as good as a mine under me wherever I go. How many pickerel are poised on easy fin fathoms below the loaded wain. The revolution of the seasons must be a curious phenomenon to them. At length the sun and wind brush aside their curtain, and they see the heavens again.

Early in the spring, after the ice has melted, is the time for spearing fish. Suddenly the wind shifts from northeast and east to west and south, and every icicle, which has tinkled on the meadow grass so long, trickles down its stem, and seeks its level unerringly with a million comrades. The steam curls up from every roof and fence.

I see the civil sun drying earth's tears,  
Her tears of joy, which only faster flow.

In the brooks is heard the slight grating sound of small cakes of ice, floating with various speed, full of content and promise, and where the water gurgles under a natural bridge, you may hear these hasty rafts hold conversation in an undertone. Every rill is a channel for the juices of the meadow. In the ponds the ice cracks with a merry and inspiriting din, and down the larger streams is whirled grating hoarsely, and crashing its way along, which was so lately a highway for the woodman's team and the fox, sometimes with the tracks of the skaters still fresh upon it, and the holes cut for pickerel. Town committees anxiously inspect the bridges and causeways, as if by mere eye-force to intercede with the ice, and save the treasury.

The river swelleth more and more,  
Like some sweet influence stealing o'er  
The passive town; and for a while  
Each tussuck makes a tiny isle,  
Where, on some friendly Ararat,  
Resteth the weary water-rat.

No ripple shows Musketaquid,  
Her very current e'en is hid,  
As deepest souls do calmest rest,  
When thoughts are swelling in the breast,  
And she that in the summer's drought  
Doth make a rippling and a rout,  
Sleeps from Nabshawtuck to the Cliff,  
Unruffled by a single skiff.  
But by a thousand distant hills  
The louder roar a thousand rills,  
And many a spring which now is dumb,  
And many a stream with smothered hum,  
Doth swifter well and faster glide,  
Though buried deep beneath the tide.

Our village shows a rural Venice,  
Its broad lagoons where yonder fen is;  
As lovely as the Bay of Naples  
Yon placid cove amid the maples;  
And in my neighbor's field of corn  
I recognize the Golden Horn.

Here Nature taught from year to year,  
When only red men came to hear,  
Methinks 'twas in this school of art  
Venice and Naples learned their part;  
But still their mistress, to my mind,  
Her young disciples leaves behind.

The fisherman now repairs and launches his boat. The best time for spearing is at this season, before the weeds have begun to grow, and while the fishes lie in the shallow water, for in summer they prefer the cool depths, and in the autumn they are still more or less concealed by the grass. The first requisite is fuel for your crate; and for this purpose the roots of the pitchpine are commonly used, found under decayed stumps, where the trees have been felled eight or ten years.

With a crate, or jack, made of iron hoops, to contain your fire, and attached to the bow of your boat about three feet from the water, a fish-spear with seven tines, and fourteen feet long, a large basket, or barrow, to carry your fuel and bring back your fish, and a thick outer garment, you are equipped for a cruise. It should be a warm and still evening; and then with a fire crackling merrily at the prow, you may launch forth like a cucullo into the night. The dullest soul cannot go upon such an expedition without some of the spirit of adventure; as if he had stolen the boat of Charon and gone down the Styx on a midnight expedition into the realms of Pluto. And much speculation does this wandering star afford to the musing nightwalker, leading him on and on, jack-o'lantern-like, over the meadows; or, if he is wiser, he amuses himself

with imagining what of human life, far in the silent night, is flitting mothlike round its candle. The silent navigator shoves his craft gently over the water, with a smothered pride and sense of benefaction, as if he were the phosphor, or light-bringer, to these dusky realms, or some sister moon, blessing the spaces with her light. The waters, for a rod or two on either hand and several feet in depth, are lit up with more than noonday distinctness, and he enjoys the opportunity which so many have desired, for the roofs of a city are indeed raised, and he surveys the midnight economy of the fishes. There they lie in every variety of posture; some on their backs, with their white bellies uppermost, some suspended in midwater, some sculling gently along with a dreamy motion of the fins, and others quite active and wide awake, — a scene not unlike what the human city would present. Occasionally he will encounter a turtle selecting the choicest morsels, or a musk-rat resting on a tussuck. He may exercise his dexterity, if he sees fit, on the more distant and active fish, or fork the nearer into his boat, as potatoes out of a pot, or even take the sound sleepers with his hands. But these last accomplishments he will soon learn to dispense with, distinguishing the real object of his pursuit, and find compensation in the beauty and never-ending novelty of his position. The pines growing down to the water's edge will show newly as in the glare of a conflagration; and as he floats under the willows with his light, the song-sparrow will often wake on her perch, and sing that strain at midnight, which she had meditated for the morning. And when he has done, he may have to steer his way home through the dark by the north star, and he will feel himself some degrees nearer to it for having lost his way on the earth.

The fishes commonly taken in this way are pickerel, suckers, perch, eels, pouts, breams, and shiners, — from thirty to sixty weight in a night. Some are hard to be recognized in the unnatural light, especially the perch, which, his dark bands being exaggerated, acquires a ferocious aspect. The number of these transverse bands, which the Report states to be seven, is, however, very variable, for in some of our ponds they have nine and ten even.

\* \* \* \* \*

It appears that we have eight kinds of tortoises, twelve snakes, — but one of which is venomous, — nine frogs and toads, nine salamanders, and one lizard, for our neighbors.

I am particularly attracted by the motions of the serpent tribe. They make our hands and feet, the wings of the bird, and the fins of the fish seems very superfluous, as if nature had only indulged her fancy in making them. The black snake will dart into a bush when pursued, and circle round and round with an easy and graceful motion, amid the thin and bare twigs, five or six feet from the ground, as a bird flits from bough to bough, or hang in festoons between the forks. Elasticity and flexibleness in the simpler forms of animal life are equivalent to a complex system of limbs in the higher; and we have only to be as wise and wily as the serpent, to perform as difficult feats without the vulgar assistance of hands and feet.

In May, the snapping turtle, *Emysaurus serpentina*, is frequently taken on the meadows and in the river. The fisherman, taking sight over the calm surface, discovers its

snout projecting above the water, at the distance of many rods, and easily secures his prey through its unwillingness to disturb the water by swimming hastily away, for, gradually drawing its head under, it remains resting on some limb or clump of grass. Its eggs, which are buried at a distance from the water, in some soft place, as a pigeon-bed, are frequently devoured by the skunk. It will catch fish by daylight, as a toad catches flies, and is said to emit a transparent fluid from its mouth to attract them.

Nature has taken more care than the fondest parent for the education and refinement of her children. Consider the silent influence which flowers exert, no less upon the ditcher in the meadow than the lady in the bower. When I walk in the woods, I am reminded that a wise purveyor has been there before me; my most delicate experience is typified there. I am struck with the pleasing friendships and unanimities of nature, as when the lichen on the trees takes the form of their leaves. In the most stupendous scenes you will see delicate and fragile features, as slight wreaths of vapor, dewlines, feathery sprays, which suggest a high refinement, a noble blood and breeding, as it were. It is not hard to account for elves and fairies; they represent this light grace, this ethereal gentility. Bring a spray from the wood, or a crystal from the brook, and place it on your mantel, and your household ornaments will seem plebeian beside its nobler fashion and bearing. It will wave superior there, as if used to a more refined and polished circle. It has a salute and a response to all your enthusiasm and heroism.

In the winter, I stop short in the path to admire how the trees grow up without forethought, regardless of the time and circumstances. They do not wait as man does, but now is the golden age of the sapling. Earth, air, sun, and rain, are occasion enough; they were no better in primeval centuries. The "winter of their discontent" never comes. Witness the buds of the native poplar standing gayly out to the frost on the sides of its bare switches. They express a naked confidence. With cheerful heart one could be a sojourner in the wilderness, if he were sure to find there the catkins of the willow or the alder. When I read of them in the accounts of northern adventurers, by Baffin's Bay or Mackenzie's river, I see how even there too I could dwell. They are our little vegetable redeemers. Methinks our virtue will hold out till they come again. They are worthy to have had a greater than Minerva or Ceres for their inventor. Who was the benignant goddess that bestowed them on mankind?

Nature is mythical and mystical always, and works with the license and extravagance of genius. She has her luxurious and florid style as well as art. Having a pilgrim's cup to make, she gives to the whole, stem, bowl, handle, and nose, some fantastic shape, as if it were to be the car of some fabulous marine deity, a Nereus or Triton.

In the winter, the botanist needs not confine himself to his books and herbarium, and give over his out-door pursuits, but may study a new department of vegetable physiology, what may be called crystalline botany, then. The winter of 1837 was unusually favorable for this. In December of that year, the Genius of vegetation seemed to hover by night over its summer haunts with unusual persistency. Such a hoarfrost, as is very uncommon here or anywhere, and whose full effects can never be witnessed after sunrise, occurred several times. As I went forth early on a still and frosty morning,

the trees looked like airy creatures of darkness caught napping; on this side huddled together with their gray hairs streaming in a secluded valley, which the sun had not penetrated; on that hurrying off in Indian file along some watercourse, while the shrubs and grasses, like elves and fairies of the night, sought to hide their diminished heads in the snow. The river, viewed from the high bank, appeared of a yellowish green color, though all the landscape was white. Every tree, shrub, and spire of grass, that could raise its head above the snow, was covered with a dense ice-foliage, answering, as it were, leaf for leaf to its summer dress. Even the fences had put forth leaves in the night. The centre, diverging, and more minute fibres were perfectly distinct, and the edges regularly indented. These leaves were on the side of the twig or stubble opposite to the sun, meeting it for the most part at right angles, and there were others standing out at all possible angles upon these and upon one another, with no twig or stubble supporting them. When the first rays of the sun slanted over the scene, the grasses seemed hung with innumerable jewels, which jingled merrily as they were brushed by the foot of the traveller, and reflected all the hues of the rainbow as he moved from side to side. It struck me that these ghost leaves, and the green ones whose forms they assume, were the creatures of but one law; that in obedience to the same law the vegetable juices swell gradually into the perfect leaf, on the one hand, and the crystalline particles troop to their standard in the same order, on the other. As if the material were indifferent, but the law one and invariable, and every plant in the spring but pushed up into and filled a permanent and eternal mould, which, summer and winter forever, is waiting to be filled.

This foliate structure is common to the coral and the plumage of birds, and to how large a part of animate and inanimate nature. The same independence of law on matter is observable in many other instances, as in the natural rhymes, when some animal form, color, or odor, has its counterpart in some vegetable. As, indeed, all rhymes imply an eternal melody, independent of any particular sense.

As confirmation of the fact, that vegetation is but a kind of crystallization, every one may observe how, upon the edge of the melting frost on the window, the needle-shaped particles are bundled together so as to resemble fields waving with grain, or shocks rising here and there from the stubble; on one side the vegetation of the torrid zone, high-towering palms and widespread banyans, such as are seen in pictures of oriental scenery; on the other, arctic pines stiff frozen, with downcast branches.

Vegetation has been made the type of all growth; but as in crystals the law is more obvious, their material being more simple, and for the most part more transient and fleeting, would it not be as philosophical as convenient to consider all growth, all filling up within the limits of nature, but a crystallization more or less rapid?

On this occasion, in the side of the high bank of the river, wherever the water or other cause had formed a cavity, its throat and outer edge, like the entrance to a citadel, bristled with a glistening ice-armor. In one place you might see minute ostrich-feathers, which seemed the waving plumes of the warriors filing into the fortress; in another, the glancing, fan-shaped banners of the Lilliputian host; and in another, the needle-shaped

particles collected into bundles, resembling the plumes of the pine, might pass for a phalanx of spears. From the under side of the ice in the brooks, where there was a thicker ice below, depended a mass of crystallization, four or five inches deep, in the form of prisms, with their lower ends open, which, when the ice was laid on its smooth side, resembled the roofs and steeples of a Gothic city, or the vessels of a crowded haven under a press of canvas. The very mud in the road, where the ice had melted, was crystallized with deep rectilinear fissures, and the crystalline masses in the sides of the ruts resembled exactly asbestos in the disposition of their needles. Around the roots of the stubble and flower-stalks, the frost was gathered into the form of irregular conical shells, or fairy rings. In some places the ice-crystals were lying upon granite rocks, directly over crystals of quartz, the frost-work of a longer night, crystals of a longer period, but to some eye unprejudiced by the short term of human life, melting as fast as the former.

In the Report on the Invertebrate Animals, this singular fact is recorded, which teaches us to put a new value on time and space. "The distribution of the marine shells is well worthy of notice as a geological fact. Cape Cod, the right arm of the Commonwealth, reaches out into the ocean, some fifty or sixty miles. It is nowhere many miles wide; but this narrow point of land has hitherto proved a barrier to the migrations of many species of Mollusca. Several genera and numerous species, which are separated by the intervention of only a few miles of land, are effectually prevented from mingling by the Cape, and do not pass from one side to the other.... Of the one hundred and ninety-seven marine species, eighty-three do not pass to the south shore, and fifty are not found on the north shore of the Cape."

That common muscle, the *Unio complanatus*, or more properly *fluviatilis*, left in the spring by the musk-rat upon rocks and stumps, appears to have been an important article of food with the Indians. In one place, where they are said to have feasted, they are found in large quantities, at an elevation of thirty feet above the river, filling the soil to the depth of a foot, and mingled with ashes and Indian remains.

The works we have placed at the head of our chapter, with as much license, as the preacher selects his text, are such as imply more labor than enthusiasm. The State wanted complete catalogues of its natural riches, with such additional facts merely as would be directly useful.

The reports on Fishes, Reptiles, Insects, and Invertebrate Animals, however, indicate labor and research, and have a value independent of the object of the legislature.

Those on Herbaceous Plants and Birds cannot be of much value, as long as Bigelow and Nuttall are accessible. They serve but to indicate, with more or less exactness, what species are found in the State. We detect several errors ourselves, and a more practised eye would no doubt expand the list.

The Quadrupeds deserved a more final and instructive report than they have obtained.

These volumes deal much in measurements and minute descriptions, not interesting to the general reader, with only here and there a colored sentence to allure him, like

those plants growing in dark forests, which bear only leaves without blossoms. But the ground was comparatively unbroken, and we will not complain of the pioneer, if he raises no flowers with his first crop. Let us not underrate the value of a fact; it will one day flower in a truth. It is astonishing how few facts of importance are added in a century to the natural history of any animal. The natural history of man himself is still being gradually written. Men are knowing enough after their fashion. Every countryman and dairymaid knows that the coats of the fourth stomach of the calf will curdle milk, and what particular mushroom is a safe and nutritious diet. You cannot go into any field or wood, but it will seem as if every stone had been turned, and the bark on every tree ripped up. But, after all, it is much easier to discover than to see when the cover is off! It has been well said that "the attitude of inspection is prone." Wisdom does not inspect, but behold. We must look a long time before we can see. Slow are the beginnings of philosophy. He has something demoniacal in him, who can discern a law or couple two facts. We can imagine a time when,— "Water runs down hill," — may have been taught in the schools. The true man of science will know nature better by his finer organization; he will smell, taste, see, hear, feel, better than other men. His will be a deeper and finer experience. We do not learn by inference and deduction, and the application of mathematics to philosophy, but by direct intercourse and sympathy. It is with science as with ethics, — we cannot know truth by contrivance and method; the Baconian is as false as any other, and with all the helps of machinery and the arts, the most scientific will still be the healthiest and friendliest man, and possess a more perfect Indian wisdom.

# A WALK TO WACHUSETT

The needles of the pine  
All to the west incline.

CONCORD, July 19, 1842.

Summer and winter our eyes had rested on the dim outline of the mountains in our horizon, to which distance and indistinctness lent a grandeur not their own, so that they served equally to interpret all the allusions of poets and travellers; whether with Homer, on a spring morning, we sat down on the many-peaked Olympus, or, with Virgil and his compeers, roamed the Etrurian and Thessalian hills, or with Humboldt measured the more modern Andes and Teneriffe. Thus we spoke our mind to them, standing on the Concord cliffs. —

With frontier strength ye stand your ground,  
With grand content ye circle round,  
Tumultuous silence for all sound,  
Ye distant nursery of rills,  
Monadnock, and the Peterboro' hills;  
Like some vast fleet,  
Sailing through rain and sleet,  
Through winter's cold and summer's heat;  
Still holding on, upon your high emprise,  
Until ye find a shore amid the skies;  
Not skulking close to land,  
With cargo contraband.  
For they who sent a venture out by ye  
Have set the sun to see  
Their honesty.  
Ships of the line, each one,  
Ye to the westward run,  
Always before the gale,  
Under a press of sail,  
With weight of metal all untold.  
I seem to feel ye, in my firm seat here,  
Immeasurable depth of hold,  
And breadth of beam, and length of running gear.

Methinks ye take luxurious pleasure  
In your novel western leisure;  
So cool your brows, and freshly blue,  
As Time had nought for ye to do;  
For ye lie at your length,  
An unappropriated strength,  
Unhewn primeval timber,  
For knees so stiff, for masts so limber;  
The stock of which new earths are made,  
One day to be our western trade,  
Fit for the stanchions of a world  
Which through the seas of space is hurled.

While we enjoy a lingering ray,  
Ye still o'ertop the western day,  
Reposing yonder, on God's croft,  
Like solid stacks of hay.  
Edged with silver, and with gold,  
The clouds hang o'er in damask fold,  
And with such depth of amber light  
The west is dight,  
Where still a few rays slant,  
That even heaven seems extravagant.  
On the earth's edge mountains and trees  
Stand as they were on air graven,  
Or as the vessels in a haven  
Await the morning breeze.  
I fancy even  
Through your defiles windeth the way to heaven;  
And yonder still, in spite of history's page,  
Linger the golden and the silver age;  
Upon the laboring gale  
The news of future centuries is brought,  
And of new dynasties of thought,  
From your remotest vale.

But special I remember thee,  
Wachusett, who like me  
Standest alone without society.  
Thy far blue eye,  
A remnant of the sky,  
Seen through the clearing or the gorge,  
Or from the windows on the forge,  
Doth leaven all it passes by.  
Nothing is true,  
But stands 'tween me and you,  
Thou western pioneer,  
Who know'st not shame nor fear,  
By venturous spirit driven,  
Under the eaves of heaven,  
And can'st expand thee there,  
And breathe enough of air?  
Upholding heaven, holding down earth,  
Thy pastime from thy birth,  
Not steadied by the one, nor leaning on the other;  
May I approve myself thy worthy brother!

At length, like Rasselas, and other inhabitants of happy valleys, we resolved to scale the blue wall which bound the western horizon, though not without misgivings, that thereafter no visible fairy land would exist for us. But we will not leap at once to our journey's end, though near, but imitate Homer, who conducts his reader over the plain, and along the resounding sea, though it be but to the tent of Achilles. In the spaces of thought are the reaches of land and water, where men go and come. The landscape lies far and fair within, and the deepest thinker is the farthest travelled.

At a cool and early hour on a pleasant morning in July, my companion and I passed rapidly through Acton and Stow, stopping to rest and refresh us on the bank of a small stream, a tributary of the Assabet, in the latter town. As we traversed the cool woods of Acton, with stout staves in our hands, we were cheered by the song of the red-eye, the thrushes, the phoebe, and the cuckoo; and as we passed through the open country, we inhaled the fresh scent of every field, and all nature lay passive, to be viewed and travelled. Every rail, every farm-house, seen dimly in the twilight, every tinkling sound told of peace and purity, and we moved happily along the dank roads, enjoying not such privacy as the day leaves when it withdraws, but such as it has not profaned. It was solitude with light; which is better than darkness. But anon, the sound of the mower's rifle was heard in the fields, and this, too, mingled with the lowing kine.

This part of our route lay through the country of hops, which plant perhaps supplies the want of the vine in American scenery, and may remind the traveller of Italy, and the South of France, whether he traverses the country when the hop-fields, as then, present solid and regular masses of verdure, hanging in graceful festoons from pole to

pole; the cool coverts where lurk the gales which refresh the wayfarer; or in September, when the women and children, and the neighbors from far and near, are gathered to pick the hops into long troughs; or later still, when the poles stand piled in vast pyramids in the yards, or lie in heaps by the roadside.

The culture of the hop, with the processes of picking, drying in the kiln, and packing for the market, as well as the uses to which it is applied, so analogous to the culture and uses of the grape, may afford a theme for future poets.

The mower in the adjacent meadow could not tell us the name of the brook on whose banks we had rested, or whether it had any, but his younger companion, perhaps his brother, knew that it was Great Brook. Though they stood very near together in the field, the things they knew were very far apart; nor did they suspect each other's reserved knowledge, till the stranger came by. In Bolton, while we rested on the rails of a cottage fence, the strains of music which issued from within, probably in compliment to us, sojourners, reminded us that thus far men were fed by the accustomed pleasures. So soon did we, wayfarers, begin to learn that man's life is rounded with the same few facts, the same simple relations everywhere, and it is vain to travel to find it new. The flowers grow more various ways than he. But coming soon to higher land, which afforded a prospect of the mountains, we thought we had not travelled in vain, if it were only to hear a truer and wilder pronunciation of their names, from the lips of the inhabitants; not Way-tatic, Way-chusett, but Wor-tatic, Wor-chusett. It made us ashamed of our tame and civil pronunciation, and we looked upon them as born and bred farther west than we. Their tongues had a more generous accent than ours, as if breath was cheaper where they wagged. A countryman, who speaks but seldom, talks copiously, as it were, as his wife sets cream and cheese before you without stint. Before noon we had reached the highlands overlooking the valley of Lancaster, (affording the first fair and open prospect into the west,) and there, on the top of a hill, in the shade of some oaks, near to where a spring bubbled out from a leaden pipe, we rested during the heat of the day, reading Virgil, and enjoying the scenery. It was such a place as one feels to be on the outside of the earth, for from it we could, in some measure, see the form and structure of the globe. There lay Wachusett, the object of our journey, lowering upon us with unchanged proportions, though with a less ethereal aspect than had greeted our morning gaze, while further north, in successive order, slumbered its sister mountains along the horizon.

We could get no further into the Aeneid than

— atque altae moenia Romae, — and the wall of high Rome,

before we were constrained to reflect by what myriad tests a work of genius has to be tried; that Virgil, away in Rome, two thousand years off, should have to unfold his meaning, the inspiration of Italian vales, to the pilgrim on New England hills. This life so raw and modern, that so civil and ancient; and yet we read Virgil, mainly to be reminded of the identity of human nature in all ages, and, by the poet's own account, we are both the children of a late age, and live equally under the reign of Jupiter.

“He shook honey from the leaves, and removed fire,  
And stayed the wine, everywhere flowing in rivers;  
That experience, by meditating, might invent various arts  
By degrees, and seek the blade of corn in furrows,  
And strike out hidden fire from the veins of the flint.”

The old world stands serenely behind the new, as one mountain yonder towers behind another, more dim and distant. Rome imposes her story still upon this late generation. The very children in the school we had that morning passed, had gone through her wars, and recited her alarms, ere they had heard of the wars of neighboring Lancaster. The roving eye still rests inevitably on her hills, and she still holds up the skirts of the sky on that side, and makes the past remote.

The lay of the land hereabouts is well worthy the attention of the traveller. The hill on which we were resting made part of an extensive range, running from southwest to northeast, across the country, and separating the waters of the Nashua from those of the Concord, whose banks we had left in the morning; and by bearing in mind this fact, we could easily determine whither each brook was bound that crossed our path. Parallel to this, and fifteen miles further west, beyond the deep and broad valley in which lie Groton, Shirley, Lancaster, and Boylston, runs the Wachusett range, in the same general direction. The descent into the valley on the Nashua side, is by far the most sudden; and a couple of miles brought us to the southern branch of the Nashua, a shallow but rapid stream, flowing between high and gravelly banks. But we soon learned that there were no gelidæ valles into which we had descended, and missing the coolness of the morning air, feared it had become the sun's turn to try his power upon us.

“The sultry sun had gained the middle sky,  
And not a tree, and not an herb was nigh.”

and with melancholy pleasure we echoed the melodious plaint of our fellow-traveller, Hassan, in the desert, —

“Sad was the hour, and luckless was the day,  
When first from Schiraz' walls I bent my way.”

The air lay lifeless between the hills, as in a seething caldron, with no leaf stirring, and instead of the fresh odor of grass and clover, with which we had before been regaled, the dry scent of every herb seemed merely medicinal. Yielding, therefore, to the heat, we strolled into the woods, and along the course of a rivulet, on whose banks we loitered, observing at our leisure the products of these new fields. He who traverses the woodland paths, at this season, will have occasion to remember the small drooping bell-like flowers and slender red stem of the dogs-bane, and the coarser stem and berry of the poke, which are both common in remoter and wilder scenes; and if “the sun casts such a reflecting heat from the sweet fern,” as makes him faint, when he is climbing the bare hills, as they complained who first penetrated into these parts, the cool fragrance of the swamp pink restores him again, when traversing the valleys between.

As we went on our way late in the afternoon, we refreshed ourselves by bathing our feet in every rill that crossed the road, and anon, as we were able to walk in the shadows of the hills, recovered our morning elasticity. Passing through Sterling, we reached the banks of the Stillwater, in the western part of the town, at evening, where is a small village collected. We fancied that there was already a certain western look about this place, a smell of pines and roar of water, recently confined by dams, belying its name, which were exceedingly grateful. When the first inroad has been made, a few acres levelled, and a few houses erected, the forest looks wilder than ever. Left to herself, nature is always more or less civilized, and delights in a certain refinement; but where the axe has

encroached upon the edge of the forest, the dead and unsightly limbs of the pine, which she had concealed with green banks of verdure, are exposed to sight. This village had, as yet, no post-office, nor any settled name. In the small villages which we entered, the villagers gazed after us, with a complacent, almost compassionate look, as if we were just making our debut in the world at a late hour. "Nevertheless," did they seem to say, "come and study us, and learn men and manners." So is each one's world but a clearing in the forest, so much open and inclosed ground. The landlord had not yet returned from the field with his men, and the cows had yet to be milked. But we remembered the inscription on the wall of the Swedish inn, "You will find at Trolhate excellent bread, meat, and wine, provided you bring them with you," and were contented. But I must confess it did somewhat disturb our pleasure, in this withdrawn spot, to have our own village newspaper handed us by our host, as if the greatest charm the country offered to the traveller was the facility of communication with the town. Let it recline on its own everlasting hills, and not be looking out from their summits for some petty Boston or New York in the horizon.

At intervals we heard the murmuring of water, and the slumberous breathing of crickets throughout the night; and left the inn the next morning in the gray twilight, after it had been hallowed by the night air, and when only the innocent cows were stirring, with a kind of regret. It was only four miles to the base of the mountain, and the scenery was already more picturesque. Our road lay along the course of the Stillwater, which was brawling at the bottom of a deep ravine, filled with pines and rocks, tumbling fresh from the mountains, so soon, alas! to commence its career of usefulness. At first, a cloud hung between us and the summit, but it was soon blown away. As we gathered the raspberries, which grew abundantly by the roadside, we fancied that that action was consistent with a lofty prudence, as if the traveller who ascends into a mountainous region should fortify himself by eating of such light ambrosial fruits as grow there; and, drinking of the springs which gush out from the mountain sides, as he gradually inhales the subtler and purer atmosphere of those elevated places, thus propitiating the mountain gods, by a sacrifice of their own fruits. The gross products of the plains and valleys are for such as dwell therein; but it seemed to us that the juices of this berry had relation to the thin air of the mountain-tops.

In due time we began to ascend the mountain, passing, first, through a grand sugar maple wood, which bore the marks of the augur, then a denser forest, which gradually became dwarfed, till there were no trees whatever. We at length pitched our tent on the summit. It is but nineteen hundred feet above the village of Princeton, and three thousand above the level of the sea; but by this slight elevation it is infinitely removed from the plain, and when we reached it, we felt a sense of remoteness, as if we had travelled into distant regions, to Arabia Petrea, or the farthest east. A robin upon a staff, was the highest object in sight. Swallows were flying about us, and the chewink and cuckoo were heard near at hand. The summit consists of a few acres, destitute of trees, covered with bare rocks, interspersed with blueberry bushes, raspberries, gooseberries, strawberries, moss, and a fine wiry grass. The common yellow lily, and dwarf-cornel, grow abundantly in the crevices of the rocks. This clear space, which is gently rounded, is bounded a few feet lower by a thick shrubbery of oaks, with maples, aspens, beeches, cherries, and occasionally a mountain-ash intermingled, among which we found the bright blueberries of the Solomon's Seal, and the fruit of the pyrola. From the foundation of a wooden observatory, which was formerly erected on the highest point, forming a rude, hollow structure of stone, a dozen feet in diameter, and five or six in height, we could see Monadnock, in simple grandeur, in the northwest, rising nearly a thousand feet higher, still the "far blue mountain," though with an altered profile. The first day the weather was so hazy that it was in vain we endeavored to unravel the obscurity. It was like looking into the sky again, and the patches of forest here and there seemed to flit like clouds over a lower heaven. As to voyagers of an aërial Polynesia, the earth seemed like a larger island in the ether; on every side, even as low as we, the sky shutting down, like an unfathomable deep, around it, a blue Pacific island, where who knows what islanders inhabit? and as we sail near its shores we see the waving of trees, and hear the lowing of kine.

We read Virgil and Wordsworth in our tent, with new pleasure there, while, waiting for a clearer atmosphere, nor did the weather prevent our appreciating the simple truth and beauty of Peter Bell:

"And he had lain beside his asses,  
On lofty Cheviot hills."

"And he had trudged through Yorkshire dales,  
Among the rocks and winding scars,  
Where deep and low the hamlets lie  
Beneath their little patch of sky,  
And little lot of stars."

Who knows but this hill may one day be a Helvellyn, or even a Parnassus, and the Muses haunt here, and other Homers frequent the neighboring plains,

Not unconcerned Wachusett rears his head  
Above the field, so late from nature won,  
With patient brow reserved, as one who read  
New annals in the history of man.

The blue-berries which the mountain afforded, added to the milk we had brought, made our frugal supper, while for entertainment the evensong of the wood-thrush rung along the ridge. Our eyes rested on no painted ceiling nor carpeted hall, but on skies of nature's painting, and hills and forests of her embroidery. Before sunset, we rambled along the ridge to the north, while a hawk soared still above us. It was a place where gods might wander, so solemn and solitary, and removed from all contagion with the plain. As the evening came on, the haze was 'condensed in vapor, and the landscape became more distinctly visible, and numerous sheets of water were brought to light.

*Et jam summa procul villarum culmina fumant,  
Majoresque cadunt altis de montibus umbrae.*

And now the tops of the villas smoke afar off,  
And the shadows fall longer from the high mountains.

As we stood on the stone tower while the sun was setting, we saw the shades of night creep gradually over the valleys of the east, and the inhabitants went into their houses, and shut their doors, while the moon silently rose up, and took possession of that part. And then the same scene was repeated on the west side, as far as the Connecticut and the Green Mountains, and the sun's rays fell on us two alone, of all New England men.

It was the night but one before the full of the moon, so bright that we could see to read distinctly by moonlight, and in the evening strolled over the summit without danger. There was, by chance, a fire blazing on Monadnock that night, which lighted up the whole western horizon, and by making us aware of a community of mountains, made our position seem less solitary. But at length the wind drove us to the shelter of our tent, and we closed its door for the night, and fell asleep.

It was thrilling to hear the wind roar over the rocks, at intervals when we waked, for it had grown quite cold and windy. The night was in its elements, simple even to majesty in that bleak place, — a bright moonlight and a piercing wind. It was at no time darker than twilight within the tent, and we could easily see the moon through its transparent roof as we lay; for there was the moon still above us, with Jupiter and Saturn on either hand, looking down on Wachusett, and it was a satisfaction to know that they were our fellow-travellers still, as high and out of our reach as our own destiny. Truly the stars were given for a consolation to man. We should not know but our life were fated to be always grovelling, but it is permitted to behold them, and surely they are deserving of a fair destiny. We see laws which never fail, of whose failure we never conceived; and their lamps burn all the night, too, as well as all day, — so rich and lavish is that nature which can afford this superfluity of light.

The morning twilight began as soon as the moon had set, and we arose and kindled our fire, whose blaze might have been seen for thirty miles around. As the daylight increased, it was remarkable how rapidly the wind went down. There was no dew on the summit, but coldness supplied its place. When the dawn had reached its prime, we enjoyed the view of a distinct horizon line, and could fancy ourselves at sea, and the distant hills the waves in the horizon, as seen from the deck of a vessel. The cherry-birds

fitted around us, the nuthatch and flicker were heard among the bushes, the titmouse perched within a few feet, and the song of the wood-thrush again rung along the ridge. At length we saw the sun rise up out of the sea, and shine on Massachusetts; and from this moment the atmosphere grew more and more transparent till the time of our departure, and we began to realize the extent of the view, and how the earth, in some degree, answered to the heavens in breadth, the white villages to the constellations in the sky. There was little of the sublimity and grandeur which belong to mountain scenery, but an immense landscape to ponder on a summer's day. We could see how ample and roomy is nature. As far as the eye could reach, there was little life in the landscape; the few birds that flitted past did not crowd. The travellers on the remote highways, which intersect the country on every side, had no fellow-travellers for miles, before or behind. On every side, the eye ranged over successive circles of towns, rising one above another, like the terraces of a vineyard, till they were lost in the horizon. Wachusett is, in fact, the observatory of the State. There lay Massachusetts, spread out before us in its length and breadth, like a map. There was the level horizon, which told of the sea on the east and south, the well-known hills of New Hampshire on the north, and the misty summits of the Hoosac and Green Mountains, first made visible to us the evening before, blue and unsubstantial, like some bank of clouds which the morning wind would dissipate, on the northwest and west. These last distant ranges, on which the eye rests unwearied, commence with an abrupt boulder in the north, beyond the Connecticut, and travel southward, with three or four peaks dimly seen. But Monadnock, rearing its masculine front in the northwest, is the grandest feature. As we beheld it, we knew that it was the height of land between the two rivers, on this side the valley of the Merrimack, or that of the Connecticut, fluctuating with their blue seas of air, — these rival vales, already teeming with Yankee men along their respective streams, born to what destiny who shall tell? Watatic, and the neighboring hills in this State and in New Hampshire, are a continuation of the same elevated range on which we were standing. But that New Hampshire bluff, — that promontory of a State, — lowering day and night on this our State of Massachusetts, will longest haunt our dreams.

We could, at length, realize the place mountains occupy on the land, and how they come into the general scheme of the universe. When first we climb their summits and observe their lesser irregularities, we do not give credit to the comprehensive intelligence which shaped them; but when afterward we behold their outlines in the horizon, we confess that the hand which moulded their opposite slopes, making one to balance the other, worked round a deep centre, and was privy to the plan of the universe. So is the least part of nature in its bearings referred to all space. These lesser mountain ranges, as well as the Alleghanies, run from northeast to southwest, and parallel with these mountain streams are the more fluent rivers, answering to the general direction of the coast, the bank of the great ocean stream itself. Even the clouds, with their thin bars, fall into the same direction by preference, and such even is the course of the prevailing winds, and the migration of men and birds. A mountain-

chain determines many things for the statesman and philosopher. The improvements of civilization rather creep along its sides than cross its summit. How often is it a barrier to prejudice and fanaticism? In passing over these heights of land, through their thin atmosphere, the follies of the plain are refined and purified; and as many species of plants do not scale their summits, so many species of folly no doubt do not cross the Alleghanies; it is only the hardy mountain plant that creeps quite over the ridge, and descends into the valley beyond.

We get a dim notion of the flight of birds, especially of such as fly high in the air, by having ascended a mountain. We can now see what landmarks mountains are to their migrations; how the Catskills and Highlands have hardly sunk to them, when Wachusett and Monadnock open a passage to the northeast; how they are guided, too, in their course by the rivers and valleys; and who knows but by the stars, as well as the mountain ranges, and not by the petty landmarks which we use. The bird whose eye takes in the Green Mountains on the one side, and the ocean on the other, need not be at a loss to find its way.

At noon we descended the mountain, and having returned to the abodes of men, turned our faces to the east again; measuring our progress, from time to time, by the more ethereal hues which the mountain assumed. Passing swiftly through Stillwater and Sterling, as with a downward impetus, we found ourselves almost at home again in the green meadows of Lancaster, so like our own Concord, for both are watered by two streams which unite near their centres, and have many other features in common. There is an unexpected refinement about this scenery; level prairies of great extent, interspersed with elms and hop-fields and groves of trees, give it almost a classic appearance. This, it will be remembered, was the scene of Mrs. Kowlandson's capture, and of other events in the Indian wars, but from this July afternoon, and under that mild exterior, those times seemed as remote as the irruption of the Goths. They were the dark age of New England. On beholding a picture of a New England village as it then appeared, with a fair open prospect, and a light on trees and river, as if it were broad noon, we find we had not thought the sun shone in those days, or that men lived in broad daylight then. We do not imagine the sun shining on hill and valley during Philip's war, nor on the war-path of Paugus, or Standish, or Church, or Lovell, with serene summer weather, but a dim twilight or night did those events transpire in. They must have fought in the shade of their own dusky deeds.

At length, as we plodded along the dusty roads, our thoughts became as dusty as they; all thought indeed stopped, thinking broke down, or proceeded only passively in a sort of rhythmical cadence of the confused material of thought, and we found ourselves mechanically repeating some familiar measure which timed with our tread; some verse of the Robin Hood ballads, for instance, which one can recommend to travel by.

“Swearers are swift, sayd lyttle John,  
As the wind blows over the hill;  
For if it be never so loud this night,  
To-morrow it may be still.”

And so it went up hill and down till a stone interrupted the line, when a new verse was chosen.

“His shoote it was but loosely shot,  
Yet flewe not the arrowe in vaine,  
For it met one of the sheriffe’s men,  
And William-a-Trent was slaine.”

There is, however, this consolation to the most way-worn traveller, upon the dustiest road, that the path his feet describe is so perfectly symbolical of human life, — now climbing the hills, now descending into the vales. From the summits he beholds the heavens and the horizon, from the vales he looks up to the heights again. He is treading his old lessons still, and though he may be very weary and travel-worn, it is yet sincere experience.

Leaving the Nashua, we changed our route a little, and arrived at Stillriver Village, in the western part of Harvard, just as the sun was setting. From this place, which lies to the northward, upon the western slope of the same range of hills on which we had spent the noon before, in the adjacent town, the prospect is beautiful, and the grandeur of the mountain outlines unsurpassed. There was such a repose and quiet here at this hour, as if the very hill-sides were enjoying the scene, and we passed slowly along, looking back over the country we had traversed, and listening to the evening song of the robin, we could not help contrasting the equanimity of nature with the bustle and impatience of man. His words and actions presume always a crisis near at hand, but she is forever silent and unpretending.

And now that we have returned to the desultory life of the plain, let us endeavor to import a little of that mountain grandeur into it. We will remember within what walls we lie, and understand that this level life too has its summit, and why from the mountain-top the deepest valleys have a tinge of blue; that there is elevation in every hour, as no part of the earth is so low that the heavens may not be seen from, and we have only to stand on the summit of our hour to command an uninterrupted horizon.

We rested that night at Harvard, and the next morning, while one bent his steps to the nearer village of Groton, the other took his separate and solitary way to the peaceful meadows of Concord; but let him not forget to record the brave hospitality of a farmer and his wife, who generously entertained him at their board, though the poor wayfarer could only congratulate the one on the continuance of hayweather, and silently accept the kindness of the other. Refreshed by this instance of generosity, no less than by the substantial viands set before him, he pushed forward with new vigor, and reached the banks of the Concord before the sun had climbed many degrees into the heavens.

# SIR WALTER RALEIGH

Perhaps no one in English history better represents the heroic character than Sir Walter Raleigh, for Sidney has got to be almost as shadowy as Arthur himself. Raleigh's somewhat antique and Roman virtues appear in his numerous military and naval adventures, in his knightly conduct toward the Queen, in his poems and his employments in the Tower, and not least in his death, but more than all in his constant soldier-like bearing and promise. He was the Bayard of peaceful as well as war like enterprise, and few lives which are the subject of recent and trustworthy history are so agreeable to the imagination. Notwithstanding his temporary unpopularity, he especially possessed the prevalent and popular qualities which command the admiration of men. If an English Plutarch were to be written, Raleigh would be the best Greek or Roman among them all. He was one whose virtues if they were not distinctively great yet gave to virtues a current stamp and value as it were by the very grace and loftiness with which he carried them; — one of nature's noblemen who possessed those requisites to true nobility without which no heraldry nor blood can avail. Among savages he would still have been chief. He seems to have had, not a profounder or grander but, so to speak, more nature than other men — a great, irregular, luxuriant nature, fit to be the darling of a people. The enthusiastic and often extravagant, but always hearty and emphatic, tone in which he is spoken of by his contemporaries is not the least remarkable fact about him, and it does not matter much whether the current stories are true or not, since they at least prove his reputation. It is not his praise to have been a saint or a seer in his generation, but "one of the gallantest worthies that ever England bred." The stories about him testify to a character rather than a virtue. As, for instance, that "he was damnable proud. Old Sir Robert Harley of Brampton-Brian Castle (who knew him) would say, 't was a great question, who was the proudest. Sir Walter or Sir Thomas Overbury, but the difference that was, was judged on Sir Thomas's side;" that "in his youth his companions were boisterous blades, but generally those that had wit;" that on one occasion he beats one of them for making a noise in a tavern, and "seals up his mouth, his upper and nether beard, with hard wax." A young contemporary says, "I have heard his enemies confess that he was one of the weightiest and wisest men that the island ever bred;" and another gives this character of him — "who hath not known or read of this prodigy of wit and fortune, Sir Walter Raleigh, a man unfortunate in nothing else but in the greatness of his wit and advancement, whose eminent worth was such, both in domestic policy, foreign expeditions, and discoveries, in arts

and literature, both practic and contemplative, that it might seem at once to conquer example and imitation.”

And what we are told of his personal appearance is accordant with the rest, that “he had in the outward man a good presence, in a handsome and well-compacted person;” that “he was a tall, handsome, and bold man;” and his “was thought a very good face,” though “his countenance was some what spoiled by the unusual height of his forehead.” “He was such a person (every way), that (as King Charles ☒ says of the Lord Strafford) a prince would rather be afraid of, than ashamed of,” and had an “awfulness and ascendancy in his aspect over other mortals;” and we are not disappointed to learn that he indulged in a splendid dress, and “notwithstanding his so great mastership in style, and his conversation with the learnedest and politest persons, yet he spake broad Devonshire to his dying day.”

Such a character as this was well suited to the time in which he lived. His age was an unusually stirring one. The discovery of America and the successful progress of the Reformation opened a field for both the intellectual and physical energies of his generation. The fathers of his age were Calvin and Knox, and Cranmer, and Pizarro, and Garcilaso; and its immediate forefathers were Luther and Raphael, and Bayard and Angelo, and Ariosto, and Copernicus, and Machiavel, and Erasmus, and Cabot, and Ximenes, and Columbus. Its device might have been an anchor, a sword, and a quill. The Pizarro laid by his sword at intervals and took to his letters. The Columbus set sail for newer worlds still, by voyages which needed not the patronage of princes. The Bayard alighted from his steed to seek adventures no less arduous than heretofore upon the ocean and in the Western world; and the Luther who had reformed religion began now to reform politics and science.

In Raleigh’s youth, however it may have concerned him, Camoens was writing a heroic poem in Portugal, and the arts still had their representative in Paul Veronese of Italy. He may have been one to welcome the works of Tasso and Montaigne to England, and when he looked about him he might have found such men as Cervantes and Sidney, men of like pursuits and not altogether dissimilar genius from himself, for his contemporaries, — a Drake to rival him on the sea, and a Hudson in western adventure; a Halley, a Galileo, and a Kepler, for his astronomers; a Bacon, a Behmen, and a Burton, for his philosophers; and a Jonson, a Spenser, and a Shakespeare, his poets for refreshment and inspiration.

But that we may know how worthy he himself was to make one of this illustrious company, and may appreciate the great activity and versatility of his genius, we will glance hastily at the various aspects of his life.

He was a proper knight, a born cavalier, who in the intervals of war betook himself still to the most vigorous arts of peace, though as if diverted from his proper aim. He makes us doubt if there is not some worthier apology for war than has been discovered, for its modes and manners were an instinct with him; and though in his writings he takes frequent occasion sincerely to condemn its folly, and show the better policy and

advantage of peace, yet he speaks with the uncertain authority of a warrior still, to whom those juster wars are not simply the dire necessity he would imply.

In whatever he is engaged we seem to see a plume waving over his head, and a sword dangling at his side. Born in 1552, the last year of the reign of Edward VI, we find that not long after, by such instinct as makes the young crab seek the seashore, he has already marched into France, as one of “a troop of a hundred gentlemen volunteers,” who are described as “a gallant company, nobly mounted and accoutred, having on their colors the motto, *Finem det mihi virtus* — ‘Let valor be my aim.’” And so in fact he marched on through life with this motto in his heart always. All the peace of those days seems to have been but a truce, or casual interruption of the order of war. War with Spain, especially, was so much the rule rather than the exception that the navigators and commanders of these two nations, when abroad, acted on the presumption that their countries were at war at home, though they had left them at peace; and their respective colonies in America carried on war at their convenience, with no infraction of the treaties between the mother countries.

Raleigh seems to have regarded the Spaniards as his natural enemies, and he was not backward to develop this part of his nature. When England was threatened with foreign invasion, the Queen looked to him especially for advice and assistance; and none was better able to give them than he. We cannot but admire the tone in which he speaks of his island, and how it is to be best defended, and the navy, its chief strength, maintained and improved. He speaks from England as his castle, and his (as no other man’s) is the voice of the state; for he does not assert the interests of an individual but of a commonwealth, and we see in him revived a Roman patriotism.

His actions, as they were public and for the public, were fit to be publicly rewarded; and we accordingly read with equanimity of gold chains and monopolies and other emoluments conferred on him from time to time for his various services — his military successes in Ireland, “that commonweal of common woe,” as he even then described it; his enterprise in the harbor of Cadiz; his capture of Fayal from the Spaniards; and other exploits which perhaps, more than anything else, got him fame and a name during his lifetime.

If war was his earnest work, it was his pastime too; for in the peaceful intervals we hear of him participating heartily and bearing off the palm in the birthday tournaments and tilting matches of the Queen, where the combatants vied with each other mainly who should come on to the ground in the most splendid dress and equipments. In those tilts it is said that his political rival, Essex, whose wealth enabled him to lead the costliest train, but who ran very ill and was thought the poorest knight of all, was wont to change his suit from orange to green, that it might be said that “There was one in green who ran worse than one in orange.”

None of the worthies of that age can be duly appreciated if we neglect to consider them in their relation to the New World. The stirring spirits stood with but one foot on the land. There were Drake, Hawkins, Hudson, Frobisher, and many others, and their worthy companion was Raleigh. As a navigator and naval commander he had few

equals, and if the reader who has attended to his other actions inquires how he filled up the odd years, he will find that they were spent in numerous voyages to America for the purposes of discovery and colonization. He would be more famous for these enterprises if they were not overshadowed by the number and variety of his pursuits.

His persevering care and oversight as the patron of Virginia, discovered and planted under his auspices in 1584, present him in an interesting light to the American reader. The work of colonization was well suited to his genius; and if the necessity of England herself had not required his attention and presence at this time, he would possibly have realized some of his dreams in plantations and cities on our coast.

England has since felt the benefit of his experience in naval affairs; for he was one of the first to assert their importance to her, and he exerted himself especially for the improvement of naval architecture, on which he has left a treatise. He also composed a discourse on the art of war at sea, a subject which at that time had never been treated.

We can least bear to consider Raleigh as a courtier; though the court of England at that time was a field not altogether unworthy of such a courtier. His competitors for fame and favor there were Burleigh, Leicester, Sussex, Buckingham, and, be it remembered, Sir Philip Sidney, whose *Arcadia* was just finished when Raleigh came to court. Sidney was his natural companion and other self, as it were, as if nature, in her anxiety to confer one specimen of a true knight and courtier on that age, had cast two in the same mould, lest one should miscarry. These two kindred spirits are said to have been mutually attracted toward each other. And there, too, was Queen Elizabeth herself, the center of the court and of the kingdom; to whose service he consecrates himself, not so much as a subject to his sovereign, but as a knight to the service of his mistress. His intercourse with the Queen may well have begun with the incident of the cloak, for such continued to be its character afterward. It has in the description an air of romance, and might fitly have made a part of his friend Sidney's *Arcadia*. The tale runs that the Queen, walking one day in the midst of her courtiers, came to a miry place, when Raleigh, who was then unknown to her, taking off his rich plush cloak, spread it upon the ground for a foot-cloth.

We are inclined to consider him as some knight, and a knight errant, too, who had strayed into the precincts of the court, and practiced there the arts which he had learned in bower and hall and in the lists. Not but that he knew how to govern states as well as queens, but he brought to the task the gallantry and graces of chivalry, as well as the judgment and experience of a practical modern Englishman. "The Queen" says one, "began to be taken with his elocution, and loved to hear his reasons to his demands; and the truth is she took him for a kind of oracle, which nettled them all." He rose rapidly in her favor, and became her indispensable counselor in all matters which concerned the state, for he was minutely acquainted with the affairs of England, and none better understood her commercial interests. But notwithstanding the advantage of his wisdom to England, we had rather think of him taking counsel with the winds and breakers of the American coast and the roar of the Spanish artillery, than with the Queen. But though he made a good use of his influence (for the most part) when

obtained, he could descend to the grossest flattery to obtain this, and we could wish him forever banished from the court, whose favors he so earnestly sought. Yet that he who was one while “the Queen of England’s poor captive,” could sometimes assume a manly and independent tone with her, appears from his answer when she once exclaimed, on his asking a favor for a friend, “When, Sir Walter, will you cease to be a beggar?” “When your gracious Majesty ceases to be a benefactor.”

His court life exhibits him in mean and frivolous relations, which make him lose that respect in our eyes which he had acquired elsewhere.

The base use he made of his recovered influence (after having been banished from the court, and even suffered imprisonment in consequence of the Queen’s displeasure) to procure the disgrace and finally the execution of his rival Essex (who had been charged with treason) is the foulest stain upon his escutcheon, the one which it is hardest to reconcile with the nobleness and generosity which we are inclined to attribute to such a character. Revenge is most unheroic. His acceptance of bribes afterwards for using his influence in behalf of the earl’s adherents is not to be excused by the usage of the times. The times may change, but the laws of integrity and magnanimity are immutable. Nor are the terms on which he was the friend of Cecil, from motives of policy merely, more tolerable to consider. Yet we cannot but think that he frequently travelled a higher, though a parallel, course with the mob, and though he had their suffrages, to some extent deserves the praise which Jonson applies to another —

That to the vulgar canst thyself apply,  
Treading a better path not contrary.

We gladly make haste to consider him in what the world calls his misfortune, after the death of Elizabeth and the accession of James ☒, when his essentially nobler nature was separated from the base company of the court and the contaminations which his loyalty could not resist, though tested by imprisonment and the scaffold.

His enemies had already prejudiced the King against him before James’s accession to the throne, and when at length the English nobility were presented to his Majesty (who, it will be remembered, was a Scotchman), and Raleigh’s name was told, “Raleigh!” exclaimed the King, “O my soule, mon, I have heard rawly of thee.” His efforts to limit the King’s power of introducing Scots into England contributed to increase his jealousy and dislike, and he was shortly after accused by Lord Cobham of participating in a conspiracy to place the Lady Arabella Stuart on the throne. Owing mainly, it is thought, to the King’s resentment, he was tried and falsely convicted of high treason; though his accuser retracted in writing his whole accusation before the conclusion of the trial.

In connection with his earlier behavior to Essex, it should be remembered that by his conduct on his own trial he in a great measure removed the ill-will which existed against him on that account. At his trial, which is said to have been most unjustly and insolently conducted by Sir Edward Coke on the part of the Crown, “he answered,” says one, “with that temper, wit, learning, courage, and judgment that, save that it went with the hazard of his life, it was the happiest day that ever he spent.” The first two that brought the news of his condemnation to the King were Roger Ashton and a

Scotsman, "whereof one affirmed that never any man spake so well in times past, nor would in the world to come; and the other said, that whereas when he saw him first, he was so led with the common hatred that he would have gone a hundred miles to have seen him hanged, he would, ere he parted, have gone a thousand to have saved his life." Another says, "he behaved himself so worthily, so wisely, and so temperately, that in half a day the mind of all the company was changed from the extremest hate to the extremest pity." And another said, "to the lords he was humble, but not prostrate; to the jury affable, but not fawning; to the King's counsel patient, but not yielding to the imputations laid upon him, or neglecting to repel them with the spirit which became an injured and honorable man." And finally he followed the sheriff out of court in the expressive words of Sir Thomas Overbury, "with admirable erection, but yet in such sort as became a man condemned."

Raleigh prepared himself for immediate execution, but after his pretended accomplices had gone through the ceremony of a mock execution and been pardoned by the King, it satisfied the policy of his enemies to retain him a prisoner in the Tower for thirteen years, with the sentence of death still unrevoked. In the meanwhile he solaced himself in his imprisonment with writing a History of the World and cultivating poetry and philosophy as the noblest deeds compatible with his confinement.

It is satisfactory to contrast with his mean personal relations while at court his connection in the Tower with the young Prince Henry (whose tastes and aspirations were of a stirring kind), as his friend and instructor. He addresses some of his shorter pieces to the Prince, and in some instances they seem to have been written expressly for his use. He preaches to him as he was well able, from experience, a wiser philosophy than he had himself practiced, and was particularly anxious to correct in him a love of popularity which he had discovered, and to give him useful maxims for his conduct when he should take his father's place.

He lost neither health nor spirits by thirteen years of captivity, but after having spent this, the literary era of his life, as in the retirement of his study, and having written the history of the Old World, he began to dream of actions which would supply materials to the future historian of the New. It is interesting to consider him, a close prisoner as he was, preparing for voyages and adventures which would require him to roam more broadly than was consistent with the comfort or ambition of his freest contemporaries.

Already in 1595, eight years before his imprisonment, it will be remembered he had undertaken his first voyage to Guiana in person; mainly, it is said, to recover favor with the Queen, but doubtless it was much more to recover favor with himself, and exercise his powers in fields more worthy of him than a corrupt court. He continued to cherish this his favorite project though a prisoner; and at length in the thirteenth year of his imprisonment, through the influence of his friends and his confident assertions respecting the utility of the expedition to the country, he obtained his release, and set sail for Guiana with twelve ships. But unfortunately he neglected to procure a formal pardon from the King, trusting to the opinion of Lord Bacon that this was unnecessary,

since the sentence of death against him was virtually annulled, by the lives of others being committed to his hands. Acting on this presumption, and with the best intentions toward his country, and only his usual jealousy of Spain, he undertook to make good his engagements to himself and the world.

It is not easy for us at this day to realize what extravagant expectations Europe had formed respecting the wealth of the New World. We might suppose two whole continents, with their adjacent seas and oceans, equal to the known globe, stretching from pole to pole, and possessing every variety of soil, climate, and productions, lying unexplored today — what would now be the speculations of Broadway and State Street?

The few travellers who had penetrated into the country of Guiana, whither Raleigh was bound, brought back accounts of noble streams flowing through majestic forests, and a depth and luxuriance of soil which made England seem a barren waste in comparison. Its mineral wealth was reported to be as inexhaustible as the cupidity of its discoverers was unbounded. The very surface of the ground was said to be resplendent with gold, and the men went covered with gold-dust, as Hottentots with grease. Raleigh was informed while at Trinidad, by the Spanish governor, who was his prisoner, that one Juan Martinez had at length penetrated into this country; and the stories told by him of the wealth and extent of its cities surpass the narratives of Marco Polo himself. He is said in particular to have reached the city of Manoa, to which he first gave the name of El Dorado, or “The Gilded,” the Indians conducting him blindfolded, not removing the veil from his eyes till he was ready to enter the city. It was at noon that he passed the gates, and it took him all that day and the next, walking from sunrise to sunset, before he arrived at the palace of Inga, where he resided for seven months, till he had made himself master of the language of the country. These and even more fanciful accounts had Raleigh heard and pondered, both before and after his first visit to the country. No one was more familiar with the stories, both true and fabulous, respecting the discovery and resources of the New World, and none had a better right than he to know what great commanders and navigators had done there, or anywhere. Such information would naturally flow to him of its own accord. That his ardor and faith were hardly cooled by actual observation may be gathered from the tone of his own description.

He was the first Englishman who ascended the Orinoco, and he thus describes the adjacent country: “On the banks were divers sorts of fruits good to eat, besides flowers and trees of that variety as were sufficient to make ten volumes of herbals. We relieved ourselves many times with the fruits of the country, and sometimes with fowl and fish: we saw birds of all colors, some carnation, some crimson, orange tawny, purple, green, watchet, and of all other sorts, both simple and mixt; as it was unto us a great good passing of the time to behold them, besides the relief we found by killing some store of them with our fowling pieces, without which, having little or no bread, and less drink, but only the thick and troubled water of the river, we had been in a very hard case.”

The following is his description of the waterfalls and the province of Canuri, through which last the river runs. "When we were come to the tops of the first hills of the plains adjoining to the river, we beheld that wonderful breach of waters which ran down Caroli: and might from that mountain see the river how it ran in three parts above twenty miles off; there appeared some ten or twelve overfalls in sight, every one as high over the other as a church tower, which fell with that fury, that the rebound of waters made it seem as if it had been all covered over with a great shower of rain: and in some places we took it at the first for a smoke that had risen over some great town. For mine own part, I was well persuaded from thence to have returned, being a very ill footman; but the rest were all so desirous to go near the said strange thunder of waters, as they drew me on by little and little, into the next valley, where we might better, discern the same. I never saw a more beautiful country, nor more lively prospects, hills so raised here and there over the valleys, the river winding into divers branches, the plains adjoining without bush or stubble, all fair green grass, the ground of hard sand, easy to march on either for horse or foot, the deer crossing in every path, the birds towards the evening singing on every tree with a thousand several tunes, cranes and herons of white, crimson, and carnation perching on the river's side, the air fresh, with a gentle easterly wind; and every stone that we stopped to take up promised either gold or silver by his complexion."

In another place he says: "To conclude, Guiana is a country never sacked, turned, nor wrought; the face of the earth hath not been torn, nor the virtue and salt of the soil spent by manurance."

To the fabulous accounts of preceding adventurers Raleigh added many others equally absurd and poetical, as, for instance, of a tribe "with eyes in their shoulders and their mouths in the middle of their breasts," but, it seems to us, with entire good faith, and no such flagrant intent to deceive as he has been accused of. "Weak policy it would be in me," says he, "to betray myself or my country with imaginations; neither am I so far in love with that lodging, watching, care, peril, diseases, ill savors, bad fare, and many other mischiefs that accompany these voyages, as to woo myself again into any of them, were I not assured that the sun covereth not so much riches in any part of the earth." Some portion of this so prevalent delusion respecting the precious metals is no doubt to be referred to the actual presence of an abundance of mica, slate, and talc and other shining substances in the soil. "We may judge," says Macaulay, "of the brilliancy of these deceptious appearances, from learning that the natives ascribed the luster of the Magellanic clouds or nebulæ of the southern hemisphere to the bright reflections produced by them." So he was himself most fatally deceived, and that too by the strength and candor no less than the weakness of his nature, for, generally speaking, such things are not to be disbelieved as task our imaginations to conceive of, but such rather as are too easily embraced by the understanding.

It is easy to see that he was tempted, not so much by the luster of the gold, as by the splendor of the enterprise itself. It was the best move that peace allowed. The expeditions to Guiana and the ensuing golden dreams were not wholly unworthy of him,

though he accomplished little more in the first voyage than to take formal possession of the country in the name of the Queen, and in the second, of the Spanish town of San Thomé, as his enemies would say, in the name of himself. Perceiving that the Spaniards, who had been secretly informed of his designs through their ambassador in England, were prepared to thwart his endeavors, and resist his progress in the country, he procured the capture of this their principal town, which was also burnt, against his orders.

But it seems that no particular exception is to be taken against these high-handed measures, though his enemies have made the greatest handle of them. His behavior on this occasion was part and parcel of his constant character. It would not be easy to say when he ceased to be an honorable soldier and became a freebooter; nor indeed is it of so much importance to inquire of a man what actions he performed at one and what at another period, as what manner of man he was at all periods. It was after all the same Raleigh who had won so much renown by land and sea, at home and abroad. It was his forte to deal vigorously with men, whether as a statesman, a courtier, a navigator, a planter of colonies, an accused person, a prisoner, an explorer of continents, or a military or naval commander.

And it was a right hero's maxim of his, that "good success admits of no examination;" which, in a liberal sense, is true conduct. That there was no cant in him on the subject of war appears from his saying (which indeed is very true), that "the necessity of war, which among human actions is most lawless, hath some kind of affinity and near resemblance with the necessity of law." It is to be remembered, too, that if the Spaniards found him a restless and uncompromising enemy, the Indians experienced in him a humane and gentle defender, and on his second visit to Guiana remembered his name and welcomed him with enthusiasm.

We are told that the Spanish ambassador, on receiving intelligence of his doings in that country, rushed into the presence of King James, exclaiming "Piratas, piratas!" — "Pirates, pirates!" and the King, to gratify his resentment, without bringing him to trial for this alleged new offence, with characteristic meanness and pusillanimity caused him to be executed upon the old sentence soon after his return to England.

The circumstances of his execution and how he bore himself on that memorable occasion, when the sentence of death passed fifteen years before was revived against him — after as an historian in his confinement he had visited the Old World in his free imagination, and as an unrestrained adventurer the New, with his fleets and in person — are perhaps too well known to be repeated. The reader will excuse our hasty rehearsal of the final scene.

We can pardon, though not without limitations, his supposed attempt at suicide in the prospect of defeat and disgrace; and no one can read his letter to his wife, written while he was contemplating this act, without being reminded of the Roman Cato, and admiring while he condemns him. "I know," says he, "that it is forbidden to destroy ourselves; but I trust it is forbidden in this sort, that we destroy not ourselves despairing of God's mercy." Though his greatness seems to have forsaken him in his

feigning himself sick, and the base methods he took to avoid being brought to trial, yet he recovered himself at last, and happily withstood the trials which awaited him. The night before his execution, besides writing letters of farewell to his wife, containing the most practical advice for the conduct of her life, he appears to have spent the time in writing verses on his condition, and among others this couplet, *On the Snuff of a Candle*.

Cowards may fear to die; but courage stout,  
Rather than live in snuff, will be put out.

And the following verses, perhaps, for an epitaph on himself:

Even such is time, that takes on trust  
Our youth, our joys, our all we have,  
And pays us but with earth and dust;  
Who in the dark and silent grave,  
When we have wandered all our ways,  
Shuts up the story of our days!  
But from this earth, this grave, this dust,  
The Lord shall raise me up, I trust!

His execution was appointed on Lord Mayor's day, that the pageants and shows might divert the attention of the people; but those pageants have long since been forgotten, while this tragedy is still remembered. He took a pipe of tobacco before he went to the scaffold, and appeared there with a serene countenance, so that a stranger could not have told which was the condemned person. After exculpating himself in a speech to the people, and without ostentation having felt the edge of the axe, and disposed himself once as he wished to lie, he made a solemn prayer, and being directed to place himself so that his face should look to the east, his characteristic answer was, "It mattered little how the head lay, provided the heart was right." The executioner being overawed was unable at first to perform his office, when Raleigh, slowly raising his head, exclaimed, "Strike away, man, don't be afraid." "He was the most fearless of death," says the bishop who attended him, "that ever was known, and the most resolute and confident, yet with reverence and conscience." But we would not exaggerate the importance of these things. The death scenes of great men are agreeable to consider only when they make another and harmonious chapter of their lives, and we have accompanied our hero thus far because he lived, so to speak, unto the end.

In his *History of the World* occurs this sentence: "O eloquent, just, and mighty Death! Whom none could advise, thou hast persuaded; what none hath dared, thou hast done; and whom all the world hath flattered, thou only hast cast out of the world and despised: thou hast drawn together all the far-stretched greatness, all the pride, cruelty, and ambition of man, and covered it all over with those two narrow words — *Hic iacet!*"

Perhaps Raleigh was the man of the most general information and universal accomplishment of any in England. Though he excelled greatly in but few departments, yet he reached a more valuable mediocrity in many. "He seemed," said Fuller, "to be like

Cato Uticensis, born to that only which he was about." He said he had been "a soldier, a sea-captain, and a courtier," but he had been much more than this. He embraced in his studies music, ornamental gardening, painting, history, antiquities, chemistry, and many arts beside. Especially he is said to have been a great chemist, and studied most in his sea voyages, "when he carried always a trunk of books along with him, and had nothing to divert him," and when also he carried his favorite pictures. In the Tower, too, says one, "he doth spend all the day in distillations;" and that this was more than a temporary recreation appears from the testimony of one who says he was operator to him for twelve years. Here also "he conversed on poetry, philosophy, and literature with Hoskins, his fellow-prisoner," whom Ben Jonson mentions as "the person who had polished him." He was a political economist far in advance of his age, and a sagacious and influential speaker in the House of Commons. Science is indebted to him in more ways than one. In the midst of pressing public cares he interested himself to establish some means of universal communication between men of science for their mutual benefit, and actually set up what he termed "An office of address" for this purpose. As a mathematician, he was the friend of Harriot, Dee, and the Earl of Northumberland. As an antiquarian, he was a member of the first antiquarian society established in England, along with Spelman, Selden, Cotton, Camden, Savile, and Stow. He is said to have been the founder of the Mermaid Club, which met in Fleet Street, to which Shakespeare, Ben Jonson, Fletcher, Beaumont, Carew, Donne, etc., belonged. He has the fame of having first introduced the potato from Virginia and the cherry from the Canaries into Ireland, where his garden was; and his manor of Sherborne "he beautified with gardens, and orchards, and groves of much variety and delight." And this fact, evincing his attention to horticulture, is related, that once, on occasion of the Queen's visiting him, he artificially retarded the ripening of some cherries by stretching a wet canvas over the tree, and removed it on a sunny day, so as to present the fruit ripe to the Queen a month later than usual.

Not to omit a more doubtful but not less celebrated benefit, it is said that on the return of his first colonists from Virginia in 1586 tobacco was first effectually introduced into England, and its use encouraged by his influence and example. And finally, not to be outdone by the quacks, he invented a cordial which became very celebrated, bore his name, and was even administered to the Queen, and to the Prince Henry in his last illness. One Febure writes that "Sir Walter, being a worthy successor of Mithridates, Matheolus, Basil Valentine, Paracelsus, and others, has, he affirms, selected all that is choicest in the animal, vegetable, and mineral world, and moreover manifested so much art and experience in the preparation of this great and admirable cordial as will of itself render him immortal."

We come at last to consider him as a literary man and a writer, concerning which aspect of his life we are least indebted to the historian for our facts.

As he was heroic with the sword, so was he with the pen. The History of the World, the task which he selected for his prison hours, was heroic in the undertaking and heroic in the achievement. The easy and cheerful heart with which he endured

his confinement, turning his prison into a study, a parlor, and a laboratory, and his prison-yard into a garden, so that men did not so much pity as admire him; the steady purpose with which he set about fighting his battles, prosecuting his discoveries, and gathering his laurels, with the pen, if he might no longer with regiments and fleets — is itself an exploit. In writing the History of the World he was indeed at liberty; for he who contemplates truth and universal laws is free, whatever walls immure his body, though to our brave prisoner thus employed, mankind may have seemed but his poor fellow-prisoners still.

Though this remarkable work interests us more, on the whole, as a part of the history of Raleigh than as the History of the World, yet it was done like himself, and with no small success. The historian of Greece and Rome is usually unmanned by his subject, as a peasant crouches before lords; but Raleigh, though he succumbs to the imposing fame of tradition and antediluvian story, and exhibits unnecessary reverence for a prophet or patriarch, from his habit of innate religious courtesy, has done better than this whenever a hero was to be dealt with. He stalks down through the aisles of the past, as through the avenues of a camp, with poets and historians for his heralds and guides; and from whatever side the faintest trump reaches his ear, that way does he promptly turn, though to the neglect of many a gaudy pavilion.

From a work so little read in these days we will venture to quote as specimens the following criticisms on Alexander and the character of Epaminondas. They will, at any rate, teach our lips no bad habits. There is a natural emphasis in his style, like a man's tread, and a breathing space between the sentences, which the best of more modern writing does not furnish. His chapters are like English parks, or rather like a Western forest, where the larger growth keeps down the underwood, and one may ride on horse back through the openings.

“Certainly the things that this King did were marvellous, and would hardly have been undertaken by any man else: and though his father had determined to have invaded the lesser Asia, it is like enough that he would have contented himself with some part thereof, and not have discovered the river of Indus, as this man did. The swift course of victory, wherewith he ran over so large a portion of the world, in so short a space, may justly be imputed unto this, that he was never encountered by an equal spirit, concurring with equal power against him. Hereby it came to pass, that his actions, being limited by no greater opposition than desert places, and the mere length of tedious journeys could make, were like the Colossus of Rhodes, not so much to be admired for the workmanship, though therein also praiseworthy, as for the huge bulk. For certainly the things performed by Xenophon, discover as brave a spirit as Alexander's, and working no less exquisitely, though the effects were less material, as were also the forces and power of command, by which it wrought. But he that would find the exact pattern of a noble commander, must look upon such as Epaminondas, that encountering worthy captains, and those better followed than themselves, have by their singular virtue over-topped their valiant enemies, and still prevailed over those that would not have yielded one foot to any other. Such as these

are do seldom live to obtain great empires; for it is a work of more labor and longer time to master the equal forces of one hardy and well-ordered state, than to tread down and utterly subdue a multitude of servile nations, compounding the body of a gross unwieldy empire. Wherefore these parvo potentes, men that with little have done much upon enemies of like ability, are to be regarded as choice examples of worth; but great conquerors, to be rather admired for the substance of their actions, than the exquisite managing: exactness and greatness concurring so seldom, that I can find no instance of both in one, save only that brave Roman, Cæsar.”

Of Epaminondas he says, “So died Epaminondas, the worthiest man that ever was bred in that nation of Greece, and hardly to be matched in any age or country; for he equaled all others in the several virtues, which in each of them were singular. His justice, and sincerity, his temperance, wisdom, and high magnanimity, were no way inferior to his military virtue; in every part whereof he so excelled, that he could not properly be called a wary, a valiant, a politic, a bountiful, or an industrious, and a provident captain; all these titles, and many others being due unto him, which with his notable discipline, and good conduct, made a perfect composition of an heroic general. Neither was his private conversation unanswerable to those high parts, which gave him praise abroad. For he was grave, and yet very affable and courteous; resolute in public business, but in his own particular easy, and of much mildness; a lover of his people, bearing with men’s infirmities, witty and pleasant in speech, far from insolence, master of his own affections, and furnished with all qualities that might win and keep love. To these graces were added great ability of body, much eloquence and very deep knowledge of philosophy and learning, wherewith his mind being enlightened, rested not in the sweetness of contemplation, but broke forth into such effects as gave unto Thebes which had ever been an underling, a dreadful reputation among all people adjoining, and the highest command in Greece.”

For the most part an author only writes history, treating it as a dead subject; but Raleigh tells it like a fresh story. A man of action himself, he knew when there was an action coming worthy to be related, and does not disappoint the reader, as is too commonly the case, by recording merely the traditionary admiration or wonder. In commenting upon the military actions of the ancients, he easily and naturally digresses to some perhaps equal action of his own, or within his experience; and he tells how they should have drawn up their fleets or men, with the authority of an admiral or general. The alacrity with which he adverts to some action within his experience, and slides down from the dignified impersonality of the historian into the familiarity and interest of a party and eye-witness, is as attractive as rare. He is often without reproach the Cæsar of his own story. He treats Scipio, Pompey, Hannibal, and the rest quite like equals, and he speaks like an eye-witness, and gives life and reality to the narrative by his very lively understanding and relating of it; especially in those parts in which the mere scholar is most likely to fail. Every reader has observed what a dust the historian commonly raises about the field of battle, to serve as an apology for not making clear the disposition and manœuvring of the parties, so that the clearest idea

one gets is of a very vague counteraction or standing over against one another of two forces. In this history we, at least, have faith that these things are right. Our author describes an ancient battle with the vivacity and truth of an eye-witness, and perhaps, in criticizing the disposition of the forces, saying they should have stood thus or so, some times enforces his assertions in some such style as "I remember being in the harbor of Cadiz," etc., so that, as in Herodotus and Thucydides, we associate the historian with the exploits he describes. But this comes not on account of his fame as a writer, but from the conspicuous part he acted on the world's stage, and his name is of equal mark to us with those of his heroes. So in the present instance, not only his valor as a writer, but the part he acted in his generation, the life of the author, seems fit to make the last chapter in the history he is writing. We expect that when his history is brought to a close it will include his own exploits. However, it is hardly a work to be consulted as authority nowadays, except on the subject of its author's character.

The natural breadth and grasp of the man is seen in the preface itself, which is a sermon with human life for its text. In the first books he discusses with childlike earnestness, and an ingenuity which they little deserved, the absurd and frivolous questions which engaged the theology and philosophy of his day. But even these are recommended by his sincerity and fine imagination, while the subsequent parts, or story itself, have the merit of being far more credible and lifelike than is common. He shows occasionally a poet's imagination, and the innocence and purity of a child (as it were) under a knight's dress, such as were worthy of the friend of Spenser. The nobleness of his nature is everywhere apparent. The gentleness and steady heart with which he cultivates philosophy and poetry in his prison, dissolving in the reader's imagination the very walls and bars by his childlike confidence in truth and his own destiny, are affecting. Even astrology, or, as he has elsewhere called it, "star-learning," comes recommended from his pen, and science will not refuse it.

"And certainly it cannot be doubted," says he, "but the stars are instruments of far greater use, than to give an obscure light, and for men to gaze on after sunset: it being manifest, that the diversity of seasons, the winters and summers, more hot and cold, are not so uncertained by the sun and moon alone, who always keep one and the same course; but that the stars have also their working therein.

"And if we cannot deny, but that God hath given virtues to springs and fountains, to cold earth, to plants and stones, minerals, and to the excremental parts of the basest living creatures, why should we rob the beautiful stars of their working powers? for seeing they are many in number, and of eminent beauty and magnitude, we may not think, that in the treasury of his wisdom, who is infinite, there can be wanting (even for every star) a peculiar virtue and operation; as every herb, plant, fruit, and flower adorning the face of the earth, hath the like. For as these were not created to beautify the earth alone, and to cover and shadow her dusty face, but otherwise for the use of man and beast, to feed them and cure them; so were not those uncountable glorious bodies set in the firmament, to no other end, than to adorn it; but for instruments and organs of his divine providence, so far as it hath pleased his just will to determine.

“Origen upon this place of Genesis, ‘Let there be light in the firmament, &c.’ affirmeth, that the stars are not causes (meaning perchance binding causes;) but are as open books, wherein are contained and set down all things whatsoever to come; but not to be read by the eyes of human wisdom: which latter part I believe well, and the saying of Syracides withal; ‘That there are hid yet greater things than these be, and we have seen but a few of his works.’ And though, for the capacity of men, we know somewhat, yet in the true and uttermost virtues of herbs and plants, which our selves sow and set, and which grow under our feet, we are in effect ignorant; much more in the powers and working of celestial bodies.... But in this question of fate, the middle course is to be followed, that as with the heathen we do not bind God to his creatures, in this supposed necessity of destiny; and so on the contrary we do not rob those beautiful creatures of their powers and offices.... And that they wholly direct the reasonless mind, I am resolved: for all those which were created mortal, as birds, beasts, and the like, are left to their natural appetites; over all which, celestial bodies (as instruments and executioners of God’s providence) have absolute dominion.... And Saint Augustine says, ‘Deus regit inferiora corpora per superiora’; ‘God ruleth the bodies below by those above.’... It was therefore truly affirmed, *Sapiens adiuuabit opus astrorum, quemadmodum agricola terrae naturam*; ‘A wise man assisteth the work of the stars, as the husbandman helpeth the nature of the soil.’... Lastly, we ought all to know, that God created the stars as he did the rest of the universal; whose influences may be called his reserved and unwritten laws.... But it was well said of Plotinus, that the stars were significant, but not efficient, giving them yet something less than their due: and therefore as I do not consent with them, who would make those glorious creatures of God virtueless: so I think that we derogate from his eternal and absolute power and providence, to ascribe to them the same dominion over our immortal souls, which they have over all bodily substances, and perishable natures: for the souls of men loving and fearing God, receive influence from that divine light itself, whereof the sun’s clarity, and that of the stars, is by Plato called but a shadow, *Lumen est umbra Dei, et Deus est lumen luminis*; ‘Light is the shadow of God’s brightness, who is the light of light.’”

We are reminded by this of Du Bartas’s poem on the Probability of the Celestial Orbs being inhabited, translated by Sylvester:

I’ll ne’er believe that the arch-Architect  
 With all these fires the heavenly arches deck’d  
 Only for shew, and with their glistering shields  
 T’ amaze poor shepherds, watching in the fields;  
 I’ll ne’er believe that the least flow’r that pranks  
 Our garden borders, or the common banks,  
 And the least stone, that in her warming lap  
 Our kind nurse Earth doth covetously wrap,  
 Hath some peculiar virtue of its own,  
 And that the glorious stars of heav’n have none.

Nor is the following brief review and exaltation of the subject of all history unworthy of a place in this History of the World:

“Man, thus compounded and formed by God, was an abstract, or model, or brief story in the universal: ... for out of the earth and dust was formed the flesh of man, and therefore heavy and lumpish; the bones of his body we may compare to the hard rocks and stones, and therefore strong and durable; of which Ovid:

Inde genus durum sumus, experiensque laborum,  
Et documenta damus qua simus origine nati.

From thence our kind hard-hearted is,  
Enduring pain and care,  
Approving, that our bodies of  
A stony nature are.

His blood, which disperseth itself by the branches of veins through all the body, may be resembled to those waters, which are carried by brooks and rivers over all the earth; his breath to the air, his natural heat to the inclosed warmth which the earth hath in itself, which, stirred up by the heat of the sun, assisteth nature in the speedier procreation of those varieties, which the earth bringeth forth; our radical moisture, oil or balsamum (whereon the natural heat feedeth and is maintained) is resembled to the fat and fertility of the earth; the hairs of man’s body, which adorns, or overshadows it, to the grass, which covereth the upper face and skin of the earth; our generative power, to nature, which produceth all things; our determinations, to the light, wandering, and unstable clouds, carried everywhere with uncertain winds; our eyes to the light of the sun and moon; and the beauty of our youth, to the flowers of the spring, which, either in a very short time, or with the sun’s heat, dry up and wither away, or the fierce puffs of wind blow them from the stalks; the thoughts of our mind, to the motion of angels; and our pure understanding (formerly called mens, and that which always looketh upwards) to those intellectual natures, which are always present with God; and lastly, our immortal souls (while they are righteous) are by God himself beautified with the title of his own image and similitude.”

But man is not in all things like nature: “For this tide of man’s life, after it once turneth and declineth, ever runneth with a perpetual ebb and falling stream, but never floweth again, our leaf once fallen, springeth no more; neither doth the sun or the summer adorn us again with the garments of new leaves and flowers.”

There is a flowing rhythm in some of these sentences like the rippling of rivers, hardly to be matched in any prose or verse. The following is his poem on the decay of Oracles and Pantheism:

“The fire which the Chaldeans worshipped for a god, is crept into every man’s chimney, which the lack of fuel starveth, water queneth, and want of air suffocateth: Jupiter is no more vexed with Juno’s jealousies; death hath persuaded him to chastity, and her to patience; and that time which hath devoured itself, hath also eaten up both the bodies and images of him and his; yea, their stately temples of stone and dureful marble. The houses and sumptuous buildings erected to Baal, can no where

be found upon the earth; nor any monument of that glorious temple consecrated to Diana. There are none now in Phoenicia, that lament the death of Adonis; nor any in Libya, Creta, Thessalia, or elsewhere, that can ask counsel or help from Jupiter. The great god Pan hath broken his pipes; Apollo's priests are become speechless; and the trade of riddles in oracles, with the devil's telling men's fortunes therein, is taken up by counterfeit Egyptians, and cozening astrologers."

In his Discourse of War in General (commencing with almost a heroic verse, "The ordinary theme and argument of history is war,") are many things well thought, and many more well said. He thus expands the maxim that corporations have no soul: "But no senate nor civil assembly can be under such natural impulses to honor and justice as single persons.... For a majority is nobody when that majority is separated, and a collective body can have no synteresis, or divine ray, which is in the mind of every man, never assenting to evil, but upbraiding and tormenting him when he does it: but the honor and conscience that lies in the majority is too thin and diffusive to be efficacious; for a number can do a great wrong, and call it right, and not one of that majority blush for it. Hence it is, that though a public assembly may lie under great censures, yet each member looks upon himself as little concerned: this must be the reason why a Roman senate should act with less spirit and less honor than any single Roman would do."

He then in the same treatise leaps with easy and almost merry elasticity from the level of his discourse to the heights of his philosophy: "And it is more plain there is not in nature a point of stability to be found; every thing either ascends or declines: when wars are ended abroad, sedition begins at home, and when men are freed from fighting for necessity, they quarrel through ambition."

And he thus concludes this discourse: "We must look a long way back to find the Romans giving laws to nations, and their consuls bringing kings and princes bound in chains to Rome in triumph; to see men go to Greece for wisdom, or Ophir for gold; when now nothing remains but a poor paper remembrance of their former condition.

"It would be an unspeakable advantage, both to the public and private, if men would consider that great truth, that no man is wise or safe, but he that is honest. All I have designed is peace to my country; and may England enjoy that blessing when I shall have no more proportion in it than what my ashes make!"

If his philosophy is for the most part poor, yet the conception and expression are rich and generous.

His maxims are not true or impartial, but are conceived with a certain magnanimity which was natural to him, as if a selfish policy could easily afford to give place in him to a more universal and true.

As a fact evincing Raleigh's poetic culture and taste, it is said that, in a visit to the poet Spenser on the banks of the Mulla, which is described in Colin Clout's Come Home Again, he anticipated the judgment of posterity with respect to the Faerie Queene, and by his sympathy and advice encouraged the poet to go on with his work, which by the advice of other friends, among whom was Sidney, he had laid aside.

His own poems, though insignificant in respect to number and length, and not yet collected into a separate volume, or rarely accredited to Raleigh, deserve the distinct attention of the lover of English poetry, and leave such an impression on the mind that this leaf of his laurels, for the time, well nigh overshadows all the rest. In these few rhymes, as in that country he describes, his life naturally culminates and his secret aspirations appear. They are in some respects more trustworthy testimonials to his character than state papers or tradition; for poetry is a piece of very private history, which unostentatiously lets us into the secret of a man's life, and is to the reader what the eye is to the beholder, the characteristic feature which cannot be distorted or made to deceive. Poetry is always impartial and unbiased evidence. The whole life of a man may safely be referred to a few deep experiences. When he only sings a more musical line than usual, all his actions have to be retried by a newer and higher standard than before.

The pleasing poem entitled A Description of the Country's Recreations, also printed among the poems of Sir Henry Wotton, is well known. The following, which bears evident marks of his pen, we will quote, from its secure and continent rhythm:

FALSE LOVE AND TRUE LOVE

As you came from the holy land  
Of Walsingham,  
Met you not with my true love  
By the way as you came?

How shall I know your true love,  
That have met many one,  
As I went to the holy land,  
That have come, that have gone.

She is neither white nor brown,  
But as the heavens fair;  
There is none hath a form so divine,  
In the earth or the air.

Such a one did I meet, good Sir,  
Such an angelic face;  
Who like a queen, like a nymph did appear,  
By her gait, by her grace:

She hath left me here all alone,  
All alone as unknown,  
Who sometimes did me lead with herself,  
And me loved as her own:

What's the cause that she leaves you alone,  
And a new way doth take:  
Who loved you once as her own  
And her joy did you make?

I have loved her all my youth,  
But now, old as you see,  
Love likes not the falling fruit  
From the withered tree:

Know that Love is a careless child  
And forgets promise past,  
He is blind, he is deaf, when he list,  
And in faith never fast:

His desire is a dureless content,  
And a trustless joy;  
He is won with a world of despair,  
And is lost with a toy.

Of women-kind such indeed is the love,  
Or the word love abused;  
Under which, many childish desires  
And conceits are excused:

But true love is a durable fire  
In the mind ever burning;  
Never sick, never old, never dead,  
From itself never turning.

The following will be new to many of our readers:

THE SHEPHERD'S PRAISE OF HIS SACRED DIANA

Prais'd be Diana's fair and harmless light;  
Prais'd be the dews, wherewith she moistens the ground;  
Prais'd be her beams, the glory of the night;  
Prais'd be her power, by which all powers abound!

Prais'd be her nymphs, with whom she decks the woods;  
Prais'd be her knights, in whom true honor lives;  
Prais'd be that force by which she moves the floods!  
Let that Diana shine, which all these gives!

In heaven, queen she is among the spheres;  
She mistress-like, makes all things to be pure;  
Eternity in her oft-change she bears;  
She, Beauty is ; by her, the fair endure.

Time wears her not; she doth his chariot guide;  
Mortality below her orb is plac'd;  
By her the virtues of the stars down slide;  
In her is Virtue's perfect image cast!

A knowledge pure it is her worth to know:  
With Circes let them dwell that think not so!

Though we discover in his verses the vices of the courtier, and they are not equally sustained, as if his genius were warped by the frivolous society of the Court, he was

capable of rising to unusual heights. His genius seems to have been fitted for short flights of unmatched sweetness and vigor, but by no means for the sustained loftiness of the epic poet. One who read his verses would say that he had not grown to be the man he promised. They have occasionally a strength of character and heroic tone rarely expressed or appreciated; and powers and excellences so peculiar, as to be almost unique specimens of their kind in the language. Those which have reference to his death have been oftenest quoted, and are the best. The Soul's Errand deserves to be remembered till her mission is accomplished in the world.

We quote the following, not so well known, with some omissions, from the commencement of —

#### HIS PILGRIMAGE

Give me my scallop-shell of quiet,  
My staff of faith to walk upon;  
My scrip of joy, immortal diet;  
My bottle of salvation;  
My gown of glory, (hope's true gage)  
And thus I'll take my pilgrimage.

Blood must be my body's balmer,  
No other balm will here be given,  
Whilst my soul, like quiet palmer,  
Travels to the land of heaven,  
Over all the silver mountains,  
Where do spring those nectar fountains:

And I there will sweetly kiss  
The happy bowl of peaceful bliss.  
Drinking mine eternal fill  
Flowing on each milky hill.  
My soul will be adry before,  
But after, it will thirst no more.

In that happy, blissful day,  
More peaceful pilgrims I shall see,  
That have cast off their rags of clay,  
And walk apparell'd fresh like me.

But he wrote his poems, after all, rather with ships and fleets, and regiments of men and horse. At his bidding, navies took their place in the channel, and even from prison he fitted out fleets with which to realize his golden dreams, and invited his companions to fresh adventures.

Raleigh might well be studied if only for the excellence of his style, for he is remarkable even in the midst of so many masters. All the distinguished writers of that period possess a greater vigor and naturalness than the more modern, and when we read a quotation from one of them in the midst of a modern authority, we seem to have come suddenly upon a greener ground and greater depth and strength of soil. It

is as if a green bough were laid across the page, and we are refreshed as if by the sight of fresh grass in midwinter or early spring. You have constantly the warrant of life and experience in all you read. The little that is said is supplied by implication of the much that was done. The sentences are verdurous and blooming as evergreen and flowers, because they are rooted in fact and experience; but our false and florid sentences have only the tints of flowers without their sap or roots. Where shall we look for standard English but to the words of a standard man? The word which is best said came very near not being spoken at all; for it is cousin to a deed which would have been better done. It must have taken the place of a deed by some urgent necessity, even by some misfortune, so that the truest writer will be some captive knight after all. And perhaps the fates had such a design, when, having stored Raleigh so richly with the substance of life and experience, they made him a fast prisoner, and compelled him to make his words his deeds, and transfer to his expression the emphasis and sincerity of his action.

The necessity of labor, and conversation with many men and things, to the scholar, is rarely well remembered. Steady labor with the hands, which engrosses the attention also, is the best method of removing palaver out of one's style both of talking and writing. If he has worked hard from morning till night, though he may have grieved that he could not be watching the train of his thoughts during that time, yet the few hasty lines which at evening record his day's experience will be more musical and true, than his freest but idle fancy could have furnished. He will not lightly dance at his work who has wood to cut and cord before nightfall in the short days of winter, but every stroke will be husbanded and ring soberly through the wood; and so will the stroke of that scholar's pen, when at evening this records the story of the day, ring soberly on the ear of the reader long after the echoes of his axe have died away. The scholar may be sure he writes the tougher truths for the calluses on his palms. They give firmness to the sentence. We are often astonished at the force and precision of style to which hard-working men unpracticed in writing easily attain, when required to make the effort; as if sincerity and plainness, those ornaments of style, were better taught on the farm or in the workshop than in the schools. The sentences written by such rude hands are nervous and tough, like hardened thongs, the sinews of the deer, or the roots of the pine. The scholar might frequently emulate the propriety and emphasis of the farmer's call to his team, and confess, if that were written, it would surpass his labored sentences.

From the weak and flimsy periods of the politician and literary man we are glad to turn even to the description of work, the simple record of the month's labor in the farmer's almanac, to restore our tone and spirits. We like that a sentence should read as if its author, had he held a plough instead of a pen, could have drawn a furrow deep and straight to the end. The scholar requires hard labor to give an impetus to his thought; he will learn to grasp the pen firmly so, and wield it gracefully and effectually as an axe or sword. When we consider the weak and nerveless periods of some literary men, who perchance in feet and inches come up to the standard of their race, and are not deficient in girth also, we are amazed at the immense sacrifice of thews and

sinews. What! these proportions, these bones, and this their work! Hands which could have felled an ox have hewed this fragile matter which would not have tasked a lady's fingers. Can this be a stalwart man's work, who has a marrow in his back and a tendon Achilles in his heel? They who set up Stonehenge did somewhat, if they only laid out their strength for once, and stretched themselves.

Yet after all the truly efficient laborer will be found not to crowd his day with work, but will saunter to his task, surrounded by a wide halo of ease and leisure, and then do but what he likes best. He is anxious only about the kernels of time. Though the hen should set all day she could lay only one egg, and besides, she would not have picked up the materials for another.

A perfectly healthy sentence is extremely rare. But for the most part we miss the hue and fragrance of the thought. As if we could be satisfied with the dews of the morning or evening without their colors, or the heavens without their azure. The most attractive sentences are perhaps not the wisest, but the surest and soundest. They are spoken firmly and conclusively, as if the author had a right to know what he says; and if not wise, they have at least been well learned. At least he does not stand on a rolling stone, but is well assured of his footing; and if you dispute their doctrine, you will yet allow that there is truth in their assurance. Raleigh's are of this sort, spoken with entire satisfaction and heartiness. They are not so much philosophy as poetry. With him it was always well done and nobly said. His learning was in his hand, and he carried it by him and used it as adroitly as his sword. Aubrey says, "He was no slug; without doubt had a wonderful waking spirit, and great judgment to guide it." He wields his pen as one who sits at ease in his chair, and has a healthy and able body to back his wits, and not a torpid and diseased one to fetter them. In whichever hand is the pen we are sure there is a sword in the other. He sits with his armor on, and with one ear open to hear if the trumpet sound, as one who has stolen a little leisure from the duties of a camp; and we are confident that the whole man, as real and palpable as an Englishman can be, sat down to the writing of his books, and not some curious brain only. Such a man's mere daily exercise in literature might well attract us, and Cecil has said, "He can toil terribly."

Raleigh seems to have been too genial and loyal a soul to resist the temptations of a court; but if to his genius and culture could have been added the temperament of George Fox or Oliver Cromwell, perhaps the world would have had reason longer to remember him. He was, however, the most generous nature that could be drawn into the precincts of a court, and carried the courtier's life almost to the highest pitch of magnanimity and grace of which it was capable. He was liberal and generous as a prince, that is, within bounds; brave, chivalrous, heroic, as a knight in armor but not as a defenceless man. His was not the heroism of a Luther, but of a Bayard, and had more of grace than of honest truth in it. He had more taste than appetite. There may be something petty in a refined taste, it easily degenerates into effeminacy. It does not consider the broadest use, and is not content with simple good and bad, but is often fastidious, and curious, or nice only.

His faults, as we have hinted before, were those of a courtier and a soldier. In his counsels and aphorisms we see not unfrequently the haste and rashness of the soldier, strangely mingled with the wisdom of the philosopher. Though his philosophy was not wide nor profound, it was continually giving way to the generosity of his nature, and he was not hard to be won to the right.

What he touches he adorns by a greater humanity and native nobleness, but he touches not the truest nor deepest. He does not in any sense unfold the new, but embellishes the old, and with all his promise of originality he never was quite original, or steered his own course. He was of so fair and susceptible a nature, rather than broad or deep, that he delayed to slake his thirst at the nearest and most turbid wells of truth and beauty; and his homage to the least fair and noble left no room for homage to the All-fair. The misfortune and incongruity of the man appear in the fact that he was at once the author of the *Maxims of State* and *The Soul's Errand*.

When we reconsider what we have said in the foregoing pages, we hesitate to apply any of their eulogy to the actual and historical Raleigh, or any of their condemnation to that ideal Raleigh which he suggests. For we must know the man of history as we know our contemporaries, not so much by his deeds, which often belie his real character, as by the expectation he begets in us and there is a bloom and halo about the character of Raleigh which defies a close and literal scrutiny, and robs us of our critical acumen. With all his heroism, he was not heroic enough; with all his manliness, he was servile and dependent; with all his aspirations, he was ambitious. He was not upright nor constant, yet we would have trusted him; he could flatter and cringe, yet we should have respected him; and he could accept a bribe, yet we should confidently have appealed to his generosity.

Such a life is useful for us to contemplate as suggesting that a man is not to be measured by the virtue of his described actions, or the wisdom of his expressed thoughts merely, but by that free character he is, and is felt to be, under all circumstances. Even talent is respectable only when it indicates a depth of character unfathomed. Surely it is better that our wisdom appear in the constant success of our spirits than in our business, or the maxims which fall from our lips merely. We want not only a revelation, but a nature behind to sustain it. Many silent, as well as famous, lives have been the result of no mean thought, though it was never adequately expressed nor conceived; and perhaps the most illiterate and unphilosophical mind may yet be accustomed to think to the extent of the noblest action. We all know those in our own circle who do injustice to their entire character in their conversation and in writing, but who, if actually set over against us, would not fail to make a wiser impression than many a wise thinker and speaker.

We are not a little profited by any life which teaches us not to despair of the race; and such effect has the steady and cheerful bravery of Raleigh. To march sturdily through life, patiently and resolutely looking grim defiance at one's foes, that is one way; but we cannot help being more attracted by that kind of heroism which relaxes its brows in the presence of danger, and does not need to maintain itself strictly, but,

by a kind of sympathy with the universe, generously adorns the scene and the occasion, and loves valor so well that itself would be the defeated party only to behold it; which is as serene and as well pleased with the issue as the heavens which look down upon the field of battle. It is but a lower height of heroism when the hero wears a sour face. We fear that much of the heroism which we praise nowadays is dyspeptic. When we consider the vast Xerxean army of reformers in these days, we cannot doubt that many a grim soul goes silent, the hero of some small intestine war; and it is somewhat to begin to live on cornbread solely, for one who has before lived on bolted wheat; — but of this sort surely are not the deeds to be sung. These are not the Arthurs that inflame the imaginations of men. All fair action is the product of enthusiasm, and nature herself does nothing in the prose mood, though sometimes grimly with poetic fury, and at others humorously. There is enthusiasm in the sunrise and the summer, and we imagine that the shells on the shore take new layers from year to year with such rapture as the bard writes his poems.

We would fain witness a heroism which is literally illustrious, whose daily life is the stuff of which our dreams are made; so that the world shall regard less what it does than how it does it; and its actions unsettle the common standards, and have a right to be done, however wrong they may be to the moralist.

Mere gross health and cheerfulness are no slight attraction, and some biographies have this charm mainly. For the most part the best man's spirit makes a fearful sprite to haunt his grave, and it adds not a little there fore to the credit of Little John, the celebrated follower of Robin Hood, reflecting favorably on the character of his life, that his grave was "long celebrous for the yielding of excellent whetstones."

A great cheerfulness indeed have all great wits and heroes possessed, almost a profane levity to such as understood them not, but their religion had the broader basis of health and permanence. For the hero, too, has his religion, though it is the very opposite to that of the ascetic. It demands not a narrower cell but a wider world. He is perhaps the very best man of the world; the poet active, the saint wilful; not the most godlike, but the most manlike. There have been souls of a heroic stamp for whom this world seemed expressly made; as if this fair creation had at last succeeded, for it seems to be thrown away on the saint. Such seem to be an essential part of their age if we consider them in time, and of the scenery if we consider them in Nature. They lie out before us ill-defined and uncertain, like some scraggy hillside or pasture, which varies from day to day and from hour to hour, with the revolutions of Nature, so that the eye of the forester never rests twice upon the same scene; one knows not what may occur — he may hear a fox bark or a partridge drum. They are planted deep in Nature and have more root than others. They are earth-born (*γηγενεις*), as was said of the Titans. They are brothers of the sun and moon, they belong, so to speak, to the natural family of man. Their breath is a kind of wind, their step like that of a quadruped, their moods the seasons, and they are as serene as Nature. Their eyes are deep-set like moles or glow worms, they move free and unconstrained through Nature as her guests, their motions easy and natural as if their course were already

determined for them; as of rivers flowing through valleys, not as somewhat finding a place in Nature, but for whom a place is already found. We love to hear them speak though we do not hear what they say. The very air seems forward to modulate itself into speech for them, and their words are of its own substance, and fall naturally on the ear, like the rustling of leaves and the crackling of the fire. They have the heavens for their abettors, for they never stood from under them, and they look at the stars with an answering ray. The distinctions of better and best, sense and nonsense, seem trivial and petty, when such great healthy indifferences come along. We lay aside the trick of thinking well to attend to their thoughtless and happy natures, and are inclined to show a divine politeness and heavenly good-breeding, for they compel it. They are great natures. It takes a good deal to support them. Theirs is no thin diet. The very air they breathe seems rich, and, as it were, perfumed.

They are so remarkable as to be least remarked at first, since they are most in harmony with the time and place, and if we wonder at all it will be at ourselves and not at them. Mountains do not rise perpendicularly, but the lower eminences hide the higher, and we at last reach their top by a gentle acclivity. We must abide a long time in their midst and at their base, as we spend many days at the Notch of the White Mountains in order to be impressed by the scenery. Let us not think that Alexander will conquer Asia the first time we are introduced to him, though smaller men may be in haste to re-enact their exploits then.

“Would you have  
Such an Herculean actor in the scene,  
And not his hydra?”  
“They must sweat no less  
To fit their properties than to express their parts.”

The presence of heroic souls enhances the beauty and ampleness of Nature herself. Where they walk, as Virgil says of the abodes of the blessed —

Largior hic campos aether et lumine vestit  
Purpureo: solemque suum, sua sidera norunt.

Here a more copious air invests the fields, and clothes with purple light; and they know their own sun and their own stars.

But, alas! What is Truth? That which we know not. What is Beauty? That which we see not. What is Heroism? That which we are not. It is in vain to hang out flags on a day of rejoicing — fresh bunting, bright and whole; better the soiled and torn remnant which has been borne in the wars.

We have considered a fair specimen of an Englishman in the sixteenth century; but it behoves us to be fairer specimens of American men in the nineteenth. The gods have given man no constant gift, but the power and liberty to act greatly. How many wait for health and warm weather to be heroic and noble! We are apt to think there is a kind of virtue which need not be heroic and brave — but in fact virtue is the deed of the bravest; and only the hardy souls venture upon it, for it deals in what we have no experience, and alone does the rude pioneer work of the world. In winter is its

campaign, and it never goes into quarters. "Sit not down," said Sir Thomas Browne, "in the popular seats and common level of virtues, but endeavor to make them heroic. Offer not only peace-offerings, but holocausts, unto God."

In our lonely chambers at night we are thrilled by some far-off serenade within the mind, and seem to hear the clarion sound and clang of corselet and buckler from many a silent hamlet of the soul, though actually it may be but the rattling of some farmer's wagon rolling to market against the morrow.

# DARK AGES

WE should read history as little critically as we consider the landscape, and be more interested by the atmospheric tints, and various lights and shades which the intervening spaces create, than by its groundwork and composition. It is the morning now turned evening and seen in, the west, - the same sun, but a new light and atmosphere. Its beauty is like the sunset ; not a fresco painting on a wall, flat and bounded, but atmospheric and roving or free.

In reality history fluctuates as the face of the landscape from morning to evening. What is of moment is its hue and color. Time hides no treasures; we want not its then but its now. We do not complain that the mountains in the horizon are blue and indistinct; they are the more like the heavens. Of what moment are facts that can be lost, - which need to be commemorated? The monument of death will outlast the memory of the dead. The pyramids do not tell the tale that was confided to them; the living fact commemorates itself. Why look in the dark for light? Strictly speaking, the historical societies have not recovered one fact from oblivion, but are themselves instead of the fact that is lost. The researcher is more memorable than the researched. The crowd stood admiring the mist, and the dim outlines of the trees seen through it, when one of their number advanced to explore the phenomenon, and with fresh admiration, all eyes were turned on his dimly retreating figure. It is astonishing with how little cooperation of the societies, the past is remembered. Its story has indeed had a different muse than has been assigned it . There is a good instance of the manner in which all history began, in Alwakidi's Arabian Chronicle. "I was informed by Ahmed Almatin Aljorhami, who had it from Rephaa Ebn Kais Alamiri, who had it from Saiph Ebn Fabalah Alchatquarmi, who had it from Thabet Ebn Alkamah, who said he was present at the action." These fathers of history were not anxious to preserve, but to learn the fact; and hence it was not for gotten.

Critical acumen is exerted in vain to uncover the past; the past cannot be presented; we cannot know what we are not. But one veil hangs over past, present, and future, and it is the province of the historian to find out not what was, but what is. Where a battle has been fought, you will find nothing but the bones of men and beasts; where a battle is being fought there are hearts beating. We will sit on a mound and muse, and not try to make these skeletons stand on their legs attain. Does nature remember, think you, that they were men, or not rather that they are bones? Ancient history has an air of antiquity; it should be more modern.

It is written as if the spectator should be thinking of the backside of the picture on the wall, or as if the author expected the dead would be his readers, and wished to detail to them their own experience. Men seem anxious to accomplish an orderly retreat through the centuries, earnestly rebuilding the works behind, as they are battered down by the encroachments of time; but while they loiter, they and their works both fall a prey to the arch enemy. It has neither the venerableness of antiquity, nor the freshness of the modern.

It does as if it would go to the beginning of things, which natural history might with reason assume to do; but consider the Universal History, and then tell us -when did burdock and plantain sprout first? It has been so written for the most part, that the times it describes are with remarkable propriety called dark arcs. They are dark, as one has observed, because we are so in the dark about them. The sun rarely shines in history, what with the dust and confusion; and when we meet with any cheering fact which implies the presence of this luminary, we excerpt and modernize it. As when we read in the history of the Saxons, that Edwin of Northumbria "caused stakes to be fixed in the highways where he had seen a clear spring," and "brazen dishes were chained to them, to refresh the weary sojourner, whose fatigues Edwin had himself experienced." This is worth all Arthur's twelve battles.

But it is fit the past should be dark; though the darkness is not so much a quality of the past, as of tradition. It is not a distance of time but a distance of relation, which makes thus dusky its memorials. What is near to the heart of this generation is fair and bright still. Greece lies outspread fair and sunshiny in floods of light, for there is the sun and day-light in her literature and art, Homer does not allow us to forget that the sun shone - nor Phidias, nor the Parthenon. Yet no era has been wholly dark, nor will we too hastily submit to the historian, and congratulate ourselves on a blaze of light. If we could pierce the obscurity of those remote years we should find it light enough; only there is not our day. - Some creatures are made to see in the dark. - There has always been the same amount of light in the world.

The new and missing stars, the comets and eclipses do not affect the general illumination, for only our glasses appreciate them. The eyes of the oldest fossil remains, they tell us, indicate that the same laws of light prevailed then as now. Always the laws of light are the same, but the modes and degrees of seeing vary. The gods are partial to no era, but steadily shines their light in the heavens, while the eye of the beholder is turned to stone. There was but the eye and the sun from the first. The ages have not added a new ray to the one, nor altered a fibre of the other.

# A WINTER WALK

The wind has gently murmured through the blinds, or puffed with feathery softness against the windows, and occasionally sighed like a summer zephyr lifting the leaves along, the livelong night. The meadow-mouse has slept in his snug gallery in the sod, the owl has sat in a hollow tree in the depth of the swamp, the rabbit, the squirrel, and the fox have all been housed. The watch-dog has lain quiet on the hearth, and the cattle have stood silent in their stalls. The earth itself has slept, as it were its first, not its last sleep, save when some street-sign or wood-house door has faintly creaked upon its hinge, cheering forlorn nature at her midnight work, — the only sound awake twixt Venus and Mars, — advertising us of a remote inward warmth, a divine cheer and fellowship, where gods are met together, but where it is very bleak for men to stand. But while the earth has slumbered, all the air has been alive with feathery flakes descending, as if some northern Ceres reigned, showering her silvery grain over all the fields.

We sleep, and at length awake to the still reality of a winter morning. The snow lies warm as cotton or down upon the window-sill; the broadened sash and frosted panes admit a dim and private light, which enhances the snug cheer within. The stillness of the morning is impressive. The floor creaks under our feet as we move toward the window to look abroad through some clear space over the fields. We see the roofs stand under their snow burden. From the eaves and fences hang stalactites of snow, and in the yard stand stalagmites covering some concealed core. The trees and shrubs rear white arms to the sky on every side; and where were walls and fences, we see fantastic forms stretching in frolic gambols across the dusky landscape, as if nature had strewn her fresh designs over the fields by night as models for man's art.

Silently we unlatch the door, letting the drift fall in, and step abroad to face the cutting air. Already the stars have lost some of their sparkle, and a dull, leaden mist skirts the horizon. A lurid brazen light in the east proclaims the approach of day, while the western landscape is dim and spectral still, and clothed in a sombre Tartarian light, like the shadowy realms. They are Infernal sounds only that you hear, — the crowing of cocks, the barking of dogs, the chopping of wood, the lowing of kine, all seem to come from Pluto's barn-yard and beyond the Styx; — not for any melancholy they suggest, but their twilight bustle is too solemn and mysterious for earth. The recent tracks of the fox or otter, in the yard, remind us that each hour of the night is crowded with events, and the primeval nature is still working and making tracks in the snow. Opening the gate, we tread briskly along the lone country road, crunching the dry and

crisped snow under our feet, or aroused by the sharp clear creak of the wood-sled, just starting for the distant market, from the early farmer's door, where it has lain the summer long, dreaming amid the chips and stubble; while far through the drifts and powdered windows we see the farmer's early candle, like a paled star, emitting a lonely beam, as if some severe virtue were at its matins there. And one by one the smokes begin to ascend from the chimneys amidst the trees and snows.

The sluggish smoke curls up from some deep dell,  
The stiffened air exploring in the dawn,  
And making slow acquaintance with the day;  
Delaying now upon its heavenward course,  
In wreathed loiterings dallying with itself,  
With as uncertain purpose and slow deed,  
As its half-wakened master by the hearth,  
Whose mind still slumbering and sluggish thoughts  
Have not yet swept into the onward current  
Of the new day; — and now it streams afar,  
The while the chopper goes with step direct,  
And mind intent to swing the early axe.

First in the dusky dawn he sends abroad  
His early scout, his emissary, smoke,  
The earliest, latest pilgrim from the roof,  
To feel the frosty air, inform the day;  
And while he crouches still beside the hearth,  
Nor musters courage to unbar the door,  
It has gone down the glen with the light wind,  
And o'er the plain unfurled its venturous wreath,  
Draped the tree-tops, loitered upon the hill,  
And warmed the pinions of the early bird;  
And now, perchance, high in the crispy air,  
Has caught sight of the day o'er the earth's edge,  
And greets its master's eye at his low door,  
As some refulgent cloud in the upper sky.

We hear the sound of wood-chopping at the farmers' doors, far over the frozen earth, the baying of the house-dog, and the distant clarion of the cock. Though the thin and frosty air conveys only the finer particles of sound to our ears, with short and sweet vibrations, as the waves subside soonest on the purest and lightest liquids, in which gross substances sink to the bottom. They come clear and bell-like, and from a greater distance in the horizon, as if there were fewer impediments than in summer to make them faint and ragged. The ground is sonorous, like seasoned wood, and even the ordinary rural sounds are melodious, and the jingling of the ice on the trees is sweet and liquid. There is the least possible moisture in the atmosphere, all being dried up, or congealed, and it is of such extreme tenuity and elasticity, that it becomes

a source of delight. The withdrawn and tense sky seems groined like the aisles of a cathedral, and the polished air sparkles as if there were crystals of ice floating in it. As they who have resided in Greenland tell us, that, when it freezes, "the sea smokes like burning turf-land, and a fog or mist arises, called frost-smoke," which "cutting smoke frequently raises blisters on the face and hands, and is very pernicious to the health." But this pure stinging cold is an elixir to the lungs, and not so much a frozen mist, as a crystallized midsummer haze, refined and purified by cold.

The sun at length rises through the distant woods, as if with the faint clashing swinging sound of cymbals, melting the air with his beams, and with such rapid steps the morning travels, that already his rays are gilding the distant western mountains. Meanwhile we step hastily along through the powdery snow, warmed by an inward heat, enjoying an Indian summer still, in the increased glow of thought and feeling. Probably if our lives were more conformed to nature, we should not need to defend ourselves against her heats and colds, but find her our constant nurse and friend, as do plants and quadrupeds. If our bodies were fed with pure and simple elements, and not with a stimulating and heating diet, they would afford no more pasture for cold than a leafless twig, but thrive like the trees, which find even winter genial to their expansion.

The wonderful purity of nature at this season is a most pleasing fact. Every decayed stump and moss-grown stone and rail, and the dead leaves of autumn, are concealed by a clean napkin of snow. In the bare fields and tinkling woods, see what virtue survives. In the coldest and bleakest places, the warmest charities still maintain a foothold. A cold and searching wind drives away all contagion, and nothing can withstand it but what has a virtue in it; and accordingly, whatever we meet with in cold and bleak places, as the tops of mountains, we respect for a sort of sturdy innocence, a Puritan toughness. All things beside seem to be called in for shelter, and what stays out must be part of the original frame of the universe, and of such valor as God himself. It is invigorating to breathe the cleansed air. Its greater fineness and purity are visible to the eye, and we would fain stay out long and late, that the-gales may sigh through us, too, as through the leafless trees, and fit us for the winter: — as if we hoped so to borrow some pure and steadfast virtue, which will stead us in all seasons.

There is a slumbering subterranean fire in nature which never goes out, and which no cold can chill. It finally melts the great snow, and in January or July is only buried under a thicker or thinner covering. In the coldest day it flows somewhere, and the snow melts around every tree. This field of winter rye, which sprouted late in the fall, and now speedily dissolves the snow, is where the fire is very thinly covered. We feel warmed by it. In the winter, warmth stands for all virtue, and we resort in thought to a trickling rill, with its bare stones shining in the sun, and to warm springs in the woods, with as much eagerness as rabbits and robins. The steam which rises from swamps and pools, is as dear and domestic as that of our own kettle. What fire could ever equal the sunshine of a winter's day, when the meadow mice come out by the wallsides, and the chickadee lisps in the defiles of the wood? The warmth comes directly from the sun,

and is not radiated from the earth, as in summer; and when we feel his beams on our backs as we are treading some snowy dell, we are grateful as for a special kindness, and bless the sun which has followed us into that by-place.

This subterranean fire has its altar in each man's breast, for in the coldest day, and on the bleakest hill, the traveller cherishes a warmer fire within the folds of his cloak than is kindled on any hearth. A healthy man, indeed, is the complement of the seasons, and in winter, summer is in his heart. There is the south. Thither have all birds and insects migrated, and around the warm springs in his breast are gathered the robin and the lark.

At length, having reached the edge of the woods, and shut out the gadding town, we enter within their covert as we go under the roof of a cottage, and cross its threshold, all ceiled and banked up with snow. They are glad and warm still, and as genial and cheery in winter as in summer. As we stand in the midst of the pines, in the nickering and checkered light which straggles but little way into their maze, we wonder if the towns have ever heard their simple story. It seems to us that no traveller has ever explored them, and notwithstanding the wonders which science is elsewhere revealing every day, who would not like to hear their annals? Our humble villages in the plain are their contribution. We borrow from the forest the boards which shelter, and the sticks which warm us. How important is their evergreen to the winter, that portion of the summer which does not fade, the permanent year, the unwithered grass. Thus simply, and with little expense of altitude, is the surface of the earth diversified. What would human life be without forests, those natural cities? From the tops of mountains they appear like smooth shaven lawns, yet whither shall we walk but in this taller grass?

In this glade covered with bushes of a year's growth, see how the silvery dust lies on every seared leaf and twig, deposited in such infinite and luxurious forms as by their very variety atone for the absence of color. Observe the tiny tracks of mice around every stem, and the triangular tracks of the rabbit. A pure elastic heaven hangs over all, as if the impurities of the summer sky, refined and shrunk by the chaste winter's cold, had been winnowed from the heavens upon the earth.

Nature confounds her summer distinctions at this season. The heavens seem to be nearer the earth. The elements are less reserved and distinct. Water turns to ice, rain to snow. The day is but a Scandinavian night. The winter is an arctic summer.

How much more living is the life that is in nature, the furred life which still survives the stinging nights, and, from amidst fields and woods covered with frost and snow, sees the sun rise.

"The foodless wilds  
Pour forth their brown inhabitants."

The gray squirrel and rabbit are brisk and playful in the remote glens, even on the morning of the cold Friday. Here is our Lapland and Labrador, and for our Esquimaux and Knistenaux, Dog-ribbed Indians, Novazemblaites, and Spitzbergeners, are there not the ice-cutter and wood-chopper, the fox, musk-rat, and mink?

Still, in the midst of the arctic day, we may trace the summer to its retreats, and sympathize with some contemporary life. Stretched over the brooks, in the midst of the frost-bound meadows, we may observe the submarine cottages of the caddice-worms, the larvae of the Plicipennes. Their small cylindrical cases built around themselves, composed of flags, sticks, grass, and withered leaves, shells, and pebbles, in form and color like the wrecks which strew the bottom, — now drifting along over the pebbly bottom, now whirling in tiny eddies and dashing down steep falls, or sweeping rapidly along with the current, or else swaying to and fro at the end of some grass-blade or root. Anon they will leave their sunken habitations, and, crawling up the stems of plants, or to the surface, like gnats, as perfect insects henceforth, flutter over the surface of the water, or sacrifice their short lives in the flame of our candles at evening. Down yonder little glen the shrubs are drooping under their burden, and the red alder-berries contrast with the white ground. Here are the marks of a myriad feet which have already been abroad. The sun rises as proudly over such a glen, as over the valley of the Seine or the Tiber, and it seems the residence of a pure and self-subsistent valor, such as they never witnessed; which never knew defeat nor fear. Here reign the simplicity and purity of a primitive age, and a health and hope far remote from towns and cities. Standing quite alone, far in the forest, while the wind is shaking down snow from the trees, and leaving the only human tracks behind us, we find our reflections of a richer variety than the life of cities. The chickadee and nuthatch are more inspiring society than statesmen and philosophers, and we shall return to these last, as to more vulgar companions. In this lonely glen, with its brook draining the slopes, its creased ice and crystals of all hues, where the spruces and hemlocks stand up on either side, and the rush and sere wild oats in the rivulet itself, our lives are more serene and worthy to contemplate.

As the day advances, the heat of the sun is reflected by the hill-sides, and we hear a faint but sweet music, where flows the rill released from its fetters, and the icicles are melting on the trees; and the nuthatch and partridge are heard and seen. The south wind melts the snow at noon, and the bare ground appears with its withered grass and leaves, and we are invigorated by the perfume which exhales from it, as by the scent of strong meats.

Let us go into this deserted woodman's hut, and see how he has passed the long winter nights and the short and stormy days. For here man has lived under this south hill-side, and it seems a civilized and public spot. We have such associations as when the traveller stands by the ruins of Palmyra or Hecatompolis. Singing birds and flowers perchance have begun to appear here, for flowers as well as weeds follow in the footsteps of man. These hemlocks whispered over his head, these hickory logs were his fuel, and these pitch-pine roots kindled his fire; yonder fuming rill in the hollow, whose thin and airy vapor still ascends as busily as ever, though he is far off now, was his well. These hemlock boughs, and the straw upon this raised platform, were his bed, and this broken dish held his drink. But he has not been here this season, for the phoebes built their nest upon this shelf last summer. I find some embers left, as if he had but just

gone out, where he baked his pot of beans; and while at evening he smoked his pipe, whose stemless bowl lies in the ashes, chatted with his only companion, if perchance he had any, about the depth of the snow on the morrow, already falling fast and thick without, or disputed whether the last sound was the screech of an owl, or the creak of a bough, or imagination only; and through this broad chimney throat, in the late winter evening, ere he stretched himself upon the straw, he looked up to learn the progress of the storm, and, seeing the bright stars of Cassiopeia's chair shining brightly down upon him, fell contentedly asleep. See how many traces from which we may learn the chopper's history. From this stump we may guess the sharpness of his axe, and, from the slope of the stroke, on which side he stood, and whether he cut down the tree without going round it or changing hands; and, from the flexure of the splinters, we may know which way it fell. This one chip contains inscribed on it the whole history of the wood-chopper and of the world. On this scrap of paper, which held his sugar or salt, perchance, or was the wadding of his gun, sitting on a log in the forest, with what interest we read the tattle of cities, of those larger huts, empty and to let, like this, in High Streets and Broadways. The eaves are dripping on the south side of this simple roof, while the titmouse lisps in the pine, and the genial warmth of the sun around the door is somewhat kind and human.

After two seasons, this rude dwelling does not deform the scene. Already the birds resort to it, to build their nests, and you may track to its door the feet of many quadrupeds. Thus, for a long time, nature overlooks the encroachment and profanity of-man. The wood still cheerfully and unsuspectingly echoes the strokes of the axe that fells it, and while they are few and seldom, they enhance its wildness, and all the elements strive to naturalize the sound.

Now our path begins to ascend gradually to the top of this high hill, from whose precipitous south side we can look over the broad country, of forest and field and river, to the distant snowy mountains. See yonder thin column of smoke curling up through the woods from some invisible farm-house; the standard raised over some rural homestead. There must be a warmer and more genial spot there below, as where we detect the vapor from a spring forming a cloud above the trees. What fine relations are established between the traveller who discovers this airy column from some eminence in the forest, and him who sits below. Up goes the smoke as silently and naturally as the vapor exhales from the leaves, and as busy disposing itself in wreathes as the housewife on the hearth below. It is a hieroglyphic of man's life, and suggests more intimate and important things than the boiling of a pot. Where its fine column rises above the forest, like an ensign, some human life has planted itself, — and such is the beginning of Rome, the establishment of the arts, and the foundation of empires, whether on the prairies of America, or the steppes of Asia.

And now we descend again to the brink of this woodland lake, which lies in a hollow of the hills, as if it were their expressed juice, and that of the leaves, which are annually steeped in it. Without outlet or inlet to the eye, it has still its history, in the lapse of its waves, in the rounded pebbles on its shore, and in the pines which grow down

to its brink. It has not been idle, though sedentary, but, like Abu Musa, teaches that "sitting still at home is the heavenly way; the going out is the way of the world." Yet in its evaporation it travels as far as any. In summer it is the earth's liquid eye; a mirror in the breast of nature. The sins of the wood are washed out in it. See how the woods form an amphitheatre about it, and it is an arena for all the genialness of nature. All trees direct the traveller to its brink, all paths seek it out, birds fly to it, quadrupeds flee to it, and the very ground inclines toward it. It is nature's saloon, where she has sat down to her toilet. Consider her silent economy and tidiness; how the sun comes with his evaporation to sweep the dust from its surface each morning, and a fresh surface is constantly welling up; and annually, after whatever impurities have accumulated herein, its liquid transparency appears again in the spring. In summer a hushed music seems to sweep across its surface. But now a plain sheet of snow conceals it from our eyes, except where the wind has swept the ice bare, and the sere leaves are gliding from side to side, tacking and veering on their tiny voyages. Here is one just keeled up against a pebble on shove, a dry beech-leaf, rocking still, as if it would start again. A skilful engineer, methinks, might project its course since it fell from the parent stem. Here are all the elements for such a calculation. Its present position, the direction of the wind, the level of the pond, and how much more is given. In its scarred edges and veins is its log rolled up.

We fancy ourselves in the interior of a larger house. The surface of the pond is our deal table or sanded floor, and the woods rise abruptly from its edge, like the walls of a cottage. The lines set to catch pickerel through the ice look like a larger culinary preparation, and the men stand about on the white ground like pieces of forest furniture. The actions of these men, at the distance of half a mile over the ice and snow, impress us as when we read the exploits of Alexander in history. They seem not unworthy of the scenery, and as momentous as the conquest of kingdoms.

Again we have wandered through the arches of the wood, until from its skirts we hear the distant booming of ice from yonder bay of the river, as if it were moved by some other and subtler tide than oceans know. To me it has a strange sound of home, thrilling as the voice of one's distant and noble kindred. A mild summer sun shines over forest and lake, and though there is but one green leaf for many rods, yet nature enjoys a serene health. Every sound is fraught with the same mysterious assurance of health, as well now the creaking of the boughs in January, as the soft sough of the wind in July.

When Winter fringes every bough  
With his fantastic wreath,  
And puts the seal of silence now  
Upon the leaves beneath;  
When every stream in its pent-house  
Goes gurgling on its way,  
And in his gallery the mouse  
Nibbleth the meadow hay;

Methinks the summer still is nigh,  
And lurketh underneath,  
As that same meadow-mouse doth lie  
Snug in that last year's heath.

    And if perchance the cicadee  
Lisp a faint note anon,  
The snow is summer's canopy,  
Which she herself put on.

    Fair blossoms deck the cheerful trees,  
And dazzling fruits depend,  
The north wind sighs a summer breeze,  
The nipping frosts to fend,  
    Bringing glad tidings unto me,  
The while I stand all ear,  
Of a serene eternity,  
Which need not winter fear.

    Out on the silent pond straightway  
The restless ice doth crack,  
And pond sprites merry gambols play  
Amid the deafening rack.

    Eager I hasten to the vale,  
As if I heard brave news,  
How nature held high festival,  
Which it were hard to lose.

    I gambol with my neighbor ice,  
And sympathizing quake,  
As each new crack darts in a trice  
Across the gladsome lake.

    One with the cricket in the ground,  
And fagot on the hearth,  
Resounds the rare domestic sound  
Along the forest path.

    Before night we will take a journey on skates along the course of this meandering river, as full of novelty to one who sits by the cottage fire all the winter's day, as if it were over the polar ice, with Captain Parry or Franklin; following the winding of the stream, now flowing amid hills, now spreading out into fair meadows, and forming a myriad coves and bays where the pine and hemlock overarch. The river flows in the rear of the towns, and we see all things from a new and wilder side. The fields and gardens come down to it with a frankness, and freedom from pretension, which they do not wear on the highway. It is the outside and edge of the earth. Our eyes are not offended by violent contrasts. The last rail of the farmer's fence is some swaying willow bough, which still preserves its freshness, and here at length all fences stop, and we no longer

cross any road. We may go far up within the country now by the most retired and level road, never climbing a hill, but by broad levels ascending to the upland meadows. It is a beautiful illustration of the law of obedience, the flow of a river; the path for a sick man, a highway down which an acorn cup may float secure with its freight. Its slight occasional falls, whose precipices would not diversify the landscape, are celebrated by mist and spray, and attract the traveller from far and near. From the remote interior, its current conducts him by broad and easy steps, or by one gentle inclined plane, to the sea. Thus by an early and constant yielding to the inequalities of the ground, it secures itself the easiest passage.

No domain of nature is quite closed to man at all times, and now we draw near to the empire of the fishes. Our feet glide swiftly over unfathomed depths, where in summer our line tempted the pout and perch, and where the stately pickerel lurked in the long corridors formed by the bulrushes. The deep, impenetrable marsh, where the heron waded, and bittern squatted, is made pervious to our swift shoes, as if a thousand railroads had been made into it. With one impulse we are carried to the cabin of the musk-rat, that earliest settler, and see him dart away under the transparent ice, like a furred fish, to his hole in the bank; and we glide rapidly over meadows where lately "the mower whet his scythe," through beds of frozen cranberries mixed with meadow grass. We skate near to where the blackbird, the pewee, and the kingbird hung their nests over the water, and the hornets builded from the maple in the swamp. How many gay warblers following the sun, have radiated from this nest of silver-birch and thistledown. On the swamp's outer edge was hung the supermarine village, where no foot penetrated. In this hollow tree the wood-duck reared her brood, and slid away each day to forage in yonder fen.

In winter, nature is a cabinet of curiosities, full of dried specimens, in their natural order and position. The meadows and forests are a hortus siccus. The leaves and grasses stand perfectly pressed by the air without screw or gum, and the birds' nests are not hung on an artificial twig, but where they builded them. We go about dryshod to inspect the summer's work in the rank swamp, and see what a growth have got the alders, the willows, and the maples; testifying to how many warm suns, and fertilizing dews and showers. See what strides their boughs took in the luxuriant summer, — and anon these dormant buds will carry them onward and upward another span into the heavens.

Occasionally we wade through fields of snow, under whose depths the river is lost for many rods, to appear again to the right or left, where we least expected; still holding on its way underneath, with a faint, stertorous, rumbling sound, as if, like the bear and marmot, it too had hibernated, and we had followed its faint summer-trail to where it earthed itself in snow and ice. At first we should have thought that rivers would be empty and dry in midwinter, or else frozen solid till the spring thawed them; but their volume is not diminished even, for only a superficial cold bridges their surface. The thousand springs which feed the lakes and streams are flowing still. The issues of a few surface springs only are closed, and they go to swell the deep reservoirs. Nature's

wells are below the frost. The summer brooks are not filled with snow-water, nor does the mower quench his thirst with that alone. The streams are swollen when the snow melts in the spring, because nature's work has been delayed, the water being turned into ice and snow, whose particles are less smooth and round, and do not find their level so soon.

Far over the ice, between the hemlock woods and snow-clad hills, stands the pickerel fisher, his lines set in some retired cove, like a Finlander, with his arms thrust into the pouches of his dreadnought; with dull, snowy, fishy thoughts, himself a finless fish, separated a few inches from his race; dumb, erect, and made to be enveloped in clouds and snows, like the pines on shore. In these wild scenes, men stand about in the scenery, or move deliberately and heavily, having sacrificed the sprightliness and vivacity of towns to the dumb sobriety of nature. He does not make the scenery less wild, more than the jays and musk-rats, but stands there as a part of it, as the natives are represented in the voyages of early navigators, at Nootka Sound, and on the Northwest coast, with their furs about them, before they were tempted to loquacity by a scrap of iron. He belongs to the natural family of man, and is planted deeper in nature and has more root than the inhabitants of towns. Go to him, ask what luck, and you will learn that he too is a worshipper of the unseen. Hear with what sincere deference and waving gesture in his tone, he speaks of the lake pickerel, which he has never seen, his primitive and ideal race of pickerel. He is connected with the shore still, as by a fish-line, and yet remembers the season when he took fish through the ice on the pond, while the peas were up in his garden at home.

But now, while we have loitered, the clouds have gathered again, and a few straggling snow-flakes are beginning to descend. Faster and faster they fall, shutting out the distant objects from sight. The snow falls on every wood and field, and no crevice is forgotten; by the river and the pond, on the hill and in the valley. Quadrupeds are confined to their coverts, and the birds sit upon their perches this peaceful hour. There is not so much sound as in fair weather, but silently and gradually every slope, and the gray walls and fences, and the polished ice, and the sere leaves, which were not buried before, are concealed, and the tracks of men and beasts are lost. With so little effort does nature reassert her rule and blot out the traces of men. Hear how Homer has described the same. "The snow-flakes fall thick and fast on a winter's day. The winds are lulled, and the snow falls incessant, covering the tops of the mountains, and the hills, and the plains where the lotus-tree grows, and the cultivated fields, and they are falling by the inlets and shores of the foaming sea, but are silently dissolved by the waves." The snow levels all things, and infolds them deeper in the bosom of nature, as, in the slow summer, vegetation creeps up to the entablature of the temple, and the turrets of the castle, and helps her to prevail over art.

The surly night-wind rustles through the wood, and warns us to retrace our steps, while the sun goes down behind the thickening storm, and birds seek their roosts, and cattle their stalls.

“Drooping the lab’rer ox  
Stands covered o’er with snow, and now demands  
The fruit of all his toil.”

Though winter is represented in the almanac as an old man, facing the wind and sleet, and drawing his cloak about him, we rather think of him as a merry wood-chopper, and warm-blooded youth, as blithe as summer. The unexplored grandeur of the storm keeps up the spirits of the traveller. It does not trifle with us, but has a sweet earnestness. In winter we lead a more inward life. Our hearts are warm and cheery, like cottages under drifts, whose windows and doors are half concealed, but from whose chimneys the smoke cheerfully ascends. The imprisoning drifts increase the sense of comfort which the house affords, and in the coldest days we are content to sit over the hearth and see the sky through the chimney top, enjoying the quiet and serene life that may be had in a warm corner by the chimney side, or feeling our pulse by listening to the low of cattle in the street, or the sound of the flail in distant barns all the long afternoon. No doubt a skilful physician could determine our health by observing how these simple and natural sounds affected us. We enjoy now, not an oriental, but a boreal leisure, around warm stoves and fireplaces, and watch the shadow of motes in the sunbeams.

Sometimes our fate grows too homely and familiarly serious ever to be cruel. Consider how for three months the human destiny is wrapped in furs. The good Hebrew Revelation takes no cognizance of all this cheerful snow. Is there no religion for the temperate and frigid zones? We know of no scripture which records the pure benignity of the gods on a New England winter night. Their praises have never been sung, only their wrath deprecated. The best scripture, after all, records but a meagre faith. Its saints live reserved and austere. Let a brave devout man spend the year in the woods of Maine or Labrador, and see if the Hebrew Scriptures speak adequately to his condition and experience, from the setting in of winter to the breaking up of the ice.

Now commences the long winter evening around the farmer’s hearth, when the thoughts of the indwellers travel far abroad, and men are by nature and necessity charitable and liberal to all creatures. Now is the happy resistance to cold, when the farmer reaps his reward, and thinks of his preparedness for winter, and, through the glittering panes, sees with equanimity “the mansion of the northern bear,” for now the storm is over,

“The full ethereal round,  
Infinite worlds disclosing to the view,  
Shines out intensely keen; and all one cope  
Of starry glitter glows from pole to pole.”

# THE LANDLORD

Under the one word, house, are included the school-house, the alms-house, the jail, the tavern, the dwelling-house; and the meanest shed or cave in which men live contains the elements of all these. But nowhere on the earth stands the entire and perfect house. The Parthenon, St. Peter's, the Gothic minster, the palace, the hovel, are but imperfect executions of an imperfect idea. Who would dwell in them? Perhaps to the eye of the gods, the cottage is more holy than the Parthenon, for they look down with no especial favor upon the shrines formally dedicated to them, and that should be the most sacred roof which shelters most of humanity. Surely, then, the gods who are most interested in the human race preside over the Tavern, where especially men congregate. Methinks I see the thousand shrines erected to Hospitality shining afar in all countries, as well Mahometan and Jewish, as Christian, khans, and caravansaries, and inns, whither all pilgrims without distinction resort.

Likewise we look in vain, east or west over the earth, to find the perfect man; but each represents only some particular excellence. The Landlord is a man of more open and general sympathies, who possesses a spirit of hospitality which is its own reward, and feeds and shelters men from pure love of the creatures. To be sure, this profession is as often filled by imperfect characters, and such as have sought it from unworthy motives, as any other, but so much the more should we prize the true and honest Landlord when we meet with him.

Who has not imagined to himself a country inn, where the traveller shall really feel in, and at home, and at his public-house, who was before at his private house; whose host is indeed a host, and a lord of the land, a self-appointed brother of his race; called to his place, beside, by all the winds of heaven and his good genius, as truly as the preacher is called to preach; a man of such universal sympathies, and so broad and genial a human nature, that he would fain sacrifice the tender but narrow ties of private friendship, to a broad, sunshiny, fair-weather-and-foul friendship for his race; who loves men, not as a philosopher, with philanthropy, nor as an overseer of the poor, with charity, but by a necessity of his nature, as he loves dogs and horses; and standing at his open door from morning till night, would fain see more and more of them come along the highway, and is never satiated. To him the sun and moon are but travellers, the one by day and the other by night; and they too patronize his house. To his imagination all things travel save his sign-post and himself; and though you may be his neighbor for years, he will show you only the civilities of the road. But on the other hand, while nations and individuals are alike selfish and exclusive, he loves all

men equally; and if he treats his nearest neighbor as a stranger, since he has invited all nations to share his hospitality, the farthest travelled is in some measure kindred to him who takes him into the bosom of his family.

He keeps a house of entertainment at the sign of the Black Horse or the Spread Eagle, and is known far and wide, and his fame travels with increasing radius every year. All the neighborhood is in his interest, and if the traveller ask how far to a tavern, he receives some such answer as this: "Well, sir, there's a house about three miles from here, where they haven't taken down their sign yet; but it's only ten miles to Slocum's, and that's a capital house, both for man and beast." At three miles he passes a cheerless barrack, standing desolate behind its sign-post, neither public nor private, and has glimpses of a discontented couple who have mistaken their calling. At ten miles see where the Tavern stands, — really an entertaining prospect, — so public and inviting that only the rain and snow do not enter. It is no gay pavilion, made of bright stuffs, and furnished with nuts and gingerbread, but as plain and sincere as a caravansary; located in no Tarrytown, where you receive only the civilities of commerce, but far in the fields it exercises a primitive hospitality, amid the fresh scent of new hay and raspberries, if it be summer time, and the tinkling of cow-bells from invisible pastures; for it is a land flowing with milk and honey, and the newest milk courses in a broad, deep stream across the premises.

In these retired places the tavern is first of all a house — elsewhere, last of all, or never, — and warms and shelters its inhabitants. It is as simple and sincere in its essentials as the caves in which the first men dwelt, but it is also as open and public. The traveller steps across the threshold, and lo! he too is master, for he only can be called proprietor of the house here who behaves with most propriety in it. The Landlord stands clear back in nature, to my imagination, with his axe and spade felling trees and raising potatoes with the vigor of a pioneer; with Promethean energy making nature yield her increase to supply the wants of so many; and he is not so exhausted, nor of so short a stride, but that he comes forward even to the highway to this wide hospitality and publicity. Surely, he has solved some of the problems of life. He comes in at his backdoor, holding a log fresh cut for the hearth upon his shoulder with one hand, while he greets the newly arrived traveller with the other.

Here at length we have free range, as not in palaces, nor cottages, nor temples, and intrude nowhere. All the secrets of housekeeping are exhibited to the eyes of men, above and below, before and behind. This is the necessary way to live, men have confessed, in these days, and shall he skulk and hide? And why should we have any serious disgust at kitchens? Perhaps they are the holiest recess of the house. There is the hearth, after all, — and the settle, and the fagots, and the kettle, and the crickets. We have pleasant reminiscences of these. They are the heart, the left ventricle, the very vital part of the house. Here the real and sincere life which we meet in the streets was actually fed and sheltered. Here burns the taper that cheers the lonely traveller by night, and from this hearth ascend the smokes that populate the valley to his eyes by day. On the whole, a man may not be so little ashamed of any other part of his house, for here is his

sincerity and earnest, at least. It may not be here that the besoms are plied most, — it is not here that they need to be, for dust will not settle on the kitchen floor more than in nature.

Hence it will not do for the Landlord to possess too fine a nature. He must have health above the common accidents of life, subject to no modern fashionable diseases; but no taste, rather a vast relish or appetite. His sentiments on all subjects will be delivered as freely as the wind blows; there is nothing private or individual in them, though still original, but they are public, and of the hue of the heavens over his house, — a certain out-of-door obviousness and transparency not to be disputed. What he does, his manners are not to be complained of, though abstractly offensive, for it is what man does, and in him the race is exhibited. When he eats, he is liver and bowels, and the whole digestive apparatus to the company, and so all admit the thing is done. He must have no idiosyncrasies, no particular bents or tendencies to this or that, but a general, uniform, and healthy development, such as his portly person indicates, offering himself equally on all sides to men. He is not one of your peaked and inhospitable men of genius, with particular tastes, but, as we said before, has one uniform relish, and taste which never aspires higher than a tavern-sign, or the cut of a weather-cock. The man of genius, like a dog with a bone, or the slave who has swallowed a diamond, or a patient with the gravel, sits afar and retired, off the road, hangs out no sign of refreshment for man and beast, but says, by all possible hints and signs, I wish to be alone — good-by — farewell. But the landlord can afford to live without privacy. He entertains no private thought, he cherishes no solitary hour, no Sabbath day, but thinks, — enough to assert the dignity of reason, — and talks, and reads the newspaper. What he does not tell to one traveller, he tells to another. He never wants to be alone, but sleeps, wakes, eats, drinks, sociably, still remembering his race. He walks abroad through the thoughts of men, and the Iliad and Shakspeare are tame to him, who hears the rude but homely incidents of the road from every traveller. The mail might drive through his brain in the midst of his most lonely soliloquy, without disturbing his equanimity, provided it brought plenty of news and passengers. There can be no pro-fanity where there is no fane behind, and the whole world may see quite round him. Perchance his lines have fallen to him in dustier places, and he has heroically sat down where two roads meet, or at the Four Corners, or the Five Points, and his life is sublimely trivial for the good of men. The dust of travel blows ever in his eyes, and they preserve their clear, complacent look. The hourlies and half-hourlies, the dailies and weeklies, whirl on well-worn tracks, round and round his house, as if it were the goal in the stadium, and still he sits within in unruffled serenity, with no show of retreat. His neighbor dwells timidly behind a screen of poplars and willows, and a fence with sheaves of spears at regular intervals, or defended against the tender palms of visitors by sharp spikes, — but the traveller's wheels rattle over the door-step of the tavern, and he cracks his whip in the entry. He is truly glad to see you, and sincere as the bull's-eye over his door. The traveller seeks to find, wherever he goes, some one who will stand in this broad and catholic relation to him, who will be an

inhabitant of the land to him a stranger, and represent its human nature, as the rock stands for its inanimate nature; and this is he. As his crib furnishes provender for the traveller's horse, and his larder provisions for his appetite, so his conversation furnishes the necessary aliment to his spirits. He knows very well what a man wants, for he is a man himself, and as it were the farthest travelled, though he has never stirred from his door. He understands his needs and destiny. He would be well fed and lodged, there can be no doubt, and have the transient sympathy of a cheerful companion, and of a heart which always prophesies fair weather. And after all the greatest men, even, want much more the sympathy which every honest fellow can give, than that which the great only can impart. If he is not the most upright, let us allow him this praise, that he is the most downright of men. He has a hand to shake and to be shaken, and takes a sturdy and unquestionable interest in you, as if he had assumed the care of you, but if you will break your neck, he will even give you the best advice as to the method.

The great poets have not been ungrateful to their landlords. Mine host of the Tabard Inn, in the Prologue to the *Canterbury Tales*, was an honor to his profession: —

“A semely man our Hoste was, with alle,  
For to han been an marshal in an halle.  
A large man he was, with eyen stepe;  
A fairer burgeis is ther nou in Chepe:  
Bold of his speche, and wise, and well ytaught,  
And of manhood him lacked righte naught.  
Eke thereto, was he right a mery man,  
And after souper plaien he began,  
And spake of mirthe amonges other thinges,  
Whan that we hadden made our reckoninges.”

He is the true house-band, and centre of the company — of greater fellowship and practical social talent than any. He it is that proposes that each shall tell a tale to while away the time to Canterbury, and leads them himself, and concludes with his own tale: —

“Now, by my fader's soule that is ded,  
But ye be mery, smiteth of my hed:  
Hold up your hondes withouten more speche.”

If we do not look up to the Landlord, we look round for him on all emergencies, for he is a man of infinite experience, who unites hands with wit. He is a more public character than a statesman, — a publican, and not consequently a sinner; and surely, he, if any, should be exempted from taxation and military duty.

Talking with our host is next best and instructive to talking with one's self. It is a more conscious soliloquy; as it were, to speak generally, and try what we would say provided we had an audience. He has indulgent and open ears, and does not require petty and particular statements. “Heigho!” exclaims the traveller. Them's my sentiments, thinks mine host, and stands ready for what may come next, expressing

the purest sympathy by his demeanor. "Hot as blazes!" says the other,— "Hard weather, sir, — not much stirring nowadays," says he. He is wiser than to contradict his guest in any case; he lets him go on, he lets him travel.

The latest sitter leaves him standing far in the night, prepared to live right on, while suns rise and set, and his "good night" has as brisk a sound as his "good morning;" and the earliest riser finds him tasting his liquors in the bar ere flies begin to buzz, with a countenance fresh as the morning star over the sanded floor, — and not as one who had watched all night for travellers. And yet, if beds be the subject of conversation, it will appear that no man has been a sounder sleeper in his time.

Finally, as for his moral character, we do not hesitate to say, that he has no grain of vice or meanness in him, but represents just that degree of virtue which all men relish without being obliged to respect. He is a good man, as his bitters are good, — an unquestionable goodness. Not what is called a good man, — good to be considered, as a work of art in galleries and museums, — but a good fellow, that is, good to be associated with. Who ever thought of the religion of an innkeeper — whether he was joined to the Church, partook of the sacrament, said his prayers, feared God, or the like? No doubt he has had his experiences, has felt a change, and is a firm believer in the perseverance of the saints. In this last, we suspect, does the peculiarity of his religion consist. But he keeps an inn, and not a conscience. How many fragrant charities and sincere social virtues are implied in this, daily offering of himself to the public. He cherishes good will to all, and gives the wayfarer as good and honest advice to direct him on his road as the priest.

To conclude, the tavern will compare favorably with the church. The church is the place where prayers and sermons are delivered, but the tavern is where they are to take effect, and if the former are good, the latter cannot be bad.

# PARADISE (TO BE) REGAINED

We learn that Mr. Etzler is a native of Germany, and originally published his book in Pennsylvania, ten or twelve years ago; and now a second English edition, from the original American one, is demanded by his readers across the water, owing, we suppose, to the recent spread of Fourier's doctrines. It is one of the signs of the times. We confess that we have risen from reading this book with enlarged ideas, and grander conceptions of our duties in this world. It did expand us a little. It is worth attending to, if only that it entertains large questions. Consider what Mr. Etzler proposes:

"Fellow-men! I promise to show the means of creating a paradise within ten years, where everything desirable for human life may be had by every man in superabundance, without labor, and without pay; where the whole face of nature shall be changed into the most beautiful forms, and man may live in the most magnificent palaces, in all imaginable refinements of luxury, and in the most delightful gardens; where he may accomplish, without labor, in one year, more than hitherto could be done in thousands of years; may level mountains, sink valleys, create lakes, drain lakes and swamps, and intersect the land everywhere with beautiful canals, and roads for transporting heavy loads of many thousand tons, and for traveling one thousand miles in twenty-four hours; may cover the ocean with floating islands movable in any desired direction with immense power and celerity, in perfect security, and with all comforts and luxuries, bearing gardens and palaces, with thousands of families, and provided with rivulets of sweet water; may explore the interior of the globe, and travel from pole to pole in a fortnight; provide himself with means, unheard of yet, for increasing his knowledge of the world, and so his intelligence; lead a life of continual happiness, of enjoyments yet unknown; free himself from almost all the evils that afflict mankind, except death, and even put death far beyond the common period of human life, and finally render it less afflicting. Mankind may thus live in and enjoy a new world, far superior to the present, and raise themselves far higher in the scale of being."

It would seem from this and various indications beside, that there is a transcendentalism in mechanics as well as in ethics. While the whole field of the one reformer lies beyond the boundaries of space, the other is pushing his schemes for the elevation of the race to its utmost limits. While one scours the heavens, the other sweeps the earth. One says he will reform himself, and then nature and circumstances will be right. Let us not obstruct ourselves, for that is the greatest friction. It is of little importance though a cloud obstruct the view of the astronomer compared with his own blindness. The other will reform nature and circumstances, and then man will be right.

Talk no more vaguely, says he, of reforming the world — I will reform the globe itself. What matters it whether I remove this humor out of my flesh, or this pestilent humor from the fleshy part of the globe? Nay, is not the latter the more generous course? At present the globe goes with a shattered constitution in its orbit. Has it not asthma, and ague, and fever, and dropsy, and flatulence, and pleurisy, and is it not afflicted with vermin? Has it not its healthful laws counteracted, and its vital energy which will yet redeem it? No doubt the simple powers of nature, properly directed by man, would make it healthy and a paradise; as the laws of man's own constitution but wait to be obeyed, to restore him to health and happiness. Our panaceas cure but few ills, our general hospitals are private and exclusive. We must set up another Hygeian than is now worshipped. Do not the quacks even direct small doses for children, larger for adults, and larger still for oxen and horses? Let us remember that we are to prescribe for the globe itself.

This fair homestead has fallen to us, and how little have we done to improve it, how little have we cleared and hedged and ditched! We are too inclined to go hence to a "better land," without lifting a finger, as our farmers are moving to the Ohio soil; but would it not be more heroic and faithful to till and redeem this New England soil of the world? The still youthful energies of the globe have only to be directed in their proper channel. Every gazette brings accounts of the untutored freaks of the wind, — shipwrecks and hurricanes which the mariner and planter accept as special or general providences; but they touch our consciences, they remind us of our sins. Another deluge would disgrace mankind. We confess we never had much respect for that antediluvian race. A thoroughbred business man cannot enter heartily upon the business of life without first looking into his accounts. How many things are now at loose ends! Who knows which way the wind will blow to-morrow? Let us not succumb to nature. We will marshal the clouds and restrain tempests; we will bottle up pestilent exhalations; we will probe for earthquakes, grub them up, and give vent to the dangerous gas; we will disembowel the volcano, and extract its poison, take its seed out. We will wash water, and warm fire, and cool ice, and underprop the earth. We will teach birds to fly, and fishes to swim, and ruminants to chew the cud. It is time we had looked into these things.

And it becomes the moralist, too, to inquire what man might do to improve and beautify the system; what to make the stars shine more brightly, the sun more cheery and joyous, the moon more placid and content. Could he not heighten the tints of flowers and the melody of birds? Does he perform his duty to the inferior races? Should he not be a god to them? What is the part of magnanimity to the whale and the beaver? Should we not fear to exchange places with them for a day, lest by their behavior they should shame us? Might we not treat with magnanimity the shark and the tiger, not descend to meet there on their own level, with spears of shark's teeth and bucklers of tiger's skin? We slander the hyena; man is the fiercest and cruelest animal. Ah! he is of little faith; even the erring comets and meteors would thank him, and return his kindness in their kind.

How meanly and grossly do we deal with nature! Could we not have a less gross labor? What else do these fine inventions suggest, — magnetism, the daguerreotype, electricity? Can we not do more than cut and trim the forest — can we not assist in its interior economy, in the circulation of the sap? Now we work superficially and violently. We do not suspect how much might be done to improve our relation to animated nature even; what kindness and refined courtesies there might be.

There are certain pursuits which, if not wholly poetic and true, do at least suggest a nobler and finer relation to nature than we know. The keeping of bees, for instance, is a very slight interference. It is like directing the sunbeams. All nations, from the remotest antiquity, have thus fingered nature. There are Hymettus and Hybla, and how many bee-renowned spots beside? There is nothing gross in the idea of these little herds, — their hum like the faintest low of kine in the meads. A pleasant reviewer has lately reminded us that in some places they are led out to pasture where the flowers are most abundant. “Columella tells us,” says he, “that the inhabitants of Arabia sent their hives into Attica to benefit by the later-blowing flowers.” Annually are the hives, in immense pyramids, carried up the Nile in boats, and suffered to float slowly down the stream by night, resting by day, as the flowers put forth along the banks; and they determine the richness of any locality, and so the profitableness of delay, by the sinking of the boat in the water. We are told, by the same reviewer, of a man in Germany, whose bees yielded more honey than those of his neighbors, with no apparent advantage; but at length he informed them, that he had turned his hives one degree more to the east, and so his bees, having two hours the start in the morning, got the first sip of honey. True, there is treachery and selfishness behind all this, but these things suggest to the poetic mind what might be done.

Many examples there are of a grosser interference, yet not without their apology. We saw last summer, on the side of a mountain, a dog employed to churn for a farmer’s family, traveling upon a horizontal wheel, and though he had sore eyes, an alarming cough, and withal a demure aspect, yet their bread did get buttered for all that. Undoubtedly, in the most brilliant successes, the first rank is always sacrificed. Much useless traveling of horses, in extenso, has of late years been improved for man’s behoof, only two forces being taken advantage of, — the gravity of the horse, which is the centripetal, and his centrifugal inclination to go ahead. Only these two elements in the calculation. And is not the creature’s whole economy better economized thus? Are not all finite beings better pleased with motions relative than absolute? And what is the great globe itself but such a wheel, — a larger tread-mill, — so that our horse’s freest steps over prairies are oftentimes balked and rendered of no avail by the earth’s motion on its axis? But here he is the central agent and motive-power; and, for variety of scenery, being provided with a window in front, do not the ever-varying activity and fluctuating energy of the creature himself work the effect of the most varied scenery on a country road? It must be confessed that horses at present work too exclusively for men, rarely men for horses; and the brute degenerates in man’s society.

It will be seen that we contemplate a time when man's will shall be law to the physical world, and he shall no longer be deterred by such abstractions as time and space, height and depth, weight and hardness, but shall indeed be the lord of creation. "Well," says the faithless reader, "life is short, but art is long; where is the power that will effect all these changes?" This it is the very object of Mr. Etzler's volume to show. At present, he would merely remind us that there are innumerable and immeasurable powers already existing in nature, unimproved on a large scale, or for generous and universal ends, amply sufficient for these purposes. He would only indicate their existence, as a surveyor makes known the existence of a water-power on any stream; but for their application he refers us to a sequel to this book, called the "Mechanical System." A few of the most obvious and familiar of these powers are the Wind, the Tide, the Waves, the Sunshine. Let us consider their value.

