Summary	This book is a history of the Medici family. According to the author, the Medici family played an important role in the in the rebirth of learning and art in the Europe of their time as well in science. But the author attempts to go beyond the historical record of the family by writing about the Medici as merely a family.

Description:	Bracket in right margin by: The men married to Indian women - squawmen, as they were contemptuously called - suffered most, and, strange to say, the wives of the newcomers, not the men, were their bitterest enemies. They forbade their children to associate with the half-breed children, and at school the position of the latter was unbearable. The white ones beat them and called them opprobrious names. This hatred of the squawman was even carried into politics.

I could not see that I had said anything funny. "He's goin' home," said Sorrel Horse, "and he's goin' to be a good, quiet little boy ever after." "And go to church," said Berry. "And walk the straight and narrer path, world without end, and so forth," Sorrel Horse concluded. "Well, you see how it is," I said. "I've got to go - much as I would like to remain here with you; I simply must go." "Yes," Berry acquiesced; "you have to go all right - but you'll come back, and sooner than you think. These plains and mountains, the free life you have, and they'll never let go. I've been back there myself; went to school there, and all the time old Montana kept calling me, and I never felt right until I saw the sun shining on her bare plains once more and the Rockies looming up sharp and clear in the distance."</p>

Where Found: Type of Marking: Description:	201 Margins Bracket in right margin by: Let me correct the general impression of the squawmen, at least as to those I have known, the men who married Blackfeet women. In the days of the Indians' dire extremity, they gave them all they could, and were content so long as there remained a little bacon and flour for their families; and some days there was not even that in the houses of some of them, for they had given their all. With the Indian they starved for a time, perchance. Scattered here and there upon the reservation, they built for themselves neat homes and corrals, and fenced their hay lands, all of which was an object lesson to the Indian.

Nothing was now hidden from me of the happenings of the night. Wherever I went the snow gave me the story as well as if some one had looked on, had seen it all, and then related it. Here walked, and fed, and played, and rested deer and elk; here a bear prowled around, turning over logs and stones. There were tracks of wolf, and coyote, and bobcat and fox, each hunting in his own way for something with which to fill his belly.

Summary	The sub-title to this book is "Hitler's Dictatorship and the German Nation" and it is a compilation of writings by different authors edited by the late John L. Snell and revised and with an introduction by Allan Mitchell, University of California, San Diego. The book is divided into four parts with each part devoted to one aspect of the Nazi movement. Each part has about six writings pertaining to Nazi Germany and Hitler. One part is devoted exclusively to the personality of Hitler. Another part is about the Nazi movement in the greater context of the whole of German history.

Summary	Science Magazine January 19, 1973 Article requested by Ted via Lewis & Clark Library interlibrary loan on 03/11/1988. Author writes about if sanity and insanity exist, how shall we know them? How what is viewed as normal in one culture may be seen as quite aberrant in another. This article is an experiment of whether sane can be distinguished from the insane (and whether degrees of insanity can be distinguished from each other) This article describes such an experiment. Eight sane people gained secret admission to 12 different hospitals. This experiment covers their diagnostic experiences as well as their description of experiences in psychiatric institutions.

Summary	A study of a way of life that many Americans are now leading, and that many more are likely to lead. Book covers life under the protection of the big organization - the corporation, the government etc., Basically a study of society, the organization man, they are not the workers, nor are they the white-collar people in the usual clerk sense of the word. They are the ones that left home in our middle class, spiritually as well as physically, to take the vows of organization life.

<p>Where Found: Type of Marking: Description:</p>	<p>3-4 Underlined Underlined with a big asterik: Fleeing before the march of Napoleon's armies the royal family of Portugal sought safety in Brazil. There it remained for thirteen years. And in this vast and empty land the transition from colony to kingdom and from kingdom to independent empire was a gradual process. There was no abrupt break with the colonial past, no prolonged and devastating civil war. When the royal family returned to Portugal to 1821, the heir to the crown of Portugal himself became the emperor of Brazil, endowed the country with its constitution, and secured its entry into the family of nations, and with the support of a powerful plantation aristocracy, the throne thus peacefully established survived for sixty-five years.</p>
<p>Where Found: Type of Marking: Description:</p>	<p>123 margins Big asterik next to the following, also underlined: Revolutions are caused not by he completely oppressed but by those who have tasted liberty and want more. By giving Americans a vision of better government and denying them a significant share in its operation, the reforms of Charles III, both in their administrative and in their commercial aspects, helped to precipitate the collapse of the imperial regume they were intended to prolong.</p>

Summary	Personality in Twins Reared Apart and Together by Tellegen, Lykken, Bouchard, Wilcox, Segal & Rich. Until recently, almost all knowledge regarding environmental and genetic causal influences on stable personality traits has come from studies of twins reared together. The findings have been remarkable and puzzling. Particularly puzzling, and contrary to what many psychologist would predict, is the finding that almost none of the environmental variance is due to sharing a common family environment.