First, there is the power of the Wind, constantly exerted over tire globe. It appears from observation of a sailing-vessel, and from scientific tables, that the average power of the wind is equal to that of one horse for every one hundred square feet. "We know," says our author —

"that ships of the first class carry sails two hundred feet high; we may, therefore, equally, on land, oppose to the wind surfaces of the same height. Imagine a line of such surfaces one mile, or about 5,000 feet, long; they would then contain 1,000,000 square feet. Let these surfaces intersect the direction of the wind at right angles, by some contrivance, and receive, consequently, its full power at al times. Its average power being equal to one horse for every 100 square feet, the total power would be equal to 1,000,000 divided by 100, or 10,000 horses' power. Allowing the power of one horse to equal that of ten men, the power of 10,000 horses is equal to 100,000 men. But as men cannot work uninterruptedly, but want about half the time for sleep and repose, the same power would be equal to 200,000 men. ... We are not limited to the height of 200 feet; we might extend, if required, the application of this power to the height of the clouds, by means of kites."

But we will have one such fence for every square mile of the globe's surface, for, as the wind usually strikes the earth at an angle of more than two degrees, which is evident from observing its effect on the high sea, it admits of even a closer approach. As the surface of the globe contains about 200,000,000 square miles, the whole power of the wind on these surfaces would equal 40,000,000,000,000 men's power, and "would perform 80,000 times as much work as all the men on earth could effect with their nerves."

If it should be objected that this computation includes the surface of the ocean and uninhabitable regions of the earth, where this power could not be applied for our purposes, Mr. Etzler is quick with his reply — "But, you will recollect," says he, "that I have promised to show the means for rendering the ocean as inhabitable as the most fruitful dry land; and I do not exclude even the polar regions."

The reader will observe that our author uses the fence only as a convenient formula for expressing the power of the wind, and does not consider it a necessary method

of its application. We do not attach much value to this statement of the comparative power of the wind and horse, for no common ground is mentioned on which they can be compared. Undoubtedly, each is incomparably excellent in its way, and every general comparison made for such practical purposes as are contemplated, which gives a preference to the one, must be made with some unfairness to the other. The scientific tables are, for the most part, true only in a tabular sense. We suspect that a loaded wagon, with a light sail, ten feet square, would not have been blown so far by the end of the year, under equal circumstances, as a common racer or dray horse would have drawn it. And how many crazy structures on our globe's surface, of the same dimensions, would wait for dry-rot if the traces of one horse were hitched to them, even to their windward side? Plainly this is not the principle of comparison. But even the steady and constant force of the horse may be rated as equal to his weight at least. Yet we should prefer to let the zephyrs and gales bear, with all their weight, upon our fences, than that Dobbin, with feet braced, should lean ominously against them for a season.

Nevertheless, here is an almost incalculable power at our disposal, yet how trifling the use we make of it! It only serves to turn a few mills, blow a few vessels across the ocean, and a few trivial ends besides. What a poor compliment do we pay to our indefatigable and energetic servant!

“If you ask, perhaps, why this power is not used, if the statement be true, I have to ask in return, why is the power of steam so lately come to application? so many millions of men boiled water every day for many thousand years; they must have frequently seen that boiling water, in tightly closed pots or kettles, would lift the cover or burst the vessel with great violence. The power of steam was, therefore, as commonly known down to the least kitchen or wash-woman, as the power of wind; but close observation and reflection were bestowed neither on the one nor the other.”

Men having discovered the power of falling water, which, after all, is comparatively slight, how eagerly do they seek out and improve these privileges! Let a difference of but a few feet in level be discovered on some stream near a populous town, some slight occasion for gravity to act, and the whole economy of the neighborhood is changed at once. Men do indeed speculate about and with this power as if it were the only privilege. But meanwhile this aerial stream is falling from far greater heights with more constant flow, never shrunk by drought, offering mill-sites wherever the wind blows; a Niagara in the air, with no Canada side; — only the application is hard.

There are the powers, too, of the Tide and Waves, constantly ebbing and flowing, lapsing and relapsing, but they serve man in but few ways. They turn a few tide mills, and perform a few other insignificant and accidental services only. We all perceive the effect of the tide, how imperceptibly it creeps up into our harbors and rivers, and raises the heaviest navies as easily as the lightest chip. Everything that floats must yield to it. But man, slow to take nature's constant hint of assistance, makes slight and irregular use of this power, in careening ships and getting them afloat when aground.

The following is Mr. Etzler' calculation on this head: To form a conception of the power which the tide affords, let us imagine a surface of 100 miles square, or 10,000 square miles, where the tide rises and sinks, on an average, 10 feet; how many men would it require to empty a basin of 10,000 square miles area, and 10 feet deep, filled with sea-water, in  $6\frac{1}{4}$  hours and fill it again in the same time? As one man can raise 8 cubic feet of sea-water per minute, and in  $6\frac{1}{4}$  hours 3,000, it would take 1,200,000,000 men, or as they could work only half the time, 2,400,000,000, to raise 3,000,000,000,000 cubic feet, or the whole quantity required in the given time.

This power may be applied in various ways. A large body, of the heaviest materials that will float, may first be raised by it, and being attached to the end of a balance reaching from the land, or from a stationary support fastened to the bottom, when the tide falls the whole weight will be brought to bear upon the end of the balance. Also, when the tide rises, it may be made to exert a nearly equal force in the opposite direction. It can be employed wherever a point d'appui can be obtained.

"However, the application of the tide being by establishments fixed on the ground, it is natural to begin with them near the shores in shallow water, and upon sands, which may be extended gradually further into the sea. The shores of the continent, islands, and sands, being generally surrounded by shallow water, not exceeding from 50 to 100 fathoms in depth, for 20, 50, or 100 miles and upward. The coasts of North America, with their extensive sand-banks, islands, and rocks, may easily afford, for this purpose, a ground about 3,000 miles long, and, on average, 100 miles broad, or 300,000 square miles, which, with a power of 240,000 men per square mile, as stated, at 10 feet tide, will be equal to 72,000 millions of men, or for every mile of coast, a power of 24,000,000 men."

"Rafts, of any extent, fastened on the ground of the sea, along the shore, and stretching far into the sea, may be covered with fertile soil, bearing vegetables and trees, of every description, the finest gardens, equal to those the firm land may admit of, and buildings and machineries, which may operate, not only on the sea, where they are, but which also, by means of mechanical connections, may extend their operations for many miles into the continent. (Etzler's Mechanical System, page 24.) Thus this power may cultivate the artificial soil for many miles upon the surface of the sea, near the shores, and, for several miles, the dry land, along the shore, in the most superior manner imaginable; it may build cities along the shore, consisting of the most magnificent palaces, every one surrounded by gardens and the most delightful sceneries; it may level the hills and unevennesses, or raise eminences for enjoying open prospect into the country and upon the sea; it may cover the barren shore with fertile soil, and beautify the same in various ways; it may clear the sea of shallows, and make easy the approach to the land, not merely of vessels, but of large floating islands, which may come from, and go to distant parts of the world, islands that have every commodity and security for their inhabitants which the firm land affords."

"Thus may a power, derived from the gravity of the moon and the ocean, hitherto but the objects of idle curiosity to the studious man, be made eminently subservient

for creating the most delightful abodes along the coasts, where men may enjoy at the same time all the advantages of sea and dry land; the coasts may hereafter be continuous paradisiacal skirts between land and sea, everywhere crowded with the densest population. The shores and the sea along them will be no more as raw nature presents them now, but everywhere of easy and charming access, not even molested by the roar of waves, shaped as it may suit the purposes of their inhabitants; the sea will be cleared of every obstruction to free passage every-where, and its productions in fishes, etc., will be gathered in large, appropriate receptacles, to present them to the inhabitants of the shores and of the sea.”

Verily, the land would wear a busy aspect at the spring and neap tide, and these island ships, these terræ infirmæ, which realize the fables of antiquity, affect our imagination. We have often thought that the fittest locality for a human dwelling was on the edge of the land, that there the constant lesson and impression of the sea might sink deep into the life and character of the landsman, and perhaps impart a marine tint to his imagination. It is a noble word, that mariner — one who is conversant with the sea. There should be more of what it signifies in each of us. It is a worthy country to belong to — we look to see him not disgrace it. Perhaps we should be equally mariners and terreners, and even our Green Mountains need some of that sea-green to be mixed with them.

The computation of the power of the waves is less satisfactory. While only the average power of the wind and the average height of the tide were taken before, now the extreme height of the waves is used, for they are made to rise ten feet above the level of the sea, to which, adding ten more for depression, we have twenty feet, or the extreme height of a wave. Indeed, the power of the waves, which is produced by the wind blowing obliquely and at disadvantage upon the water, is made to be, not only three thousand times greater than that of the tide, but one hundred times greater than that of the wind itself, meeting its object at right angles. Moreover, this power is measured by the area of the vessel, and not by its length mainly, and it seems to be forgotten that the motion of the waves is chiefly undulatory, and exerts a power only within the limits of a vibration, else the very continents, with their extensive coasts, would soon be set adrift.

Finally, there is the power to be derived from sunshine, by the principle on which Archimedes contrived his burning-mirrors, a multiplication of mirrors reflecting the rays of the sun upon the same spot, till the requisite degree of heat is obtained. The principal application of this power will be to the boiling of water and production of steam.

“How to create rivulets of sweet and wholesome water, on floating islands, in the midst of the ocean, will be no riddle now. Sea-water changed into steam, will distil into sweet water, leaving the salt on the bottom. Thus the steam engines on floating islands, for their propulsion and other mechanical purposes, will serve, at the same time, for the distillery of sweet water, which, collected in basins, may be led through channels over the island, while, where required, it may be refrigerated by artificial means, and

changed into cool water, surpassing, in salubrity, the best spring water, because nature hardly ever distils water so purely, and without admixture of less wholesome matter.”

So much for these few and more obvious powers, already used to a trifling extent. But there are innumerable others in nature, not described nor discovered. These, however, will do for the present. This would be to make the sun and the moon equally our satellites. For, as the moon is the cause of the tides, and the sun the cause of the wind, which, in turn, is the cause of the waves, all the work of this planet would be performed by these far influences.

“But as these powers are very irregular and subject to interruptions; the next object is to show how they may be converted into powers that operate continually and uniformly for ever, until the machinery be worn out, or, in other words, into perpetual motions” ... “Hitherto the power of the wind has been applied immediately upon the machinery for use, and we have had to wait the chances of the wind’s blowing; while the operation was stopped as soon as the wind ceased to blow. But the manner, which I shall state hereafter, of applying this power, is to make it operate only for collecting or storing up power, and then to take out of this store, at any time, as much as may be wanted for final operation upon the machines. The power stored up is to react as required, and may do so long after the original power of the wind has ceased. And though the wind should cease for intervals of many months, we may have by the same power a uniform perpetual motion in a very simple way.”

“The weight of a clock being wound up gives us an image of reaction. The sinking of this weight is the reaction of winding it up. It is not necessary to wait till it has run down before we wind up the weight, but it may be wound up at any time, partly or totally; and if done always before the weight reaches the bottom, the clock will be going perpetually. In a similar, though not in the same way, we may cause a reaction on a larger scale. We may raise, for instance, water by the immediate application of wind or steam to a pond upon some eminence, out of which, through an outlet, it may fall upon some wheel or other contrivance for setting machinery a going. Thus we may store up water in some eminent pond, and take out of this store, at any time, as much water through the outlet as we want to employ, by which means the original power may react for many days after it has ceased.” ... “Such reservoirs of moderate elevation or size need not be made artificially, but will be found made by nature very frequently, requiring but little aid for their completion. They require no regularity of form. Any valley, with lower grounds in its vicinity, would answer the purpose. Small crevices may be filled up. Such places may be eligible for the beginning of enterprises of this kind.”

The greater the height, of course, the less water required. But suppose a level and dry country; then hill and valley, and “eminent pond,” are to be constructed by main force; or, if the springs are unusually low, then dirt and stones may be used, and the disadvantage arising from friction will be counterbalanced by their greater gravity. Nor shall a single rood of dry land be sunk in such artificial ponds as may be wanted, but

their surfaces “may be covered with rafts decked with fertile earth, and all kinds of vegetables which may grow there as well as anywhere else.”

And, finally, by the use of thick envelopes retaining the heat, and other contrivances, “the power of steam caused by sunshine may react at will, and thus be rendered perpetual, no matter how often or how long the sunshine may be interrupted. (Etzler’s Mechanical System).”

Here is power enough, one would think, to accomplish somewhat. These are the powers below. Oh ye millwrights, ye engineers, ye operatives and speculators of every class, never again complain of a want of power; it is the grossest form of infidelity. The question is, not how we shall execute, but what. Let us not use in a niggardly manner what is thus generously offered.

Consider what revolutions are to be effected in agriculture. First, in the new country a machine is to move along, taking out trees and stones to any required depth, and piling them up in convenient heaps; then the same machine, “with a little alteration,” is to plane the ground perfectly, till there shall be no hills nor valleys, making the requisite canals, ditches, and roads as it goes along. The same machine, “with some other little alterations,” is then to sift the ground thoroughly, supply fertile soil from other places if wanted, and plant it; and finally the same machine, “with a little addition,” is to reap and gather in the crop, thresh and grind it, or press it to oil, or prepare it any way for final use. For the description of these machines we are referred to “Etzler’s Mechanical System, pages 11 to 27.” We should be pleased to see that “Mechanical System,” though we have not been able to ascertain whether it has been published, or only exists as yet in the design of the author. We have great faith in it. But we cannot stop for applications now.

“Any wilderness, even the most hideous and sterile, may be converted into the most fertile and delightful gardens. The most dismal swamps may be cleared of all their spontaneous growth, filled up and levelled, and intersected by canals, ditches and aqueducts, for draining them entirely. The soil, if required, may be meliorated, by covering or mixing it with rich soil taken from distant places, and the same be moulderred to fine dust, levelled, sifted from all roots, weeds and stones, and sowed and planted in the most beautiful order and symmetry, with fruit trees and vegetables of every kind that may stand the climate.”

New facilities for transportation and locomotion are to be adopted:

“Large and commodious vehicles, for carrying many thousand tons, running over peculiarly adapted level roads, at the rate of forty miles per hour, or one thousand miles per day, may transport men and things, small houses, and whatever may serve for comfort and ease, by land. Floating islands, constructed of logs, or of wooden-stuff prepared in a similar manner, as is to be done with stone, and of live trees, which may be reared so as to interlace one another, and strengthen the whole, may be covered with gardens and palaces, and propelled by powerful engines, so as to run at an equal rate though seas and oceans. Thus, man may move, with the celerity of a bird’s flight, in terrestrial paradises, from one climate to another, and see the world in all its variety,

exchanging, with distant nations, the surplus of productions. The journey from one pole to another may be performed in a fortnight; the visit to a transmarine country in a week or two; or a journey round the world in one or two months by land and water. And why pass a dreary winter every year while there is yet room enough on the globe where nature is blessed with a perpetual summer, and with a far greater variety and luxuriance of vegetation? More than one-half the surface of the globe has no winter. Men will have it in their power to remove and prevent all bad influences of climate, and to enjoy, perpetually, only that temperature which suits their constitution and feeling best.”

Who knows but by accumulating the power until the end of the present century, using meanwhile only the smallest allowance, reserving all that blows, all that shines, all that ebbs and flows, all that dashes, we may have got such a reserved accumulated power as to run the earth off its track into a new orbit, some summer, and so change the tedious vicissitude of the seasons? Or, perchance, coming generations will not abide the dissolution of the globe, but, availing themselves of future inventions in aerial locomotion, and the navigation of space, the entire race may migrate from the earth, to settle some vacant and more western planet, it may be still healthy, perchance unearthly, not composed of dirt and stones, whose primary strata only are strewn, and where no weeds are sown. It took but little art, a simple application of natural laws, a canoe, a paddle, and a sail of matting, to people the isles of the Pacific, and a little more will people the shining isles of space. Do we not see in the firmament the lights carried along the shore by night, as Columbus did? Let us not despair nor mutiny.

“The dwellings also ought to be very different from what is known, if the full benefit of our means is to be enjoyed. They are to be of a structure for which we have no name yet. They are to be neither palaces, nor temples, nor cities, but a combination of all, superior to whatever is known. Earth may be baked into bricks, or even vitrified stone by heat, — we may bake large masses of any size and form, into stone and vitrified substance of the greatest durability, lasting even thousands of years, out of clayey earth, or of stones ground to dust, by the application of burning mirrors. This is to be done in the open air without other preparation than gathering the substance, grinding and mixing it with water and cement, moulding or casting it, and bringing the focus of the burning mirrors of proper size upon the same. The character of the architecture is to be quite different from what it ever has been hitherto; large solid masses are to be baked or cast in one piece, ready shaped in any form that may be desired. The building may, therefore, consist of columns two hundred feet high and upwards, of proportionate thickness, and of one entire piece of vitrified substance; huge pieces are to be moulded so as to join and hook on to each other firmly, by proper joints and folds, and not to yield in any way without breaking.”

“Foundries, of any description, are to be heated by burning mirrors, and will require no labor, except the making of the first moulds and the superintendence for gathering the metal and taking the finished articles away.”

Alas! in the present state of science, we must take the finished articles away; but think not that man will always be the victim of circumstances.

The countryman who visited the city, and found the streets cluttered with bricks and lumber, reported that it was not yet finished, and one who considers the endless repairs and reforming of our houses might well wonder when they will be done. But why may not the dwellings of men on this earth be built, once for all, of some durable material, some Roman or Etruscan masonry, which will stand, so that time shall only adorn and beautify them? Why may we not finish the outward world for posterity, and leave them leisure to attend to the inner? Surely, all the gross necessities and economics might be cared for in a few years. All might be built and baked and stored up, during this, the term-time of the world, against the vacant eternity, and the globe go provisioned and furnished like our public vessels, for its voyage through space, as through some Pacific ocean, while we would "tie up the rudder and sleep before the wind," as those who sail from Lima to Manilla.

But, to go back a few years in imagination, think not that life in these crystal palaces is to bear any analogy to life in our present humble cottages. Far from it. Clothed, once for all, in some "flexible stuff," more durable than George Fox's suit of leather, composed of "fibres of vegetables," "glutinated" together by some "cohesive substances," and made into sheets, like paper, of any size or form, man will put far from him corroding care and the whole host of ills.

"The twenty-five halls in the inside of the square are to be each two hundred feet square and high; the forty corridors, each one hundred feet long and twenty wide; the eighty galleries, each from 1,000 to 1,250 feet long; about 7,000 private rooms, the whole surrounded and intersected by the grandest and most splendid colonnades imaginable; floors, ceilings, columns, with their various beautiful and fanciful intervals, all shining, and reflecting to infinity all objects and persons, with splendid lustre of all beautiful colors, and fanciful shapes and pictures. All galleries, outside and within the halls, are to be provided with many thousand commodious and most elegant vehicles, in which persons may move up and down like birds, in perfect security, and without exertion. Any member may procure himself all the common articles of his daily wants, by a short turn of some crank, without leaving his apartment; he may, at any time, bathe himself in cold or warm water, or in steam, or in some artificially prepared liquor for invigorating health. He may, at any time, give to the air in his apartment that temperature that suits his feeling best. He may cause, at any time, an agreeable scent of various kinds. He may, at any time, meliorate his breathing air, — that main vehicle of vital power. Thus, by a proper application of the physical knowledge of our days, man may be kept in a perpetual serenity of mind, and if there is no incurable disease or defect in his organism, in constant vigor of health, and his life be prolonged beyond any parallel which present times afford."

"One or two persons are sufficient to direct the kitchen business. They have nothing else to do but to superintend the cookery, and to watch the time of the victuals being done, and then to remove them, with the table and vessels, into the dining-hall, or to

the respective private apartments, by a slight motion of the hand at some crank. Any very extraordinary desire of any person may be satisfied by going to the place where the thing is to be had; and anything that requires a particular preparation in cooking or baking may be done by the person who desires it.”

This is one of those instances in which the individual genius is found to consent, as indeed it always does, at last, with the universal. This last sentence has a certain sad and sober truth, which reminds us of the scripture of all nations. All expression of truth does at length take this deep ethical form. Here is hint of a place the most eligible of any in space, and of a servitor, in comparison with whom all other helps dwindle into insignificance. We hope to hear more of him anon, for even a Crystal Palace would be deficient without his invaluable services.

And as for the environs of the establishment,

“There will be afforded the most enrapturing views to be fancied, out of the private apartments, from the galleries, from the roof, from its turrets and cupolas, — gardens, as far as the eye can see, full of fruits and flowers, arranged in the most beautiful order, with walks, colonnades, aqueducts, canals, ponds, plains, amphitheatres, terraces, fountains, sculptural works, pavilions, gondolas, places for public amusement, etc., to delight the eye and fancy, the taste and smell.” ... “The walks and roads are to be paved with hard vitrified large plates, so as to be always clean from all dirt in any weather or season. ... The channels being of vitrified substance, and the water perfectly clear, and filtrated or distilled if required, may afford the most beautiful scenes imaginable, while a variety of fishes is seen clear down to the bottom playing about, and the canals may afford at the same time, the means of gliding smoothly along between various sceneries of art and nature, in beautiful gondolas, while their surface and borders may be covered with fine land and aquatic birds. The walks may be covered with porticoes adorned with magnificent columns, statues, and sculptural works; all of vitrified substance, and lasting forever, while the beauties of nature around heighten the magnificence and deliciousness.

“The night affords no less delight to fancy and feelings. An infinite variety of grand, beautiful and fanciful objects and sceneries, radiating with crystalline brilliancy, by the illumination of gas-light; the human figures themselves, arrayed in the most beautiful pomp fancy may suggest, or the eye desire, shining even with brilliancy of stuffs and diamonds, like stones of various colors, elegantly shaped and arranged around the body; all reflected a thousand-fold in huge mirrors and reflectors of various forms; theatrical scenes of a grandeur and magnificence, and enrapturing illusions, unknown yet, in which any person may be either a spectator or an actor; the speech and the songs reverberating with increased sound, rendered more sonorous and harmonious than by nature, by vaultings that are moveable into any shape at any time; the sweetest and most impressive harmony of music, produced by song and instruments partly not known yet, may thrill through the nerves and vary with other amusements and delights.”

“At night the roof and the inside and outside of the whole square are illuminated by gas-light, which in the mazes of many-colored crystal-like colonnades and vaultings, is reflected with a brilliancy that gives to the whole a lustre of precious stones, as far as the eye can see. Such are the future abodes of men.” ... “Such is the life reserved to true intelligence, but withheld from ignorance, prejudice, and stupid adherence to custom.” ... “Such is the domestic life to be enjoyed by every human individual that will partake of it. Love and affection may there be fostered and enjoyed without any of the obstructions that oppose, diminish, and destroy them in the present state of men.” ... “It would be as ridiculous, then, to dispute and quarrel about the means of life, as it would be now about water to drink along mighty rivers, or about the permission to breathe air in the atmosphere, or about sticks in our extensive woods.”

Thus is Paradise to be Regained, and that old and stern decree at length reversed. Man shall no more earn his living by the sweat of his brow. All labor shall be reduced to “a short turn of some crank,” and “taking the finished article away.” But there is a crank, — oh, how hard to be turned! Could there not be a crank upon a crank, — an infinitely small crank? — we would fain inquire. No, — alas! not. But there is a certain divine energy in every man, but sparingly employed as yet, which may be called the crank within, — the crank after all, — the prime mover in all machinery, — quite indispensable to all work. Would that we might get our hands on its handle! In fact, no work can be shirked. It may be postponed indefinitely, but not infinitely. Nor can any really important work be made easier by cooperation or machinery. Not one particle of labor now threatening any man can be routed without being performed. It cannot be hunted out of the vicinity like jackals and hyenas. It will not run. You may begin by sawing the little sticks, or you may saw the great sticks first, but sooner or later you must saw them both.

We will not be imposed upon by this vast application of forces. We believe that most things will have to be accomplished still by the application called Industry. We are rather pleased, after all, to consider the small private, but both constant and accumulated, force which stands behind every spade in the field. This it is that makes the valleys shine, and the deserts really bloom. Sometimes, we confess, we are so degenerate as to reflect with pleasure on the days when men were yoked like cattle, and drew a crooked stick for a plow. After all, the great interests and methods were the same.

It is a rather serious objection to Mr. Etzler’s schemes, that they require time, men, and money, three very superfluous and inconvenient things for an honest and well-disposed man to deal with. “The whole world,”; he tells us, “might therefore be really changed into a paradise, within less than ten years, commencing from the first year of an association for the purpose of constructing and applying the machinery.” We are sensible of a startling incongruity when time and money are mentioned in this connection. The ten years which are proposed would be a tedious while to wait, if every man were at his post and did his duty, but quite too short a period, if we are to take time for it. But this fault is by no means peculiar to Mr. Etzler’s schemes.

There is far too much hurry and bustle, and too little patience and privacy, in all our methods, as if something were to be accomplished in centuries. The true reformer does not want time, nor money, nor cooperation, nor advice. What is time but the stuff delay is made of? And depend upon it, our virtue will not live on the interest of our money. He expects no income, but outgoes; so soon as we begin to count the cost, the cost begins. And as for advice, the information floating in the atmosphere of society is as evanescent and unserviceable to him as gossamer for clubs of Hercules. There is absolutely no common sense; it is common nonsense. If we are to risk a cent or a drop of our blood, who then shall advise us? For ourselves, we are too young for experience. Who is old enough? We are older by faith than by experience. In the unbending of the arm to do the deed there is experience worth all the maxims in the world.

“It will now be plainly seen that the execution of the proposals is not proper for individuals. Whether it be proper for government at this time, before the subject has become popular, is a question to be decided; all that is to be done is to step forth, after mature reflection, to confess loudly one’s conviction, and to constitute societies. Man is powerful but in union with many. Nothing great, for the improvement of his own condition, or that of his fellow-men, can ever be effected by individual enterprise.”

Alas! this is the crying sin of the age, this want of faith in the prevalence of a man. Nothing can be effected but by one man. He who wants help wants everything. True, this is the condition of our weakness, but it can never be the means of our recovery. We must first succeed alone, that we may enjoy our success together. We trust that the social movements which we witness indicate an aspiration not to be thus cheaply satisfied. In this matter of reforming the world, we have little faith in corporations; not thus was it first formed.

But our author is wise enough to say that the materials for the accomplishment of his purposes are “iron, copper, wood, earth chiefly, and a union of men whose eyes and understanding are not shut up by preconceptions.” Ay, this last may be what we want mainly, — a company of “odd fellows” indeed.

“Small shares of twenty dollars will be sufficient,” — in all, from “200,000 to 300,000,” — “to create the first establishment for a whole community of from 3,000 to 4,000 individuals” at the end of five years we shall have a principal of 200 millions of dollars, and so paradise will be wholly regained at the end of the tenth year. But, alas! the ten years have already elapsed, and there are no signs of Eden yet, for want of the requisite funds to begin the enterprise in a hopeful manner. Yet it seems a safe investment. Perchance they could be hired at a low rate, the property being mortgaged for security, and, if necessary, it could be given up in any stage of the enterprise, without loss, with the fixtures.

Mr. Etzler considers this “Address as a touchstone, to try whether our nation is in any way accessible to these great truths, for raising the human creature to a superior state of existence, in accordance with the knowledge and the spirit of the most cultivated minds of the present time.” He has prepared a constitution, short and concise, consisting of twenty-one articles, so that wherever an association may spring up, it

may go into operation without delay; and the editor informs us that "Communications on the subject of this book may be addressed to C.F. Stollmeyer, No. 6, Upper Charles street, Northampton square, London."

But we see two main difficulties in the way: first, the successful application of the powers by machinery (we have not yet seen the "Mechanical System,") and, secondly, which is infinitely harder, the application of man to the work by faith. This it is, we fear, which will prolong the ten years to ten thousand at least. It will take a power more than "80,000 times greater than all the men on earth could effect with their nerves," to persuade men to use that which is already offered them. Even a greater than this physical power must be brought to bear upon that moral power. Faith, indeed, is all the reform that is needed; it is itself a reform. Doubtless, we are as slow to conceive of Paradise as of Heaven, of a perfect natural as of a perfect spiritual world. We see how past ages have loitered and erred. "Is perhaps our generation free from irrationality and error? Have we perhaps reached now the summit of human wisdom, and need no more to look out for mental or physical improvement?" Undoubtedly, we are never so visionary as to be prepared for what the next hour may bring forth.

Μέλλει τὸ Θεῖον δ' ἔστι τοιοῦτον φύσει

The Divine is about to be, and such is its nature. In our wisest moments we are secreting a matter, which, like the lime of the shell-fish, incrusts us quite over, and well for us if, like it, we cast our shells from time to time, though they be pearl and of fairest tint. Let us consider under what disadvantages science has hitherto labored before we pronounce thus confidently on her progress.

"There was never any system in the productions of human labor; but they came into existence and fashion as chance directed men." "Only a few professional men of learning occupy themselves with teaching natural philosophy, chemistry, and the other branches of the sciences of nature, to a very limited extent, for very limited purposes, with very limited means." "The science of mechanics is but in a state of infancy. It is true, improvements are made upon improvements, instigated by patents of government; but they are made accidentally or at hap-hazard. There is no general system of this science, mathematical as it is, which develops its principles in their full extent, and the outlines of the application to which they lead. There is no idea of comparison between what is explored and what is yet to be explored in this science. The ancient Greeks placed mathematics at the head of their education. But we are glad to have filled our memory with notions, without troubling ourselves much with reasoning about them."

Mr. Etzler is not one of the enlightened practical men, the pioneers of the actual, who move with the slow, deliberate tread of science, conserving the world; who execute the dreams of the last century, though they have no dreams of their own; yet he deals in the very raw but still solid material of all inventions. He has more of the practical than usually belongs to so bold a schemer, so resolute a dreamer. Yet his success is in theory, and not in practice, and he feeds our faith rather than contents our understanding. His book wants order, serenity, dignity, everything, — but it does not fail to impart what only man can impart to man of much importance, his own faith. It is true his dreams

are not thrilling nor bright enough, and he leaves off to dream where he who dreams just before the dawn begins. His castles in the air fall to the ground, because they are not built lofty enough; they should be secured to heaven's roof. After all, the theories and speculations of men concern us more than their puny accomplishment. It is with a certain coldness and languor that we loiter about the actual and so-called practical. How little do the most wonderful inventions of modern times detain us. They insult nature. Every machine, or particular application, seems a slight outrage against universal laws. How many fine inventions are there which do not clutter the ground? We think that those only succeed which minister to our sensible and animal wants, which bake or brew, wash or warm, or the like. But are those of no account which are patented by fancy and imagination, and succeed so admirably in our dreams that they give the tone still to our waking thoughts? Already nature is serving all those uses which science slowly derives on a much higher and grander scale to him that will be served by her. When the sunshine falls on the path of the poet, he enjoys all those pure benefits and pleasures which the arts slowly and partially realize from age to age. The winds which fan his cheek waft him the sum of that profit and happiness which their lagging inventions supply.

The chief fault of this book is, that it aims to secure the greatest degree of gross comfort and pleasure merely. It paints a Mahometan's heaven, and stops short with singular abruptness when we think it is drawing near to the precincts of the Christian's, — and we trust we have not made here a distinction without a difference. Undoubtedly if we were to reform this outward life truly and thoroughly, we should find no duty of the inner omitted. It would be employment for our whole nature; and what we should do thereafter would be as vain a question as to ask the bird what it will do when its nest is built and its brood reared. But a moral reform must take place first, and then the necessity of the other will be superseded, and we shall sail and plow by its force alone. There is a speedier way than the "Mechanical System" can show to fill up marshes, to drown the roar of the waves, to tame hyenas, secure agreeable environs, diversify the land, and refresh it with "rivulets of sweet water," and that is by the power of rectitude and true behavior. It is only for a little while, only occasionally, methinks, that we want a garden. Surely a good man need not be at the labor to level a hill for the sake of a prospect, or raise fruits and flowers, and construct floating islands, for the sake of a paradise. He enjoys better prospects than lie behind any hill. Where an angel travels it will be paradise all the way, but where Satan travels it will be burning marl and cinders. What says Veeshnoo Sarma? "He whose mind is at ease is possessed of all riches. Is it not the same to one whose foot is enclosed in a shoe, as if the whole surface of the earth were covered with leather?"

He who is conversant with the supernal powers will not worship these inferior deities of the wind, waves, tide, and sunshine. But we would not disparage the importance of such calculations as we have described. They are truths in physics, because they are true in ethics. The moral powers no one would presume to calculate. Suppose we could compare the moral with the physical, and say how many horse-power the force of love,

for instance, blowing on every square foot of a man's soul, would equal. No doubt we are well aware of this force; figures would not increase our respect for it; the sunshine is equal to but one ray of its heat. The light of the sun is but the shadow of love. "The souls of men loving and fearing God," says Raleigh, "receive influence from that divine light itself, whereof the sun's clarity, and that of the stars, is by Plato called but a shadow. *Lumen est umbra Dei, Deus est Lumen Luminis*. Light is the shadow of God's brightness, who is the light of light," and, we may add, the heat of heat. Love is the wind, the tide, the waves, the sunshine. Its power is incalculable; it is many horse-power. It never ceases, it never slacks; it can move the globe without a resting-place; it can warm without fire; it can feed without meat; it can clothe without garments; it can shelter without roof; it can make a paradise within which will dispense with a paradise without. But though the wisest men in all ages have labored to publish this force, and every human heart is, sooner or later, more or less, made to feel it, yet how little is actually applied to social ends! True, it is the motive-power of all successful social machinery; but, as in physics we have made the elements do only a little drudgery for us — steam to take the place of a few horses, wind of a few oars, water of a few cranks and hand-mills — as the mechanical forces have not yet been generously and largely applied to make the physical world answer to the ideal, so the power of love has been but meanly and sparingly applied, as yet. It has patented only such machines as the almshouse, the hospital, and the Bible Society, while its infinite wind is still blowing, and blowing down these very structures too, from time to time. Still less are we accumulating its power, and preparing to act with greater energy at a future time. Shall we not contribute our shares to this enterprise, then?

# HOMER. OSSIAN. CHAUCER.

EXTRACTS FROM A LECTURE ON POETRY, READ BEFORE THE CONCORD LYCEUM, NOVEMBER 29, 1843, BY HENRY D. THOREAU.

HOMER.

THE wisest definition of poetry the poet will instantly prove false by setting aside its requisitions. We can therefore publish only our advertisement of it.

There is no doubt that the loftiest written wisdom is rhymed or measured, is in form as well as substance poetry; and a volume, which should contain the condensed wisdom of mankind, need not have one rhythmless line. Yet poetry, though the last and finest result, is a natural fruit. As naturally as the oak bears an acorn, and the vine a gourd, man bears a poem, either spoken or done. It is the chief and most memorable success, for history is but a prose narrative of poetic deeds. What else have the Hindoos, the Persians, the Babylonians, the Egyptians, done, that can be told? It is the simplest relation of phenomena, and describes the commonest sensations with more truth than science does, and the latter at a distance slowly mimics its style and methods. The poet sings how the blood flows in his veins. He performs his functions, and is so well that he needs such stimulus to sing only as plants to put forth leaves and blossoms. He would strive in vain to modulate the remote and transient music which he sometimes hears, since his song is a vital function like breathing, and an integral result like weight. It is not the overflowing of life but its subsidence rather, and is drawn from under the feet of the poet. It is enough if Homer but say the sun sets. He is as serene as nature, and we can hardly detect the enthusiasm of the bard. It is as if nature spoke. He presents to us the simplest pictures of human life, so that childhood itself can understand them, and the man must not think twice to appreciate his naturalness. Each reader discovers for himself, that succeeding poets have done little else than copy his similes. His more memorable passages are as naturally bright, as gleams of sunlight in misty weather. Nature furnishes him not only with words, but with stereotyped lines and sentences from her mint.

“As from the clouds appears the full moon,  
All shining, and then again it goes behind the shadowy clouds,  
So Hector, at one time appeared among the foremost,  
And at another in the rear, commanding; and all with brass  
He shone, like to the lightning of ægis-bearing Zeus.”

He conveys the least information, even the hour of the day, with such magnificence, and vast expense of natural imagery, as if it were a message from the gods.

“While it was dawn, and sacred day was advancing,  
For that space the weapons of both flew fast, and the people fell;  
But when now the woodcutter was preparing his morning meal  
In the recesses of the mountain, and had wearied his hands  
With cutting lofty trees, and satiety came to his mind,  
And the desire of sweet food took possession of his thoughts;  
Then the Danaans by their valor broke the phalanxes,  
Shouting to their companions from rank to rank.”

When the army of the Trojans passed the night under arms, keeping watch lest the enemy should re-embark under cover of the dark,

“They, thinking great things, upon the neutral ground of war, Sat all the night; and many fires burned for them.

As when in the heavens the stars round the bright moon Appear beautiful, and the air is without wind; And all the heights, and the extreme summits, And the shady valleys appear; and the shepherd rejoices in his heart; So between the ships and the streams of Xanthus Appeared the fires of the Trojans before Ilium.”

The “white-armed goddess Juno,” sent by the Father of gods and men for Iris and Apollo,

“Went down the Idæan mountains to far Olympus,

As when the mind of a man, who has come over much earth, Sallies forth, and he reflects with rapid thoughts, There was I, and there, and remembers many things; So swiftly the august Juno hastening flew through the air, And came to high Olympus.”

There are few books which are fit to be remembered in our wisest hours, but the Iliad is brightest in the serenest days, and imbodies still all the sunlight that fell on Asia Minor. No modern joy or ecstasy of ours can lower its height or dim its lustre; but there it lies in the east of literature, as it were the earliest, latest production of the mind. The ruins of Egypt oppress and stifle us with their dust, foulness preserved in cassia and pitch, and swathed in linen; the death of that which never lived. But the rays of Greek poetry struggle down to us, and mingle with the sunbeams of the recent day. The statue of Memnon is cast down, but the shaft of the Iliad still meets the sun in his rising.

So too, no doubt, Homer had his Homer, and Orpheus his Orpheus, in the dim antiquity which preceded them. The mythological system of the ancients, and it is still the only mythology of the moderns, the poem of mankind, interwoven so wonderfully with their astronomy, and matching in grandeur and harmony with the architecture of the Heavens themselves, seems to point to a time when a mightier genius inhabited the earth. But man is the great poet, and not Homer nor Shakspeare; and our language itself, and the common arts of life are his work. Poetry is so universally true and independent of experience, that it does not need any particular biography to illustrate it, but we refer it sooner or later to some Orpheus or Linus, and after ages to the genius of humanity, and the gods themselves.

OSSIAN.

The genuine remains of Ossian, though of less fame and extent, are in many respects of the same stamp with the Iliad itself. He asserts the dignity of the bard no less than Homer, and in his era we hear of no other priest than he. It will not avail to call him a heathen because he personifies the sun and addresses it; and what if his heroes did “worship the ghosts of their fathers,” their thin, airy, and unsubstantial forms? we but worship the ghosts of our fathers in more substantial forms. We cannot but respect the vigorous faith of those heathen, who sternly believed somewhat, and are inclined to say to the critics, who are offended by their superstitious rites, don’t interrupt these men’s prayers. As if we knew more about human life and a God, than the heathen and ancients. Does English theology contain the recent discoveries?

Ossian reminds us of the most refined and rudest eras, of Homer, Pindar, Isaiah, and the American Indian. In his poetry, as in Homer’s, only the simplest and most enduring features of humanity are seen, such essential parts of a man as Stonehenge exhibits of a temple; we see the circles of stone, and the upright shaft alone. The phenomena of life acquire almost an unreal and gigantic size seen through his mists. Like all older and grander poetry, it is distinguished by the few elements in the lives of its heroes. They stand on the heath, between the stars and the earth, shrunk to the bones and sinews. The earth is a boundless plain for their deeds. They lead such a simple, dry, and everlasting life, as hardly needs depart with the flesh, but is transmitted entire from age to age. There are but few objects to distract their sight, and their life is as unencumbered as the course of the stars they gaze at.

“The wrathful kings, on cairns apart,  
Look forward from behind their shields,  
And mark the wandering stars,  
That brilliant westward move.”

It does not cost much for these heroes to live. They want not much furniture. They are such forms of men only as can be seen afar through the mist, and have no costume nor dialect, but for language there is the tongue itself, and for costume there are always the skins of beasts and the bark of trees to be had. They live out their years by the vigor of their constitutions. They survive storms and the spears of their foes, and perform a few heroic deeds, and then,

“Mounds will answer questions of them,  
For many future years.”

Blind and infirm, they spend the remnant of their days listening to the lays of the bards, and feeling the weapons which laid their enemies low, and when at length they die, by a convulsion of nature, the bard allows us a short misty glance into futurity, yet as clear, perchance, as their lives had been. When Mac-Roine was slain,

“His soul departed to his warlike sires,  
To follow misty forms of boars,  
In tempestuous islands bleak.”

The hero’s cairn is erected, and the bard sings a brief significant strain, which will suffice for epitaph and biography.

“The weak will find his bow in the dwelling,  
The feeble will attempt to bend it.”

Compared with this simple, fibrous life, our civilized history appears the chronicle of debility, of fashion, and the arts of luxury. But the civilized man misses no real refinement in the poetry of the rudest era. It reminds him that civilization does but dress men. It makes shoes, but it does not toughen the soles of the feet. It makes cloth of finer texture, but it does not touch the skin. Inside the civilized man stands the savage still in the place of honor. We are those blue-eyed, yellow-haired Saxons, those slender, dark-haired Normans.

The profession of the bard attracted more respect in those days from the importance attached to fame. It was his province to record the deeds of heroes. When Ossian hears the traditions of inferior bards, he exclaims,

“I straightway seize the unfruitful tales,  
And send them down in faithful verse.”  
His philosophy of life is expressed in the opening of the third Duan of Ca-Lodin.  
“Whence have sprung the things that are?  
And whither roll the passing years?  
Where does time conceal its two heads,  
In dense impenetrable gloom,  
Its surface marked with heroes’ deeds alone?  
I view the generations gone;  
The past appears but dim;  
As objects by the moon’s faint beams,  
Reflected from a distant lake.  
I see, indeed, the thunder-bolts of war,  
But there the unmighty joyless dwell,  
All those who send not down their deeds  
To far, succeeding times.”  
The ignoble warriors die and are forgotten;  
“Strangers come to build a tower,  
And throw their ashes overhand;  
Some rusted swords appear in dust;  
One, bending forward, says,  
‘The arms belonged to heroes gone;  
We never heard their praise in song.’”

The grandeur of the similes is another feature which characterizes great poetry. Ossian seems to speak a gigantic and universal language. The images and pictures occupy even much space in the landscape, as if they could be seen only from the sides of mountains, and plains with a wide horizon, or across arms of the sea. The machinery is so massive that it cannot be less than natural. Oivana says to the spirit of her father, “Grey-haired Torkil of Tome,” seen in the skies, “Thou glidest away like receding ships.”

So when the hosts of Fingal and Starne approach to battle,

“With murmurs loud, like rivers far,  
The race of Torne hither moved.”  
And when compelled to retire,  
“dragging his spear behind,  
Cudulin sank in the distant wood,  
Like a fire unblazing ere it dies.”  
Nor did Fingal want a proper audience when he spoke;  
“A thousand orators inclined  
To hear the lay of Fingal.”

The threats too would have deterred a man. Vengeance and terror were real. Tremore threatens the young warrior, whom he meets on a foreign strand,

“Thy mother shall find thee pale on the shore,  
While lessening on the waves she spies  
The sails of him who slew her son.”

If Ossian’s heroes weep, it is from excess of strength, and not from weakness, a sacrifice or libation of fertile natures, like the perspiration of stone in summer’s heat. We hardly know that tears have been shed, and it seems as if weeping were proper only for babes and heroes. Their joy and their sorrow are made of one stuff, like rain and snow, the rainbow and the mist. When Fillan was worsted in fight, and ashamed in the presence of Fingal,

“He strode away forthwith,  
And bent in grief above a stream,  
His cheeks bedewed with tears.  
From time to time the thistles gray  
He lopped with his inverted lance.”

Crodar, blind and old, receives Ossian, son of Fingal, who comes to aid him in war,  
“‘My eyes have failed,’ says he, ‘Crodar is blind,

Is thy strength like that of thy fathers?  
Stretch, Ossian, thine arm to the hoary-haired.’

I gave my arm to the king.  
The aged hero seized my hand;  
He heaved a heavy sigh;  
Tears flowed incessant down his cheek.

‘Strong art thou, son of the mighty,  
Though not so dreadful as Morven’s prince. \* \* \*

Let my feast be spread in the hall,  
Let every sweet-voiced minstrel sing;  
Great is he who is within my wall,  
Sons of wave-echoing Croma.’”

Even Ossian himself, the hero-bard, pays tribute to the superior strength of his father Fingal.

“How beauteous, mighty man, was thy mind,

Why succeeded Ossian without its strength?"

CHAUCER.

What a contrast between the stern and desolate poetry of Ossian, and that of Chaucer, and even of Shakspeare and Milton, much more of Dryden, and Pope, and Gray. Our summer of English poetry, like the Greek and Latin before it, seems well advanced toward its fall, and laden with the fruit and foliage of the season, with bright autumnal tints, but soon the winter will scatter its myriad clustering and shading leaves, and leave only a few desolate and fibrous boughs to sustain the snow and rime, and creak in the blasts of ages. We cannot escape the impression, that the Muse has stooped a little in her flight, when we come to the literature of civilized eras. Now first we hear of various ages and styles of poetry, but the poetry of runic monuments is for every age. The bard has lost the dignity and sacredness of his office. He has no more the bardic rage, and only conceives the deed, which he formerly stood ready to perform. Hosts of warriors, earnest for battle, could not mistake nor dispense with the ancient bard. His lays were heard in the pauses of the fight. There was no danger of his being overlooked by his contemporaries. But now the hero and the bard are of different professions. When we come to the pleasant English verse, it seems as if the storms had all cleared away, and it would never thunder and lighten more. The poet has come within doors, and exchanged the forest and crag for the fireside, the hut of the Gael, and Stonehenge with its circles of stones, for the house of the Englishman. No hero stands at the door prepared to break forth into song or heroic action, but we have instead a homely Englishman, who cultivates the art of poetry. We see the pleasant fireside, and hear the crackling fagots in all the verse. The towering and misty imagination of the bard has descended into the plain, and become a lowlander, and keeps flocks and herds. Poetry is one man's trade, and not all men's religion, and is split into many styles. It is pastoral, and lyric, and narrative, and didactic.

Notwithstanding the broad humanity of Chaucer, and the many social and domestic comforts which we meet with in his verse, we have to narrow our vision somewhat to consider him, as if he occupied less space in the landscape, and did not stretch over hill and valley as Ossian does. Yet, seen from the side of posterity, as the father of English poetry, preceded by a long silence or confusion in history, unenlivened by any strain of pure melody, we easily come to reverence him. Passing over the earlier continental poets, since we are bound to the pleasant archipelago of English poetry, Chaucer's is the first name after that misty weather in which Ossian lived, which can detain us long. Indeed, though he represents so different a culture and society, he may be regarded as in many respects the Homer of the English poets. Perhaps he is the youthfullest of them all. We return to him as to the purest well, the fountain furthest removed from the highway of desultory life. He is so natural and cheerful, compared with later poets, that we might almost regard him as a personification of spring. To the faithful reader his muse has even given an aspect to his times, and when he is fresh from perusing him, they seem related to the golden age. It is still the poetry of youth and life, rather than of thought; and though the moral vein is obvious and constant, it

has not yet banished the sun and daylight from his verse. The loftiest strains of the muse are, for the most part, sublimely plaintive, and not a carol as free as nature's. The content which the sun shines to celebrate from morning to evening is unsung. The muse solaces herself, and is not ravished but consoled. There is a catastrophe implied, and a tragic element in all our verse, and less of the lark and morning dews, than of the nightingale and evening shades. But in Homer and Chaucer there is more of the innocence and serenity of youth, than in the more modern and moral poets. The Iliad is not sabbath but morning reading, and men cling to this old song, because they have still moments of unbaptized and uncommitted life, which give them an appetite for more. It represents no creed nor opinion, and we read it with a rare sense of freedom and irresponsibility, as if we trod on native ground, and were autochthones of the soil.

Chaucer had eminently the habits of a literary man and a scholar. We do not enough allow for the prevalence of this class. There were never any times so stirring, that there were not to be found some sedentary still. Through all those outwardly active ages, there were still monks in cloisters writing or copying folios. He was surrounded by the din of arms. The battles of Hallidon Hill and Neville's Cross, and the still more memorable battles of Crecy and Poitiers, were fought in his youth, but these did not concern our poet much, Wicliffe much more. He seems to have regarded himself always as one privileged to sit and converse with books. He helped to establish the literary class. His character, as one of the fathers of the English language, would alone make his works important, even those which have little poetical merit. A great philosophical and moral poet gives permanence to the language he uses, by making the best sound convey the best sense. He was as simple as Wordsworth in preferring his homely but vigorous Saxon tongue, when it was neglected by the court, and had not yet attained to the dignity of a literature, and rendered a similar service to his country to that which Dante rendered to Italy. If Greek sufficeth for Greek, and Arabic for Arabian, and Hebrew for Jew, and Latin for Latin, then English shall suffice for him, for any of these will serve to teach truth "right as divers pathes leaden divers folke the right waye to Rome." In the Testament of Love he writes, "Let then clerkes enditen in Latin, for they have the propertie of science, and the knowinge in that facultie, and lette Frenchmen in their Frenche also enditen their queinte termes, for it is kyndely to their mouthes, and let us shewe our fantasies in soche wordes as we lerneden of our dames tonge."

He will know how to appreciate Chaucer best, who has come down to him the natural way, through the meagre pastures of Saxon and ante-Chaucerian poetry; and yet so human and wise he seems after such diet, that he is liable to misjudge him still. In the Saxon poetry extant, in the earliest English, and the contemporary Scottish poetry, there is less to remind the reader of the rudeness and vigor of youth, than of the feebleness of a declining age. It is for the most part translation or imitation merely, with only an occasional and slight tinge of poetry, and oftentimes the falsehood and exaggeration of fable, without its imagination to redeem it. It is astonishing to how few thoughts so many sincere efforts give utterance. But as they never sprang out of

nature, so they will never root themselves in nature. There are few traces of original genius, and we look in vain to find antiquity restored, humanized, and made blithe again, by the discovery of some natural sympathy between it and the present. But when we come to Chaucer we are relieved of many a load. He is fresh and modern still, and no dust settles on his true passages. It lightens along the line, and we are reminded that flowers have bloomed, and birds sung, and hearts beaten, in England. Before the earnest gaze of the reader the rust and moss of time gradually drop off, and the original green life is revealed. He was a homely and domestic man, and did breathe quite as modern men do. Only one trait, one little incident of human biography needs to be truly recorded, that all the world may think the author fit to wear the laurel crown. In the dearth we have described, and at this distance of time, the bare processes of living read like poetry, for all of human good or ill, heroic or vulgar, lies very near to them. All that is truly great and interesting to men, runs thus as level a course, and is as un aspiring, as the plough in the furrow.

There is no wisdom which can take place of humanity, and we find that in Chaucer. We can expand in his breadth and think we could be that man's acquaintance. He was worthy to be a citizen of England, while Petrarch and Boccaccio lived in Italy, and Tell and Tamerlane in Switzerland and in Asia, and Bruce in Scotland, and Wickliffe, and Gower, and Edward the Third, and John of Gaunt, and the Black Prince, were his own countrymen; all stout and stirring names. The fame of Roger Bacon came down from the preceding century, and the name of Dante still exerted the influence of a living presence. On the whole, Chaucer impresses us, as greater than his reputation, and not a little like Homer and Shakspeare, for he would have held up his head in their company. Among early English poets he is the landlord and host, and has the authority of such. The affectionate mention, which succeeding early poets make of him, coupling him with Homer and Virgil, is to be taken into the account in estimating his character and influence. King James and Dunbar of Scotland speak with more love and reverence of him, than any modern author of his predecessors of the last century. The same childlike relation is without parallel now. We read him without criticism for the most part, for he pleads not his own cause, but speaks for his readers, and has that greatness of trust and reliance which compels popularity. He confides in the reader, and speaks privily with him, keeping nothing back. And in return his reader has great confidence in him, that he tells no lies, and reads his story with indulgence, as if it were the circumlocution of a child, but discovers afterwards that he has spoken with more directness and economy of words than a sage. He is never heartless,

“For first the thing is thought within the hart,  
Er any word out from the mouth astart.”

And so new as all his theme in those days, that he had not to invent, but only to tell.

We admire Chaucer for his sturdy English wit. The easy height he speaks from in his Prologue to the Canterbury Tales, as if he were equal to any of the company there assembled, is as good as any particular excellence in it. But though it is full of

good sense and humanity, it is not transcendent poetry. For picturesque description of persons it is, perhaps, without a parallel in English poetry; yet it is essentially humorous, as the loftiest genius never is. Humor, however broad and genial, takes a narrower view than enthusiasm. The whole story of Chanticleer and Dame Partlett, in the Nonne's Preeste's tale, is genuine humanity. I know of nothing better in its kind, no more successful fabling of birds and beasts. If it is said of Shakspeare, that he is now Hamlet, and then Falstaff, it may be said of Chaucer that he sympathizes with brutes as well as men, and assumes their nature that he may speak from it. In this tale he puts on the very feathers and stature of the cock. To his own finer vein he added all the common wit and wisdom of his time, and every where in his works his remarkable knowledge of the world, and nice perception of character, his rare common sense and proverbial wisdom, are apparent. His genius does not soar like Milton's, but is genial and familiar. It shows great tenderness and delicacy, but not the heroic sentiment. It is only a greater portion of humanity with all its weakness. It is not heroic, as Raleigh's, nor pious, as Herbert's, nor philosophical, as Shakspeare's, but it is the child of the English muse, that child which is the father of the man. It is for the most part only an exceeding naturalness, perfect sincerity, with the behavior of a child rather than of a man.

Gentleness and delicacy of character are every where apparent in his verse. The simplest and humblest words come readily to his lips. No one can read the Prioress' tale, understanding the spirit in which it was written, and in which the child sings, *O alma redemptoris mater*, or the account of the departure of Custance with her child upon the sea, in the Man of Lawe's tale, without feeling the native innocence and refinement of the author. Nor can we be mistaken respecting the essential purity of his character, disregarding the apology of the manners of the age. His sincere sorrow in his later days for the grossness of his earlier works, and that he "cannot recall and annul" much that he had written, "but, alas, they are now continued from man to man, and I cannot do what I desire," is not to be forgotten. A simple pathos and feminine gentleness, which Wordsworth occasionally approaches, but does not equal, are peculiar to him. We are tempted to say, that his genius was feminine, not masculine. It was such a feminineness, however, as is rarest to find in woman, though not the appreciation of it. Perhaps it is not to be found at all in woman, but is only the feminine in man.

Such pure, childlike love of nature is not easily to be matched. Nor is it strange, that the poetry of so rude an age should contain such sweet and polished praise of nature, for her charms are not enhanced by civilization, as society's are, but by her own original and permanent refinement she at last subdues and educates man.

Chaucer's remarkably trustful and affectionate character appears in his familiar, yet innocent and reverent, manner of speaking of his God. He comes into his thought without any false reverence, and with no more parade than the zephyr to his ear. If nature is our mother, then God is our father. There is less love and simple practical trust in Shakspeare and Milton. How rarely in our English tongue do we find expressed any affection for God. There is no sentiment so rare as the love of God. Herbert almost

alone expresses it, "Ah, my dear God!" Our poet uses similar words, and whenever he sees a beautiful person, or other object, prides himself on the "maistry" of his God. He reverently recommends Dido to be his bride,

"if that God that heaven and yearth made,  
Would have a love for beauty and goodnesse,  
And womanhede, trouth, and semeliness."

He supplies the place to his imagination of the saints of the Catholic calendar, and has none of the attributes of a Scandinavian deity.

But, in justification of our praise, we must refer the hearer to his works themselves; to the Prologue to the Canterbury Tales, the account of Gentilesse, the Flower and the Leaf, the stories of Griselda, Virginia, Ariadne, and Blanche the Dutchesse, and much more of less distinguished merit. There are many poets of more taste and better manners, who knew how to leave out their dulness, but such negative genius cannot detain us long; we shall return to Chaucer still with love. Even the clown has taste, whose dictates, though he disregards them, are higher and purer than those which the artist obeys; and some natures, which are rude and ill developed, have yet a higher standard of perfection, than others which are refined and well balanced. Though the peasant's cot is dark, it has the evening star for taper, while the nobleman's saloon is meanly lighted. If we have to wander through many dull and prosaic passages in Chaucer, we have at least the satisfaction of knowing that it is not an artificial dulness, but too easily matched by many passages in life, and it is, perhaps, more pleasing, after all, to meet with a fine thought in its natural setting. We confess we feel a disposition commonly to concentrate sweets, and accumulate pleasures, but the poet may be presumed always to speak as a traveller, who leads us through a varied scenery, from one eminence to another, and, from time to time, a single casual thought rises naturally and inevitably, with such majesty and escort only as the first stars at evening. And surely fate has enshrined it in these circumstances for some end. Nature strews her nuts and flowers broadcast, and never collects them into heaps. This was the soil it grew in, and this the hour it bloomed in; if sun, wind, and rain, came here to cherish and expand the flower, shall not we come here to pluck it?

A true poem is distinguished, not so much by a felicitous expression, or any thought it suggests, as by the atmosphere which surrounds it. Most have beauty of outline merely, and are striking as the form and bearing of a stranger, but true verses come toward us indistinctly, as the very kernel of all friendliness, and envelope us in their spirit and fragrance. Much of our poetry has the very best manners, but no character. It is only an unusual precision and elasticity of speech, as if its author had taken, not an intoxicating draught, but an electuary. It has the distinct outline of sculpture, and chronicles an early hour. Under the influence of passion all men speak thus distinctly, but wrath is not always divine.

There are two classes of men called poets. The one cultivates life, the other art; one seeks food for nutriment, the other for flavor; one satisfies hunger, the other gratifies the palate. There are two kinds of writing, both great and rare; one that of genius, or

the inspired, the other of intellect and taste, in the intervals of inspiration. The former is above criticism, always correct, giving the law to criticism. It vibrates and pulsates with life forever. It is sacred, and to be read with reverence, as the works of nature are studied. There are few instances of a sustained style of this kind; perhaps every man has spoken words, but the speaker is then careless of the record. Such a style removes us out of personal relations with its author, we do not take his words on our lips, but his sense into our hearts. It is the stream of inspiration, which bubbles out, now here, now there, now in this man, now in that. It matters not through what ice-crystals it is seen, now a fountain, now the ocean stream running under ground. It is in Shakspeare, Alpheus, in Burns, Arethuse; but ever the same. The other is self-possessed and wise. It is reverent of genius, and greedy of inspiration. It is conscious in the highest and the least degree. It consists with the most perfect command of the faculties. It dwells in a repose as of the desert, and objects are as distinct in it as oases or palms in the horizon of sand. The train of thought moves with subdued and measured step, like a caravan. But the pen is only an instrument in its hand, and not instinct with life, like a longer arm. It leaves a thin varnish or glaze over all its work. The works of Goethe furnish remarkable instances of the latter.

There is no just and serene criticism as yet. Our taste is too delicate and particular. It says nay to the poet's work, but never yea to his hope. It invites him to adorn his deformities, and not to cast them off by expansion, as the tree its bark. We are a people who live in a bright light, in houses of pearl and porcelain, and drink only light wines, whose teeth are easily set on edge by the least natural sour. If we had been consulted, the back bone of the earth would have been made, not of granite, but of Bristol spar. A modern author would have died in infancy in a ruder age. But the poet is something more than a scald, "a smoother and polisher of language"; he is a Cincinnatus in literature, and occupies no west end of the world, but, like the sun, indifferently selects his rhymes, and with a liberal taste weaves into his verse the planet and the stubble.

In these old books the stucco has long since crumbled away, and we read what was sculptured in the granite. They are rude and massive in their proportions, rather than smooth and delicate in their finish. The workers in stone polish only their chimney ornaments, but their pyramids are roughly done. There is a soberness in a rough aspect, as of unhewn granite, which addresses a depth in us, but a polished surface hits only the ball of the eye. The true finish is the work of time and the use to which a thing is put. The elements are still polishing the pyramids. Art may varnish and gild, but it can do no more. A work of genius is rough-hewn from the first, because it anticipates the lapse of time, and has an ingrained polish, which still appears when fragments are broken off, an essential quality of its substance. Its beauty is at the same time its strength, and it breaks with a lustre. The great poem must have the stamp of greatness as well as its essence. The reader easily goes within the shallowest contemporary poetry, and informs it with all the life and promise of the day, as the pilgrim goes within the temple, and hears the faintest strains of the worshippers; but

it will have to speak to posterity, traversing these deserts, through the ruins of its outmost walls, by the grandeur and beauty of its proportions.

# HERALD OF FREEDOM

We have occasionally, for several years, met with a number of this spirited journal, edited, as abolitionists need not to be informed, by Nathaniel P. Rogers, once a counselor at law in Plymouth, still further up the Merrimack, but now, in his riper years, come down the hills thus far, to be the Herald of Freedom to those parts. We have been refreshed not a little by the cheap cordial of his editorials, flowing like his own mountain-torrents, now clear and sparkling, now foaming and gritty, and always spiced with the essence of the fir and the Norway pine; but never dark nor muddy, nor threatening with smothered murmurs, like the rivers of the plain. The effect of one of his effusions reminds us of what the hydropathists say about the electricity in fresh spring-water, compared with that which has stood over night, to suit weak nerves. We do not know of another notable and public instance of such pure, youthful, and hearty indignation at all wrong. The Church itself must love it, if it have any heart, though he is said to have dealt rudely with its sanctity. His clean attachment to the right, however, sanctions the severest rebuke we have read.

We have neither room, nor inclination, to criticise this paper, or its cause, at length, but would speak of it in the free and uncalculating spirit of its author. Mr. Rogers seems to us to occupy an honorable and manly position in these days, and in this country, making the press a living and breathing organ to reach the hearts of men, and not merely "fine paper, and good type," with its civil pilot sitting aft, and magnanimously waiting for the news to arrive — the vehicle of the earliest news, but the latest intelligence — recording the indubitable and last results, the marriages and deaths, alone. The present editor is wide awake, and standing on the beak of his ship; not as a scientific explorer under government, but a Yankee sealer rather, who makes those unexplored continents his harbors in which to refit for more adventurous cruises. He is a fund of news and freshness in himself — has the gift of speech, and the knack of writing, and if anything important takes place in the Granite State, we may be sure that we shall hear of it in good season. No other paper that we know keeps pace so well with one forward wave of the restless public thought and sentiment of New England, and asserts so faithfully and ingenuously the largest liberty in all things. There is, beside, more unpledged poetry in his prose than in the verses of many an accepted rhymers; and we are occasionally advertised by a mellow hunter's note from his trumpet, that, unlike most reformers, his feet are still where they should be, on the turf, and that he looks out from a serener natural life into the turbid arena of politics. Nor is slavery always a sombre theme with him, but invested with the colors of his wit and fancy,

and an evil to be abolished by other means than sorrow and bitterness of complaint. He will fight this fight with what cheer may be. But to speak of his composition. It is a genuine Yankee style, without fiction — real guessing and calculating to some purpose, and reminds us occasionally, as does all free, brave, and original writing, of its great master in these days, Thomas Carlyle. It has a life above grammar, and a meaning which need not be parsed to be understood.

But like those same mountain-torrents, there is rather too much slope to his channel, and the rainbow sprays and evaporations go double-quick-time to heaven, while the body of his water falls headlong to the plain. We would have more pause and deliberation, occasionally, if only to bring his tide to a head — more frequent expansions of the stream, still, bottomless, mountain tarns, perchance inland seas, and at length the deep ocean itself.

We cannot do better than enrich our pages with a few extracts from such articles as we have at hand. Who can help sympathizing with his righteous impatience, when invited to hold his peace or endeavor to convince the understandings of the people by well ordered arguments?

“Bandy compliments and arguments with the somnambulist, on ‘table rock,’ when all the waters of Lake Superior are thundering in the great horse-shoe, and deafening the very war of the elements! Would you not shout to him with a clap of thunder through a speaking-trumpet, if you could command it — if possible to reach his senses in his appalling extremity! Did Jonah argufy with the city of Nineveh— ‘yet forty days,’ cried the vagabond prophet, ‘and Nineveh shall be overthrown!’ That was his salutation. And did the ‘Property and Standing’ turn up their noses at him, and set the mob on to him? Did the clergy discountenance him, and call him extravagant, misguided, a divider of churches, a disturber of parishes? What would have become of that city, if they had done this? Did they ‘approve his principles’ but dislike his ‘measures’ and his ‘spirit’!!

“Slavery must be cried down, denounced down, ridiculed down, and pro-slavery with it, or rather before it. Slavery will go when pro-slavery starts. The sheep will follow when the bell-wether leads. Down, then, with the bloody system, out of the land with it, and out of the world with it — into the Red Sea with it. Men shan’t be enslaved in this country any longer. Women and children shan’t be flogged here any longer. If you undertake to hinder us, the worst is your own.”— “But this is all fanaticism. Wait and see.”

He thus raises the anti-slavery ‘war-whoop’ in New Hampshire, when an important convention is to be held, sending the summons

“To none but the whole-hearted, fully-committed, cross-the-Rubicon spirits.”— “From rich ‘old Cheshire,’ from Rockingham, with her horizon setting down away to the salt sea.”— “From where the sun sets behind Kearsarge, even to where he rises gloriously over Moses Norris’s own town of Pittsfield; and from Amoskeag to Ragged Mountains — Coos — Upper Coos, home of the everlasting hills, send out your bold advocates of human rights — wherever they lay, scattered by lonely lake,

or Indian stream, or 'Grant,' or 'Location' — from the trout-haunted brooks of the Amorisoggin, and where the adventurous streamlet takes up its mountain march for the St. Lawrence.

"Scattered and insulated men, wherever the light of philanthropy and liberty has beamed in upon your solitary spirits, come down to us like your streams and clouds — and our own Grafton, all about among your dear hills, and your mountain-flanked valleys — whether you home along the swift Ammonoosuck, the cold Pemigewasset, or the ox-bowed Connecticut." —

"We are slow, brethren, dishonorably slow, in a cause like ours. Our feet should be 'as hinds' feet.' 'Liberty lies bleeding.' The leaden-colored wing of slavery obscures the land with its baleful shadow. Let us come together, and inquire at the hand of the Lord what is to be done."

And again; on occasion of the New England Convention in the Second-Advent Tabernacle, in Boston, he desires to try one more blast, as it were, 'on Fabyan's White Mountain horn.'

"Ho, then, people of the Bay State — men, women, and children; children, women, and men, scattered friends of the friendless, wheresoever ye inhabit — if habitations ye have, as such friends have not always — along the sea-beat border of Old Essex and the Puritan Landing, and up beyond sight of the sea-cloud, among the inland hills, where the sun rises and sets upon the dry land, in that vale of the Connecticut, too fair for human content, and too fertile for virtuous industry — where deepens the haughtiest of earth's streams, on its seaward way, proud with the pride of old Massachusetts. Are there any friends of the friendless negro haunting such a valley as this? In God's name, I fear there are none, or few, for the very scene looks apathy and oblivion to the genius of humanity. I blow you the summons though. Come, if any of you are there.

"And gallant little Rhode Island; transcendent abolitionists of the tiny Commonwealth. I need not call you. You are called the year round, and, instead of sleeping in your tents, stand harnessed, and with trumpets in your hands — every one!

"Connecticut! yonder, the home of the Burleighs, the Monroes, and the Hudsons, and the native land of old George Benson! are you ready? 'All ready!'

"Maine here, off east, looking from my mountain post, like an everglade. Where is your Sam. Fessenden, who stood storm-proof 'gainst New Organization in '38? Has he too much name as a jurist and orator, to be found at a New England Convention in '43? God forbid! Come one and all of you from 'Down East' to Boston, on the 30th, and let the sails of your coasters whiten all the sea-road. Alas! there are scarce enough of you to man a fishing boat. Come up, mighty in your fewness.

"And green Vermont, what has become of your anti-slavery host — thick as your mountain maples — mastering your very politics — not by balance of power, but by sturdy majority. Where are you now? Will you be at the Advent Meeting on the 30th of May? Has anti-slavery waxed too trying for your off-hand, how-are-ye, humanity? Have you heard the voice of Freedom of late? Next week will answer.

“Poor, cold, winter-ridden New-Hampshire — winter-killed, I like to have said — she will be there, bare-foot, and bare-legged, making tracks like her old bloody-footed volunteers at Trenton. She will be there, if she can work her passage. I guess her minstrelsy\* will — for birds can go independently of car, or tardy stage-coach.” —

— “Let them come as Macaulay says they did to the siege of Rome, when they did not leave old men and women enough to begin the harvests. Oh how few we should be, if every soul of us were there. How few, and yet it is the entire muster-roll of Freedom for all the land. We should have to beat up for recruits to complete the army of Gideon, or the platoon at the Spartan straits. The foe are like the grasshoppers for multitude, as for moral power. Thick grass mows the easier, as the Goth said of the enervated millions of falling Rome. They can’t stand too thick, nor too tall for the anti-slavery scythe. Only be there at the mowing.”

In noticing the doings of another Convention, he thus congratulates himself on the liberty of speech which anti-slavery concedes to all — even to the Folsoms and Lamsons:

“Denied a chance to speak elsewhere, because they are not mad after the fashion, they all flock to the anti-slavery boards as a kind of Asylum. And so the poor old enterprise has to father all the oddity of the times. It is a glory to anti-slavery, that she can allow the poor friends the right of speech. I hope she will always keep herself able to afford it. Let the constables wait on the State House, and Jail, and the Meeting Houses. Let the door-keeper at the Anti-Slavery Hall be that tall, celestial-faced Woman, that carries the flag on the National Standard, and says, ‘without concealment,’ as well as ‘without compromise.’ Let every body in, who has sanity enough to see the beauty of brotherly kindness, and let them say their fantasies, and magnanimously bear with them, seeing unkind pro-slavery drives them in upon us. We shall have saner and sensibler meetings then, than all others in the land put together.”

More recently, speaking of the use which some of the clergy have made of Webster’s plea in the Girard case, as a seasonable aid to the church, he proceeds:

“Webster is a great man, and the clergy run under his wing. They had better employ him as counsel against the Comeouters. He wouldn’t trust the defence on the Girard will plea though, if they did. He would not risk his fame on it, as a religious argument. He would go and consult William Bassett, of Lynn, on the principles of the ‘Comeouters,’ to learn their strength; and he would get him a testament, and go into it as he does into the Constitution, and after a year’s study of it he would hardly come off in the argument as he did from the conflict with Carolina Hayne. On looking into the case, he would advise the clergy not to go to trial — to settle — or, if they couldn’t to ‘leave it out’ to a reference of ‘orthodox deacons.’

We will quote from the same sheet his indignant and touching satire on the funeral of those public officers who were killed by the explosion on board the Princeton, together with the President’s slave; an accident which reminds us how closely slavery is linked with the government of this nation. The President coming to preside over a nation of free men, and the man who stands next to him a slave!

“I saw account,” says he, “of the burial of those slaughtered politicians. The hearses passed along, of Upshur, Gilmer, Kennon, Maxcy, and Gardner — but the dead slave, who fell in company with them on the deck of the Princeton, was not there. He was held their equal by the impartial gun-burst, but not allowed by the bereaved nation a share in the funeral.” ... “Out upon their funeral, and upon the paltry procession that went in its train. Why didn’t they enquire for the body of the other man who fell on that deck! And why hasn’t the nation inquired, and its press? I saw account of the scene in a barbarian print, called the Boston Atlas, and it was dumb on the absence of that body, as if no such man had fallen. Why, I demand in the name of human nature, what was that sixth man of the game brought down by that great shot, left unburied and above ground — for there is no account yet that his body has been allowed the right of sepulture.” ... “They didn’t bury him even as a slave. They didn’t assign him a jim-crow place in that solemn procession, that he might follow to wait upon his enslavers in the land of spirits. They have gone there without slaves or waiters.” ... “The poor black man — they enslaved and imbruted him all his life, and now he is dead, they have, for aught appears, left him to decay and waste above ground. Let the civilized world take note of the circumstance.”

We deem such timely, pure, and unpremeditated expressions of a public sentiment, such publicity of genuine indignation and humanity, as abound everywhere in this journal, the most generous gifts a man can make, and should be glad to see the scraps from which we have quoted, and the others which we have not seen, collected into a volume. It might, perchance, penetrate into some quarters which the unpopular cause of freedom has not reached.

Long may we hear the voice of this Herald.

But since our voyage Rogers has died, and now there is no one in New England to express the indignation or contempt which may still be felt at any cant or inhumanity.

When, on a certain occasion, one said to him, “Why do you go about as you do, agitating the community on the subject of abolition? Jesus Christ never preached abolitionism:” he replied, “Sir, I have two answers to your appeal to Jesus Christ. First, I deny your proposition, that he never preached abolition. That single precept of his— ‘Whatsoever ye would that men should do to you, do ye even so to them’ — reduced to practice, would abolish slavery over the whole earth in twenty-four hours. That is my first answer. I deny your proposition.

Secondly, granting your proposition to be true — and admitting what I deny — that Jesus Christ did not preach the abolition of slavery, then I say, “he didn’t do his duty.”

His was not the wisdom of the head, but of the heart. If perhaps he had all the faults, he had more than the usual virtues of the radical. He loved his native soil, her hills and streams, like a Burns or Scott. As he rode to an antislavery convention, he viewed the country with a poet’s eye, and some of his letters written back to his editorial substitute contain as true and pleasing pictures of New England life and scenery as are anywhere to be found.

Whoever heard of Swamscot before? “Swamscot is all fishermen. Their business is all on the deep. Their village is ranged along the ocean margin, where their brave little fleets lay drawn up, and which are out at day-break on the mighty blue — where you may see them brooding at anchor — still and intent at their profound trade, as so many flies on the back of a wincing horse, and for whose wincings they care as little as the Swamscot Fishers heed the restless heavings of the sea around their barks. Every thing about savors of fish. Nets hang out on every enclosure. Flakes, for curing the fish are attached to almost every dwelling. Every body has a boat — and you’ll see a huge pair of sea boots lying before almost every door. The air too savors strongly of the common finny vocation. Beautiful little beaches slope out from the dwellings into the Bay, all along the village — where the fishing boats lie keeled up, at low water, with their useless anchors hooked deep into the sand. A stranded bark is a sad sight — especially if it is above high water mark, where the next tide can’t relieve it and set it afloat again. The Swamscot boats though, all look cheery, and as if sure of the next sea-flow. The people are said to be the freest in the region — owing perhaps to their bold and adventurous life. The Priests can’t ride them out into the deep, as they can the shore folks. “

His style and vein though often exaggerated and affected were more native to New England than those of any of her sons, and unfinished as his pieces were, yet their literary merit has been overlooked.

# WENDELL PHILLIPS BEFORE THE CONCORD LYCEUM

Concord, Mass. March 12th, 1845.

Mr. Editor: —

We have now, for the third winter, had our spirits refreshed, and our faith in the destiny of the commonwealth strengthened, by the presence and the eloquence of Wendell Phillips; and we wish to tender to him our thanks and our sympathy. The admission of this gentleman into the Lyceum has been strenuously opposed by a respectable portion of our fellow citizens, who themselves, we trust, whose descendants, at least, we know, will be as faithful conservers of the true order, whenever that shall be the order of the day — and in each instance, the people have voted that they would hear him, by coming themselves and bringing their friends to the lecture room, and being very silent that they might hear. We saw some men and women, who had long ago come out, going in once more through the free and hospitable portals of the Lyceum; and many of our neighbors confessed, that they had had a “sound season” this once.

It was the speaker’s aim to show what the State, and above all the Church, had to do, and now, alas! have done, with Texas and slavery, and how much, on the other hand, the individual should have to do with church and state. These were fair themes, and not mistimed; and his words were addressed to “fit audience, and not few.”

We must give Mr. Phillips the credit of being a clean, erect, and what was once called a consistent man. He at least is not responsible for slavery, nor for American Independence; for the hypocrisy and superstition of the Church, nor the timidity and selfishness of the State; nor for the indifference and willing ignorance of any. He stands so distinctly, so firmly, and so effectively, alone, and one honest man is so much more than a host, that we cannot but feel that he does himself injustice when he reminds us of “the American Society, which he represents.” It is rare that we have the pleasure of listening to so clear and orthodox a speaker, who obviously has so few cracks or flaws in his moral nature — who, having words at his command in a remarkable degree, has much more than words, if these should fail, in his unquestionable earnestness and integrity — and, aside from their admiration at his rhetoric, secures the genuine respect of his audience. He unconsciously tells his biography as he proceeds, and we see him early and earnestly deliberating on these subjects, and wisely and bravely, without counsel or consent of any, occupying a ground at first, from which the varying tides of public opinion cannot drive him.

No one could mistake the genuine modesty and truth with which he affirmed, when speaking of the framers of the Constitution— “I am wiser than they,” which with him has improved these sixty years’ experience of its working; or the uncompromising consistency and frankness of the prayer which concluded, not like the Thanksgiving proclamations, with— “God save the Commonwealth of Massachusetts,” but God dash it into a thousand pieces, till there shall not remain a fragment on which a man can stand, and dare not tell his name — referring to the case of Frederick — .

To our disgrace we know not what to call him, unless Scotland will lend us the spoils of one of her Douglasses, out of history or fiction, for a season, till we be hospitable and brave enough to hear his proper name — a fugitive slave in one more sense than we; who has proved himself the possessor of a fair intellect, and has won a colorless reputation in these parts; and who, we trust, will be as superior to degradation from the sympathies of Freedom, as from the antipathies of slavery. When, said Mr. Phillips, he communicated to a New Bedford audience, the other day, his purpose of writing his life, and telling his name, and the name of his master, and the place he ran from, the murmur ran round the room, and was anxiously whispered by the sons of the Pilgrims, “He had better not!” and it was echoed under the shadow of Concord monument, “He had better not!”

We would fain express our appreciation of the freedom and steady wisdom, so rare in the reformer, with which he declared that he was not born to abolish slavery, but to do right. We have heard a few, a very few, good political speakers, who afforded us the pleasure of great intellectual power and acuteness, of soldier-like steadiness, and of a graceful and natural oratory; but in this man the audience might detect a sort of moral principle and integrity, which was more stable than their firmness, more discriminating than his own intellect, and more graceful than his rhetoric, which was not working for temporary or trivial ends. It is so rare and encouraging to listen to an orator, who is content with another alliance than with the popular party, or even with the sympathizing school of the martyrs, who can afford sometimes to be his own auditor if the mob stay away, and hears himself without reproof, that we feel ourselves in danger of slandering all mankind by affirming, that here is one, who is at the same time an eloquent speaker and a righteous man.

Perhaps, on the whole, the most interesting fact elicited by these addresses, is the readiness of the people at large, of whatever sect or party, to entertain, with good will and hospitality, the most revolutionary and heretical opinions, when frankly and adequately, and in some sort cheerfully, expressed. Such clear and candid declaration of opinion served like an electuary to whet and clarify the intellect of all parties, and furnished each one with an additional argument for that right he asserted.

We consider Mr. Phillips one of the most conspicuous and efficient champions of a true Church and State now in the field, and would say to him, and such as are like him, “God speed you.” If you know of any champion in the ranks of his opponents, who has the valor and courtesy even of Paynim chivalry, if not the Christian graces and refinement of this knight, you will do us a service by directing him to these fields

forthwith, where the lists are now open, and he shall be hospitably entertained. For as yet the red-cross knight has shown us only the gallant device upon his shield, and his admirable command of his steed, prancing and curveting in the empty lists; but we wait to see who, in the actual breaking of lances, will come tumbling upon the plain.

# THOMAS CARLYLE AND HIS WORKS

Thomas Carlyle is a Scotchman, born about fifty years ago, "at Ecclefechan, Annandale," according to one authority. "His parents 'good farmer people,' his father an elder in the Secession church there, and a man of strong native sense, whose words were said to 'nail a subject to the wall.'" We also hear of his "excellent mother," still alive, and of "her fine old covenanting accents, converting with his transcendental tones." He seems to have gone to school at Annan, on the shore of the Solway Firth, and there, as he himself writes, "heard of famed professors, of high matters classical, mathematical, a whole Wonderland of Knowledge," from Edward Irving, then a young man "fresh from Edinburgh, with college prizes, ... come to see our schoolmaster, who had also been his." From this place, they say, you can look over into Wordsworth's country. Here first he may have become acquainted with Nature, with woods, such as are there, and rivers and brooks, some of whose names we have heard, and the last lapses of Atlantic billows. He got some of his education, too, more or less liberal, out of the University of Edinburgh, where, according to the same authority, he had to "support himself," partly by "private tuition, translations for the booksellers, etc.," and afterward, as we are glad to hear, "taught an academy in Dysart, at the same time that Irving was teaching in Kirkaldy," the usual middle passage of a literary life. He was destined for the Church, but not by the powers that rule man's life; made his literary *début* in Fraser's Magazine, long ago; read here and there in English and French, with more or less profit, we may suppose, such of us at least as are not particularly informed, and at length found some words which spoke to his condition in the German language, and set himself earnestly to unravel that mystery — with what success many readers know.

After his marriage he "resided partly at Comely Bank, Edinburgh; and for a year or two at Craigenputtock, a wild and solitary farmhouse in the upper part of Dumfriesshire," at which last place, amid barren heather hills, he was visited by our countryman, Emerson. With Emerson he still corresponds. He was early intimate with Edward Irving, and continued to be his friend until the latter's death. Concerning this "freest, brotherliest, bravest human soul," and Carlyle's relation to him, those whom it concerns will do well to consult a notice of his death in Fraser's Magazine for 1835, reprinted in the Miscellanies. He also corresponded with Goethe. Latterly, we hear, the poet Sterling was his only intimate acquaintance in England.

He has spent the last quarter of his life in London, writing books; has the fame, as all readers know, of having made England acquainted with Germany, in late years, and done much else that is novel and remarkable in literature. He especially is the literary man of those parts. You may imagine him living in altogether a retired and simple way, with small family, in a quiet part of London, called Chelsea, a little out of the din of commerce, in "Cheyne Row," there, not far from the "Chelsea Hospital.

"A little past this, and an old ivy-clad church, with its buried generations lying around it," writes one traveler, "you come to an antique street running at right angles with the Thames, and, a few steps from the river, you find Carlyle's name on the door." "A Scotch lass ushers you into the second story front chamber, which is the spacious workshop of the world maker." Here he sits a long time together, with many books and papers about him; many new books, we have been told, on the upper shelves, uncut, with the "author's respects" in them; in late months, with many manuscripts in an old English hand, and innumerable pamphlets, from the public libraries, relating to the Cromwellian period; now, perhaps, looking out into the street on brick and pavement, for a change, and now upon some rod of grass ground in the rear; or, perchance, he steps over to the British Museum, and makes that his studio for the time. This is the fore part of the day; that is the way with literary men commonly; and then in the afternoon, we presume, he takes a short run of a mile or so through the suburbs out into the country; we think he would run that way, though so short a trip might not take him to very sylvan or rustic places. In the meanwhile, people are calling to see him, from various quarters, few very worthy of being seen by him; "distinguished travelers from America," not a few; to all and sundry of whom he gives freely of his yet unwritten rich and flashing soliloquy, in exchange for whatever they may have to offer; speaking his English, as they say, with a "broad Scotch accent," talking, to their astonishment and to ours, very much as he writes, a sort of Carlylese, his discourse "coming to its climaxes, ever and anon, in long, deep, chest-shaking bursts of laughter."

He goes to Scotland sometimes, to visit his native heath-clad hills, having some interest still in the earth there; such names as Craigenputtock and Ecclefechan, which we have already quoted, stand for habitable places there to him; or he rides to the seacoast of England in his vacations, upon his horse Yankee, bought by the sale of his books here, as we have been told.

How, after all, he gets his living; what proportion of his daily bread he earns by day-labor or job-work with his pen, what he inherits, what steals — questions whose answers are so significant, and not to be omitted in his biography — we, alas! are unable to answer here. It may be worth the while to state that he is not a Reformer in our sense of the term — eats, drinks, and sleeps, thinks and believes, professes and practices, not according to the New England standard, nor to the Old English wholly. Nevertheless, we are told that he is a sort of lion in certain quarters there, "an amicable centre for men of the most opposite opinions," and "listened to as an oracle," "smoking his perpetual pipe."

A rather tall, gaunt figure, with intent face, dark hair and complexion, and the air of a student; not altogether well in body, from sitting too long in his workhouse — he, born in the Border Country and descended from moss-troopers, it may be.

We have seen several pictures of him here; one, a full-length portrait, with hat and overall, if it did not tell us much, told the fewest lies; another, we remember, was well said to have “too combed a look;” one other also we have seen in which we discern some features of the man we are thinking of; but the only ones worth remembering, after all, are those which he has unconsciously drawn of himself.

When we remember how these volumes came over to us, with their encouragement and provocation from month to month, and what commotion they created in many private breasts, we wonder that the country did not ring, from shore to shore, from the Atlantic to the Pacific, with its greeting; and the Boones and Crocketts of the West make haste to hail him, whose wide humanity embraces them too. Of all that the packets have brought over to us, has there been any richer cargo than this? What else has been English news for so long a season? What else, of late years, has been England to us — to us who read books, we mean? Unless we remembered it as the scene where the age of Wordsworth was spending itself, and a few younger muses were trying their wings, and from time to time as the residence of Landor, Carlyle alone, since the death of Coleridge, has kept the promise of England. It is the best apology for all the bustle and the sin of commerce, that it has made us acquainted with the thoughts of this man. Commerce would not concern us much if it were not for such results as this. New England owes him a debt which she will be slow to recognize. His earlier essays reached us at a time when Coleridge’s were the only recent words which had made any notable impression so far, and they found a field unoccupied by him, before yet any words of moment had been uttered in our midst. He had this advantage, too, in a teacher, that he stood near to his pupils; and he has no doubt afforded reasonable encouragement and sympathy to many an independent but solitary thinker.

It is remarkable, but on the whole, perhaps, not to be lamented, that the world is so unkind to a new book. Any distinguished traveler who comes to our shores is likely to get more dinners and speeches of welcome than he can well dispose of, but the best books, if noticed at all, meet with coldness and suspicion, or, what is worse, gratuitous, off-hand criticism. It is plain that the reviewers, both here and abroad, do not know how to dispose of this man. They approach him too easily, as if he were one of the men of letters about town, who grace Mr. Somebody’s administration, merely; but he already belongs to literature, and depends neither on the favor of reviewers, nor the honesty of booksellers, nor the pleasure of readers for his success. He has more to impart than to receive from his generation. He is another such a strong and finished workman in his craft as Samuel Johnson was, and, like him, makes the literary class respectable; since few are yet out of their apprenticeship, or, even if they learn to be able writers, are at the same time able and valuable thinkers. The aged and critical eye, especially, is incapacitated to appreciate the works of this author. To such their meaning is impalpable and evanescent, and they seem to abound only in

obstinate mannerisms, Germanisms, and whimsical ravings of all kinds, with now and then an unaccountably true and sensible remark. On the strength of this last, Carlyle is admitted to have what is called genius. We hardly know an old man to whom these volumes are not hopelessly sealed.

The language, they say, is foolishness and a stumbling-block to them; but to many a clear-headed boy they are plainest English, and dispatched with such hasty relish as his bread and milk. The fathers wonder how it is that the children take to this diet so readily, and digest it with so little difficulty. They shake their heads with mistrust at their free and easy delight, and remark that "Mr. Carlyle is a very learned Man;" for they, too, not to be out of fashion, have got grammar and dictionary, if the truth were known, and with the best faith cudgelled their brains to get a little way into the jungle, and they could not but confess, as often as they found the clue, that it was as intricate as Blackstone to follow, if you read it honestly. But merely reading, even with the best intentions, is not enough: you must almost have written these books yourself. Only he who has had the good fortune to read them in the nick of time, in the most perceptive and recipient season of life, can give any adequate account of them.

Many have tasted of this well with an odd suspicion, as if it were some fountain Arethuse which had flowed under the sea from Germany, as if the materials of his books had lain in some garret there, in danger of being appropriated for waste-paper. Over what German ocean, from what Hercynian forest, he has been imported, piecemeal, into England, or whether he has now all arrived, we are not informed. This article is not invoiced in Hamburg nor in London. Perhaps it was contraband. However, we suspect that this sort of goods cannot be imported in this way. No matter how skillful the stevedore, all things being got into sailing trim, wait for a Sunday, and aft wind, and then weigh anchor, and run up the main-sheet — straightway what of transcendent and permanent value is there resists the aft wind, and will doggedly stay behind that Sunday — it does not travel Sundays; while biscuit and pork make headway, and sailors cry heave-yo! It must part company, if it open a seam. It is not quite safe to send out a venture in this kind, unless yourself go supercargo. Where a man goes, there he is; but the slightest virtue is immovable — it is real estate, not personal; who would keep it, must consent to be bought and sold with it.

However, we need not dwell on this charge of a German extraction, it being generally admitted, by this time, that Carlyle is English, and an inhabitant of London. He has the English for his mother-tongue, though with a Scotch accent, or never so many accents, and thoughts also, which are the legitimate growth of native soil, to utter therewith. His style is eminently colloquial, and no wonder it is strange to meet with in a book. It is not literary or classical; it has not the music of poetry, nor the pomp of philosophy, but the rhythms and cadences of conversation endlessly repeated. It resounds with emphatic, natural, lively, stirring tones, muttering, rattling, exploding, like shells and shot, and with like execution. So far as it is a merit in composition that the written answer to the spoken word, and the spoken word to a fresh and pertinent

thought in the mind, as well as to the half thoughts, the tumultuary misgivings and expectancies, this author is, perhaps, not to be matched in literature.

He is no mystic, either, more than Newton or Arkwright or Davy, and tolerates none. Not one obscure line, or half line, did he ever write.

His meaning lies plain as the daylight, and he who runs may read; indeed, only he who runs can read, and keep up with the meaning. It has the distinctness of picture to his mind, and he tells us only what he sees printed in largest English type upon the face of things. He utters substantial English thoughts in plainest English dialects; for it must be confessed, he speaks more than one of these. All the shires of England, and all the shires of Europe, are laid under contribution to his genius; for to be English does not mean to be exclusive and narrow, and adapt one's self to the apprehension of his nearest neighbor only. And yet no writer is more thoroughly Saxon. In the translation of those fragments of Saxon poetry, we have met with the same rhythm that occurs so often in his poem on the French Revolution. And if you would know where many of those obnoxious Carlyleisms and Germanisms came from, read the best of Milton's prose, read those speeches of Cromwell which he has brought to light, or go and listen once more to your mother's tongue. So much for his German extraction.

Indeed, for fluency and skill in the use of the English tongue, he is a master unrivaled. His felicity and power of expression surpass even his special merits as historian and critic. Therein his experience has not failed him, but furnished him with such a store of winged, ay and legged words, as only a London life, perchance, could give account of. We had not understood the wealth of the language before. Nature is ransacked, and all the resorts and purlieus of humanity are taxed, to furnish the fittest symbol for his thought. He does not go to the dictionary, the word-book, but to the word-manufactory itself, and has made endless work for the lexicographers. Yes, he has that same English for his mother-tongue that you have, but with him it is no dumb, muttering, mumbling faculty, concealing the thoughts, but a keen, unwearied, resistless weapon. He has such command of it as neither you nor I have; and it would be well for any who have a lost horse to advertise, or a town-meeting warrant, or a sermon, or a letter to write, to study this universal letter-writer, for he knows more than the grammar or the dictionary.

The style is worth attending to, as one of the most important features of the man which we at this distance can discern. It is for once quite equal to the matter. It can carry all its load, and never breaks down nor staggers. His books are solid and workmanlike, as all that England does; and they are graceful and readable also. They tell of huge labor done, well done, and all the rubbish swept away, like the bright cutlery which glitters in shop windows, while the coke and ashes, the turnings, filings, dust, and borings lie far away at Birmingham, unheard of. He is a masterly clerk, scribe, reporter, writer. He can reduce to writing most things — gestures, winks, nods, significant looks, patois, brogue, accent, pantomime, and how much that had passed for silence before does he represent by written words. The countryman who puzzled the city lawyer, requiring him to write, among other things, his call to his horses, would

hardly have puzzled him; he would have found a word for it, all right and classical, that would have started his team for him.

Consider the ceaseless tide of speech forever flowing in countless cellars, garrets, parlors; that of the French, says Carlyle, "only ebbs toward the short hours of night," and what a drop in the bucket is the printed word. Feeling, thought, speech, writing, and, we might add, poetry, inspiration — for so the circle is completed; how they gradually dwindle; at length, passing through successive colanders, into your history and classics, from the roar of the ocean, the murmur of the forest, to the squeak of a mouse; so much only parsed and spelt out, and punctuated, at last. The few who can talk like a book, they only get reported commonly. But this writer ports a new *lieferung*.

One wonders how so much, after all, was expressed in the old way, so much here depends upon the emphasis, tone, pronunciation, style, and spirit of the reading. No writer uses so profusely all the aids to intelligibility which the printer's art affords. You wonder how others had contrived to write so many pages without emphatic or italicized words, they are so expressive, so natural, so indispensable here, as if none had ever used the demonstrative pronouns demonstratively before. In another's sentences the thought, though it may be immortal, is as it were embalmed, and does not strike you, but here it is so freshly living, even the body of it not having passed through the ordeal of death, that it stirs in the very extremities, and the smallest particles and pronouns are all alive within it. It is not simple dictionary it, yours or mine, but it. The words did not come at the command of grammar, but of a tyrannous, inexorable meaning; not like standing soldiers, by vote of Parliament, but any able-bodied countryman pressed into the service, for "Sire, it is not a revolt, it is a revolution."

We have never heard him speak, but we should say that Carlyle was a rare talker. He has broken the ice, and streams freely forth like a spring torrent. He does not trace back the stream of his thought, silently adventurous, up to its fountain-head, but is borne away with it, as it rushes through his brain like a torrent to overwhelm and fertilize. He holds a talk with you. His audience is such a tumultuous mob of thirty thousand as assembled at the University of Paris, before printing was invented. Philosophy, on the other hand, does not talk, but write, or, when it comes personally before an audience, lecture or read; and therefore it must be read tomorrow, or a thousand years hence. But the talker must naturally be attended to at once; he does not talk on without an audience; the winds do not long bear the sound of his voice. Think of Carlyle reading his "French Revolution" to any audience. One might say it was never written, but spoken; and thereafter reported and printed, that those not within sound of his voice might know something about it. Some men read to you something which they have written in a dead language, of course, but it may be in a living letter, in Syriac, or Roman, or Runic character. Men must speak English who can write Sanskrit; they must speak a modern language who write, perchance, an ancient and universal one. We do not live in those days when the learned used a learned language.

There is no writing of Latin with Carlyle; but as Chaucer, with all reverence to Homer, and Virgil, and Messieurs the Normans, sung his poetry in the homely Saxon tongue, and Locke has at least the merit of having done philosophy into English, so Carlyle has done a different philosophy still further into English, and thrown open the doors of literature and criticism to the populace.

Such a style — so diversified and variegated! It is like the face of a country; it is like a New England landscape, with farmhouses and villages, and cultivated spots, and belts of forests and blueberry swamps round about, with the fragrance of shad-blossoms and violets on certain winds. And as for the reading of it, it is novel enough to the reader who has used only the diligence, and old line mail-coach. It is like traveling, sometimes on foot, sometimes in a gig tandem; sometimes in a full coach, over highways, mended and unmended, for which you will prosecute the town; on level roads, through French departments, by Simplon roads over the Alps; and now and then he hauls up for a relay, and yokes in an unbroken colt of a Pegasus for a leader, driving off by cart-paths, and across lots, by corduroy roads and gridiron bridges; and where the bridges are gone, not even a string-piece left, and the reader has to set his breast and swim. You have got an expert driver this time, who has driven ten thousand miles, and was never known to upset; can drive six in hand on the edge of a precipice, and touch the leaders anywhere with his snapper.

With wonderful art he grinds into paint for his picture all his moods and experiences, so that all his forces may be brought to the encounter. Apparently writing without a particular design or responsibility, setting down his soliloquies from time to time, taking advantage of all his humors, when at length the hour comes to declare himself, he puts down in plain English, without quotation marks, what he, Thomas Carlyle, is ready to defend in the face of the world, and fathers the rest, often quite as defensible, only more modest, or plain-spoken, or insinuating, upon “Sauerteig,” or some other gentleman long employed on the subject. Rolling his subject how many ways in his mind, he meets it now face to face, wrestling with it at arm’s length, and striving to get it down, or throw it over his head; and if that will not do, or whether it will do or not, tries the back stitch and side hug with it, and downs it again, scalps it, draws and quarters it, hangs it in chains, and leaves it to the winds and dogs. With his brows knit, his mind made up, his will resolved and resistless, he advances, crashing his way through the host of weak, half-formed, dilettante opinions, honest and dishonest ways of thinking, with their standards raised, sentimentalities and conjectures, and tramples them all into dust. See how he prevails; you don’t even hear the groans of the wounded and dying. Certainly it is not so well worth the while to look through any man’s eyes at history, for the time, as through his; and his way of looking at things is fastest getting adopted by his generation.

It is not in man to determine what his style shall be. He might as well determine what his thoughts shall be. We would not have had him write always as in the chapter on Burns, and the Life of Schiller, and elsewhere. No; his thoughts were ever irregular and

impetuous. Perhaps as he grows older and writes more he acquires a truer expression; it is in some respects manlier, freer, struggling up to a level with its fountain-head.

We think it is the richest prose style we know of.

Who cares what a man's style is, so it is intelligible — as intelligible as his thought. Literally and really, the style is no more than the stylus, the pen he writes with; and it is not worth scraping and polishing, and gilding, unless it will write his thoughts the better for it. It is something for use, and not to look at. The question for us is, not whether Pope had a fine style, wrote with a peacock's feather, but whether he uttered useful thoughts. Translate a book a dozen times from one language to another, and what becomes of its style? Most books would be worn out and disappear in this ordeal. The pen which wrote it is soon destroyed, but the poem survives. We believe that Carlyle has, after all, more readers, and is better known today for this very originality of style, and that posterity will have reason to thank him for emancipating the language, in some measure, from the fetters which a merely conservative, aimless, and pedantic literary class had imposed upon it, and setting an example of greater freedom and naturalness. No man's thoughts are new, but the style of their expression is the never-failing novelty which cheers and refreshes men. If we were to answer the question, whether the mass of men, as we know them, talk as the standard authors and reviewers write, or rather as this man writes, we should say that he alone begins to write their language at all, and that the former is, for the most part, the mere effigies of a language, not the best method of concealing one's thoughts even, but frequently a method of doing without thoughts at all.

In his graphic description of Richter's style, Carlyle describes his own pretty nearly; and no doubt he first got his own tongue loosened at that fountain, and was inspired by it to equal freedom and originality. "The language," as he says of Richter, "groans with indescribable metaphors and allusions to all things, human and divine, flowing onward, not like a river, but like an inundation; circling in complex eddies, chafing and gurgling, now this way, now that;" but in Carlyle, "the proper current" never "sinks out of sight amid the boundless uproar." Again: "His very language is Titanian — deep, strong, tumultuous, shining with a thousand hues, fused from a thousand elements, and winding in labyrinthic mazes."

In short, if it is desirable that a man be eloquent, that he talk much, and address himself to his own age mainly, then this is not a bad style of doing it. But if it is desired rather that he pioneer into unexplored regions of thought, and speak to silent centuries to come, then, indeed, we could wish that he had cultivated the style of Goethe more, that of Richter less; not that Goethe's is the kind of utterance most to be prized by mankind, but it will serve for a model of the best that can be successfully cultivated.

But for style, and fine writing, and Augustan ages, that is but a poor style, and vulgar writing, and a degenerate age, which allows us to remember these things. This man has something to communicate. Carlyle's are not, in the common sense, works of art in their origin and aim; and yet, perhaps, no living English writer evinces an equal literary talent.

They are such works of art only as the plow and corn-mill and steam-engine — not as pictures and statues. Others speak with greater emphasis to scholars, as such, but none so earnestly and effectually to all who can read. Others give their advice, he gives his sympathy also. It is no small praise that he does not take upon himself the airs, has none of the whims, none of the pride, the nice vulgarities, the starched, impoverished isolation, and cold glitter of the spoiled children of genius. He does not need to husband his pearl, but excels by a greater humanity and sincerity.

He is singularly serious and untrivial. We are everywhere impressed by the rugged, unwearied, and rich sincerity of the man. We are sure that he never sacrificed one jot of his honest thought to art or whim, but to utter himself in the most direct and effectual way — that is the endeavor. These are merits which will wear well. When time has worn deeper into the substance of these books, this grain will appear. No such sermons have come to us here out of England, in late years, as those of this preacher — sermons to kings, and sermons to peasants, and sermons to all intermediate classes. It is in vain that John Bull, or any of his cousins, turns a deaf ear, and pretends not to hear them: nature will not soon be weary of repeating them. There are words less obviously true, more for the ages to hear, perhaps, but none so impossible for this age not to hear. What a cutting cimeter was that “Past and Present,” going through heaps of silken stuffs, and glibly through the necks of men, too, without their knowing it, leaving no trace! He has the earnestness of a prophet. In an age of pedantry and dilettantism, he has no grain of these in his composition. There is nowhere else, surely, in recent readable English, or other books, such direct and effectual teaching, reproving, encouraging, stimulating, earnestly, vehemently, almost like Mahomet, like Luther; not looking behind him to see how his Opera Omnia will look, but forward to other work to be done. His writings are a gospel to the young of this generation; they will hear his manly, brotherly speech with responsive joy, and press forward to older or newer gospels.

We should omit a main attraction in these books, if we said nothing of their humor. Of this indispensable pledge of sanity, without some leaven of which the abstruse thinker may justly be suspected of mysticism, fanaticism, or insanity, there is a superabundance in Carlyle. Especially the transcendental philosophy needs the leaven of humor to render it light and digestible. In his later and longer works it is an unflinching accompaniment, reverberating through pages and chapters, long sustained without effort. The very punctuation, the italics, the quotation marks, the blank spaces and dashes, and the capitals, each and all are pressed into its service.

Carlyle’s humor is vigorous and titanic, and has more sense in it than the sober philosophy of many another. It is not to be disposed of by laughter and smiles merely; it gets to be too serious for that: only they may laugh who are not hit by it. For those who love a merry jest, this is a strange kind of fun — rather too practical joking, if they understand it. The pleasant humor which the public loves is but the innocent pranks of the ballroom, harmless flow of animal spirits, the light plushy pressure of dandy pumps, in comparison.

But when an elephant takes to treading on your corns, why then you are lucky if you sit high, or wear cowhide. His humor is always subordinate to a serious purpose, though often the real charm for the reader is not so much in the essential progress and final upshot of the chapter as in this indirect side-light illustration of every hue. He sketches first, with strong, practical English pencil, the essential features in outline, black on white, more faithfully than Dryasdust would have done, telling us wisely whom and what to mark, to save time, and then with brush of camel's-hair, or sometimes with more expeditious swab, he lays on the bright and fast colors of his humor everywhere. One piece of solid work, be it known, we have determined to do, about which let there be no jesting, but all things else under the heavens, to the right and left of that, are for the time fair game. To us this humor is not wearisome, as almost every other is. Rabelais, for instance, is intolerable; one chapter is better than a volume — it may be sport to him, but it is death to us. A mere humorist, indeed, is a most unhappy man; and his readers are most unhappy also.

Humor is not so distinct a quality as, for the purposes of criticism, it is commonly regarded, but allied to every, even the divinest faculty. The familiar and cheerful conversation about every hearthside, if it be analyzed, will be found to be sweetened by this principle. There is not only a never-failing, pleasant, and earnest humor kept up there, embracing the domestic affairs, the dinner, and the scolding, but there is also a constant run upon the neighbors, and upon Church and State, and to cherish and maintain this, in a great measure, the fire is kept burning, and the dinner provided. There will be neighbors, parties to a very genuine, even romantic friendship, whose whole audible salutation and intercourse, abstaining from the usual cordial expressions, grasping of hands, or affectionate farewells, consists in the mutual play and interchange of a genial and healthy humor, which excepts nothing, not even themselves, in its lawless range. The child plays continually, if you will let it, and all its life is a sort of practical humor of a very pure kind, often of so fine and ethereal a nature, that its parents, its uncles and cousins, can in no wise participate in it, but must stand aloof in silent admiration, and reverence even. The more quiet the more profound it is. Even Nature is observed to have her playful moods or aspects, of which man seems sometimes to be the sport.

But, after all, we could sometimes dispense with the humor, though unquestionably incorporated in the blood, if it were replaced by this author's gravity. We should not apply to himself, without qualification, his remarks on the humor of Richter. With more repose in his inmost being, his humor would become more thoroughly genial and placid. Humor is apt to imply but a half satisfaction at best. In his pleasantest and most genial hour, man smiles but as the globe smiles, and the works of nature. The fruits dry ripe, and much as we relish some of them in their green and pulpy state, we lay up for our winter store, not out of these, but the rustling autumnal harvests.

Though we never weary of this vivacious wit, while we are perusing its work, yet when we remember it from afar, we sometimes feel balked and disappointed, missing the security, the simplicity, and frankness, even the occasional magnanimity of acknowl-

edged dullness and bungling. This never-failing success and brilliant talent become a reproach.

Besides, humor does not wear well. It is commonly enough said, that a joke will not bear repeating. The deepest humor will not keep. Rumors do not circulate but stagnate, or circulate partially. In the oldest literature, in the Hebrew, the Hindoo, the Persian, the Chinese, it is rarely humor, even the most divine, which still survives, but the most sober and private, painful or joyous thoughts, maxims of duty, to which the life of all men may be referred. After time has sifted the literature of a people, there is left only their scripture, for that is writing, par excellence. This is as true of the poets, as of the philosophers and moralists by profession; for what subsides in any of these is the moral only, to reappear as dry land at some remote epoch.

We confess that Carlyle's humor is rich, deep, and variegated, in direct communication with the backbone and risible muscles of the globe — and there is nothing like it; but much as we relish this jovial, this rapid and delugeous way of conveying one's views and impressions, when we would not converse but meditate, we pray for a man's diamond edition of his thought, without the colored illuminations in the margin — the fishes and dragons and unicorns, the red or the blue ink, but its initial letter in distinct skeleton type, and the whole so clipped and condensed down to the very essence of it, that time will have little to do. We know not but we shall immigrate soon, and would fain take with us all the treasures of the East; and all kinds of dry, portable soups, in small tin canisters, which contain whole herds of English beeves boiled down, will be acceptable.

The difference between this flashing, fitful writing and pure philosophy is the difference between flame and light. The flame, indeed, yields light; but when we are so near as to observe the flame, we are apt to be incommoded by the heat and smoke. But the sun, that old Platonist, is set so far off in the heavens, that only a genial summer heat and ineffable daylight can reach us. But many a time, we confess, in wintry weather, we have been glad to forsake the sunlight, and warm us by these Promethean flames. Carlyle must undoubtedly plead guilty to the charge of mannerism. He not only has his vein, but his peculiar manner of working it. He has a style which can be imitated, and sometimes is an imitator of himself.

Certainly, no critic has anywhere said what is more to the purpose than this which Carlyle's own writings furnish, which we quote, as well for its intrinsic merit as for its pertinence here. "It is true," says he, thinking of Richter, "the beaten paths of literature lead the safest to the goal; and the talent pleases us most which submits to shine with new gracefulness through old forms. Nor is the noblest and most peculiar mind too noble or peculiar for working by prescribed laws; Sophocles, Shakespeare, Cervantes, and, in Richter's own age, Goethe, how little did they innovate on the given forms of composition, how much in the spirit they breathed into them! All this is true; and Richter must lose of our esteem in proportion.

And again, in the chapter on Goethe, "We read Goethe for years before we come to see wherein the distinguishing peculiarity of his understanding, of his disposition, even

of his way of writing, consists! It seems quite a simple style — that of his; remarkable chiefly for its calmness, its perspicuity, in short, its commonness; and yet it is the most uncommon of all styles.” And this, too, translated for us by the same pen from Schiller, which we will apply not merely to the outward form of his works, but to their inner form and substance. He is speaking of the artist. “Let some beneficent divinity snatch him, when a suckling, from the breast of his mother, and nurse him with the milk of a better time, that he may ripen to his full stature beneath a distant Grecian sky. And having grown to manhood, let him return, a foreign shape, into his century; not, however, to delight it by his presence, but, dreadful, like the son of Agamemnon, to purify it. The matter of his works he will take from the present, but their form he will derive from a nobler time; nay, from beyond all time, from the absolute unchanging unity of his own nature.”

But enough of this. Our complaint is already out of all proportion to our discontent.

Carlyle’s works, it is true, have not the stereotyped success which we call classic. They are a rich but inexpensive entertainment, at which we are not concerned lest the host has strained or impoverished himself to feed his guests. It is not the most lasting word, nor the loftiest wisdom, but rather the word which comes last. For his genius it was reserved to give expression to the thoughts which were throbbing in a million breasts. He has plucked the ripest fruit in the public garden; but this fruit already least concerned the tree that bore it, which was rather perfecting the bud at the foot of the leaf-stalk. His works are not to be studied, but read with a swift satisfaction. Their flavor and gust is like what poets tell of the froth of wine, which can only be tasted once and hastily. On a review we can never find the pages we had read. Yet they are in some degree true natural products in this respect. All things are but once, and never repeated. These works were designed for such complete success that they serve but for a single occasion.

But he is willfully and pertinaciously unjust, even scurrilous, impolite, ungentlemanly; calls us “Imbeciles,” “Dilettantes,” “Philistines,” implying sometimes what would not sound well expressed. If he would adopt the newspaper style, and take back these hard names — But where is the reader who does not derive some benefit from these epithets, applying them to himself?

He is, in fact, the best tempered, and not the least impartial of reviewers. He goes out of his way to do justice to profligates and quacks. There is somewhat even Christian, in the rarest and most peculiar sense, in his universal brotherliness, his simple, childlike endurance, and earnest, honest endeavor, with sympathy for the like. Carlyle, to adopt his own classification, is himself the hero as literary man. There is no more notable workingman in England, in Manchester or Birmingham, or the mines round about. We know not how many hours a day he toils, nor for what wages, exactly: we only know the results for us.

Notwithstanding the very genuine, admirable, and loyal tributes to Burns, Schiller, Goethe, and others, Carlyle is not a critic of poetry. In the book of heroes, Shakespeare, the hero as poet, comes off rather slimly. His sympathy, as we said, is with the men of

endeavor; not using the life got, but still bravely getting their life. "In fact," as he says of Cromwell, "everywhere we have to notice the decisive practical eye of this man, how he drives toward the practical and practicable; has a genuine insight into what is fact." You must have very stout legs to get noticed at all by him. He is thoroughly English in his love of practical men, and dislike for cant, and ardent, enthusiastic heads that are not supported by any legs. He would kindly knock them down that they may regain some vigor by touching their mother earth. We have often wondered how he ever found out Burns, and must still refer a good share of his delight in him to neighborhood and early association. The *Lycidas* and *Comus*, appearing in *Blackwood's Magazine*, would probably go unread by him, nor lead him to expect a *Paradise Lost*. The condition-of-England question is a practical one. The condition of England demands a hero, not a poet. Other things demand a poet; the poet answers other demands. Carlyle in London, with this question pressing on him so urgently, sees no occasion for minstrels and rhapsodists there. Kings may have their bards when there are any kings. Homer would certainly go a-begging there. He lives in Chelsea, not on the plains of Hindostan, nor on the prairies of the West, where settlers are scarce, and a man must at least go whistling to himself.

What he says of poetry is rapidly uttered, and suggestive of a thought, rather than the deliberate development of any. He answers your question, What is poetry? by writing a special poem, as that Norse one, for instance, in the *Book of Heroes*, altogether wild and original; — answers your question, What is light? by kindling a blaze which dazzles you, and pales sun and moon, and not as a peasant might, by opening a shutter.

Carlyle is not a seer, but a brave looker-on and reviewer; not the most free and catholic observer of men and events, for they are likely to find him preoccupied, but unexpectedly free and catholic when they fall within the focus of his lens. He does not live in the present hour, and read men and books as they occur for his theme, but having chosen this, he directs his studies to this end. If we look again at his page, we are apt to retract somewhat that we have said. Often a genuine poetic feeling dawns through it, like the texture of the earth seen through the dead grass and leaves in the spring. The "History of the French Revolution" is a poem, at length translated into prose — an *Iliad*, indeed, as he himself has it — "The destructive wrath of Sansculottism, this is what we speak, having unhappily no voice for singing."

One improvement we could suggest in this last, as indeed in most epics — that he should let in the sun oftener upon his picture. It does not often enough appear, but it is all revolution, the old way of human life turned simply bottom upward, so that when at length we are inadvertently reminded of the "Brest Shipping," a St.

Domingo colony, and that anybody thinks of owning plantations, and simply turning up the soil there, and that now at length, after some years of this revolution, there is a falling off in the importation of sugar, we feel a queer surprise. Had they not sweetened their water with revolution then? It would be well if there were several chapters headed "Work for the Month," — Revolution-work inclusive, of course — "Altitude of

the Sun," "State of the Crops and Markets," "Meteorological Observations," "Attractive Industry," "Day Labor," etc., just to remind the reader that the French peasantry did something beside go without breeches, burn châteaux, get ready knotted cords, and embrace and throttle one another by turns. These things are sometimes hinted at, but they deserve a notice more in proportion to their importance. We want not only a background to the picture, but a ground under the feet also. We remark, too, occasionally, an unphilosophical habit, common enough elsewhere, in Alison's History of Modern Europe, for instance, of saying, undoubtedly with effect, that if a straw had not fallen this way or that, why then — but, of course, it is as easy in philosophy to make kingdoms rise and fall as straws.

The poet is blithe and cheery ever, and as well as nature. Carlyle has not the simple Homeric health of Wordsworth, nor the deliberate philosophic turn of Coleridge, nor the scholastic taste of Landor, but, though sick and under restraint, the constitutional vigor of one of his old Norse heroes, struggling in a lurid light, with Jötuns still, striving to throw the old woman, and "she was Time" — striving to lift the big cat, and that was "the Great World-Serpent, which, tail in mouth, girds and keeps up the whole created world." The smith, though so brawny and tough, I should not call the healthiest man. There is too much shopwork, too great extremes of heat and cold, and incessant ten-pound-ten and thrashing of the anvil, in his life. But the haymaker's is a true sunny perspiration, produced by the extreme of summer heat only, and conversant with the blast of the zephyr, not of the forge-bellows. We know very well the nature of this man's sadness, but we do not know the nature of his gladness.

The poet will maintain serenity in spite of all disappointments. He is expected to preserve an unconcerned and healthy outlook over the world, while he lives. *Philosophia practica est eruditionis meta* — Philosophy practiced is the goal of learning; and for that other, *Oratoris est celare artem*, we might read, *Herois est celare pugnam* — the hero will conceal his struggles. Poetry is the only life got, the only work done, the only pure product and free labor of man, performed only when he has put all the world under his feet, and conquered the last of his foes.

Carlyle speaks of Nature with a certain unconscious pathos for the most part. She is to him a receded but ever memorable splendor, casting still a reflected light over all his scenery. As we read his books here in New England, where there are potatoes enough, and every man can get his living peacefully and sportively as the birds and bees, and need think no more of that, it seems to us as if by the world he often meant London, at the head of the tide upon the Thames, the sorest place on the face of the earth, the very citadel of conservatism.

In his writings, we should say that he, as conspicuously as any, though with little enough expressed or even conscious sympathy, represents the Reformer class, and all the better for not being the acknowledged leader of any. In him the universal plaint is most settled, unappeasable, and serious. Until a thousand named and nameless grievances are righted, there will be no repose for him in the lap of nature, or the

seclusion of science and literature. By foreseeing it, he hastens the crisis in the affairs of England, and is as good as many years added to her history.

To do himself justice, and set some of his readers right, he should give us some transcendent hero at length, to rule his demigods and Titans; develop, perhaps, his reserved and dumb reverence for Christ, not speaking to a London or Church of England audience merely. Let not "sacred silence meditate that sacred matter" forever, but let us have sacred speech and sacred scripture thereon.

Every man will include in his list of worthies those whom he himself best represents. Carlyle, and our countryman Emerson, whose place and influence must ere long obtain a more distinct recognition, are, to a certain extent, the complement of each other. The age could not do with one of them, it cannot do with both. To make a broad and rude distinction, to suit our present purpose, the former, as critic, deals with the men of action — Mahomet, Luther, Cromwell; the latter with the thinkers — Plato, Shakespeare, Goethe; for, though both have written upon Goethe, they do not meet in him. The one has more sympathy with the heroes, or practical reformers, the other with the observers, or philosophers. Put their worthies together, and you will have a pretty fair representation of mankind; yet with one or more memorable exceptions. To say nothing of Christ, who yet awaits a just appreciation from literature, the peacefully practical hero, whom Columbus may represent, is obviously slighted; but above and after all, the Man of the Age, come to be called workingman, it is obvious that none yet speaks to his condition, for the speaker is not yet in his condition.

Like speaks to like only; labor to labor, philosophy to philosophy, criticism to criticism, poetry to poetry. Literature speaks how much still to the past, how little to the future, how much to the East, how little to the West —

In the East fames are won,  
In the West deeds are done.

One merit in Carlyle, let the subject be what it may, is the freedom of prospect he allows, the entire absence of cant and dogma. He removes many cartloads of rubbish, and leaves open a broad highway. His writings are all unfenced on the side of the future and the possible. Though he does but inadvertently direct our eyes to the open heavens, nevertheless he lets us wander broadly underneath, and shows them to us reflected in innumerable pools and lakes.

These volumes contain not the highest, but a very practicable wisdom, which startles and provokes, rather than informs us. Carlyle does not oblige us to think; we have thought enough for him already, but he compels us to act. We accompany him rapidly through an endless gallery of pictures, and glorious reminiscences of experiences unimproved.

"If they hear not Moses and the prophets, neither will they be persuaded, though one rose from the dead." There is no calm philosophy of life here, such as you might put at the end of the Almanac, to hang over the farmer's hearth — how men shall live in these winter, in these summer days. No philosophy, properly speaking, of love, or friendship, or religion, or politics, or education, or nature, or spirit; perhaps a nearer approach

to a philosophy of kingship, and of the place of the literary man, than of anything else. A rare preacher, with prayer, and psalm, and sermon, and benediction, but no contemplation of man's life from the serene Oriental ground, nor yet from the stirring Occidental. No thanksgiving sermon for the holydays, or the Easter vacations, when all men submit to float on the full currents of life. When we see with what spirits, though with little heroism enough, woodchoppers, drovers, and apprentices take and spend life, playing all day long, sunning themselves, shading themselves, eating, drinking, sleeping, we think that the philosophy of their life written would be such a level natural history as the Gardener's Calendar and the works of the early botanists, inconceivably slow to come to practical conclusions.

There is no philosophy here for philosophers, only as every man is said to have his philosophy; no system but such as is the man himself — and, indeed, he stands compactly enough; — no progress beyond the first assertion and challenge, as it were, with trumpet blast. One thing is certain — that we had best be doing something in good earnest henceforth forever; that's an indispensable philosophy. The before impossible precept, "Know thyself," he translates into the partially possible one, "Know what thou canst work at." "Sartor Resartus" is, perhaps, the sunniest and most philosophical, as it is the most autobiographical of his works, in which he drew most largely on the experience of his youth. But we miss everywhere a calm depth, like a lake, even stagnant, and must submit to rapidity and whirl, as on skates, with all kinds of skillful and antic motions, sculling, sliding, cutting punch-bowls and rings, forward and backward. The talent is very nearly equal to the genius. Sometimes it would be preferable to wade slowly through a Serbonian bog, and feel the juices of the meadow.

Beside some philosophers of larger vision, Carlyle stands like an honest, half-despairing boy, grasping at some details only of their world systems. Philosophy, certainly, is some account of truths the fragments and very insignificant parts of which man will practice in this workshop; truths infinite and in harmony with infinity, in respect to which the very objects and ends of the so-called practical philosopher will be mere propositions, like the rest. It would be no reproach to a philosopher, that he knew the future better than the past, or even than the present. It is better worth knowing. He will prophesy, tell what is to be, or, in other words, what alone is, under appearances, laying little stress on the boiling of the pot, or, the condition-of-England question. He has no more to do with the condition of England than with her national debt, which a vigorous generation would not inherit. The philosopher's conception of things will, above all, be truer than other men's, and his philosophy will subordinate all the circumstances of life.

To live like a philosopher is to live, not foolishly, like other men, but wisely and according to universal laws. If Carlyle does not take two steps in philosophy, are there any who take three? Philosophy, having crept clinging to the rocks so far, puts out its feelers many ways in vain. It would be hard to surprise him by the relation of any important human experience, but in some nook or corner of his works you will find that this, too, was sometimes dreamed of in his philosophy.

To sum up our most serious objections in a few words, we should say that Carlyle indicates a depth — and we mean not impliedly, but distinctly — which he neglects to fathom. We want to know more about that which he wants to know as well. If any luminous star or undissolvable nebula is visible from his station which is not visible from ours, the interests of science require that the fact be communicated to us. The universe expects every man to do his duty in his parallel of latitude. We want to hear more of his inmost life; his hymn and prayer more; his elegy and eulogy less; that he should speak more from his character, and less from his talent; communicate centrally with his readers, and not by a side; that he should say what he believes, without suspecting that men disbelieve it, out of his never-misunderstood nature. His genius can cover all the land with gorgeous palaces, but the reader does not abide in them, but pitches his tent rather in the desert and on the mountain-peak.

When we look about for something to quote, as the fairest specimen of the man, we confess that we labor under an unusual difficulty; for his philosophy is so little of the proverbial or sentential kind, and opens so gradually, rising insensibly from the reviewer's level, and developing its thought completely and in detail, that we look in vain for the brilliant passages, for point and antithesis, and must end by quoting his works entire. What in a writer of less breadth would have been the proposition which would have bounded his discourse, his column of victory, his Pillar of Hercules, and ne plus ultra, is in Carlyle frequently the same thought unfolded; no Pillar of Hercules, but a considerable prospect, north and south, along the Atlantic coast. There are other pillars of Hercules, like beacons and lighthouses, still further in the horizon, toward Atlantis, set up by a few ancient and modern travelers; but, so far as this traveler goes, he clears and colonizes, and all the surplus population of London is bound thither at once. What we would quote is, in fact, his vivacity, and not any particular wisdom or sense, which last is ever synonymous with sentence (*sententia*), as in his contemporaries Coleridge, Landor, and Wordsworth. We have not attempted to discriminate between his works, but have rather regarded them all as one work, as is the man himself. We have not examined so much as remembered them. To do otherwise would have required a more indifferent, and perhaps even less just review than the present.

All his works might well enough be embraced under the title of one of them, a good specimen brick, "On Heroes, Hero-Worship, and the Heroic in History." Of this department he is the Chief Professor in the World's University, and even leaves Plutarch behind.

Such intimate and living, such loyal and generous sympathy with the heroes of history, not one in one age only, but forty in forty ages, such an unparalleled reviewing and greeting of all past worth, with exceptions, to be sure — but exceptions were the rule before — it was, indeed, to make this the age of review writing, as if now one period of the human story were completing itself, and getting its accounts settled. This soldier has told the stories with new emphasis, and will be a memorable hander-down of fame to posterity. And with what wise discrimination he has selected his men, with reference both to his own genius and to theirs! — Mahomet, Dante, Cromwell, Voltaire,

Johnson, Burns, Goethe, Richter, Schiller, Mirabeau — could any of these have been spared? These we wanted to hear about. We have not, as commonly, the cold and refined judgment of the scholar and critic merely, but something more human and affecting. These eulogies have the glow and warmth of friendship. There is sympathy, not with mere fames, and formless, incredible things, but with kindred men — not transiently, but lifelong he has walked with them.

No doubt, some of Carlyle's worthies, should they ever return to earth, would find themselves unpleasantly put upon their good behavior, to sustain their characters; but if he can return a man's life more perfect to our hands than it was left at his death, following out the design of its author, we shall have no great cause to complain. We do not want a daguerreotype likeness. All biography is the life of Adam — a much-experienced man — and time withdraws something partial from the story of every individual, that the historian may supply something general. If these virtues were not in this man, perhaps they are in his biographer — no fatal mistake. Really, in any other sense, we never do, nor desire to, come at the historical man — unless we rob his grave, that is the nearest approach. Why did he die, then? He is with his bones, surely.

No doubt Carlyle has a propensity to exaggerate the heroic in history, that is, he creates you an ideal hero rather than another thing: he has most of that material. This we allow in all its senses, and in one narrower sense it is not so convenient. Yet what were history if he did not exaggerate it? How comes it that history never has to wait for facts, but for a man to write it? The ages may go on forgetting the facts never so long, he can remember two for every one forgotten. The musty records of history, like the catacombs, contain the perishable remains, but only in the breast of genius are embalmed the souls of heroes. There is very little of what is called criticism here; it is love and reverence, rather, which deal with qualities not relatively, but absolutely great; for whatever is admirable in a man is something infinite, to which we cannot set bounds. These sentiments allow the mortal to die, the immortal and divine to survive. There is something antique, even, in his style of treating his subject, reminding us that heroes and Demi-gods, Fates and Furies, still exist; the common man is nothing to him, but after death the hero is apotheosized and has a place in heaven, as in the religion of the Greeks.

Exaggeration! was ever any virtue attributed to a man without exaggeration? was ever any vice, without infinite exaggeration? Do we not exaggerate ourselves to ourselves, or do we recognize ourselves for the actual men we are? Are we not all great men? Yet what are we actually, to speak of? We live by exaggeration. What else is it to anticipate more than we enjoy? The lightning is an exaggeration of the light. Exaggerated history is poetry, and truth referred to a new standard. To a small man every greater is an exaggeration. He who cannot exaggerate is not qualified to utter truth. No truth, we think, was ever expressed but with this sort of emphasis, so that for the time there seemed to be no other. Moreover, you must speak loud to those who are hard of hearing, and so you acquire a habit of shouting to those who are not. By an

immense exaggeration we appreciate our Greek poetry and philosophy, and Egyptian ruins; our Shakespeares and Miltons; our Liberty and Christianity. We give importance to this hour over all other hours. We do not live by justice, but by grace. As the sort of justice which concerns us in our daily intercourse is not that administered by the judge, so the historical justice which we prize is not arrived at by nicely balancing the evidence. In order to appreciate any, even the humblest man, you must first, by some good fortune, have acquired a sentiment of admiration, even of reverence, for him, and there never were such exaggerators as these.

To try him by the German rule of referring an author to his own standard, we will quote the following from Carlyle's remarks on history, and leave the reader to consider how far his practice has been consistent with his theory. "Truly, if History is Philosophy teaching by Experience, the writer fitted to compose history is hitherto an unknown man. The Experience itself would require All-knowledge to record it, were the All-wisdom, needful for such Philosophy as would interpret it, to be had for asking. Better were it that mere earthly Historians should lower such pretensions, more suitable for Omniscience than for human science; and aiming only at some picture of the things acted, which picture itself will at best be a poor approximation, leave the inscrutable purport of them an acknowledged secret; or, at most, in reverent faith, far different from that teaching of Philosophy, pause over the mysterious vestiges of Him whose path is in the great deep of Time, whom History indeed reveals, but only all History, and in Eternity, will clearly reveal."

Carlyle is a critic who lives in London to tell this generation who have been the great men of our race. We have read that on some exposed place in the city of Geneva, they have fixed a brazen indicator for the use of travelers, with the names of the mountain summits in the horizon marked upon it, "so that by taking sight across the index you can distinguish them at once. You will not mistake Mont Blanc, if you see him, but until you get accustomed to the panorama, you may easily mistake one of his court for the king." It stands there a piece of mute brass, that seems nevertheless to know in what vicinity it is: and there perchance it will stand, when the nation that placed it there has passed away, still in sympathy with the mountains, forever discriminating in the desert.

So, we may say, stands this man, pointing as long as he lives, in obedience to some spiritual magnetism, to the summits in the historical horizon, for the guidance of his fellows.

Truly, our greatest blessings are very cheap.

To have our sunlight without paying for it, without any duty levied — to have our poet there in England, to furnish us entertainment, and, what is better, provocation, from year to year, all our lives long, to make the world seem richer for us, the age more respectable, and life better worth the living — all without expense of acknowledgment even, but silently accepted out of the east, like morning light, as a matter of course.

# ON THE DUTY OF CIVIL DISOBEDIENCE

I heartily accept the motto, "That government is best which governs least"; and I should like to see it acted up to more rapidly and systematically. Carried out, it finally amounts to this, which also I believe— "That government is best which governs not at all"; and when men are prepared for it, that will be the kind of government which they will have. Government is at best but an expedient; but most governments are usually, and all governments are sometimes, inexpedient. The objections which have been brought against a standing army, and they are many and weighty, and deserve to prevail, may also at last be brought against a standing government. The standing army is only an arm of the standing government. The government itself, which is only the mode which the people have chosen to execute their will, is equally liable to be abused and perverted before the people can act through it. Witness the present Mexican war, the work of comparatively a few individuals using the standing government as their tool; for in the outset, the people would not have consented to this measure.

This American government — what is it but a tradition, though a recent one, endeavoring to transmit itself unimpaired to posterity, but each instant losing some of its integrity? It has not the vitality and force of a single living man; for a single man can bend it to his will. It is a sort of wooden gun to the people themselves. But it is not the less necessary for this; for the people must have some complicated machinery or other, and hear its din, to satisfy that idea of government which they have. Governments show thus how successfully men can be imposed upon, even impose on themselves, for their own advantage. It is excellent, we must all allow. Yet this government never of itself furthered any enterprise, but by the alacrity with which it got out of its way. It does not keep the country free. It does not settle the West. It does not educate. The character inherent in the American people has done all that has been accomplished; and it would have done somewhat more, if the government had not sometimes got in its way. For government is an expedient, by which men would fain succeed in letting one another alone; and, as has been said, when it is most expedient, the governed are most let alone by it. Trade and commerce, if they were not made of india-rubber, would never manage to bounce over obstacles which legislators are continually putting in their way; and if one were to judge these men wholly by the effects of their actions and not partly by their intentions, they would deserve to be classed and punished with those mischievous persons who put obstructions on the railroads.

But, to speak practically and as a citizen, unlike those who call themselves no-government men, I ask for, not at once no government, but at once a better government. Let every man make known what kind of government would command his respect, and that will be one step toward obtaining it.

After all, the practical reason why, when the power is once in the hands of the people, a majority are permitted, and for a long period continue, to rule is not because they are most likely to be in the right, nor because this seems fairest to the minority, but because they are physically the strongest. But a government in which the majority rule in all cases can not be based on justice, even as far as men understand it. Can there not be a government in which the majorities do not virtually decide right and wrong, but conscience? — in which majorities decide only those questions to which the rule of expediency is applicable? Must the citizen ever for a moment, or in the least degree, resign his conscience to the legislator? Why has every man a conscience then? I think that we should be men first, and subjects afterward. It is not desirable to cultivate a respect for the law, so much as for the right. The only obligation which I have a right to assume is to do at any time what I think right. It is truly enough said that a corporation has no conscience; but a corporation of conscientious men is a corporation with a conscience. Law never made men a whit more just; and, by means of their respect for it, even the well-disposed are daily made the agents on injustice. A common and natural result of an undue respect for the law is, that you may see a file of soldiers, colonel, captain, corporal, privates, powder-monkeys, and all, marching in admirable order over hill and dale to the wars, against their wills, ay, against their common sense and consciences, which makes it very steep marching indeed, and produces a palpitation of the heart. They have no doubt that it is a damnable business in which they are concerned; they are all peaceably inclined. Now, what are they? Men at all? or small movable forts and magazines, at the service of some unscrupulous man in power? Visit the Navy Yard, and behold a marine, such a man as an American government can make, or such as it can make a man with its black arts — a mere shadow and reminiscence of humanity, a man laid out alive and standing, and already, as one may say, buried under arms with funeral accompaniment, though it may be,

“Not a drum was heard, not a funeral note,  
As his corse to the rampart we hurried;  
Not a soldier discharged his farewell shot  
O’er the grave where our hero was buried.”

The mass of men serve the state thus, not as men mainly, but as machines, with their bodies. They are the standing army, and the militia, jailers, constables, posse comitatus, etc. In most cases there is no free exercise whatever of the judgement or of the moral sense; but they put themselves on a level with wood and earth and stones; and wooden men can perhaps be manufactured that will serve the purpose as well. Such command no more respect than men of straw or a lump of dirt. They have the same sort of worth only as horses and dogs. Yet such as these even are commonly esteemed good citizens. Others — as most legislators, politicians, lawyers, ministers,

and office-holders — serve the state chiefly with their heads; and, as they rarely make any moral distinctions, they are as likely to serve the devil, without intending it, as God. A very few — as heroes, patriots, martyrs, reformers in the great sense, and men — serve the state with their consciences also, and so necessarily resist it for the most part; and they are commonly treated as enemies by it. A wise man will only be useful as a man, and will not submit to be “clay,” and “stop a hole to keep the wind away,” but leave that office to his dust at least:

“I am too high born to be propertied,  
To be a second at control,  
Or useful serving-man and instrument  
To any sovereign state throughout the world.”

He who gives himself entirely to his fellow men appears to them useless and selfish; but he who gives himself partially to them is pronounced a benefactor and philanthropist.

How does it become a man to behave toward the American government today? I answer, that he cannot without disgrace be associated with it. I cannot for an instant recognize that political organization as my government which is the slave’s government also.

All men recognize the right of revolution; that is, the right to refuse allegiance to, and to resist, the government, when its tyranny or its inefficiency are great and unendurable. But almost all say that such is not the case now. But such was the case, they think, in the Revolution of ‘75. If one were to tell me that this was a bad government because it taxed certain foreign commodities brought to its ports, it is most probable that I should not make an ado about it, for I can do without them. All machines have their friction; and possibly this does enough good to counter-balance the evil. At any rate, it is a great evil to make a stir about it. But when the friction comes to have its machine, and oppression and robbery are organized, I say, let us not have such a machine any longer. In other words, when a sixth of the population of a nation which has undertaken to be the refuge of liberty are slaves, and a whole country is unjustly overrun and conquered by a foreign army, and subjected to military law, I think that it is not too soon for honest men to rebel and revolutionize. What makes this duty the more urgent is that fact that the country so overrun is not our own, but ours is the invading army.

Paley, a common authority with many on moral questions, in his chapter on the “Duty of Submission to Civil Government,” resolves all civil obligation into expediency; and he proceeds to say that “so long as the interest of the whole society requires it, that is, so long as the established government cannot be resisted or changed without public inconvenience, it is the will of God . . . that the established government be obeyed — and no longer. This principle being admitted, the justice of every particular case of resistance is reduced to a computation of the quantity of the danger and grievance on the one side, and of the probability and expense of redressing it on the other.” Of this, he says, every man shall judge for himself. But Paley appears never to have

contemplated those cases to which the rule of expediency does not apply, in which a people, as well as an individual, must do justice, cost what it may. If I have unjustly wrested a plank from a drowning man, I must restore it to him though I drown myself. This, according to Paley, would be inconvenient. But he that would save his life, in such a case, shall lose it. This people must cease to hold slaves, and to make war on Mexico, though it cost them their existence as a people.

In their practice, nations agree with Paley; but does anyone think that Massachusetts does exactly what is right at the present crisis?

“A drab of stat,  
a cloth-o’-silver slut,  
To have her train borne up,  
and her soul trail in the dirt.”

Practically speaking, the opponents to a reform in Massachusetts are not a hundred thousand politicians at the South, but a hundred thousand merchants and farmers here, who are more interested in commerce and agriculture than they are in humanity, and are not prepared to do justice to the slave and to Mexico, cost what it may. I quarrel not with far-off foes, but with those who, near at home, co-operate with, and do the bidding of, those far away, and without whom the latter would be harmless. We are accustomed to say, that the mass of men are unprepared; but improvement is slow, because the few are not as materially wiser or better than the many. It is not so important that many should be good as you, as that there be some absolute goodness somewhere; for that will leaven the whole lump. There are thousands who are in opinion opposed to slavery and to the war, who yet in effect do nothing to put an end to them; who, esteeming themselves children of Washington and Franklin, sit down with their hands in their pockets, and say that they know not what to do, and do nothing; who even postpone the question of freedom to the question of free trade, and quietly read the prices-current along with the latest advices from Mexico, after dinner, and, it may be, fall asleep over them both. What is the price-current of an honest man and patriot today? They hesitate, and they regret, and sometimes they petition; but they do nothing in earnest and with effect. They will wait, well disposed, for other to remedy the evil, that they may no longer have it to regret. At most, they give up only a cheap vote, and a feeble countenance and Godspeed, to the right, as it goes by them. There are nine hundred and ninety-nine patrons of virtue to one virtuous man. But it is easier to deal with the real possessor of a thing than with the temporary guardian of it.

All voting is a sort of gaming, like checkers or backgammon, with a slight moral tinge to it, a playing with right and wrong, with moral questions; and betting naturally accompanies it. The character of the voters is not staked. I cast my vote, perchance, as I think right; but I am not vitally concerned that that right should prevail. I am willing to leave it to the majority. Its obligation, therefore, never exceeds that of expediency. Even voting for the right is doing nothing for it. It is only expressing to men feebly your desire that it should prevail. A wise man will not leave the right to the mercy of

chance, nor wish it to prevail through the power of the majority. There is but little virtue in the action of masses of men. When the majority shall at length vote for the abolition of slavery, it will be because they are indifferent to slavery, or because there is but little slavery left to be abolished by their vote. They will then be the only slaves. Only his vote can hasten the abolition of slavery who asserts his own freedom by his vote.

I hear of a convention to be held at Baltimore, or elsewhere, for the selection of a candidate for the Presidency, made up chiefly of editors, and men who are politicians by profession; but I think, what is it to any independent, intelligent, and respectable man what decision they may come to? Shall we not have the advantage of this wisdom and honesty, nevertheless? Can we not count upon some independent votes? Are there not many individuals in the country who do not attend conventions? But no: I find that the respectable man, so called, has immediately drifted from his position, and despairs of his country, when his country has more reasons to despair of him. He forthwith adopts one of the candidates thus selected as the only available one, thus proving that he is himself available for any purposes of the demagogue. His vote is of no more worth than that of any unprincipled foreigner or hireling native, who may have been bought. O for a man who is a man, and, as my neighbor says, has a bone in his back which you cannot pass your hand through! Our statistics are at fault: the population has been returned too large. How many men are there to a square thousand miles in the country? Hardly one. Does not America offer any inducement for men to settle here? The American has dwindled into an Odd Fellow — one who may be known by the development of his organ of gregariousness, and a manifest lack of intellect and cheerful self-reliance; whose first and chief concern, on coming into the world, is to see that the almshouses are in good repair; and, before yet he has lawfully donned the virile garb, to collect a fund to the support of the widows and orphans that may be; who, in short, ventures to live only by the aid of the Mutual Insurance company, which has promised to bury him decently.

It is not a man's duty, as a matter of course, to devote himself to the eradication of any, even to most enormous wrong; he may still properly have other concerns to engage him; but it is his duty, at least, to wash his hands of it, and, if he gives it no thought longer, not to give it practically his support. If I devote myself to other pursuits and contemplations, I must first see, at least, that I do not pursue them sitting upon another man's shoulders. I must get off him first, that he may pursue his contemplations too. See what gross inconsistency is tolerated. I have heard some of my townsmen say, "I should like to have them order me out to help put down an insurrection of the slaves, or to march to Mexico — see if I would go"; and yet these very men have each, directly by their allegiance, and so indirectly, at least, by their money, furnished a substitute. The soldier is applauded who refuses to serve in an unjust war by those who do not refuse to sustain the unjust government which makes the war; is applauded by those whose own act and authority he disregards and sets at naught; as if the state were penitent to that degree that it hired one to scourge it while

it sinned, but not to that degree that it left off sinning for a moment. Thus, under the name of Order and Civil Government, we are all made at last to pay homage to and support our own meanness. After the first blush of sin comes its indifference; and from immoral it becomes, as it were, unmoral, and not quite unnecessary to that life which we have made.

The broadest and most prevalent error requires the most disinterested virtue to sustain it. The slight reproach to which the virtue of patriotism is commonly liable, the noble are most likely to incur. Those who, while they disapprove of the character and measures of a government, yield to it their allegiance and support are undoubtedly its most conscientious supporters, and so frequently the most serious obstacles to reform. Some are petitioning the State to dissolve the Union, to disregard the requisitions of the President. Why do they not dissolve it themselves — the union between themselves and the State — and refuse to pay their quota into its treasury? Do not they stand in same relation to the State that the State does to the Union? And have not the same reasons prevented the State from resisting the Union which have prevented them from resisting the State?

How can a man be satisfied to entertain an opinion merely, and enjoy it? Is there any enjoyment in it, if his opinion is that he is aggrieved? If you are cheated out of a single dollar by your neighbor, you do not rest satisfied with knowing you are cheated, or with saying that you are cheated, or even with petitioning him to pay you your due; but you take effectual steps at once to obtain the full amount, and see to it that you are never cheated again. Action from principle, the perception and the performance of right, changes things and relations; it is essentially revolutionary, and does not consist wholly with anything which was. It not only divided States and churches, it divides families; ay, it divides the individual, separating the diabolical in him from the divine.

Unjust laws exist: shall we be content to obey them, or shall we endeavor to amend them, and obey them until we have succeeded, or shall we transgress them at once? Men, generally, under such a government as this, think that they ought to wait until they have persuaded the majority to alter them. They think that, if they should resist, the remedy would be worse than the evil. But it is the fault of the government itself that the remedy is worse than the evil. It makes it worse. Why is it not more apt to anticipate and provide for reform? Why does it not cherish its wise minority? Why does it cry and resist before it is hurt? Why does it not encourage its citizens to put out its faults, and do better than it would have them? Why does it always crucify Christ and excommunicate Copernicus and Luther, and pronounce Washington and Franklin rebels?

One would think, that a deliberate and practical denial of its authority was the only offense never contemplated by its government; else, why has it not assigned its definite, its suitable and proportionate, penalty? If a man who has no property refuses but once to earn nine shillings for the State, he is put in prison for a period unlimited by any law that I know, and determined only by the discretion of those who put him there;

but if he should steal ninety times nine shillings from the State, he is soon permitted to go at large again.

If the injustice is part of the necessary friction of the machine of government, let it go, let it go: perchance it will wear smooth — certainly the machine will wear out. If the injustice has a spring, or a pulley, or a rope, or a crank, exclusively for itself, then perhaps you may consider whether the remedy will not be worse than the evil; but if it is of such a nature that it requires you to be the agent of injustice to another, then I say, break the law. Let your life be a counter-friction to stop the machine. What I have to do is to see, at any rate, that I do not lend myself to the wrong which I condemn.

As for adopting the ways of the State has provided for remedying the evil, I know not of such ways. They take too much time, and a man's life will be gone. I have other affairs to attend to. I came into this world, not chiefly to make this a good place to live in, but to live in it, be it good or bad. A man has not everything to do, but something; and because he cannot do everything, it is not necessary that he should be doing something wrong. It is not my business to be petitioning the Governor or the Legislature any more than it is theirs to petition me; and if they should not hear my petition, what should I do then? But in this case the State has provided no way: its very Constitution is the evil. This may seem to be harsh and stubborn and unconciliatory; but it is to treat with the utmost kindness and consideration the only spirit that can appreciate or deserves it. So is all change for the better, like birth and death, which convulse the body.

I do not hesitate to say, that those who call themselves Abolitionists should at once effectually withdraw their support, both in person and property, from the government of Massachusetts, and not wait till they constitute a majority of one, before they suffer the right to prevail through them. I think that it is enough if they have God on their side, without waiting for that other one. Moreover, any man more right than his neighbors constitutes a majority of one already.

I meet this American government, or its representative, the State government, directly, and face to face, once a year — no more — in the person of its tax-gatherer; this is the only mode in which a man situated as I am necessarily meets it; and it then says distinctly, Recognize me; and the simplest, the most effectual, and, in the present posture of affairs, the indispensablest mode of treating with it on this head, of expressing your little satisfaction with and love for it, is to deny it then. My civil neighbor, the tax-gatherer, is the very man I have to deal with — for it is, after all, with men and not with parchment that I quarrel — and he has voluntarily chosen to be an agent of the government. How shall he ever know well that he is and does as an officer of the government, or as a man, until he is obliged to consider whether he will treat me, his neighbor, for whom he has respect, as a neighbor and well-disposed man, or as a maniac and disturber of the peace, and see if he can get over this obstruction to his neighborliness without a ruder and more impetuous thought or speech corresponding with his action. I know this well, that if one thousand, if one hundred, if ten men whom I could name — if ten honest men only — ay, if one HONEST man, in this

State of Massachusetts, ceasing to hold slaves, were actually to withdraw from this co-partnership, and be locked up in the county jail therefor, it would be the abolition of slavery in America. For it matters not how small the beginning may seem to be: what is once well done is done forever. But we love better to talk about it: that we say is our mission. Reform keeps many scores of newspapers in its service, but not one man. If my esteemed neighbor, the State's ambassador, who will devote his days to the settlement of the question of human rights in the Council Chamber, instead of being threatened with the prisons of Carolina, were to sit down the prisoner of Massachusetts, that State which is so anxious to foist the sin of slavery upon her sister — though at present she can discover only an act of inhospitality to be the ground of a quarrel with her — the Legislature would not wholly waive the subject of the following winter.

Under a government which imprisons unjustly, the true place for a just man is also a prison. The proper place today, the only place which Massachusetts has provided for her freer and less despondent spirits, is in her prisons, to be put out and locked out of the State by her own act, as they have already put themselves out by their principles. It is there that the fugitive slave, and the Mexican prisoner on parole, and the Indian come to plead the wrongs of his race should find them; on that separate but more free and honorable ground, where the State places those who are not with her, but against her — the only house in a slave State in which a free man can abide with honor. If any think that their influence would be lost there, and their voices no longer afflict the ear of the State, that they would not be as an enemy within its walls, they do not know by how much truth is stronger than error, nor how much more eloquently and effectively he can combat injustice who has experienced a little in his own person. Cast your whole vote, not a strip of paper merely, but your whole influence. A minority is powerless while it conforms to the majority; it is not even a minority then; but it is irresistible when it clogs by its whole weight. If the alternative is to keep all just men in prison, or give up war and slavery, the State will not hesitate which to choose. If a thousand men were not to pay their tax bills this year, that would not be a violent and bloody measure, as it would be to pay them, and enable the State to commit violence and shed innocent blood. This is, in fact, the definition of a peaceable revolution, if any such is possible. If the tax-gatherer, or any other public officer, asks me, as one has done, "But what shall I do?" my answer is, "If you really wish to do anything, resign your office." When the subject has refused allegiance, and the officer has resigned from office, then the revolution is accomplished. But even suppose blood should flow. Is there not a sort of blood shed when the conscience is wounded? Through this wound a man's real manhood and immortality flow out, and he bleeds to an everlasting death. I see this blood flowing now.

I have contemplated the imprisonment of the offender, rather than the seizure of his goods — though both will serve the same purpose — because they who assert the purest right, and consequently are most dangerous to a corrupt State, commonly have not spent much time in accumulating property. To such the State renders com-

paratively small service, and a slight tax is wont to appear exorbitant, particularly if they are obliged to earn it by special labor with their hands. If there were one who lived wholly without the use of money, the State itself would hesitate to demand it of him. But the rich man — not to make any invidious comparison — is always sold to the institution which makes him rich. Absolutely speaking, the more money, the less virtue; for money comes between a man and his objects, and obtains them for him; it was certainly no great virtue to obtain it. It puts to rest many questions which he would otherwise be taxed to answer; while the only new question which it puts is the hard but superfluous one, how to spend it. Thus his moral ground is taken from under his feet. The opportunities of living are diminished in proportion as that are called the “means” are increased. The best thing a man can do for his culture when he is rich is to endeavor to carry out those schemes which he entertained when he was poor. Christ answered the Herodians according to their condition. “Show me the tribute-money,” said he — and one took a penny out of his pocket — if you use money which has the image of Caesar on it, and which he has made current and valuable, that is, if you are men of the State, and gladly enjoy the advantages of Caesar’s government, then pay him back some of his own when he demands it. “Render therefore to Caesar that which is Caesar’s and to God those things which are God’s” — leaving them no wiser than before as to which was which; for they did not wish to know.

When I converse with the freest of my neighbors, I perceive that, whatever they may say about the magnitude and seriousness of the question, and their regard for the public tranquillity, the long and the short of the matter is, that they cannot spare the protection of the existing government, and they dread the consequences to their property and families of disobedience to it. For my own part, I should not like to think that I ever rely on the protection of the State. But, if I deny the authority of the State when it presents its tax bill, it will soon take and waste all my property, and so harass me and my children without end. This is hard. This makes it impossible for a man to live honestly, and at the same time comfortably, in outward respects. It will not be worth the while to accumulate property; that would be sure to go again. You must hire or squat somewhere, and raise but a small crop, and eat that soon. You must live within yourself, and depend upon yourself always tucked up and ready for a start, and not have many affairs. A man may grow rich in Turkey even, if he will be in all respects a good subject of the Turkish government. Confucius said: “If a state is governed by the principles of reason, poverty and misery are subjects of shame; if a state is not governed by the principles of reason, riches and honors are subjects of shame.” No: until I want the protection of Massachusetts to be extended to me in some distant Southern port, where my liberty is endangered, or until I am bent solely on building up an estate at home by peaceful enterprise, I can afford to refuse allegiance to Massachusetts, and her right to my property and life. It costs me less in every sense to incur the penalty of disobedience to the State than it would to obey. I should feel as if I were worth less in that case.

Some years ago, the State met me in behalf of the Church, and commanded me to pay a certain sum toward the support of a clergyman whose preaching my father attended, but never I myself. "Pay," it said, "or be locked up in the jail." I declined to pay. But, unfortunately, another man saw fit to pay it. I did not see why the schoolmaster should be taxed to support the priest, and not the priest the schoolmaster; for I was not the State's schoolmaster, but I supported myself by voluntary subscription. I did not see why the lyceum should not present its tax bill, and have the State to back its demand, as well as the Church. However, at the request of the selectmen, I condescended to make some such statement as this in writing: "Know all men by these presents, that I, Henry Thoreau, do not wish to be regarded as a member of any incorporated society which I have not joined." This I gave to the town clerk; and he has it. The State, having thus learned that I did not wish to be regarded as a member of that church, has never made a like demand on me since; though it said that it must adhere to its original presumption that time. If I had known how to name them, I should then have signed off in detail from all the societies which I never signed on to; but I did not know where to find such a complete list.

I have paid no poll tax for six years. I was put into a jail once on this account, for one night; and, as I stood considering the walls of solid stone, two or three feet thick, the door of wood and iron, a foot thick, and the iron grating which strained the light, I could not help being struck with the foolishness of that institution which treated me as if I were mere flesh and blood and bones, to be locked up. I wondered that it should have concluded at length that this was the best use it could put me to, and had never thought to avail itself of my services in some way. I saw that, if there was a wall of stone between me and my townsmen, there was a still more difficult one to climb or break through before they could get to be as free as I was. I did not for a moment feel confined, and the walls seemed a great waste of stone and mortar. I felt as if I alone of all my townsmen had paid my tax. They plainly did not know how to treat me, but behaved like persons who are underbred. In every threat and in every compliment there was a blunder; for they thought that my chief desire was to stand the other side of that stone wall. I could not but smile to see how industriously they locked the door on my meditations, which followed them out again without let or hindrance, and they were really all that was dangerous. As they could not reach me, they had resolved to punish my body; just as boys, if they cannot come at some person against whom they have a spite, will abuse his dog. I saw that the State was half-witted, that it was timid as a lone woman with her silver spoons, and that it did not know its friends from its foes, and I lost all my remaining respect for it, and pitied it.

Thus the state never intentionally confronts a man's sense, intellectual or moral, but only his body, his senses. It is not armed with superior wit or honesty, but with superior physical strength. I was not born to be forced. I will breathe after my own fashion. Let us see who is the strongest. What force has a multitude? They only can force me who obey a higher law than I. They force me to become like themselves. I do not hear of men being forced to live this way or that by masses of men. What sort of

life were that to live? When I meet a government which says to me, "Your money or your life," why should I be in haste to give it my money? It may be in a great strait, and not know what to do: I cannot help that. It must help itself; do as I do. It is not worth the while to snivel about it. I am not responsible for the successful working of the machinery of society. I am not the son of the engineer. I perceive that, when an acorn and a chestnut fall side by side, the one does not remain inert to make way for the other, but both obey their own laws, and spring and grow and flourish as best they can, till one, perchance, overshadows and destroys the other. If a plant cannot live according to nature, it dies; and so a man.

The night in prison was novel and interesting enough. The prisoners in their shirt-sleeves were enjoying a chat and the evening air in the doorway, when I entered. But the jailer said, "Come, boys, it is time to lock up"; and so they dispersed, and I heard the sound of their steps returning into the hollow apartments. My room-mate was introduced to me by the jailer as "a first-rate fellow and clever man." When the door was locked, he showed me where to hang my hat, and how he managed matters there. The rooms were whitewashed once a month; and this one, at least, was the whitest, most simply furnished, and probably neatest apartment in town. He naturally wanted to know where I came from, and what brought me there; and, when I had told him, I asked him in my turn how he came there, presuming him to be an honest man, of course; and as the world goes, I believe he was. "Why," said he, "they accuse me of burning a barn; but I never did it." As near as I could discover, he had probably gone to bed in a barn when drunk, and smoked his pipe there; and so a barn was burnt. He had the reputation of being a clever man, had been there some three months waiting for his trial to come on, and would have to wait as much longer; but he was quite domesticated and contented, since he got his board for nothing, and thought that he was well treated.

He occupied one window, and I the other; and I saw that if one stayed there long, his principal business would be to look out the window. I had soon read all the tracts that were left there, and examined where former prisoners had broken out, and where a grate had been sawed off, and heard the history of the various occupants of that room; for I found that even there there was a history and a gossip which never circulated beyond the walls of the jail. Probably this is the only house in the town where verses are composed, which are afterward printed in a circular form, but not published. I was shown quite a long list of young men who had been detected in an attempt to escape, who avenged themselves by singing them.

I pumped my fellow-prisoner as dry as I could, for fear I should never see him again; but at length he showed me which was my bed, and left me to blow out the lamp.

It was like travelling into a far country, such as I had never expected to behold, to lie there for one night. It seemed to me that I never had heard the town clock strike before, not the evening sounds of the village; for we slept with the windows open, which were inside the grating. It was to see my native village in the light of the Middle Ages, and our Concord was turned into a Rhine stream, and visions of knights and castles

passed before me. They were the voices of old burghers that I heard in the streets. I was an involuntary spectator and auditor of whatever was done and said in the kitchen of the adjacent village inn — a wholly new and rare experience to me. It was a closer view of my native town. I was fairly inside of it. I never had seen its institutions before. This is one of its peculiar institutions; for it is a shire town. I began to comprehend what its inhabitants were about.

In the morning, our breakfasts were put through the hole in the door, in small oblong-square tin pans, made to fit, and holding a pint of chocolate, with brown bread, and an iron spoon. When they called for the vessels again, I was green enough to return what bread I had left, but my comrade seized it, and said that I should lay that up for lunch or dinner. Soon after he was let out to work at haying in a neighboring field, whither he went every day, and would not be back till noon; so he bade me good day, saying that he doubted if he should see me again.

When I came out of prison — for some one interfered, and paid that tax — I did not perceive that great changes had taken place on the common, such as he observed who went in a youth and emerged a gray-headed man; and yet a change had come to my eyes come over the scene — the town, and State, and country, greater than any that mere time could effect. I saw yet more distinctly the State in which I lived. I saw to what extent the people among whom I lived could be trusted as good neighbors and friends; that their friendship was for summer weather only; that they did not greatly propose to do right; that they were a distinct race from me by their prejudices and superstitions, as the Chinamen and Malays are; that in their sacrifices to humanity they ran no risks, not even to their property; that after all they were not so noble but they treated the thief as he had treated them, and hoped, by a certain outward observance and a few prayers, and by walking in a particular straight though useless path from time to time, to save their souls. This may be to judge my neighbors harshly; for I believe that many of them are not aware that they have such an institution as the jail in their village.

It was formerly the custom in our village, when a poor debtor came out of jail, for his acquaintances to salute him, looking through their fingers, which were crossed to represent the jail window, "How do ye do?" My neighbors did not thus salute me, but first looked at me, and then at one another, as if I had returned from a long journey. I was put into jail as I was going to the shoemaker's to get a shoe which was mended. When I was let out the next morning, I proceeded to finish my errand, and, having put on my mended shoe, joined a huckleberry party, who were impatient to put themselves under my conduct; and in half an hour — for the horse was soon tackled — was in the midst of a huckleberry field, on one of our highest hills, two miles off, and then the State was nowhere to be seen.

This is the whole history of "My Prisons."

I have never declined paying the highway tax, because I am as desirous of being a good neighbor as I am of being a bad subject; and as for supporting schools, I am doing my part to educate my fellow countrymen now. It is for no particular item in

the tax bill that I refuse to pay it. I simply wish to refuse allegiance to the State, to withdraw and stand aloof from it effectually. I do not care to trace the course of my dollar, if I could, till it buys a man or a musket to shoot one with — the dollar is innocent — but I am concerned to trace the effects of my allegiance. In fact, I quietly declare war with the State, after my fashion, though I will still make use and get what advantages of her I can, as is usual in such cases.

If others pay the tax which is demanded of me, from a sympathy with the State, they do but what they have already done in their own case, or rather they abet injustice to a greater extent than the State requires. If they pay the tax from a mistaken interest in the individual taxed, to save his property, or prevent his going to jail, it is because they have not considered wisely how far they let their private feelings interfere with the public good.

This, then, is my position at present. But one cannot be too much on his guard in such a case, lest his actions be biased by obstinacy or an undue regard for the opinions of men. Let him see that he does only what belongs to himself and to the hour.

I think sometimes, Why, this people mean well, they are only ignorant; they would do better if they knew how: why give your neighbors this pain to treat you as they are not inclined to? But I think again, This is no reason why I should do as they do, or permit others to suffer much greater pain of a different kind. Again, I sometimes say to myself, When many millions of men, without heat, without ill will, without personal feelings of any kind, demand of you a few shillings only, without the possibility, such is their constitution, of retracting or altering their present demand, and without the possibility, on your side, of appeal to any other millions, why expose yourself to this overwhelming brute force? You do not resist cold and hunger, the winds and the waves, thus obstinately; you quietly submit to a thousand similar necessities. You do not put your head into the fire. But just in proportion as I regard this as not wholly a brute force, but partly a human force, and consider that I have relations to those millions as to so many millions of men, and not of mere brute or inanimate things, I see that appeal is possible, first and instantaneously, from them to the Maker of them, and, secondly, from them to themselves. But if I put my head deliberately into the fire, there is no appeal to fire or to the Maker of fire, and I have only myself to blame. If I could convince myself that I have any right to be satisfied with men as they are, and to treat them accordingly, and not according, in some respects, to my requisitions and expectations of what they and I ought to be, then, like a good Mussulman and fatalist, I should endeavor to be satisfied with things as they are, and say it is the will of God. And, above all, there is this difference between resisting this and a purely brute or natural force, that I can resist this with some effect; but I cannot expect, like Orpheus, to change the nature of the rocks and trees and beasts.

I do not wish to quarrel with any man or nation. I do not wish to split hairs, to make fine distinctions, or set myself up as better than my neighbors. I seek rather, I may say, even an excuse for conforming to the laws of the land. I am but too ready to conform to them. Indeed, I have reason to suspect myself on this head; and each

year, as the tax-gatherer comes round, I find myself disposed to review the acts and position of the general and State governments, and the spirit of the people to discover a pretext for conformity.

“We must affect our country as our parents,  
And if at any time we alienate  
Out love or industry from doing it honor,  
We must respect effects and teach the soul  
Matter of conscience and religion,  
And not desire of rule or benefit.”

I believe that the State will soon be able to take all my work of this sort out of my hands, and then I shall be no better patriot than my fellow-countrymen. Seen from a lower point of view, the Constitution, with all its faults, is very good; the law and the courts are very respectable; even this State and this American government are, in many respects, very admirable, and rare things, to be thankful for, such as a great many have described them; seen from a higher still, and the highest, who shall say what they are, or that they are worth looking at or thinking of at all?

However, the government does not concern me much, and I shall bestow the fewest possible thoughts on it. It is not many moments that I live under a government, even in this world. If a man is thought-free, fancy-free, imagination-free, that which is not never for a long time appearing to be to him, unwise rulers or reformers cannot fatally interrupt him.

I know that most men think differently from myself; but those whose lives are by profession devoted to the study of these or kindred subjects content me as little as any. Statesmen and legislators, standing so completely within the institution, never distinctly and nakedly behold it. They speak of moving society, but have no resting-place without it. They may be men of a certain experience and discrimination, and have no doubt invented ingenious and even useful systems, for which we sincerely thank them; but all their wit and usefulness lie within certain not very wide limits. They are wont to forget that the world is not governed by policy and expediency. Webster never goes behind government, and so cannot speak with authority about it. His words are wisdom to those legislators who contemplate no essential reform in the existing government; but for thinkers, and those who legislate for all time, he never once glances at the subject. I know of those whose serene and wise speculations on this theme would soon reveal the limits of his mind's range and hospitality. Yet, compared with the cheap professions of most reformers, and the still cheaper wisdom an eloquence of politicians in general, his are almost the only sensible and valuable words, and we thank Heaven for him. Comparatively, he is always strong, original, and, above all, practical. Still, his quality is not wisdom, but prudence. The lawyer's truth is not Truth, but consistency or a consistent expediency. Truth is always in harmony with herself, and is not concerned chiefly to reveal the justice that may consist with wrong-doing. He well deserves to be called, as he has been called, the Defender of the Constitution. There are really no blows to be given him but defensive ones. He is not a

leader, but a follower. His leaders are the men of '87. "I have never made an effort," he says, "and never propose to make an effort; I have never countenanced an effort, and never mean to countenance an effort, to disturb the arrangement as originally made, by which various States came into the Union." Still thinking of the sanction which the Constitution gives to slavery, he says, "Because it was part of the original compact — let it stand." Notwithstanding his special acuteness and ability, he is unable to take a fact out of its merely political relations, and behold it as it lies absolutely to be disposed of by the intellect — what, for instance, it behooves a man to do here in America today with regard to slavery — but ventures, or is driven, to make some such desperate answer to the following, while professing to speak absolutely, and as a private man — from which what new and singular of social duties might be inferred? "The manner," says he, "in which the governments of the States where slavery exists are to regulate it is for their own consideration, under the responsibility to their constituents, to the general laws of propriety, humanity, and justice, and to God. Associations formed elsewhere, springing from a feeling of humanity, or any other cause, have nothing whatever to do with it. They have never received any encouragement from me and they never will." [These extracts have been inserted since the lecture was read -HDT]

They who know of no purer sources of truth, who have traced up its stream no higher, stand, and wisely stand, by the Bible and the Constitution, and drink at it there with reverence and humanity; but they who behold where it comes trickling into this lake or that pool, gird up their loins once more, and continue their pilgrimage toward its fountainhead.

No man with a genius for legislation has appeared in America. They are rare in the history of the world. There are orators, politicians, and eloquent men, by the thousand; but the speaker has not yet opened his mouth to speak who is capable of settling the much-vexed questions of the day. We love eloquence for its own sake, and not for any truth which it may utter, or any heroism it may inspire. Our legislators have not yet learned the comparative value of free trade and of freedom, of union, and of rectitude, to a nation. They have no genius or talent for comparatively humble questions of taxation and finance, commerce and manufactures and agriculture. If we were left solely to the wordy wit of legislators in Congress for our guidance, uncorrected by the seasonable experience and the effectual complaints of the people, America would not long retain her rank among the nations. For eighteen hundred years, though perchance I have no right to say it, the New Testament has been written; yet where is the legislator who has wisdom and practical talent enough to avail himself of the light which it sheds on the science of legislation.

The authority of government, even such as I am willing to submit to — for I will cheerfully obey those who know and can do better than I, and in many things even those who neither know nor can do so well — is still an impure one: to be strictly just, it must have the sanction and consent of the governed. It can have no pure right over my person and property but what I concede to it. The progress from an absolute to a limited monarchy, from a limited monarchy to a democracy, is a progress toward

a true respect for the individual. Even the Chinese philosopher was wise enough to regard the individual as the basis of the empire. Is a democracy, such as we know it, the last improvement possible in government? Is it not possible to take a step further towards recognizing and organizing the rights of man? There will never be a really free and enlightened State until the State comes to recognize the individual as a higher and independent power, from which all its own power and authority are derived, and treats him accordingly. I please myself with imagining a State at last which can afford to be just to all men, and to treat the individual with respect as a neighbor; which even would not think it inconsistent with its own repose if a few were to live aloof from it, not meddling with it, nor embraced by it, who fulfilled all the duties of neighbors and fellow men. A State which bore this kind of fruit, and suffered it to drop off as fast as it ripened, would prepare the way for a still more perfect and glorious State, which I have also imagined, but not yet anywhere seen.

# WALKING

I wish to speak a word for Nature, for absolute freedom and wildness, as contrasted with a freedom and culture merely civil, — to regard man as an inhabitant, or a part and parcel of Nature, rather than a member of society. I wish to make an extreme statement, if so I may make an emphatic one, for there are enough champions of civilization: the minister and the school-committee, and every one of you will take care of that.

\* \* \* \* \*

I have met with but one or two persons in the course of my life who understood the art of Walking, that is, of taking walks, — who had a genius, so to speak, for sauntering: which word is beautifully derived “from idle people who roved about the country, in the Middle Ages, and asked charity, under pretence of going à la Sainte Terre” to the Holy Land, till the children exclaimed, “There goes a Sainte-Terrer,” a Saunterer, — a Holy-Lander. They who never go to the Holy Land in their walks, as they pretend, are indeed mere idlers and vagabonds; but they who do go there are saunterers in the good sense, such as I mean. Some, however, would derive the word from *sans terre*, without land or a home, which, therefore, in the good sense, will mean, having no particular home, but equally at home everywhere. For this is the secret of successful sauntering. He who sits still in a house all the time may be the greatest vagrant of all; but the saunterer, in the good sense, is no more vagrant than the meandering river, which is all the while sedulously seeking the shortest course to the sea. But I prefer the first, which, indeed, is the most probable derivation. For every walk is a sort of crusade, preached by some Peter the Hermit in us, to go forth and reconquer this Holy Land from the hands of the Infidels.

It is true, we are but faint-hearted crusaders, even the walkers, nowadays, who undertake no persevering, never-ending enterprises. Our expeditions are but tours, and come round again at evening to the old hearth-side from which we set out. Half the walk is but retracing our steps. We should go forth on the shortest walk, perchance, in the spirit of undying adventure, never to return, — prepared to send back our embalmed hearts only as relics to our desolate kingdoms. If you are ready to leave father and mother, and brother and sister, and wife and child and friends, and never see them again, — if you have paid your debts, and made your will, and settled all your affairs, and are a free man, then you are ready for a walk.

To come down to my own experience, my companion and I, for I sometimes have a companion, take pleasure in fancying ourselves knights of a new, or rather an old,

order, — not Equestrians or Chevaliers, not Ritters or riders, but Walkers, a still more ancient and honorable class, I trust. The chivalric and heroic spirit which once belonged to the Rider seems now to reside in, or perchance to have subsided into, the Walker, — not the Knight, but Walker Errant. He is a sort of fourth estate, outside of Church and State and People.

We have felt that we almost alone hereabouts practised this noble art; though, to tell the truth, at least, if their own assertions are to be received, moat of my townsmen would fain walk sometimes, as I do, but they cannot. No wealth can buy the requisite leisure, freedom, and independence, which are the capital in this profession. It comes only by the grace of God. It requires a direct dispensation from Heaven to become a walker. You must be born into the family of the Walkers. *Ambulator nascitur, non fit.* Some of my townsmen, it is true, can remember and have described to me some walks which they took ten years ago, in which they were so blessed as to lose themselves for half an hour in the woods; but I know very well that they have confined themselves to the highway ever since, whatever pretensions they may make to belong to this select class. No doubt they were elevated for a moment as by the reminiscence of a previous state of existence, when even they were foresters and outlaws.

“When he came to grene wode,  
In a mery mornynge,  
There he herde the notes small  
Of byrdes mery syngynge.

“It is ferre gone, sayd Robyn,  
That I was last here;  
Me lyste a lytell for to shote  
At the donne dere.”

I think that I cannot preserve my health and spirits, unless I spend four hours a day at least, — and it is commonly more than that, — sauntering through the woods and over the hills and fields, absolutely free from all worldly engagements. You may safely say, A penny for your thoughts, or a thousand pounds. When sometimes I am reminded that the mechanics and shopkeepers stay in their shops not only all the forenoon, but all the afternoon too, sitting with crossed legs, so many of them, — as if the legs were made to sit upon, and not to stand or walk upon, — I think that they deserve some credit for not having all committed suicide long ago.

I, who cannot stay in my chamber for a single day without acquiring some rust, and when sometimes I have stolen forth for a walk at the eleventh hour of four o'clock in the afternoon, too late to redeem the day, when the shades of night were already beginning to be mingled with the daylight, have felt as if I had committed some sin to be atoned for, — I confess that I am astonished at the power of endurance, to say nothing of the moral insensibility, of my neighbors who confine themselves to shops and offices the whole day for weeks and months, ay, and years almost together. I know not what manner of stuff they are of, — sitting there now at three o'clock in the afternoon, as if it were three o'clock in the morning. Bonaparte may talk of the three-

o'clock-in-the-morning courage, but it is nothing to the courage which can sit down cheerfully at this hour in the afternoon over against one's self whom you have known all the morning, to starve out a garrison to whom you are bound by such strong ties of sympathy. I wonder that about this time, or say between four and five o'clock in the afternoon, too late for the morning papers and too early for the evening ones, there is not a general explosion heard up and down the street, scattering a legion of antiquated and house-bred notions and whims to the four winds for an airing, — and so the evil cure itself.

How womankind, who are confined to the house still more than men, stand it I do not know; but I have ground to suspect that most of them do not stand it at all. When, early in a summer afternoon, we have been shaking the dust of the village from the skirts of our garments, making haste past those houses with purely Doric or Gothic fronts, which have such an air of repose about them, my companion whispers that probably about these times their occupants are all gone to bed. Then it is that I appreciate the beauty and the glory of architecture, which itself never turns in, but forever stands out and erect, keeping watch over the slumberers.

No doubt temperament, and, above all, age, have a good deal to do with it. As a man grows older, his ability to sit still and follow indoor occupations increases. He grows vespertinal in his habits as the evening of life approaches, till at last he comes forth only just before sundown, and gets all the walk that he requires in half an hour.

But the walking of which I speak has nothing in it akin to taking exercise, as it is called, as the sick take medicine at stated hours, — as the swinging of dumb-bells or chairs; but is itself the enterprise and adventure of the day. If you would get exercise, go in search of the springs of life. Think of a man's swinging dumb-bells for his health, when those springs are bubbling up in far-off pastures unsought by him!

Moreover, you must walk like a camel, which is said to be the only beast which ruminates when walking. When a traveller asked Wordsworth's servant to show him her master's study, she answered, "Here is his library, but his study is out of doors."

Living much out of doors, in the sun and wind, will no doubt produce a certain roughness of character, — will cause a thicker cuticle to grow over some of the finer qualities of our nature, as on the face and hands, or as severe manual labor robs the hands of some of their delicacy of touch. So staying in the house, on the other hand, may produce a softness and smoothness, not to say thinness of skin, accompanied by an increased sensibility to certain impressions. Perhaps we should be more susceptible to some influences important to our intellectual and moral growth, if the sun had shone and the wind blown on us a little less; and no doubt it is a nice matter to proportion rightly the thick and thin skin. But methinks that is a scurf that will fall off fast enough, — that the natural remedy is to be found in the proportion which the night bears to the day, the winter to the summer, thought to experience. There will be so much the more air and sunshine in our thoughts. The callous palms of the laborer are conversant with finer tissues of self-respect and heroism, whose touch thrills the heart,

than the languid fingers of idleness. That is mere sentimentality that lies abed by day and thinks itself white, far from the tan and callus of experience.

When we walk, we naturally go to the fields and woods: what would become of us, if we walked only in a garden or a mall? Even some sects of philosophers have felt the necessity of importing the woods to themselves, since they did not go to the woods. "They planted groves and walks of Platanes," where they took subdiales ambulationes in porticos open to the air. Of course it is of no use to direct our steps to the woods, if they do not carry us thither. I am alarmed when it happens that I have walked a mile into the woods bodily, without getting there in spirit. In my afternoon walk I would fain forget all my morning occupations and my obligations to society. But it sometimes happens that I cannot easily shake off the village. The thought of some work will run in my head, and I am not where my body is, — I am out of my senses. In my walks I would fain return to my senses. What business have I in the woods, if I am thinking of something out of the woods? I suspect myself, and cannot help a shudder, when I find myself so implicated even in what are called good works, — for this may sometimes happen.

My vicinity affords many good walks; and though for so many years I have walked almost every day, and sometimes for several days together, I have not yet exhausted them. An absolutely new prospect is a great happiness, and I can still get this any afternoon. Two or three hours' walking will carry me to as strange a country as I expect ever to see. A single farmhouse which I had not seen before is sometimes as good as the dominions of the King of Dahomey. There is in fact a sort of harmony discoverable between the capabilities of the landscape within a circle of ten miles' radius, or the limits of an afternoon walk, and the threescore years and ten of human life. It will never become quite familiar to you.

Nowadays almost all man's improvements, so called, as the building of houses, and the cutting down of the forest and of all large trees, simply deform the landscape, and make it more and more tame and cheap. A people who would begin by burning the fences and let the forest stand! I saw the fences half consumed, their ends lost in the middle of the prairie, and some worldly miser with a surveyor looking after his bounds, while heaven had taken place around him, and he did not see the angels going to and fro, but was looking for an old post-hole in the midst of paradise. I looked again, and saw him standing in the middle of a boggy, stygian fen, surrounded by devils, and he had found his bounds without a doubt, three little stones, where a stake had been driven, and looking nearer, I saw that the Prince of Darkness was his surveyor.

I can easily walk ten, fifteen, twenty, any number of miles, commencing at my own door, without going by any house, without crossing a road except where the fox and the mink do: first along by the river, and then the brook, and then the meadow and the wood-side. There are square miles in my vicinity which have no inhabitant. From many a hill I can see civilization and the abodes of man afar. The farmers and their works are scarcely more obvious than woodchucks and their burrows. Man and his affairs, church and state and school, trade and commerce, and manufactures and agriculture,

even politics, the most alarming of them all, — I am pleased to see how little space they occupy in the landscape. Politics is but a narrow field, and that still narrower highway yonder leads to it. I sometimes direct the traveller thither. If you would go to the political world, follow the great road, — follow that market-man, keep his dust in your eyes, and it will lead you straight to it; for it, too, has its place merely, and does not occupy all space. I pass from it as from a bean-field into the forest, and it is forgotten. In one half-hour I can walk off to some portion of the earth's surface where a man does not stand from one year's end to another, and there, consequently, politics are not, for they are but as the cigar-smoke of a man.

The village is the place to which the roads tend, a sort of expansion of the highway, as a lake of a river. It is the body of which roads are the arms and legs, — a trivial or quadrivial place, the thoroughfare and ordinary of travellers. The word is from the Latin villa, which, together with via, a way, or more anciently ved and vella, Varro derives from veho, to carry, because the villa is the place to and from which things are carried. They who got their living by teaming were said vellaturam facere. Hence, too, apparently, the Latin word vilis and our vile; also villain. This suggests what kind of degeneracy villagers are liable to. They are wayworn by the travel that goes by and over them, without travelling themselves.

Some do not walk at all; others walk in the highways; a few walk across lots. Roads are made for horses and men of business. I do not travel in them much, comparatively, because I am not in a hurry to get to any tavern or grocery or livery-stable or depot to which they lead. I am a good horse to travel, but not from choice a roadster. The landscape-painter uses the figures of men to mark a road. He would not make that use of my figure. I walk out into a Nature such as the old prophets and poets, Menu, Moses, Homer, Chaucer, walked in. You may name it America, but it is not America: neither Atrericus Vespuccius, nor Columbus, nor the rest were the discoverers of it. There is a truer account of it in mythology than in any history of America, so called, that I have seen.

However, there are a few old roads that may be trodden with profit, as if they led somewhere now that they are nearly discontinued. There is the Old Marlborough Road, which does not go to Marlborough now, methinks, unless that is Marlborough where it carries me. I am the bolder to speak of it here, because I presume that there are one or two such roads in every town.

THE OLD MARLBOROUGH ROAD.

Where they once dug for money,  
But never found any;  
Where sometimes Martial Miles  
Singly files,  
And Elijah Wood,  
I fear for no good:  
No other man,  
Save Elisha Dugan, —  
O man of wild habits,  
Partridges and rabbits,  
Who hast no cares  
Only to set snares,  
Who liv'st all alone,  
Close to the bone,  
And where life is sweetest  
Constantly eatest.  
When the spring stirs my blood  
With the instinct to travel,  
I can get enough gravel  
On the Old Marlborough Road.  
Nobody repairs it,  
For nobody wears it;  
It is a living way,  
As the Christians say.  
Not many there be  
Who enter therein,  
Only the guests of the  
Irishman Quin.  
What is it, what is it,  
But a direction out there,  
And the bare possibility  
Of going somewhere?  
Great guide-boards of stone,  
But travellers none;  
Cenotaphs of the towns  
Named on their crowns.  
It is worth going to see  
Where you might be.  
What king  
Did the thing,  
I am still wondering;  
Set up how or when,  
By what selectmen,  
Gourgas or Lee,  
Clark or Darby?  
They're a great endeavor  
To be something forever;  
Blank tablets of stone,  
Where a traveller might groan,  
And in one sentence

At present, in this vicinity, the best part of the land is not private property; the landscape is not owned, and the walker enjoys comparative freedom. But possibly the day will come when it will be partitioned off into so-called pleasure-grounds, in which a few will take a narrow and exclusive pleasure only, — when fences shall be multiplied, and man-traps and other engines invented to confine men to the public road, and walking over the surface of God's earth shall be construed to mean trespassing on some gentleman's grounds. To enjoy a thing exclusively is commonly to exclude yourself from the true enjoyment of it. Let us improve our opportunities, then, before the evil days come.

\* \* \* \* \*

What is it that makes it so hard sometimes to determine whither we will walk? I believe that there is a subtle magnetism in Nature, which, if we unconsciously yield to it, will direct us aright. It is not indifferent to us which way we walk. There is a right way; but we are very liable from heedlessness and stupidity to take the wrong one. We would fain take that walk, never yet taken by us through this actual world, which is perfectly symbolical of the path which we love to travel in the interior and ideal world; and sometimes, no doubt, we find it difficult to choose our direction, because it does not yet exist distinctly in our idea.

When I go out of the house for a walk, uncertain as yet whither I will bend my steps, and submit myself to my instinct to decide for me, I find, strange and whimsical as it may seem, that I finally and inevitably settle southwest, toward some particular wood or meadow or deserted pasture or hill in that direction. My needle is slow to settle, — varies a few degrees, and does not always point due southwest, it is true, and it has good authority for this 'variation, but it always settles between west and south-southwest. The future lies that way to me, and the earth seems more unexhausted and richer on that side. The outline which would bound my walks would be, not a circle, but a parabola, or rather like one of those cometary orbits which have been thought to be non-returning curves, in this case opening westward, in which my house occupies the place of the sun. I turn round and round irresolute sometimes for a quarter of an hour, until I decide, for a thousandth time, that I will walk into the southwest or west. Eastward I go only by force; but westward I go free. Thither no business leads me. It is hard for me to believe that I shall find fair landscapes or sufficient wildness and freedom behind the eastern horizon. I am not excited by the prospect of a walk thither; but I believe that the forest which I see in the western horizon stretches uninterruptedly toward the setting sun, and there are no towns nor cities in it of enough consequence to disturb me. Let me live where I will, on this side is the city, on that the wilderness, and ever I am leaving the city more and more, and withdrawing into the wilderness. I should not lay so much stress on this fact, if I did not believe that something like this is the prevailing tendency of my countrymen. I must walk toward Oregon, and not toward Europe. And that way the nation is moving, and I may say that mankind progress from east to west. Within a few years we have witnessed the phenomenon of a southeastward migration, in the settlement of Australia; but this affects us as a

retrograde movement, and, judging from the moral and physical character of the first generation of Australians, has not yet proved a successful experiment. The eastern Tartars think that there is nothing west beyond Thibet. "The world ends there," say they, "beyond there is nothing but a shoreless sea." It is unmitigated East where they live.

We go eastward to realize history and study the works of art and literature, retracing the steps of the race; we go westward as into the future, with a spirit of enterprise and adventure. The Atlantic is a Lethean stream, in our passage over which we have had an opportunity to forget the Old World and its institutions. If we do not succeed this time, there is perhaps one more chance for the race left before it arrives on the banks of the Styx; and that is in the Lethe of the Pacific, which is three times as wide.

I know not how significant it is, or how far it is an evidence of singularity, that an individual should thus consent in his pettiest walk with the general movement of the race; but I know that something akin to the migratory instinct in birds and quadrupeds, — which, in some instances, is known to have affected the squirrel tribe, impelling them to a general and mysterious movement, in which they were seen, say some, crossing the broadest rivers, each on its particular chip, with its tail raised for a sail, and bridging narrower streams with their dead, — that something like the furor which affects the domestic cattle in the spring, and which is referred to a worm in their tails, — affects both nations and individuals, either perennially or from time to time. Not a flock of wild geese cackles over our town, but it to some extent unsettles the value of real estate here, and, if I were a broker, I should probably take that disturbance into account.

"Than longen folk to gon on pilgrimages,  
And palmeres for to seken strange strondes."

Every sunset which I witness inspires me with the desire to go to a West as distant and as fair as that into which the sun goes down. He appears to migrate westward daily, and tempt us to follow him. He is the Great Western Pioneer whom the nations follow. We dream all night of those mountain-ridges in the horizon, though they may be of vapor only, which were last gilded by his rays. The island of Atlantis, and the islands and gardens of the Hesperides, a sort of terrestrial paradise, appear to have been the Great West of the ancients, enveloped in mystery and poetry. Who has not seen in imagination, when looking into the sunset sky, the gardens of the Hesperides, and the foundation of all those fables?

Columbus felt the westward tendency more strongly than any before. He obeyed it, and found a New World for Castile and Leon. The herd of men in those days scented fresh pastures from afar.

"And now the sun had stretched out all the hills,  
And now was dropped into the western bay;  
At last he rose, and twitched his mantle blue;  
To-morrow to fresh woods and pastures new."

Where on the globe can there be found an area of equal extent with that occupied by the bulk of our States, so fertile and so rich and varied in its productions, and

at the same time so habitable by the European, as this is? Michaux, who knew but part of them, says that “the species of large trees are much more numerous in North America than in Europe; in the United States there are more than one hundred and forty species that exceed thirty feet in height; in France there are but thirty that attain this size.” Later botanists more than confirm his observations. Humboldt came to America to realize his youthful dreams of a tropical vegetation, and he beheld it in its greatest perfection in the primitive forests of the Amazon, the most gigantic wilderness on the earth, which he has so eloquently described. The geographer Guyot, himself a European, goes farther, — farther than I am ready to follow him; yet not when he says,— “As the plant is made for the animal, as the vegetable world is made for the animal world, America is made for the man of the Old World.... The man of the Old World sets out upon his way. Leaving the highlands of Asia, he descends from station to station towards Europe. Each of his steps is marked by a new civilization superior to the preceding, by a greater power of development. Arrived at the Atlantic, he pauses on the shore of this unknown ocean, the bounds of which he knows not, and turns upon his footprints for an instant.” When he has exhausted the rich soil of Europe, and reinvigorated himself, “then recommences his adventurous career westward as in the earliest ages.” So far Guyot.

From this western impulse coming in contact with the barrier of the Atlantic sprang the commerce and enterprise of modern times. The younger Michaux, in his “Travels West of the Alleghanies in 1802,” says that the common inquiry in the newly settled West was, “‘From what part of the world have you come?’ As if these vast and fertile regions would naturally be the place of meeting and common country of all the inhabitants of the globe.”

To use an obsolete Latin word, I might say, *Ex Oriente lux; ex Occidente FRUX*. From the East light; from the West fruit.

Sir Francis Head, an English traveller and a Governor-General of Canada, tells us that “in both the northern and southern hemispheres of the New World, Nature has not only outlined her works on a larger scale, but has painted the whole picture with brighter and more costly colors than she used in delineating and in beautifying the Old World.... The heavens of America appear infinitely higher, the sky is bluer, the air is fresher, the cold is intenser, the moon looks larger, the stars are brighter, the thunder is louder, the lightning is vivider, the wind is stronger, the rain is heavier, the mountains are higher, the rivers longer, the forests bigger, the plains broader.” This statement will do at least to set against Buffon’s account of this part of the world and its productions.

Linnaeus said long ago, “*Nescio quae facies laeta, glabra plantis Americanis*: I know not what there is of joyous and smooth in the aspect of American plants;” and I think that in this country there are no, or at most very few, *Africanæ bestiae*, African beasts, as the Romans called them, and that in this respect also it is peculiarly fitted for the habitation of man. We are told that within three miles of the centre of the East-Indian city of Singapore, some of the inhabitants are annually carried off by tigers; but the

traveller can lie down in the woods at night almost anywhere in North America without fear of wild beasts.

These are encouraging testimonies. If the moon looks larger here than in Europe, probably the sun looks larger also. If the heavens of America appear infinitely higher, and the stars brighter, I trust that these facts are symbolical of the height to which the philosophy and poetry and religion of her inhabitants may one day soar. At length, perchance, the immaterial heaven will appear as much higher to the American mind, and the intimations that star it as much brighter. For I believe that climate does thus react on man, — as there is something in the mountain-air that feeds the spirit and inspires. Will not man grow to greater perfection intellectually as well as physically under these influences? Or is it unimportant how many foggy days there are in his life? I trust that we shall be more imaginative, that our thoughts will be clearer, fresher, and more ethereal, as our sky, — our understanding more comprehensive and broader, like our plains, — our intellect generally on a grander scale, like our thunder and lightning, our rivers and mountains and forests, — and our hearts shall even correspond in breadth and depth and grandeur to our inland seas. Perchance there will appear to the traveller something, he knows not what, of *laeta* and *glabra*, of joyous and serene, in our very faces. Else to what end does the world go on, and why was America discovered?

To Americans I hardly need to say, —

“Westward the star of empire takes its way.”

As a true patriot, I should be ashamed to think that Adam in paradise was more favorably situated on the whole than the backwoodsman in this country.

Our sympathies in Massachusetts are not confined to New England; though we may be estranged from the South, we sympathize with the West. There is the home of the younger sons, as among the Scandinavians they took to the sea for their inheritance. It is too late to be studying Hebrew; it is more important to understand even the slang of to-day.

Some months ago I went to see a panorama of the Rhine. It was like a dream of the Middle Ages. I floated down its historic stream in something more than imagination, under bridges built by the Romans, and repaired by later heroes, past cities and castles whose very names were music to my ears, and each of which was the subject of a legend. There were Ehrenbreitstein and Rolandseck and Coblenz, which I knew only in history. They were ruins that interested me chiefly. There seemed to come up from its waters and its vine-clad hills and valleys a hushed music as of Crusaders departing for the Holy Land. I floated along under the spell of enchantment, as if I had been transported to an heroic age, and breathed an atmosphere of chivalry.

Soon after, I went to see a panorama of the Mississippi, and as I worked my way up the river in the light of to-day, and saw the steamboats wooding up, counted the rising cities, gazed on the fresh ruins of Nauvoo, beheld the Indians moving west across the stream, and, as before I had looked up the Moselle now looked up the Ohio and the Missouri, and heard the legends of Dubuque and of Wenona's Cliff, — still thinking

more of the future than of the past or present, — I saw that this was a Rhine stream of a different kind; that the foundations of castles were yet to be laid, and the famous bridges were yet to be thrown over the river; and I felt that this was the heroic age itself, though we know it not, for the hero is commonly the simplest and obscurest of men.

\* \* \* \* \*

The West of which I speak is but another name for the Wild; and what I have been preparing to say is, that in Wildness is the preservation of the World. Every tree sends its fibres forth in search of the Wild. The cities import it at any price. Men plough and sail for it. From the forest and wilderness come the tonics and barks which brace mankind. Our ancestors were savages. The story of Romulus and Remus being suckled by a wolf is not a meaningless fable. The founders of every State which has risen to eminence have drawn their nourishment and vigor from a similar wild source. It was because the children of the Empire were not suckled by the wolf that they were conquered and displaced by the children of the Northern forests who were.

I believe in the forest, and in the meadow, and in the night in which the corn grows. We require an infusion of hemlock-spruce or arbor-vitae in our tea. There is a difference between eating and drinking for strength and from mere gluttony. The Hottentots eagerly devour the marrow of the koodoo and other antelopes raw, as a matter of course. Some of our Northern Indians eat raw the marrow of the Arctic reindeer, as well as various other parts, including the summits of the antlers, as long as they are soft. And herein, perchance, they have stolen a march on the cooks of Paris. They get what usually goes to feed the fire. This is probably better than stall-fed beef and slaughter-house pork to make a man of. Give me a wildness whose glance no civilization can endure, — as if we lived on the marrow of koodoos devoured raw.

There are some intervals which border the strain of the wood-thrush, to which I would migrate, — wild lands where no settler has squatted; to which, methinks, I am already acclimated.

The African hunter Cummings tells us that the skin of the eland, as well as that of most other antelopes just killed, emits the most delicious perfume of trees and grass. I would have every man so much like a wild antelope, so much a part and parcel of Nature, that his very person should thus sweetly advertise our senses of his presence, and remind us of those parts of Nature which he most haunts. I feel no disposition to be satirical, when the trapper's coat emits the odor of musquash even; it is a sweeter scent to me than that which commonly exhales from the merchant's or the scholar's garments. When I go into their wardrobes and handle their vestments, I am reminded of no grassy plains and flowery meads which they have frequented, but of dusty merchants' exchanges and libraries rather.

A tanned skin is something more than respectable, and perhaps olive is a fitter color than white for a man, — a denizen of the woods. "The pale white man!" I do not wonder that the African pitied him. Darwin the naturalist says, "A white man bathing

by the side of a Tahitian was like a plant bleached by the gardener's art, compared with a fine, dark green one, growing vigorously in the open fields."

Ben Jonson exclaims, —

"How near to good is what is fair!"

So I would say, —

How near to good is what is wild!

Life consists with wildness. The most alive is the wildest. Not yet subdued to man, its presence refreshes him. One who pressed forward incessantly and never rested from his labors, who grew fast and made infinite demands on life, would always find himself in a new country or wilderness, and surrounded by the raw material of life. He would be climbing over the prostrate stems of primitive forest-trees.

Hope and the future for me are not in lawns and cultivated fields, not in towns and cities, but in the impervious and quaking swamps. When, formerly, I have analyzed my partiality for some farm which I had contemplated purchasing, I have frequently found that I was attracted solely by a few square rods of impermeable and unfathomable bog, — a natural sink in one corner of it. That was the jewel which dazzled me. I derive more of my subsistence from the swamps which surround my native town than from the cultivated gardens in the village. There are no richer parterres to my eyes than the dense beds of dwarf andromeda (*Cassandra calyculata*) which cover these tender places on the earth's surface. Botany cannot go farther than tell me the names of the shrubs which grow there, — the high-blueberry, paniced andromeda, lamb-kill, azalea, and rhodora, — all standing in the quaking sphagnum. I often think that I should like to have my house front on this mass of dull red bushes, omitting other flower plots and borders, transplanted spruce and trim box, even gravelled walks, — to have this fertile spot under my windows, not a few imported barrow-fulls of soil only to cover the sand which was thrown out in digging the cellar. Why not put my house, my parlor, behind this plot, instead of behind that meagre assemblage of curiosities, that poor apology for a Nature and Art, which I call my front-yard? It is an effort to clear up and make a decent appearance when the carpenter and mason have departed, though done as much for the passer-by as the dweller within. The most tasteful front-yard fence was never an agreeable object of study to me; the most elaborate ornaments, acorn-tops, or what not, soon wearied and disgusted me. Bring your sills up to the very edge of the swamp, then, (though it may not be the best place for a dry cellar,) so that there be no access on that side to citizens. Front-yards are not made to walk in, but, at most, through, and you could go in the back way.

Yes, though you may think me perverse, if it were proposed to me to dwell in the neighborhood of the most beautiful garden that ever human art contrived, or else of a Dismal swamp, I should certainly decide for the swamp. How vain, then, have been all your labors, citizens, for me!

My spirits infallibly rise in proportion to the outward dreariness. Give me the ocean, the desert or the wilderness! In the desert, pure air and solitude compensate for want of moisture and fertility. The traveller Burton says of it,— "Your morale improves; you

become frank and cordial, hospitable and single-minded..... In the desert, spirituous liquors excite only disgust. There is a keen enjoyment in a mere animal existence." They who have been travelling long on the steppes of Tartary say,— "On reëntering cultivated lands, the agitation, perplexity, and turmoil of civilization oppressed and suffocated us; the air seemed to fail us, and we felt every moment as if about to die of asphyxia." When I would recreate myself, I seek the darkest wood, the thickest and most interminable, and, to the citizen, most dismal swamp. I enter a swamp as a sacred place, — a sanctum sanctorum. There is the strength, the marrow of Nature. The wild-wood covers the virgin mould, — and the same soil is good for men and for trees. A man's health requires as many acres of meadow to his prospect as his farm does loads of muck. There are the strong meats on which he feeds. A town is saved, not more by the righteous men in it than by the woods and swamps that surround it. A township where one primitive forest waves above, while another primitive forest rots below, — such a town is fitted to raise not only corn and potatoes, but poets and philosophers for the coming ages. In such a soil grew Homer and Confucius and the rest, and out of such a wilderness comes the Reformer eating locusts and wild honey.

To preserve wild animals implies generally the creation of a forest for them to dwell in or resort to. So it is with man. A hundred years ago they sold bark in our streets peeled from our own woods. In the very aspect of those primitive and rugged trees, there was, methinks, a tanning principle which hardened and consolidated the fibres of men's thoughts. Ah! already I shudder for these comparatively degenerate days of my native village, when you cannot collect a load of bark of good thickness, — and we no longer produce tar and turpentine.

The civilized nations — Greece, Rome, England — have been sustained by the primitive forests which anciently rotted where they stand. They survive as long as the soil is not exhausted. Alas for human culture! little is to be expected of a nation, when the vegetable mould is exhausted, and it is compelled to make manure of the bones of its fathers. There the poet sustains himself merely by his own superfluous fat, and the philosopher comes down on his marrow-bones.

It is said to be the task of the American "to work the virgin soil," and that "agriculture here already assumes proportions unknown everywhere else." I think that the farmer displaces the Indian even because he redeems the meadow, and so makes himself stronger and in some respects more natural. I was surveying for a man the other day a single straight line one hundred and thirty-two rods long, through a swamp, at whose entrance might have been written the words which Dante read over the entrance to the infernal regions,— "Leave all hope, ye that enter," — that is, of ever getting out again; where at one time I saw my employer actually up to his neck and swimming for his life in his property, though it was still winter. He had another similar swamp which I could not survey at all, because it was completely under water, and nevertheless, with regard to a third swamp, which I did survey from a distance, he remarked to me, true to his instincts, that he would not part with it for any consideration, on account of the mud which it contained. And that man intends to put a girdling ditch round the

whole in the course of forty months, and so redeem it by the magic of his spade. I refer to him only as the type of a class.

The weapons with which we have gained our most important victories, which should be handed down as heirlooms from father to son, are not the sword and the lance, but the bushwhack, the turf-cutter, the spade, and the bog-hoe, rusted with the blood of many a meadow, and begrimed with the dust of many a hard-fought field. The very winds blew the Indian's cornfield into the meadow, and pointed out the way which he had not the skill to follow. He had no better implement with which to intrench himself in the land than a clam-shell. But the farmer is armed with plough and spade.

In Literature it is only the wild that attracts us. Dullness is but another name for tameness. It is the uncivilized free and wild thinking in "Hamlet" and the "Iliad," in all the Scriptures and Mythologies, not learned in the schools, that delights us. As the wild duck is more swift and beautiful than the tame, so is the wild — the mallard — thought, which 'mid falling dews wings its way above the fens. A truly good book is something as natural, and as unexpectedly and unaccountably fair and perfect, as a wild flower discovered on the prairies of the West or in the jungles of the East. Genius is a light which makes the darkness visible, like the lightning's flash, which perchance shatters the temple of knowledge itself, — and not a taper lighted at the hearth-stone of the race, which pales before the light of common day.

English literature, from the days of the minstrels to the Lake Poets, — Chaucer and Spenser and Milton, and even Shakspeare, included, — breathes no quite fresh and in this sense wild strain. It is an essentially tame and civilized literature, reflecting Greece and Rome. Her wilderness is a green wood, — her wild man a Robin Hood. There is plenty of genial love of Nature, but not so much of Nature herself. Her chronicles inform us when her wild animals, but not when the wild man in her, became extinct.

The science of Humboldt is one thing, poetry is another thing. The poet to-day, notwithstanding all the discoveries of science, and the accumulated learning of mankind, enjoys no advantage over Homer.

Where is the literature which gives expression to Nature? He would be a poet who could impress the winds and streams into his service, to speak for him; who nailed words to their primitive senses, as farmers drive down stakes in the spring, which the frost has heaved; who derived his words as often as he used them, — transplanted them to his page with earth adhering to their roots; whose words were so true and fresh and natural that they would appear to expand like the buds at the approach of spring, though they lay half-smothered between two musty leaves in a library, — ay, to bloom and bear fruit there, after their kind, annually, for the faithful reader, in sympathy with surrounding Nature.

I do not know of any poetry to quote which adequately expresses this yearning for the Wild. Approached from this side, the best poetry is tame. I do not know where to find in any literature, ancient or modern, any account which contents me of that Nature with which even I am acquainted. You will perceive that I demand something which no Augustan nor Elizabethan age, which no culture, in short, can

give. Mythology comes nearer to it than anything. How much more fertile a Nature, at least, has Grecian mythology its root in than English literature! Mythology is the crop which the Old World bore before its soil was exhausted, before the fancy and imagination were affected with blight; and which it still bears, wherever its pristine vigor is unabated. All other literatures endure only as the elms which overshadow our houses; but this is like the great dragon-tree of the Western Isles, as old as mankind, and, whether that does or not, will endure as long; for the decay of other literatures makes the soil in which it thrives.

The West is preparing to add its fables to those of the East. The valleys of the Ganges, the Nile, and the Rhine, having yielded their crop, it remains to be seen what the valleys of the Amazon, the Plate, the Orinoco, the St. Lawrence, and the Mississippi will produce. Perchance, when, in the course of ages, American liberty has become a fiction of the past, — as it is to some extent a fiction of the present, — the poets of the world will be inspired by American mythology.

The wildest dreams of wild men, even, are not the less true, though they may not recommend themselves to the sense which is most common among Englishmen and Americans today. It is not every truth that recommends itself to the common sense. Nature has a place for the wild clematis as well as for the cabbage. Some expressions of truth are reminiscent, — others merely sensible, as the phrase is, — others prophetic. Some forms of disease, even, may prophesy forms of health. The geologist has discovered that the figures of serpents, griffins, flying dragons, and other fanciful embellishments of heraldry, have their prototypes in the forms of fossil species which were extinct before man was created, and hence “indicate a faint and shadowy knowledge of a previous state of organic existence.” The Hindoos dreamed that the earth rested on an elephant, and the elephant on a tortoise, and the tortoise on a serpent; and though it may be an unimportant coincidence, it will not be out of place here to state, that a fossil tortoise has lately been discovered in Asia large enough to support an elephant. I confess that I am partial to these wild fancies, which transcend the order of time and development. They are the sublimest recreation of the intellect. The partridge loves peas, but not those that go with her into the pot.

In short, all good things are wild and free. There is something in a strain of music, whether produced by an instrument or by the human voice, — take the sound of a bugle in a summer night, for instance, — which by its wildness, to speak without satire, reminds me of the cries emitted by wild beasts in their native forests. It is so much of their wildness as I can understand. Give me for my friends and neighbors wild men, not tame ones. The wildness of the savage is but a faint symbol of the awful ferity with which good men and lovers meet.

I love even to see the domestic animals reassert their native rights, — any evidence that they have not wholly lost their original wild habits and vigor; as when my neighbor's cow breaks out of her pasture early in the spring and boldly swims the river, a cold, gray tide, twenty-five or thirty rods wide, swollen by the melted snow. It is the buffalo crossing the Mississippi. This exploit confers some dignity on the herd in my

eyes, — already dignified. The seeds of instinct are preserved under the thick hides of cattle and horses, like seeds in the bowels of the earth, an indefinite period.

Any sportiveness in cattle is unexpected. I saw one day a herd of a dozen bullocks and cows running about and frisking in unwieldy sport, like huge rats, even like kittens. They shook their heads, raised their tails, and rushed up and down a hill, and I perceived by their horns, as well as by their activity, their relation to the deer tribe. But, alas! a sudden loud Whoa! would have damped their ardor at once, reduced them from venison to beef, and stiffened their sides and sinews like the locomotive. Who but the Evil One has cried, "Whoa!" to mankind? Indeed, the life of cattle, like that of many men, is but a sort of locomotiveness; they move a side at a time, and man, by his machinery, is meeting the horse and the ox half-way. Whatever part the whip has touched is thenceforth palsied. Who would ever think of a side of any of the supple cat tribe, as we speak of a side of beef?

I rejoice that horses and steers have to be broken before they can be made the slaves of men, and that men themselves have some, wild oats still left to sow before they become submissive members of society. Undoubtedly, all men are not equally fit subjects for civilization; and because the majority, like dogs and sheep, are tame by inherited disposition, this is no reason why the others should have their natures broken that they may be reduced to the same level. Men are in the main alike, but they were made several in order that they might be various. If a low use is to be served, one man will do nearly or quite as well as another; if a high one, individual excellence is to be regarded. Any man can stop a hole to keep the wind away, but no other man could serve so rare a use as the author of this illustration did. Confucius says,— "The skins of the tiger and the leopard, when they are tanned, are as the skins of the dog and the sheep tanned." But it is not the part of a true culture to tame tigers, any more than it is to make sheep ferocious; and tanning their skins for shoes is not the best use to which they can be put.

When looking over a list of men's names in a foreign language, as of military officers, or of authors who have written on a particular subject, I am reminded once more that there is nothing in a name. The name Menschikoff, for instance, has nothing in it to my ears more human than a whisker, and it may belong to a rat. As the names of the Poles and Russians are to us, so are ours to them. It is as if they had been named by the child's rigmarole, — Iery wery ichery van, tittle-tol-tan. I see in my mind a herd of wild creatures swarming over the earth, and to each the herdsman has affixed some barbarous sound in his own dialect. The names of men are of course as cheap and meaningless as Bose and Tray, the names of dogs.

Methinks it would be some advantage to philosophy, if men were named merely in the gross, as they are known. It would be necessary only to know the genus and perhaps the race or variety, to know the individual. We are not prepared to believe that every private soldier in a Roman army had a name of his own, — because we have not supposed that he had a character of his own. At present our only true names are nicknames. I knew a boy who, from his peculiar energy, was called "Buster" by his

playmates, and this rightly supplanted his Christian name. Some travellers tell us that an Indian had no name given him at first, but earned it, and his name was his fame; and among some tribes he acquired a new name with every new exploit. It is pitiful when a man bears a name for convenience merely, who has earned neither name nor fame.

I will not allow mere names to make distinctions for me, but still see men in herds for all them. A familiar name cannot make a man less strange to me. It may be given to a savage who retains in secret his own wild title earned in the woods. We have a wild savage in us, and a savage name is perchance somewhere recorded as ours. I see that my neighbor, who bears the familiar epithet William, or Edwin, takes it off with his jacket. It does not adhere to him when asleep or in anger, or aroused by any passion or inspiration. I seem to hear pronounced by some of his kin at such a time his original wild name in some jaw-breaking or else melodious tongue.

Here is this vast, savage, howling mother of ours, Nature, lying all around, with such beauty, and such affection for her children, as the leopard; and yet we are so early weaned from her breast to society, to that culture which is exclusively an interaction of man on man, — a sort of breeding in and in, which produces at most a merely English nobility, a civilization destined to have a speedy limit.

In society, in the best institutions of men, it is easy to detect a certain precocity. When we should still be growing children, we are already little men. Give me a culture which imports much muck from the meadows, and deepens the soil, — not that which trusts to heating manures, and improved implements and modes of culture only!

Many a poor sore-eyed student that I have heard of would grow faster, both intellectually and physically, if, instead of sitting up so very late, he honestly slumbered a fool's allowance.

There may be an excess even of informing light. Niépce, a Frenchman, discovered "actinism," that power in the sun's rays which produces a chemical effect, — that granite rocks, and stone structures, and statues of metal, "are all alike destructively acted upon during the hours of sunshine, and, but for provisions of Nature no less wonderful, would soon perish under the delicate touch of the most subtle of the agencies of the universe." But he observed that "those bodies which underwent this change during the daylight possessed the power of restoring themselves to their original conditions during the hours of night, when this excitement was no-longer influencing them." Hence it has been inferred that "the hours of darkness are as necessary to the inorganic creation as we know night and sleep are to the organic kingdom." Not even does the moon shine every night, but gives place to darkness.

I would not have every man nor every part of a man cultivated, any more than I would have every acre of earth cultivated: part will be tillage, but the greater part will be meadow and forest, not only serving an immediate use, but preparing a mould against a distant future, by the annual decay of the vegetation which it supports.

There are other letters for the child to learn than those which Cadmus invented. The Spaniards have a good term to express this wild and dusky knowledge, — Gramática

parda, tawny grammar, — a kind of mother-wit derived from that same leopard to which I have referred.

We have heard of a Society for the Diffusion of Useful Knowledge. It is said that knowledge is power; and the like. Methinks there is equal need of a Society for the Diffusion of Useful Ignorance, what we will call Beautiful Knowledge, a knowledge useful in a higher sense: for what is most of our boasted so-called knowledge but a conceit that we know something, which robs us of the advantage of our actual ignorance? What we call knowledge is often our positive ignorance; ignorance our negative knowledge. By long years of patient industry and reading of the newspapers, — for what are the libraries of science but files of newspapers? — a man accumulates a myriad facts, lays them up in his memory, and then when in some spring of his life he saunters abroad into the Great Fields of thought, he, as it were, goes to grass like a horse, and leaves all his harness behind in the stable. I would say to the Society for the Diffusion of Useful Knowledge, sometimes, — Go to grass. You have eaten hay long enough. The spring has come with its green crop. The very cows are driven to their country pastures before the end of May; though I have heard of one unnatural farmer who kept his cow in the barn and fed her on hay all the year round. So, frequently, the Society for the Diffusion of Useful Knowledge treats its cattle.

A man's ignorance sometimes is not only useful, but beautiful, — while his knowledge, so called, is oftentimes worse than useless, besides being ugly. Which is the best man to deal with, — he who knows nothing about a subject, and, what is extremely rare, knows that he knows nothing, or he who really knows something about it, but thinks that he knows all?

My desire for knowledge is intermittent; but my desire to bathe my head in atmospheres unknown to my feet is perennial and constant. The highest that we can attain to is not Knowledge, but Sympathy with Intelligence. I do not know that this higher knowledge amounts to anything more definite than a novel and grand surprise on a sudden revelation of the insufficiency of all that we called Knowledge before, — a discovery that there are more things in heaven and earth than are dreamed of in our philosophy. It is the lighting up of the mist by the sun. Man cannot know in any higher sense than this, any more than he can look serenely and with impunity in the face of sun: [Greek: 'Os thi noon, ou keiuou uoaeseis],— “You will not perceive that, as perceiving a particular thing,” say the Chaldean Oracles.

There is something servile in the habit of seeking after a law which we may obey. We may study the laws of matter at and for our convenience, but a successful life knows no law. It is an unfortunate discovery certainly, that of a law which binds us where we did not know before that we were bound. Live free, child of the mist, — and with respect to knowledge we are all children of the mist. The man who takes the liberty to live is superior to all the laws, by virtue of his relation to the law-maker. “That is active duty,” says the Vishnu Parana, “which is not for our bondage; that is knowledge which is for our liberation: all other duty is good only unto weariness; all other knowledge is only the cleverness of an artist.”

\* \* \* \* \*

It is remarkable how few events or crises there are in our histories; how little exercised we have been in our minds; how few experiences we have had. I would fain be assured that I am growing apace and rankly, though my very growth disturb this dull equanimity, — though it be with struggle through long, dark, muggy nights or seasons of gloom. It would be well, if all our lives were a divine tragedy even, instead of this trivial comedy or farce. Dante, Bunyan, and others, appear to have been exercised in their minds more than we: they were subjected to a kind of culture such as our district schools and colleges do not contemplate. Even Mahomet, though many may scream at his name, had a good deal more to live for, ay, and to die for, than they have commonly.

When, at rare intervals, some thought visits one, as perchance he is walking on a railroad, then indeed the cars go by without his hearing them. But soon, by some inexorable law, our life goes by and the cars return.

“Gentle breeze, that wanderest unseen,  
And bendest the thistles round Loira of storms,  
Traveller of the windy glens,  
Why hast thou left my ear so soon?”

While almost all men feel an attraction drawing them to society, few are attracted strongly to Nature. In their relation to Nature men appear to me for the most part, notwithstanding their arts, lower than the animals. It is not often a beautiful relation, as in the case of the animals. How little appreciation of the beauty of the landscape there is among us! We have to be told that the Greeks called the world [Greek: Kosmos], Beauty, or Order, but we do not see clearly why they did so, and we esteem it at best only a curious philological fact.

For my part, I feel that with regard to Nature I live a sort of border life, on the confines of a world into which I make occasional and transional and transient forays only, and my patriotism and allegiance to the State into whose territories I seem to retreat are those of a moss-trooper. Unto a life which I call natural I would gladly follow even a will-o'-the-wisp through bogs and sloughs unimaginable, but no moon nor fire-fly has shown me the causeway to it. Nature is a personality so vast and universal that we have never seen one of her features. The walker in the familiar fields which stretch around my native town sometimes finds himself in another land than is described in their owners' deeds, as it were in some far-away field on the confines of the actual Concord, where her jurisdiction ceases, and the idea which the word Concord suggests ceases to be suggested. These farms which I have myself surveyed, these bounds which I have set up, appear dimly still as through a mist; but they have no chemistry to fix them; they fade from the surface of the glass; and the picture which the painter painted stands out dimly from beneath. The world with which we are commonly acquainted leaves no trace, and it will have no anniversary.

I took a walk on Spaulding's Farm the other afternoon. I saw the setting sun lighting up the opposite side of a stately pine wood. Its golden rays straggled into the aisles of

the wood as into some noble hall. I was impressed as if some ancient and altogether admirable and shining family had settled there in that part of the land called Concord, unknown to me, — to whom the sun was servant, — who had not gone into society in the village, — who had not been called on. I saw their park, their pleasure-ground, beyond through the wood, in Spaulding's cranberry-meadow. The pines furnished them with gables as they grew. Their house was not obvious, to vision; the trees grew through it. I do not know whether I heard the sounds of a suppressed hilarity or not. They seemed to recline on the sunbeams. They have sons and daughters. They are quite well. The farmer's cart-path, which leads directly through their hall, does not in the least put them out, — as the muddy bottom of a pool is sometimes seen through the reflected skies. They never heard of Spaulding, and do not know that he is their neighbor, — notwithstanding I heard him whistle as he drove his team through the house. Nothing can equal the serenity of their lives. Their coat of arms is simply a lichen. I saw it painted on the pines and oaks. Their attics were in the tops of the trees. They are of no politics. There was no noise of labor. I did not perceive that they were weaving or spinning. Yet I did detect, when the wind lulled and hearing was done away, the finest imaginable sweet musical hum, — as of a distant hive in May, which perchance was the sound of their thinking. They had no idle thoughts, and no one without could see their work, for their industry was not as in knots and excrescences embayed.

But I find it difficult to remember them. They fade irrevocably out of my mind even now while I speak and endeavor to recall them, and recollect myself. It is only after a long and serious effort to recollect my best thoughts that I become again aware of their cohabitancy. If it were not for such families as this, I think I should move out of Concord.

\* \* \* \* \*

We are accustomed to say in New England that few and fewer pigeons visit us every year. Our forests furnish no mast for them. So, it would seem, few and fewer thoughts visit each growing man from year to year, for the grove in our minds is laid waste, — sold to feed unnecessary fires of ambition, or sent to mill, and there is scarcely a twig left for them to perch on. They no longer build nor breed with us. In some more genial season, perchance, a faint shadow flits across the landscape of the mind, cast by the wings of some thought in its vernal or autumnal migration, but, looking up, we are unable to detect the substance of the thought itself. Our winged thoughts are turned to poultry. They no longer soar, and they attain only to a Shanghai and Cochin-China grandeur. Those gra-a-ate thoughts, those gra-a-ate men you hear of!

\* \* \* \* \*

We hug the earth, — how rarely we mount! Methinks we might elevate ourselves a little more. We might climb a tree, at least. I found my account in climbing a tree once. It was a tall white pine, on the top of a hill; and though I got well pitched, I was well paid for it, for I discovered new mountains in the horizon which I had never seen before, — so much more of the earth and the heavens. I might have walked about the

foot of the tree for threescore years and ten, and yet I certainly should never have seen them. But, above all, I discovered around me, — it was near the end of June, — on the ends of the topmost branches only, a few minute and delicate red cone-like blossoms, the fertile flower of the white pine looking heavenward. I carried straightway to the village the topmost spire, and showed it to stranger jurymen who walked the streets, — for it was court-week, — and to farmers and lumber-dealers and wood-choppers and hunters, and not one had ever seen the like before, but they wondered as at a star dropped down. Tell of ancient architects finishing their works on the tops of columns as perfectly as on the lower and more visible parts! Nature has from the first expanded the minute blossoms of the forest only toward the heavens, above men's heads and unobserved by them. We see only the flowers that are under our feet in the meadows. The pines have developed their delicate blossoms on the highest twigs of the wood every summer for ages, as well over the heads of Nature's red children as of her white ones; yet scarcely a farmer or hunter in the land has ever seen them.

\* \* \* \* \*

Above all, we cannot afford not to live in the present. He is blessed over all mortals who loses no moment of the passing life in remembering the past. Unless our philosophy hears the cock crow in every barn-yard within our horizon, it is belated. That sound commonly reminds us that we are growing rusty and antique in our employments and habits of thought. His philosophy comes down to a more recent time than ours. There is something suggested by it that is a newer testament, — the gospel according to this moment. He has not fallen astern; he has got up early, and kept up early, and to be where he is to be in season, in the foremost rank of time. It is an expression of the health and soundness of Nature, a brag for all the world, — healthiness as of a spring burst forth, a new fountain of the Muses, to celebrate this last instant of time. Where he lives no fugitive slave laws are passed. Who has not betrayed his master many times since last he heard that note?

The merit of this bird's strain is in its freedom from all plaintiveness. The singer can easily move us to tears or to laughter, but where is he who can excite in us a pure morning joy? When, in doleful dumps, breaking the awful stillness of our wooden sidewalk on a Sunday, or, perchance, a watcher in the house of mourning, I hear a cockerel crow far or near, I think to myself, "There is one of us well, at any rate," — and with a sudden gush return to my senses.

We had a remarkable sunset one day last November. I was walking in a meadow, the source of a small brook, when the sun at last, just before setting, after a cold gray day, reached a clear stratum in the horizon, and the softest, brightest morning sunlight fell on the dry grass and on the stems of the trees in the opposite horizon, and on the leaves of the shrub-oaks on the hill-side, while our shadows stretched long over the meadow eastward, as if we were the only motes in its beams. It was such a light as we could not have imagined a moment before, and the air also was so warm and serene that nothing was wanting to make a paradise of that meadow. When we reflected that this was not a solitary phenomenon, never to happen again, but that it would happen

forever and ever an infinite number of evenings, and cheer and reassure the latest child that walked there, it was more glorious still.

The sun sets on some retired meadow, where no house is visible, with all the glory and splendor that it lavishes on cities, and perchance, as it has never set before, — where there is but a solitary marsh-hawk to have his wings gilded by it, or only a musquash looks out from his cabin, and there is some little black-veined brook in the midst of the marsh, just beginning to meander, winding slowly round a decaying stump. We walked in so pure and bright a light, gilding the withered grass and leaves, so softly and serenely bright, I thought I had never bathed in such a golden flood, without a ripple or a murmur to it. The west side of every wood and rising ground gleamed like the boundary of Elysium, and the sun on our backs seemed like a gentle herdsman driving us home at evening.

So we saunter toward the Holy Land, till one day the sun shall shine more brightly than ever he has done, shall perchance shine into our minds and hearts, and light up our whole lives with a great awakening light, as warm and serene and golden as on a bank-side in autumn.

# LOVE

WHAT the essential difference between man and woman is that they should be thus attracted to one another, no one has satisfactorily answered. Perhaps we must acknowledge the justness of the distinction which assigns to man the sphere of wisdom, and to woman that of love, though neither belongs exclusively to either. Man is continually saying to woman, Why will you not be more wise? Woman is continually saying to man, Why will you not be more loving? It is not in their wills to be wise or to be loving; but, unless each is both wise and loving, there can be neither wisdom nor love.

All transcendent goodness is one, though appreciated in different ways, or by different senses. In beauty we see it, in music we hear it, in fragrance we scent it, in the palatable the pure palate tastes it, and in rare health the whole body feels it. The variety is in the surface or manifestation; but the radical identity we fail to express. The lover sees in the glance of his beloved the same beauty that in the sunset paints the western skies. It is the same daimon, here lurking under a human eyelid, and there under the closing eyelids of the day. Here, in small compass, is the ancient and natural beauty of evening and morning. What loving astronomer has ever fathomed the ethereal depths of the eye?

The maiden conceals a fairer flower and sweeter fruit than any calyx in the field; and, if she goes with averted face, confiding in her purity and high resolves, she will make the heavens retrospective, and all nature humbly confess its queen.

Under the influence of this sentiment, man is a string of an Æolian harp, which vibrates with the zephyrs of the eternal morning.

There is at first thought something trivial in the commonness of love. So many Indian youths and maidens along these banks have in ages past yielded to the influence of this great civilizer. Nevertheless, this generation is not disgusted nor discouraged, for love is no individual's experience; and though we are imperfect mediums, it does not partake of our imperfection; though we are finite, it is infinite and eternal; and the same divine influence broods over these banks, whatever race may inhabit them, and perchance still would, even if the human race did not dwell here.

Perhaps an instinct survives through the intensest actual love, which prevents entire abandonment and devotion, and makes the most ardent lover a little reserved. It is the anticipation of change. For the most ardent lover is not the less practically wise, and seeks a love which will last forever.

Considering how few poetical friendships there are, it is remarkable that so many are married. It would seem as if men yielded too easy an obedience to nature without consulting their genius. One may be drunk with love without being any nearer to finding his mate. There is more of good nature than of good sense at the bottom of most marriages. But the good nature must have the counsel of the good spirit or Intelligence. If common sense had been consulted, how many marriages would never have taken place; if uncommon or divine sense, how few marriages such as we witness would ever have taken place!

Our love may be ascending or descending. What is its character, if it may be said of it, —

“We must respect the souls above,  
But only those below we love.”

Love is a severe critic. Hate can pardon more than love. They who aspire to love worthily, subject themselves to an ordeal more rigid than any other.

Is your friend such a one that an increase of worth on your part will surely make her more your friend? Is she retained, — is she attracted, — by more nobleness in you, — by more of that virtue which is peculiarly yours; or is she indifferent and blind to that? Is she to be flattered and won by your meeting her on any other than the ascending path? Then duty requires that you separate from her.

Love must be as much a light as a flame.

Where there is not discernment, the behavior even of the purest soul may in effect amount to coarseness.

A man of fine perceptions is more truly feminine than a merely sentimental woman. The heart is blind, but Love is not blind. None of the gods is so discriminating.

In Love & Friendship the imagination is as much exercised as the heart, and if either is outraged, the other will be estranged. It is commonly the imagination which is wounded first, rather than the heart, it is so much the more sensitive.

Comparatively, we can excuse any offence against the heart, but not against the imagination. The imagination knows — nothing escapes its glance from out its eye — and it controls the breast. My heart may still yearn toward the valley, but my imagination will not permit me to jump off the precipice that debars me from it, for it is wounded, its wings are dipt, and it cannot fly, even descendingly. Our “blundering hearts”! some poet says. The imagination never forgets, it is a remembering. It is not foundationless, but most reasonable, and it alone uses all the knowledge of the intellect.

Love is the profoundest of secrets. Divulged, even to the beloved, it is no longer Love. As if it were merely I that loved you. When love ceases, then it is divulged.

In our intercourse with one we love, we wish to have answered those questions at the end of which we do not raise our voice; against which we put no interrogation-mark, — answered with the same unfailing, universal aim toward every point of the compass.

I require that thou knowest everything without being told anything. I parted from my beloved because there was one thing which I had to tell her. She questioned me.

She should have known all by sympathy. That I had to tell it her was the difference between us, — the misunderstanding.

A lover never hears anything that is told, for that is commonly either false or stale; but he hears things taking place, as the sentinels heard Trenck mining in the ground, and thought it was moles.

The relation may be profaned in many ways. The parties may not regard it with equal sacredness. What if the lover should learn that his beloved dealt in incantations and philters! What if he should hear that she consulted a clairvoyant! The spell would be instantly broken.

If to chaffer and higgler are bad in trade, they are much worse in Love. It demands directness as of an arrow.

There is danger that we lose sight of what our friend is absolutely, while considering what she is to us alone.

The lover wants no partiality. He says, Be so kind as to be just.

Canst thou love with thy mind,

And reason with thy heart?

Canst thou be kind,

And from thy darling part?

Canst thou range earth, sea, and air,

And so meet me everywhere?

Through all events I will pursue thee,

Through all persons I will woo thee.

I need thy hate as much as thy love. Thou wilt not repel me entirely when thou repellst what is evil in me.

Indeed, indeed, I cannot tell,

Though I ponder on it well.

Which were easier to state,

All my love or all my hate.

Surely, surely, thou wilt trust me

When I say thou dost disgust me.

O I hate thee with a hate

That would fain annihilate;

Yet, sometimes, against my will,

My dear Friend, I love thee still.

It were treason to our love,

And a sin to God above,

One iota to abate

Of a pure, impartial hate.

It is not enough that we are truthful; we must cherish and carry out high purposes to be truthful about.

It must be rare, indeed, that we meet with one to whom we are prepared to be quite ideally related, as she to us. We should have no reserve; we should give the whole of

ourselves to that society; we should have no duty aside from that. One who could bear to be so wonderfully and beautifully exaggerated every day. I would take my friend out of her low self and set her higher, infinitely higher, and there know her. But, commonly, men are as much afraid of love as of hate. They have lower engagements. They have near ends to serve. They have not imagination enough to be thus employed about a human being, but must be cooperating a barrel, forsooth.

What a difference, whether, in all your walks, you meet only strangers, or in one house is one who knows you, and whom you know. To have a brother or a sister! To have a gold mine on your farm! To find diamonds in the gravel heaps before your door! How rare these things are! To share the day with you, — to people the earth. Whether to have a god or a goddess for companion in your walks, or to walk alone with hinds and villains and carles. Would not a friend enhance the beauty of the landscape as much as a deer or hare? Everything would acknowledge and serve such a relation; the corn in the field, and the cranberries in the meadow. The flowers would bloom, and the birds sing, with a new impulse. There would be more fair days in the year.

The object of love expands and grows before us to eternity, until it includes all that is lovely, and we become all that can love.

# CHASTITY AND SENSUALITY

The subject of Sex is a remarkable one, since, though its phenomena concern us so much both directly and indirectly, and, sooner or later it occupies the thoughts of all, yet, all mankind, as it were, agree to be silent about it, at least the sexes commonly one to another. One of the most interesting of all human facts is veiled more completely than any mystery. It is treated with such secrecy and awe, as surely do not go to any religion. I believe that it is unusual even for the most intimate friends to communicate the pleasures and anxieties connected with this fact, — much as the external affairs of love, its comings & goings, are bruited. The Shakers do not exaggerate it so much by their manner of speaking of it, as all mankind by their manner of keeping silence about it. Not that men should speak on this or any subject without having any thing worthy to say; but it is plain that the education of man has hardly commenced, there is so little genuine intercommunication.

In a pure society, the subject of copulation would not be so often avoided from shame and not from reverence, winked out of sight, and hinted at only, but treated naturally and simply, — perhaps simply avoided, like the kindred mysteries. If it cannot be spoken of for shame, how can it be acted of? But doubtless there is far more purity as well as more impurity, than is apparent.

Men commonly couple with their idea of marriage a slight degree at least of sensuality, but every lover, the world over, believes in its inconceivable purity.

If it is the result of a pure love, there can be nothing sensual in marriage. Chastity is something positive, not negative. It is the virtue of the married especially. All lusts or base pleasures must give place to loftier delights. They who meet as superior beings cannot perform the deeds of inferior ones. The deeds of love are less questionable than any action of an individual can be, for, it being founded on the rarest mutual respect, the parties incessantly stimulate each other to a loftier and purer life, and the act in which they are associated must be pure and noble indeed, for innocence and purity can have no equal. In this relation we deal with one whom we respect more religiously even than we respect our better selves, and we shall necessarily conduct as in the presence of God. What presence can be more awful to the lover than that of his beloved?

If you seek the warmth even of affection from a similar motive to that from which cats and dogs and slothful persons hug the fire, because your temperature is low through sloth, you are on the downward road, and it is but to plunge yet deeper into sloth. Better the cold affection of the sun reflected from fields of ice and snow, or his warmth in some still wintry dell. The warmth of celestial love does not relax, but

nerves and braces its enjoyer. Warm your body by healthful exercise, not by cowering over a stove. Warm your spirit by performing independently noble deeds, not by ignobly seeking the sympathy of your fellows who are no better than yourself. A man's social and spiritual discipline must answer to his corporeal. He must lean on a friend who has a hard breast, as he would lie on a hard bed. He must drink cold water for his only beverage. So he must not hear sweetened and colored words, but pure and refreshing truths. He must daily bathe in truth cold as spring water, not warmed by the sympathy of friends.

Can love be in aught allied to dissipation? Let us love by refusing not accepting one another. Love and lust are far asunder. The one is good, the other bad. When the affectionate sympathize by their higher natures, there is love; but there is danger that they will sympathize by their lower natures, and then there is lust. It is not necessary that this be deliberate, hardly even conscious, but in the close contact of affection there is danger that we may stain and pollute one another, for we cannot embrace but with an entire embrace.

We must love our friend so much that she shall be associated with our purest and holiest thoughts alone. When there is impurity, we have "descended to meet," though we knew it not.

The luxury of affection, — there's the danger. There must be some nerve and heroism in our love, as of a winter morning. In the religion of all nations a purity is hinted at, which, I fear, men never attain to. We may love and not elevate one another. The love that takes us as it finds us, degrades us. What watch we must keep over the fairest and purest of our affections, lest there be some taint about them. May we so love as never to have occasion to repent of our love.

There is to be attributed to sensuality the loss to language of how many pregnant symbols.

Flowers, which, by their infinite hues and fragrance celebrate the marriage of the plants are intended for a symbol of the open and unsuspected beauty of all true marriage, when man's flowering season arrives.

Virginity too is a budding flower, and by an impure marriage the virgin is deflowered. Whoever loves flowers, loves virgins and chastity. Love and lust are as far asunder as a flower garden is from a brothel.

J. Biberg, in the "*Amoenitates Botanicae*", edited by Linnaeus, observes, (I translate from the Latin) "the organs of generation which in the animal kingdom are for the most part concealed by nature as if they were to be ashamed of, in the vegetable kingdom are exposed to the eyes of all; and when the nuptials of plants are celebrated, it is wonderful what delight they afford to the beholder, refreshing the senses with the most agreeable color and the sweetest odor, and at the same time bees and other insects, not to mention the humming bird, extract honey from their nectaries, and gather wax from their effete pollen." Linnaeus himself calls the calyx the *thalamus*, or bridal chamber, and the corolla the *aulaeum* or tapestry of it, and proceeds to explain thus every part of the flower.

Who knows but evil spirits might corrupt the flowers themselves, rob them of their fragrance and their fair hues, and turn their marriage into a secret shame & defilement? Already they are of various qualities, and there is one whose nuptials fill the lowlands in June with the odor of carrion.

The intercourse of the sexes, I have dreamed, is incredibly beautiful, too fair to be remembered. I have had thoughts about it, but they are among the most fleeting and irrecoverable in my experience. It is strange that men will talk of miracles, revelation, inspiration, and the like, as things past, while love remains.

A true marriage will differ in no wise from illumination. In all perception of the truth there is a divine ecstasy, an inexpressible delirium of joy, as when a youth embraces his betrothed virgin. The ultimate delights of a true marriage are one with this.

No wonder that out of such a union, not as end, but as accompaniment, comes the undying race of man. The womb is a most fertile soil.

Some have asked if the stock of men could not be improved, — if they could not be bred as cattle. Let Love be purified and all the rest will follow. A pure love is thus indeed the panacea for all the ills of the world.

The only excuse for reproduction is improvement. Nature abhors repetition. Beasts merely propagate their kind, but the offspring of noble men & women will be superior to themselves, as their aspirations are. By their fruits ye shall know them.

# SLAVERY IN MASSACHUSETTS

I lately attended a meeting of the citizens of Concord, expecting, as one among many, to speak on the subject of slavery in Massachusetts; but I was surprised and disappointed to find that what had called my townsmen together was the destiny of Nebraska, and not of Massachusetts, and that what I had to say would be entirely out of order. I had thought that the house was on fire, and not the prairie; but though several of the citizens of Massachusetts are now in prison for attempting to rescue a slave from her own clutches, not one of the speakers at that meeting expressed regret for it, not one even referred to it. It was only the disposition of some wild lands a thousand miles off, which appeared to concern them. The inhabitants of Concord are not prepared to stand by one of their own bridges, but talk only of taking up a position on the highlands beyond the Yellowstone river. Our Buttricks, and Davises, and Hosmers are retreating thither, and I fear that they will have no Lexington Common between them and the enemy. There is not one slave in Nebraska; there are perhaps a million slaves in Massachusetts.

They who have been bred in the school of politics fail now and always to face the facts. Their measures are half measures and make-shifts, merely. They put off the day of settlement indefinitely, and meanwhile, the debt accumulates. Though the Fugitive Slave Law had not been the subject of discussion on that occasion, it was at length faintly resolved by my townsmen, at an adjourned meeting, as I learn, that the compromise compact of 1820 having been repudiated by one of the parties, 'Therefore, . . . the Fugitive Slave Law must be repealed.' But this is not the reason why an iniquitous law should be repealed. The fact which the politician faces is merely, that there is less honor among thieves than was supposed, and not the fact that they are thieves.

As I had no opportunity to express my thoughts at that meeting, will you allow me to do so here?

Again it happens that the Boston Court House is full of armed men, holding prisoner and trying a MAN, to find out if he is not really a SLAVE. Does any one think that Justice or God awaits Mr. Loring's decision? For him to sit there deciding still, when this question is already decided from eternity to eternity, and the unlettered slave himself, and the multitude around, have long since heard and assented to the decision, is simply to make himself ridiculous. We may be tempted to ask from whom he received his commission, and who he is that received it; what novel statutes he obeys, and what

precedents are to him of authority. Such an arbiter's very existence is an impertinence. We do not ask him to make up his mind, but to make up his pack.

I listen to hear the voice of a Governor, Commander-in-Chief of the forces of Massachusetts. I hear only the creaking of crickets and the hum of insects which now fill the summer air. The Governor's exploit is to review the troops on muster days. I have seen him on horseback, with his hat off, listening to a chaplain's prayer. It chances that is all I have ever seen of a Governor. I think that I could manage to get along without one. If he is not of the least use to prevent my being kidnapped, pray of what important use is he likely to be to me? When freedom is most endangered, he dwells in the deepest obscurity. A distinguished clergyman told me that he chose the profession of a clergyman, because it afforded the most leisure for literary pursuits. I would recommend to him the profession of a Governor.

Three years ago, also, when the Simms tragedy was acted, I said to myself, there is such an officer, if not such a man, as the Governor of Massachusetts, — what has he been about the last fortnight? Has he had as much as he could do to keep on the fence during this moral earthquake? It seemed to me that no keener satire could have been aimed at, no more cutting insult have been offered to that man, than just what happened — the absence of all inquiry after him in that crisis. The worst and the most I chance to know of him is, that he did not improve that opportunity to make himself known, and worthily known. He could at least have resigned himself into fame. It appeared to be forgotten that there was such a man, or such an office. Yet no doubt he was endeavoring to fill the gubernatorial chair all the while. He was no Governor of mine. He did not govern me.

But at last, in the present case, the Governor was heard from. After he and the United States Government had perfectly succeeded in robbing a poor innocent black man of his liberty for life, and, as far as they could, of his Creator's likeness in his breast, he made a speech to his accomplices, at a congratulatory supper!

I have read a recent law of this State, making it penal for 'any officer of the Commonwealth' to 'detain, or aid in the . . . detention,' any where within its limits, 'of any person, for the reason that he is claimed as a fugitive slave.' Also, it was a matter of notoriety that a writ of replevin to take the fugitive out of the custody of the United States Marshal could not be served, for want of sufficient force to aid the officer.

I had thought that the Governor was in some sense the executive officer of the State; that it was his business, as a Governor, to see that the laws of the State were executed; while, as a man, he took care that he did not, by so doing, break the laws of humanity; but when there is any special important use for him, he is useless, or worse than useless, and permits the laws of the State to go unexecuted. Perhaps I do not know what are the duties of a Governor; but if to be a Governor requires to subject one's self to so much ignominy without remedy, if it is to put a restraint upon my manhood, I shall take care never to be Governor of Massachusetts. I have not read far in the statutes of this Commonwealth. It is not profitable reading. They do not always say what is true; and they do not always mean what they say. What I am concerned to know is,

that that man's influence and authority were on the side of the slaveholder, and not of the slave — of the guilty, and not of the innocent — of injustice, and not of justice. I never saw him of whom I speak; indeed, I did not know that he was Governor until this event occurred. I heard of him and Anthony Burns at the same time, and thus, undoubtedly, most will hear of him. So far am I from being governed by him. I do not mean that it thing to his discredit that I had not heard of him, only that I heard what I did. The worst I shall say of him is, that he proved no better than the majority of his constituents would be likely to prove. In my opinion, he was not equal to the occasion.

The whole military force of the State is at the service of a Mr. Suttle, a slaveholder from Virginia, to enable him to catch a man whom he calls his property; but not a soldier is offered to save a citizen of Massachusetts from being kidnapped! Is this what all these soldiers, all this training has been for these seventy-nine years past? Have they been trained merely to rob Mexico, and carry back fugitive slaves to their masters?

These very nights, I heard the sound of a drum in our streets. There were men training still; and for what? I could with an effort pardon the cockerels of Concord for crowing still, for they, perchance, had not been beaten that morning; but I could not excuse this rub-a-dub of the 'trainers.' The slave was carried back by exactly such as these, i.e., by the soldier, of whom the best you can say in this connection is that he is a fool made conspicuous by a painted coat.

Three years ago, also, just a week after the authorities of Boston assembled to carry back a perfectly innocent man, and one whom they knew to be innocent, into slavery, the inhabitants of Concord caused the bells to be rung and the cannons to be fired, to celebrate their liberty — and the courage and love of liberty of their ancestors who fought at the bridge. As if those three millions had fought for the right to be free themselves, but to hold in slavery three million others. Now-a-days men wear a fool's cap, and call it a liberty cap. I do not know but there are some, who, if they were tied to a whipping-post, and could but get one hand free, would use it to ring the bells and fire the cannons, to celebrate their liberty. So some of my townsmen took the liberty to ring and fire; that was the extent of their freedom; and when the sound of the bells died away, their liberty died away also; when the powder was all expended, their liberty went off with the smoke.

The joke could be no broader, if the inmates of the prisons were to subscribe for all the powder to be used in such salutes, and hire the jailers to do the firing and ringing for them, while they enjoyed it through the grating.

This is what I thought about my neighbors.

Every humane and intelligent inhabitant of Concord, when he or she heard those bells and those cannons, thought not with pride of the events of the 19th of April, 1775, but with shame of the events of the 12th of April, 1851. But now we have half buried that old shame under a new one.

Massachusetts sat waiting Mr. Loring's decision, as if it could in any way affect her own criminality. Her crime, the most conspicuous and fatal crime of all, was permitting him to be the umpire in such a case. It was really the trial of Massachusetts. Every

moment that she hesitated to set this man free — every moment that she now hesitates to atone for her crime, she is convicted. The Commissioner on her case is God; not Edward G. God, but simple God.

I wish my countrymen to consider, that whatever the human law may be, neither an individual nor a nation can ever commit the least act of injustice against the obscurest individual, without having to pay the penalty for it. A government which deliberately enacts injustice, and persists in it, will at length ever become the laughing-stock of the world.

Much has been said about American slavery, but I think that we do not even yet realize what slavery is. If I were seriously to propose to Congress to make mankind into sausages, I have no doubt that most of the members would smile at my proposition, and if any believed me to be in earnest, they would think that I proposed something much worse than Congress had ever done. But if any of them will tell me that to make a man into a sausage would be much worse, — would be any worse, than to make him into a slave, — than it was to enact the Fugitive Slave Law, I will accuse him of foolishness, of intellectual incapacity, of making a distinction without a difference. The one is just as sensible a proposition as the other.

I hear a good deal said about trampling this law under foot. Why, one need not go out of his way to do that. This law rises not to the level of the head or the reason; its natural habitat is in the dirt. It was born and bred, and has its life only in the dust and mire, on a level with the feet, and he who walks with freedom, and does not with Hindoo mercy avoid treading on every venomous reptile, will inevitably tread on it, and so trample it under foot, — and Webster, its maker, with it, like the dirt-bug and its ball.

Recent events will be valuable as a criticism on the administration of justice in our midst, or, rather, as showing what are the true resources of justice in any community. It has come to this, that the friends of liberty, the friends of the slave, have shuddered when they have understood that his fate was left to the legal tribunals of the country to be decided. Free men have no faith that justice will be awarded in such a case; the judge may decide this way or that; it is a kind of accident, at best. It is evident that he is not a competent authority in so important a case. It is no time, then, to be judging according to his precedents, but to establish a precedent for the future. I would much rather trust to the sentiment of the people. In their vote, you would get something of some value, at least, however small; but, in the other case, only the trammelled judgment of an individual, of no significance, be it which way it might.

It is to some extent fatal to the courts, when the people are compelled to go behind them. I do not wish to believe that the courts were made for fair weather, and for very civil cases merely, — but think of leaving it to any court in the land to decide whether more than three millions of people. in this case, a sixth part of a nation, have a right to be freemen or not! But it has been left to the courts of justice, so-called — to the Supreme Court of the land — and, as you all know, recognizing no authority but the Constitution, it has decided that the three millions are, and shall continue to

be, slaves. Such judges as these are merely the inspectors of a pick-lock and murderer's tools, to tell him whether they are in working order or not, and there they think that their responsibility ends. There was a prior case on the docket, which they, as judges appointed by God, had no right to skip; which having been justly settled, they would have been saved from this humiliation. It was the case of the murderer himself.

The law will never make men free; it is men who have got to make the law free. They are the lovers of law and order, who observe the law when the government breaks it.

Among human beings, the judge whose words seal the fate of a man furthest into eternity, is not he who merely pronounces the verdict of the law, but he, whoever he may be, who, from a love of truth, and unprejudiced by any custom or enactment of men, utters a true opinion or sentence concerning him. He it is that sentences him. Whoever has discerned truth has received his commission from a higher source than the chiefest justice in the world, who can discern only law. He finds himself constituted judge of the judge. — Strange that it should be necessary to state such simple truths.

I am more and more convinced that, with reference to any public question, it is more important to know what the country thinks of it, than what the city thinks. The city does not think much. On any moral question, I would rather have the opinion of Boxboro than of Boston and New York put together. When the former speaks, I feel as if somebody had spoken, as if humanity was yet, and a reasonable being had asserted its rights, — as if some unprejudiced men among the country's hills had at length turned their attention to the subject, and by a few sensible words redeemed the reputation of the race. When, in some obscure country town, the farmers come together to a special town meeting, to express their opinion on some subject which is vexing the land, that, I think, is the true Congress, and the most respectable one that is ever assembled in the United States.

It is evident that there are, in this Commonwealth, at least, two parties, becoming more and more distinct — the party of the city, and the party of the country. I know that the country is mean enough, but I am glad to believe that there is a slight difference in her favor. But as yet, she has few, if any organs, through which to express herself. The editorials which she reads, like the news, come from the sea-board. Let us, the inhabitants of the country, cultivate self-respect. Let us not send to the city for aught more essential than our broadcloths and groceries, or, if we read the opinions of the city, let us entertain opinions of our own.

Among measures to be adopted, I would suggest to make as earnest and vigorous an assault on the Press as has already been made, and with effect, on the Church. The Church has much improved within a few years; but the Press is almost, without exception, corrupt. I believe that, in this country, the press exerts a greater and a more pernicious influence than the Church did in its worst period. We are not a religious people, but we are a nation of politicians. We do not care for the Bible, but we do care for the newspaper. At any meeting of politicians, — like that at Concord the other evening, for instance, — how impertinent it would be to quote from the Bible! how

pertinent to quote from a newspaper or from the Constitution! The newspaper is a Bible which we read every morning and every afternoon, standing and sitting, riding and walking. It is a Bible which every man carries in his pocket, which lies on every table and counter, and which the mail, and thousands of missionaries, are continually dispensing. It is, in short, the only book which America has printed, and which America reads. So wide is its influence. The editor is a preacher whom you voluntarily support. Your tax is commonly one cent daily, and it costs nothing for pew hire. But how many of these preachers preach the truth? I repeat the testimony of many an intelligent foreigner as well as my own convictions, when I say, that probably no country was ever ruled by so mean a class of tyrants as, with a few noble exceptions, are the editors of the periodical press in this country. And as they live and rule only by their servility, and appealing to the worst, and not the better nature of man, the people who read them are in the condition of the dog that returns to his vomit.

The Liberator and the Commonwealth were the only papers in Boston, as far as I know, which made themselves heard in condemnation of the cowardice and meanness of the authorities of that city, as exhibited in '51. The other journals, almost without exception, by their manner of referring to and speaking of the Fugitive Slave Law, and the carrying back of the slave Simms, insulted the common sense of the country, at least. And, for the most part, they did this, one would say, because they thought so to secure the approbation of their patrons, not being aware that a sounder sentiment prevailed to any extent in the heart of the Commonwealth. I am told that some of them have improved of late; but they are still eminently time-serving. Such is the character they have won.

But, thank fortune, this preacher can be even more easily reached by the weapons of the reformer than could the recreant priest. The free men of New England have only to refrain from purchasing and reading these sheets, have only to withhold their cents, to kill a score of them at once. One whom I respect told me that he purchased Mitchell's Citizen in the cars, and then threw it out the window. But would not his contempt have been more fatally expressed, if he had not bought it?

Are they Americans? are they New Englanders? are they inhabitants of Lexington, and Concord, and Framingham, who read and support the Boston Post, Mail, Journal, Advertiser, Courier, and Times? Are these the Flags of our Union? I am not a newspaper reader, and may omit to name the worst.

Could slavery suggest a more complete servility than some of these journals exhibit? Is there any dust which their conduct does not lick, and make fouler still with its slime? I do not know whether the Boston Herald is still in existence, but I remember to have seen it about the streets when Simms was carried off. Did it not act its part well — serve its master faithfully? How could it have gone lower on its belly? How can a man stoop lower than he is low? do more than put his extremities in the place of the head he has? than make his head his lower extremity? When I have taken up this paper with my cuffs turned up, I have heard the gurgling of the sewer through every column. I have felt that I was handling a paper picked out of the public gutters, a leaf from

the gospel of the gambling-house, the groggery and the brothel, harmonizing with the gospel of the Merchants' Exchange.

The majority of the men of the North, and of the South, and East, and West, are not men of principle. If they vote, they do not send men to Congress or errands of humanity, but while their brothers and sisters are being scourged and hung for loving liberty, while I might here insert all that slavery implies and is, it is the mismanagement of wood and iron and stone and gold which concerns them. Do what you will, O Government! with my wife and children, my mother and brother, my father and sister, I will obey your commands to the letter. It will indeed grieve me if you hurt them, if you deliver them to overseers to be hunted by hounds or to be whipped to death; but nevertheless, I will peaceably pursue my chosen calling on this fair earth, until perchance, one day, when I have put on mourning for them dead, I shall have persuaded you to relent. Such is the attitude, such are the words of Massachusetts.

Rather than do thus, I need not say what match I would touch, what system endeavor to blow up, — but as I love my life, I would side with the light, and let the dark earth roll from under me, calling my mother and my brother to follow.

I would remind my countrymen, that they are to be men first, and Americans only at a late and convenient hour. No matter how valuable law may be to protect your property, even to keep soul and body together, if it do not keep you and humanity together.

I am sorry to say, that I doubt if there is a judge in Massachusetts who is prepared to resign his office, and get his living innocently, whenever it is required of him to pass sentence under a law which is merely contrary to the law of God. I am compelled to see that they put themselves, or rather, are by character, in this respect, exactly on a level with the marine who discharges his musket in any direction he is ordered to. They are just as much tools and as little men. Certainly, they are not the more to be respected, because their master enslaves their understandings and consciences, instead of their bodies.

The judges and lawyers, — simply as such, I mean, — and all men of expediency, try this case by a very low and incompetent standard. They consider, not whether the Fugitive Slave Law is right, but whether it is what they call constitutional. Is virtue constitutional, or vice? Is equity constitutional, or iniquity? In important moral and vital questions like this, it is just as impertinent to ask whether a law is constitutional or not, as to ask whether it is profitable or not. They persist in being the servants of the worst of men, and not the servants of humanity. The question is not whether you or your grandfather, seventy years ago, did not enter into an agreement to serve the devil, and that service is not accordingly now due; but whether you will not now, for once and at last, serve God, — in spite of your own past recreancy, or that of your ancestor, — by obeying that eternal and only just CONSTITUTION, which He, and not any Jefferson or Adams, has written in your being.

The amount of it is, if the majority vote the devil to be God, the minority will live and behave accordingly, and obey the successful candidate, trusting that some time or

other, by some Speaker's casting vote, perhaps, they may reinstate God. This is the highest principle I can get out of or invent for my neighbors. These men act as if they believed that they could safely slide down hill a little way — or a good way — and would surely come to a place, by and by, where they could begin to slide up again. This is expediency, or choosing that course which offers the slightest obstacles to the feet, that is, a down-hill one. But there is no such thing as accomplishing a righteous reform by the use of 'expediency.' There is no such thing as sliding up hill. In morals, the only sliders are backsliders.

Thus we steadily worship Mammon, both School, and State, and Church, and the Seventh Day curse God with a tintamar from one end of the Union to the other.

Will mankind never learn that policy is not morality — that it never secures any moral right, but considers merely what is expedient? chooses the available candidate, who is invariably the devil, — and what right have his constituents to be surprised, because the devil does not behave like an angel of light? What is wanted is men, not of policy, but of probity — who recognize a higher law than the Constitution, or the decision of the majority. The fate of the country does not depend on how you vote at the polls — the worst man is as strong as the best at that game; it does not depend on what kind of paper you drop into the ballot-box once a year, but on what kind of man you drop from your chamber into the street every morning.

What should concern Massachusetts is not the Nebraska Bill, nor the Fugitive Slave Bill, but her own slaveholding and servility. Let the State dissolve her union with the slaveholder. She may wriggle and hesitate, and ask leave to read the Constitution once more; but she can find no respectable law or precedent which sanctions the continuance of such a Union for an instant.

Let each inhabitant of the State dissolve his union with her, as long as she delays to do her duty.

The events of the past month teach me to distrust Fame. I see that she does not finely discriminate, but coarsely hurrahs. She considers not the simple heroism of an action, but only as it is connected with its apparent consequences. She praises till she is hoarse the easy exploit of the Boston tea party, but will be comparatively silent about the braver and more disinterestedly heroic attack on the Boston Court-House simply because it was unsuccessful!

Covered with disgrace, the State has sat down coolly to try for their lives and liberties the men who attempted to do its duty for it. And this is called justice! They who have shown that they can behave particularly well may perchance be put under bonds for their good behavior. They whom truth requires at present to plead guilty. are of all the inhabitants of the State, pre-eminently innocent. While the Governor, and the Mayor, and countless officers of the Commonwealth, are at large, the champions of liberty are imprisoned.

Only they are guiltless, who commit the crime of contempt of such a Court. It behoves every man to see that his influence is on the side of justice, and let the courts make their own characters. My sympathies in this case are wholly with the accused,

and wholly against the accusers and their judges. Justice is sweet and musical; but injustice is harsh and discordant. The judge still sits grinding at his organ, but it yields no music, and we hear only the sound of the handle. He believes that all the music resides in the handle, and the crowd toss him their coppers the same as before.

Do you suppose that that Massachusetts which is now doing these things, — which hesitates to crown these men, some of whose lawyers, and even judges, Perchance, may be driven to take refuge in some poor quibble, that they may not wholly outrage their instinctive sense of justice, — do you suppose that she is any thing but base and servile? that she is the champion of liberty?

Show me a free State, and a court truly of justice, and I will fight for them, if need be; but show me Massachusetts, and I refuse her my allegiance, and express contempt for her courts.

The effect of a good government is to make life more valuable, — of a bad one, to make it less valuable. We can afford that railroad, and all merely material stock, should lose some of its value, for that only compels us to live more simply and economically; but suppose that the value of life itself should be diminished! How can we make a less demand on man and nature, how live more economically in respect to virtue and all noble qualities, than we do? I have lived for the last month, — and I think that every man in Massachusetts capable of the sentiment of patriotism must have had a similar experience, — with the sense of having suffered a vast and indefinite loss. I did not know at first what ailed me. At last it occurred to me that what I had lost was a country. I had never respected the Government near to which I had lived, but I had foolishly thought that I might manage to live here, minding my private affairs, and forget it. For my part, my old and worthiest pursuits have lost I cannot say how much of their attraction, and I feel that my investment in life here is worth many per cent. less since Massachusetts last deliberately sent back an innocent man, Anthony Burns, to slavery. I dwelt before, perhaps, in the illusion that my life passed somewhere only between heaven and hell, but now I cannot persuade myself that I do not dwell wholly within hell. The site of that political organization called Massachusetts is to me morally covered with volcanic scoriae and cinders, such as Milton describes in the infernal regions. If there is any hell more unprincipled than our rulers, and we, the ruled, I feel curious to see it. Life itself being worth less, all things with it, which minister to it, are worth less. Suppose you have a small library, with pictures to adorn the walls — a garden laid out around — and contemplate scientific and literary pursuits, &c., and discover all at once that your villa, with all its contents, is located in hell, and that the justice of the peace has a cloven foot and a forked tail — do not these things suddenly lose their value in your eyes?

I feel that, to some extent, the State has fatally interfered with my lawful business. It has not only interrupted me in my passage through Court street on errands of trade, but it has interrupted me and every man on his onward and upward path, on which he had trusted soon to leave Court street far behind. What right had it to remind me of Court street? I have found that hollow which even I had relied on for solid.

I am surprised to see men going about their business as if nothing had happened. I say to myself — Unfortunates! they have not heard the news. I am surprised that the man whom I just met on horseback should be so earnest to overtake his newly bought cows running away — since all property is insecure — and if they do not run away again, they may be taken away from him when he gets them. Fool! does he not know that his seed-corn is worth less this year — that all beneficent harvests fail as you approach the empire of hell? No prudent man will build a stone house under these circumstances, or engage in any Peaceful enterprise which it requires a long time to accomplish. Art is as long as ever, but life is more interrupted and less available for a man's proper pursuits. It is not an era of repose. We have used up all our inherited freedom. If we would save our lives, we must fight for them.

I walk toward one of our ponds, but what signifies the beauty of nature when men are base? We walk to lakes to see our serenity reflected in them; when we are not serene, we go not to them. Who can be serene in a country where both the rulers and the ruled are without principle? The remembrance of my country spoils my walk. My thoughts are murder to the State, and involuntarily go plotting against her.

But it chanced the other day that I scented a white water-lily, and a season I had waited for had arrived. It is the emblem of purity. It bursts up so pure and fair to the eye, and so sweet to the scent, as if to show us what purity and sweetness reside in, and can be extracted from, the slime and muck of earth. I think I have plucked the first one that has opened for a mile. What confirmation of our hopes is in the fragrance of this flower! I shall not so soon despair of the world for it, notwithstanding slavery, and the cowardice and want of principle of Northern men. It suggests what kind of laws have prevailed longest and widest, and still prevail and that the time may come when man's deeds will smell as sweet. Such is the odor which the plant omits. If Nature can compound this fragrance still annually, I shall believe her still young and full of vigor, her integrity and genius unimpaired, and that there is virtue even in man, too who is fitted to perceive and love it. It reminds me that Nature has been partner to no Missouri Compromise. I scent no compromise in the fragrance of the water-lily. It is not a *Nymphoea Douglassii*. In it, the sweet, and pure, and innocent, are wholly sundered from the obscene and baleful. I do not scent in this time the time-serving irresolution of a Massachusetts Governor, nor of a Boston Mayor. So behave that the odor of your actions may enhance the general sweetness of the atmosphere, that when we behold or scent a flower, we may not be reminded how inconsistent your deeds are with it; for all odor is but one form of advertisement of a moral quality, and if fair actions had not been performed, the lily would not smell sweet. The foul slime stands for the sloth and vice of man, the decay of humanity; the fragrant flower that springs from it, for the purity and courage which are immortal.

Slavery and servility have produced no sweet-scented flower annually, to charm the senses of men, for they have no real life: they are merely a decaying and a death, offensive to all healthy nostrils. We do not complain that they live, but that they do not get buried. Let the living bury them; even they are good for manure.

# LIFE WITHOUT PRINCIPLE

AT A LYCEUM, not long since, I felt that the lecturer had chosen a theme too foreign to himself, and so failed to interest me as much as he might have done. He described things not in or near to his heart, but toward his extremities and superficialities. There was, in this sense, no truly central or centralizing thought in the lecture. I would have had him deal with his privatest experience, as the poet does. The greatest compliment that was ever paid me was when one asked me what I thought, and attended to my answer. I am surprised, as well as delighted, when this happens, it is such a rare use he would make of me, as if he were acquainted with the tool. Commonly, if men want anything of me, it is only to know how many acres I make of their land- since I am a surveyor- or, at most, what trivial news I have burdened myself with. They never will go to law for my meat; they prefer the shell. A man once came a considerable distance to ask me to lecture on Slavery; but on conversing with him, I found that he and his clique expected seven eighths of the lecture to be theirs, and only one eighth mine; so I declined. I take it for granted, when I am invited to lecture anywhere- for I have had a little experience in that business- that there is a desire to hear what I think on some subject, though I may be the greatest fool in the country- and not that I should say pleasant things merely, or such as the audience will assent to; and I resolve, accordingly, that I will give them a strong dose of myself. They have sent for me, and engaged to pay for me, and I am determined that they shall have me, though I bore them beyond all precedent.

So now I would say something similar to you, my readers. Since you are my readers, and I have not been much of a traveller, I will not talk about people a thousand miles off, but come as near home as I can. As the time is short, I will leave out all the flattery, and retain all the criticism.

Let us consider the way in which we spend our lives.

This world is a place of business. What an infinite bustle! I am awaked almost every night by the panting of the locomotive. It interrupts my dreams. There is no sabbath. It would be glorious to see mankind at leisure for once. It is nothing but work, work, work. I cannot easily buy a blank-book to write thoughts in; they are commonly ruled for dollars and cents. An Irishman, seeing me making a minute in the fields, took it for granted that I was calculating my wages. If a man was tossed out of a window when an infant, and so made a cripple for life, or seared out of his wits by the Indians, it is regretted chiefly because he was thus incapacitated for business! I think that there is

nothing, not even crime, more opposed to poetry, to philosophy, ay, to life itself, than this incessant business.

There is a coarse and boisterous money-making fellow in the outskirts of our town, who is going to build a bank-wall under the hill along the edge of his meadow. The powers have put this into his head to keep him out of mischief, and he wishes me to spend three weeks digging there with him. The result will be that he will perhaps get some more money to board, and leave for his heirs to spend foolishly. If I do this, most will commend me as an industrious and hard-working man; but if I choose to devote myself to certain labors which yield more real profit, though but little money, they may be inclined to look on me as an idler. Nevertheless, as I do not need the police of meaningless labor to regulate me, and do not see anything absolutely praiseworthy in this fellow's undertaking any more than in many an enterprise of our own or foreign governments, however amusing it may be to him or them, I prefer to finish my education at a different school.

If a man walk in the woods for love of them half of each day, he is in danger of being regarded as a loafer; but if he spends his whole day as a speculator, shearing off those woods and making earth bald before her time, he is esteemed an industrious and enterprising citizen. As if a town had no interest in its forests but to cut them down!

Most men would feel insulted if it were proposed to employ them in throwing stones over a wall, and then in throwing them back, merely that they might earn their wages. But many are no more worthily employed now. For instance: just after sunrise, one summer morning, I noticed one of my neighbors walking beside his team, which was slowly drawing a heavy hewn stone swung under the axle, surrounded by an atmosphere of industry- his day's work begun- his brow commenced to sweat- a reproach to all sluggards and idlers- pausing abreast the shoulders of his oxen, and half turning round with a flourish of his merciful whip, while they gained their length on him. And I thought, Such is the labor which the American Congress exists to protect- honest, manly toil- honest as the day is long- that makes his bread taste sweet, and keeps society sweet- which all men respect and have consecrated; one of the sacred band, doing the needful but irksome drudgery. Indeed, I felt a slight reproach, because I observed this from a window, and was not abroad and stirring about a similar business. The day went by, and at evening I passed the yard of another neighbor, who keeps many servants, and spends much money foolishly, while he adds nothing to the common stock, and there I saw the stone of the morning lying beside a whimsical structure intended to adorn this Lord Timothy Dexter's premises, and the dignity forthwith departed from the teamster's labor, in my eyes. In my opinion, the sun was made to light worthier toil than this. I may add that his employer has since run off, in debt to a good part of the town, and, after passing through Chancery, has settled somewhere else, there to become once more a patron of the arts.

The ways by which you may get money almost without exception lead downward. To have done anything by which you earned money merely is to have been truly idle or worse. If the laborer gets no more than the wages which his employer pays him, he

is cheated, he cheats himself. If you would get money as a writer or lecturer, you must be popular, which is to go down perpendicularly. Those services which the community will most readily pay for, it is most disagreeable to render. You are paid for being something less than a man. The State does not commonly reward a genius any more wisely. Even the poet laureate would rather not have to celebrate the accidents of royalty. He must be bribed with a pipe of wine; and perhaps another poet is called away from his muse to gauge that very pipe. As for my own business, even that kind of surveying which I could do with most satisfaction my employers do not want. They would prefer that I should do my work coarsely and not too well, ay, not well enough. When I observe that there are different ways of surveying, my employer commonly asks which will give him the most land, not which is most correct. I once invented a rule for measuring cord-wood, and tried to introduce it in Boston; but the measurer there told me that the sellers did not wish to have their wood measured correctly- that he was already too accurate for them, and therefore they commonly got their wood measured in Charlestown before crossing the bridge.

The aim of the laborer should be, not to get his living, to get "a good job," but to perform well a certain work; and, even in a pecuniary sense, it would be economy for a town to pay its laborers so well that they would not feel that they were working for low ends, as for a livelihood merely, but for scientific, or even moral ends. Do not hire a man who does your work for money, but him who does it for love of it.

It is remarkable that there are few men so well employed, so much to their minds, but that a little money or fame would commonly buy them off from their present pursuit. I see advertisements for active young men, as if activity were the whole of a young man's capital. Yet I have been surprised when one has with confidence proposed to me, a grown man, to embark in some enterprise of his, as if I had absolutely nothing to do, my life having been a complete failure hitherto. What a doubtful compliment this to pay me! As if he had met me half-way across the ocean beating up against the wind, but bound nowhere, and proposed to me to go along with him! If I did, what do you think the underwriters would say? No, no! I am not without employment at this stage of the voyage. To tell the truth, I saw an advertisement for able-bodied seamen, when I was a boy, sauntering in my native port, and as soon as I came of age I embarked.

The community has no bribe that will tempt a wise man. You may raise money enough to tunnel a mountain, but you cannot raise money enough to hire a man who is minding his own business. An efficient and valuable man does what he can, whether the community pay him for it or not. The inefficient offer their inefficiency to the highest bidder, and are forever expecting to be put into office. One would suppose that they were rarely disappointed.

Perhaps I am more than usually jealous with respect to my freedom. I feel that my connection with and obligation to society are still very slight and transient. Those slight labors which afford me a livelihood, and by which it is allowed that I am to some extent serviceable to my contemporaries, are as yet commonly a pleasure to me,

and I am not often reminded that they are a necessity. So far I am successful. But I foresee that if my wants should be much increased, the labor required to supply them would become a drudgery. If I should sell both my forenoons and afternoons to society, as most appear to do, I am sure that for me there would be nothing left worth living for. I trust that I shall never thus sell my birthright for a mess of pottage. I wish to suggest that a man may be very industrious, and yet not spend his time well. There is no more fatal blunderer than he who consumes the greater part of his life getting his living. All great enterprises are self-supporting. The poet, for instance, must sustain his body by his poetry, as a steam planing-mill feeds its boilers with the shavings it makes. You must get your living by loving. But as it is said of the merchants that ninety-seven in a hundred fail, so the life of men generally, tried by this standard, is a failure, and bankruptcy may be surely prophesied.

Merely to come into the world the heir of a fortune is not to be born, but to be still-born, rather. To be supported by the charity of friends, or a government pension-provided you continue to breathe- by whatever fine synonyms you describe these relations, is to go into the almshouse. On Sundays the poor debtor goes to church to take an account of stock, and finds, of course, that his outgoes have been greater than his income. In the Catholic Church, especially, they go into chancery, make a clean confession, give up all, and think to start again. Thus men will lie on their backs, talking about the fall of man, and never make an effort to get up.

As for the comparative demand which men make on life, it is an important difference between two, that the one is satisfied with a level success, that his marks can all be hit by point-blank shots, but the other, however low and unsuccessful his life may be, constantly elevates his aim, though at a very slight angle to the horizon. I should much rather be the last man- though, as the Orientals say, "Greatness doth not approach him who is forever looking down; and all those who are looking high are growing poor."

It is remarkable that there is little or nothing to be remembered written on the subject of getting a living; how to make getting a living not merely holiest and honorable, but altogether inviting and glorious; for if getting a living is not so, then living is not. One would think, from looking at literature, that this question had never disturbed a solitary individual's musings. Is it that men are too much disgusted with their experience to speak of it? The lesson of value which money teaches, which the Author of the Universe has taken so much pains to teach us, we are inclined to skip altogether. As for the means of living, it is wonderful how indifferent men of all classes are about it, even reformers, so called- whether they inherit, or earn, or steal it. I think that Society has done nothing for us in this respect, or at least has undone what she has done. Cold and hunger seem more friendly to my nature than those methods which men have adopted and advise to ward them off.

The title wise is, for the most part, falsely applied. How can one be a wise man, if he does not know any better how to live than other men?- if he is only more cunning and intellectually subtle? Does Wisdom work in a tread-mill? or does she teach how to succeed by her example? Is there any such thing as wisdom not applied to life? Is

she merely the miller who grinds the finest logic? It is pertinent to ask if Plato got his living in a better way or more successfully than his contemporaries- or did he succumb to the difficulties of life like other men? Did he seem to prevail over some of them merely by indifference, or by assuming grand airs? or find it easier to live, because his aunt remembered him in her will? The ways in which most men get their living, that is, live, are mere makeshifts, and a shirking of the real business of life- chiefly because they do not know, but partly because they do not mean, any better.

The rush to California, for instance, and the attitude, not merely of merchants, but of philosophers and prophets, so called, in relation to it, reflect the greatest disgrace on mankind. That so many are ready to live by luck, and so get the means of commanding the labor of others less lucky, without contributing any value to society! And that is called enterprise! I know of no more startling development of the immorality of trade, and all the common modes of getting a living. The philosophy and poetry and religion of such a mankind are not worth the dust of a puffball. The hog that gets his living by rooting, stirring up the soil so, would be ashamed of such company. If I could command the wealth of all the worlds by lifting my finger, I would not pay such a price for it. Even Mahomet knew that God did not make this world in jest. It makes God to be a moneyed gentleman who scatters a handful of pennies in order to see mankind scramble for them. The world's raffle! A subsistence in the domains of Nature a thing to be raffled for! What a comment, what a satire, on our institutions! The conclusion will be, that mankind will hang itself upon a tree. And have all the precepts in all the Bibles taught men only this? and is the last and most admirable invention of the human race only an improved muck-rake? Is this the ground on which Orientals and Occidentals meet? Did God direct us so to get our living, digging where we never planted- and He would, perchance, reward us with lumps of gold?

God gave the righteous man a certificate entitling him to food and raiment, but the unrighteous man found a facsimile of the same in God's coffers, and appropriated it, and obtained food and raiment like the former. It is one of the most extensive systems of counterfeiting that the world has seen. I did not know that mankind was suffering for want of old. I have seen a little of it. I know that it is very malleable, but not so malleable as wit. A grain of gold gild a great surface, but not so much as a grain of wisdom.

The gold-digger in the ravines of the mountains is as much a gambler as his fellow in the saloons of San Francisco. What difference does it make whether you shake dirt or shake dice? If you win, society is the loser. The gold-digger is the enemy of the honest laborer, whatever checks and compensations there may be. It is not enough to tell me that you worked hard to get your gold. So does the Devil work hard. The way of transgressors may be hard in many respects. The humblest observer who goes to the mines sees and says that gold-digging is of the character of a lottery; the gold thus obtained is not the same same thing with the wages of honest toil. But, practically, he forgets what he has seen, for he has seen only the fact, not the principle, and goes into

trade there, that is, buys a ticket in what commonly proves another lottery, where the fact is not so obvious.

After reading Howitt's account of the Australian gold-diggings one evening, I had in my mind's eye, all night, the numerous valleys, with their streams, all cut up with foul pits, from ten to one hundred feet deep, and half a dozen feet across, as close as they can be dug, and partly filled with water- the locality to which men furiously rush to probe for their fortunes- uncertain where they shall break ground- not knowing but the gold is under their camp itself- sometimes digging one hundred and sixty feet before they strike the vein, or then missing it by a foot- turned into demons, and regardless of each others' rights, in their thirst for riches- whole valleys, for thirty miles, suddenly honeycombed by the pits of the miners, so that even hundreds are drowned in them- standing in water, and covered with mud and clay, they work night and day, dying of exposure and disease. Having read this, and partly forgotten it, I was thinking, accidentally, of my own unsatisfactory life, doing as others do; and with that vision of the diggings still before me, I asked myself why I might not be washing some gold daily, though it were only the finest particles- why I might not sink a shaft down to the gold within me, and work that mine. There is a Ballarat, a Bendigo for you- what though it were a sulky-gully? At any rate, I might pursue some path, however solitary and narrow and crooked, in which I could walk with love and reverence. Wherever a man separates from the multitude, and goes his own way in this mood, there indeed is a fork in the road, though ordinary travellers may see only a gap in the paling. His solitary path across lots will turn out the higher way of the two.

Men rush to California and Australia as if the true gold were to be found in that direction; but that is to go to the very opposite extreme to where it lies. They go prospecting farther and farther away from the true lead, and are most unfortunate when they think themselves most successful. Is not our native soil auriferous? Does not a stream from the golden mountains flow through our native valley? and has not this for more than geologic ages been bringing down the shining particles and forming the nuggets for us? Yet, strange to tell, if a digger steal away, prospecting for this true gold, into the unexplored solitudes around us, there is no danger that any will dog his steps, and endeavor to supplant him. He may claim and undermine the whole valley even, both the cultivated and the uncultivated portions, his whole life long in peace, for no one will ever dispute his claim. They will not mind his cradles or his toms. He is not confined to a claim twelve feet square, as at Ballarat, but may mine anywhere, and wash the whole wide world in his tom.

Howitt says of the man who found the great nugget which weighed twenty-eight pounds, at the Bendigo diggings in Australia: "He soon began to drink; got a horse, and rode all about, generally at full gallop, and, when he met people, called out to inquire if they knew who he was, and then kindly informed them that he was 'the bloody wretch that had found the nugget.' At last he rode full speed against a tree, and nearly knocked his brains out." I think, however, there was no danger of that, for he had already knocked his brains out against the nugget. Howitt adds, "He is a

hopelessly ruined man." But he is a type of the class. They are all fast men. Hear some of the names of the places where they dig: "Jackass Flat"- "Sheep's-Head Gully"- "Murderer's Bar," etc. Is there no satire in these names? Let them carry their ill-gotten wealth where they will, I am thinking it will still be "Jackass Flat," if not "Murderer's Bar," where they live.

The last resource of our energy has been the robbing of graveyards on the Isthmus of Darien, an enterprise which appears to be but in its infancy; for, according to late accounts, an act has passed its second reading in the legislature of New Granada, regulating this kind of mining; and a correspondent of the "Tribune" writes: "In the dry season, when the weather will permit of the country being properly prospected, no doubt other rich guacas [that is, graveyards] will be found." To emigrants he says: "do not come before December; take the Isthmus route in preference to the Boca del Toro one; bring no useless baggage, and do not cumber yourself with a tent; but a good pair of blankets will be necessary; a pick, shovel, and axe of good material will be almost all that is required": advice which might have been taken from the "Burker's Guide." And he concludes with this line in *Italics and small capitals*: "If you are doing well at home, *STAY THERE,*" which may fairly be interpreted to mean, "If you are getting a good living by robbing graveyards at home, stay there."

But why go to California for a text? She is the child of New England, bred at her own school and church.

It is remarkable that among all the preachers there are so few moral teachers. The prophets are employed in excusing the ways of men. Most reverend seniors, the illuminati of the age, tell me, with a gracious, reminiscent smile, betwixt an aspiration and a shudder, not to be too tender about these things- to lump all that, that is, make a lump of gold of it. The highest advice I have heard on these subjects was grovelling. The burden of it was- It is not worth your while to undertake to reform the world in this particular. Do not ask how your bread is buttered; it will make you sick, if you do and the like. A man had better starve at once than lose his innocence in the process of getting his bread. If within the sophisticated man there is not an unsophisticated one, then he is but one of the devil's angels. As we grow old, we live more coarsely, we relax a little in our disciplines, and, to some extent, cease to obey our finest instincts. But we should be fastidious to the extreme of sanity, disregarding the gibes of those who are more unfortunate than ourselves.

In our science and philosophy, even, there is commonly no true and absolute account of things. The spirit of sect and bigotry has planted its hoof amid the stars. You have only to discuss the problem, whether the stars are inhabited or not, in order to discover it. Why must we daub the heavens as well as the earth? It was an unfortunate discovery that Dr. Kane was a Mason, and that Sir John Franklin was another. But it was a more cruel suggestion that possibly that was the reason why the former went in search of the latter. There is not a popular magazine in this country that would dare to print a child's thought on important subjects without comment. It must be submitted to the D.D.'s. I would it were the chickadee-dees.

You come from attending the funeral of mankind to attend to a natural phenomenon. A little thought is sexton to all the world.

I hardly know an intellectual man, even, who is so broad and truly liberal that you can think aloud in his society. Most with whom you endeavor to talk soon come to a stand against some institution in which they appear to hold stock- that is, some particular, not universal, way of viewing things. They will continually thrust their own low roof, with its narrow skylight, between you and the sky, when it is the unobstructed heavens you would view. Get out of the way with your cobwebs; wash your windows, I say! In some lyceums they tell me that they have voted to exclude the subject of religion. But how do I know what their religion is, and when I am near to or far from it? I have walked into such an arena and done my best to make a clean breast of what religion I have experienced, and the audience never suspected what I was about. The lecture was as harmless as moonshine to them. Whereas, if I had read to them the biography of the greatest scamps in history, they might have thought that I had written the lives of the deacons of their church. Ordinarily, the inquiry is, Where did you come from? or, Where are you going? That was a more pertinent question which I overheard one of my auditors put to another one- "What does he lecture for?" It made me quake in my shoes.

To speak impartially, the best men that I know are not serene, a world in themselves. For the most part, they dwell in forms, and flatter and study effect only more finely than the rest. We select granite for the underpinning of our houses and barns; we build fences of stone; but we do not ourselves rest on an underpinning of granitic truth, the lowest primitive rock. Our sills are rotten. What stuff is the man made of who is not coexistent in our thought with the purest and subtilest truth? I often accuse my finest acquaintances of an immense frivolity; for, while there are manners and compliments we do not meet, we do not teach one another the lessons of honesty and sincerity that the brutes do, or of steadiness and solidity that the rocks do. The fault is commonly mutual, however; for we do not habitually demand any more of each other.

That excitement about Kossuth, consider how characteristic, but superficial, it was!- only another kind of politics or dancing. Men were making speeches to him all over the country, but each expressed only the thought, or the want of thought, of the multitude. No man stood on truth. They were merely banded together, as usual one leaning on another, and all together on nothing; as the Hindoos made the world rest on an elephant, the elephant on a tortoise, and the tortoise on a serpent, and had nothing to put under the serpent. For all fruit of that stir we have the Kossuth hat.

Just so hollow and ineffectual, for the most part, is our ordinary conversation. Surface meets surface. When our life ceases to be inward and private, conversation degenerates into mere gossip. We rarely meet a man who can tell us any news which he has not read in a newspaper, or been told by his neighbor; and, for the most part, the only difference between us and our fellow is that he has seen the newspaper, or been out to tea, and we have not. In proportion as our inward life fails, we go more constantly and desperately to the post-office. You may depend on it, that the poor fellow who walks

away with the greatest number of letters, proud of his extensive correspondence, has not heard from himself this long while.

I do not know but it is too much to read one newspaper a week. I have tried it recently, and for so long it seems to me that I have not dwelt in my native region. The sun, the clouds, the snow, the trees say not so much to me. You cannot serve two masters. It requires more than a day's devotion to know and to possess the wealth of a day.

We may well be ashamed to tell what things we have read or heard in our day. I did not know why my news should be so trivial- considering what one's dreams and expectations are, why the developments should be so paltry. The news we hear, for the most part, is not news to our genius. It is the stalest repetition. You are often tempted to ask why such stress is laid on a particular experience which you have had- that, after twenty-five years, you should meet Hobbins, Registrar of Deeds, again on the sidewalk. Have you not budged an inch, then? Such is the daily news. Its facts appear to float in the atmosphere, insignificant as the sporules of fungi, and impinge on some neglected thallus, or surface of our minds, which affords a basis for them, and hence a parasitic growth. We should wash ourselves clean of such news. Of what consequence, though our planet explode, if there is no character involved in the explosion? In health we have not the least curiosity about such events. We do not live for idle amusement. I would not run round a corner to see the world blow up.

All summer, and far into the autumn, perchance, you unconsciously went by the newspapers and the news, and now you find it was because the morning and the evening were full of news to you. Your walks were full of incidents. You attended, not to the affairs of Europe, but to your own affairs in Massachusetts fields. If you chance to live and move and have your being in that thin stratum in which the events that make the news transpire- thinner than the paper on which it is printed- then these things will fill the world for you; but if you soar above or dive below that plane, you cannot remember nor be reminded of them. Really to see the sun rise or go down every day, so to relate ourselves to a universal fact, would preserve us sane forever. Nations! What are nations? Tartars, and Huns, and Chinamen! Like insects, they swarm. The historian strives in vain to make them memorable. It is for want of a man that there are so many men. It is individuals that populate the world. Any man thinking may say with the Spirit of Lodin-

“I look down from my height on nations,  
And they become ashes before me;-  
Calm is my dwelling in the clouds;  
Pleasant are the great fields of my rest.”

Pray, let us live without being drawn by dogs, Esquimaux-fashion, tearing over hill and dale, and biting each other's ears.

Not without a slight shudder at the danger, I often perceive how near I had come to admitting into my mind the details of some trivial affair- the news of the street; and I am astonished to observe how willing men are to lumber their minds with such

rubish- to permit idle rumors and incidents of the most insignificant kind to intrude on ground which should be sacred to thought. Shall the mind be a public arena, where the affairs of the street and the gossip of the tea-table chiefly are discussed? Or shall it be a quarter of heaven itself- an hypaethral temple, consecrated to the service of the gods? I find it so difficult to dispose of the few facts which to me are significant, that I hesitate to burden my attention with those which are insignificant, which only a divine mind could illustrate. Such is, for the most part, the news in newspapers and conversation. It is important to preserve the mind's chastity in this respect. Think of admitting the details of a single case of the criminal court into our thoughts, to stalk profanely through their very sanctum sanctorum for an hour, ay, for many hours! to make a very bar-room of the mind's inmost apartment, as if for so long the dust of the street had occupied us- the very street itself, with all its travel, its bustle, and filth, had passed through our thoughts' shrine! Would it not be an intellectual and moral suicide? When I have been compelled to sit spectator and auditor in a court-room for some hours, and have seen my neighbors, who were not compelled, stealing in from time to time, and tiptoeing about with washed hands and faces, it has appeared to my mind's eye, that, when they took off their hats, their ears suddenly expanded into vast hoppers for sound, between which even their narrow heads were crowded. Like the vanes of windmills, they caught the broad but shallow stream of sound, which, after a few titillating gyrations in their coggy brains, passed out the other side. I wondered if, when they got home, they were as careful to wash their ears as before their hands and faces. It has seemed to me, at such a time, that the auditors and the witnesses, the jury and the counsel, the judge and the criminal at the bar- if I may presume him guilty before he is convicted- were all equally criminal, and a thunderbolt might be expected to descend and consume them all together.

By all kinds of traps and signboards, threatening the extreme penalty of the divine law, exclude such trespassers from the only ground which can be sacred to you. It is so hard to forget what it is worse than useless to remember! If I am to be a thoroughfare, I prefer that it be of the mountain brooks, the Parnassian streams, and not the town sewers. There is inspiration, that gossip which comes to the ear of the attentive mind from the courts of heaven. There is the profane and stale revelation of the bar-room and the police court. The same ear is fitted to receive both communications. Only the character of the hearer determines to which it shall be open, and to which closed. I believe that the mind can be permanently profaned by the habit of attending to trivial things, so that all our thoughts shall be tinged with triviality. Our very intellect shall be macadamized, as it were- its foundation broken into fragments for the wheels of travel to roll over; and if you would know what will make the most durable pavement, surpassing rolled stones, spruce blocks, and asphaltum, you have only to look into some of our minds which have been subjected to this treatment so long.

If we have thus desecrated ourselves- as who has not?- the remedy will be by wariness and devotion to reconsecrate ourselves, and make once more a fane of the mind. We should treat our minds, that is, ourselves, as innocent and ingenuous children, whose

guardians we are, and be careful what objects and what subjects we thrust on their attention. Read not the Times. Read the Eternities. Conventionalities are at length as had as impurities. Even the facts of science may dust the mind by their dryness, unless they are in a sense effaced each morning, or rather rendered fertile by the dews of fresh and living truth. Knowledge does not come to us by details, but in flashes of light from heaven. Yes, every thought that passes through the mind helps to wear and tear it, and to deepen the ruts, which, as in the streets of Pompeii, evince how much it has been used. How many things there are concerning which we might well deliberate whether we had better know them- had better let their peddling-carts be driven, even at the slowest trot or walk, over that bride of glorious span by which we trust to pass at last from the farthest brink of time to the nearest shore of eternity! Have we no culture, no refinement- but skill only to live coarsely and serve the Devil?- to acquire a little worldly wealth, or fame, or liberty, and make a false show with it, as if we were all husk and shell, with no tender and living kernel to us? Shall our institutions be like those chestnut burs which contain abortive nuts, perfect only to prick the fingers?

America is said to be the arena on which the battle of freedom is to be fought; but surely it cannot be freedom in a merely political sense that is meant. Even if we grant that the American has freed himself from a political tyrant, he is still the slave of an economical and moral tyrant. Now that the republic- the republica- has been settled, it is time to look after the res-privata- the private state- to see, as the Roman senate charged its consuls, “ne quid res-PRIVATA detrimenti caperet,” that the private state receive no detriment.

Do we call this the land of the free? What is it to be free from King George and continue the slaves of King Prejudice? What is it to be born free and not to live free? What is the value of any political freedom, but as a means to moral freedom? Is it a freedom to be slaves, or a freedom to be free, of which we boast? We are a nation of politicians, concerned about the outmost defences only of freedom. It is our children's children who may perchance be really free. We tax ourselves unjustly. There is a part of us which is not represented. It is taxation without representation. We quarter troops, we quarter fools and cattle of all sorts upon ourselves. We quarter our gross bodies on our poor souls, till the former eat up all the latter's substance.

With respect to a true culture and manhood, we are essentially provincial still, not metropolitan- mere Jonathans. We are provincial, because we do not find at home our standards; because we do not worship truth, but the reflection of truth; because we are warped and narrowed by an exclusive devotion to trade and commerce and manufactures and agriculture and the like, which are but means, and not the end.

So is the English Parliament provincial. Mere country bumpkins, they betray themselves, when any more important question arises for them to settle, the Irish question, for instance- the English question why did I not say? Their natures are subdued to what they work in. Their “good breeding” respects only secondary objects. The finest manners in the world are awkwardness and fatuity when contrasted with a finer intelligence. They appear but as the fashions of past days- mere courtliness, knee-buckles

and small-clothes, out of date. It is the vice, but not the excellence of manners, that they are continually being deserted by the character; they are cast-off-clothes or shells, claiming the respect which belonged to the living creature. You are presented with the shells instead of the meat, and it is no excuse generally, that, in the case of some fishes, the shells are of more worth than the meat. The man who thrusts his manners upon me does as if he were to insist on introducing me to his cabinet of curiosities, when I wished to see himself. It was not in this sense that the poet Decker called Christ "the first true gentleman that ever breathed." I repeat that in this sense the most splendid court in Christendom is provincial, having authority to consult about Transalpine interests only, and not the affairs of Rome. A praetor or proconsul would suffice to settle the questions which absorb the attention of the English Parliament and the American Congress.

Government and legislation! these I thought were respectable professions. We have heard of heaven-born Numas, Lycurguses, and Solons, in the history of the world, whose names at least may stand for ideal legislators; but think of legislating to regulate the breeding of slaves, or the exportation of tobacco! What have divine legislators to do with the exportation or the importation of tobacco? what humane ones with the breeding of slaves? Suppose you were to submit the question to any son of God- and has He no children in the Nineteenth Century? is it a family which is extinct?- in what condition would you get it again? What shall a State like Virginia say for itself at the last day, in which these have been the principal, the staple productions? What ground is there for patriotism in such a State? I derive my facts from statistical tables which the States themselves have published.

A commerce that whitens every sea in quest of nuts and raisins, and makes slaves of its sailors for this purpose! I saw, the other day, a vessel which had been wrecked, and many lives lost, and her cargo of rags, juniper berries, and bitter almonds were strewn along the shore. It seemed hardly worth the while to tempt the dangers of the sea between Leghorn and New York for the sake of a cargo of juniper berries and bitter almonds. America sending to the Old World for her bitters! Is not the sea-brine, is not shipwreck, bitter enough to make the cup of life go down here? Yet such, to a great extent, is our boasted commerce; and there are those who style themselves statesmen and philosophers who are so blind as to think that progress and civilization depend on precisely this kind of interchange and activity- the activity of flies about a molasses-hogshead. Very well, observes one, if men were oysters. And very well, answer I, if men were mosquitoes.

Lieutenant Herndon, whom our government sent to explore the Amazon, and, it is said, to extend the area of slavery, observed that there was wanting there "an industrious and active population, who know what the comforts of life are, and who have artificial wants to draw out the great resources of the country." But what are the "artificial wants" to be encouraged? Not the love of luxuries, like the tobacco and slaves of, I believe, his native Virginia, nor the ice and granite and other material wealth of our native New England; nor are "the great resources of a country" that fertility or

barrenness of soil which produces these. The chief want, in every State that I have been into, was a high and earnest purpose in its inhabitants. This alone draws out "the great resources" of Nature, and at last taxes her beyond her resources; for man naturally dies out of her. When we want culture more than potatoes, and illumination more than sugar-plums, then the great resources of a world are taxed and drawn out, and the result, or staple production, is, not slaves, nor operatives, but men- those rare fruits called heroes, saints, poets, philosophers, and redeemers.

In short, as a snow-drift is formed where there is a lull in the wind, so, one would say, where there is a lull of truth, an institution springs up. But the truth blows right on over it, nevertheless, and at length blows it down.

What is called politics is comparatively something so superficial and inhuman, that practically I have never fairly recognized that it concerns me at all. The newspapers, I perceive, devote some of their columns specially to politics or government without charge; and this, one would say, is all that saves it; but as I love literature and to some extent the truth also, I never read those columns at any rate. I do not wish to blunt my sense of right so much. I have not got to answer for having read a single President's Message. A strange age of the world this, when empires, kingdoms, and republics come a-begging to a private man's door, and utter their complaints at his elbow! I cannot take up a newspaper but I find that some wretched government or other, hard pushed and on its last legs, is interceding with me, the reader, to vote for it- more importunate than an Italian beggar; and if I have a mind to look at its certificate, made, perchance, by some benevolent merchant's clerk, or the skipper that brought it over, for it cannot speak a word of English itself, I shall probably read of the eruption of some Vesuvius, or the overflowing of some Po, true or forged, which brought it into this condition. I do not hesitate, in such a case, to suggest work, or the almshouse; or why not keep its castle in silence, as I do commonly? The poor President, what with preserving his popularity and doing his duty, is completely bewildered. The newspapers are the ruling power. Any other government is reduced to a few marines at Fort Independence. If a man neglects to read the Daily Times, government will go down on its knees to him, for this is the only treason in these days.

Those things which now most engage the attention of men, as politics and the daily routine, are, it is true, vital functions of human society, but should be unconsciously performed, like the corresponding functions of the physical body. They are infrahuman, a kind of vegetation. I sometimes awake to a half-consciousness of them going on about me, as a man may become conscious of some of the processes of digestion in a morbid state, and so have the dyspepsia, as it is called. It is as if a thinker submitted himself to be rasped by the great gizzard of creation. Politics is, as it were, the gizzard of society, full of grit and gravel, and the two political parties are its two opposite halves- sometimes split into quarters, it may be, which grind on each other. Not only individuals, but states, have thus a confirmed dyspepsia, which expresses itself, you can imagine by what sort of eloquence. Thus our life is not altogether a forgetting, but also, alas! to a great extent, a remembering, of that which we should never have been

conscious of, certainly not in our waking hours. Why should we not meet, not always as dyspeptics, to tell our had dreams, but sometimes as eupeptics, to congratulate each other on the ever-glorious morning? I do not make an exorbitant demand, surely.

# AUTUMNAL TINTS

Europeans coming to America are surprised by the brilliancy of our autumnal foliage. There is no account of such a phenomenon in English poetry, because the trees acquire but few bright colors there. The most that Thomson says on this subject in his "Autumn" is contained in the lines, —

"But see the fading many-colored woods,  
Shade deepening over shade, the country round  
Imbrown; a crowded umbrage, dusk and dun,  
Of every hue, from wan declining green to sooty dark": —

and in the line in which he speaks of  
"Autumn beaming o'er the yellow woods."

The autumnal change of our woods has not made a deep impression on our own literature yet. October has hardly tinged our poetry.

A great many, who have spent their lives in cities, and have never chanced to come into the country at this season, have never seen this, the flower, or rather the ripe fruit, of the year. I remember riding with one such citizen, who, though a fortnight too, late for the most brilliant tints, was taken by surprise, and would not believe that there had been any brighter. He had never heard of this phenomenon before. Not only many in our towns have never witnessed it, but it is scarcely remembered by the majority from year to year.

Most appear to confound changed leaves with withered ones, as if they were to confound ripe apples with rotten ones. I think that the change to some higher color in a leaf is an evidence that it has arrived at a late and perfect maturity, answering to the maturity of fruits. It is generally the lowest and oldest leaves which change first. But as the perfect winged and usually bright-colored insect is short-lived, so the leaves ripen but to fall.

Generally, every fruit, on ripening, and just before it falls, when it commences a more independent and individual existence, requiring less nourishment from any source, and that not so much from the earth through its stem as from the sun and air, acquires a bright tint. So do leaves. The physiologist says it is "due to an increased absorption of oxygen." That is the scientific account of the matter, — only a reassertion of the fact. But I am more interested in the rosy cheek than I am to know what particular diet the maiden fed on. The very forest and herbage, the pellicle of the earth, must acquire a bright color, an evidence of its ripeness, — as if the globe itself were a fruit on its stem, with ever a cheek toward the sun.

Flowers are but colored leaves, fruits but ripe ones. The edible part of most fruits is, as the physiologist says, "the parenchyma or fleshy tissue of the leaf," of which they are formed.

Our appetites have commonly confined our views of ripeness and its phenomena, color, mellowness, and perfectness, to the fruits which we eat, and we are wont to forget that an immense harvest which we do not eat, hardly use at all, is annually ripened by Nature. At our annual Cattle Shows and Horticultural Exhibitions, we make, as we think, a great show of fair fruits, destined, however, to a rather ignoble end, fruits not valued for their beauty chiefly. But round about and within our towns there is annually another show of fruits, on an infinitely grander scale, fruits which address our taste for beauty alone.

October is the month for painted leaves. Their rich glow now flashes round the world. As fruits and leaves and the day itself acquire a bright tint just before they fall, so the year near its setting. October is its sunset sky; November the later twilight.

I formerly thought that it would be worth the while to get a specimen leaf from each changing tree, shrub, and herbaceous plant, when it had acquired its brightest characteristic color, in its transition from the green to the brown state, outline it, and copy its color exactly, with paint in a book, which should be entitled, "October, or Autumnal Tints"; — beginning with the earliest reddening, — Woodbine and the lake of radical leaves, and coming down through the Maples, Hickories, and Sumachs, and many beautifully freckled leaves less generally known, to the latest Oaks and Aspens. What a memento such a book would be! You would need only to turn over its leaves to take a ramble through the autumn woods whenever you pleased. Or if I could preserve the leaves themselves, unfaded, it would be better still. I have made but little progress toward such a book, but I have endeavored, instead, to describe all these bright tints in the order in which they present themselves. The following are some extracts from my notes.

#### THE PURPLE GRASSES.

By the twentieth of August, everywhere in woods and swamps, we are reminded of the fall, both by the richly spotted Sarsaparilla-leaves and Brakes, and the withering and blackened Skunk-Cabbage and Hellebore, and, by the river-side, the already blackening *Pontederia*.

The Purple Grass (*Eragrostis pectinacea*) is now in the height of its beauty. I remember still when I first noticed this grass particularly. Standing on a hillside near our river, I saw, thirty or forty rods off, a stripe of purple half a dozen rods long, under the edge of a wood, where the ground sloped toward a meadow. It was as high-colored and interesting, though not quite so bright, as the patches of *Rhexia*, being a darker purple, like a berry's stain laid on close and thick. On going to and examining it, I found it to be a kind of grass in bloom, hardly a foot high, with but few green blades, and a fine spreading panicle of purple flowers, a shallow, purplish mist trembling around me. Close at hand it appeared but a dull purple, and made little impression on the eye; it was even difficult to detect; and if you plucked a single plant, you were sur-

prised to find how thin it was, and how little color it had. But viewed at a distance in a favorable light, it was of a fine lively purple, flower-like, enriching the earth. Such puny causes combine to produce these decided effects. I was the more surprised and charmed because grass is commonly of a sober and humble color.

With its beautiful purple blush it reminds me, and supplies the place, of the *Rhexia*, which is now leaving off, and it is one of the most interesting phenomena of August. The finest patches of it grow on waste strips or selvages of land at the base of dry hills, just above the edge of the meadows, where the greedy mower does not deign to swing his scythe; for this is a thin and poor grass, beneath his notice. Or, it may be, because it is so beautiful he does not know that it exists; for the same eye does not see this and Timothy. He carefully gets the meadow hay and the more nutritious grasses which grow next to that, but he leaves this fine purple mist for the walker's harvest, — fodder for his fancy stock. Higher up the hill, perchance, grow also Blackberries, John's-Wort, and neglected, withered, and wiry June-Grass. How fortunate that it grows in such places, and not in the midst of the rank grasses which are annually cut! Nature thus keeps use and beauty distinct. I know many such localities, where it does not fail to present itself annually, and paint the earth with its blush. It grows on the gentle slopes, either in a continuous patch or in scattered and rounded tufts a foot in diameter, and it lasts till it is killed by the first smart frosts.

In most plants the corolla or calyx is the part which attains the highest color, and is the most attractive; in many it is the seed-vessel or fruit; in others, as the Red Maple, the leaves; and in others still it is the very culm itself which is the principal flower or blooming part.

The last is especially the case with the Poke or Garget (*Phytolacca decandra*). Some which stand under our cliffs quite dazzle me with their purple stems now and early in September. They are as interesting to me as most flowers, and one of the most important fruits of our autumn. Every part is flower, (or fruit,) such is its superfluity of color, — stem, branch, peduncle, pedicel, petiole, and even the at length yellowish purple-veined leaves. Its cylindrical racemes of berries of various hues, from green to dark purple, six or seven inches long, are gracefully drooping on all sides, offering repasts to the birds; and even the sepals from which the birds have picked the berries are a brilliant lake-red, with crimson flame-like reflections, equal to anything of the kind, — all on fire with ripeness. Hence the lacca, from lac, lake. There are at the same time flower-buds, flowers, green berries, dark purple or ripe ones, and these flower-like sepals, all on the same plant.

We love to see any redness in the vegetation of the temperate zone. It is the color of colors. This plant speaks to our blood. It asks a bright sun on it to make it show to best advantage, and it must be seen at this season of the year. On warm hillsides its stems are ripe by the twenty-third of August. At that date I walked through a beautiful grove of them, six or seven feet high, on the side of one of our cliffs, where they ripen early. Quite to the ground they were a deep brilliant purple with a bloom, contrasting with the still clear green leaves. It appears a rare triumph of Nature to

have produced and perfected such a plant, as if this were enough for a summer. What a perfect maturity it arrives at! It is the emblem of a successful life concluded by a death not premature, which is an ornament to Nature. What if we were to mature as perfectly, root and branch, glowing in the midst of our decay, like the Poke! I confess that it excites me to behold them. I cut one for a cane, for I would fain handle and lean on it. I love to press the berries between my fingers, and see their juice staining my hand. To walk amid these upright, branching casks of purple wine, which retain and diffuse a sunset glow, tasting each one with your eye, instead of counting the pipes on a London dock, what a privilege! For Nature's vintage is not confined to the vine. Our poets have sung of wine, the product of a foreign plant which commonly they never saw, as if our own plants had no juice in them more than the singers. Indeed, this has been called by some the American Grape, and, though a native of America, its juices are used in some foreign countries to improve the color of the wine; so that the poetaster may be celebrating the virtues of the Poke without knowing it. Here are berries enough to paint afresh the western sky, and play the bacchanal with, if you will. And what flutes its ensanguined stems would make, to be used in such a dance! It is truly a royal plant. I could spend the evening of the year musing amid the Poke-stems. And perchance amid these groves might arise at last a new school of philosophy or poetry. It lasts all through September.

At the same time with this, or near the end of August, a to me very interesting genus of grasses, Andropogons, or Beard-Grasses, is in its prime. *Andropogon furcatus*, Forked Beard-Grass, or call it Purple-Fingered Grass; *Andropogon scoparius*, Purple Wood Grass; and *Andropogon* (now called *Sorghum*) *nutans*, Indian-Grass. The first is a very tall and slender-culmed grass, three to seven feet high, with four or five purple finger-like spikes raying upward from the top. The second is also quite slender, growing in tufts two feet high by one wide, with culms often somewhat curving, which, as the spikes go out of bloom, have a whitish fuzzy look. These two are prevailing grasses at this season on dry and sandy fields and hillsides. The culms of both, not to mention their pretty flowers, reflect a purple tinge, and help to declare the ripeness of the year. Perhaps I have the more sympathy with them because they are despised by the farmer, and occupy sterile and neglected soil. They are high-colored, like ripe grapes, and express a maturity which the spring did not suggest. Only the August sun could have thus burnished these culms and leaves. The farmer has long since done his upland haying, and he will not condescend to bring his scythe to where these slender wild grasses have at length flowered thinly; you often see spaces of bare sand amid them. But I walk encouraged between the tufts of Purple Wood-Grass, over the sandy fields, and along the edge of the Shrub-Oaks, glad to recognize these simple contemporaries. With thoughts cutting a broad swathe I "get" them, with horse-raking thoughts I gather them into windrows. The fine-eared poet may hear the whetting of my scythe. These two were almost the first grasses that I learned to distinguish, for I had not known by how many friends I was surrounded, — I had seen them simply as

grasses standing. The purple of their culms also excites me like that of the Poke-Weed stems.

Think what refuge there is for one, before August is over, from college commencements and society that isolates! I can skulk amid the tufts of Purple Wood-Grass on the borders of the "Great Fields." Wherever I walk these afternoons, the Purple-Fingered Grass also stands like a guide-board, and points my thoughts to more poetic paths than they have lately travelled.

A man shall perhaps rush by and trample down plants as high as his head, and cannot be said to know that they exist, though he may have cut many tons of them, littered his stables with them, and fed them to his cattle for years. Yet, if he ever favorably attends to them, he may be overcome by their beauty. Each humblest plant, or weed, as we call it, stands there to express some thought or mood of ours; and yet how long it stands in vain! I had walked over those Great Fields so many Augusts, and never yet distinctly recognized these purple companions that I had there. I had brushed against them and trodden on them, forsooth; and now, at last, they, as it were, rose up and blessed me. Beauty and true wealth are always thus cheap and despised. Heaven might be defined as the place which men avoid. Who can doubt that these grasses, which the farmer says are of no account to him, find some compensation in your appreciation of them? I may say that I never saw them before, — though, when I came to look them face to face, there did come down to me a purple gleam from previous years; and now, wherever I go, I see hardly anything else. It is the reign and presidency of the Andropogons.

Almost the very sands confess the ripening influence of the August sun, and methinks, together with the slender grasses waving over them, reflect a purple tinge. The impurpled sands! Such is the consequence of all this sunshine absorbed into the pores of plants and of the earth. All sap or blood is now wine-colored. At last we have not only the purple sea, but the purple land.

The Chestnut Beard-Grass, Indian-Grass, or Wood-Grass, growing here and there in waste places, but more rare than the former, (from two to four or five feet high,) is still handsomer and of more vivid colors than its congeners, and might well have caught the Indian's eye. It has a long, narrow, one-sided, and slightly nodding panicle of bright purple and yellow flowers, like a banner raised above its reedy leaves. These bright standards are now advanced on the distant hill-sides, not in large armies, but in scattered troops or single file, like the red men. They stand thus fair and bright, representative of the race which they are named after, but for the most part unobserved as they. The expression of this grass haunted me for a week, after I first passed and noticed it, like the glance of an eye. It stands like an Indian chief taking a last look at his favorite hunting-grounds.

#### THE RED MAPLE.

By the twenty-fifth of September, the Red Maples generally are beginning to be ripe. Some large ones have been conspicuously changing for a week, and some single trees are now very brilliant. I notice a small one, half a mile off across a meadow, against the

green wood-side there, a far brighter red than the blossoms of any tree in summer, and more conspicuous. I have observed this tree for several autumns invariably changing earlier than its fellows, just as one tree ripens its fruit earlier than another. It might serve to mark the season, perhaps. I should be sorry, if it were cut down. I know of two or three such trees in different parts of our town, which might, perhaps, be propagated from, as early ripeners or September trees, and their seed be advertised in the market, as well as that of radishes, if we cared as much about them.

At present these burning bushes stand chiefly along the edge of the meadows, or I distinguish them afar on the hillsides here and there. Sometimes you will see many small ones in a swamp turned quite crimson when all other trees around are still perfectly green, and the former appear so much the brighter for it. They take you by surprise, as you are going by on one side, across the fields, thus early in the season, as if it were some gay encampment of the red men, or other foresters, of whose arrival you had not heard.