Summary	<p>Juanita H. Williams, clinical psychologist examines the basis of women's behavior in a Biosocial Context. The various chapters cover the common misconceptions about women and shows how psychological findings have refuted them. The historical aspects of the psychoanalytical works of Freud, his disciples, and his critics. Author also provides an ontogenetic analysis of the entire life cycle of women. The biological determinants of behavior, sex differences in infancy and early childhood. Also covers how children learn and how social influences seriously affect behavior. Subsequent chapters are concerned with the biological and psychological aspects of sexuality, birth control, reproduction and treatment of alternative lifestyles with a discussion on roles of housewife, and mother. The chapter on variations from the norm takes up not only female emotional disorders, but also delinquency, crime and a trenchant review of middle age and aging. The final chapter covers the major variables which determine the psychology of women-and of any particular women.</p>

Summary	Author examines the many topics in modern psychology about the powers and dangers of of the hypnotic trance, the wonders of telepathy and clairvoyance, the possibility of the interpretation of dreams, the nature and assessment of personality and the psychology of beauty. Author believes that few reliable accounts have appeared to acquaint the layman with these facts. The book covers reviewing and the evidence, and by acknowledging ignorance when the facts are still in dispute, leaving the reader the decision as to whether the conclusions drawn in the book are justified.

Hayden, Lee A |

Summary	Skeptical Inquirer Winter 1987-88 volume 12, Author writes: What does it mean to say that something is "subliminal" or that it is "below threshold?" Does it mean that something is below the limits of conscious perception?"(It does not!). A large body of research shows that the less likely we are to hear a given sound, the less likely it is to influence our behavior: even behavior as simple as saying, "Yes, I heard it." How much less likely that such a sound, can exert powerful or mysterious influences over us, as is claimed by proponents of subliminal influences!

Summary	<p>Minnesota Study of Twins Reared Apart by Bouchard, Lykken, McGue, Segal, Tellegen. Since 1979, a continuing study of Monozygotic and dizygotic twins separated at infancy and reared apart, has subjected more than 100 sets of reared-apart twins or triplets to a week of intensive psychological and physiological assessment. Like the prior, smaller studies of monozygotic twins reared apart, about 70% of the variance in IQ was found to be associated with genetic variation. The study focuses on the hypothesis that genetic differences affect psychological differences largely indirectly, by influencing the effective environment of the developing child. This evidence for the strong heritability of most psychological traits, sensibly construed, does not detract from the value or importance of parenting, education, and other propaedeutic interventions.</p>

Summary	Murray, covers the Multiform system of assessment and two essential components of this system that Murray feels has been grievously neglected by most psychologists in their investigations of normal personalities, one being the collection by various means of an abundance of experimental, biological data from each subject, and the other being a serious , systematic attempt to construct a coherent formulation of each personality.

------------	------

Hayden, Lee A The belief that advertisements contain hidden sexual and demonic images is widely held even though no evidence exists that such images are used or that they would be effective if they were. Creed analyzes Wilson Bryan Key's lectures

and books saying that they are harmful in that he provides misinformation that in turn misdirects attention and promotes simplistic thinking. Key's thesis is that the "unconscious brain" perceives everything instantaneously as well as his conspirators/victims dichotomy reinforces a student's desire for simple explanations to complex thinking to retreat from the complexity of their college coursework to the comfort of right vs. wrong and obtaining certainty from authority. |

Author:	Joseph Conrad
Language:	English Category: Fiction
Publisher:	Bantam Books, Inc. Year of 1963
Origin:	Unknown Publication:

Summary	Three Short Novels include Heart of Darkness, Youth, and Typhoon. In Heart of Darkness, is the story of the dissolution of a man and the system he stands for. The man is Kurtz, an ivory trader with a mission, and the system is the system of shameless exploitation which certain European powers imposed upon Africa. Youth is an odds-against story, the author early warns that the little 400-ton ship has only a slim chance of reaching her final destination. Typhoon takes place in the China Sea and when it hits, the demonic force of wind and water is horrific. The storm is the protagonist and the story evolves as we watch its effect upon its victims.