Some single trees, wholly bright scarlet, seen against others of their kind still freshly green, or against evergreens, are more memorable than whole groves will be by-and-by. How beautiful, when a whole tree is like one great scarlet fruit full of ripe juices, every leaf, from lowest limb to topmost spire, all aglow, especially if you look toward the sun! What more remarkable object can there be in the landscape? Visible for miles, too fair to be believed. If such a phenomenon occurred but once, it would be handed down by tradition to posterity, and get into the mythology at last.

The whole tree thus ripening in advance of its fellows attains a singular preeminence, and sometimes maintains it for a week or two. I am thrilled at the sight of it, bearing aloft its scarlet standard for the regiment of green-clad foresters around, and I go half a mile out of my way to examine it. A single tree becomes thus the crowning beauty of some meadowy vale, and the expression of the whole surrounding forest is at once more spirited for it.

A small Red Maple has grown, perchance, far away at the head of some retired valley, a mile from any road, unobserved. It has faithfully discharged the duties of a Maple there, all winter and summer, neglected none of its economies, but added to its stature in the virtue which belongs to a Maple, by a steady growth for so many months, never having gone gadding abroad, and is nearer heaven than it was in the spring. It has faithfully husbanded its sap, and afforded a shelter to the wandering bird, has long since ripened its seeds and committed them to the winds, and has the satisfaction of knowing, perhaps, that a thousand little well-behaved Maples are already settled in life somewhere. It deserves well of Mapledom. Its leaves have been asking it from time to time, in a whisper, "When shall we redden?" And now, in this month of September, this month of travelling, when men are hastening to the sea-side, or the mountains, or the lakes, this modest Maple, still without budging an inch, travels in its reputation, — runs up its scarlet flag on that hillside, which shows that it has finished its summer's work before all other trees, and withdraws from the contest. At the eleventh hour of the year, the tree which no scrutiny could have detected here when it was most industrious

is thus, by the tint of its maturity, by its very blushes, revealed at last to the careless and distant traveller, and leads his thoughts away from the dusty road into those brave solitudes which it inhabits. It flashes out conspicuous with all the virtue and beauty of a Maple, — *Acer rubrum*. We may now read its title, or rubric, clear. Its virtues, not its sins, are as scarlet.

Notwithstanding the Red Maple is the most intense scarlet of any of our trees, the Sugar-Maple has been the most celebrated, and Michaux in his "Sylva" does not speak of the autumnal color of the former. About the second of October, these trees, both large and small, are most brilliant, though many are still green. In "sprout-lands" they seem to vie with one another, and ever some particular one in the midst of the crowd will be of a peculiarly pure scarlet, and by its more intense color attract our eye even at a distance, and carry off the palm. A large Red-Maple swamp, when at the height of its change, is the most obviously brilliant of all tangible things, where I dwell, so abundant is this tree with us. It varies much both in form and color. A great many are merely yellow, more scarlet, others scarlet deepening into crimson, more red than common. Look at yonder swamp of Maples mixed with Pines, at the base of a Pine-clad hill, a quarter of a mile off, so that you get the full effect of the bright colors, without detecting the imperfections of the leaves, and see their yellow, scarlet, and crimson fires, of all tints, mingled and contrasted with the green. Some Maples are yet green, only yellow or crimson-tipped on the edges of their flakes, like the edges of a Hazel-Nut burr; some are wholly brilliant scarlet, raying out regularly and finely every way, bilaterally, like the veins of a leaf; others, of more irregular form, when I turn my head slightly, emptying out some of its earthiness and concealing the trunk of the tree, seem to rest heavily flake on flake, like yellow and scarlet clouds, wreath upon wreath, or like snowdrifts driving through the air, stratified by the wind. It adds greatly to the beauty of such a swamp at this season, that, even though there may be no other trees interspersed, it is not seen as a simple mass of color, but, different trees being of different colors and hues, the outline of each crescent tree-top is distinct, and where one laps on to another. Yet a painter would hardly venture to make them thus distinct a quarter of a mile off.

As I go across a meadow directly toward a low rising ground this bright afternoon, I see, some fifty rods off toward the sun, the top of a Maple swamp just appearing over the sheeny russet edge of the hill, a stripe apparently twenty rods long by ten feet deep, of the most intensely brilliant scarlet, orange, and yellow, equal to any flowers or fruits, or any tints ever painted. As I advance, lowering the edge of the hill which makes the firm foreground or lower frame of the picture, the depth of the brilliant grove revealed steadily increases, suggesting that the whole of the inclosed valley is filled with such color. One wonders that the tithing-men and fathers of the town are not out to see what the trees mean by their high colors and exuberance of spirits, fearing that some mischief is brewing. I do not see what the Puritans did at this season, when the Maples blaze out in scarlet. They certainly could not have worshipped in groves then. Perhaps that is what they built meeting-houses and fenced them round with horse-sheds for.

## THE ELM.

Now, too, the first of October, or later, the Elms are at the height of their autumnal beauty, great brownish-yellow masses, warm from their September oven, hanging over the highway. Their leaves are perfectly ripe. I wonder if there is any answering ripeness in the lives of the men who live beneath them. As I look down our street, which is lined with them, they remind me both by their form and color of yellowing sheaves of grain, as if the harvest had indeed come to the village itself, and we might expect to find some maturity and flavor in the thoughts of the villagers at last. Under those bright rustling yellow piles just ready to fall on the heads of the walkers, how can any crudity or greenness of thought or act prevail? When I stand where half a dozen large Elms droop over a house, it is as if I stood within a ripe pumpkin-rind, and I feel as mellow as if I were the pulp, though I may be somewhat stringy and seedy withal. What is the late greenness of the English Elm, like a cucumber out of season, which does not know when to have done, compared with the early and golden maturity of the American tree? The street is the scene of a great harvest-home. It would be worth the while to set out these trees, if only for their autumnal value. Think of these great yellow canopies or parasols held over our heads and houses by the mile together, making the village all one and compact, — an ulmarium, which is at the same time a nursery of men! And then how gently and unobserved they drop their burden and let in the sun when it is wanted, their leaves not heard when they fall on our roofs and in our streets; and thus the village parasol is shut up and put away! I see the market-man driving into the village, and disappearing under its canopy of Elm-tops, with his crop, as into a great granary or barn-yard. I am tempted to go thither as to a husking of thoughts, now dry and ripe, and ready to be separated from their integuments; but, alas! I foresee that it will be chiefly husks and little thought, blasted pig-corn, fit only for cob-meal, — for, as you sow, so shall you reap.

## FALLEN LEAVES.

By the sixth of October the leaves generally begin to fall, in successive showers, after frost or rain; but the principal leaf-harvest, the acme of the Fall, is commonly about the sixteenth. Some morning at that date there is perhaps a harder frost than we have seen, and ice formed under the pump, and now, when the morning wind rises, the leaves come down in denser showers than ever. They suddenly form thick beds or carpets on the ground, in this gentle air, or even without wind, just the size and form of the tree above. Some trees, as small Hickories, appear to have dropped their leaves instantaneously, as a soldier grounds arms at a signal; and those of the Hickory, being bright yellow still, though withered, reflect a blaze of light from the ground where they lie. Down they have come on all sides, at the first earnest touch of autumn's wand, making a sound like rain.

Or else it is after moist and rainy weather that we notice how great a fall of leaves there has been in the night, though it may not yet be the touch that loosens the Rock-Maple leaf. The streets are thickly strewn with the trophies, and fallen Elm-leaves make a dark brown pavement under our feet. After some remarkably warm Indian-

summer day or days, I perceive that it is the unusual heat which, more than anything, causes the leaves to fall, there having been, perhaps, no frost nor rain for some time. The intense heat suddenly ripens and wilts them, just as it softens and ripens peaches and other fruits, and causes them to drop.

The leaves of late Red Maples, still bright, strew the earth, often crimson-spotted on a yellow ground, like some wild apples, — though they preserve these bright colors on the ground but a day or two, especially if it rains. On causeways I go by trees here and there all bare and smoke-like, having lost their brilliant clothing; but there it lies, nearly as bright as ever, on the ground on one side, and making nearly as regular a figure as lately on the tree, I would rather say that I first observe the trees thus flat on the ground like a permanent colored shadow, and they suggest to look for the boughs that bore them. A queen might be proud to walk where these gallant trees have spread their bright cloaks in the mud. I see wagons roll over them as a shadow or a reflection, and the drivers heed them just as little as they did their shadows before.

Birds'-nests, in the Huckleberry and other shrubs, and in trees, are already being filled with the withered leaves. So many have fallen in the woods, that a squirrel cannot run after a falling nut without being heard. Boys are raking them in the streets, if only for the pleasure of dealing with such clean crisp substances. Some sweep the paths scrupulously neat, and then stand to see the next breath strew them with new trophies. The swamp-floor is thickly covered, and the *Lycopodium lucidulum* looks suddenly greener amid them. In dense woods they half-cover pools that are three or four rods long. The other day I could hardly find a well-known spring, and even suspected that it had dried up, for it was completely concealed by freshly fallen leaves; and when I swept them aside and revealed it, it was like striking the earth, with Aaron's rod, for a new spring. Wet grounds about the edges of swamps look dry with them. At one swamp, where I was surveying, thinking to step on a leafy shore from a rail, I got into the water more than a foot deep. When I go to the river the day after the principal fall of leaves, the sixteenth, I find my boat all covered, bottom and seats, with the leaves of the Golden Willow under which it is moored, and I set sail with a cargo of them rustling under my feet. If I empty it, it will be full again to-morrow. I do not regard them as litter, to be swept out, but accept them as suitable straw or matting for the bottom of my carriage. When I turn up into the mouth of the Assabet, which is wooded, large fleets of leaves are floating on its surface, as it were getting out to sea, with room to tack; but next the shore, a little farther up, they are thicker than foam, quite concealing the water for a rod in width, under and amid the Alders, Button-Bushes, and Maples, still perfectly light and dry, with fibre unrelaxed; and at a rocky bend where they are met and stopped by the morning wind, they sometimes form a broad and dense crescent quite across the river. When I turn my prow that way, and the wave which it makes strikes them, list what a pleasant rustling from these dry substances grating on one another! Often it is their undulation only which reveals the water beneath them. Also every motion of the wood-turtle on the shore is betrayed by their rustling there. Or even in mid-channel, when the wind rises, I hear them blown

with a rustling sound. Higher up they are slowly moving round and round in some great eddy which the river makes, as that at the "Leaning Hemlocks," where the water is deep, and the current is wearing into the bank.

Perchance, in the afternoon of such a day, when the water is perfectly calm and full of reflections, I paddle gently down the main stream, and, turning up the Assabet, reach a quiet cove, where I unexpectedly find myself surrounded by myriads of leaves, like fellow-voyagers, which seem to have the same purpose, or want of purpose, with myself. See this great fleet of scattered leaf-boats which we paddle amid, in this smooth river-bay, each one curled up on every side by the sun's skill, each nerve a stiff spruce-knee, — like boats of hide, and of all patterns, Charon's boat probably among the rest, and some with lofty prows and poops, like the stately vessels of the ancients, scarcely moving in the sluggish current, — like the great fleets, the dense Chinese cities of boats, with which you mingle on entering some great mart, some New York or Canton, which we are all steadily approaching together. How gently each has been deposited on the water! No violence has been used towards them yet, though, perchance, palpitating hearts were present at the launching. And painted ducks, too, the splendid wood-duck among the rest, often come to sail and float amid the painted leaves, — barks of a nobler model still!

What wholesome herb-drinks are to be had in the swamps now! What strong medicinal, but rich, scents from the decaying leaves! The rain falling on the freshly dried herbs and leaves, and filling the pools and ditches into which they have dropped thus clean and rigid, will soon convert them into tea, — green, black, brown, and yellow teas, of all degrees of strength, enough to set all Nature a gossiping. Whether we drink them or not, as yet, before their strength is drawn, these leaves, dried on great Nature's coppers, are of such various pure and delicate tints as might make the fame of Oriental teas.

How they are mixed up, of all species, Oak and Maple and Chestnut and Birch! But Nature is not cluttered with them; she is a perfect husbandman; she stores them all. Consider what a vast crop is thus annually shed on the earth! This, more than any mere grain or seed, is the great harvest of the year. The trees are now repaying the earth with interest what they have taken from it. They are discounting. They are about to add a leaf's thickness to the depth of the soil. This is the beautiful way in which Nature gets her muck, while I chaffer with this man and that, who talks to me about sulphur and the cost of carting. We are all the richer for their decay. I am more interested in this crop than in the English grass alone or in the corn. It prepares the virgin mould for future cornfields and forests, on which the earth fattens. It keeps our homestead in good heart.

For beautiful variety no crop can be compared with this. Here is not merely the plain yellow of the grains, but nearly all the colors that we know, the brightest blue not excepted: the early blushing Maple, the Poison-Sumach blazing its sins as scarlet, the mulberry Ash, the rich chrome-yellow of the Poplars, the brilliant red Huckleberry, with which the hills' backs are painted, like those of sheep. The frost touches them, and,

with the slightest breath of returning day or jarring of earth's axle, see in what showers they come floating down! The ground is all party-colored with them. But they still live in the soil, whose fertility and bulk they increase, and in the forests that spring from it. They stoop to rise, to mount higher in coming years, by subtle chemistry, climbing by the sap in the trees, and the sapling's first fruits thus shed, transmuted at last, may adorn its crown, when, in after-years, it has become the monarch of the forest.

It is pleasant to walk over the beds of these fresh, crisp, and rustling leaves. How beautifully they go to their graves! how gently lay themselves down and turn to mould! — painted of a thousand hues, and fit to make the beds of us living. So they troop to their last resting-place, light and frisky. They put on no weeds, but merrily they go scampering over the earth, selecting the spot, choosing a lot, ordering no iron fence, whispering all through the woods about it, — some choosing the spot where the bodies of men are mouldering beneath, and meeting them half-way. How many flutterings before they rest quietly in their graves! They that soared so loftily, how contentedly they return to dust again, and are laid low, resigned to lie and decay at the foot of the tree, and afford nourishment to new generations of their kind, as well as to flutter on high! They teach us how to die. One wonders if the time will ever come when men, with their boasted faith in immortality, will lie down as gracefully and as ripe, — with such an Indian-summer serenity will shed their bodies, as they do their hair and nails.

When the leaves fall, the whole earth is a cemetery pleasant to walk in. I love to wander and muse over them in their graves. Here are no lying nor vain epitaphs. What though you own no lot at Mount Auburn? Your lot is surely cast somewhere in this vast cemetery, which has been consecrated from of old. You need attend no auction to secure a place. There is room enough here. The Loose-strife shall bloom and the Huckleberry-bird sing over your bones. The woodman and hunter shall be your sextons, and the children shall tread upon the borders as much as they will. Let us walk in the cemetery of the leaves, — this is your true Greenwood Cemetery.

#### THE SUGAR-MAPLE.

But think not that the splendor of the year is over; for as one leaf does not make a summer, neither does one falling leaf make an autumn. The smallest Sugar-Maples in our streets make a great show as early as the fifth of October, more than any other trees there. As I look up the Main Street, they appear like painted screens standing before the houses; yet many are green. But now, or generally by the seventeenth of October, when almost all Red Maples, and some White Maples, are bare, the large Sugar-Maples also are in their glory, glowing with yellow and red, and show unexpectedly bright and delicate tints. They are remarkable for the contrast they often afford of deep blushing red on one half and green on the other. They become at length dense masses of rich yellow with a deep scarlet blush, or more than blush, on the exposed surfaces. They are the brightest trees now in the street.

The large ones on our Common are particularly beautiful. A delicate, but warmer than golden yellow is now the prevailing color, with scarlet cheeks. Yet, standing on the

east side of the Common just before sundown, when the western light is transmitted through them, I see that their yellow even, compared with the pale lemon yellow of an Elm close by, amounts to a scarlet, without noticing the bright scarlet portions. Generally, they are great regular oval masses of yellow and scarlet. All the sunny warmth of the season, the Indian-summer, seems to be absorbed in their leaves. The lowest and inmost leaves next the bole are, as usual, of the most delicate yellow and green, like the complexion of young men brought up in the house. There is an auction on the Common to-day, but its red flag is hard to be discerned amid this blaze of color.

Little did the fathers of the town anticipate this brilliant success, when they caused to be imported from farther in the country some straight poles with their tops cut off, which they called Sugar-Maples; and, as I remember, after they were set out, a neighboring merchant's clerk, by way of jest, planted beans about them. Those which were then jestingly called bean-poles are to-day far the most beautiful objects noticeable in our streets. They are worth all and more than they have cost, — though one of the selectmen, while setting them out, took the cold which occasioned his death, — if only because they have filled the open eyes of children with their rich color unstintedly so many Octobers. We will not ask them to yield us sugar in the spring, while they afford us so fair a prospect in the autumn. Wealth in-doors may be the inheritance of few, but it is equally distributed on the Common. All children alike can revel in this golden harvest.

Surely trees should be set in our streets with a view to their October splendor; though I doubt whether this is ever considered by the "Tree Society." Do you not think it will make some odds to these children that they were brought up under the Maples? Hundreds of eyes are steadily drinking in this color, and by these teachers even the truants are caught and educated the moment they step abroad. Indeed, neither the truant nor the studious is at present taught color in the schools. These are instead of the bright colors in apothecaries' shops and city windows. It is a pity that we have no more Red Maples, and some Hickories, in our streets as well. Our paint-box is very imperfectly filled. Instead of, or beside, supplying such paint-boxes as we do, we might supply these natural colors to the young. Where else will they study color under greater advantages? What School of Design can vie with this? Think how much the eyes of painters of all kinds, and of manufacturers of cloth and paper, and paper-stainers, and countless others, are to be educated by these autumnal colors. The stationer's envelopes may be of very various tints, yet, not so various as those of the leaves of a single tree. If you want a different shade or tint of a particular color, you have only to look farther within or without the tree or the wood. These leaves are not many dipped in one dye, as at the dye-house, but they are dyed in light of infinitely various degrees of strength, and left to set and dry there.

Shall the names of so many of our colors continue to be derived from those of obscure foreign localities, as Naples yellow, Prussian blue, raw Sienna, burnt Umber, Gamboge? — (surely the Tyrian purple must have faded by this time), — or from comparatively trivial articles of commerce, — chocolate, lemon, coffee, cinnamon, claret? — (shall we

compare our Hickory to a lemon, or a lemon to a Hickory?) — or from ores and oxides which few ever see? Shall we so often, when describing to our neighbors the color of something we have seen, refer them, not to some natural object in our neighborhood, but perchance to a bit of earth fetched from the other side of the planet, which possibly they may find at the apothecary's, but which probably neither they nor we ever saw? Have we not an earth under our feet, — ay, and a sky over our heads? Or is the last all ultramarine? What do we know of sapphire, amethyst, emerald, ruby, amber, and the like, — most of us who take these names in vain? Leave these precious words to cabinet-keepers, virtuosos, and maids-of-honor, — to the Nabobs, Begums, and Chobdars of Hindostan, or wherever else. I do not see why, since America and her autumn woods have been discovered, our leaves should not compete with the precious stones in giving names to colors; and, indeed, I believe that in course of time the names of some of our trees and shrubs, as well as flowers, will get into our popular chromatic nomenclature.

But of much more importance than a knowledge of the names and distinctions of color is the joy and exhilaration which these colored leaves excite. Already these brilliant trees throughout the street, without any more variety, are at least equal to an annual festival and holiday, or a week of such. These are cheap and innocent gala-days, celebrated by one and all without the aid of committees or marshals, such a show as may safely be licensed, not attracting gamblers or rum-sellers, not requiring any special police to keep the peace. And poor indeed must be that New-England village's October which has not the Maple in its streets. This October festival costs no powder, nor ringing of bells, but every tree is a living liberty-pole on which a thousand bright flags are waving.

No wonder that we must have our annual Cattle-Show, and Fall Training, and perhaps Cornwallis, our September Courts, and the like. Nature herself holds her annual fair in October, not only in the streets, but in every hollow and on every hill-side. When lately we looked into that Red-Maple swamp all ablaze, where the trees were clothed in their vestures of most dazzling tints, did it not suggest a thousand gypsies beneath, — a race capable of wild delight, — or even the fabled fawns, satyrs, and wood-nymphs come back to earth? Or was it only a congregation of wearied wood-choppers, or of proprietors come to inspect their lots, that we thought of? Or, earlier still, when we paddled on the river through that fine-grained September air, did there not appear to be something new going on under the sparkling surface of the stream, a shaking of props, at least, so that we made haste in order to be up in time? Did not the rows of yellowing Willows and Button-Bushes on each side seem like rows of booths, under which, perhaps, some fluviatile egg-pop equally yellow was effervescing? Did not all these suggest that man's spirits should rise as high as Nature's, — should hang out their flag, and the routine of his life be interrupted by an analogous expression of joy and hilarity?

No annual training or muster of soldiery, no celebration with its scarfs and banners, could import into the town a hundredth part of the annual splendor of our October. We have only to set the trees, or let them stand, and Nature will find the colored drapery,

— flags of all her nations, some of whose private signals hardly the botanist can read, — while we walk under the triumphal arches of the Elms. Leave it to Nature to appoint the days, whether the same as in neighboring States or not, and let the clergy read her proclamations, if they can understand them. Behold what a brilliant drapery is her Woodbine flag! What public-spirited merchant, think you, has contributed this part of the show? There is no handsomer shingling and paint than this vine, at present covering a whole side of some houses. I do not believe that the Ivy never sere is comparable to it. No wonder it has been extensively introduced into London. Let us have a good many Maples and Hickories and Scarlet Oaks, then, I say. Blaze away! Shall that dirty roll of bunting in the gun-house be all the colors a village can display? A village is not complete unless it have these trees to mark the season in it. They are important, like the town-clock. A village that has them not will not be found to work well. It has a screw loose, an essential part is wanting. Let us have Willows for spring, Elms for summer, Maples and Walnuts and Tupeloes for autumn, Evergreens for winter, and Oaks for all seasons. What is a gallery in a house to a gallery in the streets, which every market-man rides through, whether he will or not? Of course, there is not a picture-gallery in the country which would be worth so much to us as is the western view at sunset under the Elms of our main street. They are the frame to a picture which is daily painted behind them. An avenue of Elms as large as our largest and three miles long would seem to lead to some admirable place, though only C — were at the end of it.

A village needs these innocent stimulants of bright and cheering prospects to keep off melancholy and superstition. Show me two villages, one embowered in trees and blazing with all the glories of October, the other a merely trivial and treeless waste, or with only a single tree or two for suicides, and I shall be sure that in the latter will be found the most starved and bigoted religionists and the most desperate drinkers. Every washtub and milkcan and gravestone will be exposed. The inhabitants will disappear abruptly behind their barns and houses, like desert Arabs amid their rocks, and I shall look to see spears in their hands. They will be ready to accept the most barren and forlorn doctrine, — as that the world is speedily coming to an end, or has already got to it, or that they themselves are turned wrong side outward. They will perchance crack their dry joints at one another and call it a spiritual communication.

But to confine ourselves to the Maples. What if we were to take half as much pains in protecting them as we do in setting them out, — not stupidly tie our horses to our dahlia-stems?

What meant the fathers by establishing this perfectly living institution before the church, — this institution which needs no repairing nor repainting, which is continually enlarged and repaired by its growth? Surely they

“Wrought in a sad sincerity;  
Themselves from God they could not free;  
They planted better than they knew; —  
The conscious trees to beauty grew.”

Verily these Maples are cheap preachers, permanently settled, which preach their half-century, and century, ay, and century-and-a-half sermons, with constantly increasing unction and influence, ministering to many generations of men; and the least we can do is to supply them with suitable colleagues as they grow infirm.

#### THE SCARLET OAK.

Belonging to a genus which is remarkable for the beautiful form of its leaves, I suspect that some Scarlet-Oak leaves surpass those of all other Oaks in the rich and wild beauty of their outlines. I judge from an acquaintance with twelve species, and from drawings which I have seen of many others.

Stand under this tree and see how finely its leaves are cut against the sky, — as it were, only a few sharp points extending from a midrib. They look like double, treble, or quadruple crosses. They are far more ethereal than the less deeply scalloped Oak-leaves. They have so little leafy terra firma that they appear melting away in the light, and scarcely obstruct our view. The leaves of very young plants are, like those of full-grown Oaks of other species, more entire, simple, and lumpish in their outlines; but these, raised high on old trees, have solved the leafy problem. Lifted higher and higher, and sublimated more and more, putting off some earthiness and cultivating more intimacy with the light each year, they have at length the least possible amount of earthy matter, and the greatest spread and grasp of skyey influences. There they dance, arm in arm with the light, — tripping it on fantastic points, fit partners in those aerial halls. So intimately mingled are they with it, that, what with their slenderness and their glossy surfaces, you can hardly tell at last what in the dance is leaf and what is light. And when no zephyr stirs, they are at most but a rich tracery to the forest-windows.

I am again struck with their beauty, when, a month later, they thickly strew the ground in the woods, piled one upon another under my feet. They are then brown above, but purple beneath. With their narrow lobes and their bold deep scollops reaching almost to the middle, they suggest that the material must be cheap, or else there has been a lavish expense in their creation, as if so much had been cut out. Or else they seem to us the remnants of the stuff out of which leaves have been cut with a die. Indeed, when they lie thus one upon another, they remind me of a pile of scrap-tin.

Or bring one home, and study it closely at your leisure, by the fireside. It is a type, not from any Oxford font, not in the Basque nor the arrow-headed character, not found on the Rosetta Stone, but destined to be copied in sculpture one day, if they ever get to whittling stone here. What a wild and pleasing outline, a combination of graceful curves and angles! The eye rests with equal delight on what is not leaf and on what is leaf, — on the broad, free, open sinuses, and on the long, sharp, bristle-pointed lobes. A simple oval outline would include it all, if you connected the points of the leaf; but how much richer is it than that, with its half-dozen deep scollops, in which the eye and thought of the beholder are embayed! If I were a drawing-master, I would set my pupils to copying these leaves, that they might learn to draw firmly and gracefully.

Regarded as water, it is like a pond with half a dozen broad rounded promontories extending nearly to its middle, half from each side, while its watery bays extend far

inland, like sharp friths, at each of whose heads several fine streams empty in, — almost a leafy archipelago.

But it oftener suggests land, and, as Dionysius and Pliny compared the form of the Morea to that of the leaf of the Oriental Plane-tree, so this leaf reminds me of some fair wild island in the ocean, whose extensive coast, alternate rounded bays with smooth strands, and sharp-pointed rocky capes, mark it as fitted for the habitation of man, and destined to become a centre of civilization at last. To the sailor's eye, it is a much-indented shore. Is it not, in fact, a shore to the aerial ocean, on which the windy surf beats? At sight of this leaf we are all mariners, — if not vikings, buccaneers, and filibusters. Both our love of repose and our spirit of adventure are addressed. In our most casual glance, perchance, we think, that, if we succeed in doubling those sharp capes, we shall find deep, smooth, and secure havens in the ample bays. How different from the White-Oak leaf, with its rounded headlands, on which no lighthouse need be placed! That is an England, with its long civil history, that may be read. This is some still unsettled New-found Island or Celebes. Shall we go and be rajahs there?

By the twenty-sixth of October the large Scarlet Oaks are in their prime, when other Oaks are usually withered. They have been kindling their fires for a week past, and now generally burst into a blaze. This alone of our indigenous deciduous trees (excepting the Dogwood, of which I do not know half a dozen, and they are but large bushes) is now in its glory. The two Aspens and the Sugar-Maple come nearest to it in date, but they have lost the greater part of their leaves. Of evergreens, only the Pitch-Pine is still commonly bright.

But it requires a particular alertness, if not devotion to these phenomena, to appreciate the wide-spread, but late and unexpected glory of the Scarlet Oaks. I do not speak here of the small trees and shrubs, which are commonly observed, and which are now withered, but of the large trees. Most go in and shut their doors, thinking that bleak and colorless November has already come, when some of the most brilliant and memorable colors are not yet lit.

This very perfect and vigorous one, about forty feet high, standing in an open pasture, which was quite glossy green on the twelfth, is now, the twenty-sixth, completely changed to bright dark scarlet, — every leaf, between you and the sun, as if it had been dipped into a scarlet dye. The whole tree is much like a heart in form, as well as color. Was not this worth waiting for? Little did you think, ten days ago, that that cold green tree would assume such color as this. Its leaves are still firmly attached, while those of other trees are falling around it. It seems to say,— “I am the last to blush, but I blush deeper than any of ye. I bring up the rear in my red coat. We Scarlet ones, alone of Oaks, have not given up the fight.”

The sap is now, and even far into November, frequently flowing fast in these trees, as in Maples in the spring; and apparently their bright tints, now that most other Oaks are withered, are connected with this phenomenon. They are full of life. It has a pleasantly astringent, acorn-like taste, this strong Oak-wine, as I find on tapping them with my knife.

Looking across this woodland valley, a quarter of a mile wide, how rich those Scarlet Oaks, embosomed in Pines, their bright red branches intimately intermingled with them! They have their full effect there. The Pine-boughs are the green calyx to their red petals. Or, as we go along a road in the woods, the sun striking endwise through it, and lighting up the red tents of the Oaks, which on each side are mingled with the liquid green of the Pines, makes a very gorgeous scene. Indeed, without the evergreens for contrast, the autumnal tints would lose much of their effect.

The Scarlet Oak asks a clear sky and the brightness of late October days. These bring out its colors. If the sun goes into a cloud, they become comparatively indistinct. As I sit on a cliff in the southwest part of our town, the sun is now getting low, and the woods in Lincoln, south and east of me, are lit up by its more level rays; and in the Scarlet Oaks, scattered so equally over the forest, there is brought out a more brilliant redness than I had believed was in them. Every tree of this species which is visible in those directions, even to the horizon, now stands out distinctly red. Some great ones lift their red backs high above the woods, in the next town, like huge roses with a myriad of fine petals; and some more slender ones, in a small grove of White Pines on Pine Hill in the east, on the very verge of the horizon, alternating with the Pines on the edge of the grove, and shouldering them with their red coats, look like soldiers in red amid hunters in green. This time it is Lincoln green, too. Till the sun got low, I did not believe that there were so many red coats in the forest army. Theirs is an intense burning red, which would lose some of its strength, methinks, with every step you might take toward them; for the shade that lurks amid their foliage does not report itself at this distance, and they are unanimously red. The focus of their reflected color is in the atmosphere far on this side. Every such tree becomes a nucleus of red, as it were, where, with the declining sun, that color grows and glows. It is partly borrowed fire, gathering strength from the sun on its way to your eye. It has only some comparatively dull red leaves for a rallying-point, or kindling-stuff, to start it, and it becomes an intense scarlet or red mist, or fire, which finds fuel for itself in the very atmosphere. So vivacious is redness. The very rails reflect a rosy light at this hour and season. You see a redder tree than exists.

If you wish to count the Scarlet Oaks, do it now. In a clear day stand thus on a hill-top in the woods, when the sun is an hour high, and every one within range of your vision, excepting in the west, will be revealed. You might live to the age of Methuselah and never find a tithe of them, otherwise. Yet sometimes even in a dark day I have thought them as bright as I ever saw them. Looking westward, their colors are lost in a blaze of light; but in other directions the whole forest is a flower-garden, in which these late roses burn, alternating with green, while the so-called "gardeners," walking here and there, perchance, beneath, with spade and water-pot, see only a few little asters amid withered leaves.

These are my China-asters, my late garden-flowers. It costs me nothing for a gardener. The falling leaves, all over the forest, are protecting the roots of my plants. Only look at what is to be seen, and you will have garden enough, without deepening the

soil in your yard. We have only to elevate our view a little, to see the whole forest as a garden. The blossoming of the Scarlet Oak, — the forest-flower, surpassing all in splendor, (at least since the Maple)! I do not know but they interest me more than the Maples, they are so widely and equally dispersed throughout the forest; they are so hardy, a nobler tree on the whole; — our chief November flower, abiding the approach of winter with us, imparting warmth to early November prospects. It is remarkable that the latest bright color that is general should be this deep, dark scarlet and red, the intensest of colors. The ripest fruit of the year; like the cheek of a hard, glossy, red apple, from the cold Isle of Orleans, which will not be mellow for eating till next spring! When I rise to a hilltop, a thousand of these great Oak roses, distributed on every side, as far as the horizon! I admire them four or five miles off! This my unfailing prospect for a fortnight past! This late forest-flower surpasses all that spring or summer could do. Their colors were but rare and dainty specks comparatively, (created for the near-sighted, who walk amid the humblest herbs and underwoods,) and made no impression on a distant eye. Now it is an extended forest or a mountain-side, through or along which we journey from day to day, that bursts into bloom. Comparatively, our gardening is on a petty scale, — the gardener still nursing a few asters amid dead weeds, ignorant of the gigantic asters and roses, which, as it were, overshadow him, and ask for none of his care. It is like a little red paint ground on a saucer, and held up against the sunset sky. Why not take more elevated and broader views, walk in the great garden, not skulk in a little “debauched” nook of it? consider the beauty of the forest, and not merely of a few impounded herbs?

Let your walks now be a little more adventurous; ascend the hills. If, about the last of October, you ascend any hill in the outskirts of our town, and probably of yours, and look over the forest, you may see — well, what I have endeavored to describe. All this you surely will see, and much more, if you are prepared to see it, — if you look for it. Otherwise, regular and universal as this phenomenon is, whether you stand on the hill-top or in the hollow, you will think for threescore years and ten that all the wood is, at this season, sere and brown. Objects are concealed from our view, not so much because they are out of the course of our visual ray as because we do not bring our minds and eyes to bear on them; for there is no power to see in the eye itself, any more than in any other jelly. We do not realize how far and widely, or how near and narrowly, we are to look. The greater part of the phenomena of Nature are for this reason concealed from us all our lives. The gardener sees only the gardener’s garden. Here, too, as in political economy, the supply answers to the demand. Nature does not cast pearls before swine. There is just as much beauty visible to us in the landscape as we are prepared to appreciate, — not a grain more. The actual objects which one man will see from a particular hill-top are just as different from those which another will see as the beholders are different. The Scarlet Oak must, in a sense, be in your eye when you go forth. We cannot see anything until we are possessed with the idea of it, take it into our heads, — and then we can hardly see anything else. In my botanical rambles, I find, that, first, the idea, or image, of a plant occupies my thoughts, though it may

seem very foreign to this locality, — no nearer than Hudson's Bay, — and for some weeks or months I go thinking of it, and expecting it, unconsciously, and at length I surely see it. This is the history of my finding a score or more of rare plants, which I could name. A man sees only what concerns him. A botanist absorbed in the study of grasses does not distinguish the grandest Pasture Oaks. He, as it were, tramples down Oaks unwittingly in his walk, or at most sees only their shadows. I have found that it required a different intention of the eye, in the same locality, to see different plants, even when they were closely allied, as Juncaceoe and Gramineoe: when I was looking for the former, I did not see the latter in the midst of them. How much more, then, it requires different intentions of the eye and of the mind to attend to different departments of knowledge! How differently the poet and the naturalist look at objects!

Take a New-England selectman, and set him on the highest of our hills, and tell him to look, — sharpening his sight to the utmost, and putting on the glasses that suit him best, (ay, using a spy-glass, if he likes,) — and make a full report. What, probably, will he spy? — what will he select to look at? Of course, he will see a Brocken spectre of himself. He will see several meeting-houses, at least, and, perhaps, that somebody ought to be assessed higher than he is, since he has so handsome a wood-lot. Now take Julius Caesar, or Immanuel Swedenborg, or a Fegee-Islander, and set him up there. Or suppose all together, and let them compare notes afterward. Will it appear that they have enjoyed the same prospect? What they will see will be as different as Rome was from Heaven or Hell, or the last from the Fegee Islands. For aught we know, as strange a man as any of these is always at our elbow.

Why, it takes a sharp-shooter to bring down even such trivial game as snipes and woodcocks; he must take very particular aim, and know what he is aiming at. He would stand a very small chance, if he fired at random into the sky, being told that snipes were flying there. And so is it with him that shoots at beauty; though he wait till the sky falls, he will not bag any, if he does not already know its seasons and haunts, and the color of its wing, — if he has not dreamed of it, so that he can anticipate it; then, indeed, he flushes it at every step, shoots double and on the wing, with both barrels, even in cornfields. The sportsman trains himself, dresses and watches unweariedly, and loads and primes for his particular game. He prays for it, and offers sacrifices, and so he gets it. After due and long preparation, schooling his eye and hand, dreaming awake and asleep, with gun and paddle and boat he goes out after meadow-hens, which most of his townsmen never saw nor dreamed of, and paddles for miles against a head-wind, and wades in water up to his knees, being out all day without his dinner, and therefore he gets them. He had them half-way into his bag when he started, and has only to shove them down. The true sportsman can shoot you almost any of his game from his windows: what else has he windows or eyes for? It comes and perches at last on the barrel of his gun; but the rest of the world never see it with the feathers on. The geese fly exactly under his zenith, and honk when they get there, and he will keep himself supplied by firing up his chimney; twenty musquash have the refusal of each one of his traps before it is empty. If he lives, and his game-spirit increases, heaven and

earth shall fail him sooner than game; and when he dies, he will go to more extensive, and, perchance, happier hunting-grounds. The fisherman, too, dreams of fish, sees a bobbing cork in his dreams, till he can almost catch them in his sink-spout. I knew a girl who, being sent to pick huckleberries, picked wild gooseberries by the quart, where no one else knew that there were any, because she was accustomed to pick them up country where she came from. The astronomer knows where to go star-gathering, and sees one clearly in his mind before any have seen it with a glass. The hen scratches and finds her food right under where she stands; but such is not the way with the hawk.

These bright leaves which I have mentioned are not the exception, but the rule; for I believe that all leaves, even grasses and mosses, acquire brighter colors just before their fall. When you come to observe faithfully the changes of each humblest plant, you find that each has, sooner or later, its peculiar autumnal tint; and if you undertake to make a complete list of the bright tints, it will be nearly as long as a catalogue of the plants in your vicinity.

# A PLEA FOR CAPTAIN JOHN BROWN

Read to the citizens of Concord, Mass., Sunday Evening, October 30, 1859

I trust that you will pardon me for being here. I do not wish to force my thoughts upon you, but I feel forced myself. Little as I know of Captain Brown, I would fain do my part to correct the tone and the statements of the newspapers, and of my countrymen generally, respecting his character and actions. It costs us nothing to be just. We can at least express our sympathy with, and admiration of, him and his companions, and that is what I now propose to do.

First, as to his history. I will endeavor to omit, as much as possible, what you have already read. I need not describe his person to you, for probably most of you have seen and will not soon forget him. I am told that his grandfather, John Brown, was an officer in the Revolution; that he himself was born in Connecticut about the beginning of this century, but early went with his father to Ohio. I heard him say that his father was a contractor who furnished beef to the army there, in the war of 1812; that he accompanied him to the camp, and assisted him in that employment, seeing a good deal of military life, — more, perhaps, than if he had been a soldier; for he was often present at the councils of the officers. Especially, he learned by experience how armies are supplied and maintained in the field, — a work which, he observed, requires at least as much experience and skill as to lead them in battle. He said that few persons had any conception of the cost, even the pecuniary cost, of firing a single bullet in war. He saw enough, at any rate, to disgust him with a military life; indeed, to excite in his a great abhorrence of it; so much so, that though he was tempted by the offer of some petty office in the army, when he was about eighteen, he not only declined that, but he also refused to train when warned, and was fined for it. He then resolved that he would never have anything to do with any war, unless it were a war for liberty.

When the troubles in Kansas began, he sent several of his sons thither to strengthen the party of the Free State men, fitting them out with such weapons as he had; telling them that if the troubles should increase, and there should be need of his, he would follow, to assist them with his hand and counsel. This, as you all know, he soon after did; and it was through his agency, far more than any other's, that Kansas was made free.

For a part of his life he was a surveyor, and at one time he was engaged in wool-growing, and he went to Europe as an agent about that business. There, as everywhere,

he had his eyes about him, and made many original observations. He said, for instance, that he saw why the soil of England was so rich, and that of Germany (I think it was) so poor, and he thought of writing to some of the crowned heads about it. It was because in England the peasantry live on the soil which they cultivate, but in Germany they are gathered into villages, at night. It is a pity that he did not make a book of his observations.

I should say that he was an old-fashioned man in respect for the Constitution, and his faith in the permanence of this Union. Slavery he deemed to be wholly opposed to these, and he was its determined foe.

He was by descent and birth a New England farmer, a man of great common-sense, deliberate and practical as that class is, and tenfold more so. He was like the best of those who stood at Concord Bridge once, on Lexington Common, and on Bunker Hill, only he was firmer and higher principled than any that I have chanced to hear of as there. It was no abolition lecturer that converted him. Ethan Allen and Stark, with whom he may in some respects be compared, were rangers in a lower and less important field. They could bravely face their country's foes, but he had the courage to face his country herself, when she was in the wrong. A Western writer says, to account for his escape from so many perils, that he was concealed under a "rural exterior"; as if, in that prairie land, a hero should, by good rights, wear a citizen's dress only.

He did not go to the college called Harvard, good old Alma Mater as she is. He was not fed on the pap that is there furnished. As he phrased it, "I know no more of grammar than one of your calves." But he went to the great university of the West, where he sedulously pursued the study of Liberty, for which he had early betrayed a fondness, and having taken many degrees, he finally commenced the public practice of Humanity in Kansas, as you all know. Such were his humanities and not any study of grammar. He would have left a Greek accent slanting the wrong way, and righted up a falling man.

He was one of that class of whom we hear a great deal, but, for the most part, see nothing at all, — the Puritans. It would be in vain to kill him. He died lately in the time of Cromwell, but he reappeared here. Why should he not? Some of the Puritan stock are said to have come over and settled in New England. They were a class that did something else than celebrate their forefathers' day, and eat parched corn in remembrance of that time. They were neither Democrats nor Republicans, but men of simple habits, straightforward, prayerful; not thinking much of rulers who did not fear God, not making many compromises, nor seeking after available candidates.

"In his camp," as one has recently written, and as I have myself heard him state, "he permitted no profanity; no man of loose morals was suffered to remain there, unless, indeed, as a prisoner of war. 'I would rather,' said he, 'have the small-pox, yellow-fever, and cholera, all together in my camp, than a man without principle... It is a mistake, sir, that our people make, when they think that bullies are the best fighters, or that they are the fit men to oppose these Southerners. Give me men of good principles, — God-fearing men, — men who respect themselves, and with a dozen of them I will

oppose any hundred such men as these Buford ruffians.” He said that if one offered himself to be a soldier under him, who was forward to tell what he could or would do, if he could only get sight of the enemy, he had but little confidence in him.

He was never able to find more than a score or so of recruits whom he would accept, and only about a dozen, among them his sons, in whom he had perfect faith. When he was here, some years ago, he showed to a few a little manuscript book, — his “orderly book” I think he called it, — containing the names of his company in Kansas, and the rules by which they bound themselves; and he stated that several of them had already sealed the contract with their blood. When some one remarked that, with the addition of a chaplain, it would have been a perfect Cromwellian troop, he observed that he would have been glad to add a chaplain to the list, if he could have found one who could fill that office worthily. It is easy enough to find one for the United States army. I believe that he had prayers in his camp morning and evening, nevertheless.

He was a man of Spartan habits, and at sixty was scrupulous about his diet at your table, excusing himself by saying that he must eat sparingly and fare hard, as became a soldier, or one who was fitting himself for difficult enterprises, a life of exposure.

A man of rare common-sense and directness of speech, as of action; a transcendentalist above all, a man of ideas and principles, — that was what distinguished him. Not yielding to a whim or transient impulse, but carrying out the purpose of a life. I noticed that he did not overstate anything, but spoke within bounds. I remember, particularly, how, in his speech here, he referred to what his family had suffered in Kansas, without ever giving the least vent to his pent-up fire. It was a volcano with an ordinary chimney-flue. Also referring to the deeds of certain Border Ruffians, he said, rapidly paring away his speech, like an experienced soldier, keeping a reserve of force and meaning, “They had a perfect right to be hung.” He was not in the least a rhetorician, was not talking to Buncombe or his constituents anywhere, had no need to invent anything but to tell the simple truth, and communicate his own resolution; therefore he appeared incomparably strong, and eloquence in Congress and elsewhere seemed to me at a discount. It was like the speeches of Cromwell compared with those of an ordinary king.

As for his tact and prudence, I will merely say, that at a time when scarcely a man from the Free States was able to reach Kansas by any direct route, at least without having his arms taken from him, he, carrying what imperfect guns and other weapons he could collect, openly and slowly drove an ox-cart through Missouri, apparently in the capacity of a surveyor, with his surveying compass exposed in it, and so passed unsuspected, and had ample opportunity to learn the designs of the enemy. For some time after his arrival he still followed the same profession. When, for instance, he saw a knot of the ruffians on the prairie, discussing, of course, the single topic which then occupied their minds, he would, perhaps, take his compass and one of his sons, and proceed to run an imaginary line right through the very spot on which that conclave had assembled, and when he came up to them, he would naturally pause and have some talk with them, learning their news, and, at last, all their plans perfectly; and

having thus completed his real survey he would resume his imaginary one, and run on his line till he was out of sight.

When I expressed surprise that he could live in Kansas at all, with a price set upon his head, and so large a number, including the authorities, exasperated against him, he accounted for it by saying, "It is perfectly well understood that I will not be taken." Much of the time for some years he has had to skulk in swamps, suffering from poverty and from sickness, which was the consequence of exposure, befriended only by Indians and a few whites. But though it might be known that he was lurking in a particular swamp, his foes commonly did not care to go in after him. He could even come out into a town where there were more Border Ruffians than Free State men, and transact some business, without delaying long, and yet not be molested; for, said he, "No little handful of men were willing to undertake it, and a large body could not be got together in season."

As for his recent failure, we do not know the facts about it. It was evidently far from being a wild and desperate attempt. His enemy, Mr. Vallandigham, is compelled to say, that "it was among the best planned executed conspiracies that ever failed."

Not to mention his other successes, was it a failure, or did it show a want of good management, to deliver from bondage a dozen human beings, and walk off with them by broad daylight, for weeks if not months, at a leisurely pace, through one State after another, for half the length of the North, conspicuous to all parties, with a price set upon his head, going into a court-room on his way and telling what he had done, thus convincing Missouri that it was not profitable to try to hold slaves in his neighborhood? — and this, not because the government menials were lenient, but because they were afraid of him.

Yet he did not attribute his success, foolishly, to "his star," or to any magic. He said, truly, that the reason why such greatly superior numbers quailed before him was, as one of his prisoners confessed, because they lacked a cause, — a kind of armor which he and his party never lacked. When the time came, few men were found willing to lay down their lives in defence of what they knew to be wrong; they did not like that this should be their last act in this world.

But to make haste to his last act, and its effects.

The newspapers seem to ignore, or perhaps are really ignorant of the fact, that there are at least as many as two or three individuals to a town throughout the North who think much as the present speaker does about him and his enterprise. I do not hesitate to say that they are an important and growing party. We aspire to be something more than stupid and timid chattels, pretending to read history and our Bibles, but desecrating every house and every day we breathe in. Perhaps anxious politicians may prove that only seventeen white men and five negroes were concerned in the late enterprise; but their very anxiety to prove this might suggest to themselves that all is not told. Why do they still dodge the truth? They are so anxious because of a dim consciousness of the fact, which they do not distinctly face, that at least a million of the free inhabitants of the United States would have rejoiced if it had succeeded. They

at most only criticise the tactics. Though we wear no crape, the thought of that man's position and probable fate is spoiling many a man's day here at the North for other thinking. If any one who has seen him here can pursue successfully any other train of thought, I do not know what he is made of. If there is any such who gets his usual allowance of sleep, I will warrant him to fatten easily under any circumstances which do not touch his body or purse. I put a piece of paper and a pencil under my pillow, and when I could not sleep, I wrote in the dark.

On the whole, my respect for my fellow-men, except as one may outweigh a million, is not being increased these days. I have noticed the cold-blooded way in which newspaper writers and men generally speak of this event, as if an ordinary malefactor, though one of unusual "pluck," — as the Governor of Virginia is reported to have said, using the language of the cock-pit, "the gamest man he ever saw," — had been caught, and were about to be hung. He was not dreaming of his foes when the governor thought he looked so brave. It turns what sweetness I have to gall, to hear, or hear of, the remarks of some of my neighbors. When we heard at first that he was dead, one of my townsmen observed that "he died as the fool dieth"; which, pardon me, for an instant suggested a likeness in him dying to my neighbor living. Others, craven-hearted, said disparagingly, that "he threw his life away," because he resisted the government. Which way have they thrown their lives, pray? — such as would praise a man for attacking singly an ordinary band of thieves or murderers. I hear another ask, Yankee-like, "What will he gain by it?" as if he expected to fill his pockets by this enterprise. Such a one has no idea of gain but in this worldly sense. If it does not lead to a "surprise" party, if he does not get a new pair of boots, or a vote of thanks, it must be a failure. "But he won't gain anything by it." Well, no, I don't suppose he could get four-and-sixpence a day for being hung, take the year round; but then he stands a chance to save a considerable part of his soul, — and such a soul! — when you do not. No doubt you can get more in your market for a quart of milk than for a quart of blood, but that is not the market that heroes carry their blood to.

Such do not know that like the seed is the fruit, and that, in the moral world, when good seed is planted, good fruit is inevitable, and does not depend on our watering and cultivating; that when you plant, or bury, a hero in his field, a crop of heroes is sure to spring up. This is a seed of such force and vitality, that it does not ask our leave to germinate.

The momentary charge at Balaclava, in obedience to a blundering command, proving what a perfect machine the soldier is, has, properly enough, been celebrated by a poet laureate; but the steady, and for the most part successful, charge of this man, for some years, against the legions of Slavery, in obedience to an infinitely higher command, is as much more memorable than that, as an intelligent and conscientious man is superior to a machine. Do you think that that will go unsung?

"Served him right," — "A dangerous man," — "He is undoubtedly insane." So they proceed to live their sane, and wise, and altogether admirable lives, reading their Plutarch a little, but chiefly pausing at that feat of Putnam, who was let down into a

wolf's den; and in this wise they nourish themselves for brave and patriotic deeds some time or other. The Tract Society could afford to print that story of Putnam. You might open the district schools with the reading of it, for there is nothing about Slavery or the Church in it; unless it occurs to the reader that some pastors are wolves in sheep's clothing. "The American Board of Commissioners for Foreign Missions" even, might dare to protest against that wolf. I have heard of boards, and of American boards, but it chances that I never heard of this particular lumber till lately. And yet I hear of Northern men, and women, and children, by families, buying a "life membership" in such societies as these. A life-membership in the grave! You can get buried cheaper than that.

Our foes are in our midst and all about us. There is hardly a house but is divided against itself, for our foe is the all but universal woodenness of both head and heart, the want of vitality in man, which is the effect of our vice; and hence are begotten fear, superstition, bigotry, persecution, and slavery of all kinds. We are mere figureheads upon a hulk, with livers in the place of hearts. The curse is the worship of idols, which at length changes the worshipper into a stone image himself; and the New-Englander is just as much an idolater as the Hindoo. This man was an exception, for he did not set up even a political graven image between him and his God.

A church that can never have done with excommunicating Christ while it exists! Away with your broad and flat churches, and your narrow and tall churches! Take a step forward, and invent a new style of out-houses. Invent a salt that will save you, and defend our nostrils.

The modern Christian is a man who has consented to say all the prayers in the liturgy, provided you will let him go straight to bed and sleep quietly afterward. All his prayers begin with "Now I lay me down to sleep," and he is forever looking forward to the time when he shall go to his "long rest." He has consented to perform certain old-established charities, too, after a fashion, but he does not wish to hear of any new-fangled ones; he doesn't wish to have any supplementary articles added to the contract, to fit it to the present time. He shows the whites of his eyes on the Sabbath, and the blacks all the rest of the week. The evil is not merely a stagnation of blood, but a stagnation of spirit. Many, no doubt, are well disposed, but sluggish by constitution and by habit, and they cannot conceive of a man who is actuated by higher motives than they are. Accordingly they pronounce this man insane, for they know that they could never act as he does, as long as they are themselves.

We dream of foreign countries, of other times and races of men, placing them at a distance in history or space; but let some significant event like the present occur in our midst, and we discover, often, this distance and this strangeness between us and our nearest neighbors. They are our Austrias, and Chinas, and South Sea Islands. Our crowded society becomes well spaced all at once, clean and handsome to the eye, — a city of magnificent distances. We discover why it was that we never got beyond compliments and surfaces with them before; we become aware of as many versts between us and them as there are between a wandering Tartar and a Chinese town. The

thoughtful man becomes a hermit in the thoroughfares of the market-place. Impassable seas suddenly find their level between us, or dumb steppes stretch themselves out there. It is the difference of constitution, of intelligence, and faith, and not streams and mountains, that make the true and impassable boundaries between individuals and between states. None but the like-minded can come plenipotentiary to our court.

I read all the newspapers I could get within a week after this event, and I do not remember in them a single expression of sympathy for these men. I have since seen one noble statement, in a Boston paper, not editorial. Some voluminous sheets decided not to print the full report of Brown's words to the exclusion of other matter. It was as if a publisher should reject the manuscript of the New Testament, and print Wilson's last speech. The same journal which contained this pregnant news, was chiefly filled, in parallel columns, with the reports of the political conventions that were being held. But the descent to them was too steep. They should have been spared this contrast, — been printed in an extra, at least. To turn from the voices and deeds of earnest men to the cackling of political conventions! Office-seekers and speech-makers, who do not so much as lay an honest egg, but wear their breasts bare upon an egg of chalk! Their great game is the game of straws, or rather that universal aboriginal game of the platter, at which the Indians cried hub, bub! Exclude the reports of religious and political conventions, and publish the words of a living man.

But I object not so much to what they have omitted, as to what they have inserted. Even the Liberator called it "a misguided, wild, and apparently insane — effort." As for the herd of newspapers and magazines, I do not chance to know an editor in the country who will deliberately print anything which he knows will ultimately and permanently reduce the number of his subscribers. They do not believe that it would be expedient. How then can they print truth? If we do not say pleasant things, they argue, nobody will attend to us. And so they do like some travelling auctioneers, who sing an obscene song, in order to draw a crowd around them. Republican editors, obliged to get their sentences ready for the morning edition, and accustomed to look at everything by the twilight of politics, express no admiration, nor true sorrow even, but call these men "deluded fanatics,"— "mistaken men,"— "insane," or "crazed." It suggests what a sane set of editors we are blessed with, not "mistaken men"; who know very well on which side their bread is buttered, at least.

A man does a brave and humane deed, and at once, on all sides, we hear people and parties declaring, "I didn't do it, nor countenance him to do it, in any conceivable way. It can't be fairly inferred from my past career." I, for one, am not interested to hear you define your position. I don't know that I ever was, or ever shall be. I think it is mere egotism, or impertinent at this time. Ye needn't take so much pains to wash your skirts of him. No intelligent man will ever be convinced that he was any creature of yours. He went and came, as he himself informs us, "under the auspices of John Brown and nobody else." The Republican party does not perceive how many his failure will make to vote more correctly than they would have them. They have counted the votes of Pennsylvania & Co., but they have not correctly counted Captain Brown's vote. He

has taken the wind out of their sails, — the little wind they had, — and they may as well lie to and repair.

What though he did not belong to your clique! Though you may not approve of his method or his principles, recognize his magnanimity. Would you not like to claim kindredship with him in that, though in no other thing he is like, or likely, to you? Do you think that you would lose your reputation so? What you lost at the spile, you would gain at the bung.

If they do not mean all this, then they do not speak the truth, and say what they mean. They are simply at their old tricks still.

“It was always conceded to him,” says one who calls him crazy, “that he was a conscientious man, very modest in his demeanor, apparently inoffensive, until the subject of Slavery was introduced, when he would exhibit a feeling of indignation unparalleled.”

The slave-ship is on her way, crowded with its dying victims; new cargoes are being added in mid-ocean; a small crew of slaveholders, countenanced by a large body of passengers, is smothering four millions under the hatches, and yet the politician asserts that the only proper way by which deliverance is to be obtained, is by “the quiet diffusion of the sentiments of humanity,” without any “outbreak.” As if the sentiments of humanity were ever found unaccompanied by its deeds, and you could disperse them, all finished to order, the pure article, as easily as water with a watering-pot, and so lay the dust. What is that that I hear cast overboard? The bodies of the dead that have found deliverance. That is the way we are “diffusing” humanity, and its sentiments with it.

Prominent and influential editors, accustomed to deal with politicians, men of an infinitely lower grade, say, in their ignorance, that he acted “on the principle of revenge.” They do not know the man. They must enlarge themselves to conceive of him. I have no doubt that the time will come when they will begin to see him as he was. They have got to conceive of a man of faith and of religious principle, and not a politician or an Indian; of a man who did not wait till he was personally interfered with or thwarted in some harmless business before he gave his life to the cause of the oppressed.

If Walker may be considered the representative of the South, I wish I could say that Brown was the representative of the North. He was a superior man. He did not value his bodily life in comparison with ideal things. He did not recognize unjust human laws, but resisted them as he was bid. For once we are lifted out of the trivialness and dust of politics into the region of truth and manhood. No man in America has ever stood up so persistently and effectively for the dignity of human nature, knowing himself for a man, and the equal of any and all governments. In that sense he was the most American of us all. He needed no babbling lawyer, making false issues, to defend him. He was more than a match for all the judges that American voters, or office-holders of whatever grade, can create. He could not have been tried by a jury of his peers, because his peers did not exist. When a man stands up serenely against the condemnation and vengeance of mankind, rising above them literally by a whole body, — even though he were of late the vilest murderer, who has settled that matter

with himself, — the spectacle is a sublime one, — didn't ye know it, ye Liberators, ye Tribunes, ye Republicans? — and we become criminal in comparison. Do yourselves the honor to recognize him. He needs none of your respect.

As for the Democratic journals, they are not human enough to affect me at all. I do not feel indignation at anything they may say.

I am aware that I anticipate a little, — that he was still, at the last accounts, alive in the hands of his foes; but that being the case, I have all along found myself thinking and speaking of him as physically dead.

I do not believe in erecting statues to those who still live in our hearts, whose bones have not yet crumbled in the earth around us, but I would rather see the statue of Captain Brown in the Massachusetts State-House yard, than that of any other man whom I know. I rejoice that I live in this age, that I am his contemporary.

What a contrast, when we turn to that political party which is so anxiously shuffling him and his plot out of its way, and looking around for some available slave holder, perhaps, to be its candidate, at least for one who will execute the Fugitive Slave Law, and all those other unjust laws which he took up arms to annul!

Insane! A father and six sons, and one son-in-law, and several more men besides, — as many at least as twelve disciples, — all struck with insanity at once; while the same tyrant holds with a firmer gripe than ever his four millions of slaves, and a thousand sane editors, his abettors, are saving their country and their bacon! Just as insane were his efforts in Kansas. Ask the tyrant who is his most dangerous foe, the sane man or the insane? Do the thousands who know him best, who have rejoiced at his deeds in Kansas, and have afforded him material aid there, think him insane? Such a use of this word is a mere trope with most who persist in using it, and I have no doubt that many of the rest have already in silence retracted their words.

Read his admirable answers to Mason and others. How they are dwarfed and defeated by the contrast! On the one side, half-brutish, half-timid questioning; on the other, truth, clear as lightning, crashing into their obscene temples. They are made to stand with Pilate, and Gesler, and the Inquisition. How ineffectual their speech and action! and what a void their silence! They are but helpless tools in this great work. It was no human power that gathered them about this preacher.

What have Massachusetts and the North sent a few sane representatives to Congress for, of late years? — to declare with effect what kind of sentiments? All their speeches put together and boiled down, — and probably they themselves will confess it, — do not match for manly directness and force, and for simple truth, the few casual remarks of crazy John Brown, on the floor of the Harper's Ferry engine-house, — that man whom you are about to hang, to send to the other world, though not to represent you there. No, he was not our representative in any sense. He was too fair a specimen of a man to represent the like of us. Who, then, were his constituents? If you read his words understandingly you will find out. In his case there is no idle eloquence, no made, nor maiden speech, no compliments to the oppressor. Truth is his inspirer, and earnestness

the polisher of his sentences. He could afford to lose his Sharp's rifles, while he retained his faculty of speech, — a Sharp's rifle of infinitely surer and longer range.

And the New York Herald reports the conversation verbatim! It does not know of what undying words it is made the vehicle.

I have no respect for the penetration of any man who can read the report of that conversation, and still call the principal in it insane. It has the ring of a saner sanity than an ordinary discipline and habits of life, than an ordinary organization, secure. Take any sentence of it,— “Any questions that I can honorably answer, I will; not otherwise. So far as I am myself concerned, I have told everything truthfully. I value my word, sir.” The few who talk about his vindictive spirit, while they really admire his heroism, have no test by which to detect a noble man, no amalgam to combine with his pure gold. They mix their own dross with it.

It is a relief to turn from these slanders to the testimony of his more truthful, but frightened jailers and hangmen. Governor Wise speaks far more justly and appreciatingly of him than any Northern editor, or politician, or public personage, that I chance to have heard from. I know that you can afford to hear him again on this subject. He says: “They are themselves mistaken who take him to be madman... He is cool, collected, and indomitable, and it is but just to him to say, that he was humane to his prisoners... And he inspired me with great trust in his integrity as a man of truth. He is a fanatic, vain and garrulous,” (I leave that part to Mr. Wise,) “but firm, truthful, and intelligent. His men, too, who survive, are like him... Colonel Washington says that he was the coolest and firmest man he ever saw in defying danger and death. With one son dead by his side, and another shot through, he felt the pulse of his dying son with one hand, and held his rifle with the other, and commanded his men with the utmost composure, encouraging them to be firm, and to sell their lives as dear as they could. Of the three white prisoners, Brown, Stephens, and Coppic, it was hard to say which was most firm.”

Almost the first Northern men whom the slaveholder has learned to respect!

The testimony of Mr. Vallandigham, though less valuable, is of the same purport, that “it is vain to underrate either the man or his conspiracy... He is the farthest possible removed from the ordinary ruffian, fanatic, or madman.”

“All is quiet at Harper's Ferry,” say the journals. What is the character of that calm which follows when the law and the slaveholder prevail? I regard this event as a touchstone designed to bring out, with glaring distinctness, the character of this government. We needed to be thus assisted to see it by the light of history. It needed to see itself. When a government puts forth its strength on the side of injustice, as ours to maintain slavery and kill the liberators of the slave, it reveals itself a merely brute force, or worse, a demoniacal force. It is the head of the Plug-Uglies. It is more manifest than ever that tyranny rules. I see this government to be effectually allied with France and Austria in oppressing mankind. There sits a tyrant holding fettered four millions of slaves; here comes their heroic liberator. This most hypocritical and diabolical government looks up from its seat on the gasping four millions, and inquires

with an assumption of innocence: "What do you assault me for? Am I not an honest man? Cease agitation on this subject, or I will make a slave of you, too, or else hang you."

We talk about a representative government; but what a monster of a government is that where the noblest faculties of the mind, and the whole heart, are not represented. A semi-human tiger or ox, stalking over the earth, with its heart taken out and the top of its brain shot away. Heroes have fought well on their stumps when their legs were shot off, but I never heard of any good done by such a government as that.

The only government that I recognize, — and it matters not how few are at the head of it, or how small its army, — is that power that establishes justice in the land, never that which establishes injustice. What shall we think of a government to which all the truly brave and just men in the land are enemies, standing between it and those whom it oppresses? A government that pretends to be Christian and crucifies a million Christs every day!

Treason! Where does such treason take its rise? I cannot help thinking of you as you deserve, ye governments. Can you dry up the fountains of thought? High treason, when it is resistance to tyranny here below, has its origin in, and is first committed by, the power that makes and forever recreates man. When you have caught and hung all these human rebels, you have accomplished nothing but your own guilt, for you have not struck at the fountain-head. You presume to contend with a foe against whom West Point cadets and rifled cannon point not. Can all the art of the cannon-founder tempt matter to turn against its maker? Is the form in which the founder thinks he casts it more essential than the constitution of it and of himself?

The United States have a coffle of four millions of slaves. They are determined to keep them in this condition; and Massachusetts is one of the confederated overseers to prevent their escape. Such are not all the inhabitants of Massachusetts, but such are they who rule and are obeyed here. It was Massachusetts, as well as Virginia, that put down this insurrection at Harper's Ferry. She sent the marines there, and she will have to pay the penalty of her sin.

Suppose that there is a society in this State that out of its own purse and magnanimity saves all the fugitive slaves that run to us, and protects our colored fellow-citizens, and leaves the other work to the government, so-called. Is not that government fast losing its occupation, and becoming contemptible to mankind? If private men are obliged to perform the offices of government, to protect the weak and dispense justice, then the government becomes only a hired man, or clerk, to perform menial or indifferent services. Of course, that is but the shadow of a government whose existence necessitates a Vigilant Committee. What should we think of the Oriental Cadi even, behind whom worked in secret a vigilant committee? But such is the character of our Northern States generally; each has its Vigilant Committee. And, to a certain extent, these crazy governments recognize and accept this relation. They say, virtually, "We'll be glad to work for you on these terms, only don't make a noise about it." And thus the government, its salary being insured, withdraws into the back shop, taking the

Constitution with it, and bestows most of its labor on repairing that. When I hear it at work sometimes, as I go by, it reminds me, at best, of those farmers who in winter contrive to turn a penny by following the coopering business. And what kind of spirit is their barrel made to hold? They speculate in stocks, and bore holes in mountains, but they are not competent to lay out even a decent highway. The only free road, the Underground Railroad, is owned and managed by the Vigilant Committee. They have tunnelled under the whole breadth of the land. Such a government is losing its power and respectability as surely as water runs out of a leaky vessel, and is held by one that can contain it.

I hear many condemn these men because they were so few. When were the good and the brave ever in a majority? Would you have had him wait till that time came? — till you and I came over to him? The very fact that he had no rabble or troop of hirelings about him would alone distinguish him from ordinary heroes. His company was small indeed, because few could be found worthy to pass muster. Each one who there laid down his life for the poor and oppressed was a picked man, culled out of many thousands, if not millions; apparently a man of principle, of rare courage, and devoted humanity; ready to sacrifice his life at any moment for the benefit of his fellow-man. It may be doubted if there were as many more their equals in these respects in all the country — I speak of his followers only — for their leader, no doubt, scoured the land far and wide, seeking to swell his troop. These alone were ready to step between the oppressor and the oppressed. Surely they were the very best men you could select to be hung. That was the greatest compliment which this country could pay them. They were ripe for her gallows. She has tried a long time, she has hung a good many, but never found the right one before.

When I think of him, and his six sons, and his son-in-law, not to enumerate the others, enlisted for this fight, proceeding coolly, reverently, humanely to work, for months if not years, sleeping and waking upon it, summering and wintering the thought, without expecting any reward but a good conscience, while almost all America stood ranked on the other side — I say again that it affects me as a sublime spectacle. If he had any journal advocating 'his cause,' any organ, as the phrase is, monotonously and wearisomely playing the same old tune, and then passing round the hat, it would have been fatal to his efficiency. If he had acted in any way so as to be let alone by the government, he might have been suspected. It was the fact that the tyrant must give place to him, or he to the tyrant, that distinguished him from all the reformers of the day that I know.

It was his peculiar doctrine that a man has a perfect right to interfere by force with the slaveholder, in order to rescue the slave. I agree with him. They who are continually shocked by slavery have some right to be shocked by the violent death of the slaveholder, but no others. Such will be more shocked by his life than by his death. I shall not be forward to think him mistaken in his method who quickest succeeds to liberate the slave. I speak for the slave when I say that I prefer the philanthropy of Captain Brown to that philanthropy which neither shoots me nor liberates me. At

any rate, I do not think it is quite sane for one to spend his whole life in talking or writing about this matter, unless he is continuously inspired, and I have not done so. A man may have other affairs to attend to. I do not wish to kill nor to be killed, but I can foresee circumstances in which both these things would be by me unavoidable. We preserve the so-called peace of our community by deeds of petty violence every day. Look at the policeman's billy and handcuffs! Look at the jail! Look at the gallows! Look at the chaplain of the regiment! We are hoping only to live safely on the outskirts of this provisional army. So we defend ourselves and our hen-roosts, and maintain slavery. I know that the mass of my countrymen think that the only righteous use that can be made of Sharp's rifles and revolvers is to fight duels with them, when we are insulted by other nations, or to hunt Indians, or shoot fugitive slaves with them, or the like. I think that for once the Sharp's rifles and the revolvers were employed in a righteous cause. The tools were in the hands of one who could use them.

The same indignation that is said to have cleared the temple once will clear it again. The question is not about the weapon, but the spirit in which you use it. No man has appeared in America, as yet, who loved his fellow-man so well, and treated him so tenderly. He lived for him. He took up his life and he laid it down for him. What sort of violence is that which is encouraged, not by soldiers, but by peaceable citizens, not so much by laymen as by ministers of the Gospel, not so much by the fighting sects as by the Quakers, and not so much by Quaker men as by Quaker women?

This event advertises me that there is such a fact as death, — the possibility of a man's dying. It seems as if no man had ever died in America before; for in order to die you must first have lived. I don't believe in the hearses, and palls, and funerals that they have had. There was no death in the case, because there had been no life; they merely rotted or sloughed off, pretty much as they had rotted or sloughed along. No temple's veil was rent, only a hole dug somewhere. Let the dead bury their dead. The best of them fairly ran down like a clock. Franklin, — Washington, — they were let off without dying; they were merely missing one day. I hear a good many pretend that they are going to die; or that they have died, for aught that I know. Nonsense! I'll defy them to do it. They haven't got life enough in them. They'll deliquesce like fungi, and keep a hundred eulogists mopping the spot where they left off. Only half a dozen or so have died since the world began. Do you think that you are going to die, sir? No! there's no hope of you. You haven't got your lesson yet. You've got to stay after school. We make a needless ado about capital punishment, — taking lives, when there is no life to take. Memento mori! We don't understand that sublime sentence which some worthy got sculptured on his gravestone once. We've interpreted it in a grovelling and snivelling sense; we've wholly forgotten how to die.

But be sure you do die nevertheless. Do your work, and finish it. If you know how to begin, you will know when to end.

These men, in teaching us how to die, have at the same time taught us how to live. If this man's acts and words do not create a revival, it will be the severest possible satire on the acts and words that do. It is the best news that America has ever heard. It has

already quickened the feeble pulse of the North, and infused more and more generous blood into her veins and heart, than any number of years of what is called commercial and political prosperity could. How many a man who was lately contemplating suicide has now something to live for!

One writer says that Brown's peculiar monomania made him to be "dreaded by the Missourians as a supernatural being." Sure enough, a hero in the midst of us cowards is always so dreaded. He is just that thing. He shows himself superior to nature. He has a spark of divinity in him.

"Unless above himself he can

Erect himself, how poor a thing is man!"

Newspaper editors argue also that it is a proof of his insanity that he thought he was appointed to do this work which he did, — that he did not suspect himself for a moment! They talk as if it were impossible that a man could be "divinely appointed" in these days to do any work whatever; as if vows and religion were out of date as connected with any man's daily work; as if the agent to abolish slavery could only be somebody appointed by the President, or by some political party. They talk as if a man's death were a failure, and his continued life, be it of whatever character, were a success.

When I reflect to what a cause this man devoted himself, and how religiously, and then reflect to what cause his judges and all who condemn him so angrily and fluently devote themselves, I see that they are as far apart as the heavens and earth are asunder.

The amount of it is, our "leading men" are a harmless kind of folk, and they know well enough that they were not divinely appointed, but elected by the votes of their party.

Who is it whose safety requires that Captain Brown be hung? Is it indispensable to any Northern man? Is there no resource but to cast this man also to the Minotaur? If you do not wish it, say so distinctly. While these things are being done, beauty stands veiled and music is a screeching lie. Think of him, — of his rare qualities! — such a man as it takes ages to make, and ages to understand; no mock hero, nor the representative of any party. A man such as the sun may not rise upon again in this benighted land. To whose making went the costliest material, the finest adamant; sent to be the redeemer of those in captivity; and the only use to which you can put him is to hang him at the end of a rope! You who pretend to care for Christ crucified, consider what you are about to do to him who offered himself to be the savior of four millions of men.

Any man knows when he is justified, and all the wits in the world cannot enlighten him on that point. The murderer always knows that he is justly punished; but when a government takes the life of a man without the consent of his conscience, it is an audacious government, and is taking a step towards its own dissolution. Is it not possible that an individual may be right and a government wrong? Are laws to be enforced simply because they were made? or declared by any number of men to be good, if they are not good? Is there any necessity for a man's being a tool to perform

a deed of which his better nature disapproves? Is it the intention of law-makers that good men shall be hung ever? Are judges to interpret the law according to the letter, and not the spirit? What right have you to enter into a compact with yourself that you will do thus or so, against the light within you? Is it for you to make up your mind, — to form any resolution whatever, — and not accept the convictions that are forced upon you, and which ever pass your understanding? I do not believe in lawyers, in that mode of attacking or defending a man, because you descend to meet the judge on his own ground, and, in cases of the highest importance, it is of no consequence whether a man breaks a human law or not. Let lawyers decide trivial cases. Business men may arrange that among themselves. If they were the interpreters of the everlasting laws which rightfully bind man, that would be another thing. A counterfeiting law-factory, standing half in a slave land and half in free! What kind of laws for free men can you expect from that?

I am here to plead his cause with you. I plead not for his life, but for his character, — his immortal life; and so it becomes your cause wholly, and is not his in the least. Some eighteen hundred years ago Christ was crucified; this morning, perchance, Captain Brown was hung. These are the two ends of a chain which is not without its links. He is not Old Brown any longer; he is an angel of light.

I see now that it was necessary that the bravest and humanest man in all the country should be hung. Perhaps he saw it himself. I almost fear that I may yet hear of his deliverance, doubting if a prolonged life, if any life, can do as much good as his death.

“Misguided”! “Garrulous”! “Insane”! “Vindictive”! So ye write in your easy-chairs, and thus he wounded responds from the floor of the Armory, clear as a cloudless sky, true as the voice of nature is: “No man sent me here; it was my own prompting and that of my Maker. I acknowledge no master in human form.”

And in what a sweet and noble strain he proceeds, addressing his captors, who stand over him: “I think, my friends, you are guilty of a great wrong against God and humanity, and it would be perfectly right for any one to interfere with you so far as to free those you willfully and wickedly hold in bondage.”

And, referring to his movement: “It is, in my opinion, the greatest service a man can render to God.”

“I pity the poor in bondage that have none to help them; that is why I am here; not to gratify any personal animosity, revenge, or vindictive spirit. It is my sympathy with the oppressed and the wronged, that are as good as you, and as precious in the sight of God.”

You don’t know your testament when you see it.

“I want you to understand that I respect the rights of the poorest and weakest of colored people, oppressed by the slave power, just as much as I do those of the most wealthy and powerful.”

“I wish to say, furthermore, that you had better, all you people at the South, prepare yourselves for a settlement of that question, that must come up for settlement sooner than you are prepared for it. The sooner you are prepared the better. You may dispose

of me very easily. I am nearly disposed of now; but this question is still to be settled, — this negro question, I mean; the end of that is not yet.”

I foresee the time when the painter will paint that scene, no longer going to Rome for a subject; the poet will sing it; the historian record it; and, with the Landing of the Pilgrims and the Declaration of Independence, it will be the ornament of some future national gallery, when at least the present form of slavery shall be no more here. We shall then be at liberty to weep for Captain Brown. Then, and not till then, we will take our revenge.

# MARTYRDOM OF JOHN BROWN

SO universal and widely related is any transcendent moral greatness — so nearly identical with greatness every where and in every age, as a pyramid contracts the nearer you approach its apex — that, when I now look over my commonplace book of poetry, I find that the best of it is oftenest applicable, in part or wholly, to the case of Captain Brown. Only what is true, and strong, and solemnly earnest will recommend itself to our mood at this time. Almost any noble verse may be read, either as his elegy, or eulogy, or be made the text of an oration on him. Indeed, such are now discerned to be the parts of a universal liturgy, applicable to those rare cases of heroes and martyrs, for which the ritual of no church has provided. This is the formula established on high, — their burial service — to which every great genius has contributed its stanza or line. As Marvell wrote,

“When the sword glitters o’er the judge’s head,  
And fear has coward churchmen silenced,  
Then is the poet’s time; ‘tis then he draws,  
And single fights forsaken virtue’s cause.  
He when the wheel of empire whirleth back,  
And though the world’s disjointed axel crack,  
Sings still of ancient rights and better times,  
Seeks suff’ring good, arraigns successful crimes.”

The sense of grand poetry, read by the light of this event, is brought out distinctly, like an invisible writing held to the fire.

“All heads must come  
To the cold tomb,  
Only the actions of the just  
Smell sweet and blossom in the dust.”

We have heard that the Boston lady who recently visited our hero in prison found him wearing still the clothes all cut and torn by sabres and by bayonet thrusts, in which he had been taken prisoner; and thus he had gone to his trial, and without a hat. She spent her time in the prison mending those clothes, and, for a memento, brought home a pin covered with blood. — What are the clothes that endure?

“The garments lasting evermore  
Are works of mercy to the poor;

And neither tetter, time, nor moth  
Shall fray that silk, or fret this cloth.”

The well known verses called “The Soul’s Errand,” supposed, by some, to have been written by Sir Walter Raleigh, when he was expecting to be executed the following day, are at least worthy of such an origin, and are equally applicable to the present case. Hear them.

Go, Soul, the body’s guest,  
Upon a thankless arrant;  
Fear not to touch the best,  
The truth shall be thy warrant:  
Go, since I needs must die,  
And give the world the lie.  
Go, tell the court it glows  
And shines like rotten wood;  
Go, tell the church it shows  
What’s good, and doth no good;  
If church and court reply,  
Then give them both the lie.  
Tell potentates they live Acting by others’ actions;  
Not loved unless they give,  
Not strong but by their factions:  
If potentates reply,  
Give potentates the lie.  
Tell men of high condition,  
That rule affairs of state,  
Their purpose is ambition,  
Their practice only hate;  
And if they once reply,  
Then give them all the lie.  
Tell zeal, it lacks devotion;  
Tell love, it is but lust;  
Tell time, it is but motion;  
Tell flesh, it is but dust;  
And wish them not reply,  
For thou must give the lie.  
Tell age, it daily wasteth;  
Tell honor, how it alters;  
Tell beauty, how she blasteth;  
Tell favor, how she falters;  
And as they shall reply,  
Give each of them the lie.  
Tell fortune of her blindness;

Tell nature of decay;  
Tell friendship of unkindness;  
Tell justice of delay;  
And if they dare reply,  
Then give them all the lie.  
And when thou hast, as I  
Commanded thee, done blabbing,  
Although to give the lie  
Deserves no less than stabbing,  
Yet stab at thee who will,  
No stab the soul can kill.  
“When I am dead,  
Let not the day be writ— “  
Nor bell be tolled —  
“Love will remember it.”  
When hate is cold.

You, Agricola, are fortunate, not only because your life was glorious, but because your death was timely. As they tell us who heard your last words, unchanged and willing you accepted your fate; as if, as far as in your power, you would make the emperor appear innocent. But, besides the bitterness of having lost a parent, it adds to our grief, that it was not permitted us to minister to your health,... to gaze on your countenance, and receive your last embrace; surely, we might have caught some words and commands which we could have treasured in the inmost part of our souls. This is our pain, this our wound... You were buried with the fewer tears, and in your last earthly light, your eyes looked around for something which they did not see.

If there is any abode for the spirits of the pious; if, as wise men suppose, great souls are not extinguished with the body, may you rest placidly, and call your family from weak regrets, and womanly laments, to the contemplation of your virtues, which must not be lamented, either silently or aloud. Let us honor you by our admiration, rather than by short-lived praises, and, if nature aid us, by our emulation of you. That is true honor, that the piety of whoever is most akin to you. This also I would teach your family, so to venerate your memory, as to call to mind all your actions and words, and embrace your character and the form of your soul, rather than of your body; not because I think that statues which are made of marble or brass are to be condemned, but as the features of men, so images of the features, are frail and perishable. The form of the soul is eternal; and this we can retain and express, not by a foreign material and art, but by our own lives. Whatever of Agricola we have loved, whatever we have admired, remains, and will remain, in the minds of men, and the records of history, through the eternity of ages. For oblivion will overtake many of the ancients, as if they were inglorious and ignoble: Agricola, described and transmitted to posterity, will survive.

# THE LAST DAYS OF JOHN BROWN

John Brown's career for the last six weeks of his life was meteor-like, flashing through the darkness in which we live. I know of nothing so miraculous in our history.

If any person, in a lecture or conversation at that time, cited any ancient example of heroism, such as Cato or Tell or Winkelried, passing over the recent deeds and words of Brown, it was felt by any intelligent audience of Northern men to be tame and inexcusably far-fetched.

For my own part, I commonly attend more to nature than to man, but any affecting human event may blind our eyes to natural objects. I was so absorbed in him as to be surprised whenever I detected the routine of the natural world surviving still, or met persons going about their affairs indifferent. It appeared strange to me that the "little dipper" should be still diving quietly into the river, as of yore; and it suggested that this bird might continue to dive here when Concord should be no more.

I felt that he, a prisoner in the midst of his enemies and under sentence of death, if consulted as to his next step or resource, could answer more wisely than all his countrymen beside. He best understood his position; he contemplated it most calmly. Comparatively, all other men, North and South, were beside themselves. Our thoughts could not revert to any greater or wiser or better man with whom to contrast him, for he, then and there, was above them all. The man this country was about to hang appeared the greatest and best in it.

Years were not required for a revolution of public opinion; days, nay hours, produced marked changes in this case. Fifty who were ready to say, on going into our meeting in honor of him in Concord, that he ought to be hung, would not say it when they came out. They heard his words read; they saw the earnest faces of the congregation; and perhaps they joined at last in singing the hymn in his praise.

The order of instructions was reversed. I heard that one preacher, who at first was shocked and stood aloof, felt obliged at last, after he was hung, to make him the subject of a sermon, in which, to some extent, he eulogized the man, but said that his act was a failure. An influential class-teacher thought it necessary, after the services, to tell his grown-up pupils that at first he thought as the preacher did then, but now he thought that John Brown was right. But it was understood that his pupils were as much ahead of the teacher as he was ahead of the priest; and I know for a certainty that very little boys at home had already asked their parents, in a tone of surprise, why God did not

interfere to save him. In each case, the constituted teachers were only half conscious that they were not leading, but being dragged, with some loss of time and power.

The more conscientious preachers, the Bible men, they who talk about principle, and doing to others as you would that they should do unto you, — how could they fail to recognize him, by far the greatest preacher of them all, with the Bible in his life and in his acts, the embodiment of principle, who actually carried out the golden rule? All whose moral sense had been aroused, who had a calling from on high to preach, sided with him.

What confessions he extracted from the cold and conservative! It is remarkable, but on the whole it is well, that it did not prove the occasion for a new sect of Brownites being formed in our midst.

They, whether within the Church or out of it, who adhere to the spirit and let go the letter, and are accordingly called infidel, were as usual foremost to recognize him. Men have been hung in the South before for attempting to rescue slaves, and the North was not much stirred by it. Whence, then, this wonderful difference? We were not so sure of their devotion to principle. We made a subtle distinction, forgot human laws, and did homage to an idea. The North, I mean the living North, was suddenly all transcendental. It went behind the human law, it went behind the apparent failure, and recognized eternal justice and glory. Commonly, men live according to a formula, and are satisfied if the order of law is observed, but in this instance they, to some extent, returned to original perceptions, and there was a slight revival of old religion. They saw that what was called order was confusion, what was called justice, injustice, and that the best was deemed the worst. This attitude suggested a more intelligent and generous spirit than that which actuated our forefathers, and the possibility, in the course of ages, of a revolution in behalf of another and an oppressed people.

Most Northern men, and a few Southern ones, were wonderfully stirred by Brown's behavior and words. They saw and felt that they were heroic and noble, and that there had been nothing quite equal to them in their kind in this country, or in the recent history of the world. But the minority were unmoved by them. They were only surprised and provoked by the attitude of their neighbors. They saw that Brown was brave, and that he believed that he had done right, but they did not detect any further peculiarity in him. Not being accustomed to make fine distinctions, or to appreciate magnanimity, they read his letters and speeches as if they read them not. They were not aware when they approached a heroic statement, — they did not know when they burned. They did not feel that he spoke with authority, and hence they only remembered that the law must be executed. They remembered the old formula, but did not hear the new revelation. The man who does not recognize in Brown's words a wisdom and nobleness, and therefore an authority, superior to our laws, is a modern Democrat. This is the test by which to discover him. He is not willfully but constitutionally blind on this side, and he is consistent with himself. Such has been his past life; no doubt of it. In like manner he has read history and his Bible, and he accepts, or seems to accept, the

last only as an established formula, and not because he has been convicted by it. You will not find kindred sentiments in his commonplace-book, if he has one.

When a noble deed is done, who is likely to appreciate it? They who are noble themselves. I was not surprised that certain of my neighbors spoke of John Brown as an ordinary felon, for who are they? They have either much flesh, or much office, or much coarseness of some kind. They are not ethereal natures in any sense. The dark qualities predominate in them. Several of them are decidedly pachydermatous. I say it in sorrow, not in anger.

How can a man behold the light who has no answering inward light? They are true to their sight, but when they look this way they see nothing, they are blind. For the children of the light to contend with them is as if there should be a contest between eagles and owls. Show me a man who feels bitterly toward John Brown, and let me hear what noble verse he can repeat. He'll be as dumb as if his lips were stone.

It is not every man who can be a Christian, even in a very moderate sense, whatever education you give him. It is a matter of constitution and temperament, after all. He may have to be born again many times. I have known many a man who pretended to be a Christian, in whom it was ridiculous, for he had no genius for it. It is not every man who can be a free man, even.

Editors persevered for a good while in saying that Brown was crazy; but at last they said only that it was "a crazy scheme," and the only evidence brought to prove it was that it cost him his life. I have no doubt that if he had gone with five thousand men, liberated a thousand slaves, killed a hundred or two slaveholders, and had as many more killed on his own side, but not lost his own life, these same editors would have called it by a more respectable name. Yet he has been far more successful than that. He has liberated many thousands of slaves, both North and South. They seem to have known nothing about living or dying for a principle. They all called him crazy then; who calls him crazy now?

All through the excitement occasioned by his remarkable attempt and subsequent behavior the Massachusetts legislature, not taking any steps for the defense of her citizens who were likely to be carried to Virginia as witnesses and exposed to the violence of a slaveholding mob, was wholly absorbed in a liquor-agency question, and indulging in poor jokes on the word "extension." Bad spirits occupied their thoughts. I am sure that no statesman up to the occasion could have attended to that question at all at that time, — a very vulgar question to attend to at any time!

When I looked into a liturgy of the Church of England, printed near the end of the last century, in order to find a service applicable to the case of Brown, I found that the only martyr recognized and provided for it was King Charles the First, an eminent scamp. Of all the inhabitants of England and of the world, he was the only one, according to this authority, whom that church had made a martyr and saint of; and for more than a century it had celebrated his martyrdom, so called, by an annual service. What a satire on the Church is that!

Look not to legislatures and churches for your guidance, nor to any soulless incorporated bodies, but to inspirited or inspired ones.

What avail all your scholarly accomplishments and learning, compared with wisdom and manhood? To omit his other behavior, see what a work this comparatively unread and unlettered man wrote within six weeks. Where is our professor of belles-lettres, or of logic and rhetoric, who can write so well? He wrote in prison, not a History of the World, like Raleigh, but an American book which I think will live longer than that. I do not know of such words, uttered under such circumstances, and so copiously withal, in Roman or English or any history.

What a variety of themes he touched on in that short space! There are words in that letter to his wife, respecting the education of his daughters, which deserve to be framed and hung over every mantelpiece in the land. Compare this earnest wisdom with that of Poor Richard.

The death of Irving, which at any other time would have attracted universal attention, having occurred while these things were transpiring, went almost unobserved. I shall have to read of it in the biography of authors.

Literary gentlemen, editors, and critics think that they know how to write, because they have studied grammar and rhetoric; but they are egregiously mistaken. The art of composition is as simple as the discharge of a bullet from a rifle, and its masterpieces imply an infinitely greater force behind them. This unlettered man's speaking and writing are standard English. Some words and phrases deemed vulgarisms and Americanisms before, he has made standard American; such as "It will pay." It suggests that the one great rule of composition — and if I were a professor of rhetoric I should insist on this — is, to speak the truth. This first, this second, this third; pebbles in your mouth or not. This demands earnestness and manhood chiefly.

We seem to have forgotten that the expression "a liberal education" originally meant among the Romans one worthy of free men; while the learning of trades and professions by which to get your livelihood merely was considered worthy of slaves only. But taking a hint from the word, I would go a step further, and say that it is not the man of wealth and leisure simply, though devoted to art, or science, or literature, who, in a true sense, is liberally educated, but only the earnest and free man. In a slaveholding country like this, there can be no such thing as a liberal education tolerated by the State; and those scholars of Austria and France who, however learned they may be, are contented under their tyrannies have received only a servile education.

Nothing could his enemies do but it redounded to his infinite advantage, — that is, to the advantage of his cause. They did not hang him at once, but reserved him to preach to them. And then there was another great blunder. They did not hang his four followers with him; that scene was still postponed; and so his victory was prolonged and completed. No theatrical manager could have arranged things so wisely to give effect to his behavior and words. And who, think you, was the manager? Who placed the slave-woman and her child, whom he stooped to kiss for a symbol, between his prison and the gallows?

We soon saw, as he saw, that he was not to be pardoned or rescued by men. That would have been to disarm him, to restore him a material weapon, a Sharp's rifle, when he had taken up the sword of the spirit, — the sword with which he has really won his greatest and most memorable victories. Now he has not laid aside the sword of the spirit, for he is pure spirit himself, and his sword is pure spirit also.

“He nothing common did or mean  
Upon that memorable scene,  
Nor called the gods with vulgar spite,  
To vindicate his helpless right;  
But bowed his comely head  
Down, as upon a bed.

What a transit was that of his horizontal body alone, but just cut down from the gallows-tree! We read that at such a time it passed through Philadelphia, and by Saturday night had reached New York. Thus like a meteor it shot through the Union from the Southern regions toward the North! No such freight had the cars borne since they carried him southward alive.

On the day of his translation, I heard, to be sure, that he was hung, but I did not know what that meant; I felt no sorrow on that account; but not for a day or two did I even hear that he was dead, and not after any number of days shall I believe it. Of all the men who were said to be my contemporaries, it seemed to me that John Brown was the only one who had not died. I never hear of a man named Brown now, — and I hear of them pretty often, — I never hear of any particularly brave and earnest man, but my first thought is of John Brown, and what relation he may be to him. I meet him at every turn. He is more alive than he ever was. He has earned immortality. He is not confined to North Elba nor to Kansas. He is no longer working in secret. He works in public, and in the clearest light that shines on this land.

# THE SUCCESSION OF FOREST TREES

An Address read to the Middlesex Agricultural Society, in Concord, September, 1860

Every man is entitled to come to Cattle-show, even a transcendentalist; and for my part I am more interested in the men than in the cattle. I wish to see once more those old familiar faces, whose names I do not know, which for me represent the Middlesex country, and come as near being indigenous to the soil as a white man can; the men who are not above their business, whose coats are not too black, whose shoes do not shine very much, who never wear gloves to conceal their hands. It is true, there are some queer specimens of humanity attracted to our festival, but all are welcome. I am pretty sure to meet once more that weak-minded and whimsical fellow, generally weak-bodied too, who prefers a crooked stick for a cane; perfectly useless, you would say, only bizarre, fit for a cabinet, like a petrified snake. A ram's horn would be as convenient, and is yet more curiously twisted. He brings that much indulged bit of the country with him, from some town's end or other, and introduces it to Concord groves, as if he had promised it so much sometime. So some, it seems to me, elect their rulers for their crookedness. But I think that a straight stick makes the best cane, and an upright man the best ruler. Or why choose a man to do plain work who is distinguished for his oddity? However, I do not know but you will think that they have committed this mistake who invited me to speak to you to-day.

In my capacity of surveyor, I have often talked with some of you, my employers, at your dinner-tables, after having gone round and round and behind your farming, and ascertained exactly what its limits were. Moreover, taking a surveyor's and a naturalist's liberty, I have been in the habit of going across your lots much oftener than is usual, as many of you, perhaps to your sorrow, are aware. Yet many of you, to my relief, have seemed not to be aware of it; and when I came across you in some out-of-the-way nook of your farms, have inquired, with an air of surprise, if I were not lost, since you had never seen me in that part of the town or county before; when, if the truth were known, and it had not been for betraying my secret, I might with more propriety have inquired if you were not lost, since I had never seen you there before. I have several times shown the proprietor the shortest way out of his wood-lot.

Therefore, it would seem that I have some title to speak to you to-day; and considering what that title is, and the occasion that has called us together, I need offer

no apology if I invite your attention, for the few moments that are allotted me, to a purely scientific subject.

At those dinner-tables referred to, I have often been asked, as many of you have been, if I could tell how it happened, that when a pine wood was cut down an oak one commonly sprang up, and vice versa. To which I have answered, and now answer, that I can tell, — that it is no mystery to me. As I am not aware that this has been clearly shown by any one, I shall lay the more stress on this point. Let me lead you back into your wood-lots again.

When, hereabouts, a single forest tree or a forest springs up naturally where none of its kind grew before, I do not hesitate to say, though in some quarters still it may sound paradoxical, that it came from a seed. Of the various ways by which trees are known to be propagated, — by transplanting, cuttings, and the like, — this is the only supposable one under these circumstances. No such tree has ever been known to spring from anything else. If any one asserts that it sprang from something else, or from nothing, the burden of proof lies with him.

It remains, then, only to show how the seed is transported from where it grows, to where it is planted. This is done chiefly by the agency of the wind, water, and animals. The lighter seeds, as those of pines and maples, are transported chiefly by wind and water; the heavier, as acorns and nuts, by animals.

In all the pines, a very thin membrane, in appearance much like an insect's wing, grows over and around the seed, and independent of it, while the latter is being developed within its base. Indeed this is often perfectly developed, though the seed is abortive; nature being, you would say, more sure to provide the means of transporting the seed, than to provide the seed to be transported. In other words, a beautiful thin sack is woven around the seed, with a handle to it such as the wind can take hold of, and it is then committed to the wind, expressly that it may transport the seed and extend the range of the species; and this it does, as effectually, as when seeds are sent by mail in a different kind of sack from the patent-office. There is a patent-office at the seat of government of the universe, whose managers are as much interested in the dispersion of seeds as anybody at Washington can be, and their operations are infinitely more extensive and regular.

There is then no necessity for supposing that the pines have sprung up from nothing, and I am aware that I am not at all peculiar in asserting that they come from seeds, though the mode of their propagation by nature has been but little attended to. They are very extensively raised from the seed in Europe, and are beginning to be here.

When you cut down an oak wood, a pine wood will not at once spring up there unless there are, or have been, quite recently, seed-bearing pines near enough for the seeds to be blown from them. But, adjacent to a forest of pines, if you prevent other crops from growing there, you will surely have an extension of your pine forest, provided the soil is suitable.

As for the heavy seeds and nuts which are not furnished with wings, the notion is still a very common one that, when the trees which bear these spring up where

none of their kind were noticed before, they have come from seeds or other principles spontaneously generated there in an unusual manner, or which have lain dormant in the soil for centuries, or perhaps been called into activity by the heat of a burning. I do not believe these assertions, and I will state some of the ways in which, according to my observation, such forests are planted and raised.

Every one of these seeds, too, will be found to be winged or legged in another fashion. Surely it is not wonderful that cherry-trees of all kinds are widely dispersed, since their fruit is well known to be the favorite food of various birds. Many kinds are called bird-cherries, and they appropriate many more kinds, which are not so called. Eating cherries is a bird-like employment, and unless we disperse the seeds occasionally, as they do, I shall think that the birds have the best right to them. See how artfully the seed of a cherry is placed in order that a bird may be compelled to transport it — in the very midst of a tempting pericarp, so that the creature that would devour this must commonly take the stone also into its mouth or bill. If you ever ate a cherry, and did not make two bites of it, you must have perceived it — right in the centre of the luscious morsel, a large earthy residuum left on the tongue. We thus take into our mouths cherry stones as big as peas, a dozen at once, for Nature can persuade us to do almost anything when she would compass her ends. Some wild men and children instinctively swallow these, as the birds do when in a hurry, it being the shortest way to get rid of them. Thus, though these seeds are not provided with vegetable wings, Nature has impelled the thrush tribe to take them into their bills and fly away with them; and they are winged in another sense, and more effectually than the seeds of pines, for these are carried even against the wind. The consequence is, that cherry-trees grow not only here but there. The same is true of a great many other seeds.

But to come to the observation which suggested these remarks. As I have said, I suspect that I can throw some light on the fact, that when hereabouts a dense pine wood is cut down, oaks and other hard woods may at once take its place. I have got only to show that the acorns and nuts, provided they are grown in the neighborhood, are regularly planted in such woods; for I assert that if an oak-tree has not grown within ten miles, and man has not carried acorns thither, then an oak wood will not spring up at once, when a pine wood is cut down.

Apparently, there were only pines there before. They are cut off, and after a year or two you see oaks and other hard woods springing up there, with scarcely a pine amid them, and the wonder commonly is, how the seed could have lain in the ground so long without decaying. But the truth is, that it has not lain in the ground so long, but is regularly planted each year by various quadrupeds and birds.

In this neighborhood, where oaks and pines are about equally dispersed, if you look through the thickest pine wood, even the seemingly unmixed pitch-pine ones, you will commonly detect many little oaks, birches, and other hard woods, sprung from seeds carried into the thicket by squirrels and other animals, and also blown thither, but which are over-shadowed and choked by the pines. The denser the evergreen wood, the more likely it is to be well planted with these seeds, because the planters incline to

resort with their forage to the closest covert. They also carry it into birch and other woods. This planting is carried on annually, and the oldest seedlings annually die; but when the pines are cleared off, the oaks, having got just the start they want, and now secured favorable conditions, immediately spring up to trees.

The shade of a dense pine wood, is more unfavorable to the springing up of pines of the same species than of oaks within it, though the former may come up abundantly when the pines are cut, if there chance to be sound seed in the ground.

But when you cut off a lot of hard wood, very often the little pines mixed with it have a similar start, for the squirrels have carried off the nuts to the pines, and not to the more open wood, and they commonly make pretty clean work of it; and moreover, if the wood was old, the sprouts will be feeble or entirely fail; to say nothing about the soil being, in a measure, exhausted for this kind of crop.

If a pine wood is surrounded by a white oak one chiefly, white oaks may be expected to succeed when the pines are cut. If it is surrounded, instead by an edging of shrub-oaks, then you will probably have a dense shrub-oak thicket.

I have no time to go into details, but will say, in a word, that while the wind is conveying the seeds of pines into hard woods and open lands, the squirrels and other animals are conveying the seeds of oaks and walnuts into the pine woods, and thus a rotation of crops is kept up.

I affirmed this confidently many years ago, and an occasional examination of dense pine woods confirmed me in my opinion. It has long been known to observers that squirrels bury nuts in the ground, but I am not aware that any one has thus accounted for the regular succession of forests.

On the 24th of September, in 1857, as I was paddling down the Assabet, in this town, I saw a red squirrel run along the bank under some herbage, with something large in its mouth. It stopped near the foot of a hemlock, within a couple of rods of me, and, hastily pawing a hole with its forefeet, dropped its booty into it, covered it up, and retreated part way up the trunk of the tree. As I approached the shore to examine the deposit, the squirrel, descending part way, betrayed no little anxiety about its treasure, and made two or three motions to recover it before it finally retreated. Digging there, I found two green pig-nuts joined together, with the thick husks on, buried about an inch and a half under the reddish soil of decayed hemlock leaves, — just the right depth to plant it. In short, this squirrel was then engaged in accomplishing two objects, to wit, laying up a store of winter food for itself, and planting a hickory wood for all creation. If the squirrel was killed, or neglected its deposit, a hickory would spring up. The nearest hickory tree was twenty rods distant. These nuts were there still just fourteen days later, but were gone when I looked again, November 21, or six weeks later still.

I have since examined more carefully several dense woods, which are said to be, and are apparently exclusively pine, and always with the same result. For instance, I walked the same day to a small, but very dense and handsome white-pine grove, about fifteen rods square, in the east part of this town. The trees are large for Concord, being

from ten to twenty inches in diameter, and as exclusively pine as any wood that I know. Indeed, I selected this wood because I thought it the least likely to contain anything else. It stands on an open plain or pasture, except that it adjoins another small pine wood, which has a few little oaks in it, on the southeast side. On every other side, it was at least thirty rods from the nearest woods. Standing on the edge of this grove and looking through it, for it is quite level and free from underwood, for the most part bare, red-carpeted ground, you would have said that there was not a hard wood tree in it, young or old. But on looking carefully along over its floor I discovered, though it was not till my eye had got used to the search, that, alternating with thin ferns, and small blueberry bushes, there was, not merely here and there, but as often as every five feet and with a degree of regularity, a little oak, from three to twelve inches high, and in one place I found a green acorn dropped by the base of a pine.

I confess, I was surprised to find my theory so perfectly proved in this case. One of the principal agents in this planting, the red squirrels, were all the while curiously inspecting me, while I was inspecting their plantation. Some of the little oaks had been browsed by cows, which resorted to this wood for shade.

After seven or eight years, the hard woods evidently find such a locality unfavorable to their growth, the pines being allowed to stand. As an evidence of this, I observed a diseased red-maple twenty-five feet long, which had been recently prostrated, though it was still covered with green leaves, the only maple in any position in the wood.

But although these oaks almost invariably die if the pines are not cut down, it is probable that they do better for a few years under their shelter than they would anywhere else.

The very extensive and thorough experiments of the English, have at length led them to adopt a method of raising oaks almost precisely like this, which somewhat earlier had been adopted by nature and her squirrels here; they have simply rediscovered the value of pines as nurses for oaks. The English experimenters seem early and generally, to have found out the importance of using trees of some kind, as nurse-plants for the young oaks. I quote from Loudon what he describes as “the ultimatum on the subject of planting and sheltering oaks,”— “an abstract of the practice adopted by the government officers in the national forests” of England, prepared by Alexander Milne.

At first some oaks had been planted by themselves, and others mixed with Scotch pines; “but in all cases,” says Mr. Milne, “where oaks were planted actually among the pines, and surrounded by them, [though the soil might be inferior,] the oaks were found to be much the best.” “For several years past, the plan pursued has been to plant the inclosures with Scotch pines only, [a tree very similar to our pitch-pine,] and when the pines have got to the height of five or six feet, then to put in good strong oak plants of about four or five years’ growth among the pines, — not cutting away any pines at first, unless they happen to be so strong and thick as to overshadow the oaks. In about two years, it becomes necessary to shred the branches of the pines, to give light and air to the oaks, and in about two or three more years to begin gradually to remove the pines altogether, taking out a certain number each year, so that, at the end of twenty

or twenty-five years, not a single Scotch pine shall be left; although, for the first ten or twelve years, the plantation may have appeared to contain nothing else but pine. The advantage of this mode of planting has been found to be that the pines dry and ameliorate the soil, destroying the coarse grass and brambles which frequently choke and injure oaks; and that no mending over is necessary, as scarcely an oak so planted is found to fail.”

Thus much the English planters have discovered by patient experiment, and, for aught I know, they have taken out a patent for it; but they appear not to have discovered that it was discovered before, and that they are merely adopting the method of Nature, which she long ago made patent to all. She is all the while planting the oaks amid the pines without our knowledge, and at last, instead of government officers, we send a party of wood-choppers to cut down the pines, and so rescue an oak forest, at which we wonder as if it had dropped from the skies.

As I walk amid hickories, even in August, I hear the sound of green pig-nuts falling from time to time, cut off by the chickaree over my head. In the fall, I notice on the ground, either within or in the neighborhood of oak woods, on all sides of the town, stout oak twigs three or four inches long, bearing half-a-dozen empty acorn-cups, which twigs have been gnawed off by squirrels, on both sides of the nuts, in order to make them more portable. The jays scream and the red squirrels scold while you are clubbing and shaking the chestnut trees, for they are there on the same errand, and two of a trade never agree. I frequently see a red or gray squirrel cast down a green chestnut bur, as I am going through the woods, and I used to think, sometimes, that they were cast at me. In fact, they are so busy about it, in the midst of the chestnut season, that you cannot stand long in the woods without hearing one fall. A sportsman told me that he had, the day before, — that was in the middle of October, — seen a green chestnut bur dropt on our great river meadow, fifty rods from the nearest wood, and much further from the nearest chestnut-tree, and he could not tell how it came there. Occasionally, when chestnutting in midwinter, I find thirty or forty nuts in a pile, left in its gallery, just under the leaves, by the common wood-mouse (*mus leucopus*).

But especially, in the winter, the extent to which this transportation and planting of nuts is carried on is made apparent by the snow. In almost every wood, you will see where the red or gray squirrels have pawed down through the snow in a hundred places, sometimes two feet deep, and almost always directly to a nut or a pine-cone, as directly as if they had started from it and bored upward, — which you and I could not have done. It would be difficult for us to find one before the snow falls. Commonly, no doubt, they had deposited them there in the fall. You wonder if they remember the localities, or discover them by the scent. The red squirrel commonly has its winter abode in the earth under a thicket of evergreens, frequently under a small clump of evergreens in the midst of a deciduous wood. If there are any nut-trees, which still retain their nuts, standing at a distance without the wood, their paths often lead directly to and from them. We, therefore, need not suppose an oak standing here and there in the wood in order to seed it, but if a few stand within twenty or thirty rods of it, it is sufficient.

I think that I may venture to say that every white-pine cone that falls to the earth naturally in this town, before opening and losing its seeds, and almost every pitch-pine one that falls at all, is cut off by a squirrel, and they begin to pluck them long before they are ripe, so that when the crop of white-pine cones is a small one, as it commonly is, they cut off thus almost every one of these before it fairly ripens. I think, moreover, that their design, if I may so speak, in cutting them off green, is, partly, to prevent their opening and losing their seeds, for these are the ones for which they dig through the snow, and the only white-pine cones which contain anything then. I have counted in one heap, within a diameter of four feet, the cores of 239 pitch-pine cones which had been cut off and stripped by the red squirrel the previous winter.

The nuts thus left on the surface, or buried just beneath it, are placed in the most favorable circumstances for germinating. I have sometimes wondered how those which merely fell on the surface of the earth got planted; but, by the end of December, I find the chestnut of the same year partially mixed with the mould, as it were, under the decaying and mouldy leaves, where there is all the moisture and manure they want, for the nuts fall first. In a plentiful year, a large proportion of the nuts are thus covered loosely an inch deep, and are, of course, somewhat concealed from squirrels. One winter, when the crop had been abundant, I got, with the aid of a rake, many quarts of these nuts as late as the tenth of January, and though some bought at the store the same day were more than half of them mouldy, I did not find a single mouldy one among these which I picked from under the wet and mouldy leaves, where they had been snowed on once or twice. Nature knows how to pack them best. They were still plump and tender. Apparently, they do not heat there, though wet. In the spring they were all sprouting.

Loudon says that "when the nut [of the common walnut of Europe] is to be preserved through the winter for the purpose of planting in the following spring, it should be laid in a rot-heap, as soon as gathered, with the husk on; and the heap should be turned over frequently in the course of the winter."

Here, again, he is stealing Nature's "thunder." How can a poor mortal do otherwise? for it is she that finds fingers to steal with, and the treasure to be stolen. In the planting of the seeds of most trees, the best gardeners do no more than follow Nature, though they may not know it. Generally, both large and small ones are most sure to germinate, and succeed best, when only beaten into the earth with the back of a spade, and then covered with leaves or straw. These results to which planters have arrived, remind us of the experience of Kane and his companions at the North, who, when learning to live in that climate, were surprised to find themselves steadily adopting the customs of the natives, simply becoming Esquimaux. So, when we experiment in planting forests, we find ourselves at last doing as Nature does. Would it not be well to consult with Nature in the outset? for she is the most extensive and experienced planter of us all, not excepting the Dukes of Athol.

In short, they who have not attended particularly to this subject are but little aware to what an extent quadrupeds and birds are employed, especially in the fall,

in collecting, and so disseminating and planting the seeds of trees. It is the almost constant employment of the squirrels at that season and you rarely meet with one that has not a nut in its mouth, or is not just going to get one. One squirrel-hunter of this town told me that he knew of a walnut-tree which bore particularly good nuts, but that on going to gather them one fall, he found that he had been anticipated by a family of a dozen red squirrels. He took out of the tree, which was hollow, one bushel and three pecks by measurement, without the husks, and they supplied him and his family for the winter. It would be easy to multiply instances of this kind. How commonly in the fall you see the cheek-pouches of the striped squirrel distended by a quantity of nuts! This species gets its scientific name *Tamias*, or the steward, from its habit of storing up nuts and other seeds. Look under a nut-tree a month after the nuts have fallen, and see what proportion of sound nuts to the abortive ones and shells you will find ordinarily. They have been already eaten, or dispersed far and wide. The ground looks like a platform before a grocery, where the gossips of the village sit to crack nuts and less savory jokes. You have come, you would say, after the feast was over, and are presented with the shells only.

Occasionally, when threading the woods in the fall, you will hear a sound as if some one had broken a twig, and, looking up, see a jay pecking at an acorn, or you will see a flock of them at once about it, in the top of an oak, and hear them break them off. They then fly to a suitable limb, and placing the acorn under one foot, hammer away at it busily, making a sound like a woodpecker's tapping, looking round from time to time to see if any foe is approaching, and soon reach the meat, and nibble at it, holding up their heads to swallow, while they hold the remainder very firmly with their claws. Nevertheless, it often drops to the ground before the bird has done with it. I can confirm what Wm. Bartram wrote to Wilson, the Ornithologist, that "The jay is one of the most useful agents in the economy of nature, for disseminating forest trees and other nuciferous and hard-seeded vegetables on which they feed. Their chief employment during the autumnal season is foraging to supply their winter stores. In performing this necessary duty they drop abundance of seed in their flight over fields, hedges, and by fences, where they alight to deposit them in the post-holes, &c. It is remarkable what numbers of young trees rise up in fields and pastures after a wet winter and spring. These birds alone are capable, in a few years' time, to replant all the cleared lands."

I have noticed that squirrels also frequently drop their nuts in open land, which will still further account for the oaks and walnuts which spring up in pastures, for, depend on it, every new tree comes from a seed. When I examine the little oaks, one or two years old, in such places, I invariably find the empty acorn from which they sprung.

So far from the seed having lain dormant in the soil since oaks grew there before, as many believe, it is well known that it is difficult to preserve the vitality of acorns long enough to transport them to Europe; and it is recommended in Loudon's Arboretum, as the safest course, to sprout them in pots on the voyage. The same authority states that "very few acorns of any species will germinate after having been kept a year," that

beechmast, "only retains its vital properties one year," and the black-walnut, "seldom more than six months after it has ripened." I have frequently found that in November, almost every acorn left on the ground had sprouted or decayed. What with frost, drouth, moisture, and worms, the greater part are soon destroyed. Yet it is stated by one botanical writer that "acorns that have lain for centuries, on being ploughed up, have soon vegetated."

Mr. George B. Emerson, in his valuable Report on the Trees and Shrubs of this State, says of the pines: "The tenacity of life of the seeds is remarkable. They will remain for many years unchanged in the ground, protected by the coolness and deep shade of the forest above them. But when the forest is removed, and the warmth of the sun admitted, they immediately vegetate." Since he does not tell us on what observation his remark is founded, I must doubt its truth. Besides, the experience of nurserymen makes it the more questionable.

The stories of wheat raised from seed buried with an ancient Egyptian, and of raspberries raised from seed found in the stomach of a man in England, who is supposed to have died sixteen or seventeen hundred years ago, are generally discredited, simply because the evidence is not conclusive.

Several men of science, Dr. Carpenter among them, have used the statement that beach-plums sprang up in sand which was dug up forty miles inland in Maine, to prove that the seed had lain there a very long time, and some have inferred that the coast has receded so far. But it seems to me necessary to their argument to show, first, that beach-plums grow only on a beach. They are not uncommon here, which is about half that distance from the shore; and I remember a dense patch a few miles north of us, twenty-five miles inland, from which the fruit was annually carried to market. How much further inland they grow, I know not. Dr. Chas. T. Jackson speaks of finding "beach-plums" (perhaps they were this kind) more than one hundred miles inland in Maine.

It chances that similar objections lie against all the more notorious instances of the kind on record.

Yet I am prepared to believe that some seeds, especially small ones, may retain their vitality for centuries under favorable circumstances. In the spring of 1859, the old Hunt House, so called, in this town, whose chimney bore the date 1703, was taken down. This stood on land which belonged to John Winthrop, the first Governor of Massachusetts, and a part of the house was evidently much older than the above date, and belonged to the Winthrop family. For many years, I have ransacked this neighborhood for plants, and I consider myself familiar with its productions. Thinking of the seeds which are said to be sometimes dug up at an unusual depth in the earth, and thus to reproduce long extinct plants, it occurred to me last fall that some new or rare plants might have sprung up in the cellar of this house, which had been covered from the light so long. Searching there on the 22d of September, I found, among other rank weeds, a species of nettle (*Urtica urens*), which I had not found before; dill, which I had not seen growing spontaneously; the Jerusalem oak (*Chenopodium botrys*), which I had

seen wild in but one place; black nightshade (*Solanum nigrum*), which is quite rare hereabouts, and common tobacco, which, though it was often cultivated here in the last century, has for fifty years been an unknown plant in this town, and a few months before this not even I had heard that one man in the north part of the town, was cultivating a few plants for his own use. I have no doubt that some or all of these plants sprang from seeds which had long been buried under or about that house, and that that tobacco is an additional evidence that the plant was formerly cultivated here. The cellar has been filled up this year, and four of those plants, including the tobacco, are now again extinct in that locality.

It is true, I have shown that the animals consume a great part of the seeds of trees, and so, at least, effectually prevent their becoming trees; but in all these cases, as I have said, the consumer is compelled to be at the same time the disperser and planter, and this is the tax which he pays to nature. I think it is Linnaeus, who says, that while the swine is rooting for acorns, he is planting acorns.

Though I do not believe that a plant will spring up where no seed has been, I have great faith in a seed — a, to me, equally mysterious origin for it. Convince me that you have a seed there, and I am prepared to expect wonders. I shall even believe that the millennium is at hand, and that the reign of justice is about to commence, when the Patent Office, or Government, begins to distribute, and the people to plant the seeds of these things.’

In the spring of 1857, I planted six seeds sent to me from the Patent Office, and labelled, I think, “*Poitrine jaune grosse*,” large yellow squash. Two came up, and one bore a squash which weighed 123-1/2 pounds, the other bore four, weighing together 186-1/4 pounds. Who would have believed that there was 310 pounds of *poitrine jaune grosse* in that corner of my garden? These seeds were the bait I used to catch it, my ferrets which I sent into its burrow, my brace of terriers which unearthed it. A little mysterious hoeing and manuring was all the *abra cadabra presto-change*, that I used, and lo! true to the label, they found for me 310 pounds of *poitrine jaune grosse* there, where it never was known to be, nor was before. These talismen had perchance sprung from America at first, and returned to it with unabated force. The big squash took a premium at your fair that fall, and I understood that the man who bought it, intended to sell the seeds for ten cents a piece. (Were they not cheap at that?) But I have more hounds of the same breed. I learn that one which I despatched to a distant town, true to its instinct, points to the large yellow squash there, too, where no hound ever found it before, as its ancestors did here and in France.

Other seeds I have which will find other things in that corner of my garden, in like fashion, almost any fruit you wish, every year for ages, until the crop more than fills the whole garden. You have but little more to do, than throw up your cap for entertainment these American days. Perfect alchemists I keep, who can transmute substances without end; and thus the corner of my garden is an inexhaustible treasure-chest. Here you can dig, not gold, but the value which gold merely represents; and there is no Signor Blitz about it. Yet farmers’ sons will stare by the hour to see a juggler draw ribbons from

his throat, though he tells them it is all deception. Surely, men love darkness rather than light.

# WILD APPLES

## THE HISTORY OF THE APPLE-TREE.

It is remarkable how closely the history of the Apple-tree is connected with that of man. The geologist tells us that the order of the Rosaceae, which includes the Apple, also the true Grasses, and the Labiatae or Mints, were introduced only a short time previous to the appearance of man on the globe.

It appears that apples made a part of the food of that unknown primitive people whose traces have lately been found at the bottom of the Swiss lakes, supposed to be older than the foundation of Rome, so old that they had no metallic implements. An entire black and shrivelled Crab-Apple has been recovered from their stores.

Tacitus says of the ancient Germans, that they satisfied their hunger with wild apples (*agrestia poma*) among other things.

Niebuhr observes that “the words for a house, a field, a plough, ploughing, wine, oil, milk, sheep, apples, and others relating to agriculture and the gentler way of life, agree in Latin and Greek, while the Latin words for all objects pertaining to war or the chase are utterly alien from the Greek.” Thus the apple-tree may be considered a symbol of peace no less than the olive.

The apple was early so important, and generally distributed, that its name traced to its root in many languages signifies fruit in general. [Greek: *Maelon*], in Greek, means an apple, also the fruit of other trees, also a sheep and any cattle, and finally riches in general.

The apple-tree has been celebrated by the Hebrews, Greeks, Romans, and Scandinavians. Some have thought that the first human pair were tempted by its fruit. Goddesses are fabled to have contended for it, dragons were set to watch it, and heroes were employed to pluck it.

The tree is mentioned in at least three places in the Old Testament, and its fruit in two or three more. Solomon sings,— “As the apple-tree among the trees of the wood, so is my beloved among the sons.” And again,— “Stay me with flagons, comfort me with apples.” The noblest part of man’s noblest feature is named from this fruit, “the apple of the eye.”

The apple-tree is also mentioned by Homer and Herodotus. Ulysses saw in the glorious garden of Alcinous “pears and pomegranates, and apple-trees bearing beautiful fruit” (*kai maeleui aglaokarpoi*). And according to Homer, apples were among the fruits which Tantalus could not pluck, the wind ever blowing their boughs away from him. Theophrastus knew and described the apple-tree as a botanist.

According to the Prose Edda, "Iduna keeps in a box the apples which the gods, when they feel old age approaching, have only to taste of to become young again. It is in this manner that they will be kept in renovated youth until Ragnarök" (or the destruction of the gods).

I learn from Loudon that "the ancient Welsh bards were rewarded for excelling in song by the token of the apple-spray;" and "in the Highlands of Scotland the apple-tree is the badge of the-clan Lamont."

The apple-tree (*Pyrus malus*) belongs chiefly to the northern temperate zone. Loudon says, that "it grows spontaneously in every part of Europe except the frigid zone, and throughout Western Asia, China, and Japan." We have also two or three varieties of the apple indigenous in North America. The cultivated apple-tree was first introduced into this country by the earliest settlers, and is thought to do as well or better here than anywhere else. Probably some of the varieties which are now cultivated were first introduced into Britain by the Romans.

Pliny, adopting the distinction of Theophrastus, says,— "Of trees there are some which are altogether wild (*sylvestres*), some more civilized (*urbaniore*s)." Theophrastus includes the apple among the last; and, indeed, it is in this sense the most civilized of all trees. It is as harmless as a dove, as beautiful as a rose, and as valuable as flocks and herds. It has been longer cultivated than any other, and so is more humanized; and who knows but, like the dog, it will at length be no longer traceable to its wild original? It migrates with man, like the dog and horse and cow: first, perchance, from Greece to Italy, thence to England, thence to America; and our Western emigrant is still marching steadily toward the setting sun with the seeds of the apple in his pocket, or perhaps a few young trees strapped to his load. At least a million apple-trees are thus set farther westward this year than any cultivated ones grew last year. Consider how the Blossom-Week, like the Sabbath, is thus annually spreading over the prairies; for when man migrates, he carries with him not only his birds, quadrupeds, insects, vegetables, and his very sward, but his orchard also.

The leaves and tender twigs are an agreeable food to many domestic animals, as the cow, horse, sheep, and goat; and the fruit is sought after by the first, as well as by the hog. Thus there appears to have existed a natural alliance between these animals and this tree from the first. "The fruit of the Crab in the forests of France" is said to be "a great resource for the wild-boar."

Not only the Indian, but many indigenous insects, birds, and quadrupeds, welcomed the apple-tree to these shores. The tent-caterpillar saddled her eggs on the very first twig that was formed, and it has since shared her affections with the wild cherry; and the canker-worm also in a measure abandoned the elm to feed on it. As it grew apace, the bluebird, robin, cherry-bird, king-bird, and many more, came with haste and built their nests and warbled in its boughs, and so became orchard-birds, and multiplied more than ever. It was an era in the history of their race. The downy woodpecker found such a savory morsel under its bark, that he perforated it in a ring quite round the tree, before he left it, — a thing which he had never done before, to my knowledge.

It did not take the partridge long to find out how sweet its buds were, and every winter eve she flew, and still flies, from the wood, to pluck them, much to the farmer's sorrow. The rabbit, too, was not slow to learn the taste of its twigs and bark; and when the fruit was ripe, the squirrel half-rolled, half-carried it to his hole; and even the musquash crept up the bank from the brook at evening, and greedily devoured it, until he had worn a path in the grass there; and when it was frozen and thawed, the crow and the jay were glad to taste it occasionally. The owl crept into the first apple-tree that became hollow, and fairly hooted with delight, finding it just the place for him; so, settling down into it, he has remained there ever since.

My theme being the Wild Apple, I will merely glance at some of the seasons in the annual growth of the cultivated apple, and pass on to my special province.

The flowers of the apple are perhaps the most beautiful of any tree's, so copious and so delicious to both sight and scent. The walker is frequently tempted to turn and linger near some more than usually handsome one, whose blossoms are two thirds expanded. How superior it is in these respects to the pear, whose blossoms are neither colored nor fragrant!

By the middle of July, green apples are so large as to remind us of coddling, and of the autumn. The sward is commonly strewn with little ones which fall still-born, as it were, — Nature thus thinning them for us. The Roman writer Palladius said,— “If apples are inclined to fall before their time, a stone placed in a split root will retain them.” Some such notion, still surviving, may account for some of the stones which we see placed to be overgrown in the forks of trees. They have a saying in Suffolk, England, —

“At Michaelmas time, or a little before,  
Half an apple goes to the core.”

Early apples begin to be ripe about the first of August; but I think that none of them are so good to eat as some to smell. One is worth more to scent your handkerchief with than any perfume which they sell in the shops. The fragrance of some fruits is not to be forgotten, along with that of flowers. Some gnarly apple which I pick up in the road reminds me by its fragrance of all the wealth of Pomona, — carrying me forward to those days when they will be collected in golden and ruddy heaps in the orchards and about the cider-mills.

A week or two later, as you are going by orchards or gardens, especially in the evenings, you pass through a little region possessed by the fragrance of ripe apples, and thus enjoy them without price, and without robbing anybody.

There is thus about all natural products a certain volatile and ethereal quality which represents their highest value, and which cannot be vulgarized, or bought and sold. No mortal has ever enjoyed the perfect flavor of any fruit, and only the godlike among men begin to taste its ambrosial qualities. For nectar and ambrosia are only those fine flavors of every earthly fruit which our coarse palates fail to perceive, — just as we occupy the heaven of the gods without knowing it. When I see a particularly mean man carrying a load of fair and fragrant early apples to market, I seem to see a contest

going on between him and his horse, on the one side, and the apples on the other, and, to my mind, the apples always gain it. Pliny says that apples are the heaviest of all things, and that the oxen begin to sweat at the mere sight of a load of them. Our driver begins to lose his load the moment he tries to transport them to where they do not belong, that is, to any but the most beautiful. Though he gets out from time to time, and feels of them, and thinks they are all there, I see the stream of their evanescent and celestial qualities going to heaven from his cart, while the pulp and skin and core only are going to market. They are not apples, but pomace. Are not these still Iduna's apples, the taste of which keeps the gods forever young? and think you that they will let Loki or Thjassi carry them off to Jötunheim, while they grow wrinkled and gray? No, for Ragnarök, or the destruction of the gods, is not yet.

There is another thinning of the fruit, commonly near the end of August or in September, when the ground is strewn with windfalls; and this happens especially when high winds occur after rain. In some orchards you may see fully three quarters of the whole crop on the ground, lying in a circular form beneath the trees, yet hard and green, — or, if it is a hill-side, rolled far down the hill. However, it is an ill wind that blows nobody any good. All the country over, people are busy picking up the windfalls, and this will make them cheap for early apple-pies.

In October, the leaves falling, the apples are more distinct on the trees. I saw one year in a neighboring town some trees fuller of fruit than I remember to have ever seen before, small yellow apples hanging over the road. The branches were gracefully drooping with their weight, like a barberry-bush, so that the whole tree acquired a new character. Even the topmost branches, instead of standing erect, spread and drooped in all directions; and there were so many poles supporting the lower ones, that they looked like pictures of banyan-trees. As an old English manuscript says, "The mo appelen the tree bereth, the more sche boweth to the folk."

Surely the apple is the noblest of fruits. Let the most beautiful or the swiftest have it. That should be the "going" price of apples.

Between the fifth and twentieth of October I see the barrels lie under the trees. And perhaps I talk with one who is selecting some choice barrels to fulfil an order. He turns a specked one over many times before he leaves it out. If I were to tell what is passing in my mind, I should say that every one was specked which he had handled; for he rubs off all the bloom, and those fugacious ethereal qualities leave it. Cool evenings prompt the farmers to make haste, and at length I see only the ladders here and there left leaning against the trees.

It would be well, if we accepted these gifts with more joy and gratitude, and did not think it enough simply to put a fresh load of compost about the tree. Some old English customs are suggestive at least. I find them described chiefly in Brand's "Popular Antiquities." It appears that "on Christmas eve the farmers and their men in Devonshire take a large bowl of cider, with a toast in it, and carrying it in state to the orchard, they salute the apple-trees with much ceremony, in order to make them bear well the next season." This salutation consists in "throwing some of the cider about the roots

of the tree, placing bits of the toast on the branches," and then, "encircling one of the best bearing trees in the orchard, they drink the following toast three several times:

—  
'Here's to thee, old apple-tree,  
Whence thou mayst bud, and whence thou mayst blow,  
And whence thou mayst bear apples enow!  
Hats-full! caps-full!  
Bushel, bushel, sacks-full!  
And my pockets full, too! Hurra!'"

Also what was called "apple-howling" used to be practised in various counties of England on New-Year's eve. A troop of boys visited the different orchards, and, encircling the apple-trees, repeated the following words: —

"Stand fast, root! bear well, top!  
Pray God send us a good howling crop:  
Every twig, apples big;  
Every bow, apples enow!"

"They then shout in chorus, one of the boys accompanying them on a cow's horn. During this ceremony they rap the trees with their sticks." This is called "wassailing" the trees, and is thought by some to be "a relic of the heathen sacrifice to Pomona."

Herrick sings, —  
"Wassaile the trees that they may beare  
You many a plum and many a peare;  
For more or less fruits they will bring  
As you so give them wassailing."

Our poets have as yet a better right to sing of cider than of wine; but it behooves them to sing better than English Phillips did, else they will do no credit to their Muse.

#### THE WILD APPLE.

So much for the more civilized apple-trees (*urbaniores*, as Pliny calls them). I love better to go through the old orchards of ungrafted apple-trees, at whatever season of the year, — so irregularly planted: sometimes two trees standing close together; and the rows so devious that you would think that they not only had grown while the owner was sleeping, but had been set out by him in a somnambulic state. The rows of grafted fruit will never tempt me to wander amid them like these. But I now, alas, speak rather from memory than from any recent experience, such ravages have been made!

Some soils, like a rocky tract called the Easterbrooks Country in my neighborhood, are so suited to the apple, that it will grow faster in them without any care, or if only the ground is broken up once a year, than it will in many places with any amount of care. The owners of this tract allow that the soil is excellent for fruit, but they say that it is so rocky that they have not patience to plough it, and that, together with the distance, is the reason why it is not cultivated. There are, or were recently, extensive orchards there standing without order. Nay, they spring up wild and bear well there

in the midst of pines, birches, maples, and oaks. I am often surprised to see rising amid these trees the rounded tops of apple-trees glowing with red or yellow fruit; in harmony with the autumnal tints of the forest.

Going up the side of a cliff about the first of November, I saw a vigorous young apple-tree, which, planted by birds or cows, had shot up amid the rocks and open woods there, and had now much fruit on it, uninjured by the frosts, when all cultivated apples were gathered. It was a rank wild growth, with many green leaves on it still, and made an impression of thorniness. The fruit was hard and green, but looked as if it would be palatable in the winter. Some was dangling on the twigs, but more half-buried in the wet leaves under the tree, or rolled far down the hill amid the rocks. The owner knows nothing of it. The day was not observed when it first blossomed, nor when it first bore fruit, unless by the chickadee. There was no dancing on the green beneath it in its honor, and now there is no hand to pluck its fruit, — which is only gnawed by squirrels, as I perceive. It has done double duty, — not only borne this crop, but each twig has grown a foot into the air. And this is such fruit! bigger than many berries, we must admit, and carried home will be sound and palatable next spring. What care I for Iduna's apples so long as I can get these?

When I go by this shrub thus late and hardy, and see its dangling fruit, I respect the tree, and I am grateful for Nature's bounty, even though I cannot eat it. Here on this rugged and woody hill-side has grown an apple-tree, not planted by man, no relic of a former orchard, but a natural growth, like the pines and oaks. Most fruits which we prize and use depend entirely on our care. Corn and grain, potatoes, peaches, melons, etc., depend altogether on our planting; but the apple emulates man's independence and enterprise. It is not simply carried, as I have said, but, like him, to some extent, it has migrated to this New World, and is even, here and there, making its way amid the aboriginal trees; just as the ox and dog and horse sometimes run wild and maintain themselves.

Even the sourest and crabbedest apple, growing in the most unfavorable position, suggests such thoughts as these, it is so noble a fruit.

#### THE CRAB.

Nevertheless, our wild apple is wild only like myself, perchance, who belong not to the aboriginal race here, but have strayed into the woods from the cultivated stock. Wilder still, as I have said, there grows elsewhere in this country a native and aboriginal Crab-Apple, *Malus coronaria*, "whose nature has not yet been modified by cultivation." It is found from Western New-York to Minnesota, and southward. Michaux says that its ordinary height "is fifteen or eighteen feet, but it is sometimes found twenty-five or thirty feet high," and that the large ones "exactly resemble the common apple-tree." "The flowers are white mingled with rose-color, and are collected in corymbs." They are remarkable for their delicious odor. The fruit, according to him, is about an inch and a half in diameter, and is intensely acid. Yet they make fine sweetmeats, and also cider of them. He concludes, that "if, on being cultivated, it does not yield new and

palatable varieties, it will at least be celebrated for the beauty of its flowers, and for the sweetness of its perfume.”

I never saw the Crab-Apple till May, 1861. I had heard of it through Michaux, but more modern botanists, so far as I know, have not treated it as of any peculiar importance. Thus it was a half-fabulous tree to me. I contemplated a pilgrimage to the “Glades,” a portion of Pennsylvania where it was said to grow to perfection. I thought of sending to a nursery for it, but doubted if they had it, or would distinguish it from European varieties. At last I had occasion to go to Minnesota, and on entering Michigan I began to notice from the cars a tree with handsome rose-colored flowers. At first I thought it some variety of thorn; but it was not long before the truth flashed on me, that this was my long-sought Crab-Apple. It was the prevailing flowering shrub or tree to be seen from the cars at that season of the year, — about the middle of May. But the cars never stopped before one, and so I was launched on the bosom of the Mississippi without having touched one, experiencing the fate of Tantalus. On arriving at St. Anthony’s Falls, I was sorry to be told that I was too far north for the Crab-Apple. Nevertheless I succeeded in finding it about eight miles west of the Falls; touched it and smelled it, and secured a lingering corymb of flowers for my herbarium. This must have been near its northern limit.

#### HOW THE WILD APPLE GROWS.

But though these are indigenous, like the Indians, I doubt whether they are any hardier than those backwoodsmen among the apple-trees, which, though descended from cultivated stocks, plant themselves in distant fields and forests, where the soil is favorable to them. I know of no trees which have more difficulties to contend with, and which more sturdily resist their foes. These are the ones whose story we have to tell. It oftentimes reads thus: —

Near the beginning of May, we notice little thickets of apple-trees just springing up in the pastures where cattle have been, — as the rocky ones of our Easterbrooks Country, or the top of Nobscot Hill, in Sudbury. One or two of these perhaps survive the drought and other accidents, — their very birthplace defending them against the encroaching grass and some other dangers, at first.

In two years’ time ‘t had thus  
Reached the level of the rocks,  
Admired the stretching world,  
Nor feared the wandering flocks.

But at this tender age  
Its sufferings began:  
There came a browsing ox  
And cut it down a span.

This time, perhaps, the ox does not notice it amid the grass; but the next year, when it has grown more stout, he recognizes it for a fellow-emigrant from the old country, the flavor of whose leaves and twigs he well knows; and though at first he pauses to welcome it, and express his surprise, and gets for answer, “The same cause

that brought you here brought me," he nevertheless browses it again, reflecting, it may be, that he has some title to it.

Thus cut down annually, it does not despair; but, putting forth two short twigs for every one cut off, it spreads out low along the ground in the hollows or between the rocks, growing more stout and scrubby, until it forms, not a tree as yet, but a little pyramidal, stiff, twiggy mass, almost as solid and impenetrable as a rock. Some of the densest and most impenetrable clumps of bushes that I have ever seen, as well on account of the closeness and stubbornness of their branches as of their thorns, have been these wild-apple scrubs. They are more like the scrubby fir and black spruce on which you stand, and sometimes walk, on the tops of mountains, where cold is the demon they contend with, than anything else. No wonder they are prompted to grow thorns at last, to defend themselves against such foes. In their thorniness, however, there is no malice, only some malic acid.

The rocky pastures of the tract I have referred to, — for they maintain their ground best in a rocky field, — are thickly sprinkled with these little tufts, reminding you often of some rigid gray mosses or lichens, and you see thousands of little trees just springing up between them, with the seed still attached to them.

Being regularly clipped all around each year by the cows, as a hedge with shears, they are often of a perfect conical or pyramidal form, from one to four feet high, and more or less sharp, as if trimmed by the gardener's art. In the pastures on Nobscot Hill and its spurs, they make fine dark shadows when the sun is low. They are also an excellent covert from hawks for many small birds that roost and build in them. Whole flocks perch in them at night, and I have seen three robins' nests in one which was six feet in diameter.

No doubt many of these are already old trees, if you reckon from the day they were planted, but infants still when you consider their development and the long life before them. I counted the annual rings of some which were just one foot high, and as wide as high, and found that they were about twelve years old, but quite sound and thrifty! They were so low that they were unnoticed by the walker, while many of their contemporaries from the nurseries were already bearing considerable crops. But what you gain in time is perhaps in this case, too, lost in power, — that is, in the vigor of the tree. This is their pyramidal state.

The cows continue to browse them thus for twenty years or more, keeping them down and compelling them to spread, until at last they are so broad that they become their own fence, when some interior shoot, which their foes cannot reach, darts upward with joy: for it has not forgotten its high calling, and bears its own peculiar fruit in triumph.

Such are the tactics by which it finally defeats its bovine foes. Now, if you have watched the progress of a particular shrub, you will see that it is no longer a simple pyramid or cone, but that out of its apex there rises a sprig or two, growing more lustily perchance than an orchard-tree, since the plant now devotes the whole of its repressed energy to these upright parts. In a short time these become a small tree, an inverted

pyramid resting on the apex of the other, so that the whole has now the form of a vast hour-glass. The spreading bottom, having served its purpose, finally disappears, and the generous tree permits the now harmless cows to come in and stand in its shade, and rub against and redden its trunk, which has grown in spite of them, and even to taste a part of its fruit, and so disperse the seed.

Thus the cows create their own shade and food; and the tree, its hour-glass being inverted, lives a second life, as it were.

It is an important question with some nowadays, whether you should trim young apple-trees as high as your nose or as high as your eyes. The ox trims them up as high as he can reach, and that is about the right height, I think.

In spite of wandering kine, and other adverse circumstances, that despised shrub, valued only by small birds as a covert and shelter from hawks, has its blossom-week at last, and in course of time its harvest, sincere, though small.

By the end of some October, when its leaves have fallen, I frequently see such a central sprig, whose progress I have watched, when I thought it had forgotten its destiny, as I had, bearing its first crop of small green or yellow or rosy fruit, which the cows cannot get at over the bushy and thorny hedge which surrounds it, and I make haste to taste the new and undescribed variety. We have all heard of the numerous varieties of fruit invented by Van Mons and Knight. This is the system of Van Cow, and she has invented far more and more memorable varieties than both of them.

Through what hardships it may attain to bear a sweet fruit! Though somewhat small, it may prove equal, if not superior, in flavor to that which has grown in a garden, — will perchance be all the sweeter and more palatable for the very difficulties it has had to contend with. Who knows but this chance wild fruit, planted by a cow or a bird on some remote and rocky hillside, where it is as yet unobserved by man, may be the choicest of all its kind, and foreign potentates shall hear of it, and royal societies seek to propagate it, though the virtues of the perhaps truly crabbed owner of the soil may never be heard of, — at least, beyond the limits of his village? It was thus the Porter and the Baldwin grew.

Every wild-apple shrub excites our expectation thus, somewhat as every wild child. It is, perhaps, a prince in disguise. What a lesson to man! So are human beings, referred to the highest standard, the celestial fruit which they suggest and aspire to bear, browsed on by fate; and only the most persistent and strongest genius defends itself and prevails, sends a tender scion upward at last, and drops its perfect fruit on the ungrateful earth. Poets and philosophers and statesmen thus spring up in the country pastures, and outlast the hosts of unoriginal men.

Such is always the pursuit of knowledge. The celestial fruits, the golden apples of the Hesperides, are ever guarded by a hundred-headed dragon which never sleeps, so that it is an Herculean labor to pluck them.

This is one, and the most remarkable way, in which the wild apple is propagated; but commonly it springs up at wide intervals in woods and swamps, and by the sides of roads, as the soil may suit it, and grows with comparative rapidity. Those which

grow in dense woods are very tall and slender. I frequently pluck from these trees a perfectly mild and tamed fruit. As Palladius says, "Et injussu consternitur ubere mali": And the ground is strewn with the fruit of an unbidden apple-tree.

It is an old notion, that, if these wild trees do not bear a valuable fruit of their own, they are the best stocks by which to transmit to posterity the most highly prized qualities of others. However, I am not in search of stocks, but the wild fruit itself, whose fierce gust has suffered no "inteneration." It is not my

"highest plot To plant the Bergamot."

THE FRUIT, AND ITS FLAVOR.

The time for wild apples is the last of October and the first of November. They then get to be palatable, for they ripen late, and they are still perhaps as beautiful as ever. I make a great account of these fruits, which the farmers do not think it worth the while to gather, — wild flavors of the Muse, vivacious and inspiriting. The farmer thinks that he has better in his barrels, but he is mistaken, unless he has a walker's appetite and imagination, neither of which can he have.

Such as grow quite wild, and are left out till the first of November, I presume that the owner does not mean to gather. They belong to children as wild as themselves, — to certain active boys that I know, — to the wild-eyed woman of the fields, to whom nothing comes amiss, who gleans after all the world, — and, moreover, to us walkers. We have met with them, and they are ours. These rights, long enough insisted upon, have come to be an institution in some old countries, where they have learned how to live. I hear that "the custom of gripping, which may be called apple-gleaning, is, or was formerly, practised in Herefordshire. It consists in leaving a few apples, which are called the gripples, on every tree, after the general gathering, for the boys, who go with climbing-poles and bags to collect them."

As for those I speak of, I pluck them as a wild fruit, native to this quarter of the earth, — fruit of old trees that have been dying ever since I was a boy and are not yet dead, frequented only by the woodpecker and the squirrel, deserted now by the owner, who has not faith enough to look under their boughs. From the appearance of the tree-top, at a little distance, you would expect nothing but lichens to drop from it, but your faith is rewarded by finding the ground strewn with spirited fruit, — some of it, perhaps, collected at squirrel-holes, with the marks of their teeth by which they carried them, — some containing a cricket or two silently feeding within, and some, especially in damp days, a shellless snail. The very sticks and stones lodged in the tree-top might have convinced you of the savoriness of the fruit which has been so eagerly sought after in past years.

I have seen no account of these among the "Fruits and Fruit-Trees of America," though they are more memorable to my taste than the grafted kinds; more racy and wild American flavors do they possess, when October and November, when December and January, and perhaps February and March even, have assuaged them somewhat. An old farmer in my neighborhood, who always selects the right word, says that "they have a kind of bow-arrow tang."

Apples for grafting appear to have been selected commonly, not so much for their spirited flavor, as for their mildness, their size, and bearing qualities, — not so much for their beauty, as for their fairness and soundness. Indeed, I have no faith in the selected lists of pomological gentlemen. Their “Favorites” and “None-suches” and “Seek-no-farthers,” when I have fruited them, commonly turn out very tame and forgettable. They are eaten with comparatively little zest, and have no real tang nor smack to them.

What if some of these wildings are acrid and puckery, genuine verjuice, do they not still belong to the Pomaceae, which are uniformly innocent and kind to our race? I still begrudge them to the cider-mill. Perhaps they are not fairly ripe yet.

No wonder that these small and high-colored apples are thought to make the best cider. Loudon quotes from the “Herefordshire Report,” that “apples of a small size are always, if equal in quality, to be preferred to those of a larger size, in order that the rind and kernel may bear the greatest proportion to the pulp, which affords the weakest and most watery juice.” And he says, that, “to prove this, Dr. Symonds, of Hereford, about the year 1800, made one hogshead of cider entirely from the rinds and cores of apples, and another from the pulp only, when the first was found of extraordinary strength and flavor, while the latter was sweet and insipid.”

Evelyn says that the “Red-strake” was the favorite cider-apple in his day; and he quotes one Dr. Newburg as saying, “In Jersey ‘t is a general observation, as I hear, that the more of red any apple has in its rind, the more proper it is for this use. Pale-faced apples they exclude as much as may be from their cider-vat.” This opinion still prevails.

All apples are good in November. Those which the farmer leaves out as unsalable, and unpalatable to those who frequent the markets, are choicest fruit to the walker. But it is remarkable that the wild apple, which I praise as so spirited and racy when eaten in the fields or woods, being brought into the house, has frequently a harsh and crabbed taste. The Saunterer’s Apple not even the saunterer can eat in the house. The palate rejects it there, as it does haws and acorns, and demands a tamed one; for there you miss the November air, which is the sauce it is to be eaten with. Accordingly, when Tityrus, seeing the lengthening shadows, invites Meliboeus to go home and pass the night with him, he promises him mild apples and soft chestnuts, — *mitia poma, castaneae molles*. I frequently pluck wild apples of so rich and spicy a flavor that I wonder all orchardists do not get a scion from that tree, and I fail not to bring home my pockets full. But perchance, when I take one out of my desk and taste it in my chamber, I find it unexpectedly crude, — sour enough to set a squirrel’s teeth on edge and make a jay scream.

These apples have hung in the wind and frost and rain till they have absorbed the qualities of the weather or season, and thus are highly seasoned, and they pierce and sting and permeate us with their spirit. They must be eaten in season, accordingly, — that is, out-of-doors.

To appreciate the wild and sharp flavors of these October fruits, it is necessary that you be breathing the sharp October or November air. The out-door air and exercise

which the walker gets give a different tone to his palate, and he craves a fruit which the sedentary would call harsh and crabbed. They must be eaten in the fields, when your system is all aglow with exercise, when the frosty weather nips your fingers, the wind rattles the bare boughs or rustles the few remaining leaves, and the jay is heard screaming around. What is sour in the house a bracing walk makes sweet. Some of these apples might be labelled, "To be eaten in the wind."

Of course no flavors are thrown away; they are intended for the taste that is up to them. Some apples have two distinct flavors, and perhaps one-half of them must be eaten in the house, the other out-doors. One Peter Whitney wrote from Northborough in 1782, for the Proceedings of the Boston Academy, describing an apple-tree in that town "producing fruit of opposite qualities, part of the same apple being frequently sour and the other sweet;" also some all sour, and others all sweet, and this diversity on all parts of the tree.

There is a wild apple on Nawshawtuck Hill in my town which has to me a peculiarly pleasant bitter tang, not perceived till it is three-quarters tasted. It remains on the tongue. As you eat it, it smells exactly like a squash-bug. It is a sort of triumph to eat and relish it.

I hear that the fruit of a kind of plum-tree in Provence is "called Prunes sibarelles, because it is impossible to whistle after having eaten them, from their sourness." But perhaps they were only eaten in the house and in summer, and if tried out-of-doors in a stinging atmosphere, who knows but you could whistle an octave higher and clearer?

In the fields only are the sours and bitters of Nature appreciated; just as the wood-chopper eats his meal in a sunny glade, in the middle of a winter day, with content, basks in a sunny ray there and dreams of summer in a degree of cold which, experienced in a chamber, would make a student miserable. They who are at work abroad are not cold, but rather it is they who sit shivering in houses. As with temperatures, so with flavors; as, with cold and heat, so with sour and sweet. This natural raciness, the sours and bitters which the diseased palate refuses, are the true condiments.

Let your condiments be in the condition of your senses. To appreciate the flavor of these wild apples requires vigorous and healthy senses, papillae firm and erect on the tongue and palate, not easily flattened and tamed.

From my experience with wild apples, I can understand that there may be reason for a savage's preferring many kinds of food which the civilized man rejects. The former has the palate of an out-door man. It takes a savage or wild taste to appreciate a wild fruit.

What a healthy out-of-door appetite it takes to relish the apple of life, the apple of the world, then!

“Nor is it every apple I desire,  
Nor that which pleases every palate best;  
‘T is not the lasting Deuxan I require,  
Nor yet the red-cheeked Greening I request,  
Nor that which first beshrewed the name of wife,  
Nor that whose beauty caused the golden strife:  
No, no I bring me an apple from the tree of life.”

So there is one thought for the field, another for the house. I would have my thoughts, like wild apples, to be food for walkers, and will not warrant them to be palatable, if tasted in the house.

#### THEIR BEAUTY.

Almost all wild apples are handsome. They cannot be too gnarly and crabbed and rusty to look at. The gnarliest will have some redeeming traits even to the eye. You will discover some evening redness dashed or sprinkled on some protuberance or in some cavity. It is rare that the summer lets an apple go without streaking or spotting it on some part of its sphere. It will have some red stains, commemorating the mornings and evenings it has witnessed; some dark and rusty blotches, in memory of the clouds and foggy, mildewy days that have passed over it; and a spacious field of green reflecting the general face of Nature, — green even as the fields; or a yellow ground, which implies a milder flavor, — yellow as the harvest, or russet as the hills.

Apples, these I mean, unspeakably fair, — apples not of Discord, but of Concord! Yet not so rare but that the homeliest may have a share. Painted by the frosts, some a uniform clear bright yellow, or red, or crimson, as if their spheres had regularly revolved, and enjoyed the influence of the sun on all sides alike, — some with the faintest pink blush imaginable, — some brindled with deep red streaks like a cow, or with hundreds of fine blood-red rays running regularly from the stem-dimple to the blossom-end, like meridional lines, on a straw-colored ground, — some touched with a greenish rust, like a fine lichen, here and there, with crimson blotches or eyes more or less confluent and fiery when wet, — and others gnarly, and freckled or peppered all over on the stem side with fine crimson spots on a white ground, as if accidentally sprinkled from the brush of Him who paints the autumn leaves. Others, again, are sometimes red inside, perfused with a beautiful blush, fairy food, too beautiful to eat, — apple of the Hesperides, apple of the evening sky! But like shells and pebbles on the sea-shore, they must be seen as they sparkle amid the withering leaves in some dell in the woods, in the autumnal air, or as they lie in the wet grass, and not when they have wilted and faded in the house.

#### THE NAMING OF THEM.

It would be a pleasant pastime to find suitable names for the hundred varieties which go to a single heap at the cider-mill. Would it not tax a man’s invention, — no one to be named after a man, and all in the lingua vernacula? Who shall stand godfather at the christening of the wild apples? It would exhaust the Latin and Greek languages, if they were used, and make the lingua vernacula flag. We should have to

call in the sunrise and the sunset, the rainbow and the autumn woods and the wild flowers, and the woodpecker and the purple finch and the squirrel and the jay and the butterfly, the November traveller and the truant boy, to our aid.

In 1836 there were in the garden of the London Horticultural Society more than fourteen hundred distinct sorts. But here are species which they have not in their catalogue, not to mention the varieties which our Crab might yield to cultivation.

Let us enumerate a few of these. I find myself compelled, after all, to give the Latin names of some for the benefit of those who live where English is not spoken, — for they are likely to have a world-wide reputation.

There is, first of all, the Wood-Apple (*Malus sylvatica*); the Blue-Jay Apple; the Apple which grows in Dells in the Woods, (*sylvestrivallis*), also in Hollows in Pastures (*campestrivallis*); the Apple that grows in an old Cellar-Hole (*Malus cellaris*); the Meadow-Apple; the Partridge-Apple; the Truant's Apple, (*Cessatoris*), which no boy will ever go by without knocking off some, however late it may be; the Saunterer's Apple, — you must lose yourself before you can find the way to that; the Beauty of the Air (*Decus Aeris*); December-Eating; the Frozen-Thawed (*gelato-soluta*), good only in that state; the Concord Apple, possibly the same with the Musketaquidensis; the Assabet Apple; the Brindled Apple; Wine of New England; the Chickaree Apple; the Green Apple (*Malus viridis*); — this has many synonymes; in an imperfect state, it is the Cholera morbilifera aut dysenterifera, puerulis dilectissima; — the Apple which Atalanta stopped to pick up; the Hedge-Apple (*Malus Sepium*); the Slug-Apple (*limacea*); the Railroad-Apple, which perhaps came from a core thrown out of the cars; the Apple whose Fruit we tasted in our Youth; our Particular Apple, not to be found in any catalogue, — *Pedestrium Solatium*; also the Apple where hangs the Forgotten Scythe; Iduna's Apples, and the Apples which Loki found in the Wood; and a great many more I have on my list, too numerous to mention, — all of them good. As Bodaeus exclaims, referring to the cultivated kinds, and adapting Virgil to his case, so I, adapting Bodaeus, —

“Not if I had a hundred tongues, a hundred mouths,  
An iron voice, could I describe all the forms  
And reckon up all the names of these wild apples.”

#### THE LAST GLEANING.

By the middle of November the wild apples have lost some of their brilliancy, and have chiefly fallen. A great part are decayed on the ground, and the sound ones are more palatable than before. The note of the chickadee sounds now more distinct, as you wander amid the old trees, and the autumnal dandelion is half-closed and tearful. But still, if you are a skilful gleaner, you may get many a pocket-full even of grafted fruit, long after apples are supposed to be gone out-of-doors. I know a Blue-Pearmain tree, growing within the edge of a swamp, almost as good as wild. You would not suppose that there was any fruit left there, on the first survey, but you must look according to system. Those which lie exposed are quite brown and rotten now, or perchance a few still show one blooming cheek here and there amid the wet leaves. Nevertheless, with

experienced eyes, I explore amid the bare alders and the huckleberry-bushes and the withered sedge, and in the crevices of the rocks, which are full of leaves, and pry under the fallen and decaying ferns, which, with apple and alder leaves, thickly strew the ground. For I know that they lie concealed, fallen into hollows long since and covered up by the leaves of the tree itself, — a proper kind of packing. From these lurking-places, anywhere within the circumference of the tree, I draw forth the fruit, all wet and glossy, maybe nibbled by rabbits and hollowed out by crickets and perhaps with a leaf or two cemented to it (as Curzon an old manuscript from a monastery's mouldy cellar), but still with a rich bloom on it, and at least as ripe and well kept, if not better than those in barrels, more crisp and lively than they. If these resources fail to yield anything, I have learned to look between the bases of the suckers which spring thickly from some horizontal limb, for now and then one lodges there, or in the very midst of an alder-clump, where they are covered by leaves, safe from cows which may have smelled them out. If I am sharp-set, for I do not refuse the Blue-Pearmain, I fill my pockets on each side; and as I retrace my steps in the frosty eve, being perhaps four or five miles from home, I eat one first from this side, and then from that, to keep my balance.

I learn from Topsell's Gesner, whose authority appears to be Albertus, that the following is the way in which the hedgehog collects and carries home his apples. He says,— "His meat is apples, worms, or grapes: when he findeth apples or grapes on the earth, he rolleth himself upon them, until he have filled all his prickles, and then carrieth them home to his den, never bearing above one in his mouth; and if it fortune that one of them fall off by the way, he likewise shaketh off all the residue, and walloweth upon them afresh, until they be all settled upon his back again. So, forth he goeth, making a noise like a cart-wheel; and if he have any young ones in his nest, they pull off his load wherewithal he is loaded, eating thereof what they please, and laying up the residue for the time to come."

#### THE "FROZEN-THAWED" APPLE.

Toward the end of November, though some of the sound ones are yet more mellow and perhaps more edible, they have generally, like the leaves, lost their beauty, and are beginning to freeze. It is finger-cold, and prudent farmers get in their barrelled apples, and bring you the apples and cider which they have engaged; for it is time to put them into the cellar. Perhaps a few on the ground show their red cheeks above the early snow, and occasionally some even preserve their color and soundness under the snow throughout the winter. But generally at the beginning of the winter they freeze hard, and soon, though undecayed, acquire the color of a baked apple.

Before the end of December, generally, they experience their first thawing. Those which a month ago were sour, crabbed, and quite unpalatable to the civilized taste, such at least as were frozen while sound, let a warmer sun come to thaw them, for they are extremely sensitive to its rays, are found to be filled with a rich, sweet cider, better than any bottled cider that I know of, and with which I am better acquainted than with wine. All apples are good in this state, and your jaws are the cider-press.

Others, which have more substance, are a sweet and luscious food, — in my opinion of more worth than the pine-apples which are imported from the West Indies. Those which lately even I tasted only to repent of it, — for I am semi-civilized, — which the farmer willingly left on the tree, I am now glad to find have the property of hanging on like the leaves of the young oaks. It is a way to keep cider sweet without boiling. Let the frost come to freeze them first, solid as stones, and then the rain or a warm winter day to thaw them, and they will seem to have borrowed a flavor from heaven through the medium of the air in which they hang. Or perchance you find, when you get home, that those which rattled in your pocket have thawed, and the ice is turned to cider. But after the third or fourth freezing and thawing they will not be found so good.

What are the imported half-ripe fruits of the torrid South, to this fruit matured by the cold of the frigid North? These are those crabbed apples with which I cheated my companion, and kept a smooth face that I might tempt him to eat. Now we both greedily fill our pockets with them, — bending to drink the cup and save our lappets from the overflowing juice, — and grow more social with their wine. Was there one that hung so high and sheltered by the tangled branches that our sticks could not dislodge it?

It is a fruit never carried to market, that I am aware of, — quite distinct from the apple of the markets, as from dried apple and cider, — and it is not every winter that produces it in perfection.

\* \* \* \* \*

The era of the Wild Apple will soon be past. It is a fruit which will probably become extinct in New England. You may still wander through old orchards of native fruit of great extent, which for the most part went to the cider-mill, now all gone to decay. I have heard of an orchard in a distant town, on the side of a hill, where the apples rolled down and lay four feet deep against a wall on the lower side, and this the owner cut down for fear they should be made into cider. Since the temperance reform and the general introduction of grafted fruit, no native apple-trees, such as I see everywhere in deserted pastures, and where the woods have grown up around them, are set out. I fear that he who walks over these fields a century hence will not know the pleasure of knocking off wild apples. Ah, poor man, there are many pleasures which he will not know! Notwithstanding the prevalence of the Baldwin and the Porter, I doubt if so extensive orchards are set out to-day in my town as there were a century ago, when those vast straggling cider-orchards were planted, when men both ate and drank apples, when the pomace-heap was the only nursery, and trees cost nothing but the trouble of setting them out. Men could afford then to stick a tree by every wall-side and let it take its chance. I see nobody planting trees to-day in such out-of-the-way places, along the lonely roads and lanes, and at the bottom of dells in the wood. Now that they have grafted trees, and pay a price for them, they collect them into a plat by their houses, and fence them in, — and the end of it all will be that we shall be compelled to look for our apples in a barrel.

This is “The word of the Lord that came to Joel the son of Pethuel.

“Hear this, ye old men, and give ear, all ye inhabitants of the land!

Hath this been in your days, or even in the days of your fathers?...

“That which the palmer-worm hath left hath the locust eaten; and that which the locust hath left hath the canker-worm eaten; and that which the canker-worm hath left hath the caterpillar eaten.

“Awake, ye drunkards, and weep! and howl, all ye drinkers of wine, because of the new wine! for it is cut off from your mouth.

“For a nation is come up upon my land, strong, and without number, whose teeth are the teeth of a lion, and he hath the cheek-teeth of a great lion.

“He hath laid my vine waste, and barked my fig-tree; he hath made it clean bare, and cast it away; the branches thereof are made white....

“Be ye ashamed, O ye husbandmen! howl, O ye vine-dressers!...

“The vine is dried up, and the fig-tree languisheth; the pomegranate-tree, the palm-tree also, and the apple-tree, even all the trees of the field, are withered: because joy is withered away from the sons of men.”

# NIGHT AND MOONLIGHT

Chancing to take a memorable walk by moonlight some years ago, I resolved to take more such walks, and make acquaintance with another side of nature: I have done so.

According to Pliny, there is a stone in Arabia called Selenites, "wherein is a white, which increases and decreases with the moon." My journal for the last year or two, has been selenitic in this sense.

Is not the midnight like Central Africa to most of us? Are we not tempted to explore it, — to penetrate to the shores of its lake Tchad, and discover the source of its Nile, perchance the Mountains of the Moon? Who knows what fertility and beauty, moral and natural, are there to be found? In the Mountains of the Moon, in the Central Africa of the night, there is where all Niles have their hidden heads. The expeditions up the Nile as yet extend but to the Cataracts, or perchance to the mouth of the White Nile; but it is the Black Nile that concerns us.

I shall be a benefactor if I conquer some realms from the night, if I report to the gazettes anything transpiring about us at that season worthy of their attention, — if I can show men that there is some beauty awake while they are asleep, — if I add to the domains of poetry.

Night is certainly more novel and less profane than day. I soon discovered that I was acquainted only with its complexion, and as for the moon, I had seen her only as it were through a crevice in a shutter, occasionally. Why not walk a little way in her light?

Suppose you attend to the suggestions which the moon makes for one month, commonly in vain, will it not be very different from anything in literature or religion? But why not study this Sanscrit? What if one moon has come and gone with its world of poetry, its weird teachings, its oracular suggestions, — so divine a creature freighted with hints for me, and I have not used her? One moon gone by unnoticed?

I think it was Dr. Chalmers who said, criticising Coleridge, that for his part he wanted ideas which he could see all round, and not such as he must look at away up in the heavens. Such a man, one would say, would never look at the moon, because she never turns her other side to us. The light which comes from ideas which have their orbit as distant from the earth, and which is no less cheering and enlightening to the benighted traveller than that of the moon and stars, is naturally reproached or nicknamed as moonshine by such. They are moonshine, are they? Well, then do your night-travelling when there is no moon to light you; but I will be thankful for the light that reaches me from the star of least magnitude. Stars are lesser or greater only as

they appear to us so. I will be thankful that I see so much as one side of a celestial idea, — one side of the rainbow, — and the sunset sky.

Men talk glibly enough about moonshine, as if they knew its qualities very well, and despised them; as owls might talk of sunshine. None of your sunshine, — but this word commonly means merely something which they do not understand, — which they are abed and asleep to, however much it may be worth their while to be up and awake to it.

It must be allowed that the light of the moon, sufficient though it is for the pensive walker, and not disproportionate to the inner light we have, is very inferior in quality and intensity to that of the sun. But the moon is not to be judged alone by the quantity of light she sends to us, but also by her influence on the earth and its inhabitants. “The moon gravitates toward the earth, and the earth reciprocally toward the moon.” The poet who walks by moonlight is conscious of a tide in his thought which is to be referred to lunar influence. I will endeavor to separate the tide in my thoughts from the current distractions of the day. I would warn my hearers that they must not try my thoughts by a daylight standard, but endeavor to realize that I speak out of the night. All depends on your point of view. In Drake’s “Collection of Voyages,” Wafer says of some Albinoes among the Indians of Darien, “They are quite white, but their whiteness is like that of a horse, quite different from the fair or pale European, as they have not the least tincture of a blush or sanguine complexion. \* \* \* Their eyebrows are milk-white, as is likewise the hair of their heads, which is very fine. \* \* \* They seldom go abroad in the daytime, the sun being disagreeable to them, and causing their eyes, which are weak and poring, to water, especially if it shines towards them, yet they see very well by moonlight, from which we call them moon-eyed.”

Neither in our thoughts in these moonlight walks, methinks, is there “the least tincture of a blush or sanguine complexion,” but we are intellectually and morally Albinoes, — children of Endymion, — such is the effect of conversing much with the moon.

I complain of Arctic voyagers that, they do not enough remind us of the constant peculiar dreariness of the scenery, and the perpetual twilight of the Arctic night. So he whose theme is moonlight, though he may find it difficult, must, as it were, illustrate it with the light of the moon alone.

Many men walk by day; few walk by night. It is a very different season. Take a July night, for instance. About ten o’clock, — when man is asleep, and day fairly forgotten, — the beauty of moonlight is seen over lonely pastures where cattle are silently feeding. On all sides novelties present themselves. Instead of the sun there are the moon and stars, instead of the wood-thrush there is the whip-poor-will, — instead of butterflies in the meadows, fire-flies, winged sparks of fire! who would have believed it? What kind of cool deliberate life dwells in those dewy abodes associated with a spark of fire? So man has fire in his eyes, or blood, or brain. Instead of singing birds, the half-throttled note of a cuckoo flying over, the croaking of frogs, and the intenser dream of crickets. But above all, the wonderful trump of the bull-frog, ringing from Maine to Georgia.

The potato-vines stand upright, the corn grows apace, the bushes loom, the grain-fields are boundless. On our open river terraces once cultivated by the Indian, they appear to occupy the ground like an army, — their heads nodding in the breeze.

Small trees and shrubs are seen in the midst, overwhelmed as by an inundation. The shadows of rocks and trees, and shrubs and hills, are more conspicuous than the objects themselves. The slightest irregularities in the ground are revealed by the shadows, and what the feet find comparatively smooth, appears rough and diversified in consequence. For the same reason the whole landscape is more variegated and picturesque than by day. The smallest recesses in the rocks are dim and cavernous; the ferns in the wood appear of tropical size. The sweet fern and indigo in overgrown wood-paths wet you with dew up to your middle. The leaves of the shrub-oak are shining as if a liquid were flowing over them. The pools seen through the trees are as full of light as the sky. "The light of the day takes refuge in their bosoms," as the Purana says of the ocean. All white objects are more remarkable than by day. A distant cliff looks like a phosphorescent space on a hillside. The woods are heavy and dark. Nature slumbers. You see the moonlight reflected from particular stumps in the recesses of the forest, as if she selected what to shine on. These small fractions of her light remind one of the plant called moon-seed, — as if the moon were sowing it in such places.

In the night the eyes are partly closed or retire into the head. Other senses take the lead. The walker is guided as well by the sense of smell. Every plant and field and forest emits its odor now, swamp-pink in the meadow and tansy in the road; and there is the peculiar dry scent of corn which has begun to show its tassels. The senses both of hearing and smelling are more alert. We hear the tinkling of rills which we never detected before. From time to time, high up on the sides of hills, you pass through a stratum of warm air. A blast which has come up from the sultry plains of noon. It tells of the day, of sunny noon-tide hours and banks, of the laborer wiping his brow and the bee humming amid flowers. It is an air in which work has been done, — which men have breathed. It circulates about from wood-side to hill-side like a dog that has lost its master, now that the sun is gone. The rocks retain all night the warmth of the sun which they have absorbed. And so does the sand. If you dig a few inches into it you find a warm bed. You lie on your back on a rock in a pasture on the top of some bare hill at midnight, and speculate on the height of the starry canopy. The stars are the jewels of the night, and perchance surpass anything which day has to show. A companion with whom I was sailing one very windy but bright moonlight night, when the stars were few and faint, thought that a man could get along with them, — though he was considerably reduced in his circumstances, — that they were a kind of bread and cheese that never failed.

No wonder that there have been astrologers, that some have conceived that they were personally related to particular stars. Dubartas, as translated by Sylvester, says he'll

“not believe that the great architect  
With all these fires the heavenly arches decked  
Only for show, and with these glistening shields,  
T’ awake poor shepherds, watching in the fields.”  
He’ll “not believe that the least flower which pranks  
Our garden borders, or our common banks,  
And the least stone, that in her warming lap  
Our mother earth doth covetously wrap,  
Hath some peculiar virtue of its own,  
And that the glorious stars of heav’n have none.”

And Sir Walter Raleigh well says, “the stars are instruments of far greater use, than to give an obscure light, and for men to gaze on after sunset;” and he quotes Plotinus as affirming that they “are significant, but not efficient;” and also Augustine as saying, “Deus regit inferiora corpora per superiora:” God rules the bodies below by those above. But best of all is this which another writer has expressed: “Sapiens adjuvabit opus astrorum quemadmodum agricola terrae naturam:” a wise man assisteth the work of the stars as the husbandman helpeth the nature of the soil.

It does not concern men who are asleep in their beds, but it is very important to the traveller, whether the moon shines brightly or is obscured. It is not easy to realize the serene joy of all the earth, when she commences to shine unobstructedly, unless you have often been abroad alone in moonlight nights. She seems to be waging continual war with the clouds in your behalf. Yet we fancy the clouds to be her foes also. She comes on magnifying her dangers by her light, revealing, displaying them in all their hugeness and blackness, then suddenly casts them behind into the light concealed, and goes her way triumphant through a small space of clear sky.

In short, the moon traversing, or appearing to traverse, the small clouds which lie in her way, now obscured by them, now easily dissipating and shining through them, makes the drama of the moonlight night to all watchers and night-travellers. Sailors speak of it as the moon eating up the clouds. The traveller all alone, the moon all alone, except for his sympathy, overcoming with incessant victory whole squadrons of clouds above the forests and lakes and hills. When she is obscured he so sympathizes with her that he could whip a dog for her relief, as Indians do. When she enters on a clear field of great extent in the heavens, and shines unobstructedly, he is glad. And when she has fought her way through all the squadron of her foes, and rides majestic in a clear sky unscathed, and there are no more any obstructions in her path, he cheerfully and confidently pursues his way, and rejoices in his heart, and the cricket also seems to express joy in its song.

How insupportable would be the days, if the night with its dews and darkness did not come to restore the drooping world. As the shades begin to gather around us, our primeval instincts are aroused, and we steal forth from our lairs, like the inhabitants of the jungle, in search of those silent and brooding thoughts which are the natural prey of the intellect.

Richter says that “The earth is every day overspread with the veil of night for the same reason as the cages of birds are darkened, viz: that we may the more readily apprehend the higher harmonies of thought in the hush and quiet of darkness. Thoughts which day turns into smoke and mist, stand about us in the night as light and flames; even as the column which fluctuates above the crater of Vesuvius, in the daytime appears a pillar of cloud, but by night a pillar of fire.”

There are nights in this climate of such serene and majestic beauty, so medicinal and fertilizing to the spirit, that methinks a sensitive nature would not devote them to oblivion, and perhaps there is no man but would be better and wiser for spending them out of doors, though he should sleep all the next day to pay for it; should sleep an Endymion sleep, as the ancients expressed it, — nights which warrant the Grecian epithet ambrosial, when, as in the land of Beulah, the atmosphere is charged with dewy fragrance, and with music, and we take our repose and have our dreams awake, — when the moon, not secondary to the sun,

“gives us his blaze again,

Void of its flame, and sheds a softer day.

Now through the passing cloud she seems to stoop,

Now up the pure cerulean rides sublime.”

Diana still hunts in the New England sky.

“In Heaven queen she is among the spheres.

She, mistress-like, makes all things to be pure.

Eternity in her oft change she bears;

She Beauty is; by her the fair endure.

Time wears her not; she doth his chariot guide;

Mortality below her orb is placed;

By her lie virtues of the stars down slide;

By her is Virtue’s perfect image cast.”

The Hindoos compare the moon to a saintly being who has reached the last stage of bodily existence.

Great restorer of antiquity, great enchanter. In a mild night, when the harvest or hunter’s moon shines unobstructedly, the houses in our village, whatever architect they may have had by day, acknowledge only a master. The village street is then as wild as the forest. New and old things are confounded. I know not whether I am sitting on the ruins of a wall, or on the material which is to compose a new one. Nature is an instructed and impartial teacher, spreading no crude opinions, and flattering none; she will be neither radical nor conservative. Consider the moonlight, so civil, yet so savage!

The light is more proportionate to our knowledge than that of day. It is no more dusky in ordinary nights, than our mind’s habitual atmosphere, and the moonlight is as bright as our most illuminated moments are.

“In such a night let me abroad remain

Till morning breaks, and all’s confused again.”

Of what significance the light of day, if it is not the reflection of an inward dawn? — to what purpose is the veil of night withdrawn, if the morning reveals nothing to the soul? It is merely garish and glaring.

When Ossian in his address to the sun exclaims,

“Where has darkness its dwelling?

Where is the cavernous home of the stars,

When thou quickly followest their steps,

Pursuing them like a hunter in the sky, —

Thou climbing the lofty hills,

They descending on barren mountains?”

who does not in his thought accompany the stars to their “cavernous home,” “descending” with them “on barren mountains?”

Nevertheless, even by night the sky is blue and not black, for we see through the shadow of the earth into the distant atmosphere of day, where the sunbeams are revelling.

# HUCKLEBERRIES

*Agrestem tenui meditabor arundine musam*

I am going to play a rustic strain on my slender reed —  
*non injussa cano* —

but I trust that I do not sing unbidden things.

Many public speakers are accustomed, as I think foolishly, to talk about what they call little things in a patronising way sometimes, advising, perhaps, that they be not wholly neglected; but in making this distinction they really use no juster measure than a ten-foot pole, and their own ignorance. According to this rule a small potatoe is a little thing, a big one a great thing. A hogshead-full of anything — the big cheese which it took so many oxen to draw — a national salute — a state-muster — a fat ox — the horse Columbus — or Mr. Blank — the Ossian Boy — there is no danger that any body will call these little things. A cartwheel is a great thing — a snow flake a little thing. The Wellingtoniagigantea — the famous California tree, is a great thing — the seed from which it sprang a little thing — scarcely one traveller has noticed the seed at all — and so with all the seeds or origins of things. But Pliny said — *In minimis Natura praestat* — Nature excels in the least things.

In this country a political speech, whether by Mr. Seward or Caleb Cushing, is a great thing, a ray of light a little thing. It would be felt to be a greater national calamity if you should take six inches from the corporeal bulk of one or two gentlemen in Congress, than if you should take a yard from their wisdom and manhood.

I have noticed that whatever is thought to be covered by the word education — whether reading, writing or ‘rith- metick — is a great thing, but almost all that constitutes education is a little thing in the estimation of such speakers as I refer to. In short, whatever they know and care but little about is a little thing, and accordingly almost everything good or great is little in their sense, and is very slow to grow any bigger.

When the husk gets separated from the kernel, almost all men run after the husk and pay their respects to that. It is only the husk of Christianity that is so bruited and wide spread in this world, the kernel is still the very least and rarest of all things. There is not a single church founded on it. To obey the higher law is generally considered the last manifestation of littleness.

I have observed that many English naturalists have a pitiful habit of speaking of their proper pursuit as a sort of trifling or waste of time — a mere interruption to more important employments and ‘severer studies’ — for which they must ask pardon of the

reader. As if they would have you believe that all the rest of their lives was consecrated to some truly great and serious enterprise. But it happens that we never hear more of this, as we certainly should, if it were only some great public- or philanthropic service, and therefore conclude that they have been engaged in the heroic and magnanimous enterprise of feeding, clothing, housing and warming themselves and their dependents, the chief value of all which was that it enabled them to pursue just these studies of which they speak so slightingly. The 'severer study' they refer to was keeping their accounts. Comparatively speaking — what they call their graver pursuits and severer studies was the real trifling and misspense of life — and were they such fools as not to know it? It is, in effect at least, mere cant. All mankind have depended on them for this intellectual food.

I presume that every one of my audience knows what a huckleberry is — has seen a huckleberry — gathered a huckleberry — nay tasted a huckleberry — and that being the case, that you will not be averse to revisiting the huckleberry field in imagination this evening, though the pleasure of this excursion may fall as far short of the reality, as the flavor of a dried huckleberry is inferior to that of a fresh one.

Huckleberries begin to be ripe July third (or generally the thirteenth), are thick enough to pick about the twenty- second, at their height about the fifth of August, and last fresh till after the middle of that month.

This, as you know, is an upright shrub more or less stout depending on the exposure, with a spreading bushy top — a dark brown bark — red recent shoots and thick leaves. The flowers are smaller and much more red than those of the other species.

It is said to range from the Saskatchewan to the mountains of Georgia, and from the Atlantic to the Mississippi in this latitude — but it abounds over but a small part of this area, and there are large tracts where it is not found at all.

By botanists it is called of late, but I think without good reason, *Gaylussacia resinosa*, after the celebrated French chemist. If he had been the first to distil its juices and put them in this globular bag, he would deserve this honor, or if he had been a celebrated picker of huckleberries, perchance paid for his schooling so, or only notoriously a lover of them, we should not so much object. But it does not appear that he ever saw one. What if a committee of Parisian naturalists had been appointed to break this important news to an Indian maiden who had just filled her basket on the shore of Lake Huron! It is as if we should hear that the Daguerreotype had been finally named after the distinguished Chippeway conjurer, The-Wind-that-Blows. By another it has been called *Andromeda baccata*, the berry bearing andromeda — but he evidently lived far away from huckleberries and milk.

I observe green huckleberries by the nineteenth of June, and perhaps three weeks later, when I have forgotten them, I first notice on some hill side exposed to the light, some black or blue ones amid the green ones and the leaves, always sooner than I had expected, and though they may be manifestly premature, I make it a point to taste them, and so inaugurate the huckleberry season.

In a day or two the black are so thick among the green ones that they no longer incur the suspicion of being worm-eaten, and perhaps a day later I pluck a handful from one bush, and I do not fail to make report of it when I get home, though it is rarely believed, most people are so behind hand in their year's accounts.

Early in August, in a favorable year, the hills are black with them. At Nagog Pond I have seen a hundred bushels in one field — the bushes drooping over the rocks with the weight of them — and a very handsome sight they are, though you should not pluck one of them. They are of various forms, colors and flavors — some round — some pear-shaped — some glossy black — some dull black, some blue with a tough and thick skin (though they are never of the peculiar light blue of blueberries with a bloom) — some sweeter, some more insipid — etc., etc., more varieties than botanists take notice of.

To-day perhaps you gather some of those large, often pear-shaped, sweet blue ones which grow tall and thinly amid the rubbish where woods have been cut. They have not borne there before for a century — being over-shadowed and stunted by the forest — but they have the more concentrated their juices — and profited by the new recipes which nature has given them — and now they offer to you fruit of the very finest flavor, like wine of the oldest vintage.

And tomorrow you come to a strong moist soil where the black ones shine with such a gloss — every one its eye on you, and the blue are so large and firm, that you can hardly believe them to be huckleberries at all, or edible; but you seem to have travelled into a foreign country, or else are dreaming.

They are a firmer berry than most of the whortleberry family — and hence are the most marketable.

If you look closely at a huckleberry you will see that it is dotted, as if sprinkled over with a yellow dust or meal, which looks as if it could be rubbed off. Through a microscope, it looks like a resin which has exuded, and on the small green fruit is of a conspicuous light orange or lemon color, like small specks of yellow lichens. It is apparently the same with that shining resinous matter which so conspicuously covers the leaves when they are unfolding, making them sticky to the touch — whence this species is called *resinosa* or resinous.

There is a variety growing in swamps — a very tall and slender bush drooping or bent like grass to one side — commonly three or four feet high, but often seven feet — the berries, which are later than the former, are round and glossy black — with resinous dots as usual — and grow in flattish topped racemes — sometimes ten or twelve together, though generally more scattered. I call it the swamp-huckleberry.

But the most marked variety is the red-huckleberry — the white of some, (for the less ripe are whitish) — which ripens at the same time with the black. It is red with a white cheek, often slightly pear-shaped, semitransparent with a luster, very finely and indistinctly white dotted. It is as easily distinguished from the common in the green state as when ripe. I know of but three or four places in the town where they grow. It might be called *Gaylussacia resinosa* var *erythrocarpa*.

I once did some surveying for a man, who remarked, but not till the job was nearly done, that he did not know when he should pay me. I did not at first pay much heed to this observation, though it was unusual, supposing that he meant to pay me within a reasonable time. Nevertheless it occurred to me that if he did not know when he should pay me still less did I know when I should be paid. He added, however, that I was perfectly secure, for there were the pigs in the sty (and as nice pigs as ever were seen) and there was his farm itself which I had surveyed, and knew was there as much as he. All this had its due influence in increasing my sense of security, as you may suppose. After many months he sent me a quart of red huckleberries, for they grew on his farm, and this I thought was ominous; he distinguished me altogether too much by this gift, since I was not his particular friend. I saw that it was the first installment of my dues — and that it would go a great way toward being the last. In the course of years he paid a part of the debt in money, and that is the last that I have heard of it. I shall beware of red huckleberry gifts in the future.

Then there is the Late Whordeberry — Dangleberry or Blue Tangles — whose fruit does not begin to be ripe until about a month after huckleberries begin, when these and blueberries are commonly shrivelled and spoiling — on about August seventh, and is in its prime near the end of August.

This is a tall and handsome bush about twice as high as a huckleberry bush, with altogether a glaucous aspect, growing in shady copses where it is rather moist, and to produce much fruit it seems to require wet weather.

The fruit is one of the handsomest of berries, smooth, round and blue, larger than most huckleberries and more transparent, on long stems dangling two or three inches, and more or less tangled. By the inexperienced it is suspected to be poisonous, and so avoided, and perhaps is the more fair and memorable to them on that account. Though quite good to eat, it has a peculiar, slightly astringent, and compared with most huckleberries, not altogether pleasant flavor, and a tough skin.

At the end of the first week of September, they are commonly the only edible Whortleberries which are quite fresh. They are rare hereabouts however, and it is only in certain years that you can find enough for a pudding.

There is still another kind of Huckleberry growing in this town, called the Hairy Huckleberry, which ripens about the same time with the last. It is quite rare, growing only in the wildest and most neglected places, such as cold sphagnous swamps where the *Andromeda polifolia* and *Kalmia glauca* are found, and in some almost equally neglected but firmer low ground. The berries are oblong and black, and, with us, roughened with short hairs. It is the only species of *Vaccinieae* that I know of in this town whose fruit is inedible; though I have seen another kind of Whortleberry, the Deer- berry or Squaw Huckleberry, growing in another part of the state, whose fruit is said to be equally inedible. The former is merely insipid however. Some which grow on firmer ground have a little more flavor, but the thick and shaggy-feeling coats of the berries left in the mouth are far from agreeable to the palate.

Both these and Dangleberries are placed in the same genus (or section) with the common huckleberry.

Huckleberries are very apt to dry up and not attain their proper size — unless rain comes to save them before the end of July. They will be dried quite hard and black by drought even before they have ripened. On the other hand they frequently burst open and are so spoiled in consequence of copious rains when they are fully ripe.

They begin to be soft and wormy as early as the middle of August, and generally about the twentieth the children cease to carry them round to sell, as they are suspected by the purchasers.

How late when the huckleberries begin to be wormy and the pickers are deserting the fields! The walker feels very solitary now.

But in woods and other cool places they commonly last quite fresh a week or more longer, depending on the season. In some years when there are far more berries than pickers or even worms, and the birds appear to pass them by, I have found them plump, fresh, and quite thick, though with a somewhat dried taste, the fourteenth of October, when the bushes were mostly leafless, and the leaves that were left, were all red, and they continued to hold on after the leaves had all fallen, till they were softened and spoiled by rain.

Sometimes they begin to dry up generally by the middle of August — after they are ripe, but before spoiling, and by the end of that month I have seen the bushes so withered and brown owing to the drought, that they appeared dead like those which you see broken off by the pickers, or as if burnt.

I have seen the hills still black with them, though hard and shrivelled as if dried in a pan, late in September. And one year I saw an abundance of them still holding on the eleventh of December, they having dried ripe prematurely, but these had no sweetness left. The sight of them thus dried by nature may have originally suggested to the Indians to dry them artificially.

High-blueberries, the second kind of low-blueberries, huckleberries and low-blackberries are all at their height generally during the first week of August. In the dog-days (or the first ten of them) they abound and attain their full size.

Huckleberries are classed by botanists with the cranberries (both bog and mountain) — snowberry, bearberry — mayflower, checkerberry — the andromedas, clethra, laurels, azaleas, rhodora, ledum, pyrolas, prince's pine, Indian pipes, and many other plants, and they are called all together the Heath Family, they being in many respects similar to and occupying similar ground with the heaths of the Old World, which we have not. If the first botanists had been American this might have been called the Huckleberry Family including the heaths. Plants of this order (*Ericaceae*) are said to be among the earliest ones found in a fossil state, and one would say that they promised to last as long as any on this globe. George B. Emerson says that the whortleberry differs from the heath proper, 'essentially only in its juicy fruit surrounded by the calyx segments.'

The genus to which the whortleberries belong, is called by most botanists *Vaccinium*, which I am inclined to think is properly derived from *bacca*, a berry, as if these were the chief of all berries, though the etymology of this word is in dispute.

Whortle or Hurtleberry, Bilberry, and Blae or Blea, that is blue berry are the names given in England originally to the fruit of the *Vaccinium myrtillus* which we have not in New England and also to the more scarce and local *Vaccinium uliginosum* which we have.

The word whortleberry is said to be derived from the Saxon *heort-berg* (or *heorot-berg*), the hart's berry.

Hurts is an old English word used in heraldry, where, according to Bailey, it is 'certain balls resembling hurtleberries.' The Germans say *Heidel-beere*, that is heath berry. Huckleberry — this word is used by Lawson in 1709 — appears to be an American word derived from Whortleberry — and applied to fruits of the same family, but for the most part of different species from the English whortleberries. According to the Dictionary the word berry is from the Saxon *beria* — a grape or cluster of grapes. A French name of whortleberry is '*raisin des bois*' — grape of the woods. It is evident that the word berry has a new significance in America.

We do not realize how rich our country is in berries. The ancient Greeks and Romans appear not to have made much account of strawberries, huckleberries, melons etc because they had not got them.

The Englishman Lindley, in his *Natural System of Botany*, says that the *Vaccinieae* are 'Natives of North America, where they are found in great abundance as far as high northern latitudes; sparingly in Europe; and not uncommonly on high land in the Sandwich Islands.'

Or as George B. Emerson states it, they 'are found chiefly in the temperate, or on mountains in the warmer regions of America. Some are found in Europe; some on the continent and islands of Asia, and on islands in the Atlantic, Pacific and Indian Oceans.'

'The whortleberries and cranberries,' says he, 'take the place, throughout the northern part of this continent, of the heaths of the corresponding climates of Europe; and fill it with no less of beauty, and incomparably more of use.' According to the last arrangement of our plants, we have fourteen species of the Whordeberry Family (*Vaccinieae*) in New England, eleven of which bear edible berries, eight, berries which are eaten raw, and five of the last kind are abundant — to wit — the huckleberry — the bluet or Pennsylvania blueberry — the Canada blueberry (in the northern part of New England) — the second or common low blueberry — and the high or swamp-blueberry (not to mention the Dangle-berry, which is common in some seasons and localities).

On the other hand I gather from Loudon and others that there are only two species growing in England, which are eaten raw, answering to our eight — to wit, the Bilberry (*V. myrtillus*) and the Blea-berry or Bog Whortleberry (*V. uliginosum*), both of which are found in North America, and the last is the common one on the summit of the

White Mountains, but in Great Britain it is found only in the northern part of England and in Scotland. This leaves only one in England to our five which are abundant.

In short, it chances that of the thirty-two species of *Vaccinium* which Loudon describes, all except the above two and four more are referred to North America alone, and only three or possibly four are found in Europe.

Yet the few Englishmen with whom I have spoken on this subject love to think and to say that they have as many huckleberries as we. I will therefore quote the most which their own authorities say not already quoted, about the abundance and value of their only two kinds which are eaten raw.

Loudon says of the bog whortleberry (*V. uliginosum*), 'The berries are agreeable but inferior in flavor to those of *Vaccinium myrtillus* [the bilberry]; eaten in large quantities, they occasion giddiness, and a slight headache.'

And of their only common whortleberry (*V. myrtillus*), he says, 'It is found in every country in Britain, from Cornwall to Caithness, least frequently in the south-eastern countries, and increases in quantity as we advance northward.' It 'is an elegant and also a fruit-bearing plant.' The berries 'are eaten in tarts or with cream, or made into a jelly, in the northern and western counties of England; and, in other parts of the country they are made into pies and puddings.' They 'are very acceptable to children either eaten by themselves, or with milk' or otherwise. They 'have an astringent quality.'

Coleman in his "Woodlands, Heaths, and Hedges," says 'The traveller in our upland and mountain districts can hardly have failed to notice, as his almost constant companion, this cheerful little shrub,... it flourishes best in a high airy situation, only the summits of the very loftiest mountains of which this country can boast being too elevated for this hardy little mountaineer.'

'In Yorkshire, and many parts of the north, large quantities of bilberries are brought into the market, being extensively used as an ingredient in pies and puddings, or preserved in the form of jam... Much, however, of the relish of these wilding fruits must be set down to the exhilarating air, and those charms of scenery that form the accessories of a mountain feast;... One of the prettiest sights that greet one's eye in the districts where it abounds, is that of a party of rustic children "a-bilberrying" (for the greater portion of those that come to market are collected by children); there they may be seen, knee deep in the "wires," or clambering over the broken gray rocks to some rich nest of berries, their tanned faces glowing with health, and their picturesque dress (or undress) — with here and there bits of bright red, blue, or white — to the painter's eye contrasting beautifully with the purple, gray and brown of the moorland, and forming altogether rich pictorial subjects.'

These authorities tell us that children and others eat the fruit, just as they tell us that the birds do. It is evident from all this that whortleberries do not make an important part of the regular food of the Old English people in their season, as they do of the New Englanders. What should we think of a summer in which we did not taste a huckleberry pudding? That is to Jonathan what his plum pudding is to John Bull.

Yet Dr. Manassah Cutler, one of the earliest New England botanists, speaks of the huckleberry lightly as being merely a fruit which children love to eat with their milk. What ingratitude thus to shield himself behind the children! I should not wonder if it turned out that Dr. Manassah Cutler ate his huckleberry pudding or pie regularly through the season, as many his equals do. I should have pardoned him had he frankly put in his thumb and pulled out a plum, and cried 'What a Great Doctor am I?' But probably he was lead astray by reading English books or it may be that the Whites did not make so much use of them in his time.

Widely dispersed as their bilberry may still be in England, it was undoubtedly far more abundant there once. One botanist says that 'This is one of the species, that if allowed, would overrun Britain, and form, with *Culluna vulgaris* (heather) and *Empetrum nigrum* (crowberry, which grows on our White Mountains), much of the natural physiognomical character of its vegetation.'

The genus *Gaylussacia*, to which our huckleberry belongs, has no representative in Great Britain, nor does our species extend very far northward in this country.

So I might say of edible berries generally, that there are far fewer kinds in Old than in New England.

Take the rubuses or what you might call bramble berries, for instance, to which genus our raspberries, blackberries and thimbleberries belong. According to Loudon there are five kinds indigenous in Britain to our eight. But of these five only two appear to be at all common, while we have four kinds both very common and very good. The Englishman Coleman says of their best, the English raspberry, which species we also cultivate, that 'the wilding is not sufficiently abundant to have much importance.'

And the same is true of wild fruits generally. Hips and haws are much more important comparatively there than here, where they have hardly got any popular name.

I state this to show how contented and thankful we ought to be.

It is to be remembered that the vegetation of Great Britain is that of a much more northern latitude than where we live, that some of our alpine shrubs are found on the plain there and their two whortleberries are alpine or extreme northern plants with us.

If you look closely you will find blueberry and huckleberry bushes under your feet, though they may be feeble and barren, throughout all our woods, the most persevering Native Americans, ready to shoot up into place and power at the next election among the plants, ready to reclothe the hills when man has laid them bare and feed all kinds of pensioners. What though the woods be cut down; it appears that this emergency was long ago anticipated and provided for by Nature, and the interregnum is not allowed to be a barren one. She not only begins instantly to heal that scar, but she compensates us for the loss and refreshes us with fruits such as the forest did not produce. As the sandal wood is said to diffuse a perfume around the woodman who cuts it — so in this case Nature rewards with unexpected fruits the hand that lays her waste.

I have only to remember each year where the woods have been cut just long enough to know where to look for them. It is to refresh us thus once in a century that they bide their time on the forest floor. If the farmer mows and burns over his overgrown

pasture for the benefit of the grass, or to keep the children out, the huckleberries spring up there more vigorous than ever, and the fresh blueberry shoots tinge the earth crimson. All our hills are, or have been, huckleberry hills, the three hills of Boston and no doubt Bunker Hill among the rest. My mother remembers a woman who went a-whortleberrying where Dr. Lowell's church now stands.

In short the whortleberry bushes in the Northern States and British America are a sort of miniature forest surviving under the great forest, and reappearing when the latter is cut, and also extending northward beyond it. The small berry-bearing shrubs of this family, as the crowberry, bilberry, and cranberry, are called by the Esquimaux in Greenland, 'berry grass,' and Crantz says that the Greenlanders cover their winter houses with 'bilberry bushes,' together with turf and earth. They also burn them; and I hear that some body in this neighborhood has invented a machine for cutting up huckleberry bushes for fuel.

It is remarkable how universally, as it respects soil and exposure, the whortleberry family is distributed with us, almost we may say a new species for every thousand feet of elevation. One kind or another, of those of which I am speaking, flourishing in every soil and locality.

There is the high blueberry in swamps — the second low blueberry, with the huckleberry, on almost all fields and hills — the Pennsylvanian and Canada blueberries especially in cool and airy places in openings in the woods and on hills and mountains, while we have two kinds confined to the alpine tops of our highest mountains — the family thus ranging from the lowest valleys to the highest mountain tops, and forming the prevailing small shrubbery of a great part of New England.

The same is true hereabouts of a single species of this family, the huckleberry proper. I do not know of a spot where any shrub grows in this neighborhood, but one or another variety of the huckleberry may also grow there. It is stated in Loudon that all the plants of this order 'require a peat soil, or a soil of a close cohesive nature,' but this is not the case with the huckleberry. It grows on the tops of our highest hills — no pasture is too rocky or barren for it — it grows in such deserts as we have, standing in pure sand — and at the same time it flourishes in the strongest and most fertile soil. One variety is peculiar to quaking bogs where there can hardly be said to be any soil beneath, to say nothing of another but unpalatable species, the hairy huckleberry, which is found there. It also extends through all our woods more or less thinly, and a distinct species, the dangleberry, belongs especially to moist woods and thickets.

Such care has Nature taken to furnish to birds and quadrupeds, and to men, a palatable berry of this kind, slightly modified by soil and climate, wherever the consumer may chance to be. Corn and potatoes, apples and pears, have comparatively a narrow range, but we can fill our basket with whortleberries on the summit of Mount Washington, above almost all other shrubs with which we are familiar, the same kind which they have in Greenland, and again when we get home, with another species in our lowest swamps, such as the Greenlanders never dreamed of.

The berries which I celebrate, appear to have a range, most of them, very nearly coterminous with what has been called the Algonquin Family of Indians, whose territories embraced what are now the Eastern, Middle and Northwestern States — and the Canadas — and surrounded those of the Iroquois in what is now New York. These were the small fruits of the Algonquin and Iroquois Families.

Of course the Indians naturally made a much greater account of wild fruits than we do, and among the most important of these were huckleberries.

They taught us not only the use of corn and how to plant it, but also of whortleberries and how to dry them for winter. We should have hesitated long before we tasted some kinds if they had not set us the example, knowing by old experience that they were not only harmless but salutary. I have added a few to my number of edible berries, by walking behind an Indian in Maine, and observing that he ate some which I never thought of tasting before.

To convince you of the extensive use which the Indians made of huckleberries, I will quote at length the testimony of the most observing travellers, on this subject, as nearly as possible in the order in which it was given us; for it is only after listening patiently to such reiterated and concurring testimony, of various dates — and respecting widely distant localities — that we come to realize the truth.

But little is said by the discoverers of the use which the Indians made of the fresh berries in their season — the hand to mouth use of them — because there was little to be said — though in this form they may have been much the most important to them. We have volumes of recipes, called cookbooks — but when a fruit or a tart is ready for the table, nothing remains but to eat it without any more words. We therefore have few or no accounts of Indians going a- huckleberrying — though they had more than a six weeks' vacation for that purpose, and probably camped on the huckleberry field.

I will go far enough back for my authorities to show that they did not learn the use of these berries from us whites.

In the year 1615, Champlain, the founder of Quebec, being far up the Ottawa spying out the land and taking notes among the Algonquins, on his way to the Fresh Water Sea since called Lake Huron — observed that the natives made a business of collecting and drying for winter use, a small berry which he calls blues, and also raspberries — the former is the common blueberry of those regions, by some considered a variety of our early low blueberry (*Vaccinium Pennsylvanicum*); and again when near the lake he observes that the natives make a kind of bread of pounded corn sifted and mixed with mashed beans which have been boiled — and sometimes they put dried blueberries and raspberries into it.

This was five years before the Pilgrims crossed the Atlantic, and is the first account of huckleberry cake that I know of.

Gabriel Sagard, a Franciscan Friar, in the account of his visit to the Huron Country in 1624, says, 'There is so great a quantity of blues, which the Hurons call Ohentaque, and other little fruits which they call by a general name Hahique, that the savages regularly dry them for the winter, as we do prunes in the sun, and that serves them

for comfits for the sick, and to give taste to their sagamite [or gruel, making a kind of plum porridge], and also to put into the little loaves (or cakes, pains) which they cook under the ashes.'

According to him they put not only blueberries and raspberries into their bread but strawberries, 'wild mulberries (meures champestres) and other little fruits dry and green.' Indeed the gathering of blueberries by the savages is spoken of by the early French explorers as a regular and important harvest with them.

Le Jeune, the Superior of the Jesuits in Canada — residing at Quebec — in his Relation for 1639 — says of the savages that 'Some figure to themselves a paradise full of bluets.'

Roger Williams, who knew the Indians well, in his account of those in his neighborhood — published in 1643 — tells us that 'Sautash are those currants (grapes and whortleberries) dried by the natives, and so preserved all the year, which they beat to powder and mingle it with their parched meal, and make a delicate dish which they call Sautauthig, which is as sweet to them as plum or spice cake to the English.'

But Nathaniel Morton, in his New England's Memorial, printed in 1669 — speaking of white men going to treat with Canonicus, a Narraganset Indian, about Mr. Oldham's death in 1636 — says 'Boiled chestnuts is their white bread, and because they would be extraordinary in their feasting, they strove for variety after the English manner, boiling puddings made of beaten corn, putting therein great store of black berries, somewhat like currants' — no doubt whortleberries. This seems to imply that the Indians imitated the English — or set before their guests dishes to which they themselves were not accustomed — or which were extra-ordinary. But we have seen that these dishes were not new or unusual to them and it was the whites who imitated the Indians rather.

John Josselyn — in his New England's Rarities, published in 1672 — says under the fruits of New England, 'Bill-berries, two kinds, black and sky colored, which is more frequent... The Indians dry them in the sun and sell them to the English by the bushel, who make use of them instead of currence, putting of them into puddens, both boyled and baked, and into water gruel.'

The largest Indian huckleberry party that I have heard of is mentioned in the life of Captain Church who, it is said, when in pursuit of King Phillip in the summer of 1676, came across a large body of Indians, chiefly squaws, gathering whortleberries on a plain near where New Bedford now is, and killed and took prisoner sixty-six of them — some throwing away their baskets and their berries in their flight. They told him that their husbands and brothers, a hundred of them, who with others had their rendezvous in a great cedar swamp nearby, had recently left them to gather whortleberries there, while they went to Sconticut Neck to kill cattle and horses for further and more substantial provisions.

La Hontan in 1689, writing from the Great Lakes, repeats what so many French travellers had said about the Indians drying and preserving blueberries — saying, 'The savages of the north make a great harvest of them in summer, which is a great

resource especially when the chase fails them.’ They were herein more provident than we commonly suppose.

Father Rasies — who was making a Dictionary of the Abenaki Language in 1691 (at Norridgewock?) — says that their word for blueberries was fresh Satar, dry Sakisatar — and the words in their name for July meant when the blueberries are ripe. This shows how important they were to them.

Father Hennepin — who writes in 1697 — says that his captors, Naudowessi (the Sioux!), near the falls of St. Anthony, feasted on wild-rice seasoned with blueberries, ‘which they dry in the sun during the summer, and which are as good as raisins of Corinth’ — [that is, the imported currants].

The Englishman John Lawson, who published an account of the Carolinas in 1709, says of North Carolina, ‘The hurts, huckleberries or blues of this country are four sorts... The first sort is the same blue or bilberry that grows plentifully in the North of England.’

‘The second sort grows on a small bush,’ the fruit being larger than the last. The third grows three or four feet high in low land. ‘The fourth sort grows upon trees, some ten and twelve foot high, and the thickness of a man’s arm; these are found in the runs and low grounds... The Indians get many bushels, and dry them on mats, whereof they make plum bread, and many other eatables.’ He is the first author that I remember who uses the word ‘huckleberry.’

The well known natural botanist John Bartram, when returning to Philadelphia in 1743 from a Journey through what was then the wilderness of Pennsylvania and New York, to the Iroquois and Lake Ontario, says that he ‘found [when in Pennsylvania] an Indian squaw drying huckleberries. This is done by setting four forked sticks in the ground, about three or four feet high, then others across, over them the stalks of our common Jacea or Saratula, on these lie the berries, as malt is spread on the hair cloth over the kiln. Underneath she had kindled a smoke fire, which one of her children was tending.’ Kalm, in his travels in this country in 1748-9, writes, ‘On my travels through the country of the Iroquois, they offered me, whenever they designed to treat me well, fresh maize bread, baked in an oblong shape, mixed with dried huckleberries, which lay as close in it as the raisins in a plumb pudding.’

The Moravian missionary Heckewelder, who spent a great part of his life among the Delawares toward the end of the last century, states that they mixed with their bread, which was six inches in diameter by one inch thick— ‘whortleberries green or dry, but not boiled.’

Lewis and Clarke in 1805 found the Indians west of the Rocky Mountains using dried berries extensively.

And finally in Owen’s Geological Survey of Wisconsin, Iowa and Minnesota — published in 1852 — occurs the following.

‘*Vaccinium Pennsylvanicum* (Lam.) [that is, our early low blueberry] — Barrens on the upper St. Croix. This is the common Huckleberry, associated with the characteristic growth of the *Pinus Banksiana*, covering its sandy ridges with a verdant undergrowth,

and an unsurpassed luxuriance of fruit. By the Indians these are collected and smoke dried in great quantities, and in this form constitute an agreeable article of food.' Hence you see that the Indians from time immemorial, down to the present day, all over the northern part of America — have made far more extensive use of the whortleberry — at all seasons and in various ways — than we — and that they were far more important to them than to us.

It appears from the above evidence that the Indians used their dried berries commonly in the form of a cake, and also of huckleberry porridge or pudding.

What we call huckleberry cake made of Indian meal and huckleberries was evidently the principal cake of the aborigines — though they also used other berries and fruits in a similar manner and often put things into their cake which would not have been agreeable to our palates — though I do not hear that they ever put any soda or pearl ash or alum into it. We have no national cake so universal and well known as this was in all parts of the country where corn and huckleberries grew.

They enjoyed it all alone ages before our ancestors heard of their Indian corn — or their huckleberries — and probably if you had travelled here a thousand years ago it would have been offered you alike on the Connecticut, the Potomac, the Niagara, the Ottawa and the Mississippi.

The last Indian of Nantucket, who died a few years ago, was very properly represented in a painting which I saw there, with a basket full of huckleberries in his hand, as if to hint at the employment of his last days. I trust that I may not outlive the last of the huckleberries.

Tanner, who was taken captive by the Indians in 1789, and spent a good part of his life as an Indian, gives the Chippeway names of at least five kinds of whortleberries. He gives 'meen — blue berry, meen-un — blue berries,' and says that 'this is a word that enters into the composition of almost all words which are used as the names of fruits,' that is as a terminal syllable. Hence this would appear to have been the typical berry — or berry of berries — among the Chippeway as it is among us.

I think that it would be well if the Indian names, were as far as possible restored and applied to the numerous species of huckleberries, by our botanists — instead of the very inadequate — Greek and Latin or English ones at present used. They might serve both a scientific and popular use. Certainly it is not the best point of view to look at this peculiarly American family as it were from the other side of the Atlantic. It is still in doubt whether the Latin word for the genus *Vaccinium* means a berry or a flower.

Botanists, on the look out for what they thought a respectable descent, have long been inclined to trace this family backward to Mount Ida. Tournefort does not hesitate to give it the ancient name of Vine of Mount Ida. The common English Raspberry also is called *Rubus Idaea* or the Mount Ida bramble — from the old Greek name. The truth of it seems to be that blueberries and raspberries flourish best in cool and airy situations, on hills and mountains, and I can easily believe that something like these at least grows on Mount Ida. But Mount Monadnoc is as good as Mount Ida, and

probably better for blueberries, though its name is said to mean Bad Rock. But the worst rocks are the best for poets' uses. Let us then exchange that oriental uncertainty for this western certainty.

We have in the northern states a few wild plums and inedible crab apples — a few palatable grapes — and many tolerable nuts — but I think that the various species of berries are our wild fruits which are to be compared with the more celebrated ones of the tropics, and for my part I would not exchange fruits with them — for the object is not merely to get a ship-load of something which you can eat or sell, but the pleasure of gathering it is to be taken into the account.

What is the pear crop as yet to the huckleberry crop? Horticulturists make a great ado about their pears, but how many families raise or buy a barrel of pears in a year all told? They are comparatively insignificant. I do not taste more than half a dozen pears annually, and I suspect that the majority fare worse even than I. (This was written before my neighbor's pear-orchard began to bear. Now he frequently fills my own and others' pockets with the fruit.) But Nature heaps the table with berries for six weeks or more. Indeed the apple crop is not so important as the huckleberry crop. Probably the apples consumed in this town annually do not amount to more than one barrel per family. But what is this to a month or more of huckleberrying to every man, woman and child, and the birds into the bargain. Even the crop of oranges, lemons, nuts, raisins, figs, quinces, etc is of little importance to us compared with these.

They are not unprofitable in a pecuniary sense; I hear that some of the inhabitants of Ashby sold \$2000 worth of huckleberries in '56.

In May and June all our hills and fields are adorned with a profusion of the pretty little more or less bell-shaped flowers of this family, commonly turned toward the earth and more or less tinged with red or pink, and resounding with the hum of insects, each one the forerunner of a berry the most natural, wholesome and palatable that the soil can produce. I think to myself, these are the blossoms of the *Vaccinieae* or Whortleberry family, which affords so large a portion of our berries; the berry-promising flower of the *Vaccinieae*. This crop grows wild all over the country — wholesome, bountiful and free, a real ambrosia. And yet men, the foolish demons that they are, devote themselves to the culture of tobacco, inventing slavery and a thousand other curses for that purpose — with infinite pains and inhumanity go raise tobacco all their lives, and that is the staple instead of huckleberries. Wreathes of tobacco smoke go up from this land, the only incense which its inhabitants burn in honor of their gods. With what authority can such as we distinguish between Christians and Mahometans? Almost every interest, as the codfish and mackerel interest, gets represented at the General Court — but not the huckleberry interest. The first discoverers and explorers of the land make report of this fruit — but the last make comparatively little account of them.

Blueberries and huckleberries are such simple, wholesome and universal fruits that they concern our race much. It is hard to imagine any country without this kind of berry, on which men live like birds. Still covering our hills as when the red men lived here. Are they not the the principal wild fruit?

What means this profusion of berries at this season only? Nature does her best to feed her children, and the broods of birds just matured find plenty to eat now. Every bush and vine does its part and offers a wholesome and palatable diet to the way-farer. He need not go out of the road to get as many berries as he wants — of various kinds and qualities according as his road leads him over high or low, wooded or open ground — huckleberries of different colors and flavors almost everywhere — the second kind of low blueberry largest in the moist ground — high blueberries with their agreeable acid when his way lies through a swamp, and low blackberries of two or more varieties on almost every sandy plain and bank and stone heap.

Man at length stands in such a relation to Nature as the animals which pluck and eat as they go. The fields and hills are a table constantly spread. Diet-drinks, cordials, wines of all kinds and qualities, are bottled up in the skins of countless berries for their refreshment, and they quaff them at every turn. They seem offered to us not so much for food as for sociality, inviting us to a pic-nic with Nature. We pluck and eat in remembrance of her. It is a sort of sacrament — a communion — the not forbidden fruits, which no serpent tempts us to eat. Slight and innocent savors which relate us to Nature, make us her guests, and entitle us to her regard and protection.

When I see, as now, in climbing one of our hills, huckleberry and blueberry bushes bent to the ground with fruit, I think of them as fruits fit to grow on the most Olympian or heaven-pointing hills.

It does not occur to you at first that where such thoughts are suggested is Mount Olympus, and that you who taste these berries are a god. Why in his only royal moments should man abdicate his throne?

You eat these berries in the dry pastures where they grow not to gratify an appetite, but as simply and naturally as thoughts come into your mind, as if they were the food of thought, dry as itself, and surely they nourish the brain there.

Occasionally there is an unusual profusion of these fruits to compensate for the scarcity of a previous year. I remember some seasons when favorable moist weather had expanded the berries to their full size, so that the hill-sides were literally black with them. There were infinitely more of all kinds than any and all creatures could use.

One such year, on the side of Conantum Hill, they were literally five or six species deep. First, if you searched low down in the shade under all, you found still fresh the great light blue earliest blueberries, bluets, in heavy clusters — that most Olympian fruit of all — delicate flavored, thin-skinned and cool — then, next above, the still denser masses or clusters of the second low blueberry of various varieties, firm and sweet food — and rising above these large blue and black huckleberries of various qualities — and over these ran rampant the low blackberry weighing down the thicket with its wreathes of black fruit, and binding it together in a trembling mass — while here and there the high blackberry, just beginning to be ripe, towered over all the rest. Thus, as it were, the berries hung up lightly in masses or heaps, separated by their leaves and twigs so that the air could circulate through and preserve them; and you

went daintily wading through this thicket, picking perhaps only the finest of the high blackberries, as big as the end of your thumb, however big that may be, or clutching here and there a handful of huckleberries for variety, but never suspecting the delicious, cool blue-bloomed ones, which you were crushing with your feet under all. I have in such a case spread aside the bushes and revealed the last kind to those who had never in all their lives seen or heard of it before.

Each such patch, each bush — seems fuller and blacker than the last, as you proceed, and the huckleberries at length swell so big, as if aping the blackberries, that you mark the spot for future years.

There is all this profusion and yet you see neither birds nor beasts eating them — only ants and the huckleberry-bug. It seems fortunate for us that those cows in their pasture do not love them, but pass them by. We do not perceive that birds and quadrupeds make any use of them because they are so abundant we do not miss them, and they are not compelled to come when we are for them. Yet they are far more important to them than to us. We do not notice the robin when it plucks a huckleberry as we do when it visits our favorite cherry tree — and the fox pays his visits to the fields when we are not there.

I once carried my arms full of these bushes to my boat, and while I was rowing homeward two ladies, who were my companions, picked three pints from these alone, casting the bare bushes into the stream from time to time.

Even in ordinary years, when berries are comparatively scarce, I sometimes unexpectedly find so many in some distant and unfrequented part of the town, between and about the careless farmers' houses and walls, that the soil seems more fertile than where I live. Every bush and bramble bears its fruit. The very sides of the road are a fruit garden. The earth there teems with blackberries, huckleberries, thimble-berries, fresh and abundant — no signs of drought nor of pickers. Great shining black berries peep out at me from under the leaves upon the rocks. Do the rocks hold moisture? or are there no fingers to pluck these fruits? I seem to have wandered into a land of greater fertility — some up country Eden. These are the Delectable Hills. It is a land flowing with milk and huckleberries, only they have not yet put the berries into the milk. There the herbage never withers, there are abundant dews. I ask myself, What are the virtues of the inhabitants that they are thus blessed?

O fortunatos nimium, sua si bona norint Agricolas —

O too fortunate husbandmen if they knew their own happiness.

These berries are further important as introducing children to the fields and woods. The season of berrying is so far respected that the school children have a vacation then — and many little fingers are busy picking these small fruits. It is even a pastime, not a drudgery — though it often pays well beside. The First of August is to them the anniversary of Emancipation in New England.

Women and children who never visit distant hills, fields and swamps on any other errand are seen making haste thither now with half their domestic utensils in their

hands. The wood-chopper goes into the swamp for fuel in the winter; his wife and children for berries in the summer.

Now you will see who is the thorough countrywoman who does not go to the beach — conversant with berries and nuts — a masculine wild-eyed woman of the fields.

Now for a ride in the hay-rigging to that far off Elysium that Zachariah See-all alighted on — but has not mentioned to every person — in the hay-rigging without springs — trying to sensitive nerves and to full pails, for all alike sit on the bottom — such a ride is favorable to conversation for the incessant rumble hides all defects and fills the otherwise awful pauses — to be introduced to new scenes more memorable than the berries — but to the old walker the straggling party itself half concealed amid the bushes is the most novel and interesting feature. If hot the boys break up the bushes and carry them to some shady place where the girls can pick them at their ease. But this is a lazy and improvident way — and gives an unsightly look to the hill. There are many events not in the program. If you have an ear for music — perhaps one is the sound of a cow bell — never heard before — or a sudden thunder shower putting you to flight — or a breakdown.

I served my apprenticeship and have since done considerable journeywork in the huckleberry field. Though I never paid for my schooling and clothing in that way, it was some of the best schooling that I got and paid for itself. Theodore Parker is not the only New England boy who has got his education by picking huckleberries, though he may not have gone to Harvard thereafter, nor to any school more distant than the huckleberry field. There was the university itself where you could learn the everlasting Laws, and Medicine and Theology, not under Story, and Warren, and Ware, but far wiser professors than they. Why such haste to go from the huckleberry field to the College yard?

As in old times they who dwelt on the heath, remote from towns, being backward to adopt the doctrines which prevailed in towns, were called heathen in a bad sense, so I trust that we dwellers in the huckleberry pastures, which are our heath-lands, shall be slow to adopt the notions of large towns and cities, though perchance we may be nicknamed huckleberry people. But the worst of it is that the emissaries of the towns come more for our berries than they do for our salvation.

Occasionally, in still summer forenoons, when perhaps a mantua-maker was to be dined, and a huckleberry pudding had been decided on (by the authorities), I a lad of ten was despatched to a neighboring hill alone. My scholastic education could be thus far tampered with, and an excuse might be found. No matter how scarce the berries on the near hills, the exact number necessary for a pudding could surely be collected by eleven o'clock — and all ripe ones too though I turned some round three times to be sure they were not premature. My rule in such cases was never to eat one till my dish was full; for going a-berrying implies more things than eating the berries. They at home got nothing but the pudding, a comparatively heavy affair — but I got the forenoon out of doors — to say nothing about the appetite for the pudding. They got

only the plums that were in the pudding, but I got the far sweeter plums that never go into it.

At other times, when I had companions, some of them used to bring such remarkably shaped dishes, that I was often curious to see how the berries disposed of themselves in them. Some brought a coffee-pot to the huckleberry field, and such a vessel possessed this advantage at least, that if a greedy boy had skimmed off a handful or two on his way home, he had only to close the lid and give his vessel a shake to have it full again. I have seen this done all round when the party got as far homeward as the Dutch House. It can probably be done with any vessel that has much side to it.

There was a Young America then, which has become Old America, but its principles and motives are still the same, only applied to other things. Sometimes, just before reaching the spot — every boy rushed to the hill side and hastily selecting a spot — shouted ‘I speak for this place,’ indicating its bounds, and another ‘I speak for that,’ and so on — and this was sometimes considered good law for the huckleberry field. At any rate it is a law similar to this by which we have taken possession of the territory of Indians and Mexicans.

I once met with a whole family, father, mother, and children, ravaging a huckleberry field in this wise. They cut up the bushes as they went and beat them over the edge of a bushel basket, till they had it full of berries, ripe and green, leaves, sticks etc., and so they passed along out of my sight like wild men.

I well remember with what a sense of freedom and spirit of adventure I used to take my way across the fields with my pail, some years later, toward some distant hill or swamp, when dismissed for all day, and I would not now exchange such an expansion of all my being for all the learning in the world. Liberation and enlargement — such is the fruit which all culture aims to secure. I suddenly knew more about my books than if I had never ceased studying them. I found myself in a schoolroom where I could not fail to see and hear things worth seeing and hearing — where I could not help getting my lesson — for my lesson came to me. Such experience often repeated, was the chief encouragement to go to the Academy and study a book at last.

But ah we have fallen on evil days! I hear of pickers ordered out of the huckleberry fields, and I see stakes set up with written notices forbidding any to pick them. Some let their fields or allow so much for the picking. *Sic transit gloria ruris*. I do not mean to blame any, but all — to bewail our fates generally. We are not grateful enough that we have lived a part of our lives before these things occurred. What becomes of the true value of country life — what, if you must go to market for it? It has come to this, that the butcher now brings round our huckleberries in his cart. Why, it is as if the hangman were to perform the marriage ceremony. Such is the inevitable tendency of our civilization, to reduce huckleberries to a level with beef-steaks — that is to blot out four fifths of it, or the going a-huckleberrying, and leave only a pudding, that part which is the fittest accompaniment to a beef-steak. You all know what it is to go a-beef-steaking. It is to knock your old fellow laborer Bright on the head to begin with — or possibly to cut a steak from him running in the Abyssinian fashion and wait for

another to grow there. The butcher's item in chalk on the door is now 'Calf's head and huckleberries.'

I suspect that the inhabitants of England and the continent of Europe have thus lost in a measure their natural rights, with the increase of population and monopolies. The wild fruits of the earth disappear before civilization, or only the husks of them are to be found in large markets. The whole country becomes, as it were, a town or beaten common, and almost the only fruits left are a few hips and haws.

What sort of a country is that where the huckleberry fields are private property? When I pass such fields on the highway, my heart sinks within me. I see a blight on the land. Nature is under a veil there. I make haste away from the accursed spot. Nothing could deform her fair face more. I cannot think of it ever after but as the place where fair and palatable berries, are converted into money, where the huckleberry is desecrated.

It is true, we have as good a right to make berries private property, as to make wild grass and trees such — it is not worse than a thousand other practices which custom has sanctioned — but that is the worst of it, for it suggests how bad the rest are, and to what result our civilization and division of labor naturally tend, to make all things venal.

A., a professional huckleberry picker, has hired B.'s field, and, we will suppose, is now gathering the crop, with a patent huckleberry horse rake.

C., a professed cook, is superintending the boiling of a pudding made of some of the berries.

While Professor D. — for whom the pudding is intended, sits in his library writing a book — a work on the *Vaccinieae* of course.

And now the result of this downward course will be seen in that work — which should be the ultimate fruit of the huckleberry field. It will be worthless. It will have none of the spirit of the huckleberry in it, and the reading of it will be a weariness of the flesh.

I believe in a different kind of division of labor — that Professor D. should be encouraged to divide himself freely between his library and the huckleberry field.

What I chiefly regret in this case, is the in effect dog-in-the-manger result; for at the same time that we exclude mankind from gathering berries in our field, we exclude them from gathering health and happiness and inspiration, and a hundred other far finer and nobler fruits than berries, which are found there, but which we have no notion of gathering and shall not gather ourselves, nor ever carry to market, for there is no market for them, but let them rot on the bushes.

We thus strike only one more blow at a simple and wholesome relation to nature. I do not know but this is the excuse of those who have lately taken to swinging bags of beans and ringing dumb bells. As long as the berries are free to all comers they are beautiful, though they may be few and small, but tell me that this is a blueberry swamp which somebody has hired, and I shall not want even to look at it. We so commit the berries to the wrong hands, that is to the hands of those who cannot

appreciate them. This is proved by the fact that if we do not pay them some money, these parties will at once cease to pick them. They have no other interest in berries but a pecuniary one. Such is the constitution of our society that we make a compromise and permit the berries to be degraded, to be enslaved, as it were.

Accordingly in laying claim for the first time to the spontaneous fruit of our pastures, we are inevitably aware of a little meanness, and the merry berry party which we turn away naturally looks down on and despises us. If it were left to the berries to say who should have them, is it not likely that they would prefer to be gathered by the party of children in the hay-rigging, who have come to have a good time merely?

This is one of the taxes which we pay for having a rail-road. All our improvements, so called, tend to convert the country into the town. But I do not see clearly that these successive losses are ever quite made up to us. This suggests, as I have said, what origin and foundation many of our institutions have. I do not say this by way of complaining of this custom in particular, which is beginning to prevail — not that I love Caesar less but Rome more. It is my own way of living that I complain of as well as yours — and therefore I trust that my remarks will come home to you. I hope that I am not so poor a shot, like most clergymen, as to fire into a crowd of a thousand men without hitting somebody — though I do not aim at any one.

Thus we behave like oxen in a flower garden. The true fruit of Nature can only be plucked with a fluttering heart and a delicate hand, not bribed by any earthly reward. No hired man can help us to gather that crop.

Among the Indians, the earth and its productions generally were common and free to all the tribe, like the air and water — but among us who have supplanted the Indians, the public retain only a small yard or common in the middle of the village, with perhaps a grave-yard beside it, and the right of way, by sufferance, by a particular narrow route, which is annually becoming narrower, from one such yard to another. I doubt if you can ride out five miles in any direction without coming to where some individual is tolling in the road — and he expects the time when it will all revert to him or his heirs. This is the way we civilized men have arranged it.

I am not overflowing with respect and gratitude to the fathers who thus laid out our New England villages, whatever precedent they were influenced by, for I think that a 'prentice hand liberated from Old English prejudices could have done much better in this new world. If they were in earnest seeking thus far away 'freedom to worship God,' as some assure us — why did they not secure a little more of it, when it was so cheap and they were about it? At the same time that they built meeting-houses why did they not preserve from desecration and destruction far grander temples not made with hands?

What are the natural features which make a township handsome — and worth going tar to dwell in? A river with its waterfalls — meadows, lakes — hills, cliffs or individual rocks, a forest and single ancient trees — such things are beautiful. They have a high use which dollars and cents never represent. If the inhabitants of a town were wise they would seek to preserve these things though at a considerable expense. For such things

educate far more than any hired teachers or preachers, or any at present recognized system of school education.

I do not think him fit to be the founder of a state or even of a town who does not foresee the use of these things, but legislates as it were, for oxen chiefly.

It would be worth the while if in each town there were a committee appointed, to see that the beauty of the town received no detriment. If here is the largest boulder in the country, then it should not belong to an individual nor be made into door-steps. In some countries precious metals belong to the crown — so here more precious objects of great natural beauty should belong to the public.

Let us try to keep the new world new, and while we make a wary use of the city, preserve as far as possible the advantages of living in the country.

I think of no natural feature which is a greater ornament and treasure to this town than the river. It is one of the things which determine whether a man will live here or in another place, and it is one of the first objects which we show to a stranger. In this respect we enjoy a great advantage over those neighboring towns which have no river. Yet the town, as a corporation, has never turned any but the most purely utilitarian eyes upon it — and has done nothing to preserve its natural beauty.

They who laid out the town should have made the river available as a common possession forever. The town collectively should at least have done as much as an individual of taste who owns an equal area commonly does in England. Indeed I think that not only the channel but one or both banks of every river should be a public highway — for a river is not useful merely to float on. In this case, one bank might have been reserved as a public walk and the trees that adorned it have been protected, and frequent avenues have been provided leading to it from the main street. This would have cost but few acres of land and but little wood, and we should all have been gainers by it. Now it is accessible only at the bridges at points comparatively distant from the town, and there there is not a foot of shore to stand on unless you trespass on somebody's lot — and if you attempt a quiet stroll down the bank — you soon meet with fences built at right angles with the stream and projecting far over the water — where individuals, naturally enough, under the present arrangement — seek to monopolize the shore. At last we shall get our only view of the stream from the meeting house belfry.

As for the trees which fringed the shore within my remembrance — where are they? and where will the remnant of them be after ten years more?

So if there is any central and commanding hill-top, it should be reserved for the public use. Think of a mountain top in the township — even to the Indians a sacred place — only accessible through private grounds. A temple as it were which you cannot enter without trespassing — nay the temple itself private property and standing in a man's cow yard — for such is commonly the case. New Hampshire courts have lately been deciding, as if it was for them to decide, whether the top of Mount Washington belonged to A or B — and it being decided in favor of B, I hear that he went up one winter with the proper officers and took formal possession. That area should be

left unappropriated for modesty and reverence's sake — if only to suggest that the traveller who climbs thither in a degree rises above himself, as well as his native valley, and leaves some of his grovelling habits behind.

I know it is a mere figure of speech to talk about temples nowadays, when men recognize none, and associate the word with heathenism. Most men, it appears to me, do not care for Nature, and would sell their share in all her beauty, for as long as they may live, for a stated and not very large sum. Thank God they cannot yet fly and lay waste the sky as well as the earth. We are safe on that side for the present. It is for the very reason that some do not care for these things that we need to combine to protect all from the vandalism of a few.

It is true, we as yet take liberties and go across lots in most directions but we naturally take fewer and fewer liberties every year, as we meet with more resistance, and we shall soon be reduced to the same straights they are in England, where going across lots is out of the question — and we must ask leave to walk in some lady's park.

There are a few hopeful signs. There is the growing library — and then the town does set trees along the highways. But does not the broad landscape itself deserve attention?

We cut down the few old oaks which witnessed the transfer of the township from the Indian to the white man, and perchance commence our museum with a cartridge box taken from a British soldier in 1775. How little we insist on truly grand and beautiful natural features. There may be the most beautiful landscapes in the world within a dozen miles of us, for aught we know — for their inhabitants do not value nor perceive them — and so have not made them known to others — but if a grain of gold were picked up there, or a pearl found in a fresh-water clam, the whole state would resound with the news.

Thousands annually seek the White Mountains to be refreshed by their wild and primitive beauty — but when the country was discovered a similar kind of beauty prevailed all over it — and much of this might have been preserved for our present refreshment if a little foresight and taste had been used.

I do not believe that there is a town in this country which realizes in what its true wealth consists.

I visited the town of Boxboro only eight miles west of us last fall — and far the handsomest and most memorable thing which I saw there, was its noble oak wood. I doubt if there is a finer one in Massachusetts. Let it stand fifty years longer and men will make pilgrimages to it from all parts of the country, and for a worthier object than to shoot squirrels in it — and yet I said to myself, Boxboro would be very like the rest of New England, if she were ashamed of that wood-land. Probably, if the history of this town is written, the historian will have omitted to say a word about this forest — the most interesting thing in it — and lay all the stress on the history of the parish.

It turned out that I was not far from right — for not long after I came across a very brief historical notice of Stow — which then included Boxboro — written by the Reverend John Gardiner in the Massachusetts Historical Collections, nearly a hundred

years ago. In which Mr. Gardiner, after telling us who was his predecessor in the ministry, and when he himself was settled, goes on to say, 'As for any remarkables, I am of mind there have been the fewest of any town of our standing in the Province... I can't call to mind above one thing worthy of public notice, and that is the grave of Mr. John Green' who, it appears, when in England, 'was made clerk of the exchequer' by Cromwell. 'Whether he was excluded the act of oblivion or not I cannot tell,' says Mr. Gardiner. At any rate he returned to New England and as Gardiner tells us 'lived and died, and lies buried in this place.'

I can assure Mr. Gardiner that he was not excluded from the act of oblivion.

It is true Boxboro was less peculiar for its woods at that date — but they were not less interesting absolutely.

I remember talking a few years ago with a young man who had undertaken to write the history of his native town — a wild and mountainous town far up country, whose very name suggested a hundred things to me, and I almost wished I had the task to do myself — so few of the original settlers had been driven out — and not a single clerk of the exchequer buried in it. But to my chagrin I found that the author was complaining of want of materials, and that the crowning fact of his story was that the town had been the residence of General C — and the family mansion was still standing.

I have since heard, however, that Boxboro is content to have that forest stand, instead of the houses and farms that might supplant it — not because of its beauty — but because the land pays a much larger tax now than it would then.

Nevertheless it is likely to be cut off within a few years for ship-timber and the like. It is too precious to be thus disposed of. I think that it would be wise for the state to purchase and preserve a few such forests.

If the people of Massachusetts are ready to found a professorship of Natural History — so they must see the importance of preserving some portions of nature herself unimpaired.

I find that the rising generation in this town do not know what an oak or a pine is, having seen only inferior specimens. Shall we hire a man to lecture on botany, on oaks for instance, our noblest plants — while we permit others to cut down the few best specimens of these trees that are left? It is like teaching children Latin and Greek while we burn the books printed in those languages.

I think that each town should have a park, or rather a primitive forest, of five hundred or a thousand acres, either in one body or several — where a stick should never be cut for fuel — nor for the navy, nor to make wagons, but stand and decay for higher uses — a common possession forever, for instruction and recreation.

All Walden wood might have been reserved, with Walden in the midst of it, and the Easterbrooks country, an uncultivated area of some four square miles in the north of the town, might have been our huckleberry field. If any owners of these tracts are about to leave the world without natural heirs who need or deserve to be specially remembered, they will do wisely to abandon the possession to all mankind, and not will them to some individual who perhaps has enough already — and so correct the

error that was made when the town was laid out. As some give to Harvard College or another Institution, so one might give a forest or a huckleberry field to Concord. This town surely is an institution which deserves to be remembered. Forget the heathen in foreign parts, and remember the pagans and savages here.

We hear of cow commons and ministerial lots, but we want men commons and lay lots as well. There is meadow and pasture and woodlot for the town's poor, why not a forest and huckleberry field for the town's rich?

We boast of our system of education, but why stop at schoolmasters and schoolhouses? We are all schoolmasters and our schoolhouse is the universe. To attend chiefly to the desk or schoolhouse, while we neglect the scenery in which it is placed, is absurd. If we do not look out we shall find our fine schoolhouse standing in a cow yard at last.

It frequently happens that what the city prides itself on most is its park — those acres which require to be the least altered from their original condition.

Live in each season as it passes; breathe the air, drink the drink, taste the fruit, and resign yourself to the influences of each. Let these be your only diet-drink and botanical medicines.

In August live on berries, not dried meats and pemmican as if you were on shipboard making your way through a waste ocean, or in the Darien Grounds, and so die of ship-fever and scurvy. Some will die of ship-fever and scurvy in an Illinois prairie, they lead such stifled and scurvy lives.

Be blown on by all the winds. Open all your pores and bathe in all the tides of nature, in all her streams and oceans, at all seasons. Miasma and infection are from within, not without. The invalid brought to the brink of the grave by an unnatural life, instead of imbibing the great influence that nature is — drinks only of the tea made of a particular herb — while he still continues his unnatural life — saves at the spile and wastes at the bung. He does not love nature or his life and so sickens and dies and no doctor can save him.

Grow green with spring — yellow and ripe with autumn. Drink of each season's influence as a vial, a true panacea of all remedies mixed for your especial use. The vials of summer never made a man sick, only those which he had stored in his cellar. Drink the wines not of your own but of nature's bottling — not kept in a goat- or pig-skin, but in the skins of a myriad fair berries.

Let Nature do your bottling, as also your pickling and preserving.

For all nature is doing her best each moment to make us well. She exists for no other end. Do not resist her. With the least inclination to be well we should not be sick. Men have discovered, or think that they have discovered the salutariness of a few wild things only, and not of all nature. Why nature is but another name for health. Some men think that they are not well in Spring or Summer or Autumn or Winter, (if you will excuse the pun) it is only because they are not indeed well, that is fairly in those seasons.

# The Poems

The replica of Thoreau's cabin at Walden

# LIST OF POEMS IN CHRONOLOGICAL ORDER

- Fair Haven
- Voyagers Song
- Life is a summer's day
- Let's make the most of morn
- In days of yore, tis said
- Like torrents of the mountain
- Each summer sound
- Friendship
- I love a careless streamlet
- When breathless noon hath paused on hill and vale
- Pens to mend, and hands to guide
- The Bluebirds
- May Morning
- Walden
- Truth — Goodness — Beauty — those celestial thrins
- Strange that so many fickle gods
- In the busy streets, domains of trade
- Cliffs
- My Boots

- Noon
- Fair Haven
- The Thaw
- Last night as I lay gazing with shut eyes
- Love
- I knew a man by sight
- The deeds of king and meanest hedger
- T will soon appear if we but look
- The Evening Wind
- The Peal of the Bells
- The Shrike
- Sympathy
- The “Book of Gems.”
- The Assabet
- The Breezed Invitation
- Stanzas
- Loves Farewell
- Each more melodious note I hear
- The Fisher’s Son
- Friendship
- The Freshet
- The Poet’s Delay
- The Summer Rain
- Guido’s Aurora
- I’ve heard my neighbor’s pump at night

- Who sleeps by day and walks by night
- When with pale cheek and sunken eye I sang
- I arose before light
- I'm guided in the darkest night
- Friends —
- When in some cove I lie
- Who hears the parson
- Sic Vita
- Wait not till I invite thee
- Friendship
- On the Sun Coming Out in the Afternoon
- They who prepare my evening meal below
- My ground is high
- If from your price ye will not swerve
- Death cannot come too soon
- The Mountains in the Horizon
- The needles of the pine
- The Echo of the Sabbath Bell — heard in the Woods
- Low in the eastern sky
- My life has been the poem I would have writ
- To the Mountains
- Greater is the depth of sadness
- Where I have been
- Better wait
- Independence

- Cock-crowing
- Inspiration
- The Soul's Season
- The Fall of the Leaf
- Delay
- Inspiration
- Ive searched my faculties around
- Who equallest the coward's haste
- The Vireo
- The coward ever sings no song
- Only the slave knows of the slave
- Great God, I ask thee for no meaner pelf
- The Inward Morning
- Within the circuit of this plodding life
- To Edith
- Delay in Friendship
- Ah, 'tis in vain the peaceful din
- Between the traveller and the setting sun
- Have ye no work for a man to do
- I sailed up a river with a pleasant wind
- I was made erect and lone
- I'm not alone
- Our Country
- Pray to what earth does this sweet cold belong
- True kindness is a pure divine affinity

- Until at length the north winds blow
- Wait not till slaves pronounce the word
- The Funeral Bell
- Sometimes I hear the veery's clarion
- Thou dusky spirit of the wood
- Not unconcerned Wachusett rears his head
- Nature
- Godfrey of Boulogne
- The Rabbit leaps
- I am the Autumnal sun
- Where'er thou sail'st who sailed with me
- I was born upon thy bank river
- Salmon Brook
- The moon now rises to her absolute rule
- My friends, why should we live?
- I mark the summer's swift decline
- My love must be as free
- The Moon
- Rumors From an Aeolian Harp
- On shoulders whirled in some eccentric orbit
- Far oer The bow
- Methinks that by a strict behavior
- I have rolled near some other spirits path
- Fog
- How little curious is man

- To the Comet
- Haze
- Smoke
- To a Stray Fowl
- The Departure
- Brother where dost thou dwell?
- All things are current found
- On fields oer which the reaper's hand has passed
- Epitaph on an Engraver
- Epitaph on Pursy
- Ep on a Good Man
- Epitaph
- Ep on the World
- The sluggish smoke curls up from some deep dell
- On Ponkawtasset, since, we took our way
- To a Marsh Hawk in Spring
- Great Friend
- The Offer
- Morning
- The Friend
- Yet let us Thank the purblind race
- Ye do command me to all virtue ever
- Ive seen ye, sisters, on the mountain-side
- I am bound, I am bound, for a distant shore
- The Hero

- At midnight's hour I raised my head
- I seek the Present Time
- Tell me ye wise ones if ye can
- Behold these flowers
- My friends, my noble friends, know ye —
- The Earth
- But now “no war nor battle's sound.”
- Such water do the gods distill
- Die and be buried who will
- I have seen some frozenfaced Connecticut
- Such near aspects had we
- Travelling
- The Atlantides
- Conscience is instinct bred in the house
- That Phaeton of our day
- Then spend an age in whetting thy desire
- We should not mind if on our ear there fell
- Men say they know many things
- Away! away! away! away!
- In the East fames are won
- We see the planet fall
- The good how can we trust?
- Greece
- Poverty
- The respectable folks

- Farewell
- For though the eaves were rabbitted
- You Boston folks & Roxbury people
- I will obey the strictest law of love
- Why toll the bell today —
- And once again
- The Old Marlborough Road
- Old meeting-house bell
- It is a real place
- Among the worst of men that ever lived
- What's the rail-road to me?
- Tall Ambrosia
- Tis very fit the ambrosia of the gods
- I saw a delicate flower had grown up 2 feet high
- I am the little Irish boy
- In Adams fall
- Life
- The moon moves up her smooth and sheeny path
- I'm thankful that my life doth not deceive
- Manhood
- Music
- To day I climbed a handsome rounded hill
- The Just Made Perfect
- I do not fear my thoughts will die
- I'm contented you should stay

- Man Man is the Devil
- You must not only aim aright
- The Chicadee
- He knows no change who knows the true
- When the toads begin to ring
- Twas 30 years ago
- The Rosa Sanguined
- Forever in my dream & in my morning thought
- Except, returning, by the Marlboro
- All things decay
- Any fool can make a rule

## Fair Haven

When little hills like lambs did skip,And Joshua ruled in heaven,Unmindful rolled  
Musketuquid,Nor budged an inch Fair Haven.

When principle is like to yield,To selfish fear, or craven,And fickle mortals round  
me fall,I'll not forget Fair Haven.

If there's a cliff in this wide world,'S, a stepping stone to heaven,A pleasant, craggy,  
short hand cut,It sure must be Fair Haven.

Oft have I climbed thy craggy steep,Where ceaseless wheels the raven,And whiled  
away an hour at e'en,For love of thee, Fair Haven.

If e'er my bark be tempest-tossed,And every hope the wave in,And this frail hulk  
shall spring a leak,I'll steer for thee, Fair Haven.

When cares press heavy on my soul,And devils blue are craven,Or e'er I lay me  
down to rest,I'll think of thee, Fair Haven.

And when I take my last long rest,And quiet sleep my grave in,What kindlier  
covering for my breast,Than thy warm turf Fair Haven.

## Voyagers Song

Gentle river, gentle river  
Swift as glides thy stream along,  
Many a bold Canadian  
voyageur, Bravely swelled the gay chanson

Thus of old our valiant fathers,  
Many a lagging year ago  
Gliding o'er the rippling  
waters, Taught to banish care in song.

Now the sun's behind the willows,  
Now he gleams along the lake,  
Hark across the  
bounding billows Liquid songs the echoes wake.

Rise Apollo up before us,  
E'ne the lark's begun her lay  
Let us all in deafning chorus-  
Praise the glorious king of day.

Thus we lead a life of pleasure,  
Thus we while the hours away,  
Thus we revel beyond  
measure, Gaily live we while we may.

## Life is a summer's day

Life is a summer's day  
When as it were for aye  
We sport and play.  
Anon the night comes on,  
The ploughman's work is done,  
And day is gone.  
We read in this one page  
Both Youth, Manhood, and Age  
That hoary Sage.  
The morning is our prime,  
That laughs to scorn old Time,  
And knows no crime.  
The noon comes on apace,  
And then with swel'tring face  
We run our race.  
When eve comes stealing o'er  
We ponder at our door  
On days of yore.  
The patient kine, they say,  
At dawn do frisk and play,  
And well they may.  
By noon their sports abate,  
For then, as bards relate,  
They vegetate.  
When eventide hath come,  
And grey flies cease their hum,  
And now are dumb,  
They leave the tender bud,  
That's cooling to the blood,  
And chew the cud.

## Let's make the most of morn

Let's make the most of morn,  
Ere grey flies wind their horn,  
And it is gone.

## In days of yore, tis said

In days of yore, tis said, the swimming alder  
Fashioned rude, with branches lopt,  
and stripped of its smooth coat,  
Where fallen tree was none, and rippling streams  
vast breadth  
Forbade adventurous leap, the brawny swain did bear  
Secure to farthest  
shore. The book has passed away, and with the book the lay  
Which in my youthful  
days I loved to ponder. Of curious things it told, how wise men  
3 of Gotham  
In a bowl  
did venture out to sea, And darkly hints their awful fate  
If men have dared the main  
to tempt in such frail barks, Why may not wash tub round, or bread-troughs square  
oblong  
Suffice to cross the purling wave and gain the destin'd port.

## Like torrents of the mountain

Like torrents of the mountain  
We've coursed along the lea,  
From many a crystal  
fountain  
Toward the far-distant sea.

And now we've gained life's valley,  
And through the lowlands roam,  
No longer may'st  
thou dally,  
No longer spout and foam.

May pleasant meads await thee,  
Where thou may'st freely roll  
Towards that bright  
heavenly sea,  
Thy resting place and goal.

And when thou reach'st life's down-hill,  
So gentle be thy stream,  
As would not turn  
a grist-mill  
Without the aid of steam.

## Each summer sound

Each summer sound  
Is a summer round.

## Friendship

I think awhile of Love, and while I think,  
Love is to me a world,  
Sole meat and  
sweetest drink,  
And close connecting link  
Tween heaven and earth.

I only know it is, not how or why,  
My greatest happiness;  
However hard I try,  
Not if  
I were to die,  
Can I explain.

I fain would ask my friend how it can be,  
But when the time arrives,  
Then Love is  
more lovely  
Than anything to me,  
And so I'm dumb.

For if the truth were known, Love cannot speak,  
But only thinks and does;  
Though  
surely out 'twill leak  
Without the help of Greek,  
Or any tongue.

A man may love the truth and practise it,  
Beauty he may admire,  
And goodness not  
omit,  
As much as may befit  
To reverence.

But only when these three together meet,  
As they always incline,  
And make one soul  
the seat,  
And favorite retreat  
Of loveliness;  
When under kindred shape, like loves and  
hates  
And a kindred nature,  
Proclaim us to be mates,  
Exposed to equal fates  
Eternally;

And each may other help, and service do,  
Drawing Love's bands more tight,  
Service  
he ne'er shall rue  
While one and one make two,  
And two are one;

In such case only doth man fully prove  
Fully as man can do,  
What power there is in  
Love  
His inmost soul to move  
Resistlessly.

Two sturdy oaks I mean, which side by side,  
Withstand the winter's storm,  
And spite  
of wind and tide,  
Grow up the meadow's pride,  
For both are strong

Above they barely touch, but undermined  
Down to their deepest source,  
Admiring  
you shall find  
Their roots are intertwined  
Insep'rably.

## I love a careless streamlet

“Long life and success to you.”UBIQUE.

I love a careless streamlet, That takes a mad cap leap, And like a sparkling beamlet-  
Goes dashing down the steep.

## When breathless noon hath paused on hill and vale

When breathless noon hath paused on hill and vale, And now no more the woodman  
plies his axe, Nor mower whets his scythe, Somewhat it is, sole sojourner on earth, To  
hear the veery on her oaken perch Ringing her modest trill — Sole sound of all the  
din that makes a world, And I sole ear. Fondly to nestle me in that sweet melody, And  
own a kindred soul, speaking to me From out the depths of universal being. O'er birch  
and hazle, through the sultry air, Comes that faint sound this way, On Zephyr borne,  
straight to my ear. No longer time or place, nor faintest trace Of earth, the landscape's  
shimmer is my only space, Sole remnant of a world. Anon that throat has done, and  
familiar sounds Swell strangely on the breeze, the low of cattle, And the novel cries of  
sturdy swains That plod the neighboring vale — And I walk once more confounded a  
denizen of earth.

## Pens to mend, and hands to guide

Pens to mend, and hands to guide. Oh who would a schoolmaster be?

## The Bluebirds

In the midst of the poplar that stands by our door, We planted a bluebird box, And  
we hoped before the summer was o'er A transient pair to coax.

One warm summer's day the bluebirds came And lighted on our tree, But at first the  
wand'ers were not so tame But they were afraid of me.

They seemed to come from the distant south, Just over the Walden wood, And they  
skimmed it along with open mouth Close by where the bellows stood.

Warbling they swept round the distant cliff, And they warbled it over the lea, And  
over the blacksmith's shop in a jiff Did they come warbling to me.

They came and sat on the box's top Without looking into the hole, And only from  
this side to that did they hop, As 'twere a common well-pole.

Methinks I had never seen them before, Nor indeed had they seen me, Till I chanced  
to stand by our back door, And they came to the poplar tree.

In course of time they built their nest And reared a happy brood, And every morn  
they piped their best As they flew away to the wood.

Thus wore the summer hours away  
To the bluebirds and to me,  
And every hour was  
a summer's day,  
So pleasantly lived we.

They were a world within themselves,  
And I a world in me,  
Up in the tree — the  
little elves — With their callow family.

One morn the wind blowed cold and strong,  
And the leaves when whirling away;  
The birds prepared for their journey long  
That raw and gusty day.

Boreas came blust'ring down from the north,  
And ruffled their azure smocks,  
So they launched them forth, though somewhat loth,  
By way of the old Cliff rocks.

Meanwhile the earth jogged steadily on  
In her mantle of purest white,  
And anon another spring was born  
When winter was vanished quite.

And I wandered forth o'er the steamy earth,  
And gazed at the mellow sky,  
But never before from the hour of my birth  
Had I wandered so thoughtfully.

For never before was the earth so still,  
And never so mild was the sky,  
The river, the fields, the woods, and the hill,  
Seemed to heave an audible sigh.

I felt that the heavens were all around,  
And the earth was all below,  
As when in the ears there rushes a sound  
Which thrills you from top to toe.

I dreamed that I was an waking thought —  
A something I hardly knew —  
Not a solid piece, nor an empty nought,  
But a drop of morning dew.

'Twas the world and I at a game of bo-peep,  
As a man would dodge his shadow,  
An idea becalmed in eternity's deep —  
'Tween Lima and Segraddo.

Anon a faintly warbled note  
From out the azure deep,  
Into my ears did gently float  
As is the approach of sleep.

It thrilled but startled not my soul;  
Across my mind strange mem'ries gleamed,  
As often distant scenes unroll  
When we have lately dreamed

The bluebird had come from the distant South  
To his box in the poplar tree,  
And he opened wide his slender mouth,  
On purpose to sing to me.

## May Morning

The school boy loitered on his way to school,  
Scorning to live so rare a day  
by rule.  
So mild the air a pleasure 'twas to breathe,  
For what seems heaven above was  
earth beneath.

Soured neighbors chatted by the garden pale,  
Nor quarrelled who should drive the  
needed nail —  
The most unsocial made new friends that day,  
As when the sun shines  
husbandmen make hay

How long I slept I know not, but at last  
I felt my consciousness returning fast,  
For Zephyr rustled past with leafy tread,  
And heedlessly with one heel grazed my head.

My eyelids opened on a field of blue,  
For close above a nodding violet grew,  
A part of heaven it seemed, which one could scent,  
Its blue commingling with the firmament.

## Walden

— True, our converse a stranger is to speech, Only the practised ear can catch the surging words, That break and die upon thy pebbled lips. Thy flow of thought is noiseless as the lapse of thy own waters, Wafted as is the morning mist up from thy surface, So that the passive Soul doth breathe it in, And is infected with the truth thou wouldst express.

E'en the remotest stars have come in troops And stooped low to catch the benediction Of thy countenance. Oft as the day came round, Impartial has the sun exhibited himself Before thy narrow skylight — nor has the moon For cycles failed to roll this way As oft as elsewhere, and tell thee of the night. No cloud so rare but hitherward it stalked, And in thy face looked doubly beautiful. O! tell me what the winds have writ within these thousand years, On the blue vault that spans thy flood — Or sun transferred and delicately reprinted For thy own private reading. Somewhat Within these latter days I've read, But surely there was much that would have thrilled the Soul, Which human eye saw not I would give much to read that first bright page, Wet from a virgin press, when Eurus — Boreas — And the host of airy quill-drivers First dipped their pens in mist.

## Truth — Goodness — Beauty — those celestial thrins

Truth — Goodness — Beauty — those celestial thrins, Continually are bom; e'en now the Universe, With thousand throats — and eke with greener smiles, Its joy confesses at their recent birth.

## Strange that so many fickle gods

Strange that so many fickle gods, as fickle as the weather, Throughout Dame Natures provinces should always pull together.

## In the busy streets, domains of trade

In the busy streets, domains of trade, Man is a surly porter, or a vain and hectoring bully, Who can claim no nearer kindredship with me Than brotherhood by law.

## Cliffs

The loudest sound that burdens here the breeze  
Is the wood's whisper; 'tis when we  
choose to listAudible sound, and when we list not,  
It is calm profound. Tongues were  
providedBut to vex the ear with superficial thoughts.  
When deeper thoughts upswell,  
the jarring discordOf harsh speech is hushed, and senses seem  
As little as may be to  
share the extacy.

## My Boots

Anon with gaping fearlessness they quaff  
The dewy nectar with a natural thirst,  
Or wet their leathern lungs where cranberries lurk,  
With sweeter wine than Chian, Lesbian,  
or Falernian far. Theirs was the inward lustre that bespeaks  
An open sole — unknowing  
to excludeThe cheerful day — a worthier glory far  
Than that which gilds the outmost  
rind with darkness visible — Virtues that fast abide through lapse of years,  
Rather  
rubbed in than off.

## Noon

What time the bittern, solitary bird,  
Hides now her head amid the whispering  
fern,  
And not a paddock vexes all the shore — Nor feather ruffles the incumbent air,  
Save  
where the wagtail interrupts the noon.

## Fair Haven

When Winter fringes every bough  
With his fantastic wreath,  
And puts the seal of  
silence nowUpon the leaves beneath;

When every stream in its pent-house  
Goes gurgling on its way,  
And in his gallery the  
mouseNibbleth the meadow hay;

Methinks the summer still is nigh,  
And lurketh underneath,  
As that same meadow  
mouse doth lieSnug in the last year's heath.

And if perchance the chicadee  
Lisp a faint note anon,  
The snow in summer's  
canopy,Which she herself put on.

Fair blossoms deck the cheerful trees,  
And dazzling fruits depend,  
The north wind  
sighs a summer breeze,  
The nipping frosts to fend,

Bringing glad tidings unto me,  
The while I stand all ear,  
Of a serene eternity,  
Which  
need not winter fear.

Out on the silent pond straightway  
The restless ice doth crack,  
And pond sprites  
merry gambols play  
Amid the deafening rack.

Eager I hasten to the vale,As if I heard brave news,How nature held high festival,  
Which it were hard to lose.

I gambol with my neighbor ice,And sympathizing quake,As each new crack darts in  
a triceAcross the gladsome lake.

One with the cricket in the ground,And faggot on the hearth,Resounds the rare  
domestic soundAlong the forest path.

## The Thaw

I saw the civil sun drying earth's tears — Her tears of joy that only faster flowed,  
Fain would I stretch me by the highway side,To thaw and trickle with the melting  
snow,That mingled soul and body with the tide,I too may through the pores of nature  
flow.

But I alas nor tinkle can nor fume,One jot to forward the great work of Time,'Tis  
mine to hearken while these ply the loom,So shall my silence with their music chime.

## Last night as I lay gazing with shut eyes

Last night as I lay gazing with shut eyesInto the golden land of dreams,I thought  
I gazed adown a quiet reachOf land and water prospect,Whose low beachWas peopled  
with the now subsiding humOf happy industry — whose work is done.

And as I turned me on my pillow o'er,I heard the lapse of waves upon the  
shore,Distinct as it had been at broad noonday,An I were wandering at Rockaway.

## Love

We two that planets erst had beenAre now a double star,And in the heavens may  
be seen,Where that we fixed are.

Yet whirled with subtle power along,Into new space we enter,And evermore with  
spherical songRevolve about one centre.

## I knew a man by sight

I knew a man by sight,A blameless wight,Who, for a year or more,Had daily passed  
my door,Yet converse none had had with him.

I met him in a lane,Him and his cane,About three miles from home,Where I had  
chanced to roam,And volumes stared at him, and he at me.

In a more distant placeI glimpsed his face,And bowed instinctively;Starting he  
bowed to me,Bowed simultaneously, and passed along.

Next, in a foreign land I grasped his hand, And had a social chat, About this thing and that, As I had known him well a thousand years.

Late in a wilderness I shared his mess, For he had hardships seen, And I a wanderer been; He was my bosom friend, and I was his.

And as, methinks, shall all, Both great and small, That ever lived on earth, Early or late their birth, Stranger and foe, one day each other know.

## The deeds of king and meanest hedger

The deeds of king and meanest hedger, Stand side by side in heaven's ledger.

## T will soon appear if we but look

'T will soon appear if we but look At evening into earth's day book, Which way the great account doth stand Between the heavens and the land.

## The Evening Wind

The eastern mail comes lumbering in With outmost waves of Europe's din; The western sighs adown the slope, Or mid the rustling leaves doth grope, Laden with news from Californ', Whateer transpired hath since morn, How wags The world by brier and brake, From hence to Athabasca lake.

## The Peal of the Bells

When the world grows old by the chimney side, Then forth to the youngling rocks I glide — Where over the water, and over the land, The bells are booming on either hand.

Now up they go ding, then down again dong, And awhile they swing to the same old song, And the metal goes round 't a single bound, A-lulling the fields with its measured sound — Till the tired tongue falls with a lengthened boom, As solemn and loud as the crack of doom. Then changed is their measure to tone upon tone, And seldom it is that one sound comes alone, For they ring out their peals in a mingled throng, And the breezes waft the loud ding-dong along.

When the echo has reached me in this lone vale, I am straightway a hero in coat of mail, I tug at my belt and I march on my post, And feel myself more than a match for a host.

I am on the alert for some wonderful Thing, Which somewhere's a taking place, 'Tis perchance the salute which our planet doth ring When it meeteth another in space.

## The Shrike

Hark — hark — from out the thickest fog  
Warbles with might and main  
The fearless shrike, as all agog  
To find in fog his gain.

His steady sail he never furls  
At any time o' year,  
And perched now on winter's  
curls, He whistles in his ear.

## Sympathy

Lately alas I knew a gentle boy,  
Whose features all were cast in Virtue's mould,  
As one she had designed for Beauty's toy,  
But after manned him for her own stronghold.

On every side he open was as day,  
That you might see no lack of strength within,  
For walls and ports do only serve alway  
For a pretence to feebleness and sin.

Say not that Caesar was victorious,  
With toil and strife who stormed the House of  
Fame  
In other sense this youth was glorious,  
Himself a kingdom wheresoe'er he came.

No strength went out to get him victory,  
When all was income of its own accord;  
For where he went none other was to see,  
But all were parcel of their noble lord.

He forayed like the subtle haze of summer,  
That stilly shows fresh landscapes to our  
eyes,  
And revolutions works without a murmur,  
Or rustling of a leaf beneath the skies.

So was I taken unawares by this,  
I quite forgot my homage to confess;  
Yet now am forced to know, though hard it is,  
I might have loved him, had I loved him less.

Each moment, as we nearer drew to each,  
A stern respect withheld us farther yet,  
So that we seemed beyond each other's reach,  
And less acquainted than when first we met.

We two were one while we did sympathize  
So could we not the simplest bargain  
drive;  
And what avails it now that we are wise,  
If absence doth this doubleness contrive?

Eternity may not the chance repeat,  
But I must tread my single way alone,  
In sad remembrance that we once did meet,  
And know that bliss irrevocably gone.

The spheres henceforth my elegy shall sing,  
For elegy has other subject none;  
Each strain of music in my ears shall ring  
Knell of departure from that other one.

Make haste and celebrate my tragedy;  
With fitting strain resound ye woods and  
fields;  
Sorrow is dearer in such case to me  
Than all the joys other occasion yields.

Is't then too late the damage to repair?  
Distance, forsooth, from my weak grasp  
hath reft  
The empty husk, and clutched the useless tare,  
But in my hands the wheat  
and kernel left.

If I but love that virtue which he is,  
Though it be scented in the morning air,  
Still shall we be truest acquaintances,  
Nor mortals know a sympathy more rare.

## The "Book of Gems."

— With cunning plates the polished leaves were decked,  
Each one a window to the  
poet's world,  
So rich a prospect that you might suspect  
In that small space all paradise

unfurled. It was a right delightful road to go, marching through pastures of such fair herbage, O'er hill and dale it lead, and to and fro, From bard to bard, making an easy stage. Where ever and anon I slaked my thirst Like a tired traveller at some poet's well, Which from the teeming ground did bubbling burst, And tinkling thence adown the page it fell. Still through the leaves its music you might hear, Till other springs fell faintly on the ear.

## The Assabet

Up this pleasant stream let's row For the livelong summer's day, Sprinkling foam where'er we go In wreaths as white as driven snow — Ply the oars, away! away!

Now we glide along the shore, Chucking lilies as we go, While the yellow-sanded floor Doggedly resists the oar, Like some turtle dull and slow.

Now we stem the middle tide Ploughing through the deepest soil, Ridges pile on either side, While we through the furrow glide, Reaping bubbles for our toil.

Dew before and drought behind, Onward all doth seem to fly; Nought contents the eager mind, Only rapids now are kind, Forward are the earth and sky.

Sudden music strikes the ear, Leaking out from yonder bank, Fit such voyagers to cheer — Sure there must be naiads here, Who have kindly played this prank.

There I know the cunning pack Where yon self-sufficient rill All its telltale hath kept back, Through the meadows held its clack, And now babbleth its fill.

Silent flows the parent stream, And if rocks do lie below Smothers with her waves the din, As it were a youthful sin, Just as still and just as slow.

But this gleeful little rill, Purling round its storied pebble, Tindles to the self same tune From December until June, Nor doth any drought enfeeble.

See the sun behind the willows, Rising through the golden haze, How he gleams along the billows — Their white crests the easy pillows Of his dew besprinkled rays.

Forward press we to the dawning, For Aurora leads the way, Sultry noon and twilight scorning, In each dew drop of the morning Lies the promise of a day.

Rivers from the sun do flow, Springing with the dewy morn, Voyageurs 'gainst time do row, Idle noon nor sunset know, Even even with the dawn.

Since that first away! away! Many a lengthy league we've rowed, Still the sparrow on the spray, Hastes to usher in the day With her simple stanza'd ode.

## The Breezed Invitation

Come let's roam the breezy pastures, Where the freest zephyrs blow, Batten on the oak tree's rustle, And the pleasant insect bustle, Dripping with the streamlet's flow.

What if I no wings do wear, Thro' this solid seeming air I can skim like any swallow Who so dareth let her follow, And we'll be a jovial pair.

Like two careless swifts let's sail, Zephyrus shall think for me — Over hill and over dale,  
Riding on the easy gale, We will scan the earth and sea.

Yonder see that willow tree Winnowing the buxom air, You a gnat and I a bee, With  
our merry minstrelsy We will make a concert there.

One green leaf shall be our screen, Till the sun doth go to bed, I the king and you  
the queen Of that peaceful little green, Without any subject's aid.

To our music Time will linger, And earth open wide her ear, Nor shall any need to  
tarry To immortal verse to marry Such sweet music as he'll hear.

## Stanzas

Nature doth have her dawn each day, But mine are far between; Content, I cry, for  
sooth to say, Mine brightest are, I ween.

For when my sun doth deign to rise, Though it be her noontide, Her fairest field in  
shadow lies, Nor can my light abide.

Sometimes I bask me in her day, Conversing with my mate; But if we interchange  
one ray, Forthwith her heats abate.

Through his discourse I climb and see, As from some eastern hill, A brighter morrow  
rise to me Than lieth in her skill.

As't were two summer days in one, Two Sundays come together, Our rays united  
make one Sun, With fairest summer weather.

## Loves Farewell

Light hearted, careless, shall I take my way, When I to thee this being have re-  
signed, Well knowing where upon a future day, With usurer's craft, more than myself  
to find.

## Each more melodious note I hear

Each more melodious note I hear Brings this reproach to me, That I alone afford the  
ear, Who would the music be.

## The Fisher's Son

I know the world where land and water meet, By yonder hill abutting on the  
main, One while I hear the waves incessant beat, Then turning round survey the land  
again.

Within a humble cot that looks to sea  
Daily I breathe this curious warm life,  
Beneath a friendly haven's sheltering lea  
My noiseless day with myst'ry still is rife.

'Tis here, they say, my simple life began,  
And easy credit to the tale I lend,  
For well I know 'tis here I am a man,  
But who will simply tell me of the end?

These eyes fresh opened spied the far off Sea,  
Which like a silent godfather did stand,  
Nor uttered one explaining word to me,  
But introduced straight godmother Land.

And yonder still stretches that silent main,  
With many glancing ships besprinkled o'er,  
And earnest still I gaze and gaze again  
Upon the self same waves and friendly shore.

Till like a watery humor on the eye  
It still appears whichever way I turn,  
Its silent waste and mute overarching sky  
With close shut eyes I clearly still discern.

And yet with lingering doubt I haste each mom  
To see if Ocean still my gaze will greet,  
And with each day once more to life am born,  
And tread the earth once more with tott'ring feet.

My years are like a stroll upon the beach,  
As near the ocean's edge as I can go;  
My tardy steps its waves sometimes o'erreach,  
Sometimes I stay to let them overflow.

Infinite work my hands find there to do,  
Gathering the relics which the waves up cast;  
Each tempest scours the deep for something new,  
And every time the strangest is the last.

My sole employment 'tis and scrupulous care,  
To place my gains beyond the reach of tides,  
Each smoother pebble and each shell more rare  
Which Ocean kindly to my hand confides.

I have but few companions on the shore,  
They scorn the strand who sail upon the sea,  
Yet oft I think the ocean they've sailed o'er  
Is deeper known upon the strand to me.

My neighbors sometimes come with lumb'ring carts,  
As if they wished my pleasant toil to share,  
But straight they go again to distant marts  
For only weeds and ballast are their care.

'Tis by some strange coincidence if I  
Make common cause with Ocean when he storms  
Who can so well support a separate sky,  
And people it with multitude of forms.

Oft in the stillness of the night I hear  
Some restless bird presage the coming din,  
And distant murmurs faintly strike my ear  
From some bold bluff projecting far within.

My stillest depths straightway do inly heave  
More genially than rests the summer's calm,  
The howling winds through my soul's cordage grieve,  
Till every shelf and ledge gives the alarm.

Oft at some ruling star my tide has swelled,  
The sea can scarcely brag more wrecks than I,  
Ere other influence my waves has quelled  
The staunchest bark that floats is high and dry.

## Friendship

“Friends, Romans, Countrymen, and Lovers.” Let such pure hate still underprop  
Our love, that we may be Each other’s conscience, And have our sympathy  
Mainly from thence.

We’ll one another treat like gods, And all the faith we have  
In virtue and in truth, bestow  
On either, and suspicion leave  
To gods below.

Two solitary stars — Unmeasured systems far  
Between us roll, But by our conscious  
light we are Determined to one pole.

What need confound the sphere — God can afford to wait,  
For him no hour’s too late  
That witnesseth one duty’s end,  
Or to another doth beginning lend.

Love will subserve no use, More than the tints of flowers,  
Only the independent guest-  
Frequents its bowers, Inherits its bequest.

No speech though kind has it, But kinder silence doles  
Unto its mates, By night con-  
soles, By day congratulates.

What saith the tongue to tongue? What heareth ear of ear?  
By the decrees of fate-  
From year to year, Does it communicate.

Pathless the gulf of feeling yawns — No trivial bridge of words,  
Or arch of boldest span,  
Can leap the moat that girds  
The sincere man.

No show of bolts and bars  
Can keep the foeman out, Or ‘scape his secret mine  
Who entered with the doubt  
That drew the line.

No warder at the gate  
Can let the friendly in, But like the sun o’er all  
He will the castle win,  
And shine along the wall.

There’s nothing in the world I know  
That can escape from love, For every depth it  
goes below, And every height above.  
It waits as waits the sky,

Until the clouds go by, Yet shines serenely on  
With an eternal day, Alike when they  
are gone, And when they stay.

Implacable is Love, — Foes may be bought or teased  
From their hostile intent, But  
he goes unappeased  
Who is on kindness bent.

## The Freshet

— A stir is on the Worc’ter hills, And Nobscott too the valley fills —  
Where scarce you’d fill an acorn cup  
In summer when the sun was up,  
No more you’ll find a cup at  
all, But in its place a waterfall.

Oh that the moon were in conjunction  
To the dry land’s extremest unction,  
Till every dyke and pier were flooded,  
And all the land with islands studded,  
For once to teach all human kind,  
Both those that plough and those that grind,  
There is no fixture in the  
land, But all unstable is as sand.

The river swelleth more and more, Like some sweet influence stealing o'er  
The passive town; and for awhile Each tussock makes a tiny isle, Where, on some friendly  
Ararat, Resteth the weary water rat.

No ripple shows Musketaquid, Her very current e'en is hid, As deepest souls do  
calmest rest When thoughts are swelling in the breast; And she that in the summer's  
drought Doth make a rippling and a rout, Sleeps from Nawshawtuct to the cliff, Unruffled  
by a single skiff; So like a deep and placid mind Whose currents underneath it wind —  
For by a thousand distant hills The louder roar a thousand rills, And many a spring  
which now is dumb, And many a stream with smothered hum, Doth faster well and  
swifter glide Though buried deep beneath the tide.

Our village shows a rural Venice, Its broad lagunes where yonder fen is, Far lovelier  
than the Bay of Naples Yon placid cove amid the maples, And in my neighbor's field of  
corn I recognise the Golden Horn.

Here Nature taught from year to year, When only red men came to hear, Methinks  
'twas in this school of art Venice and Naples learned their part, But still their mistress,  
to my mind, Her young disciples leaves behind.

## The Poet's Delay

In vain I see the morning rise, In vain observe the western blaze, Who idly look to  
other skies, Expecting life by other ways.

Amidst such boundless wealth without, I only still am poor within, The birds have  
sung their summer out, But still my spring does not begin.

Shall I then wait the autumn wind, Compelled to seek a milder day, And leave no  
curious nest behind, No woods still echoing to my lay?

## The Summer Rain

My books I'd fain cast off, I cannot read, 'Twixt every page my thoughts go stray at  
large Down in the meadow, where is richer feed, And will not mind to hit their proper  
targe.

Plutarch was good, and so was Homer too, Our Shakspeare's life was rich to live  
again, What Plutarch read that was not good nor true, Nor Shakspeare's books, unless  
his books were men.

Here while I lie beneath this walnut bough, What care I for the Greeks, or for Troy  
town, If juster battles are enacted now Between the ants upon this hummock's crown.

Bid Homer wait till I the issue learn, If red or black the gods will favor most, Or  
yonder Ajax will the phalanx turn, Struggling to heave some rock against the host.

Tell Shakspeare to attend some leisure hour,  
For now I've business with this drop of dew,  
And see you not, the clouds prepare a shower, — I'll meet him shortly when the sky is blue.

This bed of herdsgrass and wild oats was spread  
Last year with nicer skill than monarchs use,  
A clover tuft is pillow for my head,  
And violets quite overtop my shoes.

And now the cordial clouds have shut all in,  
And gently swells the wind to say all's well,  
The scattered drops are falling fast and thin,  
Some in the pond, some in the lily bell.

Drip, drip the trees for all the country round,  
And richness rare distils from every bough,  
The wind alone it makes every sound,  
Shaking down crystals on the leaves below.

For shame the sun will never show himself,  
Who could not with his beams e'er melt me so,  
My dripping locks — they would become an elf  
Who in a beaded coat does gaily go.

## **Guido's Aurora**

The God of day rolls his car up the slopes,  
Reining his prancing steeds with steady hand,  
The moon's pale orb through western shadows gropes,  
While morning sheds its light o'er sea and land.

Casdes and cities by the sounding main  
Resound with all the busy din of life,  
The fisherman unfurls his sails again  
And the recruited warrior bides the strife.

The early breeze ruffles the poplar leaves,  
The curling waves reflect the washed light,  
The slumbering sea with the day's impulse heaves,  
While o'er the western hills retires the drowsy night.

The sea birds dip their bills in ocean's foam,  
Far circling out over the frothy waves  
—

## **I've heard my neighbor's pump at night**

I've heard my neighbor's pump at night,  
Long after Lyra sunk her light,  
As if it were a natural sound,  
And proper utterance of the ground —  
Perchance some bittern in a fen —  
Or else the squeak of a meadow hen.

## **Who sleeps by day and walks by night**

Who sleeps by day and walks by night,  
Will meet no spirit but some sprite.

## When with pale cheek and sunken eye I sang

When with pale cheek and sunken eye I sang  
Unto the slumbering world at midnights  
hour,  
How it no more resounded with war's clang,  
And virtue was decayed in Peace's  
bower;

How in these days no hero was abroad,  
But puny men, afraid of war's alarms,  
Stood  
forth to fight the battles of their Lord,  
Who scarce could stand beneath a hero's arms;

A faint, reproachful, reassuring strain,  
From some harp's strings touched by unskilful  
hands  
Brought back the days of chivalry again,  
And the surrounding fields made holy  
lands.

A bustling camp and an embattled host  
Extending far on either hand I saw,  
For I  
alone had slumbered at my post,  
Dreaming of peace when all around was war.

## I arose before light

I arose before light  
To work with all my might,  
With my arms braced for toil  
Which  
no obstacle could foil,  
For it robbed me of my rest  
Like an anvil on my breast.

But as a brittle cup  
I've held the hammer up,  
And no sound from my forge  
Has been  
heard in the gorge.  
I look forward into night,  
And seem to get some light;  
E're long the  
forge will ring  
With its ding-dong-ding,  
For the iron will be hot  
And my wages will be  
got.

## I'm guided in the darkest night

I'm guided in the darkest night  
By flashes of auroral light,  
Which over dart thy  
eastern home  
And teach me not in vain to roam.  
Thy steady light on t'other side  
Pales  
the sunset, makes day abide,  
And after sunrise stays the dawn,  
Forerunner of a brighter  
morn.

There is no being here to me  
But staying here to be  
When others laugh I am not  
glad,  
When others cry I am not sad,  
But be they grieved or be they merry  
I'm supernu-  
merary.  
I am a miser without blame  
Am conscience stricken without shame.  
An idler am  
I without leisure,  
A busy body without pleasure.  
I did not think so bright a day  
Would  
issue in so dark a night.  
I did not think such sober play  
Would leave me in so sad a  
plight,  
And I should be most sorely spent  
Where first I was most innocent.  
I thought by  
loving all beside  
To prove to you my love was wide,  
And by the rites I soared above  
To  
show you my peculiar love.

## Friends —

They cannot help, They cannot hurt, Nor in indifference rest, But when for a host's service girt, They are a mutual guest.

They are a single power Plenipotentiary, No minister of state, Anxious and wary Decides their fate.

Where interest's self is There is no go-between, But where another reaps, They do but glean In scanty heaps. They have learned well to hate, And never grant reprieve, Nor e'er succumb to love, But sternly grieve, And look above.

If faults arise, my friend will send for me As some great god, Who will the matter try, Holding the scales, even or odd, Under the sky —

Who will award strict justice All the while, Confounding mine and thine, And share his smile, When they 'gainst me incline.

## When in some cove I lie

When in some cove I lie, A placid lake at rest, Scanning the distant hills, A murmur from the west, And gleam of thousand rills Which gently swell my breast, Announce the friendly thought, And in one wave sun-lit I'm softly brought Seaward with it.

## Who hears the parson

Who hears the parson Will not hear the bell, But if he deafly pass on He will hear of hell.

I' faith the people go to church To leave the devil in the lurch, But since they've carpeted the pews To squat with hymn book he doth use.

## Sic Vita

I am a parcel of vain strivings tied By a chance bond together, Dangling this way and that, their links Were made so loose and wide, Methinks, For milder weather.

A bunch of violets without their roots, And sorrel intermixed, Encircled by a wisp of straw Once coiled about their shoots, The law By which I'm fixed.

A nosegay which Time clutched from out Those fair Elysian fields, With weeds and broken stems, in haste, Doth make the rabble rout That waste The day he yields.

And here I bloom for a short hour unseen, Drinking my juices up, Which have no root in the land To keep my branches green,

But stand  
In a bare cup.

Some tender buds were left upon my stem  
In mimicry of life, But ah! the children  
will not know Till time has withered them,  
The woe With which they're rife.

But now I see I was not plucked for nought,  
And after in life's vase Of glass set while  
I might survive, But by a kind hand brought  
Alive To a strange place.

That stock thus thinned will soon redeem its hours,  
And by another year Such as  
God knows, with freer air, More fruits and fairer flowers  
Will bear, While I droop here.

## **Wait not till I invite thee**

Wait not till I invite thee, but observe I'm glad to see thee when thou com'st.

## **Friendship**

Now we are partners in such legal trade,  
We'll look to the beginnings, not the  
ends, Nor to pay day — knowing true wealth is made  
For current stock and not for  
dividends.

## **On the Sun Coming Out in the Afternoon**

Methinks all things have travelled since you shined,  
But only Time, and clouds,  
Time's team, have moved; Again foul weather shall not change my mind,  
But In the  
shade I will believe what in the sun I loved.

## **They who prepare my evening meal below**

They who prepare my evening meal below  
Carelessly hit the kettle as they go  
With  
tongs or shovel, And ringing round and round,  
Out of this hovel It makes an eastern  
temple by the sound.

At first I thought a cow-bell right at hand  
Mid birches sounded o'er the open  
land, Where I plucked flowers  
Many years ago, Spending midsummer hours  
With such  
secure delight they hardly seemed to flow.

## **My ground is high**

My ground is high, But 'tis not dry,  
What you call dew Comes filtering through;  
Though  
in the sky, It still is nigh; Its soil is blue  
And virgin too.

## If from your price ye will not swerve

If from your price ye will not swerve,Why then Ill think the gods reserve  
A greater bargain there above,Out of their sup'rabundant love,  
Have meantime better for me cared,And so will get my stock prepared,  
Plows of new pattern, hoes the same,Designed a different soil to tame,  
And sow my seed broadcast in air,Certain to reap my harvest there.

## Death cannot come too soon

Death cannot come too soonWhere it can come at all,But always is too late  
Unless the fates it call.

## The Mountains in the Horizon

With frontier strength ye stand your ground — With grand content ye circle round  
— Tumultuous silence for all sound, Ye springing nursery of rills,Monadnock and the Pe-  
terborough hills — Staid argument that never stirs,Outcircling the philosophers.While  
we enjoy a lingering ray, Ye still oertop the western day,Reposing yonder on God's croft-  
Like solid stacks of hayThe iris of the sky, Ye runRound the horizon of its eyeWhose  
pupil is the sun.Upon a fresh and airy day,When our globe ploughs its wayIn salter  
seas of light,Right opposite the bightOf some elysian bay, Ye are its dorsal fin,  
Tossing th'etherial sprayWith breezy din.From on Fair Haven's pier,For many a year.I've seen  
ye westward bound,Without a sound,Like some vast fleetSailing through rain and  
sleet,Through winters cold and summer's heat.Ships of the line each oneThat west-  
ward run,Always before the gale,Under a press of sail,Convoying cloudsWhich cluster  
in your shrouds — With your slant masts 'tis sixes and sevensBut that ye rake the  
heavens,So near the edge ye go,Under the roof so low;With weight of metal all un-  
told,I seem to feel ye in my firm seat here,Immeasurable depth of hold,And breadth  
of beam, and length of running gear.The vessels on the seaAre relative to ye,  
Sailing by sympathy.Late enterprises of mankindSome near income to find.Flitting from shore  
to shore,Their voyages soon are oer,But ye hold on upon your high emprise,Until ye  
find a shoreAmid the skies.Crossing the pliant floodBy swifter period,They with the  
noontide weigh,And glide before its rayTo some retired bay,Their haunt — Whence  
under tropic sun,They ceaseless run,Bearing gum Senegal and Tragicant.For such small  
endsTime gladly spendsItself into eternity,For this was ocean meant,For this the sun  
was sent,And moon was lent,And 'tis the winds' employment.Time waits but till the  
field is tilled,With such small deedsHis lap is filledAs that with seeds.

Man's little acts are grandBeheld from land to land,There as they lie in timeWithin  
their native climeFor which the world did wait,They are so great. No doubt that in  
the port from whence ye hailYour masters did not failTo register your wealth, For ye

sail not by stealth, Skulking close in to land, With cargo contraband, But they who sent a venture out by ye Have set the sun to see Their honesty.

Especial I remember thee, Wachusett, who like me Standest alone without society. My life is like a western sky Unto an eastern eye Of calm repose, Each moment tinted variously As the wind blows. Now streaming like the northern light, Each yet more north, more high, more bright, Subsiding on the shores of night, Like yonder field of grain It alway doth remain Firm at its root, Bending through all its length With graceful strength, Only the shadows glide From side to side, But still the deep grain doth abide. Anon it sighs along Like the breath of a song, Or the wind on the sedge, Or a tempest on the ledge, First swells then dies away Like a harp strain, Only a string doth stay To invite the wind again, — But thou art far and blue and still, Mocking my infirm will, Thou steadfast hill. Upholding heaven, holding down earth, Thy pastime from thy birth, Not steadied by the one nor leaning on the other, May I approve myself thy worthy brother.

Thy far blue eye, A remnant of the sky, See through the clearing or the gorge, Or from the windows of the forge Doth leaven all it passes by. Thou art our rostrum in the west, Some ancient victory's bequest, With nature's trophies fringed, And natural colors tinged, Not with the Tyrian dye, But with the azure of the sky Fronting an amphitheater of glory Greater than Greek or Roman story — Their old nobility westering with the sun, Here to be done, perchance, or else begun.

Nothing is true But stands 'tween me and you, Thou western pioneer Who know'st not shame nor fear, By venturesome spirit driven Under the eaves of heaven, And canst expand thee there? And breath enough of air? The sun doth go behind thee not before, Briefly to mend his store, Even beyond the west With thy small stock thou migratest Into unclouded tracts, Without a pilgrims axe, Upon a loftier way Than our low western rout, Cleaving thy road on high With thy well tempered brow, And mak'st thyself a clearing in the sky.

## The needles of the pine

The needles of the pine, All to the west incline.

## The Echo of the Sabbath Bell — heard in the Woods

Dong — sounds the brass in the east — As if for a civic feast, But I like that sound the best Out of the fluttering west.

The steeple rings a knell, But the fairies' silvery bells Is the voice of that gentle folk — Or else the horizon that spoke.

Its metal is not of brass,But air and water and glass,And under a cloud it is swung,And by the wind is rung,With a slim silver tongue

When the steeple tolls the noonIt soundeth not so soon,Yet it rings an earlier hour,And the sun has not reached its tower.

## Low in the eastern sky

Low in the eastern skyIs set thy glancing eye;And though its gracious lightNe'er riseth to my sight,Yet every star that climbsAbove the gnarled limbsOf yonder hill,Conveys thy gentle will.

Believe I knew thy thought,And that the zephyrs broughtThy kindest wishes through,As mine they bear to you,

That some attentive cloudDid pause amid the crowdOver my head,While gentle things were said.

Believe the thrushes sung,And that the flower-bells rung,That herbs exhaled their scent,And beasts knew what was meant,The trees a welcome waved,And lakes their margins laved,When thy free mindTo my retreat did wind.

It was a summer eve,The air did gently heaveWhile yet a low-hung cloudThy eastern skies did shroud;The lightning's silent gleam,Startling my drowsy dream,Seemed like the flashUnder thy dark eyelash.

Still will I strive to beAs if thou wert with me;Whatever path I take,It shall be for thy sake,Of gentle slope and wide,As thou wert by my side,Without a rootTo trip thy gentle foot.

I'll walk with gentle pace,And choose the smoothest place,And careful dip the oar,And shun the winding shore,And gently steer my boatWhere water-lilies float,And cardinal flowersStand in their sylvan bowers.

## My life has been the poem I would have writ

My life has been the poem I would have writ,But I could not both live and utter it.

## To the Mountains

And when the sun puts out his lampWe'll sleep serene within the camp,Trusting to his invet'rate skillWho leads the stars oer yonder hill,Whose discipline doth never ceaseTo watch the slumberings of peace,And from the virtuous hold afarThe melancholy din of war. — For ye our sentries still outlie,The earth your pallet and your screen the sky.

From steadfastness I will not swerveRemembering my sweet reserve.

With all your kindness shown from year to year  
Ye do but civil demons still appear,  
Still to my mind Ye are inhuman and unkind,  
And bear an untamed aspect to my sight  
After the “civil-suited” night  
As if ye had lain out Like to the Indian scout  
Who lingers in the purlieu of the towns  
With unexplored grace and savage frowns.

## Greater is the depth of sadness

Greater is the depth of sadness  
Than is any height of gladness.

## Where I have been

Where I have been  
There was none seen.

## Better wait

Better wait  
Than be too late.

## Independence

My life more civil is and free  
Than any civil polity.

Ye princes keep your realms  
And circumscribed power,  
Not wide as are my dreams,  
Nor rich as is this hour.

What can ye give which I have not?  
What can ye take which I have got?  
Can ye defend the dangerless?  
Can ye inherit nakedness?

To all true wants times ear is deaf,  
Penurious states lend no relief  
Out of their pelf —  
But a free soul — thank God — Can help itself.

Be sure your fate  
Doth keep apart its state — Not linked with any band —  
Even the nobles of the land  
In tented fields with cloth of gold —  
No place doth hold  
But is more chivalrous than they are.  
And sigheth for a nobler war.  
A finer strain its trumpet sings —  
A brighter gleam its armor flings.

The life that I aspire to live  
No man proposeth me —  
No trade upon the street  
Wears its emblazonry.

## Cock-crowing

Upon my bed at early dawn  
I hear the cocks proclaim the day,  
Though the moon shines serenely on,  
As if her queenly course they could not stay —

Nor pull her down with their faint din  
From riding at that lofty height,  
Who in her shining knows no sin,  
As if unconscious of a nobler light.

Far in the east their larum rings,As if a watchful host there thronged,Where now  
its early clarion sings,So bravely is their martial note prolonged.

One on more distant perch, more clear,But fainter brags him still,But ah! he  
promises, I fear,More than his master's household will fulfill.

The stars withhold their shining notOr singly or in scattered crowds,But seem like  
Parthian arrows shotBy yielding night 'mid the advancing clouds.

Some wakeful steer exalts his trumpAfar oer the sonorous ground,And with a sound-  
ing eastern pompIt grandly marcheth the horizon round.

Invades each recess of the wood,Awakes each slumbering bird,Till every fowl leads  
forth her brood,Which on her nest the tuneful summons heard.

Methinks that Time has reached his prime,Eternity is in the flower,I hear their faint  
confused chimeNow ushering in the sacred hour.

Over the hill top I have runFor fear to be too late,I've left behind the luggard  
sun,Travelling at such a rate,To be in at creation,To be up with fate.

And has time got so forward then?From what perennial fount of joy,Do ye inspire  
the hearts of men,And teach them how the day-light to employ?

From your abundance pray impartWho dost so freely spill,Some bravery unto my  
heart,Or let me taste of thy perennial rill.

There is such health and length of yearsIn the elixir of that note,That God himself  
more young appears,And a more youthful world through space doth float.

The tidy night with woolen feet,I'm sure has lately passed this way,And with her  
trim despatch so neat,She has arranged the furniture of the day.

In yon thin sheet of mist spread oerThe lowland trees of leaves bereft,Which round  
her head at eve she wore,Methinks I see the housewife's duster left.

The fragrant mist exhales the scentOf aromatic herbs, so youWould say she blest  
whereer she went,And through the fields had sprinkled perfumed dew.

## Inspiration

Whate'er we leave to God, God does,And blesses us;The work we choose should be  
our own,God lets alone.

If with light head erect I sing,Though all the muses lend their force,From my poor  
love of anything,The verse is weak and shallow as its source.

But if with bended neck I grope,Listening behind me for my wit,With faith superior  
to hope,More anxious to keep back than forward it,

Making my soul accomplice thereUnto the flame my heart hath lit,Then will the  
verse forever wear,Time cannot bend the line which God hath writ.

Always the general show of thingsFloats in review before my mind,And such true  
love and reverence brings,That sometimes I forget that I am blind.

But soon there comes unsought, unseen,Some clear divine electuary,And I, who had  
but sensual been,Grow sensible, and as God is am wary.

I hearing get who had but ears,And sight who had but eyes before,I moments live who lived but years,And truth discern who knew but learning's lore.

I hear beyond the range of sound,I see beyond the verge of sight,New earths — new skies — new seas — around,And in my noon the sun doth pale his light.

A clear and ancient harmonyPeirces my soul through all its din,As through its utmost melody,Further behind than they, further within.

More swift its bolt than lightning is,Its voice than thunder is more loud,It doth expand my privaciesTo all, and leave me single in the crowd.

It speaks with such authority,With so serene and lofty tone,That idle Time runs gadding by,And leaves me with Eternity alone.

Then chiefly is my natal hour,And only then my prime of life,Of manhood's strength it is the flower,'T is peace's end and wars beginning strife.

'T hath come in summer's broadest noon,By a grey wall or some chance place,Unseasoned time, insulted June,And vexed the day with its presuming face.

Such fragrance round my sleep it makes,More rich than are Arabian drugs,That my soul scents its life, and wakesThe body up — from 'neath its perfumed rugs.

Such is the Muse — the heavenly maid,The star that guides our mortal course,Which shows where life's true kernel's laid,Its wheat's fine flower, and its undying force.

Who with one breath attunes the spheres,And also my poor human heart,With one impulse propels the yearsAround, and gives my throbbing pulse its start.

I will not doubt forever more,Nor falter from an iron faith,For if the system be turned oer,God takes not back the word which once he saith.

I will believe the love untold,Which not my worth nor want hath bought,Which wooed me young and woos me old,And call the stars to witness now my thought.

My memory I'll educateTo know the one historic truth,Remembering to the latest dateThe only true, and sole immortal youth.

Be but thy inspiration given,No matter through what dangers sought,I'll fathom hell or climb to heaven,And yet esteem that cheap which love has bought.

Fame cannot tempt the bardWho's famous with his God,Nor laurel him reward,Who hath his maker's nod.

## The Soul's Season

Thank God who seasons thus the year,And sometimes kindly slants his rays,For in his winter he's most near,And plainest seen upon the shortest days.

Who gently tempers now his heats,And then his harsher cold, lest weShould surfeit on the Summer's sweets,Or pine upon the Winter's crudity.

Grown tired of this rank summer's wealth,Its raw and superficial show,I fain would hie away by stealthWhere no roads meet, but still't doth trivial grow.

Methinks by dalliance it hath caughtThe shallow habits of the town,Itself infected most, which oughtWith sterner face upon our tameness frown.

A sober mind will walk alone  
Apart from nature if need be,  
And only its own seasons  
own,  
For nature having its humanity.

Sometimes a late Autumnal thought  
Has crossed my mind in green July,  
And to its  
early freshness brought  
Late ripened fruits and an autumnal sky.

A dry but golden thought which gleamed  
Across the greenness of my mind,  
And  
prematurely wise it seemed,  
Too ripe 'mid summer's youthful bowers to find.

So have I seen one yellow leaf  
Amid the glossy leaves of June,  
Which pensive hung,  
though not with grief,  
Like some fair flower, it had changed so soon.

I scent my med'cine from afar,  
Where the rude simpler of the year,  
October leads the  
rustling war,  
And strews his honors on the summer's bier.

## The Fall of the Leaf

Grown tired of this rank summer's wealth,  
Its raw and superficial show,  
I fain would  
hie away by stealth  
Where no roads meet, but still't doth trivial grow.

A sober mind will walk alone,  
Apart from nature if need be,  
And only its own seasons  
own,  
For nature having its humanity.

Sometimes a late autumnal thought  
Has crossed my mind in green July,  
And to its  
early freshness brought  
Late ripend fruits and an autumnal sky.

A dry but golden thought which gleamed  
Athwart the greenness of my mind,  
And  
prematurely wise it seemed,  
Too ripe mid summer's youthful bowers to find.

So have I seen one yellow leaf  
Amid the glossy leaves of June,  
Which pensive hung,  
though not with grief,  
Like some fair flower, it had changed so soon.

I scent my med'cine from afar,  
Where the rude simpler of the year  
October leads the  
rustling war,  
And strews his honors on the summer's bier.

The evening of the year draws on,  
The fields a later aspect wear,  
Since summer's  
garishness is gone  
Some grains of night tincture the noontide air.

Behold the shadows of the trees  
Now circle wider 'bout their stem,  
Like sentries which  
by slow degrees  
Perform their rounds, gently protecting them.

And as the season doth decline  
The sun affords a scantier light,  
Behind each needle  
of the pine  
There lurks a small auxiliari of the night.

After each shrub and straggling fence  
That marks the meadow's pensive green,  
And  
shows the meadow's opulence,  
Evening's insidious foot at noon is seen.

Wave upon wave a mellower air  
Flows over all the region,  
As if there were some  
tincture there  
Of ripeness caught from the long summer's sun.

I hear the cricket's slumbrous lay  
Around, beneath me, and on high,  
It rocks the  
night, it lulls the day,  
And everywhere 'tis nature's lullaby.

But most he chirps beneath the sod,  
Where he hath made his winter's bed,  
His creak  
grown fainter, but more broad,  
A film of autumn o'er the summer spread.

Upon my bed at early dawn  
I hear the cocks proclaim the day,  
Though the moon  
shines serenely on  
As if her queenly course they could not stay;

Nor pull her down with their faint din  
From riding at that lofty height,  
Who in her shining knows no sin,  
But is unconscious of a nobler light.

The stars withhold their shining not  
Or singly or in scattered crowds,  
But seem like Parthian arrows shot  
By yielding night 'mid the advancing clouds.

And has time got so forward then?  
From what perennial fount of joy  
Do ye inspire the hearts of men,  
And teach them how the daylight to employ?

From your abundance pray impart,  
Who dost so freely spill,  
Some bravery unto my heart,  
Or let me taste of thy perennial rill.

Small birds in fleets migrating by  
Now beat across some meadow's bay,  
And as they tack and veer on high,  
With faint and hurried click beguile the way.

The moon is ripe fruit in the sky  
Which overhangs her harvest now,  
The sun doth break his stem well nigh  
From summer's height he has declined so low.

The greedy earth doth pluck his fruit,  
And cast it in night's lap,  
The stars more brightly glisten, mute  
Though their tears be, to see their lords mishap.

The harvest rattles in the wind,  
Ripe apples overhang the hay,  
The cereal flavor of my mind  
Nathless, tells me I am as ripe as they.

I hearing get who had but ears,  
And sight who had but eyes before,  
I moments live who lived but years,  
And truth discern who knew but learning's lore.

Far in the woods these golden days  
Some leaf obeys its maker's call,  
And through their hollow aisles it plays  
With delicate touch the prelude of the fall.

Gently withdrawing from its stem  
It lightly lays itself along,  
Where the same hand hath pillowed them  
Resigned to sleep upon the old year's throng.

The loneliest birch is brown and sere,  
The farthest pool is strewn with leaves,  
Which float upon their watery bier,  
Where is no eye that sees, no heart that grieves.

I marked when first the wind grew rude  
Each leaf curled like a living thing,  
As if with the ripe air it would  
Secure some faint memorial of the spring.

Then for its sake it turned a boat  
And dared new elements to brave,  
A painted palace which did float  
A summer's hoarded wealth to save.

Oh could I catch these sounds remote,  
Could I preserve to human ear,  
The strains which on the breezes float,  
And sing the requiem of the dying year.

I stood beside an oaken copse  
When the first gale of autumn sighed,  
It gently waved the birch tree tops  
Then rustled the oak leaves and died

But not the strains which it awoke,  
For in my inmost sense I hear  
The melody of which it spoke  
Still faintly rising on my inward ear.

A ripple on the river fell,  
A shadow o'er the landscape passed,  
And still the whispering ferns could tell  
Whither the stranger travelled so fast.

How stand the cottages of men  
In these so fair October days,  
Along the wood along the fen  
I see them looming through the mellow haze.

Immersed in Nature there they lie  
Against some cliff or chestnuts shade  
Scarce obvious to the travellers eye  
Who thoughtful traverses the forest glade.

The harvest lies about the door  
The chestnut drops its burs around  
As if they were the stock that bore  
The yellow crops that strew the ground.

The lily loves the river's tide  
The meadow's are the daisy's haunt  
The aspens on the mountain side  
Here child of nature grows the human plant.

The jay screams through the chestnut wood  
The crisped and yellow leaves around  
Are hue and texture of my mood,  
And these rough burs my heirlooms on the ground.

The thread bare trees so poor and thin  
They are no wealthier than I,  
But with as brave a core within  
They rear their boughs to the October sky.

Poor knights they are which bravely wait  
The charge of winter's cavalry,  
Keeping a simple Roman state  
Discumbered of their Persian luxury.

Thank God who seasons thus the year  
And sometimes kindly slants his rays,  
For in his winter he's most near  
And plainest seen upon the shortest days.

Who gently tempers now his heats  
And then his harsher cold, lest we  
Should surfeit on the summer's sweets,  
Or pine upon the winter's crudity.

## **Delay**

No generous action can delay  
Or thwart our higher, steadier aims,  
But if sincere and true are they,  
It will arouse our sight and nerve our frames.

## **Inspiration**

If thou wilt but stand by my ear,  
When through the field thy anthem's rung,  
When that is done I will not fear  
But the same power will abet my tongue.

## **Ive searched my faculties around**

Ive searched my faculties around  
To learn why life to me was lent  
I will attend his faintest sound  
And then declare to man what God hath meant

## **Who equallest the coward's haste**

Who equallest the coward's haste  
And still inspires the faintest heart  
Whose lofty fame is not disgraced  
Though it assume the lowest part

## **The Vireo**

Upon the lofty elm tree sprays  
The vireo rings the changes sweet,  
During the trivial summer days,  
Striving to lift our thoughts above the street.

## The coward ever sings no song

The coward ever sings no song,He listens to no chime,He has no heart, he has no tongue,To build the lofty rhyme.

## Only the slave knows of the slave

Only the slave knows of the slave,Only the free the free,For what ye principally have,That only can ye see.

## Great God, I ask thee for no meaner pelf

Great God, I ask thee for no meaner pelfThan that I may not disappoint myself,That in my action I may soar as high,As I can now discern with this clear eye.

And next in value, which thy kindness lends,That I may greatly disappoint my friends,Howe'er they think or hope that it may be,They may not dream how thou'st distinguished me.

That my weak hand may equal my firm faith,And my life practice more than my tongue saith;That my low conduct may not show,Nor my relenting lines,That I thy purpose did not know,Or overrated thy designs.

## The Inward Morning

Packed in my mind lie all the clothesWhich outward nature wears,And in its fashion's hourly changeIt all things else repairs.

In vain I look for change abroad,And can no difference find,Till some new ray of peace uncalledIllumes my inmost mind.

What is it gilds the trees and clouds,And paints the heavens so gay,But yonder fast abiding lightWith its unchanging ray?

Lo, when the sun streams through the woodUpon a winter's morn,Wher'er his silent beams intrudeThe murky night is gone.

How could the patient pine have knownThe morning breeze would come,Or humble flowers anticipateThe insect's noonday hum?

Till the new light with morning cheerFrom far streamed through the aisles,And nimbly told the forest treesFor many stretching miles.

I've heard within my inmost soulSuch cheerful morning news,In the horizon of my mindHave seen such orient hues,

As in the twilight of the dawn,When the first birds awake,Are heard within some silent wood,Where they the small twigs break,

Or in the eastern skies are seen, Before the sun appears, The harbingers of summer heats Which from afar he bears.

## Within the circuit of this plodding life

Within the circuit of this plodding life There enter moments of an azure hue, Untarnished fair as is the violet Or anemone, when the spring strews them By some meandering rivulet, which make The best philosophy untrue that aims But to console man for his grievances. I have remembered when the winter came, High in my chamber in the frosty nights, When in the still light of the cheerful moon, On every twig and rail and jutting spout, The icy spears were adding to their length Against the arrows of the coming sun, How in the shimmering noon of summer past Some unrecorded beam slanted across The upland pastures where the Johnswort grew; Or heard, amid the verdure of my mind, The bee's long smothered hum, on the blue flag Loitering amidst the mead; or busy rill, Which now through all its course stands still and dumb Its own memorial, — purling at its play Along the slopes, and through the meadows next, Until its youthful sound was hushed at last In the staid current of the lowland stream; Or seen the furrows shine but late upturned, And where the fieldfare followed in the rear, When all the fields around lay bound and hoar Beneath a thick integument of snow. So by God's cheap economy made rich To go upon my winter's task again.

## To Edith

Thou little bud of being, Edith named, With whom I've made acquaintance on this earth, Who knowest me without impediment, As flowers know the winds that stir their leaves, And rid'st upon my shoulders as the sphere, Turning on me thy sage reserved eye, Behind whose broad & charitable gaze Floats the still true & universal soul With the pure azure of the general day, Not yet a peopled & a vulgar town, Rather a pure untarnished country ground; For thou art whole, not yet begun to die, While men look on me with their shrivelled rays Streaming through some small chink of the broad sky; Pure youthful soul, thou hast begun to be, To cumulate thy sin & piety.

## Delay in Friendship

The blossoms on the tree Swell not too fast for me. God does not want quick work but sure Not to be tempted by so cheap a lure.

Owing to slow steps I shall be never By my friend out run, More than the tide can land from ocean sever, Or earth distance the sun.

The friend is patient, he can stay Some centuries yet, Though then I may not get So on my way As fit to be his mate.

Wilt thou not wait for me my friend,  
Or give a longer lease? Why think I can wait  
for myself, If so I please. Now as ye take one step away  
Thinking to leave me here — The heavens will still beyond ye lay,  
And though ye are far they will be near.

Ye will be pilgrims on the road  
Whither my heart has single gone, And never looks  
back from its abode On ye thus left forlorn.

Love equals swift and slow And high & low — Racer and lame — The hunter and  
his game.

## Ah, 'tis in vain the peaceful din

Ah, 'tis in vain the peaceful din  
That wakes the ignoble town, Not thus did braver  
spirits win A patriot's renown.

There is one field beside this stream,  
Wherein no foot does fall, But yet it beareth in  
my dream A richer crop than all.

Let me believe a dream so dear,  
Some heart beat high that day, Above the petty  
Province here, And Britain far away;

Some hero of the ancient mould,  
Some arm of knightly worth, Of strength un-  
bought, and faith unsold, Honored this spot of earth;  
Who sought the prize his heart described,  
And did not ask release, Whose free-born valor was not bribed  
By prospect of a peace.

The men who stood on yonder height  
That day are long since gone; Not the same  
hand directs the fight And monumental stone.

Ye were the Grecian cities then,  
The Romes of modern birth, Where the New England  
husbandmen Have shown a Roman worth.

In vain I search a foreign land  
To find our Bunker Hill, And Lexington and Concord  
stand By no Laconian rill.

## Between the traveller and the setting sun

Between the traveller and the setting sun,  
Upon some drifting sand heap of the  
shore, A hound stands o'er the carcass of a man.

## Have ye no work for a man to do

Have ye no work for a man to do — No earnest work that will expand the frame,  
And give a soundness to the muscles too? How ye do waste your time! Pray make it worth  
the while to live, Or worth the while to die. Show us great actions piled on high,  
Tasking our utmost strength touching the sky, As if we lived in a mountainous country.  
Hell were not quite so hard to bear If one were honored with its hottest place.  
And did ye fear ye should spoil Hell By making it sublime?

## I sailed up a river with a pleasant wind

I sailed up a river with a pleasant wind, New lands, new people, and new thoughts to find; Many fair reaches and headlands appeared, And many dangers were there to be feared; But when I remember where I have been, And the fair landscapes that I have seen, THOU seemest the only permanent shore, The cape never rounded, nor wandered o'er.

## I was made erect and lone

I was made erect and lone And within me is the bone Still my vision will be clear Still my life will not be drear To the center all is near Where I sit there is my throne If age choose to sit apart If age choose give me the start Take the sap and leave the heart.

## I'm not alone

I'm not alone If I stand by myself, But more than one, And not in my own pelf. I'm understood If my intent is good, For who obeys The truth finds his own praise.

## Our Country

It is a noble country where we dwell, Fit for a stalwart race to summer in; From Madawaska to Red River raft, From Florid keys to the Missouri forks, See what unwearied (and) copious streams Come tumbling to the east and southern shore, To find a man stand on their lowland banks: Behold the innumerable rivers and the licks Where he may drink to quench his summer's thirst, And the broad corn and rice fields yonder, where His hands may gather for his winter's store.

See the fair reaches of the northern lakes To cool his summer with their inland breeze, And the long slumbering Appalachian range Offering its slopes to his unwearied knees! See what a long lipped sea doth clip the shores, And noble strands where navies may find port; See Boston, Baltimore, and New York stand Fair in the sunshine on the eastern sea, And yonder too the fair green prairie.

See the red race with sullen step retreat, Emptying its graves, striking the wigwam tent, And where the rude camps of its brethren stand, Dotted the distant green, their herds around; In serried ranks, and with a distant clang, Their fowl fly o'er, bound to the northern lakes, Whose plashing waves invite their webbed feet. Such the fair reach and prospect of the land, The journeying summer creeps from south to north With wearied feet, resting in many a vale; Its length doth tire the seasons to overcome, Its widening breadth doth make the sea-breeze pause And spend its breath against the mountain's

side: Still serene Summer paints the southern fields, While the stern Winter reigns on northern hills.

Look nearer, — know the lineaments of each face, — Learn the far-travelled race, and find here met The so long gathering congress of the world! The Afric race brought here to curse its fate, Erin to bless, — the patient German too, Th' industrious Swiss, the fickle, sanguine Gaul, And manly Saxon, leading all the rest. All things invite this earth's inhabitants To rear their lives to an unheard-of height, And meet the expectation of the land; To give at length the restless race of man A pause in the long westering caravan.

## **Pray to what earth does this sweet cold belong**

Pray to what earth does this sweet cold belong, Which asks no duties and no conscience? The moon goes up by leaps her cheerful path In some far summer stratum of the sky, While stars with their cold shine bedot her way. The fields gleam mildly back upon the sky, And far and near upon the leafless shrubs The snow dust still emits a silvery light. Under the hedge, where drift banks are their screen, The titmice now pursue their downy dreams, As often in the sweltering summer nights The bee doth drop asleep in the flower cup, When evening overtakes him with his load. By the brooksides, in the still genial night, The more adventurous wanderer may hear The crystals shoot and form, and winter slow Increase his rule by gentlest summer means.

## **True kindness is a pure divine affinity**

True kindness is a pure divine affinity, Not founded upon human consanguinity. It is a spirit, not a blood relation, Superior to family and station.

## **Until at length the north winds blow**

Until at length the north winds blow, And beating high mid ice and snow, The sturdy goose brings up the rear, Leaving behind the cold cold year.

## **Wait not till slaves pronounce the word**

Spes sibi quisque Each one his own hope  
Wait not till slaves pronounce the word To set the captive free, Be free yourselves, be not deferred, And farewell slavery.

Ye are all slaves, ye have your price,And gang but cries to gang.Then rise, the highest of ye rise,I hear your fetters clang.Think not the tyrant sits afarIn your own breasts ye haveThe District of ColumbiaAnd power to free the Slave.

The warmest heart the north doth breed,Is still too cold and far,The colored man's release must comeFrom outcast Africa.

Make haste & set the captive free! — Are ye so free that cry?The lowest depths of slaveryLeave freedom for a sigh.

## **The Funeral Bell**

One more is goneOut of the busy throngThat tread these paths;The church bell tolls,Its sad knell rollsTo many hearths.

Flower bells toll not,Their echoes roll notUnto my ear; — There still perchance,That gentle spirit hauntsA fragrant bier.

Low lies the pall,Lowly the mourners allTheir passage grope; — No sable hueMars the serene blueOf heaven's cope.In distant dellFaint sounds the funeral bell,A heavenly chime;Some poet thereWeaves the light burthened airInto sweet rhyme.

## **Sometimes I hear the veery's clarion**

Sometimes I hear the veery's clarion,Or brazen trump of the impatient jay,And in secluded woods the chicadeeDoles out her scanty notes, which sing the praiseOf heroes, and set forth the lovelinessOf virtue evermore.

## **Thou dusky spirit of the wood**

Thou dusky spirit of the wood,Bird of an ancient brood,Flitting thy lonely way,A meteor in the summer's day,From wood to wood, from hill to hill,Low over forest, field and rill,What wouldst thou say?Why shouldst thou haunt the day?What makes thy melancholy float?What bravery inspires thy throat,And bears thee up above the clouds,Over desponding human crowds,Which far belowLay thy haunts low?

## **Not unconcerned Wachusett rears his head**

Not unconcerned Wachusett rears his headAbove the fields so late from nature wonWith patient brow unmoved as one who readNew annals in the history of man.

## Nature

O nature I do not aspire  
To be the highest in thy quire,  
To be a meteor in the sky  
Or comet that may range on high,  
Only a zephyr that may blow  
Among the reeds by the  
river low.  
Give me thy most privy place  
Where to run my airy race.  
In some withdrawn  
unpublic mead  
Let me sigh upon a reed,  
Or in the woods with leafy din  
Whisper the still  
evening in,  
For I had rather be thy child  
And pupil in the forest wild  
Than be the king of  
men elsewhere  
And most sovereign slave of care  
To have one moment of thy dawn  
Than share the city's year forlorn.  
Some still work give me to do  
Only be it near to you.

## Godfrey of Boulogne

The moon hung low o'er Provence vales,  
'Twas night upon the sea,  
Fair France was woo'd by Afric gales  
And paid in minstrelsy  
Along the Rhone then moves a band,  
Their banner in the breeze,  
Of mail-clad men with iron hand,  
And steel on breast and knees.  
The herdsman following his droves  
Far in the night alone,  
Read faintly through  
the olive groves, — 'Twas Godfrey of Boulogne

The mist still slumbered on the heights  
The glaciers lay in shade,  
The stars withdrew  
with faded lights,  
The moon went down the glade.  
Proud Jura saw the day from far,  
And showed it to the plain;  
She heard the din of coming war,  
But told it not again.  
The goatherd seated on the rocks,  
Dreaming of battles none  
Was wakened by his startled  
flocks, — 'Twas Godfrey of Boulogne.

Night hung upon the Danube's stream,  
Deep midnight on the vales,  
Along the shore no beacons gleam,  
No sound is on the gales.  
The Turkish lord has banished care  
The harem sleeps profound,  
Save one fair Georgian sitting there  
Upon the Moslem ground.  
The lightning flashed a transient gleam,  
A glancing banner shone,  
A host swept swiftly down the stream, — 'Twas Godfrey of Boulogne.  
'Twas noon upon  
Byzantium,  
On street and tower and sea,  
On Europe's edge a warlike hum  
Of gathered chivalry.  
A troop went boldly through the throng,  
Of Ethiops, Arabs, Huns,  
Jews  
Greeks and Turk, to right their wrong  
Their swords flashed thousand suns.  
Their banner cleaved Byzantium's dust,  
And like the sun it shone,  
their armor had acquired  
no rust, — 'Twas Godfrey of Boulogne.

## The Rabbit leaps

The Rabbit leaps  
The mouse outcreeps  
The flag out-peeps  
Beside the brook.  
The ferret weeps  
The marmot sleeps  
The owlet keeps  
In his snug nook.  
The apples thaw  
The ravens caw  
The squirrels gnaw  
The frozen fruit;  
To their retreat  
We track the feet  
Of mice that eat  
The apples root.  
The willows droop  
The alders stoop  
The pheasants group  
Beneath the snow.  
The catkins green  
Cast o'er the scene  
A summer sheen  
A genial glow.

The snow dust fallsThe otter crawlsThe partridge callsFar in the wood  
The traveller dreamsThe tree-ice gleamsThe blue jay screamsIn angry mood.

## **I am the Autumnal sun**

I am the Autumnal sun,With Autumn gales my race is run.When will the hazle  
put forth its flowers,And the grape ripen under my bowers?When will the harvest and  
the hunter's moonTurn my midnight into midnight?I am all sere & yellow,And to my  
core mellow.The mast is dropping within my woodsThe winter is lurking within my  
moodsAnd the rusding of the withered leafIs the constant music of my grief,My gay  
colored grief,My autumnal relief.

## **Where'er thou sail'st who sailed with me**

Where'er thou sail'st who sailed with me,Though now thou climbest loftier  
mountsAnd fairer rivers dost ascendBe thou my muse, my Brother.

## **I was born upon thy bank river**

I was born upon thy bank riverMy blood flows in thy streamAnd thou meanderest  
foreverAt the bottom of my dream

## **Salmon Brook**

Salmon BrookPennichookYe sweet waters of my brainWhen shall I lookOr cast the  
hookIn thy waves again?

Silver eelsWooden creelsThese the baits that still allureAnd dragon flyThat floated  
byMay they still endure?

## **The moon now rises to her absolute rule**

The moon now rises to her absolute rule,And the husbandman and hunterAcknowl-  
edge her for their mistress.Asters and golden reign in the fieldsAnd the life everlasting  
withers not.The fields are reaped and shorn of their prideBut an inward verdure still  
crowns themThe thistle scatters its down on the poolAnd yellow leaves clothe the river  
— And nought disturbs the serious life of men.But behind the sheaves and under the  
sodThere lurks a ripe fruit which the reapers have not gatheredThe true harvest of the  
year — the boreal fruitWhich it bears forever.With fondness annually watering and  
maturing it.But man never severs the stalkWhich bears this palatable fruit.

## My friends, why should we live?

My friends, why should we live? Life is an idle war a toilsome peace; To-day I would not give One small consent for its securest ease.

Shall we out-wear the year In our pavilions on its dusty plain And yet no signal hear To strike our tents and take the road again?

Or else drag up the slope The heavy ordnance of nature's train? Useless but in the hope, Some far remote and heavenward hill to gain.

## I mark the summer's swift decline

I mark the summer's swift decline The springing sward its grave clothes weaves Whose rustling woods the gales confine The aged year turns on its couch of leaves.

Oh could I catch the sounds remote Could I but tell to human ear — The strains which on the breezes float And sing the requiem of the dying year.

## My love must be as free

My love must be as free As is the eagle's wing, Hovering o'er land and sea And everything.

I must not dim my eye In thy saloon, I must not leave my sky And nightly moon.

Be not the fowler's net Which stays my flight, And craftily is set T' allure the sight.

But be the favoring gale That bears me on, And still doth fill my sail When thou art gone.

I cannot leave my sky For thy caprice, True love would soar as high As heaven is.

The eagle would not brook Her mate thus won, Who trained his eye to look Beneath the sun.

## The Moon

Time wears her not; she doth his chariot guide; Mortality below her orb is placed.  
— RALEIGH.

The full-orbed moon with unchanged ray Mounts up the eastern sky, Not doomed to these short nights for aye, But shining steadily.

She does not wane, but my fortune, Which her rays do not bless, My wayward path declineth soon, But she shines not the less.

And if she faintly glimmers here, And paled is her light, Yet always in her proper sphere She's mistress of the night.

## Rumors From an Aeolian Harp

There is a vale which none hath seen,Where foot of man has never been,Such as here lives with toil and strife,An anxious and a sinful life.

There every virtue has its birth,Ere it descends upon the earth,And thither every deed returns,Which in the generous bosom burns.

There love is warm, and youth is young,And poetry is yet unsung,For Virtue still adventures there,And freely breathes her native air.

And ever, if you hearken well,You still may hear its vesper bell,And tread of high-souled men go by,Their thoughts conversing with the sky.

## On shoulders whirled in some eccentric orbit

On shoulders whirled in some eccentric orbitJust by old Paestum's temples and the perchWhere Time doth plume his wings.

## Far oer The bow

Amid the drowsy noonSouhegan creeping slowAppeareth soon.

Where gleaming fields of hazeMeet the voyageurs gaze,And above the heated airSeems to make a river there.

The pines stand up with prideBy the Souhegan's side,And the hemlock and the larchWith their triumphal archFlave accompanied its marchTo the sea.

No wind stirs its wavesBut the spirits of the bravesHov'ring o'erWhose antiquated gravesIts still water lavesOn the shore.

But with an Indian's stealthy treadIt goes sleeping in its bedWithout joy or griefOr the rusde of a leafFrom the Lyndeboro' hillsTo the merrimack mills

Without a ripple or a billowOr the sigh of a willowWhich trails in its streamThe mid current of its dream.

Not a sound is floated o'ersave the mallet on shoreWhich echoing on highSeems a caulking the sky.

experienced riverHast thou flown for ever?Souhegan soundeth oldBut the half is not told.

What names hast thou borneIn the ages far gone?When the Xanthus and Meander-Commenced to wander — Eer the brown bear huntedOn thy forest floorOr nature had plantedThe pines by thy shore.

With a louder dinDid thy current beginWhen melted the snowOn the far mountain's browAnd the drops came togetherIn that rainy weather.

## Methinks that by a strict behavior

Methinks that by a strict behavior  
I could elicit back the brightest star  
That lurks behind a cloud.

## I have rolled near some other spirits path

I have rolled near some other spirits path  
And with a pleased anxiety have felt  
Its purer influence on my opaque mass  
But always was I doomed to learn, alas!  
I had scarce changed its sidereal time.

## Fog

Thou drifting meadow of the air  
Where bloom The dasied banks & violets  
And in whose fenny labyrinths  
The bittern booms, and curlew peeps  
The heron wades and bod-  
ing rain crow clucks;  
Low anchored cloud, Newfoundland air,  
Fountain head and source  
of rivers, Ocean branch that flowest to the sun,  
Diluvian spirit, or Deucalion shroud,  
Dew cloth dream drapery  
And napkin spread by fays — Spirit of lakes and seas and rivers  
— Sea fowl that with the east wind  
Seeks't the shore — Groping thy way inland  
By which ever name I please to call thee  
Bear only perfumes and the scent  
Of healing herbs to just men's fields.

## How little curious is man

How little curious is man  
Who hath not searched his mystery a span  
But dreams of mines of treasure  
Which he neglects to measure  
For three score years and ten  
Walks to and fro amid his fellow men  
O'er this firm tract of continental land  
His fancy bearing no divining wand.  
Our uninquiring corpses lie more low  
Than our lifes curiosity doth go  
Our most ambitious steps climb not so high  
As in their hourly sport the sparrows fly.  
And yonder cloud's blown farther in a day  
Than our most vagrant feet may ever stray.  
Surely, O Lord, he hath not greatly erred  
Who hath so little from his birth place stirred.  
He wanders through this low and shallow world  
Scarcely his bolder thoughts and hopes unfurled  
Through this low walled world which his huge sin  
Hath hardly room to rest and harbor in.  
Bearing his head just o'er some fallow ground  
Some cowslip'd meadows where the bitterns sound.  
He wanders round until his end draws nigh  
And then lays down his aged head to die.  
And this is life — this is that famous strife.

His head doth coast a fathom from the land  
Six feet from where his grovelling feet do stand.

## To the Comet

My sincerity doth surpass  
The pretence of optic glass.

Say what are the highlands yonder  
Which do keep the spheres asunder  
The streams of light which centre in our sun  
And those which from some other system  
run? Distinguished stranger, system ranger,  
Plenipotentiary to our sphere,  
Dost thou know of any danger,  
War or famine near?

Special envoy, foreign minister,  
From the empire of the sky,  
Dost thou threaten aught  
that's sinister  
By thy course on high?

Runner of the firmament  
On what errand wast thou sent,  
Art thou some great general's scout  
Come to spy our weakness out?  
Sculling thy way without a sail,  
Mid the stars and constellations,  
The pioneerer of a tail  
Through the stary nations.  
Thou celestial privateer  
We entreat thee come not near.

## Haze

Woof of the sun, ethereal gauze,  
Woven of Nature's richest stuffs,  
Visible heat, air-water, and dry sea,  
Last conquest of the eye;  
Toil of the day displayed, sun-dust,  
Aerial surf upon the shores of earth,  
Ethereal estuary, frith of light,  
Breakers of air, billows of heat,  
Fine summer spray on inland seas;  
Bird of the sun, transparent-winged  
Owlet of noon, soft-pinioned,  
From heath or stubble rising without song;  
Establish thy serenity  
o'er the fields.

## Smoke

Light-winged smoke, Icarian bird,  
Melting thy pinions in thy upward flight,  
Lark without song, and messenger of dawn,  
Circling above the hamlets as thy nest;  
Or else, departing dream, and shadowy form  
Of midnight vision, gathering up thy skirts;  
By night star-veiling, and by day  
Darkening the light and blotting out the sun;  
Go thou my incense upward from this hearth,  
And ask the Gods to pardon this clear flame.

## To a Stray Fowl

Poor bird! destined to lead thy life  
Far in the adventurous west,  
And here to be debarred to-night  
From thy accustomed nest;  
Must thou fall back upon old instinct now  
— Well nigh extinct under man's fickle care?  
Did heaven bestow its quenchless inner light  
So long ago, for thy small want to-night?  
Why stand'st upon thy toes to crow so late?  
The moon is deaf to thy low feathered fate;  
Or dost thou think so to possess the night,  
And people the drear dark with thy brave sprite?  
And now with anxious eye thou look'st about,  
While the relentless shade draws on its veil,  
For some sure shelter

from approaching dews,And the insidious steps of nightly foes.I fear imprisonment  
has dulled thy wit,Or ingrained servitude extinguished it.But no, — dim memory of  
the days of yore,By Brahmapootra and the Jumna's shore,Where thy proud race flew  
swiftly o'er the heath,And sought its food the jungle's shade beneath,Fias taught thy  
wings to seek yon friendly trees,As erst by Indus' bank and far Ganges.

## The Departure

In this roadstead I have riddenIn this covert I have hiddenFriendly thoughts were  
cliffs to meAnd I hid beneath their lea.

This true people took the strangerAnd warm hearted housed the rangerThey re-  
ceived their roving guest,And have fed him with the best

Whatsoe'er the land affordedTo the stranger's wish accorded,Shook the olive,  
stripped the vine,And expressed the strengthening wine.

And at night they did spread o'er himWhat by day they spread before him,That  
good-will which was repastWas his covering at last.

The stranger moored him to their pierWithout anxiety or fear;By day he walked  
the sloping land,By night the gentle heavens he scanned.

When first his bark stood inlandTo the coast of this far Finland,Sweet-watered  
brooks came tumbling to the shoreThe weary mariner to restore.

And still he stayed from day to dayIf he their kindness might repayBut more and  
moreThe sullen waves came rolling to the shore.

And still the more the stranger waitedThe less his argosy was freighted,And still  
the more he stayedThe less his debt was paid.

So He unfurled his mastTo receive the fragrant blast,And that same refreshing  
galeWhich had woo'd him to remain

Again and again — It was that filled his sailAnd drove him to the main.

All day the low hung cloudsDropt tears into the seaAnd the wind amid the  
shroudsSighed plaintively.

## Brother where dost thou dwell?

Brother where dost thou dwell?What sun shines for thee now?Dost thou indeed  
farewell?As we wished here below.

What season didst thou find?"Twas winter here.Are not the fates more kindThan  
they appear?

Is thy brow clear againAs in thy youthful years?And was that ugly painThe summit  
of thy fears?

Yet thou wast cheery still,They could not quench thy fire,Thou didst't abide their  
will,And then retire.

Where chiefly shall I look  
To feel thy presence near?  
Along the neighboring brook  
May I thy voice still hear?

Dost thou still haunt the brink  
Of yonder river's tide?  
And may I ever think  
That thou art at my side?

What bird wilt thou employ  
To bring me word of thee?  
For it would give them joy,  
'Twould give them liberty,  
To serve their former lord  
With wing and minstrelsy.

A sadder strain has mixed with their song,  
They've slower built their nests,  
Since thou art gone  
Their lively labor rests.

Where is the finch — the thrush,  
I used to hear?  
Ah! they could well abide  
The dying year.

Now they no more return,  
I hear them not;  
They have remained to mourn,  
Or else forgot.

## All things are current found

All things are current found  
O'er the uneven ground.  
Spirits and elements  
Have their descents.

Night and day — year on year,  
High and low far and near,  
These are our own aspects  
These are our own regrets.  
Ye gods of the shore  
Who abide evermore,  
I see your far headland  
Stretching on either hand.

I hear the sweet evening sounds  
From your undecaying grounds  
Cheat me no more with time  
Take me to your clime.

## On fields o'er which the reaper's hand has passed

On fields o'er which the reaper's hand has passed,  
Lit by the harvest moon and autumn sun,  
My thoughts like stubble floating in the wind  
And of such fineness as October airs,  
There after harvest could I glean my life  
A richer harvest reaping without toil,  
And weaving gorgeous fancies at my will  
In subtler webs than finest summer haze.

## Epitaph on an Engraver

By death's favor  
Here lies the engraver  
And now I think o't  
Where lies he not?  
If the archangel look but where he lies  
He ne'er will get translated to the skies.

## Epitaph on Pursy

Traveller, this is no prison,  
He is not dead, but risen.  
Then is there need,  
To fill his grave,  
And truth to save,  
That we should read, —  
In Pursy's favor  
Here lies the engraver.

## Ep on a Good Man

Here lies — the world  
There rises one.

## Epitaph

Here lies an honest man  
Rear Admiral Van. Faith, then ye have  
Two in one grave, For  
by your favor Here too lies the engraver.

## Ep on the World

Here lies the body of this world,  
Whose soul alas to hell is hurled. This golden youth  
long since was past, Its silver manhood went as fast,  
And iron age drew on at last; 'Tis  
vain its character to tell, The several fates which it befell,  
What year it died, when 'twill  
arise, We only know that here it lies.

## The sluggish smoke curls up from some deep dell

The sluggish smoke curls up from some deep dell,  
The stiffened air exploring in the dawn,  
And making slow acquaintance with the day;  
Delaying now upon its heavenward course,  
In wreathed loiterings dallying with itself,  
With as uncertain purpose and slow deed,  
As its half-wakened master by the hearth,  
Whose mind still slumbering and sluggish thoughts  
Have not yet swept into the onward current  
Of the new day; — and now it streams afar,  
The while the chopper goes with step direct,  
And mind intent to swing the early axe.  
First in the dusky dawn he sends abroad  
His early scout, his emissary, smoke,  
The earliest, latest pilgrim from the roof,  
To feel the frosty air, inform the day;  
And while he crouches still beside the hearth,  
Nor musters courage to unbar the door,  
It has gone down the glen with the light wind,  
And o'er the plain unfurled its venturous wreath,  
Draped the tree tops, loitered upon the hill,  
And warmed the pinions of the early bird;  
And now, perchance, high in the crispy air,  
Has caught sight of the day o'er the earth's edge,  
And greets its master's eye at his low door,  
As some refulgent cloud in the upper sky.

## On Ponkawtasset, since, we took our way

On Ponkawtasset, since, we took our way,  
Down this still stream to far Billericay,  
A poet wise has settled, whose fine ray  
Doth often shine on Concord's twilight day

Like those first stars, whose silver beams on high,  
Shining more brightly as the day goes by,  
Most travellers cannot at first descry,  
But eyes that wont to range the evening

sky,And know celestial lights, do plainly see,And gladly hail them, numbering two or three;For lore that's deep must deeply studied be,As from deep wells men read star-poetry.

These stars are never paled, though out of sight,But like the sun they shine forever bright;Ay, they are suns, though earth must in its flightPut out its eyes that it may see their light.

Who would neglect the least celestial sound,Or faintest light that falls on earthly ground,If he could know it one day would be foundThat star in Cygnus whither we are bound,And pale our sun with heavenly radiance round?

## To a Marsh Hawk in Spring

There is health in thy gray wingHealth of nature's furnishing.Say thou modern-winged antique,Was thy mistress ever sick?In each heaving of thy wingThou dost health and leisure bring,Thou dost waive disease & painAnd resume new life again.

## Great Friend

I walk in nature still aloneAnd know no oneDiscern no lineament nor featureOf any creature.

Though all the firmamentIs oer me bent,Yet still I miss the graceOf an intelligent and kindred face.

I still must seek the friendWho does with nature blend,Who is the person in her mask,He is the man I ask.

Who is the expression of her meaning,Who is the uprightness of her leaning,Who is the grown child of her weaning

The center of this world,The face of nature,The site of human life,Some sure foundationAnd nucleus of a nation — At least a private station.

We twain would walk togetherThrough every weather,And see this aged nature,Go with a bending stature.

## The Offer

I make ye an offer,Ye gods hear the scoffer,The scheme will not hurt you,If ye will find goodness I will find virtue.Though I am your creature,And child of your nature,I have pride still unbended,And blood undescended,Some free independence,And my own descendents.If ye will deal plainly,I will strive mainly,If ye will discoverGreat plans to your lover,And give him a sphereSomewhat larger than here.

## Morning

Thou unconverted saint  
Early Christian without taint — Heathen without reproach—  
Who dost upon the evil day encroach,  
Who ever since thy birth  
Hast trod the outskirts  
of the earth.  
Strict anchorite who dost simply feast  
On freshest dews — I'll be thy  
guest,  
And daily bend my steps to east  
While the late risen world goes west.

## The Friend

The great friend  
Dwells at the land's end,  
There lives he  
Next to the sea.  
Fleets come  
and go,  
Carrying commerce to and fro,  
But still sits he on the sand  
And maketh firm  
that headland.  
Mariners steer them by his light  
Safely in the darkest night,  
He holds  
no visible communion  
For his friendship is a union.  
Many men dwell far inland,  
But he alone sits on the strand,  
Whether he ponders men or books  
Ever still he seaward  
looks,  
Feels the sea-breeze on his cheek,  
At each word the landsmen speak;  
From some  
distant port he hears  
Of the ventures of past years  
In the sullen ocean's roar  
Of wrecks  
upon a distant shore;  
In every companion's eye  
A sailing vessel doth descry;  
Marine news  
he ever reads  
And the slightest glances heeds.

Near is India to him  
Though his native shore is dim,  
But the bark which long was  
due,  
Never — never — heaves in view,  
Which shall put an end to commerce  
And bring  
back what it took from us,  
(Which shall make Siberia free  
Of the climes beyond the  
sea)  
Fetch the Indies in its hold,  
All their spices and their gold,  
And men sail the sea no  
more  
The sea itself become a shore,  
To a broader deeper sea,  
A profounder mystery.

## Yet let us Thank the purblind race

Yet let us Thank the purblind race,  
Who still have thought it good  
With lasting stone  
to mark the place  
Where braver men have stood.

In concord, town of quiet name  
And quiet fame as well,

## Ye do command me to all virtue ever

Ye do command me to all virtue ever  
And simple truth the law by which we live  
Me-thinks that I can trust your clearer sense  
And your immediate knowledge of the truth  
I would obey your influence — one with fate

## Ive seen ye, sisters, on the mountain-side

Ive seen ye, sisters, on the mountain-side  
When your green mantles fluttered in the  
wind  
Ive seen your foot-prints on the lakes smooth shore  
Lesser than man's, a more

ethereal trace, I have heard of ye as some far-famed race — Daughters of gods whom I should one day meet — Or mothers I might say of all our race. I reverence your natures so like mine Yet strangely different, like but still unlike Thou only stranger that hast crossed my path Accept my hospitality — let me hear The message which thou bring'st Made different from me Perchance thou't made to be The creature of a different destiny. I know not who ye are that meekly stand Thus side by side with man in every land. When did ye form alliance with our race Ye children of the moon who in placid nights Vaulted upon the hills and sought this earth. Reveal that which I fear ye can not tell Wherein ye are not I, wherein ye dwell Where I can never come. What boots it that I do regard ye so Does it make suns to shine or crops to grow? What boots that I never should forget Thee, I have sisters sitting for me yet And what are sisters The robust man who can so stoutly strive In this bleak world is hardly kept alive. And who is it protects ye smooths your way

## **I am bound, I am bound, for a distant shore**

I am bound, I am bound, for a distant shore, By a lonely isle, by a far Azore, There it is, there it is, the treasure I seek, On the barren sands of a desolate creek.

## **The Hero**

What doth he ask? Some worthy task. Never to run Till that be done, that never done — Under the sun. Here to begin All things to win By his endeavor Forever and ever — Happy and well On this ground to dwell This soil subdued Plant and renew. By might & main — Health & strength gain So to give nerve To his slenderness Yet Some mighty pain He would sustain. So to preserve His tenderness. Not be deceived Of suffering bereaved Not lose his life By living too well Nor escape strife In his lonely cell And so find out Heaven By not knowing Hell. Strength like the rock To withstand any shock — Yet some Aaron's rod Some smiting by god Occasion to gain To shed human tears And to entertain Still divine fears. Not once for all, forever, blest, Still to be cheered out of the west — Not from his heart to banish all sighs Still be encouraged by the sun rise Forever to love and to love and to love Within him, around him — beneath him above To love is to know, is to feel, is to be At once 'tis his birth & his destiny For earthly pleasures Celestial pains Heavenly losses For earthly gains. Must we still eat The bread we have spurned Must we rekindle The faggots we've burned — Must we go out By the poor man's gate Die by degrees Not by new fate. Is then no road This way my friend Is there no road Without any end — When I have slumbered I have heard sounds As travellers passing Over my grounds — 'Twas a sweet music Wafted them by I could not tell If far off or nigh. Unless I dreamed it This was of yore — But I never told it To mortal before — Never remembered But in my dreams What to me waking A miracle seems If you will give of your

pulse or your grain  
We will rekindle those flames again  
Here will we tarry it is without  
doubt  
Till a miracle putteth that fire out.

## **At midnight's hour I raised my head**

At midnight's hour I raised my head  
The owls were seeking for their bread  
The foxes barked impatient still  
At their wan fate they bear so ill — I thought me of eternities  
delayed  
And of commands but half obeyed — The night wind rustled through the  
glade  
As if a force of men there staid  
The word was whispered through the ranks  
And every hero seized his lance  
The word was whispered through the ranks  
Advance.

## **I seek the Present Time**

I seek the Present Time,  
No other clime,  
Life in to-day,  
Not to sail another way,  
To Paris or to Rome,  
Or farther still from home.  
That man, whoe'er he is,  
Lives but a moral death,  
Whose life is not coeval  
With his breath.  
What are deeds done  
Away from home?  
What the best essay  
On the Ruins of Rome?  
The dusty highways,  
What Scripture says,  
This pleasant weather  
And all signs together — The river's meander,  
All things, in short,  
Forbid me to wander  
In deed or in thought.  
In cold or in drouth,  
seek Not the sunny  
South,  
But make the whole tour  
Of the sunny Present Hour.  
For here if thou fail,  
Where canst thou prevail?  
If you love not  
Your own land most,  
You'll find nothing lovely  
Upon a distant coast.  
If you love not  
The latest sunset,  
What is there in pictures  
Or old gems set?

If no man should travel  
Till he had the means,  
There'd be little travelling  
For kings or for Queens.  
The means, what are they!  
They are the wherewithal  
Great expenses to pay;  
— Life got, and some to spare,  
Great works on hand,  
And freedom from care.  
Plenty of time well spent,  
To use, — Clothes paid for, and no rent  
In your shoes; — Something to eat,  
And something to burn,  
And, above all, no need to return; — For they who come  
back,  
have they not failed,  
Wherever they've ridden  
Or steamed it, or sailed?  
All your grass hayed, — All your debts paid, — All your wills made?  
Then you might as well  
have stayed,  
For are you not dead,  
Only not buried?

The way unto "Today",  
The rail road to "Here,"  
They never'll grade that way,  
Nor shorten it, I fear.  
There are plenty of depots  
All the world o'er,  
But not a single station  
At a man's door;  
If we would get near  
To the secret of things,  
We shall not have to hear  
When the engine bell rings.

## **Tell me ye wise ones if ye can**

Tell me ye wise ones if ye can  
Whither and whence the race of man.  
For I have seen his slender clan  
Clinging to hoar hills with their feet  
Threading the forest for their

meat Moss and lichens bark & grain  
 They racke together with might & main  
 And they digest them with anxiety & pain.  
 I meet them in their rags and unwashed hair  
 Instructed to eke out their scanty fare  
 Brave race — with a yet humbler prayer  
 Beggars they are aye on the largest scale  
 They beg their daily bread at heavens door  
 And if their this years crop alone should fail  
 They neither bread nor begging would know more.  
 They are the Titmans of their race  
 And hug the vales with mincing pace  
 Like Troglodites, and fight with cranes  
 We walk ‘mid great relations feet  
 What they let fall alone we eat  
 We are only able to catch the fragments from their table  
 These elder brothers of our race  
 By us unseen with larger pace  
 Walk oer our heads, and live our lives  
 embody our desires and dreams  
 Anticipate our hoped for gleams  
 We grub the earth for our food  
 We know not what is good.  
 Where does the fragrance of our orchards go  
 Our vineyards whiie we toil below —  
 A finer race and finer fed  
 Feast and revel above our head.  
 The tints and fragrance of the flowers & fruits  
 Are but the crumbs from off their table  
 While we consume the pulp and roots  
 Some times we do assert our kin  
 And stand a moment where once they have been  
 We hear their sounds and see their sights  
 And we experience their delights —  
 But for the moment that we stand  
 Astonished on the Olympian land.  
 We do discern no traveller’s face  
 No elder brother of our race.  
 To lead us to the monarch’s court  
 And represent our case.  
 But straightway we must journey back  
 retracing slow the arduous track  
 Without the privelege to tell  
 Even, the sight we know so well

## Behold these flowers

Behold these flowers — let us be up with Timenot dreaming of 3000 years ago. Erect ourselves and let those columns lie — not stoop to raise a foil against the sky — Where is the spirit of that time but in this present day this present line 3000 years ago are not gone — they are still lingering here aye every one, Where there is memory which compelleth time the muse’s mother and the muses nine — There are all ages — past and future time unwearied memory that does not forget the actions of the past — that does not forego — to stamp them freshly — . That old mortality industrious to retouch the monuments of time, in the world’s cemetery through-out every clime / And Memnon’s mother sprightly greets us now Wears still her youthful blushes on her brow And Carnac’s columns why stand they on the plain? T’ enjoy our opportunities they would fain remain

This is my Carnac whose unmeasured dome  
 Shelters the measuring art & measurer’s home  
 Whose propylaeum is the system nigh  
 And sculptured facade the visible sky

## My friends, my noble friends, know ye —

My friends, my noble friends, know ye — That in my waking hours I think of ye —  
 Ever in godlike band uncompromised & free

## The Earth

Which seems so barren once gave birth  
To heroes — who oerran her plains,  
Who plowed her seas and reaped her grains

## But now “no war nor battle’s sound.”

But now “no war nor battle’s sound.”  
Invades this peaceful battleground  
But waves of Concord murmuring by  
flowing with gentle harmony.  
Yet since we sailed, some things  
have failed  
And many a dream gone down the stream  
Here then an aged shepherd  
dwelt  
Who to his flock his substance dealt  
And ruled them with a vigorous crook  
According to the sacred Book.  
But he the pierless bridge passed o’er  
And solitary left the shore  
Anon a youthful pastor came  
Whose crook was not unknown to fame  
His lambs he viewed with gentle glance  
Spread oer the country’s wide expanse  
And fed with “mosses from the manse” —  
Yonder the rocky seat where late  
With soothed and patient ear we sat  
Beside our Hawthorne in the dale  
And listened to his Twice told Tale. —

## Such water do the gods distill

Such water do the gods distill  
And pour down every hill  
For their new England men.  
A draught of this wild water bring  
And I will never taste the spring  
Of Helicon again.  
But yesterday in dew it fell  
This morn its streams began to swell  
And with the sun it downward flowd  
So fresh it hardly knew its road.

## Die and be buried who will

Die and be buried who will,  
I mean to live my fill.  
My nature grows ever more young  
The primitive pines among.

## I have seen some frozenfaced Connecticut

I have seen some frozenfaced Connecticut  
Or Down east man in his crack coaster-  
With tort sail, with folded arms standing  
Beside his galley with his dog & man  
While his cock crowed aboard, scud thro the surf  
By some fast anchored Staten island farm,  
But just outside the vast and stirring line  
Where the astonished Dutchman digs his clams  
Or but half ploughs his cabbage garden plot  
With unbroken steeds & ropy harness —  
And some squat bantam whom the shore wind drownd  
Feebly responded there for all reply,  
While the triumphant Yankee’s farm swept by.

## Such near aspects had we

Such near aspects had we  
Of our life's scenery.

## Travelling

If e'er our minds be ill at ease  
It is in vain to cross the seas  
Or when the fates do prove unkind  
To leave our native land behind.  
The ship becalmed at length stands still  
The steed will rest beneath the hill.  
But swiftly still our fortunes pace  
To find us out in every place.

## The Atlantides

The smothered streams of love, which flow  
More bright than Phlegethon, more low,  
Island us ever, like the sea,  
In an Atlantic mystery.  
Our fabled shores none ever reach,  
No mariner has found our beach,  
Scarcely our mirage now is seen,  
And neighboring waves with floating green,  
Yet still the oldest charts contain  
Some dotted outline of our main;  
In ancient times midsummer days  
Unto the western islands' gaze,  
To Teneriffe and the Azores,  
Have shown our faint and cloud-like shores.

But sink not yet, ye desolate isles,  
Anon your coast with commerce smiles,  
And richer freights ye'll furnish far  
Than Africa or Malabar.  
Be fair, be fertile evermore,  
Ye rumored but untrodden shore,  
Princes and monarchs will contend  
Who first unto your land shall send,  
And pawn the jewels of the crown  
To call your distant soil their own.

## Conscience is instinct bred in the house

Conscience is instinct bred in the house,  
Feeling and Thinking propagate the sin  
By an unnatural breeding in and in.  
I say, Turn it out doors,  
Into the moors.  
I love a life whose plot is simple,  
And does not thicken with every pimple,  
A soul so sound no sickly conscience binds it,  
That makes the universe no worse than't finds it.  
I love an earnest soul,  
Whose mighty joy and sorrow  
Are not drowned in a bowl,  
And brought to life to-morrow;  
That lives one tragedy,  
And not seventy;  
A conscience worth keeping,  
Laughing not weeping;  
A conscience wise and steady,  
And forever ready;  
Not changing with events,  
Dealing in compliments;  
A conscience exercised about  
Large things, where one may doubt.  
I love a soul not all of wood,  
Predestinated to be good,  
But true to the backbone  
Unto itself alone,  
And false to none;  
Born to its own affairs,  
Its own joys and own cares;  
By whom the work which God begun  
Is finished, and not undone;  
Taken up where he left off,  
Whether to worship or to scoff;  
If not good, why then evil,  
If not good god, good devil.  
Goodness! you hypocrite, come out of that,  
Live your life, do your

work, then take your hat. I have no patience towards  
Such conscientious cowards. Give  
me simple laboring folk, Who love their work,  
Whose virtue is a song To cheer God along.

## **That Phaeton of our day**

That Phaeton of our day, Who'd make another milky way,  
And burn the world up with his ray;

By us an undisputed seer, — Who'd drive his flaming car so near  
Unto our shuddering mortal sphere,

Disgracing all our slender worth, And scorching up the living earth,  
To prove his heavenly birth.

The silver spokes, the golden tire, Are glowing with unwonted fire,  
And ever nigher roll and nigher;

The pins and axle melted are, The silver radii fly afar,  
Ah, he will spoil his Father's car!

Who let him have the steeds he cannot steer? Henceforth the sun will not shine for  
a year; And we shall Ethiops all appear.

## **Then spend an age in whetting thy desire**

Then spend an age in whetting thy desire, Thou needs't not hasten if thou dost  
standfast.

## **We should not mind if on our ear there fell**

We should not mind if on our ear there fell Some less of cunning, more of oracle.

## **Men say they know many things**

Men say they know many things But lo! they have taken wings,  
The arts & sciences. And a thousand appliances — The wind that blows  
Is all that anybody knows.

## **Away! away! away! away!**

Away! away! away! away! Ye have not kept your secret well,  
I will abide that other day, Those other lands ye tell.

Has time no leisure left for these, The acts that ye rehearse?  
Is not eternity a lease For better deeds than verse?

'T is sweet to hear of heroes dead,To know them still alive,But sweeter if we earn their bread,And in us they survive.

Our life should feed the springs of fameWith a perennial wave,As ocean feeds the babbling fountsWhich find in it their grave.

Ye skies drop gently round my breast,And be my corselet blue,Ye earth receive my lance in rest,My faithful charger you;

Ye stars my spear-heads in the sky,My arrow-tips ye are, — I see the routed foemen fly,My bright spears fixed are.

Give me an angel for a foe,Fix now the place and time,And straight to meet him I will goAbove the starry chime.

And with our clashing bucklers' clangThe heavenly spheres shall ring,While bright the northern lights shall hangBeside our tourneying.

And if she lose her champion true,Tell Heaven not despair,For I will be her champion new,Her fame I will repair.

## **In the East fames are won**

In the East fames are won,In the West deeds are done.

## **We see the planet fall**

We see the planet fall,And that is all.

## **The good how can we trust?**

The good how can we trust?Only the wise are just.The good we use,The wise we cannot choose.These there are none above;The good they know & love,But are not known againBy those of lesser ken. — They do not charm us with their eyes,But they transfix with their advice.No partial sympathy they feel,With private woe or private weal,But with the Universe joy & sigh,Whose knowledge is their sympathy.

## **Greece**

When life contracts into a vulgar spanAnd human nature tires to be a man,I thank the gods for GreeceThat permanent realm of peace,For as the rising moon far in the nightChecquers the shade with her forerunning light,So in my darkest hour my senses seemTo catch from her Acropolis a gleam,Greece who am I that should remember thee?Thy Marathon and thy ThermopylaeIs my life vulgar my fate meanWhich on such golden memories can lean?

## Poverty

If I am poor it is that I am proud, If God has made me naked and a boor  
He did not think it fit his work to shroud.

The poor man comes from heaven direct to earth  
As stars drop down the sky and tropic beams.  
The rich receives in our gross air his birth,  
As from low suns are slanted golden gleams.

Men are by birth equal in this that given  
Themselves and their condition they are even.  
The less of inward essence is to leaven  
The more of outward circumstance is given.

Yon sun is naked bare of satellite  
Unless our earths and moons that office hold,  
Though his perpetual day feareth no night  
And his perennial summer dreads no cold.

Where are his gilded rays but in our sky?  
His solid disk doth float far from us still,  
The orb which through the central way doth fly  
Shall naked seem though proudly circumstanced.

Ill leave my mineral wealth hoarded in earth?  
Buried in seas in mines and ocean caves  
More safely kept than is the merchant's worth,  
Which every storm committeth to the waves.

Man kind may delve but cannot my wealth spend,  
If I no partial store appropriaten  
armed ships into the Indies send  
To rob me of my orient estate

The rich man's clothes keep out the genial sun  
But scarce defend him from the piercing cold  
If he did not his heavenly garment shun  
He would not need to hide beneath a fold.

## The respectable folks

The respectable folks, Where dwell they?  
They whisper in the oaks, And they sigh  
in the hay, Summer and winter, night and day,  
Out on the meadow, there dwell they.  
They drink at the brooks and the pilgrim's cup,  
And with the owl and the nighthawk sup;  
They suck the breath of the morning wind,  
And they make their own all the good they find.  
They never die, Nor snivel nor cry,  
For they have a lease of immortality.  
A sound estate forever they mend,  
To every asker readily lend,  
To the ocean wealth, To the meadow health,  
To Time his length, To the rocks strength,  
To the stars light, To the weary night,  
To the busy day, To the idle play,  
And so their good cheer never ends,  
For all are their debtors and all their friends.

## Farewell

Whether we've far withdrawn  
Or come more near  
Equally the outward form  
Doth no more appear.  
Not thou by distance lost  
No — for regret doth bind  
Me faster to thee  
now  
Than neighborhood confined.  
Where thy love followeth me  
Is enough society.  
Thy

indelible mild eyeIs my sky.Whether by land or seaI wander to and fro,Oft as I think  
of theeThe heavens hang more lowThe pure glance of thy eyeDoth purge the summer's  
sky,And thy breath so rareDoth refine the winter's air.my feet would weary beEre they  
travelled from thee.I discover by thy faceThat we are of one raceFlowed in one vein  
our bloodEre the sea found its floodThe worm may be dividedAnd each part become  
a whole,But the nobler creature manMay not separate a span.

## **For though the eaves were rabitted**

For though the eaves were rabitted,And the well sweeps were slanted,Each house  
seemed not inhabitedBut haunted.

The pensive traveller held his way,Silent & melancholy,For every man an ideot  
was,And every house a folly.

## **You Boston folks & Roxbury people**

You Boston folks & Roxbury peopleWill want Tom Hyde to mend your kettle

## **I will obey the strictest law of love**

I will obey the strictest law of loveAs if I dealt with cherubim above.I will accept no  
half gift from my friendBy which he thinks for hate to make amend.But every friendly  
thoughtWill come to me unboughtMy friend may do whate'er he willAnd I shall love  
himIf he doth it from love.But let him do whateer he willI think that I must hate him  
stillIf lower motives move.

I love not allI love not one alwayBut that I love is one & allAnd lasteth ever and  
aye.I will leave him I hateAnd cleave to him I loveI will forsake my earthly mateAnd  
seek my mate above.

Though my friends are dull and coldI will be quick and warm.Though their love  
groweth oldMine shall be new born

Though they understand me notI shall be understoodThough by them I am forgot-  
Not therefore by the good.My friend can wound meFor to him I bare my breast —  
But his wounds save meFrom a foe's embraceBut these are honorable scarsAnd fit the  
wounded heart for Love's more glorious wars.

These wounds are not fatal though inflicted on the heartFor the heart's not less  
a vital than a mortal part.Unlike the inferior partThe wounded heartIs not repaired  
with woodBut by fresh currents from aboveWhich fit it for a purer loveFor all that's  
true & beautiful & good.

## Why toll the bell today —

Why toll the bell today — Its knell has died away —

## And once again

And once again When I went a-maying — & once or twice more I had seen thee before. For there grow the May flower (*Epigaea repens*) & the mt cranberry & the screech owl *strepens*

## The Old Marlborough Road

Where they once dug for money, But never found any; Where sometimes Martial Miles Singly files, And Elijah Wood, I fear for no good: No other man, Save Elisha Dugan, — O man of wild habits, Partridges and rabbits, Who hast no cares Only to set snares, Who liv'st all alone, Close to the bone, And where life is sweetest Constantly eatest. When the spring stirs my blood With the instinct to travel, I can get enough gravel On the Old Marlborough Road. Nobody repairs it, For nobody wears it; It is a living way, As the Christians say. Not many there be Who enter therein, Only the guests of the Irishman Quin. What is it, what is it, But a direction out there, And the bare possibility Of going somewhere? Great guide-boards of stone, But travellers none; Cenotaphs of the towns Named on their crowns. It is worth going to see Where you might be. What king Did the thing, I am still wondering; Set up how or when, By what selectmen, Gourgas or Lee, Clark or Darby? They're a great endeavor To be something forever; Blank tablets of stone, Where a traveller might groan, And in one sentence Grave all that it known; Which another might read, In his extreme need. I know one or two Lines that would do, Literature that might stand All over the land, Which a man could remember Till next December, And read again in the spring, After the thawing. If with fancy unfurled You leave your abode, You may go round the world By the Old Marlborough Road.

## Old meeting-house bell

Old meeting-house bell I love thy music well It peals through the air Sweetly full & fair As in the early times When I listened to its chimes.

## It is a real place

It is a real place, Boston, I tell it to your face. And no dream of mine To ornament a line I can not come nearer to God & Heaven Than I live to Walden even. It is a part

of me which I have not prophaned  
I live by the shore of me detained.  
Laden with my dregs  
I stand on my legs,  
While all my pure wine  
I to nature consign.  
I am its stoney shore  
And the breeze that passes o'er  
In the hollow of my hand  
Are its water and its sand;  
Its deepest resort  
Lies high in my thought,

## **Among the worst of men that ever lived**

Among the worst of men that ever lived  
However we did seriously attend  
A little space we let our thoughts ascend  
Experienced our religion & confessed  
'Twas good for us to be there — be anywhere  
Then to a heap of apples we addressed  
& cleared the topmost rider sine care  
But our Icarian thoughts returned to ground  
And we went on to heaven the long way round.

## **What's the rail-road to me?**

What's the rail-road to me?  
I never go to see  
Where it ends  
It fills a lew hollows  
And makes banks for the swallows  
It sets the sand a flowing  
And blackberries a growing

## **Tall Ambrosia**

Among the signs of autumn I perceive  
The Roman wormwood (called by learned men  
Ambrosia elatior, food for gods, — For to impartial science the humblest weed  
Is as immortal once as the proudest flower — )  
Sprinkles its yellow dust over my shoes  
As I cross the now neglected garden — We trample under foot the food of gods  
& spill their nectar in each drop of dew — My honest shoes  
Fast friends that never stray far from my couch  
thus powdered countryfied  
Bearing many a mile the marks of their adventure  
At the post-house disgrace the Gallic gloss  
Of those well dressed ones who no morning dew  
Nor Roman wormwood ever have been through  
Who never walk but are transported rather — For what old crime of theirs I do not gather

## **'Tis very fit the ambrosia of the gods**

'Tis very fit the ambrosia of the gods  
Should be a weed on earth. As nectar is  
The morning dew with which we wet our shoes  
For the gods are simple folks and we should  
pine upon their humble fare

## **I saw a delicate flower had grown up 2 feet high**

I saw a delicate flower had grown up 2 feet high  
Between the horse's paths & the  
wheel track  
Which Dakin's & Maynards wagons had  
Passed over many a time  
An inch  
more to right or left had sealed its fate  
Or an inch higher. And yet it lived & flourished  
As  
much as if it had a thousand acres  
Of untrodden space around it — and never  
Knew the  
danger it incurred.  
It did not borrow trouble nor invite an  
Evil fate by apprehending  
it.  
For though the distant market-wagon  
Every other day — inevitably rolled  
This way  
— it just as inevitably rolled  
In those ruts — And the same  
Charioteer who steered the  
flower  
Upward — guided the horse & cart aside from it.  
There were other flowers which  
you would say  
Incurred less danger grew more out of the way  
Which no cart rattled  
near, no walker daily passed.  
But at length one rambling deviously  
For no rut restrained  
plucked them  
And then it appeared that they stood  
Directly in his way though he had  
come  
From farther than the market wagon —

## **I am the little Irish boy**

I am the little Irish boy  
That lives in the shanty  
I am four years old today  
And shall  
soon be one and twenty  
I shall grow up  
And be a great man  
And shovel all day  
As hard  
as I can.

Down in the deep cut  
Where the men lived  
Who made the Rail road.

for supper  
I have some potatoe  
And sometimes some bread  
And then if it's cold  
I go  
right to bed.

I lie on some straw  
Under my fathers coat

My mother does not cry  
And my father does not scold  
For I am a little Irish Boy  
And  
I'm four years old.

Every day I go to school  
Along the Railroad  
It was so cold it made me cry  
The day  
that it snowed.

And if my feet ache  
I do not mind the cold  
For I am a little Irish boy  
& I'm four years  
old.

## **In Adams fall**

We sinned all  
In Adams fall  
We sinned all.  
In the new Adam's rise  
We shall all reach  
the skies.

## **Life**

My life is like a stately warrior horse,  
That walks with fluent pace along the way,  
And  
I the upright horseman that bestrides  
His flexuous back, feeding my private thoughts.

— Alas, when will this rambling head and neck  
Be welded to that firm and brawny  
breast? — But still my steady steed goes proudly forth,  
Mincing his stately steps along  
the road; The sun may set, the silver moon may rise,  
But my unresting steed holds on his  
way. He is far gone ere this, you fain would say,  
He is far going. Plants grow and rivers  
run; You ne'er may look upon the ocean waves,  
At morn or eventide, but you will see  
Far in th' horizon with expanded sail,  
Some solitary bark stand out to sea,  
Far bound — well so my life sails far,  
To double some far cape not yet explored.  
A cloud ne'er standeth  
in the summer's sky, The eagle sailing high,  
with outspread wings  
Cleaving the silent  
air, resteth him not  
A moment in his flight, the air is not his perch.  
Nor doth my life  
fold its unwearied wings,  
And hide its head within its downy breast,  
But still it plows  
the shoreless seas of time,  
Breasting the waves with an unsanded bow.

## **The moon moves up her smooth and sheeny path**

The moon moves up her smooth and sheeny path  
Without impediment; and happily  
The brook Glides by lulled by its tinkling;  
Meteors drop down the sky without  
chagrin  
And rise again; but my cares never rest.  
No charitable laws alas cut me  
An easy orbit round the sun, but I  
Must make my way through rocks and seas and earth  
my steep and devious way  
Uncertain still. My current never rounds into a lake  
In whose fair heart the heavens come to bathe  
Nor does my life drop freely but a rod  
By its resistless course  
As Meteors do.

## **I'm thankful that my life doth not deceive**

I'm thankful that my life doth not deceive  
Itself with a low loftiness, half height,  
And think it soars when still it dip its way  
Beneath the clouds on noiseless pinion  
Like the crow or owl, but it doth know  
The full extent of all its trivialness,  
Compared with the splendid heights above.  
See how it waits to watch the mail come in  
While 'hind its back the sun goes out perchance.  
And yet their lumbering cart brings me no word  
Not one scrawled leaf such as my neighbors get  
To cheer them with the slight events forsooth—  
Faint ups and downs of their far distant friends —  
And now tis passed. What next?  
See the long train  
Of teams wreathed in dust, their atmosphere;  
Shall I attend until the last is passed?  
Else why these ears that hear the leader's bells  
Or eyes that link me in procession.  
But hark! the drowsy day has done its task,  
Far in yon hazy field where stands a barn  
Unanxious hens improve the sultry hour  
And with contented voice now brag their deed —  
A new laid egg — Now let the day decline —  
They'll lay another by tomorrow's sun.

## Manhood

I love to see the man, a long-lived child,  
As yet uninjured by all worldly taint  
As the fresh infant whose whole life is play.  
'Tis a serene spectacle for a serene day;  
But better still I love to contemplate  
The mature soul of lesser innocence,  
Who hath travelled far on life's dusty road  
Far from the starting point of infancy  
And proudly bears his small degen'racy  
Blazon'd on his memorial standard high  
Who from the sad experience of his fate  
Since his bark struck on that unlucky rock  
Has proudly steered his life with his own hands.  
Though his face harbors less of innocence  
Yet there do chiefly lurk within its depths  
Furrowed by care, but yet all over spread  
With the ripe bloom of a self-wrought content  
Noble resolves which do reprove the gods  
And it doth more assert man's eminence  
Above the happy level of the brute  
And more doth advertise me of the heights  
To which no natural path doth ever lead  
No natural light can ever light our steps,  
— But the far-piercing ray that shines  
From the recesses of a brave man's eye.

## Music

Far from this atmosphere that music sounds  
Bursting some azure chink in the dull clouds  
Of sense that overarch my recent years  
And steal his freshness from the noonday sun.  
Ah, I have wandered many ways and lost  
The boyant step, the whole responsive life  
That stood with joy to hear what seemed then  
Its echo, its own harmony borne back  
Upon its ear. This tells of better space,  
Far far beyond the hills the woods the clouds  
That bound my low and plodding valley life,  
Far from my sin, remote from my distrust,  
When first my healthy morning life perchance  
Trod lightly as on clouds, and not as yet  
My weary and faint hearted noon had sunk  
Upon the clod while the bright day went by.  
Lately, I feared my life was empty, now  
I know though a frail tenement that it still  
Is worth repair, if yet its hollowness  
Doth entertain so fine a guest within,  
and through its empty aisles there still doth ring  
Though but the echo of so high a strain;  
It shall be swept again and cleansed from sin  
To be a thoroughfare for celestial airs;  
Perchance the God who is proprietor  
Will pity take on his poor tenant here  
And countenance his efforts to improve  
His property and make it worthy to revert,  
At some late day Unto himself again.

## To day I climbed a handsome rounded hill

To day I climbed a handsome rounded hill  
Covered with hickory trees wishing to see  
The country from its top — for low hillsshow unexpected prospects — I looked  
many miles over a woody low-land  
Toward Marlborough Framingham & Sudbury  
And as I sat amid the hickory trees

## The Just Made Perfect

A stately music rises on my ear,  
Borne on the breeze from some adjacent vale;  
A host of knights, my own true ancestors,  
Tread to the lofty strains and pass away  
In long procession; to this music's sound  
The Just move onward in deep serried ranks,  
With looks serene of hope, and gleaming brows,  
As if they were the temples of the Day.

Gilt by an unseen sun's resplendent ray  
They firmly move, sure as the lapse of  
Time; Departed worth, leaving these trivial fields  
Where sedate valor finds no worthy  
aim, And still is Fame the noblest cause of all.

Forward they press and with exalted eye,  
As if their road, which seems a level  
plain, Did still ascend, and were again subdued  
'Neath their proud feet. Forward they  
move, and leave The sun and moon and stars alone behind:  
And now, by the still fainter  
strains, I know They surely pass; and soon their quivering harp,  
And faintly clashing  
cymbal, will have ceased To feed my ear.

It is the steadiest motion eye hath seen,  
A Godlike progress; e'en the hills and  
rocks Do forward come, so to congratulate  
Their feet; the rivers eddy backward, and  
The waves recurl to accompany their march.

Onward they move, like to the life of man,  
Which cannot rest, but goes without  
delay Right to the gates of Death, not losing time  
In its majestic tread to Eternity,  
As if Man's blood, a river, flowed right on  
Far as the eye could reach, to the Heart of  
hearts, Nor eddied round about these complex limbs.  
'Tis the slow march of life, — I  
feel the feet Of tiny drops go pattering through my veins;  
Their arteries flow with an  
Assyrian pace, And empires rise and fall beneath their stride.

Still, as they move, flees the horizon wall;  
The low-roofed sky o'erarches their true  
path; For they have caught at last the pace of Heaven,  
Their great Commander's true  
and timely tread.

Lo! how the sky before them is cast up  
Into an archèd road, like to the gallery  
Of the small mouse that bores the meadow's turf:  
Chapels of ease swift open o'er the path,  
And domes continuous span the lengthening way.

## I do not fear my thoughts will die

I do not fear my thoughts will die  
For never yet it was so dry as to scorch the azure of  
the sky. It knows no withering & no drought  
Though all eyes crop it ne'er gives out  
My eyes my flocks are Mountains my crops are  
I do not fear my flocks will stray  
For they were made to roam the day  
For they can wander with the latest light  
Yet be at home at night.

## **I'm contented you should stay**

I'm contented you should stay  
For ever and ay  
If you can take yourself away  
Any day.

## **Man Man is the Devil**

Man Man is the Devil  
The source of all evil.

## **You must not only aim aright**

You must not only aim aright,  
But draw the bow with all your might.

## **The Chicadee**

The chicadee  
Hops near to me.

## **He knows no change who knows the true**

He knows no change who knows the true,  
And on it keeps his eye,  
Who always still  
the unseen doth view;  
Only the false & the apparent die.

Things change, but change not far  
From what they are not but to what they are,  
Or rather 'tis our ignorance that dies;  
Forever lives the knowledge of the wise.

## **When the toads begin to ring**

When the toads begin to ring,  
Then thinner clothing bring  
or Off your greatcoat fling

## **Tw'as 30 years ago**

'Twas 30 years ago  
In a rocky pasture field  
Sprang an infant apple grove  
low planted & concealed — I sing the wild apple theme enough for me.

I love the racy fruit & I reverence the tree — In that small family there was one that loved the sun — which sent its root down deep — & took fast hold on life — while the others went to sleep  
In 2 years time 't had thus Reached the level of the rocks — Admired the stretching world  
Nor feared the wandering flocks —

But at this tender age  
Its sufferings began — There came a browsing ox  
And cut it down a span.

Its heart did bleed all day  
& When the birds were hushed —

## The Rosa Sanguined

As often as a martyr dies, This opes its petals to the skies; And Nature by this trace alone Informs us which way he is gone.

## Forever in my dream & in my morning thought

Forever in my dream & in my morning thought Eastward a mount ascends — But when in the sunbeam its hard outline is sought — It all dissolves & ends. The woods that way are gates — the pastures too slope up To an unearthly ground — But when I ask my mates, to take the staff & cup, It can no more be found — Perchance I have no shoes fit for the lofty soil Where my thoughts graze — No properly spun clues — nor well strained mid day oil Or — must I mend my ways? It is a promised land which I have not yet earned, I have not made beginning With consecrated hand — I have not even learned To lay the underpinning. The mountain sinks by day — as do my lofty thoughts, Because I'm not highminded. If I could think alway above these hills & warts I should see it, though blinded. It is a spiral path within the pilgrim's soul Leads to this mountain's brow Commencing at his hearth he reaches to this goal He knows not when nor how.

## Except, returning, by the Marlboro

Except, returning, by the Marlboro, A way, methinks, might safely be allowed To pilgrims of the holiest character We marked, I say, the barberry's brilliant fruit, Which on our hill & pasture grows to waste Not the less sweet to see though sour to taste — And in a rocky lane through which we passed Not so much lengthwise as diagonally In our saint-terrering over hill & valley We plucked wild apples of the fairest hew Filling our pockets out with eagerness, Excellent whether to eat or look at, Or to throw at one another & the Squirrels in sport; & afterward tame ones In orchards heaped by a penurious hind, Who saw but heaps of dollars in his mind; Some what less tame to us for being stolen, Although our pockets were already swollen; And, one more proof, I saw at Willis Lake Where we had come our nature's thirst to slake The willow bed which ornaments its edge Mixed with the cranberry — button bush & sedge Touched by the frost send forth its scarlet flames, Which far surpassed all oriental dyes Reminding me of the wild wealth of the skies And of the red man who once on this shore Beheld it, ere his last summer was oer. So we returned from Willis Pond & Hill, I climb the last & drink the former still.

## **All things decay**

All things decay& so must our sleigh

## **Any fool can make a rule**

Any fool can make a ruleAnd every fool will mind it.

# The Translations

Thoreau worked for most of his adult life in his family's pencil factory at Concord, where he rediscovered the process to make a good pencil out of inferior graphite by using clay as the binder.

# PROMETHEUS BOUND OF ÆSCHYLUS

## PERSONS OF THE DRAMA

Kratos and Bia (Strength and Force).Hephaistus (Vulcan).Prometheus.Chorus of Ocean Nymphs.Oceanus.Io, Daughter of Inachus.Hermes.Kratos and Bia, Hephaistus, Prometheus.

## PROMETHEUS BOUND.

Kr. We are come to the far-bounding plain of earth,To the Scythian way, to the unapproached solitude.Hephaistus, orders must have thy attention,Which the Father has enjoined on thee, this bold oneTo the high-hanging rocks to bindIn indissoluble fetters of adamantine bonds.For thy flower, the splendor of fire useful in all arts,Stealing, he bestowed on mortals; and for suchA crime 't is fit he should give satisfaction to the gods;That he may learn the tyranny of ZeusTo love, and cease from his man-loving ways.

Heph. Kratos and Bia, your charge from ZeusAlready has its end, and nothing further in the way;But I cannot endure to bindA kindred god by force to a bleak precipice,— Yet absolutely there's necessity that I have courage for these things;For it is hard the Father's words to banish.High-plotting son of the right-counseling Themis,Unwilling thee unwilling in brazen fetters hard to be loosedI am about to nail to this inhuman hill,Where neither voice [you'll hear], nor form of any mortalSee, but, scorched by the sun's clear flame,Will change your color's bloom; and to you gladThe various-robed night will conceal the light,And sun disperse the morning frost again;And always the burden of the present illWill wear you; for he that will relieve you has not yet been born.Such fruits you've reaped from your man-loving ways,For a god, not shrinking from the wrath of gods,You have bestowed honors on mortals more than just,For which this pleasureless rock you'll sentinel,Standing erect, sleepless, not bending a knee;And many sighs and lamentations to no purposeWill you utter; for the mind of Zeus is hard to be changed;And he is wholly rugged who may newly rule.

Kr. Well, why dost thou delay and pity in vain?Why not hate the god most hostile to gods,Who has betrayed thy prize to mortals?

Heph. The affinity indeed is appalling, and the familiarity.

Kr. I agree, but to disobey the Father's words  
How is it possible? Fear you not this  
more?

Heph. Ay, you are always without pity, and full of confidence.

Kr. For 't is no remedy to bewail this one;  
Cherish not vainly troubles which avail  
naught.

Heph. O much hated handicraft!

Kr. Why hatest it? for in simple truth, for these misfortunes  
Which are present now  
Art's not to blame.

Heph. Yet I would 't had fallen to another's lot.

Kr. All things were done but to rule the gods,  
For none is free but Zeus.

Heph. I knew it, and have naught to say against these things.

Kr. Will you not haste, then, to put the bonds about him,  
That the Father may not  
observe you loitering?

Heph. Already at hand the shackles you may see.

Kr. Taking them, about his hands with firm strength  
Strike with the hammer, and  
nail him to the rocks.

Heph. 'T is done, and not in vain this work.

Kr. Strike harder, tighten, nowhere relax,  
For he is skillful to find out ways e'en from  
the impracticable.

Heph. Ay, but this arm is fixed inextricably.

Kr. And this now clasp securely, that  
He may learn he is a duller schemer than is  
Zeus.

Heph. Except him would none justly blame me.

Kr. Now with an adamantine wedge's stubborn fang  
Through the breasts nail  
strongly.

Heph. Alas! alas! Prometheus, I groan for thy afflictions.

Kr. And do you hesitate? for Zeus' enemies  
Do you groan? Beware lest one day you  
yourself will pity.

Heph. You see a spectacle hard for eyes to behold.

Kr. I see him meeting his deserts;  
But round his sides put straps.

Heph. To do this is necessity, insist not much.

Kr. Surely I will insist and urge beside;  
Go downward, and the thighs surround with  
force.

Heph. Already it is done, the work, with no long labor.

Kr. Strongly now drive the fetters, through and through,  
For the critic of the works  
is difficult.

Heph. Like your form your tongue speaks.

Kr. Be thou softened, but for my stubbornness  
Of temper and harshness reproach  
me not.

Heph. Let us withdraw, for he has a net about his limbs.

Kr. There now insult, and the shares of gods  
Plundering on ephemerals bestow; what  
thee  
Can mortals in these ills relieve?  
Falsely thee the divinities Prometheus  
Call; for you

yourself need one foreseeing  
In what manner you will escape this fortune.  
Prometheus, alone.  
O divine ether, and ye swift-winged winds,  
Fountains of rivers, and countless smilings  
Of the ocean waves, and earth, mother of all,  
And thou all-seeing orb of the sun I call.  
Behold me what a god I suffer at the hands of gods.  
See by what outrages Tormented the myriad-yeared  
Time I shall endure; such the new Ruler of the blessed has contrived for me,  
Unseemly bonds. Alas! alas! the present and the coming  
Woe I groan; where ever of these sufferings  
Must an end appear. But what say I? I know beforehand all,  
Exactly what will be, nor to me strange  
Will any evil come. The destined fate  
As easily as possible it behooves to bear, knowing  
Necessity's is a resistless strength. But neither to be silent nor unsilent about this  
Lot is possible for me; for a gift to mortals  
Giving, I wretched have been yoked to these necessities;  
Within a hollow reed by stealth I carry off fire's  
Stolen source, which seemed the teacher  
Of all art to mortals, and a great resource.  
For such crimes penalty I pay, Under the sky, riveted in chains.  
Ah! ah! alas! alas!  
What echo, what odor has flown to me obscure,  
Of god, or mortal, or else mingled,  
— Came it to this terminal hill  
A witness of my sufferings, or wishing what?  
Behold bound me an unhappy god,  
The enemy of Zeus, fallen under  
The ill will of all the gods, as many as  
Enter into the hall of Zeus,  
Through too great love of mortals. Alas! alas!  
what fluttering do I hear  
Of birds near? for the air rustles  
With the soft rippling of wings.  
Everything to me is fearful which creeps this way.  
Prometheus and Chorus.

Ch. Fear nothing; for friendly this band  
Of wings with swift contention  
Drew to this hill, hardly  
Persuading the paternal mind.  
The swift-carrying breezes sent me;  
For the echo of beaten steel pierced the recesses  
Of the caves, and struck out from me reserved  
modesty; And I rushed unsandaled in a winged chariot.

Pr. Alas! alas! alas! alas!  
Offspring of the fruitful Tethys,  
And of him rolling around  
all  
The earth with sleepless stream children,  
Of Father Ocean; behold, look on me;  
By what bonds embraced  
On this cliff's topmost rocks  
I shall maintain unenvied watch.

Ch. I see, Prometheus; but to my eyes a fearful  
Mist has come surcharged  
With tears, looking upon thy body  
Shrunk to the rocks  
By these mischiefs of adamantine bonds;  
Indeed, new helmsmen rule Olympus;  
And with new laws Zeus strengthens himself,  
annulling the old,  
And the before great now makes unknown.

Pr. Would that under earth, and below Hades,  
Receptacle of dead, to impassable  
Tartarus he had sent me, to bonds indissoluble  
Cruelly conducting, that neither god  
Nor any other had rejoiced at this.  
But now the sport of winds, unhappy one,  
A source of pleasure to my foes, I suffer.

Ch. Who so hard-hearted  
Of the gods, to whom these things are pleasant?  
Who does not sympathize with thy  
Misfortunes, excepting Zeus?  
for he in wrath always  
Fixing his stubborn mind,  
Afflicts the heavenly race;  
Nor will he cease, until his heart is sated;  
Or with some palm some one may take the power  
hard to be taken.

Pr. Surely yet, though in strong  
Fetters I am now maltreated,  
The ruler of the blessed will have need of me,  
To show the new conspiracy by which  
He's robbed of sceptre and of honors,  
And not at all me with persuasion's  
honey-tongued Charms will he appease,

nor ever, Shrinking from his firm threats, will I Declare this, till from cruel Bonds he may release, and to do justice For this outrage be willing.

Ch. You are bold; and to bitter Woes do nothing yield, But too freely speak. But my mind piercing fear disturbs; For I'm concerned about thy fortunes, Where at length arriving you may see An end to these afflictions. For manners Inaccessible, and a heart hard to be dissuaded has the son of Kronos.

Pr. I know, that — Zeus is stern and having Justice to himself. But after all Gentle-minded He will one day be, when thus he's crushed, And his stubborn wrath allaying, Into agreement with me and friendliness Earnest to me earnest he at length will come.

Ch. The whole account disclose and tell us plainly, In what crime taking you Zeus Thus disgracefully and bitterly insults; Inform us, if you are nowise hurt by the recital.

Pr. Painful indeed it is to me to tell these things, And a pain to be silent, and every way unfortunate. When first the divinities began their strife, And discord 'mong themselves arose, Some wishing to cast Kronos from his seat, That Zeus might reign, forsooth, others the contrary Striving, that Zeus might never rule the gods; Then I, the best advising, to persuade The Titans, sons of Uranus and Chthon, Unable was; but crafty stratagems Despising with rude minds, They thought without trouble to rule by force; But to me my mother not once only, Themis, And Gæa, of many names one form, How the future should be accomplished had foretold, That not by power nor by strength Would it be necessary, but by craft the victors should prevail. Such I in words expounding, They deigned not to regard at all. The best course, therefore, of those occurring then Appeared to be, taking my mother to me, Of my own accord to side with Zeus glad to receive me; And by my counsels Tartarus' black-pitted Depths conceals the ancient Kronos, With his allies. In such things by me The tyrant of the gods having been helped, With base rewards like these repays me; For there is somehow in kingship This disease, not to trust its friends. What then you ask, for what cause He afflicts me, this will I now explain. As soon as on his father's throne He sat, he straightway to the gods distributes honors, Some to one and to another some, and arranged The government; but of unhappy mortals account Had none; but blotting out the race Entire, wished to create another new. And these things none opposed but I, But I adventured; I rescued mortals From going destroyed to Hades. Therefore, indeed, with such afflictions am I bent, To suffer grievous, and piteous to behold, And, holding mortals up to pity, myself am not Thought worthy to obtain it; but without pity Am I thus corrected, a spectacle inglorious to Zeus.

Ch. Of iron heart and made of stone, Whoe'er, Prometheus, with thy sufferings Does not grieve; for I should not have wished to see These things, and having seen them I am grieved at heart.

Pr. Indeed to friends I'm piteous to behold.

Ch. Did you in no respect go beyond this?

Pr. True, mortals I made cease foreseeing fate.

Ch. Having found what remedy for this all?

Pr. Blind hopes in them I made to dwell.

Ch. A great advantage this you gave to men.

Pr. Beside these, too, I bestowed on them fire.

Ch. And have mortals flamy fire?

Pr. From which, indeed, they will learn many arts.

Ch. Upon such charges, then, does Zeus Maltreat you, and nowhere relax from ills? Is there no term of suffering lying before thee?

Pr. Nay, none at all, but when to him it may seem good.

Ch. And how will it seem good? What hope? See you not that You have erred? But how you've erred, for me to tell Not pleasant, and to you a pain. But these things Let us omit, and seek you some release from sufferings.

Pr. Easy, whoever out of trouble holds his Foot, to admonish and remind those faring

Ill. But all these things I knew; Willing, willing I erred, I'll not deny; Mortals assisting I myself found trouble. Not indeed with penalties like these thought I That I should pine on lofty rocks, Gaining this drear unneighbored hill. But bewail not my present woes, But alighting, the fortunes creeping on Hear ye, that ye may learn all to the end. Obey me, obey, sympathize With him now suffering. Thus indeed affliction, Wandering round, sits now by one, then by another.

Ch. Not to unwilling ears do you urge This, Prometheus. And now with light foot the swift-rushing Seat leaving, and the pure ether, Path of birds, to this peaked Ground I come; for thy misfortunes I wish fully to hear. Prometheus, Chorus, and Oceanus.

Oc. I come to the end of a long way Traveling to thee, Prometheus, By my will without bits directing This wing-swift bird; For at thy fortunes know I grieve. And, I think, affinity thus Impels me, but apart from birth, There's not to whom a higher rank I would assign than thee. And you will know these things as true, and not in vain To flatter with the tongue is in me. Come, therefore, Show how it is necessary to assist you; For never will you say, than Ocean There's a firmer friend to thee.

Pr. Alas! what now? And you, then, of my sufferings Come spectator? How didst thou dare, leaving The stream which bears thy name, and rock-roofed Caves self-built, to the iron-mother Earth to go? To behold my fate Hast come, and to compassionate my ills? Behold a spectacle, this, the friend of Zeus, Having with him stablished his tyranny, With what afflictions by himself I'm bent.

Oc. I see, Prometheus, and would admonish Thee the best, although of varied craft. Know thyself, and fit thy manners New; for new also the king among the gods. For if thus rude and whetted words Thou wilt hurl out, quickly may Zeus, though sitting-Far above, hear thee, so that thy present wrath Of troubles child's play will seem to be. But, O wretched one, dismiss the indignation which thou hast, And seek deliverance from these woes. Like an old man, perhaps, I seem to thee to say these things; Such, however, are the wages Of the too lofty speaking tongue, Prometheus; But thou art not yet humble, nor dost yield to ills, And beside the present wish to receive others still. But

thou wouldst not, with my counsel, Against the pricks extend your limbs, seeing that A stern monarch irresponsible reigns. And now I go, and will endeavor, If I can, to release thee from these sufferings. But be thou quiet, nor too rudely speak. Know'st thou not well, with thy superior wisdom, that On a vain tongue punishment is inflicted?

Pr. I congratulate thee that thou art without blame, Having shared and dared all with me; And now leave off, and let it not concern thee. For altogether thou wilt not persuade him, for he's not easily persuaded, But take heed yourself lest you be injured by the way.

Oc. Far better thou art to advise those near Than thyself; by deed and not by word I judge. But me hastening by no means mayest thou detain, For I boast, I boast, this favor will Zeus Grant me, from these sufferings to release thee.

Pr. So far I praise thee, and will never cease; For zeal you nothing lack. But Strive not; for in vain, naught helping Me, thou 'lt strive, if aught to strive you wish. But be thou quiet, holding thyself aloof, For I would not, though I'm unfortunate, that on this account Evils should come to many.

Oc. Surely not, for me too the fortunes of thy brother Atlas grieve, who towards the evening-places Stands, the pillar of heaven and earth Upon his shoulders bearing, a load not easy to be borne. And the earth-born inhabitant of the Cilician Caves seeing, I pitied, the savage monster With a hundred heads, by force o'ercome, Typhon impetuous, who stood 'gainst all the gods, With frightful jaws hissing out slaughter; And from his eyes flashed a Gorgonian light, Utterly to destroy by force the sovereignty of Zeus; But there came to him Zeus' sleepless bolt, Descending thunder, breathing flame, Which struck him out from lofty Boastings. For, struck to his very heart, His strength was scorched and thundered out. And now a useless and extended carcass Lies he near a narrow passage of the sea, Pressed down under the roots of Ætna. And on the topmost summit seated, Hephaistus Hammers the ignited mass, whence will burst out at length Rivers of fire, devouring with wild jaws Fair-fruited Sicily's smooth fields; Such rage will Typhon make boil over With hot discharges of insatiable fire-breathing tempest, Though by the bolt of Zeus burnt to a coal.

Pr. Thou art not inexperienced, nor dost want My counsel; secure thyself as thou know'st how; And I against the present fortune will bear up, Until the thought of Zeus may cease from wrath.

Oc. Know'st thou not this, Prometheus, that Words are healers of distempered wrath?

Pr. If any seasonably soothe the heart, And swelling passion check not rudely.

Oc. In the consulting and the daring What harm seest thou existing? Teach me.

Pr. Trouble superfluous, and light-minded folly.

Oc. Be this my ail then, since it is Most profitable, being wise, not to seem wise.

Pr. This will seem to be my error.

Oc. Plainly homeward thy words remand me.

Pr. Aye, let not grief for me into hostility cast thee.

Oc. To the new occupant of the all-powerful seats?

Pr. Beware lest ever his heart be angered.

Oc. Thy fate, Prometheus, is my teacher.

Pr. Go thou, depart; preserve the present mind.

Oc. To me rushing this word you utter. For the smooth path of the air sweeps  
with his wings  
The four-legged bird; and gladly would  
In the stalls at home bend a  
knee. Prometheus and Chorus.

Ch. I mourn for thee thy ruinous Fate, Prometheus, And tear-distilling from my ten-  
der Eyes a stream has wet My cheeks with flowing springs; For these, unenvied, Zeus By  
his own laws enforcing, Haughty above the gods That were displays his sceptre. And ev-  
ery region now With groans resounds, Mourning the illustrious And ancient honor Of thee  
and of thy kindred; As many mortals as the habitable seat Of sacred Asia pasture, With  
thy lamentable Woes have sympathy; And of the Colchian land, virgin Inhabitants, in  
fight undaunted, And Scythia's multitude, who the last Place of earth, about Mæotis  
lake possess, And Arabia's martial flower, And who the high-hung citadels Of Caucasus  
inhabit near, A hostile army, raging With sharp-prowed spears. Only one other god be-  
fore, in sufferings Subdued by injuries Of adamantine bonds, I've seen, Titanian Atlas,  
who always with superior strength The huge and heavenly globe On his back bears; And  
with a roar the sea waves Dashing, groans the deep, And the dark depth of Hades mur-  
murs underneath The earth, and fountains of pure-running rivers Heave a pitying sigh.

Pr. Think not, indeed, through weakness or through pride That I am silent; for with  
the consciousness I gnaw my heart, Seeing myself thus basely used. And yet to these  
new gods their shares Who else than I wholly distributed? But of these things I am  
silent; for I should tell you What you know; the sufferings of mortals too You've heard,  
how I made intelligent And possessed of sense them ignorant before. But I will speak,  
not bearing any grudge to men, But showing in what I gave the good intention; At first,  
indeed, seeing they saw in vain, And hearing heard not; but like the forms Of dreams,  
for that long time, rashly confounded All, nor brick-woven dwellings Knew they, placed  
in the sun, nor woodwork; But digging down they dwelt, like puny Ants, in sunless  
nooks of caves. And there was naught to them, neither of winter sign, Nor of flower-  
giving spring, nor fruitful Summer, that was sure; but without knowledge Did they all,  
till I taught them the risings Of the stars, and goings down, hard to determine. And  
numbers, chief of inventions, I found out for them, and the assemblages of letters, And  
memory, Muse-mother, doer of all things; And first I joined in pairs wild animals Obe-  
dient to the yoke; and that they might be Alternate workers with the bodies of men In  
the severest toils, I harnessed the rein-loving horses To the car, the ornament of over-  
wealthy luxury. And none else than I invented the sea-wandering Flaxen-winged vehicles  
of sailors. Such inventions I wretched having found out For men, myself have not the  
ingenuity by which From the now present ill I may escape.

Ch. You suffer unseemly ill; deranged in mind You err; and as some bad physician,  
falling Sick you are dejected, and cannot find By what remedies you may be healed.

Pr. Hearing the rest from me more will you wonder What arts and what expedients  
I planned. That which was greatest, if any might fall sick, There was alleviation none,

neither to eat, Nor to anoint, nor drink, but for the want Of medicines they were reduced to skeletons, till to them I showed the mingling of mild remedies, By which all ails they drive away. And many modes of prophecy I settled, And distinguished first of dreams what a real Vision is required to be, and omens hard to be determined I made known to them; and tokens by the way, And flight of crooked-taloned birds I accurately Defined, which lucky are, And unlucky, and what mode of life Have each, and to one another what Hostilities, attachments, and assemblings; The entrails' smoothness, and what color having They would be to the divinities acceptable; Of the gall and liver the various symmetry, And the limbs concealed in fat; and the long Flank burning, to an art hard to be guessed I showed the way to mortals; and flammeous signs Explained, before obscure. Such indeed these; and under ground Concealed the helps to men; Brass, iron, silver, gold, who Would affirm that he discovered before me? None, I well know, not wishing in vain to boast. But learn all in one word, All arts to mortals from Prometheus.

Ch. Assist not mortals now unseasonably, And neglect yourself unfortunate; for I AM of good hope that, from these bonds Released, you will yet have no less power than Zeus.

Pr. Never thus has Fate the Accomplisher Decreed to fulfill these things, but by a myriad ills And woes subdued, thus bonds I flee; For art 's far weaker than necessity.

Ch. Who, then, is helmsman of necessity?

Pr. The Fates three-formed, and the remembering Furies.

Ch. Than these, then, is Zeus weaker?

Pr. Ay, he could not escape what has been fated.

Ch. But what to Zeus is fated, except always to rule?

Pr. This thou wilt not learn; seek not to know.

Ch. Surely some awful thing it is which you withhold.

Pr. Remember other words, for this by no means Is it time to tell, but to be concealed As much as possible; for keeping this do I Escape unseemly bonds and woes.

Ch. Never may the all-ruling Zeus put into my mind Force antagonist to him. Nor let me cease drawing near The gods with holy sacrifices Of slain oxen, by Father Ocean's Ceaseless passage, Nor offend with words, But in me this remain And ne'er be melted out. 'Tis something sweet with bold Hopes the long life to Extend, in bright Cheerfulness the cherishing spirit. But I shudder, thee beholding By a myriad sufferings tormented... For, not fearing Zeus, In thy private mind thou dost regard Mortals too much, Prometheus. Come, though a thankless Favor, friend, say where is any strength, From ephemerals any help? Saw you not The powerless inefficiency, Dream-like, in which the blind ... Race of mortals are entangled? Never counsels of mortals May transgress the harmony of Zeus. I learned these things looking on Thy destructive fate, Prometheus. For different to me did this strain come, And that which round thy baths And couch I hymned, With the design of marriage, when my father's child With bridal gifts persuading, thou didst lead Hesione the partner of thy bed. Prometheus, Chorus, and Io.

Io. What earth, what race, what being shall I see in bridles of rock  
Exposed? By what crime's Penalty dost thou perish? Show, to what part  
Of earth I miserable have wandered. Ah! ah! alas! alas! Again some fly doth sting me wretched,  
Image of earth-born Argus, cover it, earth; I fear the myriad-eyed herdsman beholding;  
For he goes having a treacherous eye, Whom not e'en dead the earth conceals.  
But me, wretched from the Infernals passing, He pursues, and drives fasting along the seaside  
Sand, while low resounds a wax-compacted reed, Uttering sleep-giving law; alas! alas! O gods!  
Where, gods! where lead me far-wandering courses? In what sin, O son of Kronos,  
In what sin ever having taken, To these afflictions hast thou yoked me? alas! alas!  
With fly-driven fear a wretched Frenzied one dost thou afflict? With fire burn, or with earth cover, or  
To sea monsters give for food, nor Envy me my prayers, king. Enough much-wandered  
wanderings Have exercised me, nor can I learn where I shall escape from sufferings.

Ch. Hear'st thou the address of the cow-horned virgin?

Pr. And how not hear the fly-whirled virgin, Daughter of Inachus, who Zeus' heart  
warmed With love, and now the courses over long, By Here hated, forcedly performs?

Io. Whence utterest thou my father's name? Tell me, miserable, who thou art,  
That to me, O suffering one, me born to suffer, Thus true things dost address?  
The god-sent ail thou'st named, Which wastes me stinging With maddening goads, alas! alas!  
With foodless and unseemly leaps Rushing headlong, I came, By wrathful plots subdued.  
Who of the wretched, who, alas! alas! suffers like me? But to me clearly show  
What me awaits to suffer, What not necessary; what remedy of ill, Teach, if indeed thou know'st;  
speak out, Tell the ill-wandering virgin.

Pr. I'll clearly tell thee all you wish to learn. Not weaving in enigmas, but in simple  
speech, As it is just to open the mouth to friends. Thou seest the giver of fire to men,  
Prometheus.

Io. O thou who didst appear a common help to mortals, Wretched Prometheus, to  
atone for what do you endure this?

Pr. I have scarce ceased my sufferings lamenting.

Io. Would you not grant this favor to me?

Pr. Say what you ask; for you'd learn all from me.

Io. Say who has bound thee to the cliff.

Pr. The will, indeed, of Zeus, Hephaistus' hand.

Io. And penalty for what crimes dost thou pay?

Pr. Thus much only can I show thee.

Io. But beside this, declare what time will be To me unfortunate the limit of my  
wandering.

Pr. Not to learn is better for thee than to learn these things.

Io. Conceal not from me what I am to suffer.

Pr. Indeed, I grudge thee not this favor.

Io. Why, then, dost thou delay to tell the whole?

Pr. There's no unwillingness, but I hesitate to vex thy mind.

Io. Care not for me more than is pleasant to me.

Pr. Since you are earnest, it behooves to speak; hear then.

Ch. Not yet, indeed; but a share of pleasure also give to me. First we'll learn the malady of this one, herself relating her destructive fortunes, and the remainder of her trials let her learn from thee.

Pr. 'T is thy part, Io, to do these a favor, as well for every other reason, and as they are sisters of thy father. Since to weep and to lament misfortunes, there where one will get a tear from those attending, is worthy the delay.

Io. I know not that I need distrust you, but in plain speech you shall learn all that you ask for; and yet e'en telling I lament the god-sent tempest, and dissolution of my form — whence to me miserable it came. For always visions in the night, moving about my virgin chambers, enticed me with smooth words: "O greatly happy virgin, why be a virgin long? is permitted to obtain the greatest marriage. For Zeus with love's dart has been warmed by thee, and wishes to unite in love; but do thou, O child, spurn not the couch of Zeus, but go out to Lerna's deep morass, and stables of thy father's herds, that the divine eye may cease from desire." With such dreams every night was I unfortunate distressed, till I dared tell my father of the night-wandering visions. And he to Pytho and Dodona frequent prophets sent, that he might learn what it was necessary he should say or do, to do agreeably to the gods. And they came bringing ambiguous oracles, darkly and indistinctly uttered. But finally a plain report came to Inachus, clearly enjoining him and telling out of my home and country to expel me, discharged to wander to the earth's last bounds; and if he was not willing, from Zeus would come a fiery thunderbolt, which would annihilate all his race. Induced by such predictions of the Loxian, against his will he drove me out, and shut me from the houses; but Zeus' rein compelled him by force to do these things. Immediately my form and mind were changed, and horned, as you behold, stung by a sharp-mouthed fly, with frantic leaping rushed I to Cenchrea's palatable stream, and Lerna's source; but a herdsman born-of-earth of violent temper, Argus, accompanied, with numerous eyes my steps observing. But unexpectedly a sudden fate robbed him of life; and I, fly-stung, by lash divine am driven from land to land. You hear what has been done; and if you have to say aught, what's left of labors, speak; nor pitying me comfort with false words; for an ill the worst of all, I say, are made-up words.

Ch. Ah! ah! enough, alas! Ne'er, ne'er did I presume such cruel words would reach my ears, nor thus unsightly and intolerable hurts, sufferings, fears with a two-edged goad would chill my soul; Alas! alas! fate! fate! I shudder, seeing the state of Io.

Pr. Beforehand sigh'st thou, and art full of fears, hold till the rest also thou learn'st.

Ch. Tell, teach; for to the sick 't is sweet to know the remaining pain beforehand clearly.

Pr. Your former wish ye got from me with ease; for first ye asked to learn from her relating her own trials; the rest now hear, what sufferings 't is necessary this young woman should endure from here. But do thou, offspring of Inachus, my words cast in thy mind, that thou may'st learn the boundaries of the way. First, indeed, hence towards the rising of the sun turning thyself, travel uncultivated lands, and

to the Scythian nomads thou wilt come, who woven roofs  
On high inhabit, on well-wheeled carts,  
With far-casting bows equipped; Whom go not near, but to the sea-  
resounding cliffs Bending thy feet, pass from the region.  
On the left hand the iron-working Chalybes inhabit, whom thou must needs beware,  
For they are rude and inaccessible to strangers.  
And thou wilt come to the Hybristes river, not ill named,  
Which pass not, for not easy is 't to pass,  
Before you get to Caucasus itself, highest  
Of mountains, where the stream spurts out its tide  
From the very temples; and passing over  
The star-neighbored summits, 't is necessary to go  
The southern way, where thou wilt come  
to the man-hating Army of the Amazons, who Themiscyra one day  
Will inhabit, by the Thermedon, where's Salmydessia, rough jaw of the sea,  
Inhospitable to sailors, step-mother of ships;  
They will conduct thee on thy way, and very cheerfully.  
And to the Cimmerian isthmus thou wilt come,  
Just on the narrow portals of a lake, which leaving  
It behooves thee with stout heart to pass the Mœotic straits;  
And there will be to mortals ever a great fame  
Of thy passage, and Bosphorus from thy name 'T will be called.  
And leaving Europe's plain The continent of Asia thou wilt reach. — Seemeth  
to thee, forsooth, The tyrant of the gods in everything to be  
Thus violent? For he a god, with this mortal  
Wishing to unite, drove her to these wanderings.  
A bitter wooer didst thou find, O virgin,  
For thy marriage. For the words you now have heard  
Think not yet to be the prelude.

Io. Ah! me! me! alas! alas!

Pr. Again dost shriek and heave a sigh? What  
Wilt thou do when the remaining ills thou learn'st?

Ch. And hast thou any further suffering to tell her?

Pr. Ay, a tempestuous sea of baleful woe.

Io. What profit, then, for me to live, and not in haste  
To cast myself from this rough rock,  
That rushing down upon the plain I may be released  
From every trouble? For better once for all to die,  
Than all my days to suffer evilly.

Pr. Unhappily my trials would'st thou hear,  
To whom to die has not been fated; For this  
would be release from sufferings; But now there is no end of ills lying  
Before me, until Zeus falls from sovereignty.

Io. And is Zeus ever to fall from power?

Pr. Thou would'st be pleased, I think, to see this accident.

Io. How should I not, who suffer ill from Zeus?

Pr. That these things then are so, be thou assured.

Io. By what one will the tyrant's power be robbed?

Pr. Himself, by his own senseless counsels.

Io. In what way show, if there's no harm.

Pr. He will make such a marriage as one day he'll repent.

Io. Of god or mortal? If to be spoken, tell.

Pr. What matters which? For these things are not to be told.

Io. By a wife will he be driven from the throne?

Pr. Ay, she will bring forth a son superior to his father.

Io. Is there no refuge for him from this fate?

Pr. None, surely, till I may be released from bonds.

Io. Who, then, is to release thee, Zeus unwilling?

Pr. He must be some one of thy descendants.

Io. How sayest thou? that my child will deliver thee from ills?

Pr. Third of thy race after ten other births.

Io. This oracle is not yet easy to be guessed.

Pr. But do not seek to understand thy sufferings.

Io. First proffering gain to me, do not then withhold it.

Pr. I'll grant thee one of two relations.

Io. What two propose, and give to me my choice.

Pr. I give; choose whether thy remaining troubles I shall tell thee clearly, or him that will release me.

Ch. Consent to do her the one favor, Me the other, nor deem us undeserving of thy words; To her indeed tell what remains of wandering, And to me, who will release; for I desire this.

Pr. Since ye are earnest, I will not resist To tell the whole, as much as ye ask for. To thee first, Io, vexatious wandering I will tell, Which engrave on the remembering tablets of the mind. When thou hast passed the flood boundary of continents, Towards the flaming orient sun-traveled ... Passing through the tumult of the sea, until you reach The Gorgonian plains of Cisthene, where The Phorcides dwell, old virgins, Three, swan-shaped, having a common eye, One-toothed, whom neither the sun looks on With his beams, nor nightly moon ever. And near, their winged sisters three, Dragon-scaled Gorgons, odious to men, Whom no mortal beholding will have breath; Such danger do I tell thee. But hear another odious sight; Beware the gryphons, sharp-mouthed Dogs of Zeus, which bark not, and the one-eyed Arimaspians, going on horseback, who dwell about The golden-flowing flood of Pluto's channel; These go not near. But to a distant land Thou 'lt come, a dusky race, who near the fountains Of the sun inhabit, where is the Æthiopian river. Creep down the banks of this, until thou com'st To a descent, where from Byblinian mounts The Nile sends down its sacred palatable stream. This will conduct thee to the triangled land Nilean, where, Io, 't is decreed Thou and thy progeny shall form the distant colony. If aught of this is unintelligible to thee, and hard to be found out, Repeat thy questions, and learn clearly; For more leisure than I want is granted me.

Ch. If to her aught remaining or omitted Thou hast to tell of her pernicious wandering, Speak; but if thou hast said all, give us The favor which we ask, for surely thou remember'st.

Pr. The whole term of her traveling has she heard. But that she may know that not in vain she hears me, I'll tell what before coming hither she endured, Giving this as proof of my relations. The great multitude of words I will omit, And proceed unto the very limit of thy wanderings. When, then, you came to the Molossian ground, And near the high-ridged Dodona, where Oracle and seat is of Thesprotian Zeus, And prodigy incredible,

the speaking oaks, By whom you clearly, and naught enigmatically, Were called the illustrious wife of Zeus About to be, if aught of these things soothes thee; Thence, driven by the fly, you came The seaside way to the great gulf of Rhea, From which by courses retrograde you are now tempest-tossed. But for time to come the sea gulf, Clearly know, will be called Ionian, Memorial of thy passage to all mortals. Proofs to thee are these of my intelligence, That it sees somewhat more than the apparent. But the rest to you and her in common I will tell, Having come upon the very track of former words. There is a city Canopus, last of the land, By Nile's very mouth and bank; There at length Zeus makes thee sane, Stroking with gentle hand, and touching only. And, named from Zeus' begetting, Thou wilt bear dark Epaphus, who will reap As much land as broad-flowing Nile doth water; And fifth from him, a band of fifty children Again to Argos shall unwilling come, Of female sex, avoiding kindred marriage Of their cousins; but they, with minds inflamed, Hawks by doves not far left behind, Will come pursuing marriages Not to be pursued, but heaven will take vengeance on their bodies; For them Pelasgia shall receive by Mars Subdued with woman's hand with night-watching boldness. For each wife shall take her husband's life, Staining a two-edged dagger in his throat. Such 'gainst my foes may Cypris come. — But one of the daughters shall love soften Not to slay her bedfellow, but she will waver In her mind; and one of two things will prefer, To hear herself called timid, rather than stained with blood; She shall in Argos bear a royal race. — Of a long speech is need this clearly to discuss. From this seed, however, shall be born a brave, Famed for his bow, who will release me From these sufferings. Such oracle my ancient Mother told me, Titanian Themis; But how and by what means, this needs long speech To tell, and nothing, learning, wilt thou gain.

Io. Ah me! ah wretched me? Spasms again and brain-struck Madness burn me within, and a fly's dart Stings me, — not wrought by fire. My heart with fear knocks at my breast, And my eyes whirl round and round, And from my course I'm borne by madness' Furious breath, unable to control my tongue; While confused words dash idly 'Gainst the waves of horrid woe.

Ch. Wise, wise indeed was he, Who first in mind This weighed, and with the tongue expressed, To marry according to one's degree is best by far; Nor, being a laborer with the hands, To woo those who are by wealth corrupted, Nor, those by birth made great. Never, never me Fates ... May you behold the sharer of Zeus' couch. Nor may I be brought near to any husband among those from heaven, For I fear, seeing the virginhood of Io, Not content with man, through marriage vexed With these distressful wanderings by Here. But for myself, since an equal marriage is without fear, I am not concerned lest the love of the almighty Gods cast its inevitable eye on me. Without war, indeed, this war, producing Troubles; nor do I know what would become of me; For I see not how I should escape the subtlety of Zeus.

Pr. Surely shall Zeus, though haughty now, Yet be humble, such marriage He prepares to make, which from sovereignty And the throne will cast him down obscure; and Father Kronos' Curse will then be all fulfilled, Which falling from the ancient seats he imprecated. And refuge from such ills none of the gods But I can show him clearly. I

know these things, and in what manner. Now, therefore, Being bold, let him sit trusting to lofty Sounds, and brandishing with both hands his fire-breathing weapon, For naught will these avail him, not To fall disgracefully intolerable falls; Such wrestler does he now prepare, Himself against himself, a prodigy most hard to be withstood; Who, indeed, will invent a better flame than lightning, And a loud sound surpassing thunder; And shiver the trident, Neptune's weapon, The marine earth-shaking ail. Stumbling upon this ill he'll learn How different to govern and to serve.

Ch. Ay, as you hope you vent this against Zeus.

Pr. What will be done, and also what I hope, I say.

Ch. And are we to expect that any will rule Zeus?

Pr. Even than these more grievous ills he'll have.

Ch. How fear'st thou not, hurling such words?

Pr. What should I fear, to whom to die has not been fated?

Ch. But suffering more grievous still than this he may inflict.

Pr. Then let him do it; all is expected by me.

Ch. Those reverencing Adrastia are wise.

Pr. Revere, pray, flatter each successive ruler. Me less than nothing Zeus concerns. Let him do, let him prevail this short time As he will, for long he will not rule the gods, — But I see here, indeed, Zeus' runner, The new tryant's drudge; Doubtless he brings some new message. Prometheus, Chorus, and Hermes.

Her. To thee, the sophist, the bitterly bitter, The sinner against gods, the giver of honors To ephemerals, the thief of fire, I speak; The Father commands thee to tell the marriage Which you boast, by which he falls from power; And that, too, not enigmatically, But each particular declare; nor cause me Double journeys, Prometheus; for thou see'st that Zeus is not appeased by such.

Pr. Solemn-mouthed and full of wisdom Is thy speech, as of the servant of the gods. Ye newly rule, and think forsooth To dwell in griefless citadels; have I not seen Two tyrants fallen from these? And third I shall behold him ruling now, Basest and speediest. Do I seem to thee To fear and shrink from the new gods? Nay, much and wholly I fall short of this. The way thou cam'st go through the dust again; For thou wilt learn naught which thou ask'st of me.

Her. Ay, by such insolence before You brought yourself into these woes.

Pr. Plainly know, I would not change My ill fortune for thy servitude, For better, I think, to serve this rock Than be the faithful messenger of Father Zeus. Thus to insult the insulting it is fit.

Her. Thou seem'st to enjoy thy present state.

Pr. I enjoy? Enjoying thus my enemies Would I see; and thee 'mong them I count.

Her. Dost thou blame me for aught of thy misfortunes?

Pr. In plain words, all gods I hate, As many as well treated wrong me unjustly.

Her. I hear thee raving, no slight ail.

Pr. Ay, I should ail, if ail one's foes to hate.

Her. If prosperous, thou couldst not be borne.

Pr. Ah me!

Her. This word Zeus does not know.

Pr. But time growing old teaches all things.

Her. And still thou know'st not yet how to be prudent.

Pr. For I should not converse with thee a servant.

Her. Thou seem'st to say naught which the Father wishes.

Pr. And yet his debtor I'd requite the favor.

Her. Thou mock'st me verily as if I were a child.

Pr. And art thou not a child, and simpler still than this, If thou expectest to learn aught from me? There is not outrage nor expedient, by which Zeus will induce me to declare these things, Before he loose these grievous bonds. Let there be hurled, then, flaming fire, And the white-winged snows, and thunders Of the earth, let him confound and mingle all. For none of these will bend me till I tell By whom 't is necessary he should fall from sovereignty.

Her. Consider now if these things seem helpful.

Pr. Long since these were considered and resolved.

Her. Venture, O vain one, venture, at length, In view of present sufferings to be wise.

Pr. In vain you vex me, as a wave, exhorting. Ne'er let it come into thy mind that I, fearing Zeus' anger, shall become woman-minded, And beg him, greatly hated, With womanish upturnings of the hands, To loose me from these bonds. I am far from it.

Her. Though saying much I seem in vain to speak; For thou art nothing softened nor appeased By prayers; but champing at the bit like a new-yoked Colt, thou strugglest and contend'st against the reins. But thou art violent with feeble wisdom. For stubbornness to him who is not wise, Itself alone, is less than nothing strong. But consider, if thou art not persuaded by my words, What storm and triple surge of ills Will come upon thee, not to be avoided; for first this rugged Cliff with thunder and lightning flame The Father'll rend, and hide Thy body, and a strong arm will bury thee. When thou hast spent a long length of time, Thou wilt come back to light; and Zeus' Winged dog, a bloodthirsty eagle, ravenously Shall tear the great rag of thy body, Creeping an uninvited guest all day, And banquet on thy liver black by eating. Of such suffering expect not any end, Before some god appear Succeeding to thy labors, and wish to go to rayless Hades, and the dark depths of Tartarus. Therefore deliberate; since this is not made Boasting, but in earnest spoken; For to speak falsely does not know the mouth Of Zeus, but every word he does. So Look about thee, and consider, nor ever think Obstinacy better than prudence.

Ch. To us indeed Hermes appears to say not unseasonable things, For he directs thee, leaving off Self-will, to seek prudent counsel. Obey; for it is base to err, for a wise man.

Pr. To me foreknowing these messages He has uttered, but for a foe to suffer ill From foes is naught unseemly. Therefore 'gainst me let there be hurled Fire's double-pointed curl, and air Be provoked with thunder, and a tumult Of wild winds; and earth from its foundations Let a wind rock, and its very roots, And with a rough surge mingle The sea

waves with the passages  
Of the heavenly stars, and to black  
Tartarus let him quite cast  
down my  
Body, by necessity's strong eddies.  
Yet after all he will not kill me.

Her. Such words and counsels you may hear  
From the brain-struck.  
For what lacks  
he of being mad?  
And if prosperous, what does he cease from madness?  
Do you, therefore, who sympathize  
With this one's suffering,  
From these places quick withdraw some-  
where,  
Lest the harsh bellowing thunder  
Stupefy your minds.

Ch. Say something else, and exhort me  
To some purpose; for surely  
Thou hast intolerably  
abused this word.  
How direct me to perform a baseness?  
I wish to suffer with  
him whate'er is necessary,  
For I have learned to hate betrayers;  
Nor is the pest  
Which I abominate more than this.

Her. Remember, then, what I foretell;  
Nor by calamity pursued  
Blame fortune, nor e'er say  
That Zeus into unforeseen  
Ill has cast you; surely not, but yourselves  
You yourselves; for knowing,  
And not suddenly nor clandestinely,  
You'll be entangled through  
your folly  
In an impassable net of woe.

Pr. Surely indeed, and no more in word,  
Earth is shaken;  
And a hoarse sound of thunder  
Bellows near; and wreaths of lightning  
Flash out fiercely blazing, and whirlwinds  
dust  
Whirl up; and leap the blasts  
Of all winds, 'gainst one another  
Blowing in opposite  
array;  
And air with sea is mingled;  
Such impulse against me from Zeus,  
Producing fear,  
doth plainly come.  
O revered Mother, O Ether  
Revolving common light to all,  
You see me, how unjust things I endure!

# TRANSLATIONS FROM PINDAR

ELYSIUM  
Olympia ii, 109-150  
Equally by night always,  
And by day, having the sun,  
the good  
Lead a life without labor, not disturbing the earth  
With violent hands, nor the  
sea water,  
For a scanty living; but honored  
By the gods, who take pleasure in fidelity  
to oaths,  
They spend a tearless existence;  
While the others suffer unsightly pain.  
But  
as many as endured threefold  
Probation, keeping the mind from all  
Injustice, going the  
way of Zeus to Kronos' tower,  
Where the ocean breezes blow around  
The island of the  
blessed; and flowers of gold shine,  
Some on the land from dazzling trees,  
And the water  
nourishes others;  
With garlands of these they crown their hands and hair,  
According to  
the just decrees of Rhadamanthus,  
Whom Father Kronos, the husband of Rhea,  
Having  
the highest throne of all, has ready by himself as his assistant judge.  
Peleus and Kad-  
mus are regarded among these;  
And his mother brought Achilles, when she had  
Per-  
suaded the heart of Zeus with prayers,  
Who overthrew Hector, Troy's  
Unconquered,  
unshaken column, and gave Cycnus  
To death, and Morning's Æthiop son.  
Olympia v, 34-  
39  
Always around virtues labor and expense strive toward a work  
Covered with danger;  
but those succeeding seem to be wise even to the citizens.  
Olympia vi, 14-17  
Dangerless  
virtues,  
Neither among men, nor in hollow ships,  
Are honorable; but many remember if  
a fair deed is done.

ORIGIN OF RHODES  
Olympia vii, 100-129  
Ancient sayings of men relate,  
That  
when Zeus and the Immortals divided earth,  
Rhodes was not yet apparent in the deep  
sea;  
But in salt depths the island was hid.  
And, Helios being absent, no one claimed  
for him his lot;  
So they left him without any region for his share,  
The pure god. And  
Zeus was about to make a second drawing of lots  
For him warned. But he did not  
permit him;  
For he said that within the white sea he had seen a certain land spring-  
ing up from the bottom,  
Capable of feeding many men, and suitable for flocks.  
And  
straightway he commanded golden-filleted Lachesis  
To stretch forth her hands, and not  
contradict  
The great oath of the gods, but with the son of Kronos  
Assent that, to the  
bright air being sent by his nod,  
It should hereafter be his prize. And his words were  
fully performed,  
Meeting with truth. The island sprang from the watery  
Sea; and the  
genial Father of penetrating beams,  
Ruler of fire-breathing horses, has it.  
Olympia viii,  
95, 96  
A man doing fit things  
Forgets Hades.

HERCULES NAMES THE HILL OF KRONOS  
Olympia x, 59-68  
He named the Hill  
of Kronos, for before nameless,  
While Ænomaus ruled, it was moistened with much

snow; And at this first rite the Fates stood by, And Time, who alone proves Unchanging truth.

OLYMPIA AT EVENING  
Olympia x, 85-92  
With the javelin Phrastor struck the mark; And Eniceus cast the stone afar, Whirling his hand, above them all, And with applause it rushed Through a great tumult; And the lovely evening light Of the fair-faced moon shone on the scene.

FAME  
Olympia x, 109-117  
When, having done fair things, O Agesidamus, Without the reward of song, a man may come To Hades' rest, vainly aspiring He obtains with toil some short delight. But the sweet-voiced lyre And the sweet flute bestow some favor; For Zeus' Pierian daughters Have wide fame.

TO ASOPICHUS OF ORCHOMENOS, ON HIS VICTORY IN THE STADIC COURSE  
Olympia xiv  
O ye, who inhabit for your lot the seat of the Cephisian Streams, yielding fair steeds, renowned Graces, Ruling bright Orchomenos, Protectors of the ancient race of Minyæ, Hear, when I pray. For with you are all pleasant And sweet things to mortals; If wise, if fair, if noble, Any man. For neither do the gods, Without the august Graces, Rule the dance, Nor feasts; but stewards Of all works in heaven, Having placed their seats By golden-bowed Pythian Apollo, They reverence the eternal power Of the Olympian Father. August Aglaia and song-loving Euphrosyne, children of the mightiest god, Hear now, and Thalia loving song, Beholding this band, in favorable fortune Lightly dancing; for in Lydian Manner meditating, I come celebrating Asopichus, Since Minya by thy means is victor at the Olympic games. Now to Persephone's Black-walled house go, Echo, Bearing to his father the famous news; That seeing Cleodamus thou mayest say, That in renowned Pisa's vale His son crowned his young hair With plumes of illustrious contests.

TO THE LYRE  
Pythia i, 8-11  
Thou extinguishest even the spear-like bolt Of everlasting fire. And the eagle sleeps on the sceptre of Zeus, Drooping his swift wings on either side, The king of birds.  
Pythia i, 25-28  
Whatever things Zeus has not loved Are terrified, hearing The voice of the Pierians, On earth and the immeasurable sea.  
Pythia ii, 159-161  
A plain-spoken man brings advantage to every government, — To a monarchy, and when the Impetuous crowd, and when the wise, rule a city. As a whole, the third Pythian Ode, to Hiero, on his victory in the single-horse race, is one of the most memorable. We extract first the account of

ÆSCULAPIUS  
Pythia iii, 83-110  
As many, therefore, as came suffering From spontaneous ulcers, or wounded In their limbs with glittering steel, Or with the far-cast stone, Or by the summer's heat o'ercome in body, Or by winter, relieving he saved from Various ills; some cherishing With soothing strains, Others having drunk refreshing draughts, or applying Remedies to the limbs, others by cutting off he made erect. But even wisdom is bound by gain, And gold appearing in the hand persuaded even him, with its bright reward, To bring a man from death Already overtaken. But the Kronian, smiting With both hands, quickly took away The breath from his breasts; And the rushing thunderbolt hurled him to death. It is necessary for mortal minds To seek what is reasonable from the divinities, Knowing what is before the feet, of what destiny we

are. Do not, my soul, aspire to the life  
Of the Immortals, but exhaust the practicable  
means. In the conclusion of the ode, the poet reminds the victor, Hiero, that adversity  
alternates with prosperity in the life of man, as in the instance of

PELEUS AND CADMUS Pythia iii, 145-205  
The Immortals distribute to men  
With one good two evils. The foolish, therefore,  
Are not able to bear these with grace,  
But the wise, turning the fair outside.  
But thee the lot of good fortune follows,  
For surely great  
Destiny looks down upon a king ruling the people,  
If on any man. But a secure life  
Was not to Peleus, son of Æacus,  
Nor to godlike Cadmus, who yet are said to have had  
The greatest happiness  
Of mortals, and who heard  
The song of the golden-filleted Muses,  
On the mountain, and in seven-gated Thebes,  
When the one married fair-eyed Harmonia,  
And the other Thetis, the illustrious daughter of wise-counseling Nereus.  
And the gods feasted with both;  
And they saw the royal children of Kronos  
On golden seats, and received  
Marriage gifts; and having exchanged  
Former toils for the favor of Zeus,  
They made erect the heart.  
But in course of time  
His three daughters robbed the one  
Of some of his serenity by acute  
Sufferings; when Father Zeus, forsooth, came  
To the lovely couch  
Of white-armed Thyone. And the other's child, whom only the immortal  
Thetis bore in  
Phthia, losing  
His life in war by arrows,  
Being consumed by fire excited  
The lamentation of the Danaans.  
But if any mortal has in his  
Mind the way of truth,  
It is necessary to make the best  
Of what befalls from the blessed.  
For various are the blasts  
Of high-flying winds. The happiness of men stays not a long time,  
Though fast it follows rushing  
on. Humble in humble estate, lofty in lofty,  
I will be; and the attending dæmon  
I will always reverence in my mind,  
Serving according to my means.  
But if Heaven extend to me kind wealth,  
I have hope to find lofty fame hereafter.  
Nestor and Lycian Sarpedon  
— They are the fame of men —  
From resounding words which skillful artists  
Sung, we know.  
For virtue through renowned  
Song is lasting. But for few is it easy to obtain.

APOLLO Pythia v, 87-90  
He bestowed the lyre,  
And he gives the muse to whom he  
wishes, bringing peaceful serenity to the breast.

MAN Pythia viii, 136  
The phantom of a shadow are men.

HYPSEUS' DAUGHTER CYRENE Pythia ix, 31-44  
He reared the white-armed  
child Cyrene, who loved neither the alternating motion of the loom,  
Nor the superintendence of feasts,  
With the pleasures of companions;  
But, with javelins of steel  
And the sword contending,  
To slay wild beasts;  
Affording surely much  
And tranquil peace  
to her father's herds;  
Spending little sleep  
Upon her eyelids,  
As her sweet bedfellow,  
creeping on at dawn.

THE HEIGHT OF GLORY Pythia x, 33-48  
Fortunate and celebrated  
By the wise is that man  
Who, conquering by his hands or virtue  
Of his feet, takes the highest  
prizes  
Through daring and strength,  
And living still sees his youthful son  
Deservedly obtaining  
Pythian crowns. The brazen heaven is not yet accessible to him.  
But whatever glory we  
Of mortal race may reach,  
He goes beyond, even to the boundaries  
Of navigation. But neither in ships, nor going on foot,  
Couldst thou find the wonderful  
way to the contests of the Hyperboreans.

TO ARISTOCLIDES, VICTOR AT THE NEMEAN GAMES  
Nemea iii, 32-37  
If, being beautiful,  
And doing things like to his form,  
The child of Aristophanes  
Went to the height of manliness, no further  
Is it easy to go over the untraveled sea,  
Beyond the Pillars of Hercules.

THE YOUTH OF ACHILLES  
Nemea iii, 69-90  
One with native virtues  
Greatly prevails; but he who  
Possesses acquired talents, an obscure man,  
Aspiring to various things, never with fearless  
Foot advances, but tries  
A myriad virtues with inefficient mind.  
Yellow-haired Achilles, meanwhile, remaining in the house of Philyra,  
Being a boy played  
Great deeds; often brandishing  
Iron-pointed javelins in his hands,  
Swift as the winds, in fight he wrought death to savage lions;  
And he slew boars, and brought their bodies  
Palpitating to Kronian Centaurus,  
As soon as six years old. And all the while  
Artemis and bold Athene admired him,  
Slaying stags without dogs or treacherous  
nets; For he conquered them on foot.  
Nemea iv, 66-70  
Whatever virtues sovereign  
destiny has given me,  
I well know that time, creeping on,  
Will fulfill what was fated.

Nemea v, 1-8  
The kindred of Pytheas, a victor in the Nemean games, had wished to procure an ode from Pindar for less than three drachmæ, asserting that they could purchase a statue for that sum. In the following lines he nobly reproves their meanness, and asserts the value of his labors, which, unlike those of the statuary, will bear the fame of the hero to the ends of the earth.  
No image-maker am I, who being still make  
statues  
Standing on the same base. But on every  
Merchant-ship and in every boat, sweet  
song,  
Go from Ægina to announce that Lampo's son,  
Mighty Pytheas,  
Has conquered the pancratic crown at the Nemean games.

THE DIVINE IN MANN  
Nemea vi, 1-13  
One the race of men and of gods;  
And from one mother  
We all breathe. But quite different power  
Divides us, so that the one is nothing,  
But the brazen heaven remains always  
A secure abode. Yet in some respect we are related,  
Either in mighty mind or form, to the Immortals;  
Although not knowing  
To what resting-place,  
By day or night, Fate has written that we shall run.

THE TREATMENT OF AJAX  
Nemea viii, 44-51  
In secret votes the Danaans aided Ulysses;  
And Ajax, deprived of golden arms, struggled with death.  
Surely, wounds of another kind they wrought  
In the warm flesh of their foes, waging war  
With the man-defending spear.

THE VALUE OF FRIENDS  
Nemea viii, 68-75  
Virtue increases, being sustained by wise men and just,  
As when a tree shoots up with gentle dew into the liquid air.  
There are various uses of friendly men;  
But chiefest in labors; and even pleasure  
Requires to place some pledge before the eyes.

DEATH OF AMPHIARAUS  
Nemea ix, 41-66  
Once they led to seven-gated Thebes an army of men, not according  
To the lucky flight of birds. Nor did the Kronian,  
Brandishing his lightning, impel to march  
From home insane, but to abstain from the way.  
But to apparent destruction  
The host made haste to go, with brazen arms  
And horse equipments, and on the banks  
Of Ismenus, defending sweet return,  
Their white-flowered bodies fattened fire.  
For seven pyres devoured young-limbed  
Men. But to Amphiaraus  
Zeus rent the deep-bosomed earth  
With his mighty thunderbolt,  
And

buried him with his horses, Ere, being struck in the back By the spear of Periclymenus, his warlike Spirit was disgraced. For in dæmonic fears Flee even the sons of gods.

CASTOR AND POLLUX Nemea x, 153-171 Pollux, son of Zeus, shared his immortality with his brother Castor, son of Tyndarus, and while one was in heaven, the other remained in the infernal regions, and they alternately lived and died every day, or, as some say, every six months. While Castor lies mortally wounded by Idas, Pollux prays to Zeus, either to restore his brother to life, or permit him to die with him, to which the god answers, — Nevertheless, I give thee Thy choice of these: if, indeed, fleeing Death and odious age, You wish to dwell on Olympus, With Athene and black-speared Mars, Thou hast this lot; But if thou thinkest to fight For thy brother, and share All things with him, Half the time thou mayest breathe, being beneath the earth, And half in the golden halls of heaven. The god thus having spoken, he did not Entertain a double wish in his mind. And he released first the eye, and then the voice, Of brazen-mitred Castor.

TOIL Isthmia i, 65-71 One reward of labors is sweet to one man, one to another, — To the shepherd, and the plower, and the bird-catcher, And whom the sea nourishes. But every one is tasked to ward off Grievous famine from the stomach.

THE VENALITY OF THE MUSE Isthmia ii, 9-18 Then the Muse was not Fond of gain, nor a laboring woman; Nor were the sweet-sounding, Soothing strains Of Terpsichore sold, With silvered front. But now she directs to observe the saying Of the Argive, coming very near the truth, Who cried, “Money, money, man,” Being bereft of property and friends.

HERCULES’ PRAYER CONCERNING AJAX, SON OF TELAMON Isthmia vi, 62-73 “If ever, O Father Zeus, thou hast heard My supplication with willing mind, Now I beseech thee, with prophetic Prayer, grant a bold son from Eribœa To this man, my fated guest; Rugged in body As the hide of this wild beast Which now surrounds me, which, first of all My contests, I slew once in Nemea; and let his mind agree.” To him thus having spoken, Heaven sent A great eagle, king of birds, And sweet joy thrilled him inwardly.

THE FREEDOM OF GREECE First at Artemisium The children of the Athenians laid the shining Foundation of freedom, And at Salamis and Mycale, And in Plataea, making it firm As adamant.

FROM STRABO Apollo Having risen he went Over land and sea, And stood over the vast summits of mountains, And threaded the recesses, penetrating to the foundations of the groves.

FROM PLUTARCH Heaven being willing, even on an osier thou mayest sail. [Thus rhymed by the old translator of Plutarch: “Were it the will of heaven, an osier bough— Were vessel safe enough the seas to plough.”]

FROM SEXTUS EMPIRICUS Honors and crowns of the tempest-footed Horses delight one; Others live in golden chambers; And some even are pleased traversing securely The swelling of the sea in a swift ship.

FROM STOBÆUS This I will say to thee: The lot of fair and pleasant things It behooves to show in public to all the people; But if any adverse calamity sent from heaven befall Men, this it becomes to bury in darkness. Pindar said of the physiologists, that they “plucked the unripe fruit of wisdom.” Pindar said that “hopes were the dreams of those awake.”

FROM CLEMENS OF ALEXANDRIA To Heaven it is possible from black Night to make arise unspotted light, And with cloud-blackening darkness to obscure The pure splendor of day. First, indeed, the Fates brought the wise-counseling Uranian Themis, with golden horses, By the fountains of Ocean to the awful ascent Of Olympus, along the shining way, To be the first spouse of Zeus the Deliverer. And she bore the golden-filleted, fair-wristed Hours, preservers of good things. Equally tremble before God And a man dear to God.

FROM ÆLIUS ARISTIDES Pindar used such exaggerations [in praise of poetry] as to say that even the gods themselves, when at his marriage Zeus asked if they wanted anything, “asked him to make certain gods for them who should celebrate these great works and all his creation with speech and song.”

# The Letters

On April 18, 1841, Thoreau moved into the Emerson house, 28 Cambridge Turnpike, Concord, Massachusetts, where he served as the children's tutor, editorial assistant, repair man and gardener for three years.

Ralph Waldo Emerson (1803-1882) was an American essayist, lecturer and poet, who led the Transcendentalist movement of the mid-19th century, serving as a great source of inspiration to the younger Thoreau.

## INTRODUCTION.

THE fortune of Henry Thoreau as an author of books has been peculiar, and such as to indicate more permanence of his name and fame than could be predicted of many of his contemporaries. In the years of his literary activity (twenty-five in all), from 1837 to 1862, — when he died, not quite forty-five years old, — he published but two volumes, and those with much delay and difficulty in finding a publisher. But in the thirty-two years since his death, nine volumes have been published from his manuscripts and fugitive pieces, — the present being the tenth. Besides these,

two biographies of Thoreau have appeared in America, and two others in England, with numerous reviews and sketches of the man and his writings, — enough to make several volumes more. At present, the sale of his books and the interest in his life are greater than ever; and he seems to have grown early into an American classic, like his Concord neighbors, Emerson and Hawthorne. Pilgrimages are made to his grave and his daily haunts, as to theirs, — and those who come find it to be true, as was said by an accomplished woman (Miss Elizabeth Hoar) soon after his death, that “Concord is Henry’s monument, adorned with suitable inscriptions by his own hand.” When Horace wrote of a noble Roman family.

*Crescit occulto velut arbor aevo*

*Fama Marcelli, —*

he pointed in felicitous phrase to the only fame that posterity has much regarded, — the slow-growing, deep-rooted laurel of renown. And Shakespeare, citing the old English rhyming saw, *Small herbs have grace, Great weeds do grow apace*, signified the same thing in a parable, — the popularity and suddenness of transient things, contrasted with the usefully permanent. There were plenty of authors in Thoreau’s time (of whom Willis may be taken as the type) who would have smiled loftily to think that a rustic from the Shawsheen and Assabet could compete with the traveled scholar or elegant versifier who commanded the homage of drawing-rooms and magazines, for the prize of lasting remembrance; yet who now are forgotten, or live a shadowy life in the alcoves of libraries, piping forth an ineffective voice, like the shades in Virgil’s *Tartarus*. But Thoreau was wiser when he wrote at the end of his poem, “*Inspiration,*”

*Fame cannot tempt the bard*

*Who’s famous with his God;*

*Nor laurel him reward*

*Who has his Maker’s nod.*

He strove but little for glory, either immediate or posthumous, well knowing that it is the inevitable and unpursued result of what men do or say, —

*Our fatal shadow that walks by us still.*

The Letters of Thoreau, though not less remarkable in some aspects than what he wrote carefully for publication, have thus far scarcely had justice done them. The selection made for a small volume in 1865 was designedly done to exhibit one phase of his character, — the most striking, if you will, but not the most native or attractive. “In his own home,” says Ellery Channing, who knew him more inwardly than any other, “he was one of those characters who may be called ‘household treasures;’ always on the spot, with skillful eye and hand, to raise the best melons in the garden, plant the orchard with choicest trees, or act as extempore mechanic; fond of the pets, his sister’s flowers, or sacred Tabby; kittens were his favorites, — he would play with them by the half-hour. No whim or coldness, no absorption of his time by public or private business, deprived those to whom he belonged of his kindness and affection. He did the duties that lay nearest, and satisfied those in his immediate circle; and whatever the impressions from the theoretical part of his writings, when the matter

is probed to the bottom, good sense and good feeling will be detected in it." This is preëminently true; and the affectionate conviction of this made his sister Sophia dissatisfied with Emerson's rule of selection among the letters. This she confided to me, and this determined me, should occasion offer, to give the world some day a fuller and more familiar view of our friend.

For this purpose I have chosen many letters and mere notes, illustrating his domestic and gossipy moods, — for that element was in his mixed nature, inherited from the lively maternal side, — and even the colloquial vulgarity (using the word in its strict sense of "popular speech") that he sometimes allowed himself. In his last years he revolted a little at this turn of his thoughts, and, as Channing relates, "rubbed out the more humorous parts of his essays, originally a relief to their sterner features, saying, 'I cannot bear the levity I find;'" to which Channing replied that he ought to spare it, even to the puns, in which he abounded almost as much as Shakespeare. His friend was right, — the obvious incongruity was as natural to Thoreau as the grace and French elegance of his best sentences. Thus I have not rejected the common and trivial in these letters; being well assured that what the increasing number of Thoreau's readers desire is to see this piquant original just as he was, — not arrayed in the paradoxical cloak of the Stoic sage, nor sitting complacent in the cynic earthenware cave of Diogenes, and bidding Alexander stand out of his sunshine.

He did those acts also; but they were not the whole man. He was far more poet than cynic or stoic; he had the proud humility of those sects, but still more largely that unconscious pride which comes to the poet when he sees that his pursuits are those of the few and not of the multitude. This perception came early to Thoreau, and was expressed in some unpublished verses dating from his long, solitary rambles, by night and day, on the seashore at Staten Island, where he first learned the sombre magnificence of Ocean. He feigns himself the son of what might well be one of Homer's fishermen, or the shipwrecked seaman of Lucretius, —

Saevis projectus ab undis  
Cui tantum in vita restet transire malorum,  
and then goes on thus with his parable: —  
Within a humble cot that looks to sea  
Daily I breathe this curious warm life,  
Beneath a friendly haven's sheltering lea  
My noiseless day with mystery still is rife.  
'T is here, they say, my simple life began, —  
And easy credence to the tale I lend,  
For well I know't is here I am a man, —  
But who will simply tell me of the end?  
These eyes, fresh-opened, spied the far-off Sea,  
That like a silent godfather did stand,  
Nor uttered one explaining word to me,  
While introducing straight godmother Land.

And yonder still stretches that silent Main,  
With many glancing ships besprinkled o'er:  
And earnest still I gaze and gaze again  
Upon the selfsame waves and friendly shore.  
Infinite work my hands find there to do,  
Gathering the relicts which the waves upcast:  
Each storm doth scour the sea for something new, —  
And every time the strangest is the last.  
My neighbors sometimes come with lumbering carts,  
As if they wished my pleasant toil to share;  
But straight they go again to distant marts, —  
For only weeds and ballast are their care.

“Only weeds and ballast?” that is exactly what Thoreau’s neighbors would have said he was gathering, for the most of his days; yet now he is seen to have collected something more durable and precious than they with their implements and market-carts. If they viewed him with a kind of scorn and pity, it must be said that he returned the affront; only time seems to have sided with the poet in the controversy that he maintained against his busy age.

Superiority, — moral elevation, without peevishness or condescension, — this was Thoreau’s distinguishing quality. He softened it with humor, and sometimes sharpened it with indignation; but he directed his satire and his censure as often against himself as against mankind; men he truly loved, — if they would not obstruct his humble and strictly-chosen path. The letters here printed show this, if I mistake not, — and the many other epistles of his, still uncollected, would hardly vary the picture he has sketched of himself, though they would add new facts. Those most to be sought for are his replies to the generous letters of his one English correspondent.

The profile-portrait engraved for this volume is less known than it should be, — for it alone of the four likenesses extant shows the aquiline features as his comrades of the wood and mountain saw them, — not weakened by any effort to bring him to the standard of other men in garb or expression. The artist, Mr. Walton Ricketson, knew and admired him.

F. B. S.

Concord, Mass., March 1, 1894.

## I. YEARS OF DISCIPLINE.

IT was a happy thought of Thoreau’s friend Ellery Channing, himself a poet, to style our Concord hermit the “poet-naturalist;” for there seemed to be no year of his life, and no hour of his day when Nature did not whisper some secret in his ear, — so intimate was he with her from childhood. In ‘ another connection, speaking of natural beauty, Channing said, “There is Thoreau, — he knows about it; give him sunshine

and a handful of nuts, and he has enough." He was also a naturalist in the more customary sense, — one who studied and arranged methodically in his mind the facts of outward nature; a good botanist and ornithologist, a wise student of insects and fishes; an observer of the winds, the clouds, the seasons, and all that goes to make up what we call "weather" and "climate." Yet he was in heart a poet, and held all the accumulated knowledge of more than forty years not so much for use as for delight. As Gray's poor friend West said of himself, "Like a clear-flowing stream, he reflected the beauteous prospect around;" and Mother Nature had given Thoreau for his prospect the meandering Indian River of Concord, the woodland pastures and fair lakes by which he dwelt or rambled most of his life. Born in the East Quarter of Concord, July 12, 1817, he died in the village, May 6, 1862; he was there fitted for Harvard College, which he entered in 1833, graduating in 1837; and for the rest of his life was hardly away from the town for more than a year in all. Consequently his letters to his family are few, for he was usually among them; but when separated from his elder brother John, or his sisters Helen and Sophia, he wrote to them, and these are the earliest of his letters which have been preserved. Always thoughtful for others, he has left a few facts to aid his biographer, respecting his birth and early years. In his Journal of December 27, 1855, he wrote: —

"Recalled this evening, with the aid of Mother, the various houses (and towns) in which I have lived, and some events of my life. Born in the Minott house on the Virginia Road, where Father occupied Grandmother's 'thirds', carrying on the farm. The Catherines had the other half of the house, — Bob Catherine, and [brother] John threw up the turkeys. Lived there about eight months; Si Merriam the next neighbor. Uncle David [Dunbar] died when I was six weeks old.<sup>1</sup> I was baptized in the old Meeting-house, by Dr. Ripley, when I was three months, and did not cry. In the Red House, where Grandmother lived, we had the west side till October, 1818, — hiring of Josiah Davis, agent for the Woodwards; there were uncle Charles and cousin Charles (Dunbar), more or less. According to the Day-Book first used by Grandfather (Thoreau),<sup>2</sup> dated 1797 (his part cut out and then used by Father in Concord in 1808-9, and in Chelmsford in 1818-21), Father hired of Proctor (in Chelmsford), and shop of Spaulding. In Chelmsford till March, 1821; last charge there about the middle of March, 1821. Aunt Sarah taught me to walk there, when fourteen months old. We lived next the meeting-house, where they kept the powder in the garret. Father kept shop and painted signs, etc...

<sup>1</sup> He was named David for this uncle; Dr. Ripley was the minister of the whole town in 1817. The Red House stood near the Emerson house on the Lexington road; the Woodwards were a wealthy family, afterwards in Quincy, to which town Dr. Woodward left a large bequest.

<sup>2</sup> John Thoreau, grandfather of Henry, born at St. Helier's, Jersey, April, 1754, was a sailor on board the American privateer General Lincoln, November, 1779, and recognized La Terrible, French frigate, which carried John Adams from Boston to

France. See Thoreau's *Summer*, p. 102. This John Thoreau, son of Philip, died in Concord, 1800.

"In Pope's house, South End of Boston (a ten-footer) five or six months, — moved from Chelmsford through Concord, and may have tarried in Concord a little while.

"Day-book says, 'Moved to Pinkney Street (Boston), September 10, 1821, on Monday;' Whitwell's house, Pinkney Street, to March, 1823; then brick house, Concord, to spring of 1826; Davis house (next to Samuel Hoar's) to May 7, 1827; Shattuck house (now W. Munroe's) to spring of 1835; Hollis Hall, Cambridge, 1833; Aunts' house to spring of 1837. [This was what is now the inn called 'Thoreau House.'] At Brownson's (Canton) while teaching in winter of 1835. Went to New York with Father peddling in 1836."

This brings the date down to the year in which Henry Thoreau left college, and when the family letters begin. The notes continue, and now begin to have a literary value.

"Parkman house to fall of 1844; was graduated in 1837; kept town school a fortnight that year; began the big red Journal, October, 1837; found my first arrow-head, fall of 1837; wrote a lecture (my first) on Society, March 14, 1838, and read it before the Lyceum, in the Masons' Hall, April 11, 1838; went to Maine for a school in May, 1838; commenced school in the Parkman house<sup>1</sup> in the summer of that year; wrote an essay on '4 Sound and Silence' December, 1838; fall of 1839 up the Merrimack to the White Mountains; 4 Aulus Persius Flaccus' (first printed paper of consequence), February 10, 1840 — ; the Red Journal of 596 pages ended June, 1840; Journal of 396 pages ended January 31, 1841.

"Went to R. W. Emerson's in spring of 1840 — (about April 25), and stayed there till summer of 1843; went to William Emerson's, Staten Island, May, 1843, and returned in December, or to Thanksgiving, 1843; made pencils in 1844; Texas house to August 29, 1850; at Walden, July, 1845, to fall of 1847; then at R. W. Emerson's to fall of 1848, or while he was in Europe; then in the Yellow house (reformed) till the present."

1 This had been the abode of old Deacon Parkman, a grand-uncle of the late Francis Parkman, the historian, and son of the Westborough clergyman from whom this distinguished family descends. Deacon Parkman was a merchant in Concord, and lived in what was then a good house. It stood in the middle of the village, where the Public Library now is. The "Texas" house was built by Henry Thoreau and his father John; it was named from a section of the village then called "Texas," because a little remote from the churches and schools; perhaps the same odd fancy that had bestowed the name of "Virginia" on the road of Thoreau's birthplace. The "Yellow house re-formed" was a small cottage rebuilt and enlarged by the Thoreaus in 1850; in this, on the main street, Henry and his father and mother died.

As may be inferred from this simple record of the many mansions, chiefly small ones, in which he had spent his first thirty-eight years, there was nothing distinguished in the fortunes of Thoreau's family, who were small merchants, artisans, or farmers, mostly. On the father's side they were from the isle of Jersey, where a French strain mingled

with his English or Scandinavian blood; on the other side he was of Scotch and English descent, counting Jones, Dunbar, and Burns among his feminine ancestors. Liveliness and humor came to him from his Scotch connection; from father and grandfather he inherited a grave steadiness of mind rather at variance with his mother's vivacity. Manual dexterity was also inherited; so that he practiced the simpler mechanic arts with ease and skill; his mathematical training and his outdoor habits fitted him for a land-surveyor; and by that art, as well as by pencil-making, lecturing, and writing, he paid his way in the world, and left a small income from his writings to those who survived him. He taught pupils also, as did his brother and sisters; but it was not an occupation that he long followed after John's death in 1842. With these introductory statements we may proceed to Thoreau's first correspondence with his brother and sisters.

As an introduction to the correspondence, and a key to the young man's view of life, a passage may be taken from Thoreau's "Part" at his college commencement, August 16, 1837. He was one of two to hold what was called a "Conference" on "The Commercial Spirit," — his alternative or opponent in the dispute being Henry Vose, also of Concord, who, in later years, was a Massachusetts judge. Henry Thoreau,<sup>1</sup> then just twenty, said:

---

"The characteristic of our epoch is perfect freedom, — freedom of thought and action. The indignant Greek, the oppressed Pole, the jealous American assert it. The skeptic no less than the believer, the heretic no less than the faithful child of the Church, have begun to enjoy it. It has generated an unusual degree of energy and activity; it has generated the commercial spirit. Man thinks faster and freer than ever before. He, moreover, moves faster and freer. He is more restless, because he is more independent than ever. The winds and the waves are not enough for him; he must needs ransack the bowels of the earth, that he may make for himself a highway of iron over its surface.

1 During the greater part of his college course he signed himself D. H. Thoreau, as he was christened (David Henry); but being constantly called "Henry," he put this name first about the time he left college, and was seldom afterwards known by the former initials.

"Indeed, could one examine this beehive of ours from an observatory among the stars, he would perceive an unwonted degree of bustle in these later ages. There would be hammering and chipping in one quarter; baking and brewing, buying and selling, money-changing and speechmaking in another. What impression would he receive from so general and impartial a survey. Would it appear to him that mankind used this world as not abusing it? Doubtless he would first be struck with the profuse beauty of our orb; he would never tire of admiring its varied zones and seasons, with their changes of living. He could not but notice that restless animal for whose sake it was contrived; but where he found one man to admire with him his fair dwelling-place, the ninety and nine would be scraping together a little of the gilded dust upon its surface... We are to look chiefly for the origin of the commercial spirit, and the power that still cherishes and sustains it, in a blind and unmanly love of wealth. Wherever this exists,

it is too sure to become the ruling spirit; and, as a natural consequence, it infuses into all our thoughts and affections a degree of its own selfishness; we become selfish in our patriotism, selfish in our domestic relations, selfish in our religion.

“Let men, true to their natures, cultivate the moral affections, lead manly and independent lives; let them make riches the means and not the end of existence, and we shall hear no more of the commercial spirit. The sea will not stagnate, the earth will be as green as ever, and the air as pure. This curious world which we inhabit is more wonderful than it is convenient; more beautiful than it is useful; it is more to be admired and enjoyed than used. The order of things should be somewhat reversed; the seventh should be man’s day of toil, wherein to earn his living by the sweat of his brow; and the other six his Sabbath of the affections and the soul, — in which to range this widespread garden, and drink in the soft influences and sublime revelations of Nature... The spirit we are considering is not altogether and without exception bad. We rejoice in it as one more indication of the entire and universal freedom that characterizes the age in which we live, — as an indication that the human race is making one more advance in that infinite series of progressions which awaits it. We glory in those very excesses which are a source of anxiety to the wise and good; as an evidence that man will not always be the slave of matter, — but ere long, casting off those earth-born desires which identify him with the brute, shall pass the days of his sojourn in this his nether Paradise, as becomes the Lord of Creation.”<sup>1</sup>

<sup>1</sup> The impression made on one classmate and former roommate (“chum”) of Thoreau, by this utterance, will be seen by this fragment of a letter from James Richardson of Dedham (afterwards Reverend J. Richardson), dated Dedham, September 7, 1837: —

“Friend Thoreau, — After you had finished your part in the Performances of Commencement (the tone and sentiment of which, by the way, I liked much, as being of a sound philosophy), I hardly saw you again at all. Neither at Mr. Quincy’s levee, neither at any of our classmates’ evening entertainments, did I find you; though for the purpose of taking a farewell, and leaving you some memento of an old chum, as well as on matters of business, I much wished to see your face once more. Of course you must be present at our October meeting, — notice of the time and place for which will be given in the newspapers. I hear that you are comfortably located, in your native town, as the guardian of its children, in the immediate vicinity, I suppose, of one of our most distinguished apostles of the future, R. W. Emerson, and situated under the ministry of our old friend Reverend Barzillai Frost, to whom please make my remembrances. I heard from you, also, that Concord Academy, lately under the care of Mr. Phineas Allen of Northfield, is now vacant of a preceptor; should Mr. Hoar find it difficult to get a scholar college-distinguished, perhaps he would take up with one, who, though in many respects a critical thinker, and a careful philosopher of language among other things, has never distinguished himself in his class as a regular attendant on college studies and rules. If so, could you do me the kindness to mention my name to him as of one intending to make teaching his profession, at least for a part of his life. If

recommendations are necessary, President Quincy has offered me one, and I can easily get others.”

This passage is noteworthy as showing how early the philosophic mind was developed in Thoreau, and how much his thought and expression were influenced by Emerson’s first book, —

“Nature.” But the soil in which that germinating seed fell was naturally prepared to receive it; and the wide diversity between the master and the disciple soon began to appear. In 1863, reviewing Thoreau’s work, Emerson said, “That oaken strength which I noted whenever he walked or worked, or surveyed wood-lots, — the same unhesitating hand with which a field-laborer accosts a piece of work which I should shun as a waste of strength, Henry shows in his literary task. He has muscle, and ventures on and performs feats which I am forced to decline. In reading him I find the same thoughts, the same spirit that is in me; but he takes a step beyond, and illustrates by excellent images that which I should have conveyed in a sleepy generalization.” True as this is, it omits one point of difference only too well known to Emerson, — the controversial turn of Thoreau’s mind, in which he was so unlike Emerson and Alcott, and which must have given to his youthful utterances in company the air of something requiring an apology.

This, at all events, seems to have been the feeling of Helen Thoreau,<sup>1</sup> whose pride in her

<sup>1</sup> This eldest of the children of John Thoreau and Cynthia Dunbar was born October 22, 1812, and died June 14, 1849. Her grandmother, Mary Jones of Weston, Mass., belonged to a Tory family, and several of the Jones brothers served as officers in the British army against General Washington.

brother was such that she did not wish to see him misunderstood. A pleasing indication of both these traits is seen in the first extant letter of Thoreau to this sister. I have this in an autograph copy made by Mr. Emerson, when he was preparing the letters for partial publication, soon after Henry’s death. For some reason he did not insert it in his volume; but it quite deserves to be printed, as indicating the period when it was clear to Thoreau that he must think for himself, whatever those around him might think.

## TO HELEN THOREAU (AT TAUNTON).

CONCORD, October 27, 1837.

DEAR HELEN, — Please you, let the defendant say a few words in defense of his long silence. You know we have hardly done our own deeds, thought our own thoughts, or lived our own lives hitherto. For a man to act himself, he must be perfectly free; otherwise he is in danger of losing all sense of responsibility or of self-respect. Now when such a state of things exists, that the sacred opinions one advances in argument are apologized for by his friends, before his face, lest his hearers receive a wrong impression

of the man, — when such gross injustice is of frequent occurrence, where shall we look, and not look in vain, for men, deeds, thoughts? As well apologize for the grape that it is sour, or the thunder that it is noisy, or the lightning that it tarries not.

Further, letter-writing too often degenerates into a communicating of facts, and not of truths; of other men's deeds and not our thoughts. What are the convulsions of a planet, compared with the emotions of the soul? or the rising of a thousand suns, if that is not enlightened by a ray?

Your affectionate brother,  
HENRY.

It is presumed the tender sister did not need a second lesson; and equally that Henry did not see fit always to write such letters as he praised above, — for he was quite ready to give his correspondents facts, no less than thoughts, especially in his family letters.

Next to this epistle, chronologically, comes one in the conventional dialect of the American Indian, as handed down by travelers and romancers, by Jefferson, Chateaubriand, Lewis, Clarke, and Fenimore Cooper. John Thoreau, Henry's brother, was born in 1815 and died January 11, 1842. He was teaching at Taunton in 1837.

## TO JOHN THOREAU (AT TAUNTON).

(Written as from one Indian to another.)

Musketaquid, 202 Summers, two Moons, eleven Suns, — since the coming of the Pale Faces.

(November 11, 1837.)

TAHATAWAN, Sachimaussan, to his brother sachem, Hopeful of Hopewell, — hoping that he is well: —

Brother: It is many suns that I have not seen the print of thy moccasins by our council-fire; the Great Spirit has blown more leaves from the trees, and many clouds from the land of snows have visited our lodge; the earth has become hard, like a frozen buffalo-skin, so that the trampling of many herds is like the Great Spirit's thunder; the grass on the great fields is like the old man of many winters, and the small song-sparrow prepares for his flight to the land whence the summer comes.

Brother: I write these things because I know that thou lovest the Great Spirit's creatures, and wast wont to sit at thy lodge-door, when the maize was green, to hear the bluebird's song. So shalt thou, in the land of spirits, not only find good hunting grounds and sharp arrowheads, but much music of birds.

Brother: I have been thinking how the Pale Faces have taken away our lands, — and was a woman. You are fortunate to have pitched your wigwam nearer to the great salt lake, where the Pale Face can never plant corn.

Brother: I need not tell thee how we hunted on the lands of the Dundees, — a great war-chief never forgets the bitter taunts of his enemies. Our young men called

for strong water; they painted their faces and dug up the hatchet. But their enemies, the Dundees, were women; they hastened to cover their hatchets with wampum. Our braves are not many; our enemies took a few strings from the heap their fathers left them, and our hatchets are buried. But not Tahatawan's; his heart is of rock when the Dundees sing, — his hatchet cuts deep into the Dundee braves.

Brother: There is dust on my moccasins; I have journeyed to the White Lake, in the country of the Ninares.<sup>1</sup> The Long-knife has been

<sup>1</sup> White Pond, in the district called "Nine-Acre Comer," is here meant; the "Lee-vites" were a family then living on Lee's Hill. Naushawtuck is another name for this hill, where the old Tahatawan lived at times, before the English settled in Concord in September, 1635. The real date of this letter is November 11-14, 1837, and between its two dates the Massachusetts state election was held. The "great council-house" was the Boston State House, to which the Concord people were electing deputies; the "Eagle-Beak" named below was doubtless Samuel Hoar, the first citizen of the town, and for a time Member of Congress from Middlesex County. He was the father of Rockwood and Frisbie Hoar, afterwards judge and senator respectively.

there, — like a woman I paddled his war-canoe. But the spirits of my fathers were angered; the waters were ruffled, and the Bad Spirit troubled the air.

The hearts of the Lee-vites are gladdened; the young Peacock has returned to his lodge at Naushawtuck. He is the Medicine of his tribe, but his heart is like the dry leaves when the whirlwind breathes. He has come to help choose new chiefs for the tribe, in the great Council-house, when two suns are past. — There is no seat for Tahatawan in the council-house. He lets the squaws talk, — his voice is heard above the warwhoop of his tribe, piercing the hearts of his foes; his legs are stiff, he cannot sit.

Brother: Art thou waiting for the spring, that the geese may fly low over thy wigwam? Thy arrows are sharp, thy bow is strong. Has Anawan killed all the eagles? The crows fear not the winter. Tahatawan's eyes are sharp — he can track a snake in the grass, he knows a friend from a foe; he welcomes a friend to his lodge though the ravens croak.

Brother: Hast thou studied much in the medicine-books of the Pale-Faces? Dost thou understand the long talk of the Medicine whose words are like the music of the mocking-bird? But our chiefs have not ears to hear him; they listen like squaws to the council of old men, — they understand not his words. But, Brother, he never danced the war-dance, nor heard the warwhoop of his enemies. He was a squaw; he stayed by the wigwam when the braves were out, and tended the tame buffaloes.

Fear not; the Dundees have faint hearts and much wampum. When the grass is green on the great fields, and the small titmouse returns again, we will hunt the buffalo together.

Our old men say they will send the young chief of the Karlisles, who lives in the green wigwam and is a great Medicine, that his word may be heard in the long talk

which the wise men are going to hold at Shawmut, by the salt lake. He is a great talk, and will not forget the enemies of his tribe.

14th Sun. The fire has gone out in the council-house. The words of our old men have been like the vaunts of the Dundeers. The Eagle-Beak was moved to talk like a silly Pale-Face, and not as becomes a great war-chief in a council of braves. The young Peacock is a woman among braves; he heard not the words of the old men, — like a squaw he looked at his medicine-paper. The young chief of the green wig-wam has hung up his moccasins; he will not leave his tribe till after the buffalo have come down on to the plains.

Brother: This is a long talk, but there is much meaning to my words; they are not like the thunder of canes when the lightning smites them. Brother, I have just heard thy talk and am well pleased; thou art getting to be a great Medicine. The Great Spirit confound the enemies of thy tribe.

TAHATAWAN.

His mark (a bow and arrow).

This singular letter was addressed to John Thoreau at Taunton, and was so carefully preserved in the family that it must have had value in their eyes, as recalling traits of the two Thoreau brothers, and also events in the village life of Concord, more interesting to the young people of 1837 than to the present generation. Some of its parables are easy to read, others quite obscure. The annual state election was an important event to Henry Thoreau then, — more so than it afterwards appeared; and he “mocking-bird” is hard to explain; it may mean Edward Everett, then governor of Massachusetts, or, possibly, Emerson, whose lectures began to attract notice in Boston and Cambridge. It can hardly mean Wendell Phillips, though his melodious eloquence had lately been heard in attacks upon slavery. was certainly on the Whig side in politics, like most of the educated youths of Concord. His “young chief of the Karlisles” was Albert Nelson, son of a Carlisle physician, who began to practice law in Concord in 1836, and was afterwards chief justice of the Superior Court. He was defeated at the election of 1837, as candidate of the Whigs for representative in the state legislature, by a Democrat. Henry Yose, above named, writing from “Butternuts,” in New York, three hundred miles west of Concord, October 22, 1837, said to Thoreau: “You envy my happy situation, and mourn over your fate, which condemns you to loiter about Concord and grub among clamshells [for Indian relics]. If this were your only source of enjoyment while in Concord, — but I know that it is not. I well remember that ‘ antique and fish-like’ office of Major Nelson (to whom, and to Mr. Dennis, and Bemis, and John Thoreau, I wish to be remembered); and still more vividly do I remember the fairer portion of the community in C.” This indicates a social habit in Henry and John Thoreau, which the Indian “talk” also implies. Taliatawan, whom Henry here impersonated, was the mythical Sachem of Musketaquid (the Algonquin name for Concord River and region), whose fishing and hunting lodge was on the hill Naushawtuck, between the two rivers so much navigated by the Thoreaus. In 1837 the two brothers were sportsmen, and went shooting over the Concord meadows and

moors, but of course the “buffalo” was a figure of speech; they never shot anything larger than a raccoon. A few years later they gave up killing the game.

## TO JOHN THOREAU (AT TAUNTON).

CONCORD, February 10, 1838.

DEAR JOHN, — Dost expect to elicit a spark from so dull a steel as myself, by that flinty subject of thine? Truly, one of your copper percussion caps would have fitted this nail-head better.

Unfortunately, the “Americana”<sup>1</sup> has hardly two words on the subject. The process is very simple. The stone is struck with a mallet so as to produce pieces sharp at one end, and blunt at the other. These are laid upon a steel line (probably a chisel’s edge), and again struck with the mallet, and flints of the required size

<sup>1</sup> Americana, in this note, is the old Encyclopedia Americana, which had been edited from the German Conversations-Lexicon, and other sources, by Dr. Francis Lieber, T. G. Bradford, and other Boston scholars, ten years earlier, and was the only convenient book of reference at Thoreau’s hand. The inquiry of John Thoreau is another evidence of the interest he took, like his brother, in the Indians and their flint arrow-heads. The relics mentioned in the next letter were doubtless Indian weapons and utensils, very common about Taunton in the region formerly controlled by King Philip, are broken off. A skillful workman may make a thousand in a day.

So much for the “Americana.” Dr. Jacob Bigelow in his “Technology” says, “Gunflints are formed by a skillful workman, who breaks them out with a hammer, a roller, and steel chisel, with small, repeated strokes.”

Your ornithological commission shall be executed. When are you coming home?

Your affectionate brother,  
HENRY D. THOREAU.

## TO JOHN THOREAU (AT TAUNTON).

Concord, March 17, 1838.

DEAR JOHN, — Your box of relics came safe to hand, but was speedily deposited on the carpet, I assure you. What could it be? Some declared it must be Taunton herrings: “Just nose it, sir!” So down we went onto our knees, and commenced smelling in good earnest, — now horizontally from this corner to that, now perpendicularly from the carpet up, now diagonally, — and finally with a sweeping movement describing the circumference. But it availed not. Taunton herring would not be smelled.

So — we e’en proceeded to open it vi et chisel. What an array of nails! Four nails make a quarter, four quarters a yard, — i’ faith, this isn’t cloth measure! Blaze away, old boy!

Clap in another wedge, then! There, softly! she begins to gape. Just give that old stickler, with a black hat on, another hoist. Aye, we'll pare his nails for him! Well done, old fellow, there 's a breathing-hole for you. "Drive it in!" cries one; "Nip it off!" cries another. Be easy, I say. What's done may be undone. Your richest veins don't lie nearest the surface. Suppose we sit down and enjoy the prospect, for who knows but we may be disappointed? When they opened Pandora's box, all the contents escaped except Hope, but in this case hope is uppermost, and will be the first to escape when the box is opened. However, the general voice was for kicking the coverlid off.

The relics have been arranged numerically on a table. When shall we set up house-keeping? Miss Ward thanks you for her share of the spoils; also accept many thanks from your humble servant "for yourself."

I have a proposal to make. Suppose by the time you are released we should start in company for the West, and there either establish a school jointly, or procure ourselves separate situations. Suppose, moreover, you should get ready to start previous to leaving Taunton, to save time. Go I must, at all events. Dr. Jarvis enumerates nearly a dozen schools which I could have, — all such as would suit you equally well.<sup>1</sup> I wish you would write soon about this. It is high season to start. The canals are now open, and traveling comparatively cheap. I think I can borrow the cash in this town. There's nothing like trying.

Brigham wrote you a few words on the 8th, which father took the liberty to read, with the advice and consent of the family. He wishes you to send him those (numbers) of the "Library of Health" received since 1838, if you are in Concord; otherwise, he says you need not trouble yourself about it at present. He is in C., and enjoying better health than usual. But one number, and that you have, has been received.

The bluebirds made their appearance the 14th day of March; robins and pigeons have also been seen. Mr. Emerson has put up the bluebird box in due form. All send their love.

From your aff br.

H. D. THOREAU.

[Postscript by Helen Thoreau.]

<sup>1</sup> Dr. Edward Jarvis, born in Concord (1803), had gone to Louisville, Ky., in April, 1837, and was thriving there as a physician. He knew the Thoreaus well, and gave them good hopes of success in Ohio or Kentucky as teachers. The plan was soon abandoned, and Henry went to Maine to find a school, but without success. See Sanborn's Thoreau, p. 57.

DEAR JOHN, — Will you have the kindness to inquire at Mr. Marston's for an old singing-book I left there, — the "Handel and Haydn Collection," without a cover? Have you ever got those red handkerchiefs? Much love to the Marstons, Crockers, and Muenschers. Mr. Josiah Davis has failed. Mr and Mrs. Howe have both written again, urging my going to Roxbury; which I suppose I shall do. What day of the month shall you return?

HELEN.

One remark in this letter calls for attention, — that concerning the “bluebird box” for Mr. Emerson. In 1853 Emerson wrote in his journal: “Long ago I wrote of Gifts, and neglected a capital example. John Thoreau, Jr., one day put a bluebird’s box on my barn, — fifteen years ago it must be, — and there it still is, with every summer a melodious family in it, adorning the place and singing his praises. There’s a gift for you, — which cost the giver no money, but nothing which he bought could have been so good. I think of another, quite inestimable. John Thoreau knew how much I should value a head of little Waldo, then five years old. He came to me and offered to take him to a daguerreotypist who was then in town, and he (Thoreau) would see it well done. He did it, and brought me the daguerre, which I thankfully paid for. A few months after, my boy died; and I have since to thank John Thoreau for that wise and gentle piece of friendship.”

Little Waldo Emerson died January 27, 1842, and John Thoreau the same month; so that this taking of the portrait must have been but a few months before his own death, January 11. Henry Thoreau was then living in the Emerson family.

## TO JOHN THOREAU (AT WEST ROXBURY).

CONCORD, July 8, 1838.

DEAR JOHN, — We heard from Helen to-day, and she informs us that you are coming home by the first of August. Now I wish you to write and let me know exactly when your vacation takes place, that I may take one at the same time. I am in school from 8 to 12 in the morning, and from 2 to 4 in the afternoon. After that I read a little Greek or English, or, for variety, take a stroll in the fields. We have not had such a year for berries this long time, — the earth is actually blue with them. High blueberries, three kinds of low, thimble and raspberries constitute my diet at present. (Take notice, — I only diet between meals.) Among my deeds of charity, I may reckon the picking of a cherry-tree for two helpless single ladies, who live under the hill; but i’ faith, it was robbing Peter to pay Paul, — for while I was exalted in charity towards them, I had no mercy on my own stomach. Be advised, my love for currants continues.

The only addition that I have made to my stock of ornithological information is in the shape not of a Firing, Melod., — but surely a melodious Fringilla, — the *F. Juncorum*, or rush-sparrow. I had long known him by note, but never by name.

Report says that Elijah Stearns is going to take the town school. I have four scholars, and one more engaged. Mr. Fenner left town yesterday. Among occurrences of ill omen may be mentioned the falling out and cracking of the inscription stone of Concord Monument.<sup>1</sup> Mrs. Lowell and children are at Aunts’. Peabody (a college classmate) walked up last Wednesday, spent the night, and took a stroll in the woods.

Sophia says I must leave off and pen a few lines for her to Helen: so good-by. Love from all, and among them your aff brother,

H. D. T.

The school above mentioned as begun by Henry Thoreau in this summer of 1838 was  
1 This was the old monument of the Fight in 3775, for the dedication of which Emerson wrote his hymn, "By the rude bridge." This was sung by Thoreau, among others, to the tune of Old Hundred. joined in by John, after finishing his teaching at West Roxbury, and was continued for several years. It was in this school that Louisa Alcott and her sister received some instruction, after their father removed from Boston to Concord, in the spring of 1840. It was opened in the Parkman house, where the family then lived, and soon after was transferred to the building of the Concord Academy,<sup>1</sup> not far off. John Thoreau taught the English branches and mathematics; Henry taught Latin and Greek and the higher mathematics, — and it was the custom of both brothers to go walking with their pupils one afternoon each week. It is as a professional schoolmaster that Henry thus writes to his sister Helen, then teaching at Roxbury, after a like experience in Taunton.

## TO HELEN THOREAU (AT ROXBURY).

Concord, October 6, 1838.

DEAR HELEN, — I dropped Sophia's letter into the box immediately on taking yours out, else the tone of the former had been changed.

I have no acquaintance with "Cleaveland's First Lessons," though I have peeped into his abridged grammar, which I should think very well calculated for beginners, — at least for such

1 For twenty-five years (1800-01) the house of Ellery Channing-, and now of Charles Emerson, nephew of Waldo Emerson. as would be likely to wear out one book before they would be prepared for the abstruser parts of grammar. Ahem!

As no one can tell what was the Roman pronunciation, each nation makes the Latin conform, for the most part, to the rules of its own language; so that with us of the vowels only A has a peculiar sound. In the end of a word of more than one syllable it is sounded like "ah," as pennah, Lydiah, Hannah, etc., without regard to case; but "da" is never sounded "dah," because it is a monosyllable. All terminations in es, and plural cases in os, as you know, are pronounced long, — as homines (hominese), dominos (dominose), or, in English, Johnny Vose. For information, see Adams' "Latin Grammar," before the Rudiments.

This is all law and gospel in the eyes of the world; but remember I am speaking, as it were, in the third person, and should sing quite a different tune if it were I that made the quire. However, one must occasionally hang his harp on the willows, and play on the Jew's harp, in such a strange country as this.

One of your young ladies wishes to study mental philosophy, hey? Well, tell her that she has the very best text-book that I know of in her possession already. If she do not believe it, then she should have bespoken another better in another world, and not have expected to find one at "Little & Wilkins." But if she wishes to know how

poor an apology for a mental philosophy men have tacked together, synthetically or analytically, in these latter days, — how they have squeezed the infinite mind into a compass that would not nonplus a surveyor of Eastern Lands — making Imagination and Memory to lie still in their respective apartments like ink-stand and wafers in a lady's escritoire, — why let her read Locke, or Stewart, or Brown. The fact is, mental philosophy is very like Poverty, which, you know, begins at home; and indeed, when it goes abroad, it is poverty itself.

Chorus. I should think an abridgment of one of the above authors, or of Abercrombie, would answer her purpose. It may set her a-thinking. Probably there are many systems in the market of which I am ignorant.

As for themes, say first "Miscellaneous Thoughts." Set one up to a window, to note what passes in the street, and make her comments thereon; or let her gaze in the fire, or into a corner where there is a spider's web, and philosophize, moralize, theorize, or what not. What their hands find to putter about, or their minds to think about, that let them write about. To say nothing of advantage or disadvantage of this, that, or the other, let them set down their ideas at any given season, preserving the chain of thought as complete as may be.

This is the style pedagogical. I am much obliged to you for your piece of information. Knowing your dislike to a sentimental letter, I remain

Your affectionate brother,  
H. D. T.

The next letter to Helen carries this pedagogical style a little farther, for it is in Latin, addressed "Ad Helenam L. Thoreau, Roxbury, Mass.," and postmarked "Concord, Jan. 25" (1840).

## TO HELEN THOREAU (AT ROXBURY).

Concordiae, Dec. Kal. Feb. a. d. mdcccxl.

CARA SOROR, — Est magnus acervus nivis ad limina, et frigus intolerabile intus. Coelum ipsum ruit, credo, et terrain operit. Sero stratum linquo et mature repeto; in fenestris multa pruina prospectum absumit; et hic miser scribo, non currente calamo, nam digiti mentesque torpescunt. Canerem cum Horatio, si vox non faucibus haeserit,

---

Vides ut alta stet nive candidum  
Nawshawtucl, nec jam sustineant onus  
Silvae laborantes, geluque Flumina constiterint acuto?  
Dissolve frigus, ligna super foco  
Large reponens, etc.  
Sed olim, Musa mutata, et laetiore plectro,  
Neque jam stabulis gaudet pecus, aut arator igne,  
Nee prata canis albicant pruinis;

Jam Cytherea choros ducit Venus imminente luna.

Quam turdus ferrugineus ver reduxerit, tu, spero, linques curas sciolasticas, et, negotio religato, desipere in loco audebis; aut mecum inter sylvas, aut super scopulos Pulcliri-Portus, aut in cymba super lacum Waldensem, mulcens fluctus manu, aut speciem miratus sub undas.

Bulwerius est milii nomen incognitum, — unus ex ignobile vulgo, nec refutandus nec laudandus. Certe alicui nonnullam lionorem habeo qui insanabili cacoethe scribendi teneatur.

Specie flagrantis Lexingtonis non somnia deturbat? At non Yulcanum Neptunumque culpeinus, cum superstitioso grege. Natura curat animalculis aequae ac hominibus; cum serena, turn procellosa, arnica est.

Si amas liistoriam et fortia facta heroum, non depone Rollin, precor; ne Clio offendas nunc, nec ilia det veniam olim. Quos libros Latinos legis? legis, inquam, non studes. Beatus qui potest suos libellos tractare, et saepe perlegere, sine metu domini urgentis! ab otio injurioso procul est: suos amicos et vocare et dimittere quandocunque velit, potest. Bonus liber opus nobilissimum liominis. Hinc ratio non modo cur legeres, sed cur tu quoque scriberes; nec lectores carent; ego sum. Si non librum meditaris, libellum certe. Nihil posteris proderit te spirasse, et vitam nunc leniter niinc aspere egisse; sed cogitasse praecipue et scripsisse. Yereor ne tibi pertaesum liujus epistolae sit; necnon alma lux caret,

Majoresque cadunt altis de montibus umbrae.

Quamobrem vale, — imo valete, et requiescatis placide, Sorores.

H. D. THOKEAUS.

Memento scribere!

CARA SOPHIA, — Samuel Niger crebris aegrotationibus, quae agilitatem et aequum animum abstulere, obnoxius est; iis temporibus ad cellam descendit, et multas horas (ibi) manet.

Flores, ali crudelis pruina! parvo leti discrimine sunt. Cactus frigore ustus est, gerania vero adhuc vigent.

Conventus sociabiles hac liieme reinstituti fuere. Conveniuit (?) ad meum domum mense quarto vel quinto, ut tu hie esse possis. Matertera Sophia cum nobis remanet; quando urbem revertet non scio. Gravedine etiamnum, sed non tam aegre, laboramus.

Adolescentula E. White apud pagum paulisper moratur. Memento scribere intra duas hebdomedas.

Te valere desiderium est

Tui Matris,

C. Thoreaus.

P. S. Epistolam die solis proxima expectamus. (Amanuense, H. D. T.)

Barring a few slips, tliis is a good and lively piece of Latin, and noticeable for its thought as well as its learning and humor. The poets were evidently his favorites among Latin authors. Shall we attempt a free translation, such as Thoreau would give?

VERNACULAR VERSION.

Concord, January 23, 1840.

Dear Sister, — There is a huge snowdrift at the door, and the cold inside is intolerable. The very sky is coming down, I guess, and covering up the ground. I turn out late in the morning, and go to bed early; there is thick frost on the windows, shutting out the view; and here I write in pain, for fingers and brains are numb. I would chant with Horace, if my voice did not stick in my throat, —

See how Nashawtuck, deep in snow, Stands glittering, while the bending woods Scarce bear their burden, and the floods

Feel arctic winter stay their flow.

Pile on the firewood, melt the cold,

Spare nothing-, etc.

But soon, changing my tune, and with a cheerfuller note, I'll say, —

No longer the flock huddles up in the stall, the plowman bends over the fire, No longer frost whitens the meadow; But the goddess of love, while the moon shines above, Sets us dancing in light and in shadow.

When Robin Redbreast brings back the springtime, I trust that you will lay your school-duties aside, cast off care, and venture to be gay now and then; roaming with me in the woods, or climbing the Fairhaven cliffs, — or else, in my boat on Walden, let the water kiss your hand, or gaze at your image in the wave.

Bulwer is to me a name unknown, — one of the unnoticed crowd, attracting neither blame nor praise. To be sure, I hold any one in some esteem who is helpless in the grasp of the writing demon.

Does not the image of the Lexington afire trouble your dreams?<sup>1</sup> But we may not, like the superstitious mob, blame Vulcan or Neptune, — neither fire nor water was in fault. Nature

<sup>1</sup> The steamer Lexington lately burnt on Long Island Sound, with Dr. Follen on board. takes as much care for midgets as for mankind; she is our friend in storm and in calm.

If you like history, and the exploits of the brave, don't give up Rollin, I beg; thus would you displease Clio, who might not forgive you hereafter. What Latin are you reading? I mean reading, not studying. Blessed is the man who can have his library at hand, and oft peruse the books, without the fear of a taskmaster! he is far enough from harmful idleness, who can call in and dismiss these friends when he pleases. An honest book's the noblest work of Man. There's a reason, now, not only for your reading, but for writing something, too. You will not lack readers, — here am I, for one. If you cannot compose a volume, then try a tract. It will do the world no good, hereafter, if you merely exist, and pass life smoothly or roughly; but to have thoughts, and write them down, that helps greatly.

I fear you will tire of this epistle; the light of day is dwindling, too, —

And longer fall the shadows of the hills.

Therefore, good-by; fare ye well, and sleep in quiet, both my sisters! Don't forget to write.

H. D. Thoreau.

## **POSTSCRIPT. (BY MRS. THOREAU.)**

Dear Sophia, — Sam Black (the cat) is liable to frequent attacks that impair his agility and good-nature; at such times he goes down cellar, and stays many hours. Your flowers — O, the cruel frost! are all but dead; the cactus is withered by cold, but the geraniums yet flourish. The Sewing Circle has been revived this winter; they meet at our house in April or May, so that you may then be here. Your Aunt Sophia remains with us, — when she will return to the city I don't know. We still suffer from heavy colds, but not so much. Young Miss E. White is staying in the village a little while (is making a little visit in town). Don't forget to write within two weeks. We expect a letter next Sunday.

That you may enjoy good health is the prayer of —

Your mother,

C. Thoreau.

(H. D. T. was the scribe).

Cats were always an important branch of the Thoreaus' domestic economy, and Henry was more tolerant of them than men are wont to be. Flowers were the specialty of Sophia, who, when I knew her, from 1855 to 1876, usually had a small conservatory in a recess of the diningroom. At this time (1840) she seems to have been aiding Helen in her school. The next letter, to Helen, is of a graver tone: —

## **TO HELEN THOREAU (AT ROXBURY).**

Concord, June 13, 1840.

Dear Helen, — That letter to John, for which you had an opportunity doubtless to substitute a more perfect communication, fell, as was natural, into the hands of his "transcendental brother," who is his proxy in such cases, having been commissioned to acknowledge and receipt all bills that may be presented. But what's in a name? Perhaps it does not matter whether it be John or Henry. Nor will those same six months have to be altered, I fear, to suit his case as well. But methinks they have not passed entirely without intercourse, provided we have been sincere though humble worshipers of the same virtue in the mean time. Certainly it is better that we should make ourselves quite sure of such a communion as this by the only course which is completely free from suspicion, — the coincidence of two earnest and aspiring lives, — than run the risk of a disappointment by relying wholly or chiefly on so meagre and uncertain a means as speech, whether written or spoken, affords. How often, when we have been nearest each other bodily, have we really been farthest off! Our tongues were the witty foils with which we fenced each other off. Not that we have not met heartily

and with profit as members of one family, but it was a small one surely, and not that other human family. We have met frankly and without concealment ever, as befits those who have an instinctive trust in one another, and the scenery of whose outward lives has been the same, but never as prompted by an earnest and affectionate desire to probe deeper our mutual natures. Such intercourse, at least, if it has ever been, has not condescended to the vulgarities of oral communication, for the ears are provided with no lid as the eye is, and would not have been deaf to it in sleep. And now glad am I, if I am not mistaken in imagining that some such transcendental inquisitiveness has traveled post thither, — for, as I observed before, where the bolt hits, thither was it aimed, — any arbitrary direction notwithstanding.

Thus much, at least, our kindred temperament of mind and body — and long family-mvity — have done for us, that we already find ourselves standing on a solid and natural footing with respect to one another, and shall not have to waste time in the so often unavailing endeavor to arrive fairly at this simple ground.

Let us leave trifles, then, to accident; and politics, and finance, and such gossip, to the moments when diet and exercise are cared for, and speak to each other deliberately as out of one infinity into another, — you there in time and space, and I here. For beside this relation, all books and doctrines are no better than gossip or the turning of a spit.

Equally to you and Sophia, from  
Your affectionate brother,  
H. D. Thoreau.

We come now to the period when Thoreau entered on more intimate relations with Emerson. There was a difference of fourteen years in their ages, which had hitherto separated them intellectually; but now the young scholar, thinker, and naturalist had so fast advanced that he could meet his senior on more equal terms, and each became essential to the other. With all his prudence and common sense, in which he surpassed most men, Emerson was yet lacking in some practical faculties; while Thoreau was the most practical and handy person in all matters of every-day life, — a good mechanic and gardener, methodical in his habits, observant and kindly in the domestic world, and attractive to children, who now were important members of the Emerson household. He was therefore invited by Emerson to make his house a home, — looking after the garden, the business affairs, and performing the office of a younger brother, or a grown-up son. The invitation was accepted in April, 1841, and Thoreau remained in the family, with frequent absences, until he went in May, 1843, to reside with Mr. William Emerson, near New York, as the tutor of his sons. During these two years much occurred of deep moment to the two friends. Young Waldo Emerson, the beautiful boy, died, and just before, John Thoreau, the sunny and hopeful brother, whom Henry seems to have loved more than any human being. These tragedies brought the bereaved nearer together, and gave to Mrs. Emerson in particular an affection for Thoreau, and a trust in him which made the intimate life of the household move harmoniously, notwithstanding the independent and eccentric genius of Thoreau.

## TO MRS. LUCY BROWN 1 (AT PLYMOUTH).

Concord, July 21, 1841.

Dear Friend, — Don't think I need any prompting to write to you; but what tough

1 Mrs. Brown was the elder sister of Mrs. R. W. Emerson and of the eminent chemist and geologist, Dr. Charles T. Jackson, of Plymouth and Boston. She lived for a time in Mrs. Thoreau's family, and Thoreau's early verses, *Sic Vita*, were thrown into her window there by the young poet, wrapped round a cluster of violets.

earthenware shall I put into my packet to travel over so many hills, and thrud so many woods, as lie between Concord and Plymouth? Thank fortune it is all the way down hill, so they will get safely carried; and yet it seems as if it were writing against time and the sun to send a letter east, for no natural force forwards it. You should go dwell in the West, and then I would deluge you with letters, as boys throw feathers into the air to see the wind take them. I should rather fancy you at evening dwelling far away behind the serene curtain of the West, — the home of fair weather, — than over by the chilly sources of the east wind.

What quiet thoughts have you nowadays which will float on that east wind to west, for so we may make our worst servants our carriers, — what progress made from can't to can, in practice and theory? Under this category, you remember, we used to place all our philosophy. Do you have any still, startling, well moments, in which you think grandly, and speak with emphasis? Don't take this for sarcasm, for not in a year of the gods, I fear, will such a golden approach to plain speaking revolve again. But away with such fears; by a few miles of travel we have not distanced each other's sincerity.

I grow savager and savager every day, as if fed on raw meat, and my tameness is' only the repose of untamableness. I dream of looking abroad summer and winter, with free gaze, from some mountain-side, while my eyes revolve in an Egyptian slime of health, — I to be nature looking into nature with such easy sympathy as the blue-eyed grass in the meadow looks in the face of the sky. From some such recess I would put forth sublime thoughts daily, as the plant puts forth leaves. Now-a-nights I go on to the hill to see the sun set, as one would go home at evening; the bustle of the village has run on all day, and left me quite in the rear; but I see the sunset, and find that it can wait for my slow virtue.

But I forget that you think more of this human nature than of this nature I praise. Why won't you believe that mine is more human than any single man or woman can be? that in it, in the sunset there, are all the qualities that can adorn a household, and that sometimes, in a fluttering leaf, one may hear all your Christianity preached.

You see how unskillful a letter-writer I am, thus to have come to the end of my sheet when hardly arrived at the beginning of my story. I was going to be soberer, I assure you, but now have only room to add, that if the fates allot you a serene hour, don't fail to communicate some of its serenity to your friend, HENRY D. THOREAU.

No, no. Improve so rare a gift for yourself, and send me of your leisure.

## TO MRS. LUCY BROWN (AT PLYMOUTH).

CONCORD, Wednesday evening,  
September 8, [1841.]

Dear Friend, — Your note came wafted to my hand like the first leaf of the Fall on the September wind, and I put only another interpretation upon its lines than upon the veins of those which are soon to be strewed around me. It is nothing but Indian Summer here at present. I mean that any weather seems reserved expressly for our late purposes whenever we happen to be fulfilling them. I do not know what right I have to so much happiness, but rather hold it in reserve till the time of my desert.

What with the crickets and the crowing of cocks, and the lowing of kine, our Concord life is sonorous enough. Sometimes I hear the cock bestir himself on his perch under my feet, and crow shrilly before dawn; and I think I might have been born any year for all the phenomena I know. We count sixteen eggs daily now, when arithmetic will only fetch the hens up to thirteen; but the world is young, and we wait to see this eccentricity complete its period.

My verses on Friendship are already printed in the “Dial;” not expanded, but reduced to completeness by leaving out the long lines, which always have, or should have, a longer or at least another sense than short ones.

Just now I am in the mid-sea of verses, and they actually rustle around me as the leaves would round the head of Autumnus himself should he thrust it up through some vales which I know; but, alas! many of them are but crisped and yellow leaves like his, I fear, and will deserve no better fate than to make mould for new harvests. I see the stanzas rise around me, verse upon verse, far and near, like the mountains from Agiocochook, not all having a terrestrial existence as yet, even as some of them may be clouds; but I fancy I see the gleam of some Sebago Lake and Silver Cascade, at whose well I may drink one day. I am as unfit for any practical purpose — I mean for the furtherance of the world’s ends — as gossamer for ship-timber; and I, who am going to be a pencil-maker to-morrow,<sup>1</sup> can sympathize with God Apollo, who served King Admetus for a while on earth. But I believe he found it for his ad-

<sup>1</sup> This business of pencil-making had become the family bread-winner, and Henry Thoreau worked at it and kindred arts by intervals for the next twenty years.

vantage at last, — as I am sure I shall, though I shall hold the nobler part at least out of the service.

Don’t attach any undue seriousness to this threnody, for I love my fate to the very core and rind, and could swallow it without paring it, I think. You ask if I have written any more poems? Excepting those which Vulcan is now forging, I have only discharged a few more bolts into the horizon, — in all, three hundred verses, — and sent them, as I may say, over the mountains to Miss Fuller, who may have occasion to remember the old rhyme: —

“Three scipen gode Comen mid than flode  
Three hundred cnihten.”

But these are far more Vandalic than they. In this narrow sheet there is not room even for one thought to root itself. But you must consider this an odd leaf of a volume, and that volume Your friend,  
HENRY D. THOREAU.

## TO MRS. LUCY BROWN (AT PLYMOUTH).

CONCORD, October 5, 1841.

Dear Friend, — I send you Williams's 1 letter as the last remembrancer to one of those "whose acquaintance he had the pleasure to form while in Concord." It came quite unexpectedly to me, but I was very glad to receive it, though I hardly know whether my utmost sincerity and interest can inspire a sufficient answer to it. I should like to have you send it back by some convenient opportunity.

1. T. Williams, who had lived in Concord, but now wrote from Buffalo, N. Y.

Pray let me know what you are thinking about any day, — what most nearly concerns you. Last winter, you know, you did more than your share of the talking, and I did not complain for want of an opportunity. Imagine your stove-door out of order, at least, and then while I am fixing it you will think of enough things to say.

What makes the value of your life at present? what dreams have you, and what realizations? You know there is a high table-land which not even the east wind reaches. Now can't we walk and chat upon its plane still, as if there were no lower latitudes? Surely our two destinies are topics interesting and grand enough for any occasion.

I hope you have many gleams of serenity and health, or, if your body will grant you no positive respite, that you may, at any rate, enjoy your sickness occasionally, as much as I used to tell of. But here is the bundle going to be done up, so accept a "good-night" from

Henry D. Thoreau.

## TO MRS. LUCY BROWN (AT PLYMOUTH).

Concord, March 2, 1842.

Dear Friend, — I believe I have nothing new to tell you, for what was news you have learned from other sources. I am much the same person that I was, who should be so much better; yet when I realize what has transpired, and the greatness of the part I am unconsciously acting, I am thrilled, and it seems as if there were none in history to match it.

Soon after John's death I listened to a music-box, and if, at any time, that event had seemed inconsistent with the beauty and harmony of the universe, it was then gently constrained into the placid course of nature by those steady notes, in mild and unoffended tone echoing far and wide under the heavens. But I find these things more

strange than sad to me. What right have I to grieve, who have not ceased to wonder? We feel at first as if some opportunities of kindness and sympathy were lost, but learn afterward that any pure grief is ample recompense for all. That is, if we are faithful; for a great grief is but sympathy with the soul that disposes events, and is as natural as the resin on Arabian trees. Only Nature has a right to grieve perpetually, for she only is innocent. Soon the ice will melt, and the blackbirds sing along the river which he frequented, as pleasantly as ever. The same everlasting serenity will appear in this face of God, and we will not be sorrowful if he is not.

We are made happy when reason can discover no occasion for it. The memory of some past moments is more persuasive than the experience of present ones. There have been visions of such breadth and brightness that these motes were invisible in their light.

I do not wish to see John ever again, — I mean him who is dead, — but that other, whom only he would have wished to see, or to be, of whom he was the imperfect representative. For we are not what we are, nor do we treat or esteem each other for such, but for what we are capable of being.

As for Waldo, he died as the mist rises from the brook, which the sun will soon dart his rays through. Do not the flowers die every autumn? He had not even taken root here. I was not startled to hear that he was dead; it seemed the most natural event that could happen. His fine organization demanded it, and nature gently yielded its request. It would have been strange if he had lived. Neither will nature manifest any sorrow at his death, but soon the note of the lark will be heard down in the meadow, and fresh dandelions will spring from the old stocks where lie plucked them last summer.

I have been living ill of late, but am now doing better. How do you live in that Plymouth world, nowadays? 1 Please remember me to Mary Russell. You must not blame me if I do talk to the clouds, for I remain Your friend,

HENRY D. THOREAU.

## **TO MRS. LUCY BROWN (AT PLYMOUTH).**

Concord, January 24, 1843.

Dear Friend, — The other day I wrote you a letter to go in Mrs. Emerson's bundle, but, as 1 Mrs. Brown, to whom this letter and several others of the years 1841-43 were written, lived by turns in Plymouth, her native place, and in Concord, where she often visited Mrs. Emerson at the time when Thoreau was an inmate of the Emerson household. In the early part of 1843 she was in Plymouth, and her sister was sending her newspapers and other things, from time to time. The incident of the music-box, mentioned above, occurred at the Old Manse, where Hawthorne was living from the summer of 1842 until the spring of 1845, and was often visited by Thoreau and Ellery Channing. In the letter following, this incident is recalled, and with it the agreeable gift by Richard Fuller (a younger brother of Margaret Fuller and of Ellen, the wife of

Ellery Channing, who came to reside in Concord about these years, and soon became Thoreau's most intimate friend), which was a music-box for the Thoreaus. They were all fond of music, and enjoyed it even in this mechanical form, — one evidence of the simple conditions of life in Concord then. The note of thanks to young Fuller, who had been, perhaps, a pupil of Thoreau, follows this letter to Mrs. Brown, though earlier in date. Mary Russell afterwards became Mrs. Marston Watson. it seemed unworthy, I did not send it, and now, to atone for that, I am going to send this, whether it be worthy or not. I will not venture upon news, for, as all the household are gone to bed, I cannot learn what has been told you. Do you read any noble verses nowadays? or do not verses still seem noble? For my own part, they have been the only things I remembered, or that which occasioned them, when all things else were blurred and defaced. All things have put on mourning but they; for the elegy itself is some victorious melody or joy escaping from the wreck.

It is a relief to read some true book, wherein all are equally dead, — equally alive. I think the best parts of Shakespeare would only be enhanced by the most thrilling and affecting events. I have found it so. And so much the more, as they are not intended for consolation.

Do you think of coming to Concord again? I shall be glad to see you. I should be glad to know that I could see you when I would.

We always seem to be living just on the brink of a pure and lofty intercourse, which would make the ills and trivialness of life ridiculous. After each little interval, though it be but for the night, we are prepared to meet each other as gods and goddesses.

I seem to have dodged all my days with one or two persons, and lived upon expectation, — as if the bud would surely blossom; and so I am content to live.

What means the fact, — which is so common, so universal, — that some soul that has lost all hope for itself can inspire in another listening soul an infinite confidence in it, even while it is expressing its despair?

I am very happy in my present environment, though actually mean enough myself, and so, of course, all around me; yet, I am sure, we for the most part are transfigured to one another, and are that to the other which we aspire to be ourselves. The longest course of mean and trivial intercourse may not prevent my practicing this divine courtesy to my companion. Notwithstanding all I hear about brooms, and scouring, and taxes, and housekeeping, I am constrained to live a strangely mixed life, — as if even Valhalla might have its kitchen. We are all of us Apollos serving some Admetus.

I think I must have some Muses in my pay that I know not of, for certain musical wishes of mine are answered as soon as entertained. Last summer I went to Hawthorne's suddenly for the express purpose of borrowing his music-box, and almost immediately Mrs. Hawthorne proposed to lend it to me. The other day I said I must go to Mrs. Barrett's to hear hers, and, lo! straightway Richard Fuller sent me one for a present from Cambridge. It is a very good one. I should like to have you hear it. I shall not have to employ you to borrow for me now. Good-night.

From your affectionate friend,

H. D. T.

## TO RICHARD F. FULLER (AT CAMBRIDGE).

CONCORD, January 16, 1843.

Dear Richard, — I need not thank you for your present, for I hear its music, which seems to be playing just for us two pilgrims marching over hill and dale of a summer afternoon, up those long Bolton hills and by those bright Harvard lakes, such as I see in the placid Lucerne on the lid; and whenever I hear it, it will recall happy hours passed with its donor.

When did mankind make that foray into nature and bring off this booty? For certainly it is but history that some rare virtue in remote times plundered these strains from above and communicated them to men. Whatever we may think of it, it is a part of the harmony of the spheres you have sent me; which has condescended to serve us Admetuses, and I hope I may so behave that this may always be the tenor of your thought for me.

If you have any strains, the conquest of your own spear or quill, to accompany these, let the winds waft them also to me.

I write this with one of the “primaries” of my osprey’s wings, which I have preserved over my glass for some state occasion, and now it offers.

Mrs. Emerson sends her love.

## TO MRS. LUCY BROWN (AT PLYMOUTH).

CONCORD, Friday evening,  
January 25, 1843.

Dear Friend, — Mrs. Emerson asks me to write you a letter, which she will put into her bundle to-morrow along with the “Tribunes” and “Standards,” and miscellanies, and what not, to make an assortment. But what shall I write? You live a good way off, and I don’t know that I have anything which will bear sending so far. But I am mistaken, or rather impatient when I say this, — for we all have a gift to send, not only when the year begins, but as long as interest and memory last. I don’t know whether you have got the many I have sent you, or rather whether you were quite sure where they came from. I mean the letters I have sometimes launched off eastward in my thought; but if you have been happier at one time than another, think that then you received them. But this that I now send you is of another sort. It will go slowly, drawn by horses over muddy roads, and lose much of its little value by the way. You may have to pay for it, and it may not make you happy after all. But what shall be my new-year’s gift, then? Why, I will send you my still fresh remembrance of the hours I have passed with you here, for I find in the remembrance of them the best gift you have left to me. We

are poor and sick creatures at best; but we can have well memories, and sound and healthy thoughts of one another still, and an intercourse may be remembered which was without blur, and above us both.

Perhaps you may like to know of my estate nowadays. As usual, I find it harder to account for the happiness I enjoy, than for the sadness which instructs me occasionally. If the little of this last which visits me would only be sadder, it would be happier. One while I am vexed by a sense of meanness; one while I simply wonder at the mystery of life; and at another, and at another, seem to rest on my oars, as if propelled by propitious breezes from I know not what quarter. But for the most part I am an idle, inefficient, lingering (one term will do as well as another, where all are true and none true enough) member of the great commonwealth, who have most need of my own charity, — if I could not be charitable and indulgent to myself, perhaps as good a subject for my own satire as any. You see how, when I come to talk of myself, I soon run dry, for I would fain make that a subject which can be no subject for me, at least not till I have the grace to rule myself.

I do not venture to say anything about your griefs, for it would be unnatural for me to speak as if I grieved with you, when I think I do not. If I were to see you, it might be otherwise. But I know you will pardon the trivialness of this letter; and I only hope — as I know that you have reason to be so — that you are still happier than you are sad, and that you remember that the smallest seed of faith is of more worth than the largest fruit of happiness. I have no doubt that out of S— 's death you sometimes draw sweet consolation, not only for that, but for long-standing griefs, and may find some things made smooth by it, which before were rough.

I wish you would communicate with me, and not think me unworthy to know any of your thoughts. Don't think me unkind because I have not written to you. I confess it was for so poor a reason as that you almost made a principle of not answering. I could not speak truly with this ugly fact in the way; and perhaps I wished to be assured, by such evidence as you could not voluntarily give, that it was a kindness. For every glance at the moon, does she not send me an answering ray? Noah would hardly have done himself the pleasure to release his dove, if she had not been about to come back to him with tidings of green islands amid the waste.

But these are far-fetched reasons. I am not speaking directly enough to yourself now; so let me say directly

From your friend,

HENRY D. THOREAU.

Exactly when correspondence began between Emerson and Thoreau is not now to be ascertained, since all the letters do not seem to have been preserved. Their acquaintance opened while Thoreau was in college, although Emerson may have seen the studious boy at the town school in Concord, or at the "Academy" there, while fitting for college. But they only came to know each other as sharers of the same thoughts and aspirations in the autumn of 1837, when, on hearing a new lecture of Emerson's, Helen Thoreau said to Mrs. Brown, then living or visiting in the Thoreau family, "Henry has a thought

very like that in his journal" (which he had newly begun to keep). Mrs. Brown desired to see the passage, and soon bore it to her sister, Mrs. Emerson, whose husband saw it, and asked Mrs. Brown to bring her young friend to see him. By 1838 their new relation of respect was established, and Emerson wrote to a correspondent, "I delight much in my young friend, who seems to have as free and erect a mind as any I have ever met." A year later (Aug. 9, 1839), he wrote to Carlyle, "I have a young poet in this village, named Thoreau, who writes the truest verses." Indeed, it was in the years 1839-40 that he seems to have written the poems by which he is best remembered. Thoreau told me in his last illness that he had written many verses and destroyed many, — this fact he then regretted, although he had done it at the instance of Emerson, who did not praise them. But, said he, "they may have been better than we thought them, twenty years ago."

The earliest note which I find from Emerson to Thoreau bears no date, but must have been written before 1842, for at no later time could the persons named in it have visited Concord together. Most likely it was in the summer of 1840, and to the same date do I assign a note asking Henry to join the Emersons in a party to the Cliffs (scopuli Pulchiri-Portus), and to bring his flute, — for on that pastoral reed Thoreau played sweetly. The first series of letters from Thoreau to Emerson begins early in 1843, about the time the letters just given were written to Mrs. Brown. In the first he gives thanks to Emerson for the hospitality of his house in the two preceding years; a theme to which he returned a few months later, — for I doubt not the lovely sad poem called "The Departure" was written at Staten Island soon after his leaving the Emerson house in Concord for the more stately but less congenial residence of William Emerson at Staten Island, whither he betook himself in May, 1843. This first letter, however, was sent from the Concord home to Waldo Emerson at Staten Island, or perhaps in New York, where he was that winter giving a course of lectures.

In explanation of the passages concerning Bronson Alcott, in this letter, it should be said that he was then living at the Hosmer Cottage, in Concord, with his English friends, Charles Lane and Henry Wright, and that he had refused to pay a tax in support of what he considered an unjust government, and was arrested by the constable, Sam Staples, in consequence.

## **TO R. W. EMERSON (AT NEW YORK).**

CONCORD, January 24, 1843.

Dear Friend, — The best way to correct a mistake is to make it right. I had not spoken of writing to you, but as you say you are about to write to me when you get my letter, I make haste on my part in order to get yours the sooner.

I don't well know what to say to earn the forthcoming epistle, unless that Edith takes rapid strides in the arts and sciences — or music and natural history — as well as over the carpet; that she says "papa" less and less abstractedly every day, looking in my

face, — which may sound like a Ranz des Vaches to yourself. And Ellen declares every morning that “papa may come home to-night;” and by and by it will have changed to such positive statement as that “papa came home larks night.”

Elizabeth Hoar still flits about these clearings, and I meet her here and there, and in all houses but her own, but as if I were not the less of her family for all that. I have made slight acquaintance also with one Mrs. Lidian Emerson, who almost persuades me to be a Christian, but I fear I as often lapse into heathenism. Mr. O’Sullivan<sup>1</sup> was here three days. I met him at the Atheneum [Concord], and went to Hawthorne’s [at the Old Manse] to tea with him. He expressed a great deal of interest in your poems, and wished me to give him a list of them, which I did; he saying he did not know but he should notice them. He is a rather puny-looking man, and did not strike me. We had nothing to say to one another, and therefore we

<sup>1</sup> Editor of the Democratic Review, for which Hawthorne, Emerson, Thoreau, and Whittier all wrote, more or less.

said a great deal! He, however, made a point of asking me to write for his Review, which I shall be glad to do. He is, at any rate, one of the not-bad, but does not by any means take you by storm, — no, nor by calm, which is the best way. He expects to see you in New York. After tea I carried him and Hawthorne to the Lyceum.

Mr. Alcott has not altered much since you left. I think you will find him much the same sort of person. With Mr. Lane I have had one regular chat a la George Minott, which of course was greatly to our mutual grati-and edification; and, as two or three as regular conversations have taken place since, I fear there may have been a precession of the equinoxes. Mr. Wright, according to the last accounts, is in Lynn, with uncertain aims and prospects, — maturing slowly, perhaps, as indeed are all of us. I suppose they have told you how near Mr. Alcott went to the jail, but I can add a good anecdote to the rest. When Staples came to collect Mrs. Ward’s taxes, my sister Helen asked him what he thought Mr. Alcott meant, — what his idea was, — and he answered, “I vum, I believe it was nothing but principle, for I never heerd a man talk honester.”

There was a lecture on Peace by a Mr. Spear (ought he not to be beaten into a ploughshare?), the same evening, and, as the gentlemen, Lane and Alcott, dined at our house while the matter was in suspense, — that is, while the constable was waiting for his receipt from the jailer, — we there settled it that we, that is, Lane and myself, perhaps, should agitate the State while Winkelried lay in durance. But when, over the audience, I saw our hero’s head moving in the free air of the Universalist church, my fire all went out, and the State was safe as far as I was concerned. But Lane, it seems, had cogitated and even written on the matter, in the afternoon, and so, out of courtesy, taking his point of departure from the Spear-man’s lecture, he drove gracefully in médias res, and gave the affair a very good setting out; but, to spoil all, our martyr very characteristically, but, as artists would say, in bad taste, brought up the rear with a “My Prisons,” which made us forget Silvio Pellico himself.

Mr. Lane wishes me to ask you to see if there is anything for him in the New York office, and pay the charges. Will you tell me what to do with Mr. [Theodore] Parker,

who was to lecture February 15th? Mrs. Emerson says my letter is written instead of one from her.

At the end of this strange letter I will not write — what alone I had to say — to thank you and Mrs. Emerson for your long kindness to me. It would be more ungrateful than my constant thought. I have been your pensioner for nearly two years, and still left free as under the sky. It has been as free a gift as the sun or the summer, though I have sometimes molested you with my mean acceptance of it, — I who have failed to render even those slight services of the hand which would have been for a sign at least; and, by the fault of my nature, have failed of many better and higher services. But I will not trouble you with this, but for once thank you as well as Heaven.

Your friend,

— H. D. T.

Mrs. Lidian Emerson, the wife of R. W. Emerson, and her two daughters, Ellen and Edith, are named in this first letter, and will be frequently mentioned in the correspondence. At this date, Edith, now Mrs. W. H. Forbes, was fourteen months old. Mr. Emerson's mother, Madam Ruth Emerson, was also one of the household, which had for a little more than seven years occupied the well-known house under the trees, east of the village.

## TO R. W. EMERSON (AT NEW YORK).

CONCORD, February 10, 1843.

Dear Friend, — I have stolen one of your own sheets to write you a letter upon, and I hope, with two layers of ink, to turn it into a comforter. If you like to receive a letter from me, too, I am glad, for it gives me pleasure to write. But don't let it come amiss; it must fall as harmlessly as leaves settle on the landscape. I will tell you what we are doing this now. Supper is done, and Edith — the dessert, perhaps more than the dessert — is brought in, or even comes in per se; and round she goes, now to this altar, and then to that, with her monosyllabic invocation of "oc," "oc." It makes me think of "Langue d'oc." She must belong to that province. And like the gypsies she talks a language of her own while she understands ours. While she jabbars Sanscrit, Parsee, Pehlvi, say "Edith go bah!" and "bah" it is. No intelligence passes between us. She knows. It is a capital joke, — that is the reason she smiles so. How well the secret is kept! she never descends to explanation. It is not buried like a common secret, bolstered up on two sides, but by an eternal silence on the one side, at least. It has been long kept, and comes in from the unexplored horizon, like a blue mountain range, to end abruptly at our door one day. (Don't stumble at this steep simile.) And now she studies the heights and depths of nature

On shoulders whirled in some eccentric orbit  
Just by old Pæstum's temples and the perch  
Where Time doth plume his wings.

And now she runs the race over the carpet, while all Olympia applauds, — mamma, grandma, and uncle, good Grecians all, — and that dark-hued barbarian, Partheanna Parker, whose shafts go through and through, not backward! Grandmamma smiles over all, and mamma is wondering what papa would say, should she descend on Carlton House some day. “Larks night” ‘s abed, dreaming of “pleased faces” far away. But now the trumpet sounds, the games are over; some Hebe comes, and Edith is translated. I don’t know where; it must be to some cloud, for I never was there.

Query: what becomes of the answers Edith thinks, but cannot express? She really gives you glances which are before this world was. You can’t feel any difference of age, except that you have longer legs and arms.

Mrs. Emerson said I must tell you about domestic affairs, when I mentioned that I was going to write. Perhaps it will inform you of the state of all if I only say that I am well and happy in your house here in Concord.

Your friend,  
— Henry.

Don’t forget to tell us what to do with Mr. Parker when you write next. I lectured this week. It was as bright a night as you could wish. I hope there were no stars thrown away on the occasion.

[A part of the same letter, though bearing a date two days later, and written in a wholly different style, as from one sage to another, is this postscript.]

February 12, 1843.

Dear Friend, — As the packet still tarries, I will send you some thoughts, which I have lately relearned, as the latest public and private news.

How mean are our relations to one another! Let us pause till they are nobler. A little silence, a little rest, is good. It would be sufficient employment only to cultivate true ones.

The richest gifts we can bestow are the least marketable. We hate the kindness which we understand. A noble person confers no such gift as his whole confidence: none so exalts the giver and the receiver; it produces the truest gratitude. Perhaps it is only essential to friendship that some vital trust should have been reposed by the one in the other. I feel addressed and probed even to the remote parts of my being when one nobly shows, even in trivial things, an implicit faith in me. When such divine commodities are so near and cheap, how strange that it should have to be each day’s discovery! A threat or a curse may be forgotten, but this mild trust translates me. I am no more of this earth; it acts dynamically; it changes my very substance. I cannot do what before I did. I cannot be what before I was. Other chains may be broken, but in the darkest night, in the remotest place, I trail this thread. Then things cannot happen. What if God were to confide in us for a moment! Should we not then be gods?

How subtle a thing is this confidence! Nothing sensible passes between; never any consequences are to be apprehended should it be misplaced. Yet something has transpired. A new behavior springs; the ship carries new ballast in her hold. A sufficiently great and generous trust could never be abused. It should be cause to lay down one’s

life, — which would not be to lose it. Can there be any mistake up there? Don't the gods know where to invest their wealth? Such confidence, too, would be reciprocal. When one confides greatly in you, he will feel the roots of an equal trust fastening themselves in him. When such trust has been received or reposed, we dare not speak, hardly to see each other; our voices sound harsh and untrustworthy. We are as instruments which the Powers have dealt with. Through what straits would we not carry this little burden of a magnanimous trust! Yet no harm could possibly come, but simply faithlessness. Not a feather, not a straw, is intrusted; that packet is empty. It is only committed to us, and, as it were, all things are committed to us.

The kindness I have longest remembered has been of this sort, — the sort unsaid; so far behind the speaker's lips that almost it already lay in my heart. It did not have far to go to be communicated. The gods cannot misunderstand, man cannot explain. We communicate like the burrows of foxes, in silence and darkness, under ground. We are undermined by faith and love. How much more full is Nature where we think the empty space is than where we place the solids! — full of fluid influences. Should we ever communicate but by these? The spirit abhors a vacuum more than Nature. There is a tide which pierces the pores of the air. These aerial rivers, let us not pollute their currents. What meadows do they course through? How many fine mails there are which traverse their routes! He is privileged who gets his letter franked by them.

I believe these things.

Henry D. Thoreau.

Emerson replied to these letters in two epistles of dates from February 4 to 12, 1843, — in the latter asking Thoreau to aid him in editing the April number of the "Dial," of which he had taken charge. Among other things, Emerson desired a manuscript of Charles Lane, Alcott's English friend, to be sent to him in New York, where he was detained several weeks by his lectures. He added: "Have we no news from Wheeler? Has Bartlett none?" Of these persons, the first, Charles Stearns Wheeler, a college classmate of Thoreau, and later Greek tutor in the college, had gone to Germany, — where he died the next summer, — and was contributing to the quarterly "Dial." Robert Bartlett, of Plymouth, a townsman of Mrs. Emerson, was Wheeler's intimate friend, with whom he corresponded.<sup>1</sup> To this editorial

<sup>1</sup> An interesting fact in connection with Thoreau and Wheeler (whose home was in Lincoln, four miles southeast of Concord) is related by Ellery Channing in a note to me. It seems that Wheeler had built for himself, or hired from a farmer, a rough woodland study near Flint's Pond, half way from Lincoln to Concord, which he occupied for a short time in 1841-42, and where Thoreau and Channing visited him. Mr. Channing wrote me in 1883: "Stearns Wheeler built a 'shanty' on Flint's Pond for the purpose of economy, for purchasing Greek books and going abroad to study. Whether Mr. Thoreau assisted him to build this shanty I cannot say, but I think he may have; also that he spent six weeks with him there. As Mr. Thoreau was not too original and inventive to follow the example of others, if good to him, it is very probable this undertaking of Stearns Wheeler, whom he regarded (as I think I have heard him say)

a heroic character, suggested his own experiment on Walden. I believe I visited this shanty with Mr. Thoreau. It was very plain, with bunks of straw, and built in the Irish manner. I think Mr. Wheeler was as good a mechanic as Mr. Thoreau, and built this shanty for his own use. The object of these two experiments was quite unlike, except in the common purpose of economy. It seems to me highly probable that Mr. Wheeler's experiment suggested Mr. Thoreau's, as he was a man he almost worshiped. But I could not understand what relation Mr. Lowell had to this fact, if it be one. Students, in all parts of the earth, have pursued a similar course from motives of economy, and to carry out some special study. Mr. Thoreau wished to study birds, flowers, and the stone age, just as Mr. Wheeler wished to study Greek. And Mr. Hotham came next from just the same motive of economy (necessity) and to study the Bible. The prudential sides of all three were the same." Mr. Hotham was the young theological student who dwelt in a cabin by Walden in 1809-70.

request Thoreau, who was punctuality itself, replied at once.

## TO R. W. EMERSON (AT NEW YORK).

CONCORD, February 15, 1843.

My DEAR FRIEND, — I got your letters, one yesterday and the other to-day, and they have made me quite happy. As a packet is to go in the morning, I will give you a hasty account of the "Dial." I called on Mr. Lane this afternoon, and brought away, together with an abundance of good-will, first, a bulky catalogue of books without commentary, — some eight hundred, I think he told me, with an introduction filling one sheet, — ten or a dozen pages, say, though I have only glanced at them; second, a review — twenty-five or thirty printed pages — of Conversations on the Gospels, Record of a School, and Spiritual Culture, with rather copious extracts. However, it is a good subject, and Lane says it gives him satisfaction. I will give it a faithful reading directly. [These were Alcott's publications, reviewed by Lane.] And now I come to the little end of the horn; for myself, I have brought along the Minor Greek Poets, and will mine there for a scrap or two, at least. As for Etzler, I don't remember any "rude and snappish speech" that you made, and if you did it must have been longer than anything I had written; however, here is the book still, and I will try. Perhaps I have some few scraps in my Journal which you may choose to print. The translation of the Æschylus I should like very well to continue anon, if it should be worth the while. As for poetry, I have not remembered to write any for some time; it has quite slipped my mind; but sometimes I think I hear the mutterings of the thunder. Don't you remember that last summer we heard a low, tremulous sound in the woods and over the hills, and thought it was partridges or rocks, and it proved to be thunder gone down the river? But sometimes it was over Wayland way, and at last burst over our heads. So we'll not despair by reason of the drought. You see it takes a good many words to supply the place of one deed; a hundred lines to a cobweb, and but one cable to a man-of-war. The

“Dial” case needs to be reformed in many particulars. There is no news from Wheeler, none from Bartlett.

They all look well and happy in this house, where it gives me much pleasure to dwell.

Yours in haste, — HENRY.

P. S.

Wednesday evening, February 16.

DEAR FRIEND, — I have time to write a few words about the “Dial.” I have just received the three first signatures, which do not yet complete Lane’s piece. He will place five hundred copies for sale at Munroe’s bookstore. Wheeler has sent you two full sheets — more about the German universities — and proper names, which will have to be printed in alphabetical order for convenience; what this one has done, that one is doing, and the other intends to do. Hammer-Purgstall (Yon Hammer) may be one, for aught I know. However, there are two or three things in it, as well as names. One of the books of Herodotus is discovered to be out of place. He says something about having sent to Lowell, by the last steamer, a budget of literary news, which he will have communicated to you ere this. Mr. Alcott has a letter from Heraud,<sup>1</sup> and a book written by him, — the Life of Savonarola, — which he wishes to have republished here. Mr. Lane will write a notice of it. (The latter says that what is in the New York post-office may be directed to Mr. Alcott.) Miss [Elizabeth] Peabody has sent a “Notice to the readers of the ‘Dial,’” which is not good.

Mr. Chapin lectured this evening, and so rhetorically that I forgot my duty and heard very little. I find myself better than I have been, and am meditating some other method of paying debts than by lectures and writing, — which will only do to talk about. If anything of that “other” sort should come to your ears in New York, will you remember it for me?

Excuse this scrawl, which I have written over the embers in the dining-room. I hope that you live on good terms with yourself and the gods.

Yours in haste, —

HENRY.

Mr. Lane and his lucubrations proved to be tough subjects, and the next letter has more to say about them and the “Dial.” Lane had undertaken to do justice to Mr. Alcott and his books, as may still be read in the pages of that

<sup>1</sup> An English critic and poetaster. See Memoir of Bronson Alcott, pp. 292-318.

April number of the Transcendentalist quarterly.

## TO R. W. EMERSON (AT NEW YORK).

CONCORD, February 20, 1843.

My dear Friend, — I have read Mr. Lane’s review, and can say, speaking for this world and for fallen man, that “it is good for us.” As they say in geology, time never

fails, there is always enough of it, so I may say, criticism never fails; but if I go and read elsewhere, I say it is good, — far better than any notice Mr. Alcott has received, or is likely to receive from another quarter. It is at any rate “the other side,” which Boston needs to hear. I do not send it to you, because time is precious, and because I think you would accept it, after all. After speaking briefly of the fate of Goethe and Carlyle in their own countries, he says, “To Emerson in his own circle is but slowly accorded a worthy response; and Alcott, almost utterly neglected,” etc. I will strike out what relates to yourself, and correcting some verbal faults, send the rest to the printer with Lane’s initials.

The catalogue needs amendment, I think. It wants completeness now. It should consist of such books only as they would tell Mr. [F. H.] Hedge and [Theodore] Parker they had got; omitting the Bible, the classics, and much besides, — for there the incompleteness begins. But you will be here in season for this.

It is frequently easy to make Mr. Lane more universal and attractive; to write, for instance, “universal ends” instead of “the universal end,” just as we pull open the petals of a flower with our fingers where they are confined by its own sweets. Also he had better not say “books designed for the nucleus of a Home, University,” until he makes that word “home” ring solid and universal too. This is that abominable dialect. He had just given me a notice of George Bradford’s Fénelon for the Record of the Months, and speaks of extras of the Review and Catalogue, if they are printed, — even a hundred, or thereabouts. How shall this be arranged? Also he wishes to use some manuscripts of his which are in your possession, if you do not. Can I get them?

I think of no news to tell you. It is a serene summer day here, all above the snow. The hens steal their nests, and I steal their eggs still, as formerly. This is what I do with the hands. Ah, labor, — it is a divine institution, and conversation with many men and hens.

Do not think that my letters require as many special answers. I get one as often as you write to Concord. Concord inquires for you daily, as do all the members of this house. You must make haste home before we have settled all the great questions, for they are fast being disposed of. But I must leave room for Mrs. Emerson.

Mrs. Emerson’s letter, after speaking of other matters, gave a lively sketch of Thoreau at one of Alcott’s Conversations in her house, which may be quoted as illustrating the young Nature-worshiper’s position at the time, and the more humane and socialistic spirit of Alcott and Lane, who were soon to leave Concord for their experiment of communistic life at “Fruitlands,” in the rural town of Harvard.

“Last evening we had the c Conversation,’ though, owing to the bad weather, but few attended. The subjects were: What is Prophecy? Who is a Prophet? and The Love of Nature. Mr. Lane decided, as for all time and the race, that this same love of nature — of which Henry [Thoreau] was the champion, and Elizabeth Hoar and Lidian (though L. disclaimed possessing it herself) his faithful squires — that this love was the most subtle and dangerous of sins; a refined idolatry, much more to be dreaded than gross wickednesses, because the gross sinner would be alarmed by the

depth of his degradation, and come up from it in terror, but the unhappy idolaters of Nature were deceived by the refined quality of their sin, and would be the last to enter the kingdom. Henry frankly affirmed to both the wise men that they were wholly deficient in the faculty in question, and therefore could not judge of it. And Mr. Alcott as frankly answered that it was because they went beyond the mere material objects, and were filled with spiritual love and perception (as Mr. T. was not), that they seemed to Mr. Thoreau not to appreciate outward nature. I am very heavy, and have spoiled a most excellent story. I have given you no idea of the scene, which was ineffably comic, though it made no laugh at the time; I scarcely laughed at it myself, — too deeply amused to give the usual sign. Henry was brave and noble; well as I have always liked him, he still grows upon me.”

Before going to Staten Island in May, 1843, Thoreau answered a letter from the same Richard Fuller who had made him the musical gift in the previous winter. He was at Harvard College, and desired to know something of Thoreau’s pursuits there, — concerning which Channing says in his *Life*<sup>1</sup>:

1 Thoreau, the Poet-Naturalist. With Memorial Verses. By William Ellery Channing (Boston: Roberts Brothers, 1873). This volume, in some respects the best biography of Thoreau, is now quite rare. Among the Memorial Verses are those written by Channing for his friend’s funeral; at which, also, Mr. Alcott read Thoreau’s poem of Sympathy.

“He was a respectable student, having done there a bold reading in English poetry, — even to some portions or the whole of Davenant’s ‘Gondibert.’” This, Thoreau does not mention in his letter, but it was one of the things that attracted Emerson’s notice, since he also had the same taste for the Elizabethan and Jacobean English poets. An English youth, Henry Headley, pupil of Dr. Parr, and graduate of Oxford in 1786, had preceded Thoreau in this study of poets that had become obsolete; and it was perhaps Headley’s volume, “Select Beauties of Ancient English Poetry, with Remarks by the late Henry Headley,” published long after his death,<sup>1</sup> that served Thoreau as a guide to Quarles and the Fletchers, Daniel, Drummond, Drayton, Habington, and Raleigh, — poets that few Americans had heard of in 1833.

## TO RICHARD F. FULLER (AT CAMBRIDGE).

Concord, April 2, 1843.

Dear Richard, — I was glad to receive a letter from you so bright and cheery. You speak of not having made any conquests with your own spear or quill as yet; but if you are tempering your spear-head during these days,

1 Headley died at the age of twenty-three, in 1788. His posthumous book was edited in 1810 by Rev. Henry Kett, and published in London by John Sharp.

and fitting a straight and tough shaft thereto, will not that suffice? We are more pleased to consider the hero in the forest cutting cornel or ash for his spear, than marching in triumph with his trophies. The present hour is always wealthiest when

it is poorer than the future ones, as that is the pleasantest site which affords the pleasantest prospects.

What you say about your studies furnishing you with a “mimic idiom” only, reminds me that we shall all do well if we learn so much as to talk, — to speak truth. The only fruit which even much living yields seems to be often only some trivial success, — the ability to do some slight thing better. We make conquest only of husks and shells for the most part, — at least apparently, — but sometimes these are cinnamon and spices, you know. Even the grown hunter you speak of slays a thousand buffaloes, and brings off only their hides and tongues. What immense sacrifices, what hecatombs and holocausts, the gods exact for very slight favors! How much sincere life before we can even utter one sincere word.

What I was learning in college was chiefly, I think, to express myself, and I see now, that as the old orator prescribed, 1st, action; 2d, action; 3d, action; my teachers should have prescribed to me, 1st, sincerity; 2d, sincerity; 3d, sincerity. The old mythology is incomplete without a god or goddess of sincerity, on whose altars we might offer up all the products of our farms, our workshops, and our studies. It should be our Lar when we sit on the hearth, and our Tutelar Genius when we walk abroad. This is the only panacea. I mean sincerity in our dealings with ourselves mainly; any other is comparatively easy. But I must stop before I get to 17thly. I believe I have but one text and one sermon.

Your rural adventures beyond the West Cambridge hills have probably lost nothing by distance of time or space. I used to hear only the sigh of the wind in the woods of Concord, when I was striving to give my attention to a page of Calculus. But, depend upon it, you will love your native hills the better for being separated from them.

I expect to leave Concord, which is my Rome, and its people, who are my Romans, in May, and go to New York, to be a tutor in Mr. William Emerson’s family. So I will bid you good by till I see you or hear from you again.

Going to Staten Island, early in May, 1843, Thoreau’s first care was to write to his “Romans, countrymen, and lovers by the banks of the Musketàquid,” — beginning with his mother, his sisters, and Mrs. Emerson. To Sophia and Mrs. E. he wrote May 22, — to Helen, with a few touching verses on his brother John, the next day; and then he resumed the correspondence with Emerson. It seems that one of his errands near New York was to make the acquaintance of literary men and journalists in the city, in order to find a vehicle for publication, such as his neighbor Hawthorne had finally found in the pages of the “Democratic Review.” For this purpose Thoreau made himself known to Henry James, and other friends of Emerson, and to Horace Greeley, then in the first freshness of his success with the “Tribune,” — a newspaper hardly more than two years old then, but destined to a great career, in which several of the early Transcendentalists took some part.

## TO HIS FATHER AND MOTHER (AT CONCORD).

Castleton, Staten Island, May 11, 1843.

Dear Mother and Friends at Home, — We arrived here safely at ten o'clock on Sunday morning, having had as good a passage as usual, though we ran aground and were detained a couple of hours in the Thames River, till the tide came to our relief. At length we curtseyed up to a wharf just the other side of their Castle Garden, — very incurious about them and their city. I believe my vacant looks, absolutely inaccessible to questions, did at length satisfy an army of starving cabmen that I did not want a hack, cab, or anything of that sort as yet. It was the only demand the city made on us; as if a wheeled vehicle of some sort were the sum and summit of a reasonable man's wants. "Having tried the water," they seemed to say, "will you not return to the pleasant securities of land carriage? Else why your boat's prow turned toward the shore at last?" They are a sad-looking set of fellows, not permitted to come on board, and I pitied them. They had been expecting me, it would seem, and did really wish that I should take a cab; though they did not seem rich enough to supply me with one.

It was a confused jumble of heads and soiled coats, dangling from flesh-colored faces, — all swaying to and fro, as by a sort of undertow, while each whipstick, true as the needle to the pole, still preserved that level and direction in which its proprietor had dismissed his forlorn interrogatory. They took sight from them, — the lash being wound up thereon, to prevent your attention from wandering, or to make it concentrate upon its object by the spiral line. They began at first, perhaps, with the modest, but rather confident inquiry, "Want a cab, sir?" but as their despair increased, it took the affirmative tone, as the disheartened and irresolute are apt to do: "You want a cab, sir," or even, "You want a nice cab, sir, to take you to Fourth Street." The question which one had bravely and hopefully begun to put, another had the tact to take up and conclude with fresh emphasis, — twirling it from his particular whipstick as if it had emanated from his lips — as the sentiment did from his heart. Each one could truly say, "Them 's my sentiments." But it was a sad sight.

I am seven and a half miles from New York, and, as it would take half a day at least, have not been there yet. I have already run over no small part of the island, to the highest hill, and some way along the shore. From the hill directly behind the house I can see New York, Brooklyn, Long Island, the Narrows, through which vessels bound to and from all parts of the world chiefly pass, — Sandy Hook and the Highlands of Neversink (part of the coast of New Jersey) — and, by going still farther up the hill, the Kill van Kull, and Newark Bay. From the pinnacle of one Madame Grimes' house, the other night at sunset, I could see almost round the island. Far in the horizon there was a fleet of sloops bound up the Hudson, which seemed to be going over the edge of the earth; and in view of these trading ships, commerce seems quite imposing.

But it is rather derogatory that your dwelling-place should be only a neighborhood to a great city, — to live on an inclined plane. I do not like their cities and forts, with their morning and evening guns, and sails flapping in one's eye. I want a whole continent to breathe in, and a good deal of solitude and silence, such as all Wall Street cannot buy, — nor Broadway with its wooden pavement. I must live along the beach, on the southern shore, which looks directly out to sea, — and see what that great parade of water means, that dashes and roars, and has not yet wet me, as long as I have lived.

I must not know anything about my condition and relations here till what is not permanent is worn off. I have not yet subsided. Give me time enough, and I may like it. All my inner man heretofore has been a Concord impression; and here come these Sandy Hook and Coney Island breakers to meet and modify the former; but it will be long before I can make nature look as innocently grand and inspiring as in Concord.

---

Your affectionate son,  
Henry D. Thoreau.

## TO SOPHIA THOREAU (AT CONCORD).

Castleton, Staten Island, May 22, 1843.

Dear Sophia, — I have had a severe cold ever since I came here, and have been confined to the house for the last week with bronchitis, though I am now getting out, so I have not seen much in the botanical way. The cedar seems to be one of the most common trees here, and the fields are very fragrant with it. There are also the gum and tulip trees. The latter is not very common, but is very large and beautiful, having flowers as large as tulips, and as handsome. It is not time for it yet.

The woods are now full of a large honeysuckle in full bloom, which differs from ours in being red instead of white, so that at first I did not know its genus. The painted cup is very common in the meadows here. Peaches, and especially cherries, seem to grow by all the fences. Things are very forward here compared with Concord. The apricots growing out of doors are already as large as plums. The apple, pear, peach, cherry, and plum trees have shed their blossoms. The whole island is like a garden, and affords very fine scenery.

In front of the house is a very extensive wood, beyond which is the sea, whose roar I can hear all night long, when there is a wind; if easterly winds have prevailed on the Atlantic. There are always some vessels in sight — ten, twenty, or thirty miles off — and Sunday before last there were hundreds in long procession, stretching from New York to Sandy Hook, and far beyond, for Sunday is a lucky day.

I went to New York Saturday before last. A walk of half an hour, by half a dozen houses along the Richmond Road, — that is the road that leads to Richmond, on which we live, — brings me to the village of Stapleton, in Southfield, where is the lower dock;

but if I prefer I can walk along the shore three quarters of a mile farther toward New York to the quarantine village of Castleton, to the upper dock, which the boat leaves five or six times every day, a quarter of an hour later than the former place. Farther on is the village of New Brighton, and farther still Port Richmond, which villages another steamboat visits.

In New York I saw George Ward, and also Giles Waldo and William Tappan, whom I can describe better when I have seen them more. They are young friends of Mr. Emerson. Waldo came down to the island to see me the next day. I also saw the Great Western, the Croton water works, and the picture gallery of the National Academy of Design. But I have not had time to see or do much yet.

Tell Miss Ward I shall try to put my microscope to a good use, and if I find any new and preservable flower, will throw it into my commonplace book. Garlic, the original of the common onion, grows here all over the fields, and during its season spoils the cream and butter for the market, as the cows like it very much.

Tell Helen there are two schools of late established in the neighborhood, with large prospects, or rather designs, one for boys and another for girls. The latter by a Miss Errington, and though it is only small as yet, I will keep my ears open for her in such directions. The encouragement is very slight.

I hope you will not be washed away by the Irish sea.

Tell Mother I think my cold was not wholly owing to imprudence. Perhaps I was being acclimated.

Tell Father that Mr. Tappan, whose son I know, — and whose clerks young Tappan and Waldo are, — has invented and established a new and very important business, which Waldo thinks would allow them to burn ninety-nine out of one hundred of the stores in New York, which now only offset and cancel one another. It is a kind of intelligence office for the whole country, with branches in the principal cities, giving information with regard to the credit and affairs of every man of business of the country. Of course it is not popular at the South and West. It is an extensive business and will employ a great many clerks.

Love to all — not forgetting aunt and aunts — and Miss and Mrs. Ward.

On the 23d of May he wrote from Castleton to his sister Helen thus: —

Dear Helen, — In place of something fresher, I send you the following verses from my Journal, written some time ago: —

Brother, where dost thou dwell?

What sun shines for thee now?

Dost thou indeed fare well As we wished here below?

What season didst thou find?

'T was winter here.

Are not the Fates more kind Than they appear?

Is thy brow clear again,

As in thy youthful years?

And was that ugly pain The summit of thy fears?

Yet thou wast cheery still; —  
 They could not quench thy fire; Thou didst abide their will,  
 And then retire.  
 Where chiefly shall I look To feel thy presence near?  
 Along the neighboring brook May I thy voice still hear?  
 Dost thou still haunt the brink Of yonder river's tide?  
 And may I ever think  
 That thou art by my side?  
 What bird wilt thou employ To bring me word of thee?  
 For it would give them joy, —  
 'T would give them liberty,  
 To serve their former lord With wing and minstrelsy.  
 A sadder strain mixed with their song, They've slower built their nests; Since thou  
 art gone  
 Their lively labor rests.  
 Where is the finch, the thrush I used to hear?  
 Ah, they could well abide The dying year.  
 Now they no more return, I hear them not; They have remained to mourn; Or else  
 forgot.

As the first letter of Thoreau to Emerson was to thank him for his lofty friendship, so now the first letter to Mrs. Emerson, after leaving her house, was to say similar things, with a passing allusion to her love of flowers and of gardening, in which she surpassed all his acquaintance in Concord, then and afterward. A letter to Emerson followed, touching on the "Dial" and on several of his new and old acquaintance. "Rockwood Hoar" is the person since known as judge and cabinet officer, — the brother of Senator Hoar, and of Thoreau's special friends, Elizabeth and Edward Hoar. Channing is the poet, who had lately printed his first volume, without finding many readers.

## TO MRS. EMERSON (AT CONCORD).

CASTLETON, Staten Island, May 22, 1843.

MY DEAR FRIEND, — I believe a good many conversations with you were left in an unfinished state, and now indeed I don't know where to take them up. But I will resume some of the unfinished silence. I shall not hesitate to know you. I think of you as some elder sister of mine, whom I could not have avoided, — a sort of lunar influence, — only of such age as the moon, whose time is measured by her light. You must know that you represent to me woman, for I have not traveled very far or wide, — and what if I had? I like to deal with you, for I believe you do not lie or steal, and these are very rare virtues. I thank you for your influence for two years. I was fortunate to be subjected to it, and am now to remember it. It is the noblest gift we can make; what signify all others that can be bestowed? You have helped to keep my life " on

loft," as Chaucer says of Griselda, and in a better sense. You always seemed to look down at me as from some elevation — some of your high humilities — and I was the better for having to look up. I felt taxed not to disappoint your expectation; for could there be any accident so sad as to be respected for something better than we are? It was a pleasure even to go away from you, as it is not to meet some, as it apprised me of my high relations; and such a departure is a sort of further introduction and meeting. Nothing makes the earth seem so spacious as to have friends at a distance; they make the latitudes and longitudes.

You must not think that fate is so dark there, for even here I can see a faint reflected light over Concord, and I think that at this distance I can better weigh the value of a doubt there. Your moonlight, as I have told you, though it is a reflection of the sun, allows of bats and owls and other twilight birds to flit therein. But I am very glad that you can elevate your life with a doubt, for I am sure that it is nothing but an insatiable faith after all that deepens and darkens its current. And your doubt and my confidence are only a difference of expression.

I have hardly begun to live on Staten Island yet; but, like the man who, when forbidden to tread on English ground, carried Scottish ground in his boots, I carry Concord ground in my boots and in my hat, — and am I not made of Concord dust? I cannot realize that it is the roar of the sea I hear now, and not the wind in Walden woods. I find more of Concord, after all, in the prospect of the sea, beyond Sandy Hook, than in the fields and woods.

If you were to have this Hugh the gardener for your man, you would think a new dispensation had commenced. He might put a fairer aspect on the natural world for you, or at any rate a screen between you and the almshouse. There is a beautiful red honeysuckle now in blossom in the woods here, which should be transplanted to Concord; and if what they tell me about the tulip-tree be true, you should have that also. I have not seen Mrs. Black yet, but I intend to call on her soon. Have you established those simpler modes of living yet?— "In the full tide of successful operation?"

Tell Mrs. Brown that I hope she is anchored in a secure haven and derives much pleasure still from reading the poets, and that her constellation is not quite set from my sight, though it is sunk so low in that northern horizon. Tell Elizabeth Hoar that her bright present did "carry ink safely to Staten Island," and was a conspicuous object in Master Haven's inventory of my effects. Give my respects to Madam Emerson, whose Concord face I should be glad to see here this summer; and remember me to the rest of the household who have had vision of me. Shake a day-day to Edith, and say good night to Ellen for me. Farewell.

## **TO R. W. EMERSON (AT CONCORD).**

CASTLETON, STATEN ISLAND, May 23.

MY dear Friend, — I was just going to write to you when I received your letter. I was waiting till I had got away from Concord. I should have sent you something for the "Dial" before, but I have been sick ever since I came here, rather unaccountably, — what with a cold, bronchitis, acclimation, etc., still unaccountably. I send you some verses from my journal which will help make a packet. I have not time to correct them, if this goes by Rockwood Hoar. If I can finish an account of a winter's walk in Concord, in the midst of a Staten Island summer, — not so wise as true, I trust, — I will send it to you soon. —

I have had no later experiences yet. You must not count much upon what I can do or learn in New York. I feel a good way off here; and it is not to be visited, but seen and dwelt in. I have been there but once, and have been confined to the house since. Everything there disappoints me but the crowd; rather, I was disappointed with the rest before I came. I have no eyes for their churches, and what else they find to brag of. Though I know but little about Boston, yet what attracts me, in a quiet way, seems much meaner and more pretending than there, — libraries, pictures, and faces in the street. You don't know where any respectability inhabits. It is in the crowd in Chatham Street. The crowd is something new, and to be attended to. It is worth a thousand Trinity Churches and Exchanges while it is looking at them, and will run over them and trample them under foot one day. There are two things I hear and am aware I live in the neighborhood of, — the roar of the sea and the hum of the city. I have just come from the beach (to find your letter), and I like it much. Everything there is on a grand and generous scale, — seaweed, water, and sand; and even the dead fishes, horses, and hogs have a rank, luxuriant odor; great shad-nets spread to dry; crabs and horseshoes crawling over the sand; clumsy boats, only for service, dancing like sea-fowl over the surf, and ships afar off going about their business.

Waldo and Tappan carried me to their English alehouse the first Saturday, and Waldo spent two hours here the next day. But Tappan I have only seen. I like his looks and the sound of his silence. They are confined every day but Sunday, and then Tappan is obliged to observe the demeanor of a church-goer to prevent open war with his father.

I am glad that Channing has got settled, and that, too, before the inroad of the Irish. I have read his poems two or three times over, and partially through and under, with new and increased interest and appreciation. Tell him I saw a man buy a copy at Little & Brown's. He may have been a virtuoso, but we will give him the credit. What with Alcott and Lane and Hawthorne, too, you look strong enough to take New York by storm. Will you tell L, if he asks, that I have been able to do nothing about the books yet?

Believe that I have something better to write you than this. It would be unkind to thank you for particular deeds.

## TO R. W. EMERSON (AT CONCORD).

STATEN ISLAND, June 8, 1843.

Dear Friend, — I have been to see Henry James, and like him very much. It was a great pleasure to meet him. It makes humanity seem more erect and respectable. I never was more kindly and faithfully catechised. It made me respect myself more to be thought worthy of such wise questions. He is a man, and takes his own way, or stands still in his own place. I know of no one so patient and determined to have the good of you. It is almost friendship, such plain and human dealing. I think that he will not write or speak inspiringly; but he is a refreshing, forward-looking and forward-moving man, and he has naturalized and humanized New York for me. He actually reproaches you by his respect for your poor words. I had three hours' solid talk with him, and he asks me to make free use of his house. He wants an expression of your faith, or to be sure that it is faith, and confesses that his own treads fast upon the neck of his understanding. He exclaimed, at some careless answer of mine, "Well, you Transcendentalists are wonderfully consistent. I must get hold of this somehow!" He likes Carlyle's book,<sup>1</sup> but says that it leaves him in an

1 Past and Present.

excited and unprofitable state, and that Carlyle is so ready to obey his humor that he makes the least vestige of truth the foundation of any superstructure, not keeping faith with his better genius nor truest readers.

I met Wright on the stairs of the Society Library, and W. H. Channing and Brisbane on the steps. The former (Channing) is a concave man, and you see by his attitude and the lines of his face that he is retreating from himself and from yourself, with sad doubts. It is like a fair mask swaying from the drooping boughs of some tree whose stem is not seen. He would break with a conchoidal fracture. You feel as if you would like to see him when he has made up his mind to run all the risks. To be sure, he doubts because he has a great hope to be disappointed, but he makes the possible disappointment of too much consequence. Brisbane, with whom I did not converse, did not impress me favorably. He looks like a man who has lived in a cellar, far gone in consumption. I barely saw him, but he did not look as if he could let Fourier go, in any case, and throw up his hat. But I need not have come to New York to write this.

I have seen Tappan for two or three hours, and like both him and Waldo; but I always see those of whom I have heard well with a slight disappointment. They are so much better than the great herd, and yet the heavens are not shivered into diamonds over their heads. Persons and things flit so rapidly through my brain nowadays that I can hardly remember them. They seem to be lying in the stream, stemming the tide, ready to go to sea, as steamboats when they leave the dock go off in the opposite direction first, until they are headed right, and then begins the steady revolution of the paddle-wheels; and they are not quite cheerily headed anywhither yet, nor singing amid the shrouds as they bound over the billows. There is a certain youthfulness

and generosity about them, very attractive; and Tappan's more reserved and solitary thought commands respect.

After some ado, I discovered the residence of Mrs. Black, but there was palmed off on me, in her stead, a Mrs. Grey (quite an inferior color), who told me at last that she was not Mrs. Black, but her mother, and was just as glad to see me as Mrs. Black would have been, and so, forsooth, would answer just as well. Mrs. Black had gone with Edward Palmer to New Jersey, and would return on the morrow.

I don't like the city better, the more I see it, but worse. I am ashamed of my eyes that behold it. It is a thousand times meaner than I could have imagined. It will be something to hate, — that's the advantage it will be to me; and even the best people in it are a part of it, and talk coolly about it. The pigs in the street are the most respectable part of the population. When will the world learn that a million men are of no importance compared with one man? But I must wait for a shower of shillings, or at least a slight dew or mizzling of sixpences, before I explore New York very far.

The sea-beach is the best thing I have seen. It is very solitary and remote, and you only remember New York occasionally. The distances, too, along the shore, and inland in sight of it, are unaccountably great and startling. The sea seems very near from the hills, but it proves a long way over the plain, and yet you may be wet with the spray before you can believe that you are there. The far seems near, and the near far. Many rods from the beach, I step aside for the Atlantic, and I see men drag up their boats on to the sand, with oxen, stepping about amid the surf, as if it were possible they might draw up Sandy Hook.

I do not feel myself especially serviceable to the good people with whom I live, except as inflictions are sanctified to the righteous. And so, too, must I serve the boy. I can look to the Latin and mathematics sharply, and for the rest behave myself. But I cannot be in his neighborhood hereafter as his Educator, of course, but as the hawks fly over my own head. I am not attracted toward him but as to youth generally. He shall frequent me, however, as much as he can, and I'll be I.

Bradbury<sup>1</sup> told me, when I passed through Boston, that he was coming to New York the following Saturday, and would then settle with me, but he has not made his appearance yet. Will you, the next time you go to Boston, present that order for me which I left with you?

If I say less about Waldo and Tappan now, it is, perhaps, because I may have more to say by and by. Remember me to your mother and Mrs. Emerson, who, I hope, is quite well. I shall be very glad to hear from her, as well as from you. I have very hastily written out something for the "Dial," and send it only because you are expecting something, — though something better. It seems idle and Howittish, but it may be of more worth in Concord, where it belongs. In great haste. Farewell.

1 Of the publishing house of Bradbury & Soden, in Boston, which had taken Nathan Hale's Boston Miscellany off his hands, and had published in it, with promise of payment, Thoreau's Walk to Wachusett. But much time had passed, and the debt was not paid; hence the lack of a "shower of shillings" which the letter laments. Emerson's

reply gives the first news of the actual beginning of Alcott's short-lived paradise at Fruitlands, and dwells with interest on the affairs of the rural and lettered circle at Concord.

## TO HIS FATHER AND MOTHER (AT CONCORD).

Castleton, June 8, 1843.

Dear Parents, — I have got quite well now, and like the lay of the land and the look of the sea very much, — only the country is so fair that it seems rather too much as if it were made to be looked at. I have been to New York four or five times, and have run about the island a good deal.

George Ward, when I last saw him, which was at his house in Brooklyn, was studying the Daguerreotype process, preparing to set up in that line. The boats run now almost every hour from 8 a. M. to 7 P. m., back and forth, so that I can get to the city much more easily than before. I have seen there one Henry James, a lame man, of whom I had heard before, whom I like very much; and he asks me to make free use of his house, which is situated in a pleasant part of the city, adjoining the University, I have met several people whom I knew before, and among the rest Mr. Wright, who was on his way to Niagara.

I feel already about as well acquainted with New York as with Boston, — that is, about as little, perhaps. It is large enough now, and they intend it shall be larger still. Fifteenth Street, where some of my new acquaintance live, is two or three miles from the Battery, where the boat touches, — clear brick and stone, and no “give” to the foot; and they have laid out, though not built, up to the 149th street above. I had rather see a brick for a specimen, for my part, such as they exhibited in old times. You see it is “quite a day’s training” to make a few calls in different parts of the city (to say nothing of twelve miles by water and land, — i e., not brick and stone), especially if it does not rain shillings, which might interest omnibuses in your behalf. Some omnibuses are marked “Broadway — Fourth Street,” and they go no farther; others “Eighth Street,” and so on, — and so of the other principal streets. (This letter will be circumstantial enough for Helen.)

This is in all respects a very pleasant residence, — much more rural than you would expect of the vicinity of New York. There are woods all around. We breakfast at half past six, lunch, if we will, at twelve, and dine or sup at five; thus is the day partitioned off. From nine to two, or thereabouts, I am the schoolmaster, and at other times as much the pupil as I can be. Mr. and Mrs. Emerson are not indeed of my kith or kin in any sense; but they are irreproachable and kind. I have met no one yet on the island whose acquaintance I shall cultivate — or hoe round — unless it be our neighbor, Captain Smith, an old fisherman, who catches the fish called “moss-bonkers” — so it

sounds — and invites me to come to the beach, where he spends the week, and see him and his fish.

Farms are for sale all around here, and so, I suppose men are for purchase. North of us live Peter Wandell, Mr. Mell, and Mr. Disosway (don't mind the spelling), as far as the Clove road; and south, John Britton, Van Pelt, and Captain Smith, as far as the Fingerboard road. Behind is the hill, some 250 feet high, on the side of which we live; and in front the forest and the sea, — the latter at the distance of a mile and a half.

Tell Helen that Miss Errington is provided with assistance. This were a good place as any to establish a school, if one could wait a little. Families come down here to board in the summer, and three or four have been already established this season.

As for money matters, I have not set my traps yet, but I am getting my bait ready. Pray, how does the garden thrive, and what improvements in the pencil line? I miss you all very much. Write soon, and send a Concord paper to

Your affectionate son,  
HENRY D. THOREAU.

The traps of this sportsman were magazine articles, — but the magazines that would pay much for papers were very few in 1843. One such had existed in Boston for a short time, — the “Miscellany,” — and it printed a good paper of Thoreau's, but the pay was not forthcoming. His efforts to find publishers more liberal in New York were not successful. But he continued to write for fame in the “Dial,” and helped to edit that.

## TO MRS. EMERSON.

STATEN ISLAND, June 20, 1843.

MY VERY DEAR FRIEND, — I have only read a page of your letter, and have come out to the top of the hill at sunset, where I can see the ocean, to prepare to read the rest. It is fitter that it should hear it than the walls of my chamber. The very crickets here seem to chirp around me as they did not before. I feel as if it were a great daring to go on and read the rest, and then to live accordingly. There are more than thirty vessels in sight going to sea. I am almost afraid to look at your letter. I see that it will make my life very steep, but it may lead to fairer prospects than this.

You seem to me to speak out of a very clear and high heaven, where any one may be who stands so high. Your voice seems not a voice, but comes as much from the blue heavens as from the paper.

My dear friend, it was very noble in you to write me so trustful an answer. It will do as well for another world as for this; such a voice is for no particular time nor person, but it makes him who may hear it stand for all that is lofty and true in humanity. The thought of you will constantly elevate my life; it will be something always above the horizon to behold, as when I look up at the evening star. I think I know your thoughts without seeing you, and as well here as in Concord. You are not at all strange to me.

I could hardly believe, after the lapse of one night, that I had such a noble letter still at hand to read, — that it was not some fine dream. I looked at midnight to be sure that it was real. I feel that I am unworthy to know you, and yet they will not permit it wrongfully.

I, perhaps, am more willing to deceive by appearances than you say you are; it would not be worth the while to tell how willing; but I have the power perhaps too much to forget my meanness as soon as seen, and not be incited by permanent sorrow. My actual life is unspeakably mean compared with what I know and see that it might be. Yet the ground from which I see and say this is some part of it. It ranges from heaven to earth, and is all things in an hour. The experience of every past moment but belies the faith of each present. We never conceive the greatness of our fates. Are not these faint flashes of light which sometimes obscure the sun their certain dawn?

My friend, I have read your letter as if I was not reading it. After each pause I could defer the rest forever. The thought of you will be a new motive for every right action. You are another human being whom I know, and might not our topic be as broad as the universe? What have we to do with petty rumbling news? We have our own great affairs. Sometimes in Concord I found my actions dictated, as it were, by your influence, and though it led almost to trivial Hindoo observances, yet it was good and elevating. To hear that you have sad hours is not sad to me. I rather rejoice at the richness of your experience. Only think of some sadness away in Pekin, — unseen and unknown there. What a mine it is! Would it not weigh down the Celestial Empire, with all its gay Chinese? Our sadness is not sad, but our cheap joys. Let us be sad about all we see and are, for so we demand and pray for better. It is the constant prayer and whole Christian religion. I could hope that you would get well soon, and have a healthy body for this world, but I know this cannot be; and the Fates, after all, are the accomplishers of our hopes. Yet I do hope that you may find it a worthy struggle, and life seem grand still through the clouds.

What wealth is it to have such friends that we cannot think of them without elevation! And we can think of them any time and anywhere, and it costs nothing but the lofty disposition. I cannot tell you the joy your letter gives me, which will not quite cease till the latest time. Let me accompany your finest thought.

I send my love to my other friend and brother, whose nobleness I slowly recognize.  
HENRY.

## TO MRS. THOREAU (AT CONCORD).

Staten Island, July 7, 1843.

Dear Mother, — I was very glad to get your letter and papers. Tell father that circumstantial letters make very substantial reading, at any rate. I like to know even how the sun shines and garden grows with you. I did not get my money in Boston, and probably shall not at all. Tell Sophia that I have pressed some blossoms of the tulip-

tree for her. They look somewhat like white lilies. The magnolia, too, is in blossom here.

Pray, have you the seventeen-year locust in Concord? The air here is filled with their din.

They come out of the ground at first in an imperfect state, and, crawling up the shrubs and plants, the perfect insect bursts out through the back. They are doing great damage to the fruit and forest trees. The latter are covered with dead twigs, which in the distance look like the blossoms of the chestnut. They bore every twig of last year's growth in order to deposit their eggs in it. In a few weeks the eggs will be hatched, and the worms fall to the ground and enter it, and in 1860 make their appearance again. I conversed about their coming this season before they arrived. They do no injury to the leaves, but, beside boring the twigs, suck their sap for sustenance. Their din is heard by those who sail along the shore from the distant woods, — Phar-r-r-aoh. Phar-r-r-aoh. They are departing now. Dogs, cats, and chickens subsist mainly upon them in some places.

I have not been to New York for more than three weeks. I have had an interesting letter from Mr. Lane,<sup>1</sup> describing their new prospects. My pupil and I are getting on apace. He is remarkably well advanced in Latin, and is well advancing.

Your letter has just arrived. I was not aware that it was so long since I wrote home; I only

<sup>1</sup> At Fruitlands with the Alcotts. See Sanborn's Thoreau, p. 137, for this letter.

knew that I had sent five or six letters to the town. It is very refreshing to hear from you, though it is not all good news. But I trust that Stearns Wheeler is not dead. I should be slow to believe it. He was made to work very well in this world. There need be no tragedy in his death.

The demon which is said to haunt the Jones family, hovering over their eyelids with wings steeped in juice of poppies, has commenced another campaign against me. I am "clear J ones" in this respect at least. But he finds little encouragement in my atmosphere, I assure you, for I do not once fairly lose myself, except in those hours of truce allotted to rest by immemorial custom. However, this skirmishing interferes sadly with my literary projects, and I am apt to think it a good day's work if I maintain a soldier's eye till nightfall. Very well, it does not matter much in what wars we serve, whether in the Highlands or the Lowlands. Everywhere we get soldiers' pay still.

Give my love to Aunt Louisa, whose benignant face I sometimes see right in the wall, as naturally and necessarily shining on my path as some star of unaccountably greater age and higher orbit than myself. Let it be inquired by her of George Minott, as from me, — for she sees him, — if he has seen any pigeons yet, and tell him there are plenty of jack-snipes here. As for William P., the "worthy young man," — as I live, my eyes have not fallen on him yet.

I have not had the influenza, though here are its headquarters, — unless my first week's cold was it. Tell Helen I shall write to her soon. I have heard Lucretia Mott. This is badly written; but the worse the writing the sooner you get it this time from

Your affectionate son,  
H. D. T.

## TO R. W. EMERSON (AT CONCORD).

Staten Island, July 8, 1843.

Dear Friends, — I was very glad to hear your voices from so far. I do not believe there are eight hundred human beings on the globe. It is all a fable, and I cannot but think that you speak with a slight outrage and disrespect of Concord when you talk of fifty of them. There are not so many. Yet think not that I have left all behind, for already I begin to track my way over the earth, and find the cope of heaven extending beyond its horizon, — forsooth, like the roofs of these Dutch houses. My thoughts revert to those dear hills and that river which so fills up the world to its brim, — worthy to be named with Mincius and Alpheus, — still drinking its meadows while I am far away. How can it run heedless to the sea, as if I were there to countenance it? George Minott, too, looms up considerably, — and many another old familiar face. These things all look sober and respectable. They are better than the environs of New York, I assure you.

I am pleased to think of Channing as an inhabitant of the gray town. Seven cities contended for Homer dead. Tell him to remain at least long enough to establish Concord's right and interest in him. I was beginning to know the man. In imagination I see you pilgrims taking your way by the red lodge and the cabin of the brave farmer man, so youthful and hale, to the still cheerful woods. And Hawthorne, too, I remember as one with whom I sauntered, in old heroic times, along the banks of the Scamander, amid the ruins of chariots and heroes. Tell him not to desert, even after the tenth year. Others may say, "Are there not the cities of Asia?" But what are they? Staying at home is the heavenly way.

And Elizabeth Hoar, my brave townswoman, to be sung of poets, — if I may speak of her whom I do not know. Tell Mrs. Brown that I do not forget her, going her way under the stars through this chilly world, — I did not think of the wind, — and that I went a little way with her. Tell her not to despair. Concord's little arch does not span all our fate, nor is what transpires under it law for the universe.

And least of all are forgotten those walks in the woods in ancient days, — too sacred to be idly remembered, — when their aisles were pervaded as by a fragrant atmosphere. They still seem youthful and cheery to my imagination as Sherwood and Barnsdale, — and of far purer fame. Those afternoons when we wandered o'er Olympus, — and those hills, from which the sun was seen to set, while still our day held on its way.

"At last he rose and twitched his mantle blue; To-morrow to fresh woods, and pastures new."

I remember these things at midnight, at rare intervals. But know, my friends, that I a good deal hate you all in my most private thoughts, as the substratum of the little

love I bear you. Though you are a rare band, and do not make half use enough of one another.

I think this is a noble number of the "Dial." It perspires thought and feeling. I can speak of it now a little like a foreigner. Be assured that it is not written in vain, — it is not for me. I hear its prose and its verse. They provoke

Emerson also was satisfied with it for once, and wrote to Thoreau: "Our Dial thrives well enough in these weeks. I print W. E. Channing's 'Letters,' or the first ones, but he does not care to have them named as his for a while. They are very agreeable reading."

and inspire me, and they have my sympathy. I hear the sober and the earnest, the sad and the cheery voices of my friends, and to me it is a long letter of encouragement and reproof; and no doubt so it is to many another in the land. So don't give up the ship. Methinks the verse is hardly enough better than the prose. I give my vote for the Notes from the Journal of a Scholar, and wonder you don't print them faster. I want, too, to read the rest of the "Poet and the Painter." Miss Fuller's is a noble piece, — rich, extempore writing, talking with pen in hand. It is too good not to be better, even. In writing, conversation should be folded many times thick. It is the height of art that, on the first perusal, plain common sense should appear; on the second, severe truth; and on a third, beauty; and, having these warrants for its depth and reality, we may then enjoy the beauty for evermore. The sea-piece is of the best that is going, if not of the best that is staying. You have spoken a good word for Carlyle. As for the "Winter's Walk," I should be glad to have it printed in the "Dial" if you think it good enough, and will criticise it; otherwise send it to me, and I will dispose of it.

I have not been to New York for a month, and so have not seen Waldo and Tappan. James has been at Albany meanwhile. You will know that I only describe my personal adventures with people; but I hope to see more of them, and judge them too. I am sorry to learn that Mrs. Emerson is no better. But let her know that the Fates pay a compliment to those whom they make sick, and they have not to ask, "What have I done?"

Remember me to your mother, and remember me yourself as you are remembered by H. D. T.

I had a friendly and cheery letter from Lane a month ago.

## **TO HELEN THOREAU (AT ROXBURY).**

STATEN ISLAND, July 21, 1843.

Dear Helen, — I am not in such haste to write home when I remember that I make my readers pay the postage. But I believe I have not taxed you before.

I have pretty much explored this island, inland, and along the shore, finding my health inclined me to the peripatetic philosophy. I have visited telegraph stations, Sailors' Snug Harbors, Seaman's Retreats, Old Elm-Trees, where the Huguenots landed,

Britton's Mills, and all the villages on the island. Last Sunday I walked over to Lake Island Farm, eight or nine miles from here, where Moses Prichard lived, and found the present occupant, one Mr. Davenport, formerly from Massachusetts, with three or four men to help him, raising sweet potatoes and tomatoes by the acre. It seemed a cool and pleasant retreat, but a hungry soil. As I was coming away, I took my toll out of the soil in the shape of arrow-heads, which may after all be the surest crop, certainly not affected by drought.

I am well enough situated here to observe one aspect of the modern world at least. I mean the migratory, — the Western movement. Sixteen hundred immigrants arrived at quarantine ground on the 4th of July, and more or less every day since I have been here. I see them occasionally washing their persons and clothes: on men, women, and children gathered on an isolated quay near the shore, stretching their limbs and taking the air; the children running races and swinging on this artificial piece of the land of liberty, while their vessels are undergoing purification. They are detained but a day or two, and then go up to the city, for the most part without having landed here.

In the city, I have seen, since I wrote last, W. H. Channing, at whose home, in Fifteenth Street, I spent a few pleasant hours, discussing the all-absorbing question "what to do for the race." (He is sadly in earnest about going up the river to rusticate for six weeks, and issues a new periodical called "The Present" in September.) Also Horace Greeley, editor of the "Tribune," who is cheerfully in earnest, at his office of all work, a hearty New Hampshire boy as one would wish to meet, and says, "Now be neighborly," and believes only, or mainly, first, in the Sylvania Association, somewhere in Pennsylvania; and, secondly, and most of all, in a new association to go into operation soon in New Jersey, with which he is connected. Edward Palmer came down to see me Sunday before last. As for Waldo and Tappan, we have strangely dodged one another, and have not met for some weeks.

I believe I have not told you anything about Lucretia Mott. It was a good while ago that I heard her at the Quaker Church in Hester Street. She is a preacher, and it was advertised that she would be present on that day. I liked all the proceedings very well, their plainly greater harmony and sincerity than elsewhere. They do nothing in a hurry. Every one that walks up the aisle in his square coat and expansive hat has a history, and comes from a house to a house. The women come in one after another in their Quaker bonnets and handkerchiefs, looking all like sisters or so many chickadees. At length, after a long silence — waiting for the Spirit — Mrs. Mott rose, took off her bonnet, and began to utter very deliberately what the Spirit suggested. Her self-possession was something to see, if all else failed; but it did not. Her subject was, "The Abuse of the Bible," and thence she straightway digressed to slavery and the degradation of woman. It was a good speech, — transcendentalism in its mildest form. She sat down at length, and, after a long and decorous silence, in which some seemed to be really digesting her words, the elders shook hands, and the meeting dispersed. On the whole, I liked their ways and the plainness of their meeting-house. It looked as if it was indeed made for service.

I think that Stearns Wheeler has left a gap in the community not easy to be filled. Though he did not exhibit the highest qualities of the scholar, he promised, in a remarkable degree, many of the essential and rarer ones; and his patient industry and energy, his reverent love of letters, and his proverbial accuracy, will cause him to be associated in my memory even with many venerable names of former days. It was not wholly unfit that so pure a lover of books should have ended his pilgrimage at the great book-mart of the world. I think of him as healthy and brave, and am confident that if he had lived, he would have proved useful in more ways than I can describe. He would have been authority on all matters of fact, and a sort of connecting link between men and scholars of different walks and tastes. The literary enterprises he was planning for himself and friends remind me of an older and more studious time. So much, then, remains for us to do who survive. Love to all. Tell all my friends in Concord that I do not send my love, but retain it still.

Your affectionate brother.

## TO MRS. THOREAU (AT CONCORD).

Staten Island, August 6, 1843.

DEAR MOTHER, — As Mr. William Emerson is going to Concord on Tuesday, I must not omit sending a line by him, — though I wish I had something more weighty for so direct a post. I believe I directed my last letter to you by mistake; but it must have appeared that it was addressed to Helen. At any rate, this is to you without mistake.

I am chiefly indebted to your letters for what I have learned of Concord and family news, and am very glad when I get one. I should have liked to be in Walden woods with you, but not with the railroad. I think of you all very often, and wonder if you are still separated from me only by so many miles of earth, or so many miles of memory. This life we live is a strange dream, and I don't believe at all any account men give of it. Methinks I should be content to sit at the back-door in Concord, under the poplar-tree, henceforth forever. Not that I am homesick at all, — for places are strangely indifferent to me, — but Concord is still a cynosure to my eyes, and I find it hard to attach it, even in imagination, to the rest of the globe, and tell where the seam is.

I fancy that this Sunday evening you are poring over some select book, almost transcendental perchance, or else "Burgh's Dignity," or Massillon, or the "Christian Examiner." Father has just taken one more look at the garden, and is now absorbed in Chaptelle, or reading the newspaper quite abstractedly, only looking up occasionally over his spectacles to see how the rest are engaged, and not to miss any newer news that may not be in the paper. Helen has slipped in for the fourth time to learn the very latest item. Sophia, I suppose, is at Bangor; but Aunt Louisa, without doubt, is just flitting away to some good meeting, to save the credit of you all.

It is still a cardinal virtue with me to keep awake. I find it impossible to write or read except at rare intervals, but am, generally speaking, tougher than formerly. I could make a pedestrian tour round the world, and sometimes think it would perhaps be better to do at once the things I can, rather than be trying to do what at present I cannot do well. However, I shall awake sooner or later.

I have been translating some Greek, and reading English poetry, and a month ago sent a paper to the "Democratic Review," which, at length, they were sorry they could not accept; but they could not adopt the sentiments. However, they were very polite, and earnest that I should send them something else, or reform that.

I go moping about the fields and woods here as I did in Concord, and, it seems, am thought to be a surveyor, — an Eastern man inquiring narrowly into the condition and value of land, etc., here, preparatory to an extensive speculation. One neighbor observed to me, in a mysterious and half inquisitive way, that he supposed I must be pretty well acquainted with the state of things; that I kept pretty close; he didn't see any surveying instruments, but perhaps I had them in my pocket.

I have received Helen's note, but have not heard of Frisbie Hoar yet.<sup>1</sup> She is a fainthearted writer, who could not take the response

<sup>1</sup> At present Senator Hoar of Massachusetts, but then in Harvard College.

responsibility of blotting one sheet alone. However, I like very well the blottings I get. Tell her I have not seen Mrs. Child nor Mrs. Sedgwick.

Love to all from your affectionate son.

## TO R. W. EMERSON (AT CONCORD).

Staten Island, August 7, 1843.

MY dear Friend, — I fear I have nothing to send you worthy of so good an opportunity. Of New York I still know but little, though out of so many thousands there are no doubt many units whom it would be worth my while to know. Mr. James I talks of going to Germany soon with his wife to learn the language. He says he must know it; can never learn it here; there he may absorb it; and is very anxious to learn beforehand where he had best locate himself to enjoy the advantage of the highest culture, learn the language in its purity, and not exceed his limited means. I referred him to Longfellow. Perhaps you can help him.

I have had a pleasant talk with Channing; and Greeley, too, it was refreshing to meet. They were both much pleased with your criticism on Carlyle, but thought that you had overlooked what chiefly concerned them in the book, — its practical aim and merits.

I have also spent some pleasant hours with

<sup>1</sup> Henry James, Senior.

Waldo and Tappan at their counting-room, or rather intelligence office.

I must still reckon myself with the innumerable army of invalids, — undoubtedly in a fair field they would rout the well, — though I am tougher than formerly. Methinks I could paint the sleepy god more truly than the poets have done, from more intimate experience. Indeed, I have not kept my eyes very steadily open to the things of this world of late, and hence have little to report concerning them. However, I trust the awakening will come before the last trump, — and then perhaps I may remember some of my dreams.

I study the aspects of commerce at its Narrows here, where it passes in review before me, and this seems to be beginning at the right end to understand this Babylon. I have made a very rude translation of the Seven against Thebes, and Pindar too I have looked at, and wish he was better worth translating. I believe even the best things are not equal to their fame. Perhaps it would be better to translate fame itself, — or is not that what the poets themselves do? However, I have not done with Pindar yet. I sent a long article on Etzler's book to the "Democratic Review" six weeks ago, which at length they have determined not to accept, as they could not subscribe to all the opinions, but asked for other matter, — purely literary, I suppose. O'Sullivan wrote me that articles of this kind have to be referred to the circle who, it seems, are represented by this journal, and said something about "collective we" and "homogeneity."

Pray don't think of Bradbury & Soden 1 any more, —

"For good deed done through praiere

Is sold and bought too dear, I wis,

To herte that of great valor is."

I see that they have given up their shop here.

Say to Mrs. Emerson that I am glad to remember how she too dwells there in Concord, and shall send her anon some of the thoughts that belong to her. As for Edith, I seem to see a star in the east over where the young child is. Remember me to Mrs. Brown.

These letters for the most part explain them-

1 Emerson had written, July 20, "I am sorry to say that when I called on Bradbury & Soden, nearly a month ago, their partner, in their absence, informed me that they could not pay you, at present, any part of their debt on account of the Boston Miscellany. After much talking, all the promise he could offer was 'that within a year it would probably be paid,' — a probability which certainly looks very slender. The very worst thing he said was the proposition that you should take your payment in the form of Boston Miscellanies! I shall not fail to refresh their memory at intervals."

selves, with the aid of several to Thoreau's family, which the purpose of Emerson, in 1865, to present his friend in a stoical character, had excluded from the collection then printed. Mention of C. S. Wheeler and his sad death in Germany had come to him from Emerson, as well as from his own family at Concord, — of whose occupations Thoreau gives so genial a picture in the letter of August 6, to his mother. Emerson wrote: "You will have read and heard the sad news to the little village of Lincoln, of Stearns Wheeler's death. Such an overthrow to the hopes of his parents made me think

more of them than of the loss the community will suffer in his kindness, diligence, and ingenuous mind." He died at Leipsic, in the midst of Greek studies which have since been taken up and carried farther by a child of Concord, Professor Goodwin of the same university. Henry James, several times mentioned in the correspondence, was the moral and theological essayist (father of the novelist Henry James, and the distinguished Professor James of Harvard), who was so striking a personality, in the Concord and Cambridge circle for many years. W. H. Channing was a Christian Socialist fifty years ago, — cousin of Ellery Channing, and nephew and biographer of Dr. Channing. Both he and Horace Greeley were then deeply interested in the Fourierist scheme of association, one development of which was going on at Brook Farm, under direction of George Ripley, and another, differing in design, at Fruitlands, under Bronson Alcott and Charles Lane. The jocose allusions of Thoreau to his Jones ancestors (the descendants of the Tory Colonel Jones of Weston) had this foundation in fact, — that his uncle, Charles Dunbar, soon to be named in connection with Daniel Webster, suffered from a sort of lethargy, which would put him to sleep in the midst of conversation. Webster had been retained in the once famous "Wyman case," of a bank officer charged with fraud, and had exerted his great forensic talent for a few days in the Concord court-house. Emerson wrote Thoreau, "You will have heard of the Wyman trial, and the stir it made in the village. But the Cliff and Walden knew nothing of that."

## TO MRS. THOREAU (AT CONCORD).

Castleton, Tuesday, August 29, 1843.

Dear Mother, — Mr. Emerson has just given me warning that he is about to send to Concord, which I will endeavor to improve. I am a great deal more wakeful than I was, and growing stout in other respects, — so that I may yet accomplish something in the literary way; indeed, I should have done so before now but for the slowness and poverty of the "Reviews" themselves I have tried sundry methods of earning money in the city, of late, but without success: have rambled into every bookseller's or publisher's house, and discussed their affairs with them. Some propose to me to do what an honest man cannot. Among others I conversed with the Harpers — to see if they might not find me useful to them; but they say that they are making \$50,000 annually, and their motto is to let well alone. I find that I talk with these poor men as if I were over head and ears in business, and a few thousands were no consideration with me. I almost reproach myself for bothering them so to no purpose; but it is a very valuable experience, and the best introduction I could have.

We have had a tremendous rain here last Monday night and Tuesday morning. I was in the city at Giles Waldo's, and the streets at daybreak were absolutely impassable for the water. Yet the accounts of the storm that you may have seen are exaggerated, as indeed are all such things, to my imagination. On Sunday I heard Mr. Bellows preach here on the island; but the fine prospect over the Bay and Narrows, from where I sat,

preached louder than he, — though he did far better than the average, if I remember aright. I should have liked to see Daniel Webster walking about Concord; I suppose the town shook, every step he took. But I trust there were some sturdy Concordians who were not tumbled down by the jar, but represented still the upright town. Where was George Minott? he would not have gone far to see him. Uncle Charles should have been there, — he might as well have been catching cat naps in Concord as anywhere.

And then, what a whetter-up of his memory this event would have been! You'd have had all the classmates again in alphabetical order reversed,— “and Seth Hunt and Bob Smith — and he was a student of my father's, — and where's Put now? and I wonder — you — if Henry's been to see George Jones yet! A little account with Stow, — Balcom, — Bigelow, poor miserable t-o-a-d, — (sound asleep.) I vow, you, — what noise was that? — saving grace — and few there be — That's clear as preaching, — Easter Brooks, — morally depraved, — How charming is divine philosophy, — some wise and 'some otherwise, — Heighho! (sound asleep again) Webster's a smart fellow — bears his age well, — how old should you think he was? you — does he look as if he were ten years younger than I?”

I met, or rather, was overtaken by Fuller, who tended for Mr. How, the other day, in Broadway. He dislikes New York very much. The Mercantile Library, — that is, its Librarian, presented me with a stranger's ticket, for a month, and I was glad to read the “Reviews” there, and Carlyle's last article. I have bought some pantaloons; stockings show no holes yet. These pantaloons cost \$2.25 ready made.

In haste.

## TO R. W. EMERSON (AT CONCORD).

STATEN ISLAND, September 14, 1843.

Dear Friend, — Miss Fuller will tell you the news from these parts, so I will only devote these few moments to what she doesn't know as well. I was absent only one day and night from the island, the family expecting me back immediately. I was to earn a certain sum before winter, and thought it worth the while to try various experiments. I carried “The Agriculturist” about the city, and up as far as Manhattanville, and called at the Croton Reservoir, where, indeed, they did not want any “Agriculturists,” but paid well enough in their way.

Literature comes to a poor market here; and even the little that I write is more than will sell. I have tried “The Dem. Review,”

“The New Mirror,” and “Brother Jonathan.”<sup>1</sup> The last

<sup>1</sup> It may need to be said that these were New York weeklies — the Mirror, edited in part by N. P. Willis, and the New

two, as well as the “New World,” are overwhelmed with contributions which cost nothing, and are worth no more. “The Knickerbocker” is too poor, and only “The

Ladies' Companion" pays. O'Sullivan is printing the manuscript I sent him some time ago, having objected only to my want of sympathy with the Committee.

I doubt if you have made more corrections in my manuscript than I should have done ere this, though they may be better; but I am glad you have taken any pains with it. I have not prepared any translations for the "Dial," supposing there would be no room, though it is the only place for them.

I have been seeing men during these days, and trying experiments upon trees; have inserted three or four hundred buds (quite a Buddhist, one might say). Books I have access to through your brother and Mr. McKean, and have read a good deal. Quarles's "Divine Poems" as well as "Emblems" are quite a discovery.

I am very sorry Mrs. Emerson is so sick. Remember me to her and to your mother. I like to think of your living on the banks of the Mill-

World by Park Benjamin, formerly of Boston, whose distinction it is to have first named Hawthorne as a writer of genius. "Miss Fuller" was Margaret, — not yet resident in New York, whither she went to live in 1844.

brook, in the midst of the garden with all its weeds; for what are botanical distinctions at this distance?

## TO HIS MOTHER (AT CONCORD).

Staten Island, October 1, 1843.

DEAR MOTHER, — I hold together remarkably well as yet, — speaking of my outward linen and woolen man; no holes more than I brought away, and no stitches needed yet. It is marvelous. I think the Fates must be on my side, for there is less than a plank between me and — Time, to say the least. As for Eldorado, that is far off yet. My bait will not tempt the rats, — they are too well fed. The "Democratic Review" is poor, and can only afford half or quarter pay, which it will do; and they say there is a "Lady's Companion" that pays, — but I could not write anything companionable. However, speculate as we will, it is quite gratuitous; for life, nevertheless and never the more, goes steadily on, well or ill-fed, and clothed somehow, and "honor bright" withal. It is very gratifying to live in the prospect of great successes always; and for that purpose we must leave a sufficient foreground to see them through. All the painters prefer distant prospects for the greater breadth of view, and delicacy of tint. But this is no news, and describes no new conditions.

Meanwhile I am somnambulic at least, — stirring in my sleep; indeed, quite awake. I read a good deal, and am pretty well known in the libraries of New York. Am in with the librarian (one Dr. Forbes) of the Society Library, who has lately been to Cambridge to learn liberality, and has come back to let me take out some un-take-out-able books, which I was threatening to read on the spot. And Mr. McKean, of the Mercantile Library, is a true gentleman (a former tutor of mine), and offers me every privilege

there. I have from him a perpetual stranger's ticket, and a citizen's rights besides, — all which privileges I pay handsomely for by improving.

A canoe race "came off" on the Hudson the other day, between Chippeways and New Yorkers, which must have been as moving a sight as the buffalo hunt which I witnessed. But canoes and buffaloes are all lost, as is everything here, in the mob. It is only the people have come to see one another. Let them advertise that there will be a gathering at Hoboken, — having bargained with the ferryboats, — and there will be, and they need not throw in the buffaloes.

I have crossed the bay twenty or thirty times, and have seen a great many immigrants going up to the city for the first time: Norwegians, who carry their old-fashioned farming-tools to the West with them, and will buy nothing here for fear of being cheated; English operatives, known by their pale faces and stained hands, who will recover their birthright in a little cheap sun and wind; English travelers on their way to the Astor House, to whom I have done the honors of the city; whole families of emigrants cooking their dinner upon the pavement, — all sunburnt, so that you are in doubt where the foreigner's face of flesh begins; their tidy clothes laid on, and then tied to their swathed bodies, which move about like a bandaged finger, — caps set on the head as if woven of the hair, which is still growing at the roots, — each and all busily cooking, stooping from time to time over the pot, and having something to drop in it, that so they may be entitled to take something out, forsooth. They look like respectable but straitened people, who may turn out to be Counts when they get to Wisconsin, and will have this experience to relate to their children.

Seeing so many people from day to day, one comes to have less respect for flesh and bones, and thinks they must be more loosely joined, of less firm fibre, than the few he had known. It must have a very bad influence on children to see so many human beings at once, — mere herds of men.

I came across Henry Bigelow a week ago, sitting in front of a hotel in Broadway, very much as if he were under his father's stoop. He is seeking to be admitted into the bar in New York, but as yet had not succeeded. I directed him to Fuller's store, which he had not found, and invited him to come and see me if he came to the island. Tell Mrs and Miss Ward that I have not forgotten them, and was glad to hear from George — with whom I spent last night — that they had returned to C. Tell Mrs. Brown that it gives me as much pleasure to know that she thinks of me and my writing as if I had been the author of the piece in question, — but I did not even read over the papers I sent. The "Mirror" is really the most readable journal here. I see that they have printed a short piece that I wrote to sell, in the "Dem. Review," and still keep the review of "Paradise," that I may include in it a notice of another book by the same author, which they have found, and are going to send me.

I don't know when I shall come home; I like to keep that feast in store. Tell Helen that I do not see any advertisement for her, and I am looking for myself. If I could find a rare opening, I might be tempted to try with her for a year, till I had paid my debts, but for such I am sure it is not well to go out of New England. Teachers are

but poorly recompensed, even here. Tell her and Sophia (if she is not gone) to write to me. Father will know that this letter is to him as well as to you. I send him a paper which usually contains the news, — if not all that is stirring, all that has stirred, — and even draws a little on the future. I wish he would send me, by and by, the paper which contains the results of the Cattle Show. You must get Helen's eyes to read this, though she is a scoffer at honest penmanship.

## TO MRS. EMERSON (AT CONCORD).

Staten Island, October 16, 1843.

MY dear Friend, — I promised you some thoughts long ago, but it would be hard to tell whether these are the ones. I suppose that the great questions of "Fate, Freewill, Foreknowledge absolute," which used to be discussed at Concord, are still unsettled. And here comes [W. H.] Channing, with his "Present," to vex the world again, — a rather galvanic movement, I think. However, I like the man all the better, though his schemes the less. I am sorry for his confessions. Faith never makes a confession.

Have you had the annual berrying party, or sat on the Cliffs a whole day 'this summer? I suppose the flowers have fared quite as well since I was not there to scoff at them; and the hens, without doubt, keep up their reputation.

I have been reading lately what of Quarles's poetry I could get. He was a contemporary of Herbert, and a kindred spirit. I think you would like him. It is rare to find one who was so much of a poet and so little of an artist. He wrote long poems, almost epics for length, about Jonah, Esther, Job, Samson, and Solomon, interspersed with meditations after a quite original plan, — Shepherd's Oracles, Comedies, Romances, Fancies, and Meditations, — the quintessence of meditation, — and Enchiridions of Meditation all divine, — and what he calls his Morning Muse; besides prose works as curious as the rest. He was an unwearied Christian, and a reformer of some old school withal. Hopelessly quaint, as if he lived all alone and knew nobody but his wife, who appears to have revered him. He never doubts his genius; it is only he and his God in all the world. He uses language sometimes as greatly as Shakespeare; and though there is not much straight grain in him, there is plenty of tough, crooked timber. In an age when Herbert is revived, Quarles surely ought not to be forgotten.

I will copy a few such sentences, as I should read to you if there. Mrs. Brown, too, may find some nutriment in them.

How does the Saxon Edith do? Can you tell yet to which school of philosophy she belongs, — whether she will be a fair saint of some Christian order, or a follower of Plato and the heathen? Bid Ellen a good-night or a good-morning from me, and see if she will remember where it comes from; and remember me to Mrs. Brown, and your mother, and Elizabeth Hoar.

## TO R. W. EMERSON (AT CONCORD).

Staten Island, October 17, 1843.

MY DEAR FRIEND, — I went with my pupil to the Fair of the American Institute, and so lost a visit from Tappan, whom I met returning from the Island. I should have liked to hear more news from his lips, though he had left me a letter and the "Dial," which is a sort of circular letter itself. I find Channing's letters full of life, and I enjoy their wit highly. Lane writes straight and solid, like a guideboard, but I find that I put off the "social tendencies" to a future day, which may never come. He is always Shaker fare, quite as luxurious as his principles will allow. I feel as if I were ready to be appointed a committee on poetry, I have

1 The allusion here is to Ellery Channing's "Youth of the Poet and Painter," in the Dial — an unfinished autobiography. The Present of W. H. Channing, his cousin, named above, was a short-lived periodical, begun September 15, 1843, and ended in April, 1844. "McKean" was Henry Swasey McKean, who was a classmate of Charles Emerson at Harvard in 1828, a tutor there in 1830-35, and who died in 1857.

got my eyes so whetted and proved of late, like the knife-sharpener I saw at the Fair, certified to have been "in constant use in a gentleman's family for more than two years." Yes, I ride along the ranks of the English poets, casting terrible glances, and some I blot out, and some I spare. McKean has imported, within the year, several new editions and collections of old poetry, of which I have the reading, but there is a good deal of chaff to a little meal, — hardly worth bolting. I have just opened Bacon's "Advancement of Learning" for the first time, which I read with great delight. It is more like what Scott's novels were than anything.

I see that I was very blind to send you my manuscript in such a state; but I have a good second sight, at least. I could still shake it in the wind to some advantage, if it would hold together. There are some sad mistakes in the printing. It is a little unfortunate that the "Ethnical Scriptures" should hold out so well, though it does really hold out. The Bible ought not to be very large. Is it not singular that, while the religious world is gradually picking to pieces its old testaments, here are some coming slowly after, on the seashore, picking up the durable relics of perhaps older books, and putting them together again?

Your Letter to Contributors is excellent, and hits the nail on the head. It will taste sour to their palates at first, no doubt, but it will bear a sweet fruit at last. I like the poetry, especially the Autumn verses. They ring true. Though I am quite weather-beaten with poetry, having weathered so many epics of late. The "Sweep Ho!" sounds well this way. But I have a good deal of fault to find with your "Ode to Beauty." The tune is altogether unworthy of the thoughts. You slope too quickly to the rhyme, as if that trick had better be performed as soon as possible, or as if you stood over the line with a hatchet, and chopped off the verses as they came out, some short and some long. But give us a long reel, and we'll cut it up to suit ourselves. It sounds like parody. "Thee knew I of old,"

“Remediless thirst,” are some of those stereotyped lines. I am frequently reminded, I believe, of Jane Taylor’s “Philosopher’s Scales,” and how the world “Flew out with a bounce,” which

“Yerked the philosopher out of his cell;”

or else of

“From the climes of the sun all war-worn and weary.”

I had rather have the thought come ushered with a flourish of oaths and curses. Yet I love your poetry as I do little else that is near and recent, especially when you get fairly round the end of the line, and are not thrown back upon the rocks. To read the lecture on “The Comic” is as good as to be in our town meeting or Lyceum once more.

I am glad that the Concord farmers ploughed well this year; it promises that something will be done these summers. But I am suspicious of that Brittonner, who advertises so many cords of good oak, chestnut, and maple wood for sale. Good! ay, good for what? And there shall not be left a stone upon a stone. But no matter, — let them hack away. The sturdy Irish arms that do the work are of more worth than oak or maple. Methinks I could look with equanimity upon a long street of Irish cabins, and pigs and children reveling in the genial Concord dirt; and I should still find my Walden wood and Fair Haven in their tanned and happy faces.

I write this in the cornfield — it being washing-day — with the inkstand Elizabeth Hoar gave me;<sup>1</sup> though it is not redolent of corn-

<sup>1</sup> This inkstand was presented by Miss Hoar, with a note dated “Boston, May 2, 1843,” which deserves to be copied: —

Dear Henry, — The rain prevented me from seeing you the night before I came away, to leave with you a parting assurance of good will and good hope. We have become better acquainted within the two past years than in our whole life as schoolmates and neighbors before; and I am unwilling to let you go away without telling you that I, among your other friends, shall miss you much, and follow you with remembrance and all best wishes and confidence. Will you take this little inkstand and try if it will carry ink safely from Concord to Staten Island? and the pen, which, if you can write with steel, may be made sometimes the interpreter of friendly thoughts to those whom you leave beyond the reach of your voice, — or record the inspirations of Nature, who, I doubt not, will be as faithful to you who trust her in the sea-girt Staten Island as in Concord woods and meadows. Good-by, and eu prattein, which, a wise man says, is the only salutation fit for the wise.

Truly your friend, —

E. HOAR.

stalks, I fear. Let me not be forgotten by Channing and Hawthorne, nor our gray-suited neighbor under the hill [Edmund Hosmer].

This letter will be best explained by a reference to the “Dial” for October, 1843. The “Ethnical Scriptures” were selections from the Brahminical books, from Confucius, etc., such as we have since seen in great abundance. The Autumn verses are by Channing; “Sweep Ho!” by Ellen Sturgis, afterwards Mrs. Hooper; the “Youth of the Poet and

Painter” also by Channing. The Letter to Contributors, which is headed simply “A Letter,” is by Emerson, and has been much overlooked by his later readers; his “Ode to Beauty” is very well known, and does not deserve the slashing censure of Thoreau, though, as it now stands, it is better than first printed. Instead of “Love drinks at thy banquet Remediless thirst,”

we now have the perfect phrase,

“Love drinks at thy fountain

False waters of thirst

“The Comic” is also Emerson’s. There is a poem, “The Sail,” by William Tappan, so often named in these letters, and a sonnet by Charles A. Dana, now of the “New York Sun.”

## TO HELEN THOREAU (AT CONCORD).

STATEN ISLAND, October 18, 1843.

Dear Helen, — What do you mean by saying that “we have written eight times by private opportunity”? Isn’t it the more the better? And am I not glad of it? But people have a habit of not letting me know it when they go to Concord from New York. I endeavored to get you “The Present” when I was last in the city, but they were all sold; and now another is out, which I will send, if I get it. I did not send the “Democratic Review,” because I had no copy, and my piece was not worth fifty cents. You think that Channing’s words would apply to me too, as living more in the natural than the moral world; but I think that you mean the world of men and women rather, and reformers generally. My objection to Channing and all that fraternity is, that they need and deserve sympathy themselves rather than are able to render it to others. They want faith, and mistake their private ail for an infected atmosphere; but let any one of them recover hope for a moment, and right his particular grievance, and he will no longer train in that company. To speak or do anything that shall concern mankind, one must speak and act as if well, or from that grain of health which he has left. This “Present” book indeed is blue, but the hue of its thoughts is yellow. I say these things with the less hesitation, because I have the jaundice myself; but I also know what it is to be well. But do not think that one can escape from mankind who is one of them, and is so constantly dealing with them.

I could not undertake to form a nucleus of an institution for the development of infant minds, where none already existed. It would be too cruel. And then, as if looking all this while one way with benevolence, to walk off another about one’s own affairs suddenly! Something of this kind is an unavoidable objection to that.

I am very sorry to hear such bad news about Aunt Maria; but I think that the worst is always the least to be apprehended, for nature is averse to it as well as we. I trust to hear that she is quite well soon. I send love to her and Aunt Jane. For three months I have not known whether to think of Sophia as in Bangor or Concord, and now you

say that she is going directly. Tell her to write to me, and establish her whereabouts, and also to get well directly. And see that she has something worthy to do when she gets down there, for that's the best remedy for disease.

Your affectionate brother,  
H. D. THOREAU.

## II. GOLDEN AGE OF ACHIEVEMENT.

THIS was the golden age of hope and achievement for the Concord poets and philosophers. Their ranks were not yet broken by death (for Stearns Wheeler was hardly one of them), their spirits were high, and their faith in each other unbounded. Emerson wrote thus from Concord, while Thoreau was perambulating Staten Island and calling on "the false booksellers:"

"Ellery Channing is excellent company, and we walk in all directions. He remembers you with great faith and hope; thinks you ought not to see Concord again these ten years — that you ought to grind up fifty Concords in your mill — and much other opinion and counsel he holds in store on this topic. Hawthorne walked with me yesterday afternoon, and not until after our return did I read his *Celestial Railroad*, which has a serene strength which we cannot afford not to praise, in this low life."

The Transcendentalists had their "Quarterly," and even their daily organ, for Mr. Greeley put the "Tribune" at their service, and gave places on its staff to Margaret Fuller and her brother-in-law Channing, and would gladly have made room for Emerson in its columns, if the swift utterance of a morning paper had suited his habit of publication. While in the "Tribune" office, Ellery Channing thus wrote to Thoreau, after he had returned home, disappointed with New York, to make lead pencils in his father's shop at Concord.

## ELLERY CHANNING TO THOREAU (AT CONCORD).

March 5, 1845.

My dear Thoreau, — The handwriting of your letter is so miserable that I am not sure I have made it out. If I have, it seems to me you are the same old sixpence you used to be, rather rusty, but a genuine piece. I see nothing for you in this earth but that field which I once christened "Briars;" go out upon that, build yourself a hut, and there begin the grand process of devouring yourself alive. I see no alternative, no other hope for you. Eat yourself up; you will eat nobody else, nor anything else. Concord is just as good a place as any other; there are, indeed, more people in the streets of that village than in the streets of this. This is a singularly muddy town; muddy, solitary, and silent.

In your line, I have not done a great deal since I arrived here; I do not mean the Pencil line, but the Staten Island line, having been there once, to walk on a beach by the telegraph, but did not visit the scene of your dominical duties. Staten Island is very distant from No. 30 Ann Street. I saw polite William Emerson in November last, but have not caught any glimpse of him since then. I am as usual suffering the various alternations from agony to despair, from hope to fear, from pain to pleasure. Such wretched one-sided productions as you know nothing of the universal man; you may think yourself well off.

That baker, Hecker, who used to live on two crackers a day, I have not seen; nor Black, nor Vethake, nor Danesaz, nor Rynders, nor any of Emerson's old cronies, excepting James, a little fat, rosy Swedenborgian amateur, with the look of a broker, and the brains and heart of a Pascal. William Channing, I see nothing of him; he is the dupe of good feelings, and I have all-too-many of these now. I have seen something of your friends, Waldo and Tappan, and have also seen our good man McKean, the keeper of that stupid place, the Mercantile Library.

Acting on Channing's hint, and an old fancy of his own, Thoreau, in the summer of 1845, built his cabin at Walden and retired there; while Hawthorne entered the Salem Customhouse, and Alcott, returning defeated from his Fruitlands paradise, was struggling with poverty and discouragement at Concord. Charles Lane, his English comrade, withdrew to New York or its vicinity, and in 1846 to London, whence he had come in 1842, full of hope and enthusiasm. A few notes of his, or about him, may here find place. They were sent to Thoreau at Concord, and show that Lane continued to value his candid friend. The first, written after leaving Fruitlands, introduces the late Father Hecker, who had been one of the family there, to Thoreau. The second and third relate to the sale of the Alcott-Lane library, and other matters.

## CHARLES LANE TO THOREAU (AT CONCORD).

Boston, December 3, 1843.

Dear Friend, — As well as my wounded hands permit, I have scribbled something for friend Hecker, which if agreeable may be the opportunity for entering into closer relations with him; a course I think likely to be mutually encouraging, as well as beneficial to all men. But let it reach him in the manner most conformable to your own feelings. That from all perils of a false position you may shortly be relieved, and landed in the position where you feel "at home," is the sincere wish of yours most friendly,

CHARLES LANE.

MR. HENRY THOREAU,

Earl House, Coach Office.

New York, February 17, 1846.

DEAR FRIEND, — The books you were so kind as to deposit about two years and a half ago with Messrs. Wiley & Putnam have all been sold, but as they were left in your name it is needful, in strict business, that you should send an order to them to pay to me the amount due. I will therefore thank you to inclose me such an order at your earliest convenience in a letter addressed to your admiring friend,

CHARLES LANE,

Post Office, New York City.

Boonton, N. J., March 30, 1846.

DEAR FRIEND, — If the human nature participates of the elemental I am no longer in danger of becoming suburban, or super-urban, that is to say, too urbane. I am now more likely to be converted into a petrification, for slabs of rock and foaming waters never so abounded in my neighborhood. A very Peter I shall become: on this rock He has built his church. You would find much joy in these eminences and in the views therefrom.

My pen has been necessarily unproductive in the continued motion of the sphere in which I have lately been moved. You, I suppose, have not passed the winter to the world's unprofit.

You never have seen, as I have, the book with a preface of 450 pages and a text of 60. My letter is like unto it.

I have only to add that your letter of the 26th February did its work, and that I submit to you cordial thanks for the same.

Yours truly,

CHAS. LANE.

I hope to hear occasionally of your doings and those of your compeers in your classic ploughings and diggings.

## To HENRY D. THOBEAU,

Concord Woods.

Thoreau's letters to Lane have not come into any editor's hands. In England, before Lane's discovery by Alcott, in 1842, he had been the editor of the "Mark-Lane Gazette" (or something similar), which gave the price-current of wheat, etc., in the English markets. Emerson found him in Hampstead, London, in February, 1848, and wrote to Thoreau: "I went last Sunday, for the first time, to see Lane at Hampstead, and dined with him. He was full of friendliness and hospitality; has a school of sixteen children, one lady as matron, then Oldham. That is all the household. They looked just comfortable."

"Lane instructed me to ask you to forward his 'Dials' to him, which must be done, if you can find them. Three bound volumes are among his books in my library. The fourth volume is in unbound numbers at J. Munroe & Co.'s shop, received there in

a parcel to my address, a day or two before I sailed, and which I forgot to carry to Concord. It must be claimed without delay. It is certainly there, — was opened by me and left; and they can inclose all four volumes to Chapman for me.”

This would indicate that he had not lost interest in the days and events of his American sojourn, — unpleasant as some of these must have been to the methodical, prosaic Englishman.

While at Walden, Thoreau wrote but few letters; there is, however, a brief correspondence with Mr. J. E. Cabot, then an active naturalist, cooperating with Agassiz in his work on the American fishes, who had requested Thoreau to procure certain species from Concord. The letters were written from the cabin at Walden, and it is this same structure that figures in the letters from Thoreau to Emerson in England, as the proposed nucleus of the cottage of poor Hugh the gardener, before he ran away from Concord, as there narrated, on a subsequent page. The first sending of river-fish was in the end of April, 1847. Then followed this letter: —

## TO ELLIOT CABOT (AT BOSTON).

Concord, May 8, 1847.

DEAR SIR, — I believe that I have not yet acknowledged the receipt of your notes, and a five dollar bill. I am very glad that the fishes afforded Mr. Agassiz so much pleasure. I could easily have obtained more specimens of the *Sternothaerus odoratus*; they are quite numerous here. I will send more of them ere long. Snapping turtles are perhaps as frequently met with in our muddy river as anything, but they are not always to be had when wanted. It is now rather late in the season for them. As no one makes a business of seeking them, and they are valued for soups, science may be forestalled by appetite in this market, and it will be necessary to bid pretty high to induce persons to obtain or preserve them. I think that from seventy-five cents to a dollar apiece would secure all that are in any case to be had, and will set this price upon their heads, if the treasury of science is full enough to warrant it.

You will excuse me for taking toll in the shape of some, it may be, impertinent and unscientific inquiries. There are found in the waters of the Concord, so far as I know, the following kinds of fishes: —

Pickerel. Besides the common, fishermen distinguish the Brook, or Grass Pickerel, which bites differently, and has a shorter snout. Those caught in Walden, hard by my house, are easily distinguished from those caught in the river, being much heavier in proportion to their size, stouter, firmer fleshed, and lighter colored. The little pickerel which I sent last, jumped into the boat in its fright.

Pouts. Those in the pond are of different appearance from those that I have sent.

Breams. Some more green, others more brown.

Suckers. The horned, which I sent first, and the black. I am not sure whether the Common or Boston sucker is found here. Are the three which I sent last, which were

speared in the river, identical with the three black suckers, taken by hand in the brook, which I sent before? I have never examined them minutely.

Perch. The river perch, of which I sent five specimens in the box, are darker colored than those found in the pond. There are myriads of small ones in the latter place, and but few large ones. I have counted ten transverse bands on some of the smaller.

Lampreys. Very scarce since the dams at Lowell and Billerica were built.

Shiners. *Leuciscus chrysoleucas*, silver and golden.

What is the difference?

Roach or Chiverin, *Leuciscus pulchellus*, *argenteus*, or what not. The white and the red. The former described by Storer, but the latter, which deserves distinct notice, not described, to my knowledge. Are the minnows (called here dace), of which I sent three live specimens, I believe, one larger and two smaller, the young of this species?

Trout. Of different appearance in different brooks in this neighborhood.

Eels.

Red-finned Minnows, of which I sent you a dozen alive. I have never recognized them in any books. Have they any scientific name?

If convenient, will you let Dr. Storer see these brook minnows? There is also a kind of dace or fresh-water smelt in the pond, which is, perhaps, distinct from any of the above. What of the above does M. Agassiz particularly wish to see? Does he want more specimens of kinds which I have already sent? There are also minks, muskrats, frogs, lizards, tortoise, snakes, caddice-worms, leeches, muscles, etc., or rather, here they are. The funds which you sent me are nearly exhausted. Most fishes can now be taken with the hook, and it will cost but little trouble or money to obtain them. The snapping turtles will be the main expense. I should think that five dollars more, at least, might be profitably expended.

## TO ELLIOT CABOT (AT BOSTON).

CONCORD, June 1, 1847.

DEAR SIR, — I send you 15 pouts, 17 perch, 13 shiners, 1 larger land tortoise, and 5 muddy tortoises, all from the pond by my house. Also 7 perch, 5 shiners, 8 breams, 4 dace? 2 muddy tortoises, 5 painted do., and 3 land do., all from the river. One black snake, alive, and one dormouse? caught last night in my cellar. The tortoises were all put in alive; the fishes were alive yesterday, i e Monday, and some this morning. Observe the difference between those from the pond, which is pure water, and those from the river.

I will send the light-colored trout and the pickerel with the longer snout, which is our large one, when I meet with them. I have set a price upon the heads of snapping turtles, though it is late in the season to get them.

If I wrote red-finned eel, it was a slip of the pen; I meant red-finned minnow. This is their name here; though smaller specimens have but a slight reddish tinge at the base of the pectorals.

Will you, at your leisure, answer these queries?

Do you mean to say that the twelve banded minnows which I sent are undescribed, or only one? What are the scientific names of those minnows which have any? Are the four dace I send to-day identical with one of the former, and what are they called? Is there such a fish as the black sucker described, — distinct from the common?

## AGASSIZ TO THOREAU (AT CONCORD).

In October, 1849, Agassiz, in reply to a request from Thoreau that he would lecture in Bangor, sent this characteristic letter: —

“I remember with much pleasure the time when you used to send me specimens from your vicinity, and also our short interview in the Marlborough Chapel.<sup>1</sup> I am under too many obligations of your kindness to forget it. I am very sorry that I missed your visit in Boston; but for eighteen months I have now been settled in Cambridge. It would give me great pleasure to engage for the lectures you ask from me for the Bangor Lyceum; but I find it has been last

1 Where Agassiz was giving a course of Lowell lectures.

winter such a heavy tax upon my health, that I wish for the present to make no engagements; as I have some hope of making my living this year by other efforts, — and beyond the necessity of my wants, both domestic and scientific, I am determined not to exert myself; as all the time I can thus secure to myself must be exclusively devoted to science. My only business is my intercourse with nature; and could I do without draughtsmen, lithographers, etc., I would live still more retired. This will satisfy you that whenever you come this way, I shall be delighted to see you, — since I have also heard something of your mode of living.”

Agassiz had reason indeed to remember the collections made by Thoreau, since (from the letters of Mr. Cabot) they aided him much in his comparison of the American with the European fishes. When the first firkin of Concord fish arrived in Boston, where Agassiz was then working, “he was highly delighted, and began immediately to spread them out and arrange them for his draughtsman. Some of the species he had seen before, but never in so fresh condition; others, as the breams and the pout, he had seen only in spirits, and the little tortoise he knew only from the books. I am sure you would have felt fully repaid for your trouble,” adds Mr. Cabot, “if you could have seen the eager satisfaction with which he surveyed each fin and scale.” Agassiz himself wrote the same day: “I have been highly pleased to find that the small mud turtle was really the *Sternotlicterus odoratus*, as I suspected, — a very rare species, quite distinct from the snapping turtle. The suckers were all of one and the same species (*Catostomus tuberculatus*); the female has the tubercles. As I am very anxious to send

some snapping turtles home with my first boxes, I would thank Mr. T. very much if he could have some taken for me.”

Mr. Cabot goes on: “Of the perch Agassiz remarked that it was almost identical with that of Europe, but distinguishable, on close examination, by the tubercles on the sub-operculum... More of the painted tortoises would be acceptable. The snapping turtles are very interesting to him as forming a transition from the turtles proper to the alligator and crocodile... We have received three boxes from you since the first.” (May 27.) “Agassiz was much surprised and pleased at the extent of the collections you sent during his absence in New York. Among the fishes there is one, and probably two, new species. The fresh-water smelt he does not know. He is very anxious to see the pickerel with the long snout, which he suspects may be the *Esox estor*, or Maskalongé; he has seen this at Albany... As to the minks, etc., I know they would all be very acceptable to him. When I asked him about these, and more specimens of what you have sent, he said, ‘I dare not make any request, for I do not know how much trouble I may be giving to Mr. Thoreau; but my method of examination requires many more specimens than most naturalists would care for.’” (June 1.) “Agassiz is delighted to find one, and he thinks two, more new species; one is a *Pomotis*, — the bream without the red spot in the operculum, and with a red belly and fins. The other is the shallower and lighter colored shiner. The four dace you sent last are *Leuciscus argenteus*. They are different from that you sent before under this name, but which was a new species. Of the four kinds of minnow, two are new. There is a black sucker (*Catostomus nigricans*), but there has been no specimen among those you have sent, and A. has never seen a specimen. He seemed to know your mouse, and called it the white-bellied mouse. It was the first specimen he had seen. I am in hopes to bring or send him to Concord, to look after new *Leucisci*, etc.” Agassiz did afterwards come, more than once, and examined turtles with Thoreau.

Soon after this scientific correspondence, Thoreau left his retreat by Walden to take the place of Emerson in his household, while his friend went to visit Carlyle and give lectures in England. The letters that follow are among the longest Thoreau ever composed, and will give a new conception of the writer to those who may have figured him as a cold, stoical, or selfish person, withdrawn from society and its duties. The first describes the setting out of Emerson for Europe.

## TO SOPHIA THOREAU (AT BANGOR).

Concord, October 24, 1847.

DEAR SOPHIA, — I thank you for those letters about Ktaadn, and hope you will save and send me the rest, and anything else you may meet with relating to the Maine woods. That Dr. Young is both young and green too at traveling in the woods. However, I hope he got “yarbs” enough to satisfy him. I went to Boston the 5th of this month to see Mr. Emerson off to Europe. He sailed in the Washington Irving packet

ship; the same in which Mr. [F. II.] Hedge went before him. Up to this trip the first mate aboard this ship was, as I hear, one Stephens, a Concord boy, son of Stephens the carpenter, who used to live above Mr. Dennis's. Mr. Emerson's stateroom was like a carpeted dark closet, about six feet square, with a large keyhole for a window. The window was about as big as a saucer, and the glass two inches thick, not to mention another skylight overhead in the deck, the size of an oblong doughnut, and about as opaque. Of course it would be in vain to look up, if any contemplative promenader put his foot upon it. Such will be his lodgings for two or three weeks; and instead of a walk in Walden woods he will take a promenade on deck, where the few trees, you know, are stripped of their bark. The steam-tug carried the ship to sea against a head wind without a rag of sail being raised.

I don't remember whether you have heard of the new telescope at Cambridge or not. They think it is the best one in the world, and have already seen more than Lord Rosse or Herschel. I went to see Perez Blood's, some time ago, with Mr. Emerson. He had not gone to bed, but was sitting in the woodshed, in the dark, alone, in his astronomical chair, which is all legs and rounds, with a seat which can be inserted at any height. We saw Saturn's rings, and the mountains in the moon, and the shadows in their craters, and the sunlight on the spurs of the mountains in the dark portion, etc., etc. When I asked him the power of his glass, he said it was 85. But what is the power of the Cambridge glass? 2000!!! The last is about twenty-three feet long.

I think you may have a grand time this winter pursuing some study, — keeping a journal, or the like, — while the snow lies deep without. Winter is the time for study, you know, and the colder it is the more studious we are. Give my respects to the whole Penobscot tribe, and tell them that I trust we are good brothers still, and endeavor to keep the chain of friendship bright, though I do dig up a hatchet now and then. I trust you will not stir from your comfortable winter quarters, Miss Bruin, or even put your head out of your hollow tree, till the sun has melted the snow in the spring, and "the green buds, they are a-swellin'."

From your

— BROTHER HENRY.

This letter will explain some of the allusions in the first letter to Emerson in England. Perez Blood was a rural astronomer living in the extreme north quarter of Concord, next to Carlisle, with his two maiden sisters, in the midst of a fine oak wood; their cottage being one of the points in view when Thoreau and his friends took their afternoon rambles. Sophia Thoreau, the younger and soon the only surviving sister, was visiting her cousins in Maine, the "Penobscot tribe" of whom the letter makes mention, with an allusion to the Indians of that name near Bangor. His letter to her and those which follow were written from Emerson's house, where Thoreau lived during the master's absence across the ocean. It was in the orchard of this house that Alcott was building that summer-house at which Thoreau, with his geometrical eye, makes merry in the next letter.

## TO R. W. EMERSON (IN ENGLAND).

CONCORD, November 14, 1847.

DEAR FRIEND, — I am but a poor neighbor to you here, — a very poor companion am I. I understand that very well, but that need not prevent my writing to you now. I have almost never written letters in my life, yet I think I can write as good ones as I frequently see, so I shall not hesitate to write this, such as it may be, knowing that you will welcome anything that reminds you of Concord.

I have banked up the young trees against the winter and the mice, and I will look out, in my careless way, to see when a pale is loose or a nail drops out of its place. The broad gaps, at least, I will occupy. I heartily wish I could be of good service to this household. But I, who have only used these ten digits so long to solve the problem of a living, how can I? The world is a cow that is hard to milk, — life does not come so easy, — and oh, how thinly it is watered ere we get it! But the young bunting calf, he will get at it. There is no way so direct. This is to earn one's living by the sweat of his brow. It is a little like joining a community, this life, to such a hermit as I am; and as I don't keep the accounts, I don't know whether the experiment will succeed or fail finally. At any rate, it is good for society, so I do not regret my transient nor my permanent share in it.

Lidian [Mrs. Emerson] and I make very good housekeepers. She is a very dear sister to me. Ellen and Edith and Eddy and Aunty Brown keep up the tragedy and comedy and tragic-comedy of life as usual. The two former have not forgotten their old acquaintance; even Edith carries a young memory in her head, I find. Eddy can teach us all how to pronounce. If you should discover any rare hoard of wooden or pewter horses, I have no doubt he will know how to appreciate it. He occasionally surveys mankind from my shoulders as wisely as ever Johnson did. I respect him not a little, though it is I that lift him up so unceremoniously. And sometimes I have to set him down again in a hurry, according to his "mere will and good pleasure." He very seriously asked me, the other day, "Mr. Thoreau, will you be my father?" I am occasionally Mr. Rough-and-tumble with him that I may not miss him, and lest he should miss you too much. So you must come back soon, or you will be superseded.

Alcott has heard that I laughed, and so set the people laughing, at his arbor, though I never laughed louder than when I was on the ridgepole. But now I have not laughed for a long time, it is so serious. He is very grave to look at. But, not knowing all this, I strove innocently enough, the other day, to engage his attention to my mathematics. "Did you ever study geometry, the relation of straight lines to curves, the transition from the finite to the infinite? Fine things about it in Newton and Leibnitz." But he would hear none of it, — men of taste preferred the natural curve. Ah, he is a crooked stick himself. He is getting on now so many knots an hour. There is one knot at present occupying the point of highest elevation, — the present highest point; and as many knots as are not handsome, I presume, are thrown down and cast into the pines. Pray show him this if you meet him anywhere in London, for I cannot make

him hear much plainer words here. He forgets that I am neither old nor young, nor anything in particular, and behaves as if I had still some of the animal heat in me. As for the building, I feel a little oppressed when I come near it. It has no great disposition to be beautiful; it is certainly a wonderful structure, on the whole, and the fame of the architect will endure as long as it shall stand. I should not show you this side alone, if I did not suspect that Lidian had done complete justice to the other.

Mr. [Edmund] Hosmer has been working at a tannery in Stow for a fortnight, though he has just now come home sick. It seems that he was a tanner in his youth, and so he has made up his mind a little at last. This conies of reading the New Testament. Wasn't one of the Apostles a tanner? Mrs. Hosmer remains here, and John looks stout enough to fill his own shoes and his father's too.

Mr. Blood and his company have at length seen the stars through the great telescope, and he told me that he thought it was worth the while. Mr. Peirce made him wait till the crowd had dispersed (it was a Saturday evening), and then was quite polite, — conversed with him, and showed him the micrometer, etc.; and he said Mr. Blood's glass was large enough for all ordinary astronomical work. [Rev.] Mr. Frost and Dr. [Josiali] Bartlett seemed disappointed that there was no greater difference between the Cambridge glass and the Concord one. They used only a power of 400. Mr. Blood tells me that he is too old to study the calculus or higher mathematics. At Cambridge they think that they have discovered traces of another satellite to Neptune. They have been obliged to exclude the public altogether, at last. The very dust which they raised, "which is filled with minute crystals," etc., as professors declare, having to be wiped off the glasses, would erelong wear them away. It is true enough, Cambridge college is really beginning to wake up and redeem its character and overtake the age. I see by the catalogue that they are about establishing a scientific school in connection with the university, at which any one above eighteen, on paying one hundred dollars annually (Mr. Lawrence's fifty thousand dollars will probably diminish this sum), may be instructed in the highest branches of science, — in astronomy, "theoretical and practical, with the use of the instruments" (so the great Yankee astronomer may be born without delay), in mechanics and engineering to the last degree. Agassiz will erelong commence his lectures in the zoological department. A chemistry class has already been formed under the direction of Professor Horsford. A new and adequate building for the purpose is already being erected. They have been foolish enough to put at the end of all this earnest the old joke of a diploma. Let every sheep keep but his own skin, I say.

I have had a tragic correspondence, for the most part all on one side, with Miss — . She did really wish to — I hesitate to write — marry me. That is the way they spell it. Of course I did not write a deliberate answer. How could I deliberate upon it? I sent back as distinct a no as I have learned to pronounce after considerable practice, and I trust that this no has succeeded. Indeed, I wished that it might burst, like hollow shot, after it had struck and buried itself and made itself felt there. There was no other way. I really had anticipated no such foe as this in my career.

I suppose you will like to hear of my book, though I have nothing worth writing about it. Indeed, for the last month or two I have forgotten it, but shall certainly remember it again. Wiley & Putnam, Munroe, the Harpers, and Crosby & Nichols have all declined printing it with the least risk to themselves; but Wiley & Putnam will print it in their series, and any of them, anywhere, at my risk. If I liked the book well enough, I should not delay; but for the present I am indifferent. I believe this is, after all, the course you advised, — to let it lie.

I do not know what to say of myself. I sit before my green desk, in the chamber at the head of the stairs, and attend to my thinking, sometimes more, sometimes less distinctly. I am not unwilling to think great thoughts if there are any in the wind, but what they are I am not sure. They suffice to keep me awake while the day lasts, at any rate. Perhaps they will redeem some portion of the night ere long.

I can imagine you astonishing, bewildering, confounding, and sometimes delighting John Bull with your Yankee notions, and that he begins to take a pride in the relationship at last; introduced to all the stars of England in succession, after the lecture, until you pine to thrust your head once more into a genuine and unquestionable nebula, if there be any left. I trust a common man will be the most uncommon to you before you return to these parts. I have thought there was some advantage even in death, by which we “mingle with the herd of common men.”

Hugh [the gardener] still has his eye on the Walden agellum, and orchards are waving there in the windy future for him. That’s the where-I’ll-go-next, thinks he; but no important steps are yet taken. He reminds me occasionally of this open secret of his, with which the very season seems to labor, and affirms seriously that as to his wants — wood, stone, or timber — I know better than he. That is a clincher which I shall have to avoid to some extent; but I fear that it is a wrought nail and will not break. Unfortunately, the day after cattle show — the day after small beer — he was among the missing, but not long this time. The Ethiopian cannot change his skin nor the leopard his spots, nor indeed Hugh — his Hugh.

As I walked over Conantum, the other afternoon, I saw a fair column of smoke rising from the woods directly over my house that was (as I judged), and already began to conjecture if my deed of sale would not be made invalid by this. But it turned out to be John Richardson’s young wood, on the southeast of your field. It was burnt nearly all over, and up to the rails and the road. It was set on fire, no doubt, by the same Lucifer that lighted Brooks’s lot before. So you see that your small lot is comparatively safe for this season, the back fire having been already set for you.

They have been choosing between John Keyes and Sam Staples, if the world wants to know it, as representative of this town, and Staples is chosen. The candidates for governor — think of my writing this to you! — were Governor Briggs and General Cushing, and Briggs is elected, though the Democrats have gained. Ain’t I a brave boy to know so much of politics for the nonce? But I shouldn’t have known it if Coombs hadn’t told me. They have had a peace meeting here, — I shouldn’t think of telling you if I didn’t know anything would do for the English market, — and some men,

Deacon Brown at the head, have signed a long pledge, swearing that they will “treat all mankind as brothers henceforth.” I think I shall wait and see how they treat me first. I think that Nature meant kindly when she made our brothers few. However, my voice is still for peace. So good-by, and a truce to all joking, my dear friend, from

H. D. T.

Upon this letter some annotations are to be made. “Eddy” was Emerson’s youngest child, Edward Waldo, then three years old and upward, — of late years his father’s biographer. Hugh, the gardener, of whom more anon, bargained for the house of Thoreau on Emerson’s land at Walden, and for a field to go with it; but the bargain came to naught, and the cabin was removed three or four miles to the northwest, where it became a granary for Farmer Clark and his squirrels, near the entrance to the park known as Estabrook’s. Edmund Hosmer was the farming friend and neighbor with whom, at one time, G. W. Curtis and his brother took lodgings, and at another time the Alcott family. The book in question was “A Week on the Concord and Merrimack Rivers.”

To these letters Emerson replied from England: —

DEAR HENRY, — Yery welcome in the parcel was your letter, very precious your thoughts and tidings. It is one of the best things connected with my coming hither that you could and would keep the homestead; that fireplace shines all the brighter, and has a certain permanent glimmer therefor. Thanks, ever more thanks for the kindness which I well discern to the youth of the house: to my darling little horseman of pewter, wooden, rocking, and what other breeds, 3 — destined, I hope, to ride Pegasus yet, and, I hope, not destined to be thrown; to Edith, who long ago drew from you verses which I carefully preserve; and to Ellen, whom by speech, and now by letter, I find old enough to be companionable, and to choose and reward her own friends in her own fashions. She sends me a poem to-day, which I have read three times!

## TO R. W. EMERSON (IN ENGLAND).

CONCORD, December 15, 1847.

DEAR FRIEND, — You are not so far off but the affairs of this world still attract you. Perhaps it will be so when we are dead. Then look out. Joshua R. Holman, of Harvard, who says he lived a month with [Charles] Lane at Fruitlands, wishes to HIRE said Lane’s farm for one or more years, and will pay \$125 rent, taking out of the same a half, if necessary, for repairs, — as for a new bank-wall to the barn cellar, which he says is indispensable. Palmer is gone, Mrs. Palmer is going. This is all that is known or that is worth knowing. Yes or no? What to do?

Hugh’s plot begins to thicken. He starts thus: eighty dollars on one side; Walden, field and house, on the other. How to bring these together so as to make a garden and a palace?

House \$80 ——— Field — [house 1st, let \$10 go over to unite the two lots.

\$70

\$6 for Wetherbee's rocks to found your. — . palace on. —

\$64

\$64 — so far, indeed, we have already got.

\$4 to bring the rocks to the field.

\$60

Save \$20 by all means, to measure the field, and you have left \$40 to complete the palace, build cellar, and dig well. Build the cellar yourself, and let well alone, — and now how does it stand?

\$40 to complete the palace somewhat like this. —

For when one asks, "Why do you want twice as much room more?" the reply is, "Parlor, kitchen, and bedroom, — these make the palace."

"Well, Hugh, what will you do? Here are forty dollars to buy a new house, twelve feet by twenty-five, and add it to the old."

"Well, Mr. Thoreau, as I tell you, I know no more than a child about it. It shall be just as you say."

"Then build it yourself, get it roofed, and get in.

"Commence at one end and leave it half done,

And let time finish what money's begun."

So you see we have forty dollars for a nest egg; sitting on which, Hugh and I alternately and simultaneously, there may in course of time be hatched a house that will long stand, and perchance even lay fresh eggs one day for its owner; that is, if, when he returns, he gives the young chick twenty dollars or more in addition, by way of "swichin," to give it a start in the world.

The "Massachusetts Quarterly Review" came out the 1st of December, but it does not seem to be making a sensation, at least not hereabouts. I know of none in Concord who take or have seen it yet.

We wish to get by all possible means some notion of your success or failure in England, — more than your two letters have furnished. Can't you send a fair sample both of young and of old England's criticism, if there is any printed? Alcott and [Ellery] Channing are equally greedy with myself.

HENRY THOREAU.

C. T. Jackson takes the Quarterly (new one), and will lend it to us. Are you not going to send your wife some news of your good or ill success by the newspapers?

## TO R. W. EMERSON (IN ENGLAND).

CONCORD, December 29, 1847.

My dear Friend, — I thank you for your letter. I was very glad to get it; and I am glad again to write to you. However slow the steamer, no time intervenes between the writing and the reading of thoughts, but they come freshly to the most distant port. I

am here still, and very glad to be here, and shall not trouble you with any complaints because I do not fill my place better. I have had many good hours in the chamber at the head of the stairs, — a solid time, it seems to me. Next week I am going to give an account to the Lyceum of my expedition to Maine. Theodore Parker lectures to-night. We have had Whipple on Genius, — too weighty a subject for him, with his antithetical definitions new-vamped, — what it is, what it is not, but altogether what it is not; cuffing it this way and cuffing it that, as if it were an India-rubber ball. Really, it is a subject which should expand, expand, accumulate itself before the speaker's eyes as he goes on, like the snowballs which the boys roll in the street; and when it stops, it should be so large that he cannot start it, but must leave it there. [H. N.] Hudson, too, has been here, with a dark shadow in the core of him, and his desperate wit, so much indebted to the surface of him, — wringing out his words and snapping them off like a dish-cloth; very remarkable, but not memorable. Singular that these two best lecturers should have so much "wave" in their timber, — their solid parts to be made and kept solid by shrinkage and contraction of the whole, with consequent checks and fissures.

Ellen and I have a good understanding. I appreciate her genuineness. Edith tells me after her fashion: "By and by I shall grow up and be a woman, and then I shall remember how you exercised me." Eddy has been to Boston to Christmas, but can remember nothing but the coaches, all Kendall's coaches. There is no variety of that vehicle that he is not familiar with. He did try twice to tell us something else, but, after thinking and stuttering a long time, said, "I don't know what the word is," — the one word, forsooth, that would have disposed of all that Boston phenomenon. If you did not know him better than I, I could tell you more. He is a good companion for me, and I am glad that we are all natives of Concord. It is young Concord. Look out, World!

Mr. Alcott seems to have sat down for the winter. He has got Plato and other books to read. He is as large-featured and hospitable to traveling thoughts and thinkers as ever; but with the same Connecticut philosophy as ever, mingled with what is better. If he would only stand upright and toe the line! — though he were to put off several degrees of largeness, and put on a considerable degree of littleness. After all, I think we must call him particularly your man.

I have pleasant walks and talks with Channing. James Clark — the Swedenborgian that was — is at the poorhouse, insane with too large views, so that he cannot support himself. I see him working with Fred and the rest. Better than be there and not insane. It is strange that they will make ado when a man's body is buried, but not when he thus really and tragically dies, or seems to die. Away with your funeral processions, — into the ballroom with them! I hear the bell toll hourly over there.<sup>1</sup>

Lidian and I have a standing quarrel as to what is a suitable state of preparedness for a traveling professor's visit, or for whomsoever else; but further than this we are not at war. We have made up a dinner, we have made up a bed, we have made up a party, and our own minds and mouths, three several times for your professor, and

he came not. Three several turkeys have died the death, which I myself carved, just as if he had been there; and the company, too, convened and demeaned themselves accordingly. Everything was done up in good style, I assure you, with only the part of the professor omitted. To have seen the preparation (though Lidian says it was nothing extraordinary) I should certainly have said he was a-coming, but he did not. He must have found out some shorter way to Turkey, — some overland route, I think. By the way, he was complimented, at the conclusion of his course in Boston, by the mayor moving the appointment of a committee to draw up resolutions expressive, etc., which was done.

I have made a few verses lately. Here are some, though perhaps not the best, — at any rate

1 The town almshouse was across the field from the Emerson house.

they are the shortest, — on that universal theme, yours as well as mine, and several other people's: —

The good how can we trust!

Only the wise are just.

The good, we use,

The wise we cannot choose; These there are none above.

The good, they know and love,

But are not known again By those of lesser ken.

They do not choose us with their eyes,

But they transfix with their advice;

No partial sympathy they feel With private woe or private weal,

But with the universe joy and sigh,

Whose knowledge is their sympathy.

Good-night. — HENRY THOREAU.

P. S. — I am sorry to send such a medley as this to you. I have forwarded Lane's "Dial" to Munroe, and he tells the expressman that all is right.

## TO R. W. EMERSON (IN ENGLAND).

CONCORD, January 12, 1848.

It is hard to believe that England is so near as from your letters it appears; and that this identical piece of paper has lately come all the way from there hither, begrimed with the English dust which made you hesitate to use it; from England, which is only historical fairyland to me, to America, which I have put my spade into, and about which there is no doubt.

I thought that you needed to be informed of Hugh's progress. He has moved his house, as I told you, and dug his cellar, and purchased stone of Sol Wetherbee for the last, though he has not hauled it; all which has cost sixteen dollars, which I have paid. He has also, as next in order, run away from Concord without a penny in his

pocket, "crying" by the way, — having had another long difference with strong beer, and a first one, I suppose, with his wife, who seems to have complained that he sought other society; the one difference leading to the other, perhaps, but I don't know which was the leader. He writes back to his wife from Sterling, near Worcester, where he is chopping wood, his distantly kind reproaches to her, which I read straight through to her (not to his bottle, which he has with him, and no doubt addresses orally). He says that he will go on to the South in the spring, and will never return to Concord. Perhaps he will not. Life is not tragic enough for him, and he must try to cook up a more highly seasoned dish for himself. Towns which keep a barroom and a gun-house and a reading-room, should also keep a steep precipice whereoff impatient soldiers may jump. His sun went down, to me, bright and steady enough in the west, but it never came up in the east. Night intervened. He departed, as when a man dies suddenly; and perhaps wisely, if he was to go, without settling his affairs. They knew that that was a thin soil and not well calculated for pears. Nature is rare and sensitive on the score of nurseries. You may cut down orchards and grow forests at your pleasure. Sand watered with strong beer, though stirred with industry, will not produce grapes. He dug his cellar for the new part too near the old house, Irish like, though I warned him, and it has caved and let one end of the house down. Such is the state of his domestic affairs. I laugh with the Parcæ only. He had got the upland and the orchard and a part of the meadow ploughed by Warren, at an expense of eight dollars, still unpaid, which of course is no affair of yours.

I think that if an honest and small-familied man, who has no affinity for moisture in him, but who has an affinity for sand, can be found, it would be safe to rent him the shanty as it is, and the land; or you can very easily and simply let nature keep them still, without great loss. It may be so managed, perhaps, as to be a home for somebody, who shall in return serve you as fencing stuff, and to fix and locate your lot, as we plant a tree in the sand or on the edge of a stream; without expense to you in the mean while, and without disturbing its possible future value.

I read a part of the story of my excursion to Ktaadn to quite a large audience of men and boys, the other night, whom it interested. It contains many facts and some poetry. I have also written what will do for a lecture on "Friendship."

I think that the article on you in Blackwood's is a good deal to get from the reviewers, — the first purely literary notice, as I remember. The writer is far enough off, in every sense, to speak with a certain authority. It is a better judgment of posterity than the public had. It is singular how sure he is to be mystified by any uncommon sense. But it was generous to put Plato into the list of mystics. His confessions on this subject suggest several thoughts, which I have not room to express here. The old word seer, — I wonder what the reviewer thinks that means; whether that he was a man who could see more than himself.

I was struck by Ellen's asking me, yesterday, while I was talking with Mrs. Brown, if I did not use "colored words." She said that she could tell the color of a great many words, and amused the children at school by so doing. Eddy climbed up the sofa, the

other day, of his own accord, and kissed the picture of his father, 4— “right on his shirt, I did.”

I had a good talk with Alcott this afternoon. He is certainly the youngest man of his age we have seen, — just on the threshold of life. When I looked at his gray hairs, his conversation sounded pathetic; but I looked again, and they reminded me of the gray dawn. He is getting better acquainted with Channing, though he says that, if they were to live in the same house, they would soon sit with their backs to each other.

You must excuse me if I do not write with sufficient directness to yourself, who are a far-off traveler. It is a little like shooting on the wing, I confess.

Farewell. — HENRY THOREAU.

## TO R. W. EMERSON (IN ENGLAND).

CONCORD, February 23, 1848.

DEAR WALDO, — For I think I have heard that that is your name, — my letter which was put last into the leathern bag arrived first. Whatever I may call you, I know you better than I know your name, and what becomes of the fittest name if in any sense you are here with him who calls, and not there simply to be called?

I believe I never thanked you for your lectures, one and all, which I heard formerly read here in Concord. I know I never have. There was some excellent reason each time why I did not; but it will never be too late. I have that advantage, at least, over you in my education.

Lidian is too unwell to write to you; so I must tell you what I can about the children and herself. I am afraid she has not told you how unwell she is, — or to-day perhaps we may say has been. She has been confined to her chamber four or five weeks, and three or four weeks, at least, to her bed, with the jaundice. The doctor, who comes once a day, does not let her read (nor can she now) nor hear much reading. She has written her letters to you, till recently, sitting up in bed, but he said he would not come again if she did so. She has Abby and Almira to take care of her, and Mrs. Brown to read to her; and I also, occasionally, have something to read or to say. The doctor says she must not expect to “take any comfort of her life” for a week or two yet. She wishes me to say that she has written two long and full letters to you about the household economies, etc., which she hopes have not been delayed. The children are quite well and full of spirits, and are going through a regular course of picture-seeing, with commentary by me, every evening, for Eddy’s behoof. All the Annuals and “Diadems” are in requisition, and Eddy is forward to exclaim, when the hour arrives, “Now for the demdems!” I overheard this dialogue when Frank [Brown] came down to breakfast the other morning.

Eddy. “Why, Frank, I am astonished that you should leave your boots in the dining-room.” Frank. “I guess you mean surprised, don’t you?”

Eddy. “No, boots!”

“If Waldo were here,” said he, the other night, at bedtime, “we’d be four going upstairs.” Would he like to tell papa anything? No, not anything; but finally, yes, he would, 5 — that one of the white horses in his new barouche is broken! Ellen and Edith will perhaps speak for themselves, as I hear something about letters to be written by them.

Mr. Alcott seems to be reading well this winter: Plato, Montaigne, Ben Jonson, Beaumont and Fletcher, Sir Thomas Browne, etc., etc. “I believe I have read them all now, or nearly all,” — those English authors. He is rallying for another foray with his pen, in his latter years, not discouraged by the past, into that crowd of unexpressed ideas of his, that undisciplined Parthian army, which, as soon as a Roman soldier would face, retreats on all hands, occasionally firing backwards; easily routed, not easily subdued, hovering on the skirts of society. Another summer shall not be devoted to the raising of vegetables (Arbors?) which rot in the cellar for want of consumers; but perchance to the arrangement of the material, the brain-crop which the winter has furnished. I have good talks with him. His respect for Carlyle has been steadily increasing for some time. He has read him with new sympathy and appreciation.

I see Channing often. He also goes often to Alcott’s, and confesses that he has made a discovery in him, and gives vent to his admiration or his confusion in characteristic exaggeration; but between this extreme and that you may get a fair report, and draw an inference if you can. Sometimes he will ride a broomstick still, though there is nothing to keep him, or it, up but a certain centrifugal force of whim, which is soon spent, and there lies your stick, not worth picking up to sweep an oven with now. His accustomed path is strewn with them. But then again, and perhaps for the most part, he sits on the Cliffs amid the lichens, or flits past on noiseless pinion, like the barred owl in the daytime, as wise and unobserved. He brought me a poem the other day, for me, on Walden Hermitage: not remarkable.

Lectures begin to multiply on my desk. I have one on Friendship which is new, and the materials of some others. I read one last week to the Lyceum, on The Rights and Duties of the Individual in Relation to Government, — much to Mr. Alcott’s satisfaction.

Joel Britton has failed and gone into chancery, but the woods continue to fall before the axes of other men. Neighbor Coombs was lately found dead in the woods near Goose Pond, with his half-empty jug, after he had been rioting a week. Hugh, by the last accounts, was still in Worcester County. Mr. Hosmer, who is himself again, and living in Concord, has just hauled the rest of your wood, amounting to about ten and a half cords.

The newspapers say that they have printed a pirated edition of your Essays in England. Is it as bad as they say, and undisguised and unmitigated piracy? I thought that the printed scrap would entertain Carlyle, notwithstanding its history. If this generation will see out of its hind-head, why then you may turn your back on its forehead. Will you forward it to him for me?

This stands written in your day-book: "September 3d. Received of Boston Savings Bank, on account of Charles Lane, his deposit with interest, \$131.38. 16th. Received of Joseph Palmer, on account of Charles Lane, three hundred twenty-three 36/100 dollars, being the balance of a note on demand for four hundred dollars, with interest, \$323.36."

If you have any directions to give about the trees, you must not forget that spring will soon be upon us.

Farewell. From your friend,  
HENRY THOREAU.

Before a reply came to this letter, Thoreau had occasion to write to Mr. Elliot Cabot again. The allusions to the "Week" and to the Walden house are interesting.

## TO ELLIOT CABOT.

CONCORD, March 8, 1848.

Dear Sir, — Mr. Emerson's address is as yet, "R. W. Emerson, care of Alexander Ireland, Esq., Examiner Office, Manchester, England." We had a letter from him on Monday, dated at Manchester, February 10, and he was then preparing to go to Edinburgh the next day, where he was to lecture. He thought that he should get through his northern journeying by the 25th of February, and go to London to spend March and April, and if he did not go to Paris in May, then come home. He has been eminently successful, though the papers this side of the water have been so silent about his adventures.

My book, fortunately, did not find a publisher ready to undertake it, and you can imagine the effect of delay on an author's estimate of his own work. However, I like it well enough to mend it, and shall look at it again directly when I have dispatched some other things.

I have been writing lectures for our own Lyceum this winter, mainly for my own pleasure and advantage. I esteem it a rare happiness to be able to write anything, but there (if I ever get there) my concern for it is apt to end. Time & Co are, after all, the only quite honest and trustworthy publishers that we know. I can sympathize, perhaps, with the barberry bush, whose business it is solely to ripen its fruit (though that may not be to sweeten it) and to protect it with thorns, so that it holds on all winter, even, unless some hungry crows come to pluck it. But I see that I must get a few dollars together presently to manure my roots. Is your journal able to pay anything, provided it likes an article well enough? I do not promise one. At any rate, I mean always to spend only words enough to purchase silence with; and I have found that this, which is so valuable, though many writers do not prize it, does not cost much, after all.

I have not obtained any more of the mice which I told you were so numerous in my cellar, as my house was removed immediately after I saw you, and I have been living in the village since.

However, if I should happen to meet with anything rare, I will forward it to you. I thank you for your kind offers, and will avail myself of them so far as to ask if you can anywhere borrow for me for a short time the copy of the "Revue des Deux Mondes," containing a notice of Mr. Emerson. I should like well to read it, and to read it to Mrs. Emerson and others. If this book is not easy to be obtained, do not by any means trouble yourself about it.

## TO R. W. EMERSON.1

CONCORD, March 23, 1848.

DEAR FRIEND, — Lidian says I must write a sentence about the children. Eddy says he cannot sing,— "not till mother is a-going to be well." We shall hear his voice very soon, in that case, I trust. Ellen is already thinking what will be done when you come home; but then she thinks it will be some loss that I shall go away. Edith says that I shall come and see them, and always at tea-time, so that I can play with her. Ellen thinks she likes father best because he jumps her sometimes. This is the latest news from

Yours, etc., — HENRY.

P. S. — I have received three newspapers from you duly which I have not acknowledged. There is an anti-Sabbath convention held in Boston to-day, to which Alcott has gone.

That friend to whom Thoreau wrote most constantly and fully, on all topics, was Mr. Harrison Blake of Worcester, a graduate of Harvard two years earlier than Thoreau, in the same

1 This letter was addressed, "R. Waldo Emerson, care of Alexander Ireland, Esq., Manchester, England, via New York and Steamer Cambria, March 25." It was mailed in Boston, March 24, and received in Manchester, April 19.

class with two other young men from Concord, 6 — E. R. Hoar and H. B. Dennis. This circumstance may have led to Mr. Blake's visiting the town occasionally, before his intimacy with its poet-naturalist began, in the year 1848. At that time, as Thoreau wrote to Horace Greeley, he had been supporting himself for five years wholly by the labor of his hands; his Walden hermit-life was over, yet neither its record nor the first book had been published, and Thoreau was known in literature chiefly by his papers in the "Dial," which had then ceased for four years. In March, 1848, Mr. Blake read Thoreau's chapter on Persius in the "Dial" for July, 1840, — and though he had read it before, without being much impressed by it, he now found in it "pure depth and solidity of thought."

"It has revived in me," he wrote to Thoreau, "a haunting impression of you, which I carried away from some spoken words of yours... When I was last in Concord, you spoke of retiring farther from our civilization. I asked you if you would feel no longings for the society of your friends. Your reply was in substance, 'No, I am nothing.' That reply

was memorable to me. It indicated a depth of resources, a completeness of renunciation, a poise and repose in the universe, which to me is almost inconceivable; which in you seemed domesticated, and to which I look up with veneration. I would know of that soul which can say ‘ am nothing.’ I would be roused by its words to a truer and purer life. Upon me seems to be dawning with new significance the idea that God is here; that we have but to bow before Him in profound submission at every moment, and He will fill our souls with his presence. In this opening of the soul to God, all duties seem to centre; what else have we to do?... If I understand rightly the significance of your life, this is it: You would sunder yourself from society, from the spell of institutions, customs, conventionalities, that you may lead a fresh, simple life with God. Instead of breathing a new life into the old forms, you would have a new life without and within. There is something sublime to me in this attitude, — far as I may be from it myself... Speak to me in this hour as you are prompted... I honor you because you abstain from action, and open your soul that you may be somewhat. Amid a world of noisy, shallow actors it is noble to stand aside and say, ‘I will simply be.’ Could I plant myself at once upon the truth, reducing my wants to their minimum,... I should at once be brought nearer to nature, nearer to my fellow-men, — and life would be infinitely richer. But, alas! I shiver on the brink.”

Thus appealed to by one who had so well attained the true Transcendental shibboleth,— “God working in us, both to will and to do,” — Thoreau could not fail to make answer, as he did at once, and thus: —

## **TO HARRISON BLAKE (AT WORCESTER).**

[The first of many letters.]

CONCORD, March 27, 1848.

I am glad to hear that any words of mine, though spoken so long ago that I can hardly claim identity with their author, have reached you. It gives me pleasure, because I have therefore reason to suppose that I have uttered what concerns men, and that it is not in vain that man speaks to man. This is the value of literature. Yet those days are so distant, in every sense, that I have had to look at that page again, to learn what was the tenor of my thoughts then. I should value that article, however, if only because it was the occasion of your letter.

I do believe that the outward and the inward life correspond; that if any should succeed to live a higher life, others would not know of it; that difference and distance are one. To set about living a true life is to go a journey to a distant country, gradually to find ourselves surrounded by new scenes and men; and as long as the old are around me, I know that I am not in any true sense living a new or a better life. The outward is only the outside of that which is within. Men are not concealed under habits, but are revealed by them; they are their true clothes. I care not how curious a reason they may give for their abiding by them. Circumstances are not rigid and unyielding, but

our habits are rigid. We are apt to speak vaguely sometimes, as if a divine life were to be grafted on to or built over this present as a suitable foundation. This might do if we could so build over our old life as to exclude from it all the warmth of our affection, and addle it, as the thrush builds over the cuckoo's egg, and lays her own atop, and hatches that only; but the fact is, we — so there is the partition — hatch them both, and the cuckoo's always by a day first, and that young bird crowds the young thrushes out of the nest. No. Destroy the cuckoo's egg, or build a new nest.

Change is change. No new life occupies the old bodies; — they decay. It is born, and grows, and flourishes. Men very pathetically inform the old, accept and wear it. Why put up with the almshouse when you may go to heaven? It is embalming, — no more. Let alone your ointments and your linen swathes, and go into an infant's body. You see in the catacombs of Egypt the result of that experiment, — that is the end of it.

I do believe in simplicity. It is astonishing as well as sad, how many trivial affairs even the wisest man thinks he must attend to in a day; how singular an affair he thinks he must omit. When the mathematician would solve a difficult problem, he first frees the equation of all incumbrances, and reduces it to its simplest terms. So simplify the problem of life, distinguish the necessary and the real. Probe the earth to see where your main roots run. I would stand upon facts. Why not see, — use our eyes? Do men know nothing? I know many men who, in common things, are not to be deceived; who trust no moonshine; who count their money correctly, and know how to invest it; who are said to be prudent and knowing, who yet will stand at a desk the greater part of their lives, as cashiers in banks, and glimmer and rust and finally go out there. If they know anything, what under the sun do they do that for? Do they know what bread is? or what it is for? Do they know what life is? If they knew something, the places which know them now would know them no more forever.

This, our respectable daily life, in which the man of common sense, the Englishman of the world, stands so squarely, and on which our institutions are founded, is in fact the veriest illusion, and will vanish like the baseless fabric of a vision; but that faint glimmer of reality which sometimes illuminates the darkness of daylight for all men, reveals something more solid and enduring than adamant, which is in fact the cornerstone of the world.

Men cannot conceive of a state of things so fair that it cannot be realized. Can any man honestly consult his experience and say that it is so? Have we any facts to appeal to when we say that our dreams are premature? Did you ever hear of a man who had striven all his life faithfully and singly toward an object and in no measure obtained it? If a man constantly aspires, is he not elevated? Did ever a man try heroism, magnanimity, truth, sincerity, and find that there was no advantage in them? that it was a vain endeavor? Of course we do not expect that our paradise will be a garden. We know not what we ask. To look at literature; 7 — how many fine thoughts has every man had! how few fine thoughts are expressed! Yet we never have a fantasy so subtle and ethereal, but that talent merely, with more resolution and faithful persistency,

after a thousand failures, might fix and engrave it in distinct and enduring words, and we should see that our dreams are the solidest facts that we know. But I speak not of dreams.

What can be expressed in words can be expressed in life.

My actual life is a fact, in view of which I have no occasion to congratulate myself; but for my faith and aspiration I have respect. It is from these that I speak. Every man's position is in fact too simple to be described. I have sworn no oath. I have no designs on society, or nature, or God. I am simply what I am, or I begin to be that. I live in the present. I only remember the past, and anticipate the future. I love to live. I love reform better than its modes. There is no history of how bad became better. I believe something, and there is nothing else but that. I know that I am. I know that another is who knows more than I, who takes interest in me, whose creature, and yet whose kindred, in one sense, am I. I know that the enterprise is worthy. I know that things work well. I have heard no bad news.

As for positions, combinations, and details, — what are they? In clear weather, when we look into the heavens, what do we see but the sky and the sun?

If you would convince a man that he does wrong, do right. But do not care to convince him. Men will believe what they see. Let them see.

Pursue, keep up with, circle round and round your life, as a dog does his master's chaise. Do what you love. Know your own bone; gnaw at it, bury it, unearth it, and gnaw it still. Do not be too moral. You may cheat yourself out of much life so. Aim above morality. Be not simply good; be good for something. All fables, indeed, have their morals; but the innocent enjoy the story. Let nothing come between you and the light. Respect men and brothers only. When you travel to the Celestial City, carry no letter of introduction. When you knock, ask to see God, — none of the servants. In what concerns you much, do not think that you have companions: know that you are alone in the world.

Thus I write at random. I need to see you, and I trust I shall, to correct my mistakes. Perhaps you have some oracles for me.

HENRY THOREAU.

## **TO HARRISON BLAKE (AT WORCESTER).**

CONCORD, May 2, 1848.

“We must have our bread.” But what is our bread? Is it baker's bread? Methinks it should be very home-made bread. What is our meat? Is it butcher's meat? What is that which we must have? Is that bread which we are now earning sweet? Is it not bread which has been suffered to sour, and then been sweetened with an alkali, which has undergone the vinous, acetous, and sometimes the putrid fermentation, and then been whitened with vitriol? Is this the bread which we must have? Man must earn his bread by the sweat of his brow, truly, but also by the sweat of his brain within his

brow. The body can feed the body only. I have tasted but little bread in my life. It has been mere grub and provender for the most part. Of bread that nourished the brain and the heart, scarcely any. There is absolutely none even on the tables of the rich.

There is not one kind of food for all men. You must and you will feed those faculties which you exercise. The laborer whose body is weary does not require the same food with the scholar whose brain is weary. Men should not labor foolishly like brutes, but the brain and the body should always, or as much as possible, work and rest together, and then the work will be of such a kind that when the body is hungry the brain will be hungry also, and the same food will suffice for both; otherwise the food which repairs the waste energy of the over-wrought body will oppress the sedentary brain, and the degenerate scholar will come to esteem all food vulgar, and all getting a living drudgery.

How shall we earn our bread is a grave question; yet it is a sweet and inviting question. Let us not shirk it, as is usually done. It is the most important and practical question which is put to man. Let us not answer it hastily. Let us not be content to get our bread in some gross, careless, and hasty manner. Some men go a-hunting, some a-fishing, some a-gaming, some to war; but none have so pleasant a time as they who in earnest seek to earn their bread. It is true actually as it is true really; it is true materially as it is true spiritually, that they who seek honestly and sincerely, with all their hearts and lives and strength, to earn their bread, do earn it, and it is sure to be very sweet to them. A very little bread, — a very few crumbs are enough, if it be of the right quality, for it is infinitely nutritious. Let each man, then, earn at least a crumb of bread for his body before he dies, and know the taste of it, — that it is identical with the bread of life, and that they both go down at one swallow.

Our bread need not ever be sour or hard to digest. What Nature is to the mind she is also to the body. As she feeds my imagination, she will feed my body; for what she says she means, and is ready to do. She is not simply beautiful to the poet's eye. Not only the rainbow and sunset are beautiful, but to be fed and clothed, sheltered and warmed aright, are equally beautiful and inspiring. There is not necessarily any gross and ugly fact which may not be eradicated from the life of man. We should endeavor practically in our lives to correct all the defects which our imagination detects. The heavens are as deep as our aspirations are high. So high as a tree aspires to grow, so high it will find an atmosphere suited to it. Every man should stand for a force which is perfectly irresistible. How can any man be weak who dares to be at all? Even the tenderest plants force their way up through the hardest earth, and the crevices of rocks; but a man no material power can resist. What a wedge, what a beetle, what a catapult, is an earnest man! What can resist him?

It is a momentous fact that a man may be good, or he may be bad; his life may be true, or it may be false; it may be either a shame or a glory to him. The good man builds himself up; the bad man destroys himself.

But whatever we do we must do confidently (if we are timid, let us, then, act timidly), not expecting more light, but having light enough. If we confidently expect

more, then let us wait for it. But what is this which we have? Have we not already waited? Is this the beginning of time? Is there a man who does not see clearly beyond, though only a hair's breadth beyond where he at any time stands?

If one hesitates in his path, let him not proceed. Let him respect his doubts, for doubts, too, may have some divinity in them. That we have but little faith is not sad, but that we have but little faithfulness. By faithfulness faith is earned. When, in the progress of a life, a man swerves, though only by an angle infinitely small, from his proper and allotted path (and this is never done quite unconsciously even at first; in fact, that was his broad and scarlet sin, — ah, he knew of it more than he can tell), then the drama of his life turns to tragedy, and makes haste to its fifth act. When once we thus fall behind ourselves, there is no accounting for the obstacles which rise up in our path, and no one is so wise as to advise, and no one so powerful as to aid us while we abide on that ground. Such are cursed with duties, and the neglect of their duties. For such the decalogue was made, and other far more voluminous and terrible codes.

These departures, — who have not made them?

8 — for they are as faint as the parallax of a fixed star, and at the commencement we say they are nothing, — that is, they originate in a kind of sleep and forgetfulness of the soul when it is naught. A man cannot be too circumspect in order to keep in the straight road, and be sure that he sees all that he may at any time see, that so he may distinguish his true path.

You ask if there is no doctrine of sorrow in my philosophy. Of acute sorrow I suppose that I know comparatively little. My saddest and most genuine sorrows are apt to be but transient regrets. The place of sorrow is supplied, perchance, by a certain hard and proportionably barren indifference. I am of kin to the sod, and partake largely of its dull patience, — in winter expecting the sun of spring. In my cheapest moments I am apt to think that it is not my business to be “seeking the spirit,” but as much its business to be seeking me. I know very well what Goethe meant when he said that he never had a chagrin but he made a poem out of it. I have altogether too much patience of this kind. I am too easily contented with a slight and almost animal happiness. My happiness is a good deal like that of the woodchucks.

Methinks I am never quite committed, never wholly the creature of my moods, being always to some extent their critic. My only integral experience is in my vision. I see, perchance, with more integrity than I feel.

But I need not tell you what manner of man I am, — my virtues or my vices. You can guess if it is worth the while; and I do not discriminate them well.

I do not write this time at my hut in the woods. I am at present living with Mrs. Emerson, whose house is an old home of mine, for company during Mr. Emerson's absence.

You will perceive that I am as often talking to myself, perhaps, as speaking to you.

Here is a confession of faith, and a bit of self-portraiture worth having; for there is little except faithful statement of the fact. Its sentences are based on the questions and experiences of his correspondent; yet they diverge into that atmosphere of humor

and hyperbole so native to Thoreau; in whom was the oddest mixture of the serious and the comic, the literal and the romantic. He addressed himself also, so far as his unbending personality would allow, to the mood or the need of his correspondent; and he had great skill in fathoming character and describing in a few touches the persons he encountered; as may be seen in his letters to Emerson, especially, who also had, and in still greater measure, this "fatal gift of penetration," as he once termed it. This will be seen in the contrast of Thoreau's correspondence with Mr. Blake, and that he was holding at the same time with Horace Greeley, — persons radically unlike.

In August, 1846, Thoreau sent to Greeley his essay on Carlyle, asking him to find a place for it in some magazine. Greeley sent it to R. W. Griswold, then editing "Graham's Magazine" in Philadelphia, who accepted it and promised to pay for it, but did not publish it till March and April, 1847; even then the promised payment was not forthcoming. On the 31st of March, 1848, a year and a half after it had been put in Griswold's possession, Thoreau wrote again to Greeley, saying that no money had come to hand. At once, and at the very time when Mr. Blake was opening his spiritual state to Thoreau (April 3, 1848), the busy editor of the "Tribune" replied: "It saddens and surprises me to know that your article was not paid for by Graham; and, since my honor is involved, I will see that you are paid, and that at no distant day." Accordingly, on May 17th, he adds: "To-day I have been able to lay my hand on the money due you. I made out a regular bill for the contribution, drew a draft on G. R. Graham for the amount, gave it to his brother in New York for collection, and received the money. I have made Graham pay you seventy-five dollars, but I only send you fifty dollars," having deducted twenty-five dollars for the advance of that sum he had made a month before to Thoreau for his "Ktaadn and the Maine Woods," which finally came out in "Sartain's Union Magazine" of Philadelphia, late in 1848. To this letter and remittance of fifty dollars Thoreau replied, May 19, 1848, substantially thus: —

## TO HORACE GREELEY (AT NEW YORK).

CONCORD, May 19, 1848.

My Friend Greeley, — I have to-day received from you fifty dollars. It is five years that I have been maintaining myself entirely by manual labor, — not getting a cent from any other quarter or employment. Now this toil has occupied so few days, — perhaps a single month, spring and fall each, — that I must have had more leisure than any of my brethren for study and literature. I have done rude work of all kinds. From July, 1845, to September, 1847, I lived by myself in the forest, in a fairly good cabin, plastered and warmly covered, which I built myself. There I earned all I needed and kept to my own affairs. During that time my weekly outlay was but seven-and-twenty cents; and I had an abundance of all sorts. Unless the human race perspire more than I do, there is no occasion to live by the sweat of their brow. If men cannot get on without money (the smallest amount will suffice), the truest method of earning

it is by working as a laborer at one dollar per day. You are least dependent so; I speak as an expert, having used several kinds of labor.

Why should the scholar make a constant complaint that his fate is specially hard? We are too often told of "the pursuit of knowledge under difficulties," — how poets depend on patrons and starve in garrets, or at last go mad and die. Let us hear the other side of the story. Why should not the scholar, if he is really wiser than the multitude, do coarse work now and then? Why not let his greater wisdom enable him to do without things? If you say the wise man is unlucky, how could you distinguish him from the foolishly unfortunate?

My friend, how can I thank you for your kindness? Perhaps there is a better way, — I will convince you that it is felt and appreciated. Here have I been sitting idle, as it were, while you have been busy in my cause, and have done so much for me. I wish you had had a better subject; but good deeds are no less good because their object is unworthy.

Yours was the best way to collect money, — but I should never have thought of it; I might have waylaid the debtor perchance. Even a business man might not have thought of it, — and I cannot be called that, as business is understood usually, — not being familiar with the routine. But your way has this to commend it also, 9 — if you make the draft, you decide how much to draw. You drew just the sum suitable.

The Ktaadn paper can be put in the guise of letters, if it runs best so; dating each part on the day it describes. Twenty-five dollars more for it will satisfy me; I expected no more, and do not hold you to pay that, — for you asked for something else, and there was delay in sending. So, if you use it, send me twenty-five dollars now or after you sell it, as is most convenient; but take out the expenses that I see you must have had. In such cases carriers generally get the most; but you, as carrier here, get no money, but risk losing some, besides much of your time; while I go away, as I must, giving you unprofitable thanks. Yet trust me, my pleasure in your letter is not wholly a selfish one. May my good genius still watch over me and my added wealth!

P. S. — My book grows in bulk as I work on it; but soon I shall get leisure for those shorter articles you want, — then look out.

The "book," of course, was the "Week," then about to go through the press; the shorter articles were some that Greeley suggested for the Philadelphia magazines. Nothing came of this, but the correspondence was kept up until 1854, and led to the partial publication of "Cape Cod," and "The Yankee in Canada," in the newly-launched "Putnam's Magazine," of which G. W. Curtis was editor. But he differed with Thoreau on a matter of style or opinion (the articles appearing as anonymous, or editorial), and the author withdrew his MS. The letters of Greeley in this entertaining series are all preserved; but Greeley seems to have given Thoreau's away for autographs; and the only one accessible as yet is that just paraphrased.

## TO HARRISON BLAKE (AT MILTON).

CONCORD, August 10, 1849.

Mr. Blake, — I write now chiefly to say, before it is too late, that I shall be glad to see you in Concord, and will give you a chamber, etc., in my father's house, and as much of my poor company as you can bear.

I am in too great haste this time to speak to your, or out of my, condition. I might say, — you might say, — comparatively speaking, be not anxious to avoid poverty. In this way the wealth of the universe may be securely invested. What a pity if we do not live this short time according to the laws of the long time, — the eternal laws! Let us see that we stand erect here, and do not lie along by our whole length in the dirt. Let our meanness be our footstool, not our cushion. In the midst of this labyrinth let us live a thread of life. We must act with so rapid and resistless a purpose in one direction, that our vices will necessarily trail behind.

The nucleus of a comet is almost a star. Was there ever a genuine dilemma? The laws of earth are for the feet, or inferior man; the laws of heaven are for the head, or superior man; the latter are the former sublimed and expanded, even as radii from the earth's centre go on diverging into space. Happy the man who observes the heavenly and the terrestrial law in just proportion; whose every faculty, from the soles of his feet to the crown of his head, obeys the law of its level; who neither stoops nor goes on tiptoe, but lives a balanced life, acceptable to nature and to God.

These things I say; other things I do.

I am sorry to hear that you did not receive my book earlier. I addressed it and left it in Munroe's shop to be sent to you immediately, on the twenty-sixth of May, before a copy had been sold.

Will you remember me to Mr. Brown, when you see him next: he is well remembered by

HENRY THOREAU.

I still owe you a worthy answer.

## TO HARRISON BLAKE.

CONCORD, November 20, 1849.

MR. BLAKE, — I have not forgotten that I am your debtor. When I read over your letters, as I have just done, I feel that I am unworthy to have received or to answer them, though they are addressed, as I would have them, to the ideal of me. It behoves me, if I would reply, to speak out of the rarest part of myself.

At present I am subsisting on certain wild flavors which nature wafts to me, which unaccountably sustain me, and make my apparently poor life rich. Within a year my walks have extended themselves, and almost every afternoon (I read, or write, or make pencils in the forenoon, and by the last means get a living for my body) I visit some

new hill, or pond, or wood, many miles distant. I am astonished at the wonderful retirement through which I move, rarely meeting a man in these excursions, never seeing one similarly engaged, unless it be my companion, when I have one. I cannot help feeling that of all the human inhabitants of nature hereabouts, only we two have leisure to admire and enjoy our inheritance.

“Free in this world as the birds in the air, disengaged from every kind of chains, those who have practiced the yoga gather in Brahma the certain fruit of their works.”

Depend upon it, that, rude and careless as I am, I would fain practice the yoga faithfully.

“The yogi, absorbed in contemplation, contributes in his degree to creation: he breathes a divine perfume, he hears wonderful things. Divine forms traverse him without tearing him, and, united to the nature which is proper to him, he goes, he acts as animating original matter.”

To some extent, and at rare intervals, even I am a yogi.

I know little about the affairs of Turkey, but I am sure that I know something about barberries and chestnuts, of which I have collected a store this fall. When I go to see my neighbor, he will formally communicate to me the latest news from Turkey, which he read in yesterday’s mail,— “Now Turkey by this time looks determined, and Lord Palmerston” — Why, I would rather talk of the bran, which, unfortunately, was sifted out of my bread this morning, and thrown away. It is a fact which lies nearer to me. The newspaper gossip with which our hosts abuse our ears is as far from a true hospitality as the viands which they set before us. We did not need them to feed our bodies, and the news can be bought for a penny. We want the inevitable news, be it sad or cheering, wherefore and by what means they are extant this new day. If they are well, let them whistle and dance; if they are dyspeptic, it is their duty to complain, that so they may in any case be entertaining. If words were invented to conceal thought, I think that newspapers are a great improvement on a bad invention. Do not suffer your life to be taken by newspapers.

I thank you for your hearty appreciation of my book. I am glad to have had such a long talk with you, and that you had patience to listen to me to the end. I think that I had the advantage of you, for I chose my own mood, and in one sense your mood too, — that is, a quiet and attentive reading mood. Such advantage has the writer over the talker. I am sorry that you did not come to Concord in your vacation. Is it not time for another vacation? I am here yet, and Concord is here.

You will have found out by this time who it is that writes this, and will be glad to have you write to him, without his subscribing himself HENRY D. THOREAU.

P. S. — It is so long since I have seen you, that, as you will perceive, I have to speak, as it were, in vacuo, as if I were sounding hollowly for an echo, and it did not make much odds what kind of a sound I made. But the gods do not hear any rude or discordant sound, as we learn from the echo; and I know that the nature toward which I launch these sounds is so rich that it will modulate anew and wonderfully improve my rudest strain.

## TO HARRISON BLAKE (AT MILTON).

CONCORD, April 3, 1850.

Mr. Blake, — I thank you for your letter, and I will endeavor to record some of the thoughts which it suggests, whether pertinent or not. You speak of poverty and dependence. Who are poor and dependent? Who are rich and independent? When was it that men agreed to respect the appearance and not the reality? Why should the appearance appear? Are we well acquainted, then, with the reality? There is none who does not lie hourly in the respect he pays to false appearance. How sweet it would be to treat men and things, for an hour, for just what they are! We wonder that the sinner does not confess his sin. When we are weary with travel, we lay down our load and rest by the wayside. So, when we are weary with the burden of life, why do we not lay down this load of falsehoods which we have volunteered to sustain, and be refreshed as never mortal was? Let the beautiful laws prevail. Let us not weary ourselves by resisting them. When we would rest our bodies we cease to support them; we recline on the lap of earth. So, when we would rest our spirits, we must recline on the Great Spirit. Let things alone; let them weigh what they will; let them soar or fall. To succeed in letting only one thing alone in a winter morning, if it be only one poor frozen-thawed apple that hangs on a tree, what a glorious achievement! Methinks it lightens through the dusky universe. What an infinite wealth we have discovered! God reigns, i e., when we take a liberal view, — when a liberal view is presented us.

Let God alone if need be. Methinks, if I loved him more, I should keep him, — I should keep myself rather, — at a more respectful distance. It is not when I am going to meet him, but when I am just turning away and leaving him alone, that I discover that God is. I say, God. I am not sure that that is the name. You will know whom I mean.

If for a moment we make way with our petty selves, wish no ill to anything, apprehend no ill, cease to be but as the crystal which reflects a ray, — what shall we not reflect! What a universe will appear crystallized and radiant around us!

I should say, let the Muse lead the Muse, — let the understanding lead the understanding, though in any case it is the farthest forward which leads them both. If the Muse accompany, she is no muse, but an amusement. The Muse should lead like a star which is very far off; but that does not imply that we are to follow foolishly, falling into sloughs and over precipices, for it is not foolishness, but understanding, which is to follow, which the Muse is appointed to lead, as a fit guide of a fit follower.

Will you live? or will you be embalmed? Will you live, though it be astride of a sunbeam; or will you repose safely in the catacombs for a thousand years? In the former case, the worst accident that can happen is that you may break your neck. Will you break your heart, your soul, to save your neck? Necks and pipe-stems are fated to be broken. Men make a great ado about the folly of demanding too much of life (or of eternity?), and of endeavoring to live according to that demand. It is much ado about nothing. No harm ever came from that quarter. I am not afraid that I shall exaggerate

the value and significance of life, but that I shall not be up to the occasion which it is. I shall be sorry to remember that I was there, but noticed nothing remarkable, — not so much as a prince in disguise; lived in the golden age a hired man; visited Olympus even, but fell asleep after dinner, and did not hear the conversation of the gods. I lived in Judaea eighteen hundred years ago, but I never knew that there was such a one as Christ among my contemporaries! If there is anything more glorious than a congress of men a-framing or amending of a constitution going on, which I suspect there is, I desire to see the morning papers. I am greedy of the faintest rumor, though it were got by listening at the key-hole. I will dissipate myself in that direction.

I am glad to know that you find what I have said on Friendship worthy of attention. I wish I could have the benefit of your criticism; it would be a rare help to me. Will you not communicate it?

## TO HARRISON BLAKE (AT MILTON).

CONCORD, May 28, 1850.

MR. BLAKE,—“I never found any contentment in the life which the newspapers record,”

10 — anything of more value than the cent which they cost. Contentment in being covered with dust an inch deep! We who walk the streets, and hold time together, are but the refuse of ourselves, and that life is for the shells of us, — of our body and our mind, — for our scurf, — a thoroughly scurvy life. It is coffee made of coffee-grounds the twentieth time, which was only coffee the first time, — while the living water leaps and sparkles by our doors. I know some who, in their charity, give their coffee-grounds to the poor! We, demanding news, and putting up with such news! Is it a new convenience, or a new accident, or, rather, a new perception of the truth that we want!

You say that “the serene hours in which friendship, books, nature, thought, seem alone primary considerations, visit you but faintly.” Is not the attitude of expectation somewhat divine? — a sort of home - made divineness? Does it not compel a kind of sphere-music to attend on it? And do not its satisfactions merge at length, by insensible degrees, in the enjoyment of the thing expected?

What if I should forget to write about my not writing? It is not worth the while to make that a theme. It is as if I had written every day. It is as if I had never written before. I wonder that you think so much about it, for not writing is the most like writing, in my case, of anything I know.

Why will you not relate to me your dream? That would be to realize it somewhat. You tell me that you dream, but not what you dream. I can guess what comes to pass. So do the frogs dream. Would that I knew what. I have never found out whether they are awake or asleep, — whether it is day or night with them.

I am preaching, mind you, to bare walls, that is, to myself; and if you have chanced to come in and occupy a pew, do not think that my remarks are directed at you particularly, and so slam the seat in disgust. This discourse was written long before these exciting times.

Some absorbing employment on your higher ground, — your upland farm, — whither no cart-path leads, but where you mount alone with your hoe, — where the life everlasting grows; there you raise a crop which needs not to be brought down into the valley to a market; which you barter for heavenly products.

Do you separate distinctly enough the support of your body, from that of your essence? By how distinct a course commonly are these two ends attained! Not that they should not be attained by one and the same means, — that, indeed, is the rarest success, — but there is no half and half about it.

I shall be glad to read my lecture to a small audience in Worcester such as you describe, and will only require that my expenses be paid. If only the parlor be large enough for an echo, and the audience will embarrass themselves with hearing as much as the lecturer would otherwise embarrass himself with reading. But I warn you that this is no better calculated for a promiscuous audience than the last two which I read to you. It requires, in every sense, a concordant audience.

I will come on next Saturday and spend Sunday with you if you wish it. Say so if you do.

“Drink deep, or taste not the Pierian spring.”

Be not deterred by melancholy on the path which leads to immortal health and joy. When they tasted of the water of the river over which they were to go, they thought it tasted a little bitterish to the palate, but it proved sweeter when it was down.

H. D. T.

NOTE. — The “companion” of his walks, mentioned by Thoreau in November, 1849, was Ellery Channing; the neighbor who insisted on talking of Turkey was perhaps Emerson, who, after his visit to Europe in 1848, was more interested in its politics than before. Pencil-making was Thoreau’s manual work for many years; and it must have been about this time (1849-50) that he “had occasion to go to New York to peddle some pencils,” as he says in his journal for November 20, 1853. He adds, “I was obliged to manufacture one thousand dollars’ worth of pencils, and slowly dispose of, and finally sacrifice them, in order to pay an assumed debt of one hundred dollars.” This debt was perhaps for the printing of the *Week*, published in 1849, and paid for in 1853. Thoreau’s pencils have sold (in 1893) for 25 cents each. For other facts concerning his debt to James Munroe, see Sanborn’s *Thoreau*, pp. 230, 235.

### III. FRIENDS AND FOLLOWERS.

#### TO R. W. EMERSON<sup>1</sup> (AT CONCORD).

FIRE ISLAND BEACH, Thursday morning, July 25, 1850.

Dear Friend, — I am writing this at the house of Smith Oakes, within one mile of the wreck. He is the one who rendered most assistance. William H. Channing came down with me, but I have not seen Arthur Fuller, nor Greeley, nor Marcus Spring. Spring and Charles Sumner were here yesterday, but left soon. Mr. Oakes and wife tell me (all the survivors came, or were brought, directly to their house) that the ship struck at ten minutes after four A. M., and all hands, being mostly in their nightclothes, made haste to the forecastle, the water coming in at once. There they remained; the passengers in the forecastle, the crew above it, doing what

<sup>1</sup> It will readily be seen that this letter relates to the shipwreck on Fire Island, near New York, in which Margaret Fuller, Countess Ossoli, with her husband and child, was lost. A letter with no date of the year, but probably written February 15, 1840, from Emerson to Thoreau, represents them both as taking much trouble about a house in Concord for Mrs. Fuller, the mother of Margaret, who had just sold her Groton house, and wished to live with her daughter near Emerson.

they could. Every wave lifted the forecastle roof and washed over those within. The first man got ashore at nine; many from nine to noon. At flood tide, about half past three o'clock, when the ship broke up entirely, they came out of the forecastle, and Margaret sat with her back to the foremast, with her hands on her knees, her husband and child already drowned. A great wave came and washed her aft. The steward (?) had just before taken her child and started for shore. Both were drowned.

The broken desk, in a bag, containing no very valuable papers; a large black leather trunk, with an upper and under compartment, the upper holding books and papers; a carpet-bag, probably Ossoli's, and one of his shoes (?) are all the Ossoli effects known to have been found. Four bodies remain to be found: the two Ossolis, Horace Sumner, and a sailor. I have visited the child's grave. Its body will probably be taken away to-day. The wreck is to be sold at auction, excepting the hull, to-day.

The mortar would not go off. Mrs. Hasty, the captain's wife, told Mrs. Oakes that she and Margaret divided their money, and tied up the halves in handkerchiefs around their persons; that Margaret took sixty or seventy dollars. Mrs. Hasty, who can tell all about Margaret up to eleven o'clock on Friday, is said to be going to Portland, New England, to-day. She and Mrs. Fuller must, and probably will, come together. The cook, the last to leave, and the steward (?) will know the rest. I shall try to see them. In the mean while I shall do what I can to recover property and obtain particulars hereabouts. William H. Channing — did I write it? — has come with me. Arthur Fuller has this moment reached the house. He reached the beach last night. We got here yesterday noon. A good part of the wreck still holds together where she struck,

and something may come ashore with her fragments. The last body was found on Tuesday, three miles west. Mrs. Oakes dried the papers which were in the trunk, and she says they appeared to be of various kinds. "Would they cover that table?" (a small round one). "They would if spread out. Some were tied up. There were twenty or thirty books "in the same half of the trunk. Another smaller trunk, empty, came ashore, but there was no mark on it." She speaks of Paulina as if she might have been a sort of nurse to the child. I expect to go to Patchogue, whence the pilferers must have chiefly come, and advertise, etc.

## TO HARRISON BLAKE (IN MILTON).

CONCORD, August 9, 1850.

Mr. Blake, — I received your letter just as I was rushing to Fire Island beach to recover what remained of Margaret Fuller, and read it on the way. That event and its train, as much as anything, have prevented my answering it before. It is wisest to speak when you are spoken to. I will now endeavor to reply, at the risk of having nothing to say.

I find that actual events, notwithstanding the singular prominence which we all allow them, are far less real than the creations of my imagination. They are truly visionary and insignificant, 11 all that we commonly call life and death, — and affect me less than my dreams. This petty stream which from time to time swells and carries away the mills and bridges of our habitual life, and that mightier stream or ocean on which we securely float, — what makes the difference between them? I have in my pocket a button which I ripped off the coat of the Marquis of Ossoli, on the seashore, the other day. Held up, it intercepts the light, — an actual button, 12 and yet all the life it is connected with is less substantial to me, and interests me less, than my faintest dream. Our thoughts are the epochs in our lives: all else is but as a journal of the winds that blew while we were here.

I say to myself, Do a little more of that work which you have confessed to be good. You are neither satisfied nor dissatisfied with yourself, without reason. Have you not a thinking faculty of inestimable value? If there is an experiment which you would like to try, try it. Do not entertain doubts if they are not agreeable to you. Remember that you need not eat unless you are hungry. Do not read the newspapers. Improve every opportunity to be melancholy. As for health, consider yourself well. Do not engage to find things as you think they are. Do what nobody else can do for you. Omit to do anything else. It is not easy to make our lives respectable by any course of activity. We must repeatedly withdraw into our shells of thought, like the tortoise, somewhat helplessly; yet there is more than philosophy in that.

Do not waste any reverence on my attitude. I merely manage to sit up where I have dropped. I am sure that my acquaintances mistake me. They ask my advice on high matters, but they do not know even how poorly on't I am for hats and shoes. I have

hardly a shift. Just as shabby as I am in my outward apparel, ay, and more lamentably shabby, am I in my inward substance. If I should turn myself inside out, my rags and meanness would indeed appear. I am something to him that made me, undoubtedly, but not much to any other that he has made.

Would it not be worth while to discover nature in Milton? be native to the universe? I, too, love Concord best, but I am glad when I discover, in oceans and wildernesses far away, the material of a million Concords: indeed, I am lost, unless I discover them. I see less difference between a city and a swamp than formerly. It is a swamp, however, too dismal and dreary even for me, and I should be glad if there were fewer owls, and frogs, and mosquitoes in it. I prefer ever a more cultivated place, free from miasma and crocodiles. I am so sophisticated, and I will take my choice.

As for missing friends, — what if we do miss one another? have we not agreed on a rendezvous? While each wanders his own way through the wood, without anxiety, ay, with serene joy, though it be on his hands and knees, over rocks and fallen trees, he cannot but be in the right way. There is no wrong way to him. How can he be said to miss his friend, whom the fruits still nourish and the elements sustain? A man who missed his friend at a turn, went on buoyantly, dividing the friendly air, and humming a tune to himself, ever and anon kneeling with delight to study each little lichen in his path, and scarcely made three miles a day for friendship. As for conforming outwardly, and living your own life inwardly, I do not think much of that. Let not your right hand know what your left hand does in that line of business. It will prove a failure. Just as successfully can you walk against a sharp steel edge which divides you cleanly right and left. Do you wish to try your ability to resist distension? It is a greater strain than any soul can long endure. When you get God to pulling one way, and the devil the other, each having his feet well braced, — to say nothing of the conscience sawing transversely, — almost any timber will give way.

I do not dare invite you earnestly to come to Concord, because I know too well that the berries are not thick in my fields, and we should have to take it out in viewing the landscape. But come, on every account, and we will see — one another.

No letters of the year 1851 have been found by me. On the 27th of December, 1850, Mr. Cabot wrote to say that the Boston Society of Natural History, of which he was secretary, had elected Thoreau a corresponding member, “with all the honores, privilegia, etc., ad gradum tuum pertinentia, without the formality of paying any entrance fee, or annual subscription. Your duties in return are to advance the interests of the Society by communications or otherwise, as shall seem good.” This is believed to be the only learned body which honored itself by electing Thoreau. The immediate occasion of this election was the present, by Thoreau, to the Society, of a fine specimen of the American goshawk, caught or shot by Jacob Farmer, which Mr. Cabot acknowledged, December 18, 1849, saying: “It was first described by Wilson; lately Audubon has identified it with the European goshawk, thereby committing a very flagrant blunder. It is usually a very rare species with us. The European bird is used in hawking; and doubtless ours would be equally game. If Mr. Farmer skins him now, he will have to take

second cut; for his skin is already off and stuffed, 1841 his remains dissected, measured, and deposited in alcohol.”

## TO T. W. HIGGINSON (AT BOSTON).

CONCORD, April 2-3, 1852.

Dear Sir, — I do not see that I can refuse to read another lecture, but what makes me hesitate is the fear that I have not another available which will entertain a large audience, though I have thoughts to offer which I think will be quite as worthy of their attention. However, I will try; for the prospect of earning a few dollars is alluring. As far as I can foresee, my subject would be “Reality” rather transcendently treated. It lies still in “Walden, or Life in the Woods.” Since you are kind enough to undertake the arrangements, I will leave it to you to name an evening of next week, decide on the most suitable room, and advertise, — if this is not taking you too literally at your word.

If you still think it worth the while to attend to this, will you let me know as soon as may be what evening will be most convenient? I certainly do not feel prepared to offer myself as a lecturer to the Boston public, and hardly know whether more to dread a small audience or a large one. Nevertheless, I will repress this squeamishness, and propose no alteration in your arrangements. I shall be glad to accept your invitation to tea.

This lecture was given, says Colonel Higginson, “at the Mechanics’ Apprentices Library in Boston, with the snow outside, and the young boys rustling their newspapers among the Alcotts and Blakes.” Or, possibly, this remark may apply to a former lecture in the same year, which was that in which Thoreau first lectured habitually away from Concord. He commenced by accepting an invitation to speak at Leyden Hall, in Plymouth, where his friends the Watsons had organized Sunday services, that the Transcendentalists and Abolitionists might have a chance to be heard at a time when they were generally excluded from the popular “Lyceum courses” throughout New England. Mr. B. M. Watson says: —

“I have found two letters from Thoreau in answer to my invitation in 1852 to address our congregation at Leyden Hall on Sunday mornings, — an enterprise I undertook about that time. I find among the distinguished men who addressed us the names of Thoreau, Emerson, Ellery Channing, Alcott, Higginson, Remond, S. Johnson, F. J. Appleton, Edmund Quincy, Garrison, Phillips, J. P. Lesley, Shackford, W. F. Channing, N. H. Whiting, Adin Ballou, Abby K. Foster and her husband, J. T. Sargent, T. T. Stone, Jones Very, Wasson, Hurlbut, F. W. Holland, and Scherb; so you may depend we had some fun.”

These letters were mere notes. The first, dated February 17, 1852, says: “I have not yet seen Mr. Channing, though I believe he is in town, — having decided to come to Plymouth myself, — but I will let him know that he is expected. Mr. Daniel Foster

wishes me to say that he accepts your invitation, and that he would like to come Sunday after next. I will take the Saturday afternoon train. I shall be glad to get a winter view of Plymouth Harbor, and see where your garden lies under the snow.”

The second letter follows: —

## TO MARSTON WATSON (AT PLYMOUTH).

CONCORD, December 31, 1852.

Mr. Watson, — I would be glad to visit Plymouth again, but at present I have nothing to read which is not severely heathenish, or at least secular, — which the dictionary defines as “relating to affairs of the present world, not holy,”

1842 though not necessarily unholy; nor have I any leisure to prepare it. My writing at present is profane, yet in a good sense, and, as it were, sacredly, I may say; for, finding the air of the temple too close, I sat outside. Don’t think I say this to get off; no, no! It will not do to read such things to hungry ears. “If they ask for bread, will you give them a stone?” When I have something of the right kind, depend upon it I will let you know.

Up to 1848, when he was invited to lecture before the Salem Lyceum by Nathaniel Hawthorne, then its secretary, Thoreau seems to have spoken publicly very little except in Concord; nor did he extend the circuit of his lectures much until his two books had made him known as a thinker. There was little to attract a popular audience in his manner or his matter; but it was the era of lectures, and if one could once gain admission to the circle of “lyceum lecturers,” it did not so much matter what he said; a lecture was a lecture, as a sermon was a sermon, good, bad, or indifferent. But it was common to exclude the anti-slavery speakers from the lyceums, even those of more eloquence than Thoreau; this led to invitations from the small band of reformers scattered about New England and New York, so that the most unlikely of platform speakers (Ellery Channing, for example) sometimes gave lectures at Plymouth, Greenfield, Newburyport, or elsewhere. The present fashion of parlor lectures had not come in; yet at Worcester Thoreau’s friends early organized for him something of that kind, as his letters to Mr. Blake show. In default of an audience of numbers, Thoreau fell into the habit of lecturing in his letters to this friend; the most marked instance being the thoughtful essay on Love and Chastity which makes the bulk of his epistle dated September, 1852. Like most of his serious writing, this was made up from his daily journal, and hardly comes under the head of “familiar letters;” the didactic purpose is rather too apparent. Yet it cannot be spared from any collection of his epistles, — none of which flowed more directly from the quickened moral nature of the man.

## TO SOPHIA THOREAU (AT BANGOR).

CONCORD, July 13, 1852.

Dear Sophia, — I am a miserable letter-writer, but perhaps if I should say this at length and with sufficient emphasis and regret it would make a letter. I am sorry that nothing transpires here of much moment; or, I should rather say, that I am so slackened and rusty, like the telegraph wire this season, that no wind that blows can extract music from me.

I am not on the trail of any elephants or mastodons, but have succeeded in trapping only a few ridiculous mice, which cannot feed my imagination. I have become sadly scientific. I would rather come upon the vast valley-like “spoor” only of some celestial beast which this world’s woods can no longer sustain, than spring my net over a bushel of moles. You must do better in those woods where you are. You must have some adventures to relate and repeat for years to come, which will eclipse even mother’s voyage to Goldsborough and Sissiboo.

They say that Mr. Pierce, the presidential candidate, was in town last 5th of July, visiting Hawthorne, whose college chum he was; and that Hawthorne is writing a life of him, for electioneering purposes.

Concord is just as idiotic as ever in relation to the spirits and their knockings. Most people here believe in a spiritual world which no respectable junk bottle, which had not met with a slip, would condescend to contain even a portion of for a moment, — whose atmosphere would extinguish a candle let down into it, like a well that wants airing; in spirits which the very bullfrogs in our meadows would blackball. Their evil genius is seeing how low it can degrade them. The hooting of owls, the croaking of frogs, is celestial wisdom in comparison. If I could be brought to believe in the things which they believe, I should make haste to get rid of my certificate of stock in this and the next world’s enterprises, and buy a share in the first Immediate Annihilation Company that offered. I would exchange my immortality for a glass of small beer this hot weather. Where are the heathen? Was there ever any superstition before? And yet I suppose there may be a vessel this very moment setting sail from the coast of North America to that of Africa with a missionary on board! Consider the dawn and the sunrise, — the rainbow and the evening, — the words of Christ and the aspiration of all the saints! Hear music I see, smell, taste, feel, hear, — anything, — and then hear these idiots, inspired by the cracking of a restless board, humbly asking, “Please, Spirit, if you cannot answer by knocks, answer by tips of the table.”!!!!!!

## TO HARRISON BLAKE (AT WORCESTER).

CONCORD, July 21, 1852.

Me. Blake, — I am too stupidly well these days to write to you. My life is almost altogether outward, — all shell and no tender kernel; so that I fear the report of it

would be only a nut for you to crack, with no meat in it for you to eat. Moreover, you have not cornered me up, and I enjoy such large liberty in writing to you, that I feel as vague as the air. However, I rejoice to hear that you have attended so patiently to anything which I have said heretofore, and have detected any truth in it. It encourages me to say more, 1843 — not in this letter, I fear, but in some book which I may write one day. I am glad to know that I am as much to any mortal as a persistent and consistent scarecrow is to a farmer, — such a bundle of straw in a man's clothing as I am, with a few bits of tin to sparkle in the sun dangling about me, as if I were hard at work there in the field. However, if this kind of life saves any man's corn, — why, he is the gainer. I am not afraid that you will flatter me as long as you know what I am, as well as what I think, or aim to be, and distinguish between these two, for then it will commonly happen that if you praise the last you will condemn the first.

I remember that walk to Asnebumskit very well, — a fit place to go to on a Sunday; one of the true temples of the earth. A temple, you know, was anciently “an open place without a roof,” whose walls served merely to shut out the world and direct the mind toward heaven; but a modern meeting-house shuts out the heavens, while it crowds the world into still closer quarters. Best of all is it when, as on a mountain-top, you have for all walls your own elevation and deeps of surrounding ether. The partridge-berries, watered with mountain dews which are gathered there, are more memorable to me than the words which I last heard from the pulpit at least; and for my part, I would rather look toward Rutland than Jerusalem. Rutland, — modern town, — land of ruts, — trivial and worn, — not too sacred, — with no holy sepulchre, but profane green fields and dusty roads, and opportunity to live as holy a life as you can, — where the sacredness, if there is any, is all in yourself and not in the place.

I fear that your Worcester people do not often enough go to the hilltops, though, as I am told, the springs lie nearer to the surface on your hills than in your valleys. They have the reputation of being Free-Soilers.<sup>1</sup> Do they insist on a free atmosphere, too, that is, on freedom for

<sup>1</sup> The name of a political party, afterwards called “Republicans.”

the head or brain as well as the feet? If I were consciously to join any party, it would be that which is the most free to entertain thought.

All the world complain nowadays of a press of trivial duties and engagements, which prevents their employing themselves on some higher ground they know of; but, undoubtedly, if they were made of the right stuff to work on that higher ground, provided they were released from all those engagements, they would now at once fulfill the superior engagement, and neglect all the rest, as naturally as they breathe. They would never be caught saying that they had no time for this, when the dullest man knows that this is all that he has time for. No man who acts from a sense of duty ever puts the lesser duty above the greater. No man has the desire and the ability to work on high things, but he has also the ability to build himself a high staging.

As for passing through any great and glorious experience, and rising above it, as an eagle might fly athwart the evening sky to rise into still brighter and fairer regions

of the heavens, I cannot say that I ever sailed so creditably; but my bark ever seemed thwarted by some side wind, and went off over the edge, and now only occasionally tacks back toward the centre of that sea again. I have outgrown nothing good, but, I do not fear to say, fallen behind by whole continents of virtue, which should have been passed as islands in my course; but I trust — what else can I trust? that, with a stiff wind, some Friday, when I have thrown some of my cargo overboard, I may make up for all that distance lost.

Perchance the time will come when we shall not be content to go back and forth upon a raft to some huge Homeric or Shakespearean India-man that lies upon the reef, but build a bark out of that wreck and others that are buried in the sands of this desolate island, and such new timber as may be required, in which to sail away to whole new worlds of light and life, where our friends are.

Write again. There is one respect in which you did not finish your letter: you did not write it with ink, and it is not so good, therefore, against or for you in the eye of the law, nor in the eye of — H. D. T.

## **TO HARRISON BLAKE (AT WORCESTER).**

September, 1852.

MR. BLAKE, — Here come the sentences which I promised you. You may keep them, if you will regard and use them as the disconnected fragments of what I may find to be a completer essay, on looking over my journal, at last, and may claim again.

I send you the thoughts on Chastity and Sensuality with diffidence and shame, not knowing how far I speak to the condition of men generally, or how far I betray my peculiar defects.

Pray enlighten me on this point if you can.

## **LOVE.**

What the essential difference between man and woman is, that they should be thus attracted to one another, no one has satisfactorily answered. Perhaps we must acknowledge the justness of the distinction which assigns to man the sphere of wisdom, and to woman that of love, though neither belongs exclusively to either. Man is continually saying to woman, Why will you not be more wise? Woman is continually saying to man, Why will you not be more loving? It is not in their wills to be wise or to be loving; but, unless each is both wise and loving, there can be neither wisdom nor love.

All transcendent goodness is one, though appreciated in different ways, or by different senses. In beauty we see it, in music we hear it, in fragrance we scent it, in the palatable the pure palate tastes it, and in rare health the whole body feels it. The variety is in the surface or manifestation; but the radical identity we fail to express.

The lover sees in the glance of his beloved the same beauty that in the sunset paints the western skies. It is the same daimon, here lurking under a human eyelid, and there under the closing eyelids of the day. Here, in small compass, is the ancient and natural beauty of evening and morning. What loving astronomer has ever fathomed the ethereal depths of the eye?

The maiden conceals a fairer flower and sweeter fruit than any calyx in the field; and, if she goes with averted face, confiding in her purity and high resolves, she will make the heavens retrospective, and all nature humbly confess its queen.

Under the influence of this sentiment, man is a string of an Æolian harp, which vibrates with the zephyrs of the eternal morning.

There is at first thought something trivial in the commonness of love. So many Indian youths and maidens along these banks have in ages past yielded to the influence of this great civilizer. Nevertheless, this generation is not disgusted nor discouraged, for love is no individual's experience; and though we are imperfect mediums, it does not partake of our imperfection; though we are finite, it is infinite and eternal; and the same divine influence broods over these banks, whatever race may inhabit them, and perchance still would, even if the human race did not dwell here.

Perhaps an instinct survives through the intensest actual love, which prevents entire abandonment and devotion, and makes the most ardent lover a little reserved. It is the anticipation of change. For the most ardent lover is not the less practically wise, and seeks a love which will last forever.

Considering how few poetical friendships there are, it is remarkable that so many are married. It would seem as if men yielded too easy an obedience to nature without consulting their genius. One may be drunk with love without being any nearer to finding his mate. There is more of good nature than of good sense at the bottom of most marriages. But the good nature must have the counsel of the good spirit or Intelligence. If common sense had been consulted, how many marriages would never have taken place; if uncommon or divine sense, how few marriages such as we witness would ever have taken place!

Our love may be ascending or descending. What is its character, if it may be said of it, —

“We must respect the souls above  
But only those below we love.”

Love is a severe critic. Hate can pardon more than love. They who aspire to love worthily, subject themselves to an ordeal more rigid than any other.

Is your friend such a one that an increase of worth on your part will rarely make her more your friend? Is she retained — is she attracted by more nobleness in you, — by more of that virtue which is peculiarly yours; or is she indifferent and blind to that? Is she to be flattered and won by your meeting her on any other than the ascending path? Then duty requires that you separate from her.

Love must be as much a light as a flame.

Where there is not discernment, the behavior even of the purest soul may in effect amount to coarseness.

A man of fine perceptions is more truly feminine than a merely sentimental woman. The heart is blind; but love is not blind. None of the gods is so discriminating.

In love and friendship the imagination is as much exercised as the heart; and if either is outraged the other will be estranged. It is commonly the imagination which is wounded first, rather than the heart, — it is so much the more sensitive.

Comparatively, we can excuse any offense against the heart, but not against the imagination. The imagination knows — nothing escapes its glance from out its eyry — and it controls the breast. My heart may still yearn toward the valley, but my imagination will not permit me to jump off the precipice that debars me from it, for it is wounded, its wings are dipt, and it cannot fly, even descendingly. Our “blundering hearts!” some poet says. The imagination never forgets; it is a re-remembering. It is not foundationless, but most reasonable, and it alone uses all the knowledge of the intellect.

Love is the profoundest of secrets. Divulged, even to the beloved, it is no longer Love. As if it were merely I that loved you. When love ceases, then it is divulged.

In our intercourse with one we love, we wish to have answered those questions at the end of which we do not raise our voice; against which we put no interrogation-mark, — answered with the same unflinching, universal aim toward every point of the compass.

I require that thou knowest everything without being told anything. I parted from my beloved because there was one thing which I had to tell her. She questioned me. She should have known all by sympathy. That I had to tell it her was the difference between us, — the misunderstanding.

A lover never hears anything that is told, for that is commonly either false or stale; but he hears things taking place, as the sentinels heard Trenck<sup>1</sup> mining in the ground, and thought it was moles.

1 Baron Trenck, the famous prisoner.

The relation may be profaned in many ways. The parties may not regard it with equal sacredness. What if the lover should learn that his beloved dealt in incantations and philters! What if he should hear that she consulted a clairvoyant! The spell would be instantly broken.

If to chaffer and higgler are bad in trade, they are much worse in Love. It demands directness as of an arrow.

There is danger that we lose sight of what our friend is absolutely, while considering what she is to us alone.

The lover wants no partiality. He says, Be so kind as to be just.

Canst thou love with thy mind,

And reason with thy heart?

Canst thou be kind,

And from thy darling part?

Can'st thou range earth, sea, and air,

And so meet me everywhere?

Through all events I will pursue thee,  
Through all persons I will woo thee.

I need thy hate as much as thy love. Thou wilt not repel me entirely when thou repellst what is evil in me.

Indeed, indeed, I cannot tell,  
Though I ponder on it well,  
Which were easier to state,  
All my love or all my hate.  
Surely, surely, thou wilt trust me  
When I say thou doth disgust me.  
O, I hate thee with a hate  
That would fain annihilate;  
Yet, sometimes, against my will,  
My dear Friend, I love thee still.  
It were treason to our love,  
And a sin to God above,  
One iota to abate  
Of a pure, impartial hate.

It is not enough that we are truthful; we must cherish and carry out high purposes to be truthful about.

It must be rare, indeed, that we meet with one to whom we are prepared to be quite ideally related, as she to us. We should have no reserve; we should give the whole of ourselves to that society; we should have no duty aside from that. One who could bear to be so wonderfully and beautifully exaggerated every day. I would take my friend out of her low self and set her higher, infinitely higher, and there know her. But, commonly, men are as much afraid of love as of hate. They have lower engagements. They have near ends to serve. They have not imagination enough to be thus employed about a human being, but must be cooping a barrel, forsooth.

What a difference, whether, in all your walks, you meet only strangers, or in one house is one who knows you, and whom you know. To have a brother or a sister! To have a gold mine on your farm! To find diamonds in the gravel heaps before your door! How rare these things are! To share the day with you, — to people the earth. Whether to have a god or a goddess for companion in your walks, or to walk alone with hinds and villains and carles. Would not a friend enhance the beauty of the landscape as much as a deer or hare? Everything would acknowledge and serve such a relation; the corn in the field, and the cranberries in the meadow. The flowers would bloom, and the birds sing, with a new impulse. There would be more fair days in the year.

The object of love expands and grows before us to eternity, until it includes all that is lovely, and we become all that can love.

## CHASTITY AND SENSUALITY.

The subject of sex is a remarkable one, since, though its phenomena concern us so much, both directly and indirectly, and, sooner or later, it occupies the thoughts of all, yet all mankind, as it were, agree to be silent about it, at least the sexes commonly one to another. One of the most interesting of all human facts is veiled more completely than any mystery. It is treated with such secrecy and awe as surely do not go to any religion. I believe that it is unusual even for the most intimate friends to communicate the pleasures and anxieties connected with this fact, — much as the external affair of love, its comings and goings, are bruited. The Shakers do not exaggerate it so much by their manner of speaking of it, as all mankind by their manner of keeping silence about it. Not that men should speak on this or any subject without having anything worthy to say; but it is plain that the education of man has hardly commenced, — there is so little genuine intercommunication.

In a pure society, the subject of marriage would not be so often avoided, — from shame and not from reverence, winked out of sight, and hinted at only; but treated naturally and simply, — perhaps simply avoided, like the kindred mysteries. If it cannot be spoken of for shame, how can it be acted of? But, doubtless, there is far more purity, as well as more impurity, than is apparent.

Men commonly couple with their idea of marriage a slight degree at least of sensuality; but every lover, the world over, believes in its inconceivable purity.

If it is the result of a pure love, there can be nothing sensual in marriage. Chastity is something positive, not negative. It is the virtue of the married especially. All lusts or base pleasures must give place to loftier delights. They who meet as superior beings cannot perform the deeds of inferior ones. The deeds of love are less questionable than any action of an individual can be, for, it being founded on the rarest mutual respect, the parties incessantly stimulate each other to a loftier and purer life, and the act in which they are associated must be pure and noble indeed, for innocence and purity can have no equal. In this relation we deal with one whom we respect more religiously even than we respect our better selves, and we shall necessarily conduct as in the presence of God. What presence can be more awful to the lover than the presence of his beloved?

If you seek the warmth even of affection from a similar motive to that from which cats and dogs and slothful persons hug the fire, — because your temperature is low through sloth, — you are on the downward road, and it is but to plunge yet deeper into sloth. Better the cold affection of the sun, reflected from fields of ice and snow, or his warmth in some still, wintry dell. The warmth of celestial love does not relax, but nerves and braces its enjoyer. Warm your body by healthful exercise, not by cowering over a stove. Warm your spirit by performing independently noble deeds, not by ignobly seeking the sympathy of your fellows who are no better than yourself. A man's social and spiritual discipline must answer to his corporeal. He must lean on a friend who has a hard breast, as he would lie on a hard bed. He must drink cold water for his only beverage. So he must not hear sweetened and colored words, but pure and refreshing

truths. He must daily bathe in truth cold as spring water, not warmed by the sympathy of friends. —

Can love be in aught allied to dissipation? Let us love by refusing, not accepting one another. Love and lust are far asunder. The one is good, the other bad. When the affectionate sympathize by their higher natures, there is love; but there is danger that they will sympathize by their lower natures, and then there is lust. It is not necessary that this be deliberate, hardly even conscious; but, in the close contact of affection, there is danger that we may stain and pollute one another; for we cannot embrace but with an entire embrace.

We must love our friend so much that she shall be associated with our purest and holiest thoughts alone. When there is impurity, we have “descended to meet,” though we knew it not.

The luxury of affection, — there’s the danger. There must be some nerve and heroism in our love, as of a winter morning. In the religion of all nations a purity is hinted at, which, I fear, men never attain to. We may love and not elevate one another. The love that takes us as it finds us degrades us. What watch we must keep over the fairest and purest of our affections, lest there be some taint about them! May we so love as never to have occasion to repent of our love!

There is to be attributed to sensuality the loss to language of how many pregnant symbols! Flowers, which, by their infinite hues and fragrance, celebrate the marriage of the plants, are intended for a symbol of the open and unsuspected beauty of all true marriage, when man’s flowering season arrives.

Virginity, too, is a budding flower, and by an impure marriage the virgin is deflowered. Whoever loves flowers, loves virgins and chastity. Love and lust are as far asunder as a flower-garden is from a brothel.

J. Biberg, in the “*Amœnitates Botanicæ*,” edited by Linnæus, observes (I translate from the Latin): “The organs of generation, which, in the animal kingdom, are for the most part concealed by nature, as if they were to be ashamed of, in the vegetable kingdom are exposed to the eyes of all; and, when the nuptials of plants are celebrated, it is wonderful what delight they afford to the beholder, refreshing the senses with the most agreeable color and the sweetest odor; and, at the same time, bees and other insects, not to mention the humming-bird, extract honey from their nectaries, and gather wax from their effete pollen.” Linnaeus himself calls the calyx the *thalamus*, or bridal chamber; and the corolla the *aulæum*, or tapestry of it, and proceeds to explain thus every part of the flower.

Who knows but evil spirits might corrupt the flowers themselves, rob them of their fragrance and their fair hues, and turn their marriage into a secret shame and defilement? Already they are of various qualities, and there is one whose nuptials fill the lowlands in June with the odor of carrion.

The intercourse of the sexes, I have dreamed, is incredibly beautiful, too fair to be remembered. I have had thoughts about it, but they are among the most fleeting and

irrecoverable in my experience. It is strange that men will talk of miracles, revelation, inspiration, and the like, as things past, while love remains.

A true marriage will differ in no wise from illumination. In all perception of the truth there is a divine ecstasy, an inexpressible delirium of joy, as when a youth embraces his betrothed virgin. The ultimate delights of a true marriage are one with this.

No wonder that, out of such a union, not as end, but as accompaniment, comes the undying race of man. The womb is a most fertile soil.

Some have asked if the stock of men could not be improved, — if they could not be bred as cattle. Let Love be purified, and all the rest will follow. A pure love is thus, indeed, the panacea for all the ills of the world.

The only excuse for reproduction is improvement. Nature abhors repetition. Beasts merely propagate their kind; but the offspring of noble men and women will be superior to themselves, as their aspirations are. By their fruits ye shall know them.

## TO HARRISON BLAKE (AT WORCESTER).

CONCORD, February 27, 1853.

Mr. Blake, — I have not answered your letter before, because I have been almost constantly in the fields surveying of late. It is long since I have spent many days so profitably in a pecuniary sense; so unprofitably, it seems to me, in a more important sense. I have earned just a dollar a day for seventy-six days past; for, though I charge at a higher rate for the days which are seen to be spent, yet so many more are spent than appears. This is instead of lecturing, which has not offered, to pay for that book which I printed.<sup>1</sup> I have not only cheap

<sup>1</sup> The Week.

hours, but cheap weeks and months; that is, weeks which are bought at the rate I have named. Not that they are quite lost to me, or make me very melancholy, alas! for I too often take a cheap satisfaction in so spending them, 1844 — weeks of pasturing and browsing, like beeves and deer, — which give me animal health, it may be, but create a tough skin over the soul and intellectual part. Yet, if men should offer my body a maintenance for the work of my head alone, I feel that it would be a dangerous temptation.

As to whether what you speak of as the “world’s way” (which for the most part is my way), or that which is shown me, is the better, the former is imposture, the latter is truth. I have the coldest confidence in the last. There is only such hesitation as the appetites feel in following the aspirations. The clod hesitates because it is inert, wants animation. The one is the way of death, the other of life everlasting. My hours are not “cheap in such a way that I doubt whether the world’s way would not have been better,” but cheap in such a way that I doubt whether the world’s way, which I have adopted for the time, could be worse. The whole enterprise of this nation, which is not an upward, but a westward one, toward Oregon, California, Japan, etc., is totally

devoid of interest to me, whether performed on foot, or by a Pacific railroad. It is not illustrated by a thought; it is not warmed by a sentiment; there is nothing in it which one should lay down his life for, nor even his gloves, — hardly which one should take up a newspaper for. It is perfectly heathenish, — a filibustering toward heaven by the great western route. No; they may go their way to their manifest destiny, which I trust is not mine. May my seventy-six dollars, whenever I get them, help to carry me in the other direction! I see them on their winding way, but no music is wafted from their host, — only the rattling of change in their pockets. I would rather be a captive knight, and let them all pass by, than be free only to go whither they are bound. What end do they propose to themselves beyond Japan? What aims more lofty have they than the prairie dogs?

As it respects these things, I have not changed an opinion one iota from the first. As the stars looked to me when I was a shepherd in Assyria, they look to me now, a New-Englander. The higher the mountain on which you stand, the less change in the prospect from year to year, from age to age. Above a certain height there is no change. I am a Switzer on the edge of the glacier, with his advantages and disadvantages, goitre, or what not. (You may suspect it to be some kind of swelling at any rate.) I have had but one spiritual birth (excuse the word), and now whether it rains or snows, whether I laugh or cry, fall farther below or approach nearer to my standard; whether Pierce or Scott is elected, 1845 — not a new scintillation of light flashes on me, but ever and anon, though with longer intervals, the same surprising and everlastingly new light dawns to me, with only such variations as in the coming of the natural day, with which, indeed, it is often coincident.

As to how to preserve potatoes from rotting, your opinion may change from year to year; but as to how to preserve your soul from rotting, I have nothing to learn, but something to practice.

Thus I declaim against them; but I in my folly am the world I condemn.

I very rarely, indeed, if ever, “feel any itching to be what is called useful to my fellow-men.” Sometimes — it may be when my thoughts for want of employment fall into a beaten path or humdrum — I have dreamed idly of stopping a man’s horse that was running away; but, perchance, I wished that he might run, in order that I might stop him; — or of putting out a fire; but then, of course, it must have got well argoing. Now, to tell the truth, I do not dream much of acting upon horses before they run, or of preventing fires which are not yet kindled. What a foul subject is this of doing good! instead of minding one’s life, which should be his business; doing good as a dead carcass, which is only fit for manure, instead of as a living man, — instead of taking care to flourish, and smell and taste sweet, and refresh all mankind to the extent of our capacity and quality. People will sometimes try to persuade you that you have done something from that motive, as if you did not already know enough about it. If I ever did a man any good, in their sense, of course it was something exceptional and insignificant compared with the good or evil which I am constantly doing by being what I am. As if you were to preach to ice to shape itself into burning-glasses, which

are sometimes useful, and so the peculiar properties of ice be lost. Ice that merely performs the office of a burning-glass does not do its duty.

The problem of life becomes, one cannot say by how many degrees, more complicated as our material wealth is increased, — whether that needle they tell of was a gateway or not, — since the problem is not merely nor mainly to get life for our bodies, but by this or a similar discipline to get life for our souls; by cultivating the lowland farm on right principles, that is, with this view, to turn it into an upland farm. You have so many more talents to account for. If I accomplish as much more in spiritual work as I am richer in worldly goods, then I am just as worthy, or worth just as much, as I was before, and no more. I see that, in my own case, money might be of great service to me, but probably it would not be; for the difficulty now is, that I do not improve my opportunities, and therefore I am not prepared to have my opportunities increased. Now, I warn you, if it be as you say, you have got to put on the pack of an upland farmer in good earnest the coming spring, the lowland farm being cared for; ay, you must be selecting your seeds forthwith, and doing what winter work you can; and, while others are raising potatoes and Baldwin apples for you, you must be raising apples of the Hesperides for them. (Only hear how he preaches!) No man can suspect that he is the proprietor of an upland farm, — upland in the sense that it will produce nobler crops, and better repay cultivation in the long run, — but he will be perfectly sure that he ought to cultivate it.

Though we are desirous to earn our bread, we need not be anxious to satisfy men for it, — though we shall take care to pay them, — but God, who alone gave it to us. Men may in effect put us in the debtors' jail for that matter, simply for paying our whole debt to God, which includes our debt to them, and though we have His receipt for it, — for His paper is dishonored. The cashier will tell you that He has no stock in his bank.

How prompt we are to satisfy the hunger and thirst of our bodies; how slow to satisfy the hunger and thirst of our souls! Indeed, we would-be-practical folks cannot use this word without blushing because of our infidelity, having starved this substance almost to a shadow. We feel it to be as absurd as if a man were to break forth into a eulogy on his dog, who hasn't any. An ordinary man will work every day for a year at shoveling dirt to support his body, or a family of bodies; but he is an extraordinary man who will work a whole day in a year for the support of his soul. Even the priests, the men of God, so called, for the most part confess that they work for the support of the body. But he alone is the truly enterprising and practical man who succeeds in maintaining his soul here. Have not we our everlasting life to get? and is not that the only excuse at last for eating, drinking, sleeping, or even carrying an umbrella when it rains? A man might as well devote himself to raising pork, as to fattening the bodies, or temporal part merely, of the whole human family. If we made the true distinction we should almost all of us be seen to be in the almshouse for souls.

I am much indebted to you because you look so steadily at the better side, or rather the true centre of me (for our true centre may, and perhaps oftenest does, lie entirely

aside from us, and we are in fact eccentric), and, as I have elsewhere said, "give me an opportunity to live." You speak as if the image or idea which I see were reflected from me to you; and I see it again reflected from you to me, because we stand at the right angle to one another; and so it goes zigzag to what successive reflecting surfaces, before it is all dissipated or absorbed by the more unreflecting, or differently reflecting, — who knows? Or, perhaps, what you see directly, you refer to me. What a little shelf is required, by which we may impinge upon another, and build there our eyry in the clouds, and all the heavens we see above us we refer to the crags around and beneath us. Some piece of mica, as it were, in the face or eyes of one, as on the Delectable Mountains, slanted at the right angle, reflects the heavens to us. But, in the slow geological upheavals and depressions, these mutual angles are disturbed, these suns set, and new ones rise to us. That ideal which I worshiped was a greater stranger to the mica than to me. It was not the hero I admired, but the reflection from his epaulet or helmet. It is nothing (for us) permanently inherent in another, but his attitude or relation to what we prize, that we admire. The meanest man may glitter with micacious particles to his fellow's eye. These are the spangles that adorn a man. The highest union, — the only union (don't laugh), or central oneness, is the coincidence of visual rays. Our club-room was an apartment in a constellation where our visual rays met (and there was no debate about the restaurant). The way between us is over the mount.

Your words make me think of a man of my acquaintance whom I occasionally meet, whom you, too, appear to have met, one Myself, as he is called. Yet, why not call him Yourself? If you have met with him and know him, it is all I have done; and surely, where there is a mutual acquaintance, the my and thy make a distinction without a difference.

I do not wonder that you do not like my Canada story. It concerns me but little, and probably is not worth the time it took to tell it. Yet I had absolutely no design whatever in my mind, but simply to report what I saw. I have inserted all of myself that was implicated, or made the excursion. It has come to an end, at any rate; they will print no more, but return me my MS. when it is but little more than half done, as well as another I had sent them, because the editor<sup>1</sup> requires the liberty to omit the heresies without consulting me, — a privilege California is not rich enough to bid for.

I thank you again and again for attending to me; that is to say, I am glad that you hear me and that you also are glad. Hold fast to your most indefinite, waking dream. The very green dust on the walls is an organized vegetable; the atmosphere has its fauna and flora floating in it; and shall we think that dreams are but dust and ashes, are always disintegrated and crumbling thoughts, and not dust - like thoughts trooping to their standard with music, 1846 — systems beginning to be organized? These expectations, — these are roots, these are nuts, which even the poorest man has in his bin, and roasts or cracks them occasionally in winter evenings, — which even the poor debtor retains with his bed and his pig, i e., his idleness and sensuality. Men go to the opera because they hear there a faint expression in sound of this news

which is never quite distinctly proclaimed. Suppose a man were to sell the hue, the least amount of coloring matter in the superficies of his thought, for a farm, — were to exchange an absolute and infinite value for a relative and finite one, — to gain the whole world and lose his own soul!

1 Of Putnam's Magazine.

Do not wait as long as I have before you write. If you will look at another star, I will try to supply my side of the triangle.

Tell Mr. Brown that I remember him, and trust that he remembers me.

P. S. — Excuse this rather flippant preaching, which does not cost me enough; and do not think that I mean you always, though your letter requested the subjects.

## TO HARRISON BLAKE (AT WORCESTER).

CONCORD, April 10, 1853.

Mr. Blake, — Another singular kind of spiritual foot-ball, — really nameless, handleless, homeless, like myself, — a mere arena for thoughts and feelings; definite enough outwardly, indefinite more than enough inwardly. But I do not know why we should be styled “misters” or “masters:” we come so near to being anything or nothing, and seeing that we are mastered, and not wholly sorry to be mastered, by the least phenomenon. It seems to me that we are the mere creatures of thought, — one of the lowest forms of intellectual life, we men, — as the sunfish is of animal life. As yet our thoughts have acquired no definiteness nor solidity; they are purely molluscous, not vertebrate; and the height of our existence is to float upward in an ocean where the sun shines, — appearing only like a vast soup or chowder to the eyes of the immortal navigators. It is wonderful that I can be here, and you there, and that we can correspond, and do many other things, when, in fact, there is so little of us, either or both, anywhere. In a few minutes, I expect, this slight film or dash of vapor that I am will be what is called asleep, — resting! forsooth from what? Hard work? and thought? The hard work of the dandelion down, which floats over the meadow all day; the hard work of a pismire that labors to raise a hillock all day, and even by moonlight. Suddenly I can come forward into the utmost apparent distinctness, and speak with a sort of emphasis to you; and the next moment I am so faint an entity, and make so slight an impression, that nobody can find the traces of me. I try to hunt myself up, and find the little of me that is discoverable is falling asleep, and then I assist and tuck it up. It is getting late. How can I starve or feed? Can I be said to sleep? There is not enough of me even for that. If you hear a noise,— ‘t aint I,— ‘t aint I, — as the dog says with a tin-kettle tied to his tail. I read of something happening to another the other day: how happens it that nothing ever happens to me? A dandelion down that never alights, — settles, — blown off by a boy to see if his mother wanted him, — some divine boy in the upper pastures.

Well, if there really is another such a meteor sojourning in these spaces, I would like to ask you if you know whose estate this is that we are on? For my part I enjoy it well enough, what with the wild apples and the scenery; but I shouldn't wonder if the owner set his dog on me next. I could remember something not much to the purpose, probably; but if I stick to what I do know, then —

It is worth the while to live respectably unto ourselves. We can possibly get along with a neighbor, even with a bedfellow, whom we respect but very little; but as soon as it comes to this, that we do not respect ourselves, then we do not get along at all, no matter how much money we are paid for halting. There are old heads in the world who cannot help me by their example or advice to live worthily and satisfactorily to myself; but I believe that it is in my power to elevate myself this very hour above the common level of my life. It is better to have your head in the clouds, and know where you are, if indeed you cannot get it above them, than to breathe the clearer atmosphere below them, and think that you are in paradise.

Once you were in Milton I doubting what to

1 A town near Boston.

do. To live a better life, — this surely can be done. Dot and carry one. Wait not for a clear sight, for that you are to get. What you see clearly you may omit to do. Milton and Worcester? It is all Blake, Blake. Never mind the rats in the wall; the cat will take care of them. All that men have said or are is a very faint rumor, and it is not worth the while to remember or refer to that. If you are to meet God, will you refer to anybody out of that court? How shall men know how I succeed, unless they are in at the life? I did not see the "Times" reporter there.

Is it not delightful to provide one's self with the necessaries of life, — to collect dry wood for the fire when the weather grows cool, or fruits when we grow hungry? — not till then. And then we have all the time left for thought!

Of what use were it, pray, to get a little wood to burn, to warm your body this cold weather, if there were not a divine fire kindled at the same time to warm your spirit?

"Unless above himself he can

Erect himself, how poor a thing is man!"

I cuddle up by my stove, and there I get up another fire which warms fire itself. Life is so short that it is not wise to take roundabout ways, nor can we spend much time in waiting. Is it absolutely necessary, then, that we should do as we are doing? Are we chiefly under obligations to the devil, like Tom Walker? Though it is late to leave off this wrong way, it will seem early the moment we begin in the right way; instead of mid-afternoon, it will be early morning with us. We have not got half way to dawn yet.

As for the lectures, I feel that I have something to say, especially on Traveling, Vagueness, and Poverty; but I cannot come now. I will wait till I am fuller, and have fewer engagements. Your suggestions will help me much to write them when I am ready. I am going to Haverhill to-morrow, surveying, for a week or more. You met me on my last errand thither.

I trust that you realize what an exaggerater I am, — that I lay myself out to exaggerate whenever I have an opportunity, — pile Pelion upon Ossa, to reach heaven so. Expect no trivial truth from me, unless I am on the witness-stand. I will come as near to lying as you can drive a coach-and-four. If it isn't thus and so with me, it is with something. I am not particular whether I get the shells or meat, in view of the latter's worth.

I see that I have not at all answered your letter, but there is time enough for that.

1 A Massachusetts town, the birthplace of Whittier.

## TO HARRISON BLAKE (AT WORCESTER).

CONCORD, December 19, 1853.

Mr. Blake, — My debt has accumulated so that I should have answered your last letter at once, if I had not been the subject of what is called a press of engagements, having a lecture to write for last Wednesday, and surveying more than usual besides. It has been a kind of running fight with me, — the enemy not always behind me, I trust.

True, a man cannot lift himself by his own waistbands, because he cannot get out of himself; but he can expand himself (which is better, there being no up nor down in nature), and so split his waistbands, being already within himself.

You speak of doing and being, and the vanity, real or apparent, of much doing. The suckers — I think it is they — make nests in our river in the spring of more than a cart-load of small stones, amid which to deposit their ova. The other day I opened a muskrat's house. It was made of weeds, five feet broad at base, and three feet high, and far and low within it was a little cavity, only a foot in diameter, where the rat dwelt. It may seem trivial, this piling up of weeds, but so the race of muskrats is preserved. We must heap up a great pile of doing, for a small diameter of being. Is it not imperative on us that we do something, if we only work in a treadmill? And, indeed, some sort of revolving is necessary to produce a centre and nucleus of being. What exercise is to the body, employment is to the mind and morals. Consider what an amount of drudgery must be performed, — how much humdrum and prosaic labor goes to any work of the least value. There are so many layers of mere white lime in every shell to that thin inner one so beautifully tinted. Let not the shell-fish think to build his house of that alone; and pray, what are its tints to him? Is it not his smooth, close-fitting shirt merely, whose tints are not to him, being in the dark, but only when he is gone or dead, and his shell is heaved up to light, a wreck upon the beach, do they appear. With him, too, it is a Song of the Shirt, "Work, — work, — work! And the work is not merely a police in the gross sense, but in the higher sense a discipline. If it is surely the means to the highest end we know, can any work be humble or disgusting? Will it not rather be elevating as a ladder, the means by which we are translated?"

How admirably the artist is made to accomplish his self-culture by devotion to his art! The wood-sawyer, through his effort to do his work well, becomes not merely a better wood-sawyer, but measurably a better man. Few are the men that can work on their navels, — only some Brahmins that I have heard of. To the painter is given some paint and canvas instead; to the Irishman a hog, typical of himself. In a thousand apparently humble ways men busy themselves to make some right take the place of some wrong, — if it is only to make a better paste-blackening, — and they are themselves so much the better morally for it.

You say that you do not succeed much. Does it concern you enough that you do not? Do you work hard enough at it? Do you get the benefit of discipline out of it? If so, persevere. Is it a more serious thing than to walk a thousand miles in a thousand successive hours? Do you get any corns by it? Do you ever think of hanging yourself on account of failure?

If you are going into that line, — going to besiege the city of God, — you must not only be strong in engines, but prepared with provisions to starve out the garrison. An Irishman came to see me to-day, who is endeavoring to get his family out to this New World. He rises at half past four, milks twenty-eight cows (which has swollen the joints of his fingers), and eats his breakfast, without any milk in his tea or coffee, before six; and so on, day after day, for six and a half dollars a month; and thus he keeps his virtue in him, if he does not add to it; and he regards me as a gentleman able to assist him; but if I ever get to be a gentleman, it will be by working after my fashion harder than he does. If my joints are not swollen, it must be because I deal with the teats of celestial cows before breakfast (and the milker in this case is always allowed some of the milk for his breakfast), to say nothing of the flocks and herds of Admetus afterward.

It is the art of mankind to polish the world, and every one who works is scrubbing in some part.

If the work is high and far, You must not only aim aright, But draw the bow with all your might.

You must qualify yourself to use a bow which no humbler archer can bend.

“Work, — work, — work!”

Who shall know it for a bow? It is not of yew-tree. It is straighter than a ray of light; flexibility is not known for one of its qualities.

December 22.

So far I had got when I was called off to survey. Pray read the life of Haydon the painter, if you have not. It is a small revelation for these latter days; a great satisfaction to know that he has lived, though he is now dead. Have you met with the letter of a Turkish *cadi* at the end of Layard's “Ancient Babylon”? that also is refreshing, and a capital comment on the whole book which precedes it, — the Oriental genius speaking through him.

Those Brahmins “put it through.” They come off, or rather stand still, conquerors, with some withered arms or legs at least to show; and they are said to have cultivated

the faculty of abstraction to a degree unknown to Europeans. If we cannot sing of faith and triumph, we will sing our despair. We will be that kind of bird. There are day owls, and there are night owls, and each is beautiful and even musical while about its business.

Might you not find some positive work to do with your back to Church and State, letting your back do all the rejection of them? Can you not go upon your pilgrimage, Peter, along the winding mountain path whither you face? A step more will make those funereal church bells over your shoulder sound far and sweet as a natural sound.

“Work, — work, — work!”

Why not make a very large mud-pie and bake it in the sun! Only put no Church nor State into it, nor upset any other pepper-box that way. Dig out a woodchuck, — for that has nothing to do with rotting institutions. Go ahead.

Whether a man spends his day in an ecstasy or despondency, he must do some work to show for it, even as there are flesh and bones to show for him. We are superior to the joy we experience.

Your last two letters, methinks, have more nerve and will in them than usual, as if you had erected yourself more. Why are not they good work, if you only had a hundred correspondents to tax you?

Make your failure tragical by the earnestness and steadfastness of your endeavor, and then it will not differ from success. Prove it to be the inevitable fate of mortals, — of one mortal, — if you can.

You said that you were writing on Immortality. I wish you would communicate to me what you know about that. You are sure to live while that is your theme.

Thus I write on some text which a sentence of your letters may have furnished.

I think of coming to see you as soon as I get a new coat, if I have money enough left. I will write to you again about it.

## **TO HARRISON BLAKE (AT WORCESTER).**

CONCORD, January 21, 1854.

Mr. BLAKE, — My coat is at last done, and my mother and sister allow that I am so far in a condition to go abroad. I feel as if I had gone abroad the moment I put it on. It is, as usual, a production strange to me, the wearer, — invented by some Count D’Orsay; and the maker of it was not acquainted with any of my real depressions or elevations. He only measured a peg to hang it on, and might have made the loop big enough to go over my head. It requires a not quite innocent indifference, not to say insolence, to wear it. Ah! the process by which we get our coats is not what it should be. Though the Church declares it righteous, and its priest pardons me, my own good genius tells me that it is hasty, and coarse, and false. I expect a time when, or rather an integrity by which, a man will get his coat as honestly and as perfectly fitting as a tree its bark. Now our garments are typical of our conformity to the ways of the world,

i e., of the devil, and to some extent react on us and poison us, like that shirt which Hercules put on.

I think to come and see you next week, on Monday, if nothing hinders. I have just returned from court at Cambridge, whither I was called as a witness, having surveyed a water-privilege, about which there is a dispute, since you were here.

Ah! what foreign countries there are, greater in extent than the United States or Russia, and with no more souls to a square mile, stretching away on every side from every human being with whom you have no sympathy. Their humanity affects me as simply monstrous. Rocks, earth, brute beasts, comparatively are not so strange to me. When I sit in the parlors and kitchens of some with whom my business brings me — I was going to say in contact — (business, like misery, makes strange bedfellows), I feel a sort of awe, and as forlorn as if I were cast away on a desolate shore. I think of Riley's Narrative<sup>1</sup> and his sufferings. You, who soared like a merlin with your mate through the realms of aether, in the presence of the unlike, drop at once to earth, a mere amorphous squab, divested of your air-inflated pinions. (By the way, excuse this writing, for I am using the stub of the last feather I chance to possess.) You travel on, however, through this dark and desert world; you see in the distance an intelligent and sympathizing lineament; stars come forth in the dark, and oases appear in the desert.

But (to return to the subject of coats), we are wellnigh smothered under yet more fatal coats, which do not fit us, our whole lives long. Consider the cloak that our employment or station is; how rarely men treat each other for

1 An American seaman, wrecked on the coast of Arabia, — once a popular book.

what in their true and naked characters they are; how we use and tolerate pretension; how the judge is clothed with dignity which does not belong to him, and the trembling witness with humility that does not belong to him, and the criminal, perchance, with shame or impudence which no more belong to him. It does not matter so much, then, what is the fashion of the cloak with which we cloak these cloaks. Change the coat; put the judge in the criminal-box, and the criminal on the bench, and you might think that you had changed the men.

No doubt the thinnest of all cloaks is conscious deception or lies; it is sleazy and frays out; it is not close-woven like cloth; but its meshes are a coarse network. A man can afford to lie only at the intersection of the threads; but truth puts in the filling, and makes a consistent stuff.

I mean merely to suggest how much the station affects the demeanor and self-respectability of the parties, and that the difference between the judge's coat of cloth and the criminal's is insignificant compared with, or only partially significant of, the difference between the coats which their respective stations permit them to wear. What airs the judge may put on over his coat which the criminal may not! The judge's opinion (sententia) of the criminal sentences him, and is read by the clerk of the court, and published to the world, and executed by the sheriff; but the criminal's opinion of the judge has the weight of a sentence, and is published and executed only in the supreme court of the universe, — a court not of common pleas. How much juster is the one

than the other? Men are continually sentencing each other; but, whether we be judges or criminals, the sentence is ineffectual unless we continue ourselves.

I am glad to hear that I do not always limit your vision when you look this way; that you sometimes see the light through me; that I am here and there windows, and not all dead wall. Might not the community sometimes petition a man to remove himself as a nuisance, a darkener of the day, a too large mote?

## TO HARRISON BLAKE (AT WORCESTER).

CONCORD, August 1854.

Mr. Blake, — Methinks I have spent a rather unprofitable summer thus far. I have been too much with the world, as the poet might say.<sup>1</sup> The completest performance of the highest duties it imposes would yield me but little satisfaction. Better the neglect of all such, because your life passed on a level where it was impossible to recognize them. Latterly, I have heard

1 “The world is too much with us.” — Wordsworth.

the very flies buzz too distinctly, and have accused myself because I did not still this superficial din. We must not be too easily distracted by the crying of children or of dynasties. The Irishman erects his sty, and gets drunk, and jabbbers more and more under my eaves, and I am responsible for all that filth and folly. I find it, as ever, very unprofitable to have much to do with men. It is sowing the wind, but not reaping even the whirlwind; only reaping an unprofitable calm and stagnation. Our conversation is a smooth, and civil, and never-ending speculation merely. I take up the thread of it again in the morning, with very much such courage as the invalid takes his prescribed Seidlitz powders. Shall I help you to some of the mackerel? It would be more respectable if men, as has been said before, instead of being such pigmy desperates, were Giant Despairs. Emerson says that his life is so unprofitable and shabby for the most part, that he is driven to all sorts of resources, and, among the rest, to men. I tell him that we differ only in our resources. Mine is to get away from men. They very rarely affect me as grand or beautiful; but I know that there is a sunrise and a sunset every day. In the summer, this world is a mere watering-place, — a Saratoga, — drinking so many tumblers of Congress water; and in the winter, is it any better, with its oratorios? I have seen more men than usual, lately; and, well as I was acquainted with one, I am surprised to find what vulgar fellows they are. They do a little business commonly each day, in order to pay their board, and then they congregate in sitting-rooms and feebly fabulate and paddle in the social slush; and when I think that they have sufficiently relaxed, and am prepared to see them steal away to their shrines, they go unashamed to their beds, and take on a new layer of sloth. They may be single, or have families in their faineancy. I do not meet men who can have nothing to do with me because they have so much to do with themselves. However, I trust that a very few cherish purposes which they never declare. Only think, for a moment, of a man about

his affairs! How we should respect him! How glorious he would appear! Not working for any corporation, its agent, or president, but fulfilling the end of his being! A man about his business would be the cynosure of all eyes.

The other evening I was determined that I would silence this shallow din; that I would walk in various directions and see if there was not to be found any depth of silence around. As Bonaparte sent out his horsemen in the Red Sea on all sides to find shallow water, so I sent forth my mounted thoughts to find deep water.

I left the village and paddled up the river to Fair Haven Pond. As the sun went down, I saw a solitary boatman disporting on the smooth lake. The falling dews seemed to strain and purify the air, and I was soothed with an infinite stillness. I got the world, as it were, by the nape of the neck, and held it under in the tide of its own events, till it was drowned, and then I let it go down stream like a dead dog. Vast hollow chambers of silence stretched away on every side, and my being expanded in proportion, and filled them. Then first could I appreciate sound, and find it musical.<sup>1</sup>

But now for your news. Tell us of the year.

<sup>1</sup> A lady who made such a night voyage with Thoreau, years before, says: "How wise he was to ask the elderly lady with a younger one for a row on the Concord River one moonlit night! The river that night was as deep as the heavens above; serene stars shone from its depths, as far off as the stars above. Deep answered unto deep in our souls, as the boat glided swiftly along, past low-lying fields, under overhanging trees. A neighbor's cow waded into the cool water, — she became at once a Behemoth, a river-horse, hippopotamus, or river-god. A dog barked, — he was Diana's hound, he waked Endymion. Suddenly we were landed on a little isle; our boatman, our boat glided far off in the flood. We were left alone, in the power of the river-god; like two white birds we stood on this bit of ground, the river flowing about us; only the eternal powers of nature around us. Time for a prayer, perchance, — and back came the boat and oarsman; we were ferried to our homes, — no question asked or answered. We had drank of the cup of the night, — had felt the silence and the stars."

Have you fought the good fight? What is the state of your crops? Will your harvest answer well to the seed-time, and are you cheered by the prospect of stretching corn-fields? Is there any blight on your fields, any murrain in your herds? Have you tried the size and quality of your potatoes? It does one good to see their balls dangling in the lowlands. Have you got your meadow hay before the fall rains shall have set in? Is there enough in your barns to keep your cattle over? Are you killing weeds nowadays? or have you earned leisure to go a-fishing? Did you plant any Giant Regrets last spring, such as I saw advertised? It is not a new species, but the result of cultivation and a fertile soil. They are excellent for sauce. How is it with your marrow squashes for winter use? Is there likely to be a sufficiency of fall feed in your neighborhood? What is the state of the springs? I read that in your county there is more water on the hills than in the valleys. Do you find it easy to get all the help you require? Work early and late, and let your men and teams rest at noon. Be careful not to drink too

much sweetened water, while at your hoeing, this hot weather. You can bear the heat much better for it.

## **TO MARSTON WATSON (AT PLYMOUTH).**

CONCORD, September 19, 1854.

DEAR SIR, — I am glad to hear from you and the Plymouth men again. The world still holds together between Concord and Plymouth, it seems. I should like to be with you while Mr. Alcott is there, but I cannot come next Sunday. I will come Sunday after next, that is, October 1st, if that will do; and look out for you at the depot. I do not like to promise more than one discourse. Is there a good precedent for two?

The first of Thoreau's many lecturing visits to Worcester, the home of his friend, Blake, was in April, 1849, and from that time onward he must have read lectures there at least annually, until his last illness, in 1861-62. By 1854, the lecturing habit, in several places besides Concord, had become established; and there was a constant interchange of visits and excursions with his friends at Worcester, Plymouth, New Bedford, etc. Soon after the publication of "Walden," in the summer of 1854, Thoreau wrote these notes to Mr. Blake, touching on various matters of friendly interest.

## **TO HARRISON BLAKE (AT WORCESTER).**

CONCORD, September 21, 1854.

BLAKE, — I have just read your letter, but do not mean now to answer it, solely for want of time to say what I wish. I directed a copy of "Walden" to you at Ticknor's, on the day of its publication, and it should have reached you before. I am encouraged to know that it interests you as it now stands, — a printed book, — for you apply a very severe test to it, — you make the highest demand on me. As for the excursion you speak of, I should like it right well, — indeed I thought of proposing the same thing to you and Brown, some months ago. Perhaps it would have been better if I had done so then; for in that case I should have been able to enter into it with that infinite margin to my views, — spotless of all engagements, — which I think so necessary. As it is, I have agreed to go a-lecturing to Plymouth, Sunday after next (October 1) and to Philadelphia in November, and thereafter to the West, if they shall want me; and, as I have prepared nothing in that shape, I feel as if my hours were spoken for. However, I think that, after having been to Plymouth, I may take a day or two — if that date will suit you and Brown. At any rate I will write you then.

CONCORD, October 5, 1854.

After I wrote to you, Mr. Watson postponed my going to Plymouth one week, i e., till next Sunday; and now he wishes me to carry my instruments and survey his grounds, to which he has been adding. Since I want a little money, though I contemplate but

a short excursion, I do not feel at liberty to decline this work. I do not know exactly how long it will detain me, — but there is plenty of time yet, and I will write to you again — perhaps from Plymouth.

There is a Mr. Thomas Cholmondeley (pronounced Chumly) a young English author, staying at our house at present, who asks me to teach him botany — i e., anything which I know; and also to make an excursion to some mountain with him. He is a well-behaved person, and possibly I may propose his taking that run to Wachusett with us — if it will be agreeable to you. Nay, if I do not hear any objection from you, I will consider myself at liberty to invite him.

CONCORD, Saturday p. M., October 14, 1854.

I have just returned from Plymouth, where I have been detained surveying much longer than I expected. What do you say to visiting Wachusett next Thursday? I will start at 7 1/4 A. M. unless there is a prospect of a stormy day, go by cars to Westminster, and thence on foot five or six miles to the mountain-top, where I may engage to meet you, at (or before) 12 M. If the weather is unfavorable, I will try again, on Friday, — and again on Monday. If a storm comes on after starting, I will seek you at the tavern in Princeton centre, as soon as circumstances will permit. I shall expect an answer at once, to clinch the bargain.

The year 1854 was a memorable one in Thoreau's life, for it brought out his most successful book, "Walden," and introduced him to the notice of the world, which had paid small attention to his first book, the "Week," published five years earlier. This year also made him acquainted with two friends to whom he wrote much, and who loved to visit and stroll with him around Concord, or in more distant places, — Thomas Cholmondeley, an Englishman from Shropshire, and Daniel Ricketson, a New Bedford Quaker, of liberal mind and cultivated tastes, — an author and poet, and fond of corresponding with poets, — as he did with the Howitts and William Barnes of England, and with Bryant, Emerson, Channing, and Thoreau, in America. Few of the letters to Cholmondeley are yet found, being buried temporarily in the mass of family papers at Condover Hall, an old Elizabethan mansion near Shrewsbury, which Thomas Cholmondeley inherited, and which remains in his family's possession since his own death at Florence in 1864. But the letters of the Englishman, recently printed in the "Atlantic Monthly" (December, 1893), show how sincere was the attachment of this ideal friend to the Concord recluse, and how well he read that character which the rest of England, and a good part of America, have been so slow to recognize for what it really was.

Thomas Cholmondeley was the eldest son of Rev. Charles Cowper Cholmondeley, rector of Overleigh, Cheshire, and of a sister to Reginald Heber, the celebrated bishop of Calcutta. He was born in 1823, and brought up at Hodnet, in Shropshire, where his father, a cousin of Lord Delamere, had succeeded his brother-in-law as rector, on the departure of Bishop Heber for India, in 1823. The son was educated at Oriel College, Oxford, — a friend, and perhaps pupil of Arthur Hugh Clough, who gave him letters to Emerson in 1854. Years before, after leaving Oxford, he had gone with some relatives to New Zealand, and before coming to New England, he had published a book, "Ultima

Thule,” describing that Australasian colony of England, where he lived for part of a year. He had previously studied in Germany, and traveled on the Continent. He landed in America the first time in August, 1854, and soon after went to Concord, where, at the suggestion of Emerson, he became an inmate of Mrs. Thoreau’s family. This made him intimate with Henry Thoreau for a month or two, and also brought him into acquaintance with Ellery Channing, then living across the main street of Concord, in the west end of the village, and furnishing to Thoreau a landing-place for his boat under the willows at the foot of Channing’s small garden. Alcott was not then in Concord, but Cholmondeley made his acquaintance in Boston, and admired his character and manners.<sup>1</sup>

With Channing and Thoreau the young Englishman visited their nearest mountain, Wachusett, and in some of their walks the artist Rowse, who made the first portrait of Thoreau, joined, for he was then in Concord, late in 1854, engraving the fine head of Daniel Webster from a painting by Ames, and this engraving he gave both to Thoreau and to Cholmondeley. In December the Englishman, whose patriotism was

— See Memoir of Bronson Alcott, pp. 485-494. The remark of Emerson quoted on p. 486, that Cholmondeley was “the son of a Shropshire squire,” was not strictly correct, his father being a Cheshire clergyman of a younger branch of the ancient race of Cholmondeley. But he was the grandson of a Shropshire squire (owner of land), for his mother was daughter and sister of such gentlemen, and it was her brother Richard who presented Reginald Heber and Charles Cholmondeley to the living of Hodnet, near Market Drayton.

roused by the delays and calamities of England in her Crimean war, resolved to go home and raise a company, as he did, first spending some weeks in lodgings at Boston (Orange Street) in order to hear Theodore Parker preach and visit Harvard College, of which I was then a student, in the senior class. He visited me and my classmate, Edwin Morton, and called on some of the Cambridge friends of Clough. In January, 1855, he sailed for England, and there received the letter of Thoreau printed on pages 295-298.

The acquaintance with Mr. Ricketson began by letter before Cholmondeley reached Concord, but Thoreau did not visit him until December, 1854. Mr. Ricketson says, “In the summer of — I purchased, in New Bedford, a copy of ‘Walden.’ I had never heard of its author, but in this admirable and most original book I found so many observations on plants, birds, and natural objects generally in which I was also interested, that I felt at once I had found a congenial spirit. During this season I was rebuilding a house in the country, three miles from New Bedford, and had erected a small building which was called my ‘shanty;’ and my family being then in my city house, I made this building my temporary home. From it I addressed my first letter to the author of ‘Walden.’ In reply he wrote, ‘I had duly received your very kind and frank letter, but delayed to answer it thus long because I have little skill as a correspondent, and wished to send you something more than my thanks. I was gratified by your prompt and hearty acceptance of my book. Yours is the only word of greeting I am likely to receive from a

dweller in the woods like myself, — from where the whippoorwill and cuckoo are heard, and there are better than moral clouds drifting, and real breezes blowing.’ From that year until his death in 1862 we exchanged visits annually, and letters more frequently. He was much interested in the botany of our region, finding here many marine plants he had not before seen. When our friendship began, the admirers of his only two published books were few; most prominent among them were Emerson, Alcott, and Channing of Concord, Messrs. Blake and T. Brown of Worcester, Mr. Marston Watson of Plymouth, and myself. Many accused him of being an imitator of Emerson; others thought him unsocial, impracticable, and ascetic. Now he was none of these; a more original man never lived, nor one more thoroughly personifying civility; no man could hold a finer relationship with his family than he.”

In reply to Thoreau’s letter just quoted, Mr. Ricketson wrote further of himself and his locality, and Thoreau thus continued: —

## **TO DANIEL RICKETSON (AT NEW BEDFORD).**

CONCORD, October 1, 1854.

Dear Sir, — Your account excites in me a desire to see the Middleborough Ponds, of which I had already heard somewhat; as also some very beautiful ponds on the Cape, in Harwich, I think, near which I once passed. I have sometimes also thought of visiting that remnant of our Indians still living near you. But then, you know, there is nothing like one’s native fields and lakes. The best news you send me is, not that Nature with you is so fair and genial, but that there is one there who likes her so well. That proves all that was asserted.

Homer, of course, you include in your list of lovers of Nature; and, by the way, let me mention here, — for this is “my thunder” lately, — William Gilpin’s long series of books on the Picturesque, with their illustrations. If it chances that you have not met with these, I cannot just now frame a better wish than that you may one day derive as much pleasure from the inspection of them as I have.

Much as you have told me of yourself, you have still, I think, a little the advantage of me in this correspondence, for I have told you still more in my book. You have therefore the broadest mark to fire at.

A young Englishman, Mr. Cholmondeley, is just now waiting for me to take a walk with him; therefore excuse this very barren note from yours, hastily at last.

## **TO HARRISON BLAKE.**

CONCORD, December 22, 1854.

Mr. Blake, — I will lecture for your Lyceum on the 4th of January next; and I hope that I shall have time for that good day out of doors. Mr. Cholmondeley is in Boston, yet perhaps I may invite him to accompany me. I have engaged to lecture at New Bedford on the 26th inst., stopping with Daniel Ricketson, three miles out of town; and at Nantucket on the 28th, so that I shall be gone all next week. They say there is some danger of being weatherbound at Nantucket; but I see that others run the same risk. You had better acknowledge the receipt of this at any rate, though you should write nothing else; otherwise I shall not know whether you get it; but perhaps you will not wait till you have seen me, to answer my letter (of December 19). I will tell you what I think of lecturing when I see you. Did you see the notice of “Walden” in the last “Anti-Slavery Standard”? You will not be surprised if I tell you that it reminded me of you.

As above mentioned, Thoreau went to lecture at Nantucket, and on his way spent a day or two with Mr. Ricketson, reaching his house on Christmas Day. His host, who then saw him for the first time, says: —

“I had expected him at noon, but as he did not arrive, I had given him up for the day. In the latter part of the afternoon I was clearing off the snow from my front steps, when, looking up, I saw a man walking up the carriage-road, bearing a portmanteau in one hand and an umbrella in the other. He was dressed in a long overcoat of dark color, and wore a dark soft hat. I had no suspicion it was Thoreau, and rather supposed it was a peddler of small wares.”

This was a common mistake to make. When Thoreau ran the gauntlet of the Cape Cod villages,— “feeling as strange,” he says, “as if he were in a town in China,” — one of the old fishermen could not believe that he had not something to sell. Being finally satisfied that it was not a peddler with his pack, the old man said, “Wal, it makes no odds what ‘tis you carry, so long as you carry Truth along with ye.” Mr. Ricketson soon came to the same conclusion about his visitor, and in the early September of —— returned the visit.

## **TO HARRISON BLAKE (AT WORCESTER).**

CONCORD, December 19, 1854.

Mr. Blake, — I suppose you have heard of my truly providential meeting with Mr. T. Brown; providential because it saved me from the suspicion that my words had fallen altogether on stony ground, when it turned out that there was some Worcester soil there. You will allow me to consider that I correspond with him through you.

I confess that I am a very bad correspondent, so far as promptness of reply is concerned; but then I am sure to answer sooner or later. The longer I have forgotten you, the more I remember you. For the most part I have not been idle since I saw you. How does the world go with you? or rather, how do you get along without it? I have not yet learned to live, that I can see, and I fear that I shall not very soon. I find, however,

that in the long run things correspond to my original idea, — that they correspond to nothing else so much; and thus a man may really be a true prophet without any great exertion. The day is never so dark, nor the night even, but that the laws at least of light still prevail, and so may make it light in our minds if they are open to the truth. There is considerable danger that a man will be crazy between dinner and supper; but it will not directly answer any good purpose that I know of, and it is just as easy to be sane. We have got to know what both life and death are, before we can begin to live after our own fashion. Let us be learning our a-b-c's as soon as possible. I never yet knew the sun to be knocked down and rolled through a mud-puddle; he comes out honor-bright from behind every storm. Let us then take sides with the sun, seeing we have so much leisure. Let us not put all we prize into a football to be kicked, when a bladder will do as well.

When an Indian is burned, his body may be broiled, it may be no more than a beefsteak. What of that? They may broil his heart, but they do not therefore broil his courage, — his principles. Be of good courage! That is the main thing.

If a man were to place himself in an attitude to bear manfully the greatest evil that can be inflicted on him, he would find suddenly that there was no such evil to bear; his brave back would go a-begging. When Atlas got his back made up, that was all that was required. (In this case a priv., not pleon., and tlami.) The world rests on principles. The wise gods will never make underpinning of a man. But as long as he crouches, and skulks, and shirks his work, every creature that has weight will be treading on his toes, and crushing him; he will himself tread with one foot on the other foot.

The monster is never just there where we think he is. What is truly monstrous is our cowardice and sloth.

Have no idle disciplines like the Catholic Church and others; have only positive and fruitful ones. Do what you know you ought to do. Why should we ever go abroad, even across the way, to ask a neighbor's advice? There is a nearer neighbor within us incessantly telling us how we should behave. But we wait for the neighbor without to tell us of some false, easier way.

They have a census-table in which they put down the number of the insane. Do you believe that they put them all down there? Why, in every one of these houses there is at least one man fighting or squabbling a good part of his time with a dozen pet demons of his own breeding and cherishing, which are relentlessly gnawing at his vitals; and if perchance he resolve at length that he will courageously combat them, he says, "Ay! ay! I will attend to you after dinner!" And, when that time comes, he concludes that he is good for another stage, and reads a column or two about the Eastern War! Pray, to be in earnest, where is Sevastopol?

Who is Menchikoff? and Nicholas behind there? who the Allies? Did not we fight a little (little enough to be sure, but just enough to make it interesting) at Alma, at Balaclava, at Inkermann? We love to fight far from home. Ah! the Minié musket is the king of weapons. Well, let us get one then.

I just put another stick into my stove, — a pretty large mass of white oak. How many men will do enough this cold winter to pay for the fuel that will be required to warm them? I suppose I have burned up a pretty good-sized tree to-night, — and for what? I settled with Mr. Tarbell for it the other day; but that wasn't the final settlement. I got off cheaply from him. At last, one will say, "Let us see, how much wood did you burn, sir?" And I shall shudder to think that the next question will be, "What did you do while you were warm?" Do we think the ashes will pay for it? that God is an ash-man? It is a fact that we have got to render an account for the deeds done in the body.

Who knows but we shall be better the next year than we have been the past? At any rate, I wish you a really new year, — commencing from the instant you read this, — and happy or unhappy, according to your deserts.

The early part of 1855 was spent by Thomas Cholmondeley in a tiresome passage to England, whence he wrote (January 27) to say to Thoreau that he had reached Shropshire, and been commissioned captain in the local militia, in preparation for service at Sevastopol, but reminding his Concord friend of a half promise to visit England some day. To this Thoreau made answer thus: —

## **TO THOMAS CHOLMONDELEY (AT HODNET).**

CONCORD, Mass., February 7, 1855.

Dear Cholmondeley, — I am glad to hear that you have arrived safely at Hodnet, and that there is a solid piece of ground of that name which can support a man better than a floating plank, in that to me as yet purely historical England. But have I not seen you with my own eyes, a piece of England herself, and was not your letter come out to me thence? I have now reason to believe that Salop is as real a place as Concord; with at least as good an underpinning of granite, floating on liquid fire. I congratulate you on having arrived safely at that floating isle, after your disagreeable passage in the steamer America. So are we not all making a passage, agreeable or disagreeable, in the steamer Earth, trusting to arrive at last at some less undulating Salop and brother's house?

I cannot say that I am surprised to hear that you have joined the militia, after what I have heard from your lips; but I am glad to doubt if there will be occasion for your volunteering into the line. Perhaps I am thinking of the saying that it "is always darkest just before day." I believe it is only necessary that England be fully awakened to a sense of her position, in order that she may right herself, especially as the weather will soon cease to be her foe. I wish I could believe that the cause in which you are embarked is the cause of the people of England. However, I have no sympathy with the idleness that would contrast this fighting with the teachings of the pulpit; for,

perchance, more true virtue is being practiced at Sevastopol than in many years of peace. It is a pity that we seem to require a war, from time to time, to assure us that there is any manhood still left in man.

I was much pleased with [J. J. G.] Wilkinson's vigorous and telling assault on Allopathy, though he substitutes another and perhaps no stronger thy for that. Something as good on the whole conduct of the war would be of service. Cannot Carlyle supply it? We will not require him to provide the remedy. Every man to his trade. As you know, I am not in any sense a politician. You, who live in that snug and compact isle, may dream of a glorious commonwealth, but I have some doubts whether I and the new king of the Sandwich Islands shall pull together. When I think of the gold-diggers and the Mormons, the slaves and the slaveholders and the flibustiers, I naturally dream of a glorious private life. No, I am not patriotic; I shall not meddle with the Gem of the Antilles. General Quitman cannot count on my aid, alas for him! nor can General Pierce.

I still take my daily walk, or skate over Concord fields or meadows, and on the whole have more to do with nature than with man. We have not had much snow this winter, but have had some remarkably cold weather, the mercury, February 6, not rising above 6° below zero during the day, and the next morning falling to 26°. Some ice is still thirty inches thick about us. A rise in the river has made uncommonly good skating, which I have improved to the extent of some thirty miles a day, fifteen out and fifteen in.

Emerson is off westward, enlightening the Hamiltonians [in Canada] and others, mingling his thunder with that of Niagara. Channing still sits warming his five wits — his sixth, you know, is always limber — over that stove, with the dog down cellar. Lowell has just been appointed Professor of Belles-Lettres in Harvard University, in place of Longfellow, resigned, and will go very soon to spend another year in Europe, before taking his seat.

I am from time to time congratulating myself on my general want of success as a lecturer; apparent want of success, but is it not a real triumph? I do my work clean as I go along, and they will not be likely to want me anywhere again. So there is no danger of my repeating myself, and getting to a barrel of sermons, which you must upset, and begin again with.

My father and mother and sister all desire to be remembered to you, and trust that you will never come within range of Russian bullets. Of course, I would rather think of you as settled down there in Shropshire, in the camp of the English people, making acquaintance with your men, striking at the root of the evil, perhaps assaulting that rampart of cotton bags that you tell of. But it makes no odds where a man goes or stays, if he is only about his business.

Let me hear from you, wherever you are, and believe me yours ever in the good fight, whether before Sevastopol or under the wreken.

While Cholmondeley's first letter from England was on its way to Concord, Thoreau was one clay making his occasional call at the Harvard College Library (where he

found and was allowed to take away volumes relating to his manifold studies), when it occurred to him to call at my student-chamber in Holworthy Hall, and there leave a copy of his "Week." I had never met him, and was then out; the occasion of his call was a review of his two books that had come out a few weeks earlier in the "Harvard Magazine," of which I was an editor and might be supposed to have had some share in the criticism. The volume was left with my classmate Lyman, accompanied by a message that it was intended for the critic in the Magazine. Accordingly, I gave it to Edwin Morton, who was the reviewer, and notified Thoreau by letter of that fact, and of my hope to see him soon in Cambridge or Concord. To this he replied in a few days as below: —

## **TO F. B. SANBORN (AT HAMPTON FALLS, N. H.).**

CONCORD, February 2, 1855.

Dear Sir, — I fear that you did not get the note which I left with the Librarian for you, and so will thank you again for your politeness. I was sorry that I was obliged to go into Boston almost immediately. However, I shall be glad to see you whenever you come to Concord, and I will suggest nothing to discourage your coming, so far as I am concerned; trusting that you know what it is to take a partridge on the wing. You tell me that the author of the criticism is Mr. Morton. I had heard as much, — and indeed guessed more. I have latterly found Concord nearer to Cambridge than I believed I should, when I was leaving my Alma Mater; and hence you will not be surprised if even I feel some interest in the success of the "Harvard Magazine."

Believe me yours truly,  
HENRY D. THOREAU.

At this time I was under engagement with Mr. Emerson and others in Concord to take charge of a small school there in March; and did so without again seeing the author of "Walden" in Cambridge. Soon after my settlement at Concord, in the house of Mr. Channing, just opposite Thoreau's, he made an evening call on me and my sister (April 11, 1855), but I had already met him more than once at Mr. Emerson's, and was even beginning to take walks with him, as frequently happened in the next six years. In the following summer I began to dine daily at his mother's table, and thus saw him almost every day for three years.

## **TO HARRISON BLAKE (AT WORCESTER).**

Concord, June 27, 1855.

Mr. Blake, — I have been sick and good for nothing but to lie on my back and wait for something to turn up, for two or three months. This has compelled me to

postpone several things, among them writing to you, to whom I am so deeply in debt, and inviting you and Brown to Concord, — not having brains adequate to such an exertion. I should feel a little less ashamed if I could give any name to my disorder, — but I cannot, and our doctor cannot help me to it, — and I will not take the name of any disease in vain. However, there is one consolation in being sick; and that is the possibility that you may recover to a better state than you were ever in before. I expected in the winter to be deep in the woods of Maine in my canoe, long before this; but I am so far from this that I can only take a languid walk in Concord streets.

I do not know how the mistake arose about the Cape Cod excursion. The nearest I have come to that with anybody is this: About a month ago Channing proposed to me to go to Truro on Cape Cod with him, and board there a while, — but I declined. For a week past, however, I have been a little inclined to go there and sit on the seashore a week or more; but I do not venture to propose myself as the companion of him or of any peripatetic man. Not that I should not rejoice to have you and Brown or C. sitting there also. I am not sure that C. really wishes to go now; and as I go simply for the medicine of it, I should not think it worth the while to notify him when I am about to take my bitters. Since I began this, or within five minutes, I have begun to think that I will start for Truro next Saturday morning, the 30th. I do not know at what hour the packet leaves Boston, nor exactly what kind of accommodation I shall find at Truro.

I should be singularly favored if you and Brown were there at the same time; and though you speak of the 20th of July, I will be so bold as to suggest your coming to Concord Friday night (when, by the way, Garrison and Phillips hold forth here), and going to the Cape with me. Though we take short walks together there, we can have long talks, and you and Brown will have time enough for your own excursions besides.

I received a letter from Cholmondeley last winter, which I should like to show you, as well as his book.<sup>1</sup> He said that he had “accepted the offer of a captaincy in the Salop Militia,” and was hoping to take an active part in the war before long.

I thank you again and again for the encouragement your letters are to me. But I must stop this writing, or I shall have to pay for it.

NORTH TRURO, July 8, 1855.

There being no packet, I did not leave Boston till last Thursday, though I came down on Wednesday, and Channing with me. There is no public house here; but we are boarding with Mr. James Small, the keeper, in a little house attached to the Highland Lighthouse. It is true the table is not so clean as could be desired, but I have found it much superior in that respect to the Provincetown hotel. They are what is called “good livers.” Our host has another larger and very good house, within a quarter of a mile, unoccupied, where he says he can accommodate several more. He is a very good man to deal with, — has often been the representative of the town, and is perhaps the most intelligent

<sup>1</sup> The book was *Ultima Thule*, describing New Zealand.

man in it. I shall probably stay here as much as ten days longer: board \$3.50 per week. So you and Brown had better come down forthwith. You will find either the schooner Melrose or another, or both, leaving Commerce Street, or else T Wharf, at 9 A. M. (it commonly means 10), Tuesdays, Thursdays, and Saturdays, — if not other days. We left about 10 A. M., and reached Provincetown at 5 P. M., — a very good run. A stage runs up the Cape every morning but Sunday, starting at 4 1/2 A. M., and reaches the postoffice in North Truro, seven miles from Provincetown, and one from the lighthouse, about 6 o'clock. If you arrive at P. before night, you can walk over, and leave your baggage to be sent. You can also come by cars from Boston to Yarmouth, and thence by stage forty miles more, — through every day, but it costs much more, and is not so pleasant. Come by all means, for it is the best place to see the ocean in these States. I hope I shall be worth meeting.

July 14.

You say that you hope I will excuse your frequent writing. I trust you will excuse my infrequent and curt writing until I am able to resume my old habits, which for three months I have been compelled to abandon. Methinks I am beginning to be better. I think to leave the Cape next Wednesday, and so shall not see you here; but I shall be glad to meet you in Concord, though I may not be able to go before the mast, in a boating excursion. This is an admirable place for coolness and sea-bathing and retirement. You must come prepared for cool weather and fogs.

P. S. — There is no mail up till Monday morning.

## TO HARRISON BLAKE (AT WORCESTER).

CONCORD, September 26, 1855.

Mr. Blake, — The other day I thought that my health must be better, — that I gave at last a sign of vitality, — because I experienced a slight chagrin. But I do not see how strength is to be got into my legs again. These months of feebleness have yielded few, if any, thoughts, though they have not passed without serenity, such as our sluggish Musketaquid suggests. I hope that the harvest is to come. I trust that you have at least warped up the stream a little daily, holding fast by your anchors at night, since I saw you, and have kept my place for me while I have been absent.

Mr. Ricketson of New Bedford has just made me a visit of a day and a half, and I have had a quite good time with him. He and Channing have got on particularly well together. He is a man of very simple tastes, notwithstanding his wealth; a lover of nature; but, above all, singularly frank and plain-spoken. I think that you might enjoy meeting him.

Sincerity is a great but rare virtue, and we pardon to it much complaining, and the betrayal of many weaknesses. R. says of himself, that he sometimes thinks that he has all the infirmities of genius without the genius; is wretched without a hair-pillow, etc.; expresses a great and awful uncertainty with regard to "God," "Death," his "immortal-

ity;" says, "If I only knew," etc. He loves Cowper's "Task" better than anything else; and thereafter, perhaps, Thomson, Gray, and even Howitt. He has evidently suffered for want of sympathizing companions. He says that he sympathizes with much in my books, but much in them is naught to him,— "namby-pamby,"— "stuff,"— "mystical." Why will not I, having common sense, write in plain English always; teach men in detail how to live a simpler life, etc.; not go off into — ? But I say that I have no scheme about it, — no designs on men at all; and, if I had, my mode would be to tempt them with the fruit, and not with the manure. To what end do I lead a simple life at all, pray? That I may teach others to simplify their lives? — and so all our lives be simplified merely, like an algebraic formula? Or not, rather, that I may make use of the ground I have cleared, to live more worthily and profitably? I would fain lay the most stress forever on that which is the most important, — imports the most to me, — though it were only (what it is likely to be) a vibration in the air. As a preacher, I should be prompted to tell men, not so much how to get their wheat-bread cheaper, as of the bread of life compared with which that is bran. Let a man only taste these loaves, and he becomes a skillful economist at once. He'll not waste much time in earning those. Don't spend your time in drilling soldiers, who may turn out hirelings after all, but give to undrilled peasantry a country to fight for. The schools begin with what they call the elements, and where do they end?

I was glad to hear the other day that Higginson and —— — were gone to Ktaadn; it must be so much better to go to than a Woman's Rights or Abolition Convention; better still, to the delectable primitive mounts within you, which you have dreamed of from your youth up, and seen, perhaps, in the horizon, but never climbed.

But how do you do? Is the air sweet to you? Do you find anything at which you can work, accomplishing something solid from day to day? Have you put sloth and doubt behind, considerably? — had one redeeming dream this summer?

I dreamed, last night, that I could vault over any height it pleased me. That was something; and I contemplated myself with a slight satisfaction in the morning for it.

Methinks I will write to you. Methinks you will be glad to hear. We will stand on solid foundations to one another, — la column planted on this shore, you on that. We meet the same sun in his rising. We were built slowly, and have come to our bearing. We will not mutually fall over that we may meet, but will grandly and eternally guard the straits. Methinks I see an inscription on you, which the architect made, the stucco being worn off to it. The name of that ambitious worldly king is crumbling away. I see it toward sunset in favorable lights. Each must read for the other, as might a sailer-by. Be sure you are star-y-pointing still. How is it on your side? I will not require an answer until you think I have paid my debts to you.

I have just got a letter from Ricketson, urging me to come to New Bedford, which possibly I may do. He says I can wear my old clothes there.

Let me be remembered in your quiet house.

## TO DANIEL RICKETSON (AT NEW BEDFORD).

CONCORD, September 27, 1855.

Friend Ricketson, — I am sorry that you were obliged to leave Concord without seeing more of it, — its river and woods, and various pleasant walks, and its worthies. I assure you that I am none the worse for my walk with you, but on all accounts the better. Methinks I am regaining my health; but I would like to know first what it was that ailed me.

I have not yet conveyed your message to Mr. Hosmer,<sup>1</sup> but will not fail to do so. That idea of occupying the old house is a good one, — quite feasible, — and you could bring your hair-pillow with you. It is an inn in Concord which I had not thought of, — a philosopher's inn. That large chamber might make a man's idea expand proportionably. It would be well to have an interest in some old chamber in a deserted house in every part of the country which attracted us.

<sup>1</sup> This was Edmund Hosmer, a Concord farmer, before mentioned as a friend of Emerson, who was fond of quoting his sagacious and often cynical remarks. He had entertained George Curtis and the Alcotts at his farm on the "Turnpike," southeast of Emerson's; but now was living on a part of the old manor of Governor Winthrop, which soon passed to the ownership of the Hunts; and this house which Mr. Ricketson proposed to lease was the "old Hunt farmhouse," — in truth built for the Winthrops two centuries before. It was soon after torn down.

There would be no such place to receive one's guests as that. If old furniture is fashionable, why not go the whole house at once? I shall endeavor to make Mr. Hosmer believe that the old house is the chief attraction of his farm, and that it is his duty to preserve it by all honest appliances. You might take a lease of it in perpetuo, and done with it.

I am so wedded to my way of spending a day, — require such broad margins of leisure, and such a complete wardrobe of old clothes, — that I am ill-fitted for going abroad. Pleasant is it sometimes to sit at home, on a single egg all day, in your own nest, though it may prove at last to be an egg of chalk. The old coat that I wear is Concord; it is my morning-robe and study-gown, my working dress and suit of ceremony, and my nightgown after all. Cleave to the simplest ever. Home, — home, — home. Cars sound like cares to me.

I am accustomed to think very long of going anywhere, — am slow to move. I hope to hear a response of the oracle first. However, I think that I will try the effect of your talisman on the iron horse next Saturday, and dismount at Tarkiln Hill. Perhaps your sea air will be good for me. I conveyed your invitation to Channing, but he apparently will not come.

Excuse my not writing earlier; but I had not decided.

## TO DANIEL RICKETSON (AT NEW BEDFORD).

CONCORD, October 12, 1855.

Mr. Ricketson, — I fear that you had a lonely and disagreeable ride back to New Bedford through the Carver woods and so on, — perhaps in the rain, too, and I am in part answerable for it. I feel very much in debt to you and your family for the pleasant days I spent at Brooklawn. Tell Arthur and Walton<sup>1</sup> that the shells which they gave me are spread out, and make quite a show to inland eyes. Methinks I still hear the strains of the piano, the violin, and the flageolet blended together. Excuse me for the noise which I believe drove you to take refuge in the shanty. That shanty is indeed a favorable place to expand in, which I fear I did not enough improve.

On my way through Boston I inquired for Gilpin's works at Little, Brown & Co.'s, Monroe's, Ticknor's, and Burirham's. They have not got them. They told me at Little, Brown & Co.'s that his works (not complete), in twelve vols., 8vo, were imported and sold in this country five or six years ago for about fifteen dollars. Their terms for importing are ten per cent on the cost. I copied from the "London Catalogue

1 Sons of Mr. Ricketson; the second, a sculptor, modeled the medallion head of Thoreau engraved for this book.

of Books, 1846-51," at their shop, the following list of Gilpin's Works: —

Gilpin (Wm.), Dialogues on Various Subjects. 8vo. 9s.

Cadell.

— Essays on Picturesque Subjects. 8vo. 15s. Cadell.

— Exposition of the New Testament. 2 vols. 8vo. 16s.

Longman.

— Forest Scenery, by Sir T. D. Lauder. 2 vols. 8vo.

18s. — Smith & E. — Lectures on the Catechism. 12mo. 3s. Qd.

Longman.

— Lives of the Reformers. 2 vols. 12mo. 8s.

Rivington.

— Sermons Illustrative and Practical. 8vo. 12s.

Hatchard.

— Sermons to Country Congregations. 4 vols. 8vo. £1

16s. — Longman.

— Tour in Cambridge, Norfolk, &c. 8vo. 18s. Cadell.

— Tour of the River Wye. 12mo. 4s. With plates.

8vo. 17s. — Cadell.

Gilpin (W. S. (?) ), Hints on Landscape Gardening. Royal 8vo. £1. — Cadell.

Beside these, I remember to have read one volume on "Prints;" his "Southern Tour" (1775); "Lakes of Cumberland," two vols.; "Highlands of Scotland and West of England," two vols. — N. B. There must be plates in every volume.

I still see an image of those Middleborough Ponds in my mind's eye, — broad shallow lakes, with an iron mine at the bottom, — comparatively unvexed by sails, — only by Tom Smith and his squaw, Sepits, "Sharper." I find my map of the State to be the best I have seen of that district. It is a question whether the islands of Long Pond or Great Quitticus offer the greatest attractions to a Lord of the Isles. That plant which I found on the shore of Long Pond chances to be a rare and beautiful flower, — the *Sabattia chloroides*, — referred to Plymouth.

In a Description of Middleborough in the Hist. Coll., vol iii., 1810, signed Nehemiah Bennet, Middleborough, 1793, it is said: "There is on the easterly shore of Assawampsitt Pond, on the shore of Betty's Neck, two rocks which have curious marks thereon (supposed to be done by the Indians), which appear like the steppings of a person with naked feet which settled into the rocks; likewise the prints of a hand on several places, with a number of other marks; also there is a rock on a high hill a little to the eastward of the old stone fishing wear, where there is the print of a person's hand in said rock."

It would be well to look at those rocks again more carefully; also at the rock on the hill.

I should think that you would like to explore Sinpatuct Pond in Rochester, — it is so large and near. It is an interesting fact that the ale-wives used to ascend to it, — if they do not still, — both from Mattapoissett and through Great Quitticus.

There will be no trouble about the chamber in the old house, though, as I told you, Mr. Hosmer may expect some compensation for it. He says, "Give my respects to Mr. Ricketson, and tell him that I cannot be at a large expense to preserve an antiquity or curiosity. Nature must do its work."

"But," say I, "he asks you only not to assist nature."

## TO DANIEL RICKETSON (AT NEW BEDFORD).

CONCORD, October 16, 1855.

Friend Ricketson, — I have got both your letters at once. You must not think Concord so barren a place when Channing<sup>1</sup> is away. There are the river and fields left yet; and I, though ordinarily a man of business, should have some afternoons and evenings to spend with you, I trust, — that is, if you could stand so much of me. If you can spend your time profitably here, or without ennui, having an occasional ramble or *tete-a-tete* with one of the natives, it will give me pleasure to have you in the neighborhood. You see I am preparing you for our awful unsocial ways, — keeping in our dens a good part of the day, — sucking our claws perhaps. But then we make a religion of it, and that you cannot but respect.

<sup>1</sup> Mr. Channing had gone, October, 1855, to live in New Bedford, and help edit the Mercury there.

If you know the taste of your own heart, and like it, come to Concord, and I'll warrant you enough here to season the dish with, — ay, even though Channing and Emerson and I were all away. We might paddle quietly up the river. Then there are one or two more ponds to be seen, etc.

I should very much enjoy further rambling with you in your vicinity, but must postpone it for the present. To tell the truth, I am planning to get seriously to work after these long months of inefficiency and idleness. I do not know whether you are haunted by any such demon which puts you on the alert to pluck the fruit of each day as it passes, and store it safely in your bin. True, it is well to live abandonedly from time to time; but to our working hours that must be as the spile to the bung. So for a long season I must enjoy only a low slanting gleam in my mind's eye from the Middleborough Ponds far away.

Methinks I am getting a little more strength into those knees of mine; and, for my part, I believe that God does delight in the strength of a man's legs.

## TO HARRISON BLAKE (AT WORCESTER).

CONCORD, December 9, 1855.

Mr. Blake, — Thank you! thank you for going a-wooding with me, — and enjoying it, — for being warmed by my wood fire. I have indeed enjoyed it much alone. I see how I might enjoy it yet more with company, — how we might help each other to live. And to be admitted to Nature's hearth costs nothing. None is excluded, but excludes himself. You have only to push aside the curtain.

I am glad to hear that you were there too. There are many more such voyages, and longer ones, to be made on that river, for it is the water of life. The Ganges is nothing to it. Observe its reflections, — no idea but is familiar to it. That river, though to dull eyes it seems terrestrial wholly, flows through Elysium. What powers bathe in it invisible to villagers! Talk of its shallowness, — that hay-carts can be driven through it at midsummer; its depth passeth my understanding. If, forgetting the allurements of the world, I could drink deeply enough of it; if, cast adrift from the shore, I could with complete integrity float on it, I should never be seen on the Mill-dam again.<sup>1</sup> If there is any depth in

<sup>1</sup> The centre of Concord village, where the post-office and shops are, — so called from an old mill-dam where now is a street.

me, there is a corresponding depth in it. It is the cold blood of the gods. I paddle and bathe in their artery.

I do not want a stick of wood for so trivial a use as to burn even, but they get it over night, and carve and gild it that it may please my eye. What persevering lovers they are! What infinite pains to attract and delight us! They will supply us with fagots wrapped in the daintiest packages, and freight paid; sweet-scented woods, and bursting

into flower, and resounding as if Orpheus had just left them, — these shall be our fuel, and we still prefer to chaffer with the wood-merchant!

The jug we found still stands draining bottom up on the bank, on the sunny side of the house. That river, — who shall say exactly whence it came, and whither it goes? Does aught that flows come from a higher source? Many things drift downward on its surface which would enrich a man. If you could only be on the alert all day, and every day! And the nights are as long as the days.

Do you not think you could contrive thus to get woody fibre enough to bake your wheaten bread with? Would you not perchance have tasted the sweet crust of another kind of bread in the mean while, which ever hangs ready baked on the bread-fruit trees of the world?

Talk of burning your smoke after the wood has been consumed! There is a far more important and warming heat, commonly lost, which precedes the burning of the wood. It is the smoke of industry, which is incense. I had been so thoroughly warmed in body and spirit, that when at length my fuel was housed, I came near selling it to the ash-man, as if I had extracted all its heat.

You should have been here to help me get in my boat. The last time I used it, November 27th, paddling up the Assabet, I saw a great round pine log sunk deep in the water, and with labor got it aboard. When I was floating this home so gently, it occurred to me why I had found it. It was to make wheels with to roll my boat into winter quarters upon. So I sawed off two thick rollers from one end, pierced them for wheels, and then of a joist which I had found drifting on the river in the summer I made an axletree, and on this I rolled my boat out.

Miss Mary Emerson is here, — the youngest person in Concord, though about eighty, — and the most apprehensive of a genuine thought; earnest to know of your inner life; most stimulating society; and exceedingly witty withal. She says they called her old when she was young, and she has never grown any older. I wish you could see her.

My books did not arrive till November 30th, the cargo of the Asia having been complete when they reached Liverpool. I have arranged them in a case which I made in the mean while, partly of river boards. I have not dipped far into the new ones yet. One is splendidly bound and illuminated. They are in English, French, Latin, Greek, and Sanscrit. I have not made out the significance of this godsend yet.

Farewell, and bright dreams to you!

## **TO DANIEL RICKETSON (AT NEW BEDFORD).**

CONCORD, December 25, 1855.

Friend Ricketson, — Though you have not shown your face here, I trust that you did not interpret my last note to my disadvantage. I remember that, among other

things, I wished to break it to you, that, owing to engagements, I should not be able to show you so much attention as I could wish, or as you had shown to me. How we did scour over the country! I hope your horse will live as long as one which I hear just died in the south of France at the age of forty. Yet I had no doubt you would get quite 'enough of me. Do not give it up so easily. The old house is still empty, and Hosmer is easy to treat with.

Channing was here about ten days ago. I told him of my visit to you, and that he too must go and see you and your country. This may have suggested his writing to you.

That island lodge, especially for some weeks in a summer, and new explorations in your vicinity, are certainly very alluring; but such are my engagements to myself, that I dare not promise to wend your way, but will for the present only heartily thank you for your kind and generous offer. When my vacation comes, then look out.

My legs have grown considerably stronger, and that is all that ails me, But I wish now above all to inform you, — though I suppose you will not be particularly interested, — that Cholmondeley has gone to the Crimea, “a complete soldier,” with a design, when he returns, if he ever returns, to buy a cottage in the South of England, and tempt me over; but that, before going, he busied himself in buying, and has caused to be forwarded to me by Chapman, a royal gift, in the shape of twenty-one distinct works (one in nine volumes, — forty-four volumes in all), almost exclusively relating to ancient Hindoo literature, and scarcely one of them to be bought in America.<sup>1</sup> I am familiar with many of them, and know how to prize them. I send you information of this as I might of the birth of a child.

Please remember me to all your family.

<sup>1</sup> These books were ordered by Cholmondeley in London, and sent to Boston just as he was starting for the Crimean war, in October, 1855, calling them “a nest of Indian books.” They included Mill’s History of British India, several translations of the sacred books of India, and one of them in Sanscrit; the works of Bunsen, so far as then published, and other valuable books. In the note accompanying this gift, Cholmondeley said, “I think I never found so much kindness in all my travels as in your country of New England.” In return, Thoreau sent his English friend, in 1857, his own *Week*, Emerson’s poems, Walt Whitman’s *Leaves of Grass*, and F. L. Olmsted’s book on the Southern States (then preparing for the secession which they attempted four years later). This was perhaps the first copy of Whitman seen in England, and when Cholmondeley began to read it to his stepfather, Rev. Z. Macaulay, at Hodnet, that clergyman declared he would not hear it, and threatened to throw it in the fire. On reading the *Week* (he had received *Walden* from Thoreau when first in America), Cholmondeley wrote me, “Would you tell dear Thoreau that the lines I admire so much in his *Week* begin thus:

---

‘Low-anchored cloud,  
Newfoundland air,’ etc.  
In my mind the best thing he ever wrote,”

## TO DANIEL RICKETSON (AT NEW BEDFORD).

CONCORD, March 5, 1856.

Dear Sir, — I have been out of town, else I should have acknowledged your letter before. Though not in the best mood for writing, I will say what I can now. You plainly have a rare, though a cheap, resource in your shanty. Perhaps the time will come when every country-seat will have one, — when every country-seat will be one. I would advise you to see that shanty business out, though you go shanty-mad. Work your vein till it is exhausted, or conducts you to a broader one; so that Channing shall stand before your shanty, and say, “That is your house.”

This has indeed been a grand winter for me, and for all of us. I am not considering how much I have enjoyed it. What matters it how happy or unhappy we have been, if we have minded our business and advanced our affairs. I have made it a part of my business to wade in the snow and take the measure of the ice. The ice on our pond was just two feet thick on the first of March; and I have to-day been surveying a wood-lot, where I sank about two feet at every step.

It is high time that you, fanned by the warm breezes of the Gulf Stream, had begun to “lay,” for even the Concord hens have, though one wonders where they find the raw material of egg-shell here. Beware how you put off your laying to any later spring, else your cackling will not have the inspiring early spring sound.

As for visiting you in April, though I am inclined enough to take some more rambles in your neighborhood, especially by the seaside, I dare not engage myself, nor allow you to expect me. The truth is, I have my enterprises now as ever, at which I tug with ridiculous feebleness, but admirable perseverance, and cannot say when I shall be sufficiently fancy-free for such an excursion.

You have done well to write a lecture on Cowper. In the expectation of getting you to read it here, I applied to the curators of our Lyceum; 1 but, alas, our Lyceum has been a failure this winter for want of funds. It ceased some weeks since, with a debt, they tell me, to be carried over to the next year’s account. Only one more lecture is to be read by a Signor Somebody, an Italian, paid for by private subscription, as a deed of charity to the lecturer. They are not rich enough to offer you your expenses even, though probably a month or two ago they would have been glad of the chance.

1 The Concord Lyceum, founded in 1829, and still extant, though not performing its original function of lectures and debates. See pp. 61, 185, etc.

However, the old house has not failed yet. That offers you lodging for an indefinite time after you get into it; and in the mean while I offer you bed and board in my father’s house, — always excepting hair-pillows and new-fangled bedding.

Remember me to your family.

## TO DANIEL RICKETSON (AT NEW BEDFORD).

CONCORD, March 27, 1856.

Friend Ricketson, — I was surprised to hear the other day that Channing was in New Bedford. When he was here last (in December, I think), he said, like himself, in answer to my inquiry where he lived, “that he did not know the name of the place;” so it has remained in a degree of obscurity to me. I am rejoiced to hear that you are getting on so bravely with him and his verses. He and I, as you know, have been old cronies,<sup>1</sup> —

“Fed the same flock, by fountain, shade, and rill,  
Together both, ere the high lawns appeared  
Under the opening eyelids of the morn,  
We drove afield, and both together heard,” etc.  
“But O, the heavy change,” now he is gone.

<sup>1</sup> Ellery Channing is mentioned, though not by name, in the *Week* (pp.211,467), and in *Walden* (p. 414). He was the comrade of Thoreau in Berkshire, and on the Hudson, in New Hampshire, Canada, and Cape Cod, and in many rambles nearer Concord. He was also a companion of Hawthorne in his river voyages, as mentioned in the *Mosses*.
