On the positive side, I continue to study and publish on Ellul because of continued requests for updates of my bibliography on him, and because he has become so thoroughly central to my thinking. Childhood influences aside, I believe no one has influenced me like he has. Almost everything I read causes me to make mental “notes

in the margin” based on Ellul’s thought, and he elbows his way into an increasing proportion of my conversations.

How does he manage to touch on almost everything? I think he has done it by going “under the surface of the ocean,” to the deep currents, to use his image for what lies under most of our thinking. These normally unexamined presuppositions affect just about everything that takes place “topside.” An example: shortly after Christmas 1997, as I read a review of the philosopher Thomas Nagel’s *The Last Word* (Oxford University Press), I found myself thinking again about the whole matter of objectivity, as Ellul understands it. Rather like Nagel, he considers that we do not have the ability to adopt some sort of “neutral” stance with regard to every issue (“unqualified” thinking, in Nagel’s terms). But we can recognize our biases, and have confidence in our thinking when we make allowances for these preconceptions.

Although Nagel might not recognize this simplified summary of part of his book, I found it reassuring to recognize Ellul’s conclusions in the work of another thinker. And I found additional reasons for agreeing with Ellul on this important issue.

I do not always agree with him, of course. During interviews that he allowed me to record, mainly during the 1980’s, I sometimes attempted to challenge his ideas. I never got very far, but neither did he convince me to change my mind! A case in point: Simone de Beauvoir. I had read a great deal of her mammoth output when I first ran across a slur in one of Ellul’s books. The slur turned into what sounded like a sneer when I asked him about her, and he remained unimpressed, in spite of all I could think to put forward about her importance in establishing the dignity of women. As often proved to be the case, our difference of opinion on this occasion stemmed from historical and sociological roots. Ellul was likewise concerned for women’s dignity, but also wanted to offer a counterweight to French popular opinion that he believed simply bowed to Beauvoir as an admired figure, without examining the content of her thought. I was eager to recognize her influence in establishing the importance of women, but did not feel overawed by her reputation. I continue to teach Beauvoir regularly in French literature and culture courses, and see no reason, at least not so far, to let Ellul’s reasoning affect my appreciation of her contribution. On the contrary, the more I read of her work, the more pivotal she seems.

One of my primary interests in the development of Ellul’s thought centers around World War II and the period leading up to it. I cannot fathom how he grasped the dangers of fascism so early, with such certainty, especially when one considers the fascination it held for many other thinking people in French society at the time. His writings on the subject shine with amazing foresight and clarity, and he does not hesitate to write some “I told you so” articles after the war.

I have interviewed everyone I could find who knew Ellul in the pre-war era, or who had reason to know something about his thinking from that period. So far, none of the suggested answers to my questions about his insight into the true nature of nazism seem to ring true, or to offer an adequate explanation for his understanding. I remain

“stumped,” at least until I broaden my perspective by absorbing more background on the intellectual and political atmosphere in Europe prior to World War II.

even talk of republishing Ellul’s complete works. Some days, I think work on his bibliography will never end. Nor would I want it to.

Ellul’s seminal concepts refuse to remain confined within our convenient categories. The same weekend I read the review of Nagel’s new book mentioned above, I found my *thinking* revolving around Ellul during an adult Bible study at church. Oddly enough, my thoughts had no apparent connection with Ellul’s theological concepts, important as I believe them to be. We were studying one of Jeremiah’s many prophecies of disaster: “If you do this, the result will be that,” the prophet predicted. My mind moved to the same general pattern as we find it in Ellul on Technique: “If you do this, the result will be that,” he so often wrote.

Specifically, I began wondering about my rather uncritical enthusiasm regarding the use of the Internet: so convenient, so quick. I keep in touch with so many people I didn’t seem to be able to, formerly. Problems can be resolved so readily, decisions made without delay. But, “If you do this, the result will be that”—including writing with no forethought, not to mention without care or style, writing as a quick means to a sure end, without nuance—or even diacritical marks! For the sake of speed and convenience, have I, have we, begun to eliminate a facet of life we had good reason to preserve, namely careful writing of letters? Ellul calls us to question new patterns, rather than slipping into them unthinkingly. Before I began to listen to him, I did not reflect on such matters. I took my place, expectantly, as a child of my century, submitting to its influences, considering them as inevitable “progress.” Jeremiah took my thoughts in many directions that day, but at least one of them constituted a response to Ellul’s call.

Ellul’s thought *forms* a kind of World Wide Web unto itself. You can enter this web at an unbelievable number of points, and it may lead you in directions seemingly unrelated to your point of entry. One idea connects with another, and ultimately relates to a vast array, touching most of the important facets of life and thought. Since I first found myself in this particular web, I have not been able to stop making connections.

Some of those connections involve new people. In part because of the Ellul bibliography, hardly a week goes by without someone e-mailing or writing me with an Ellul question: do I have a certain Ellul book, do I know where he wrote about a given topic, do I have names of people interested in Ellul in this country or that? I should not have been surprised, then, when the September 1997 conference at The Pennsylvania State University on “Education Technology: Asking the Right Questions” attracted more than 200 people, most of them apparently readers of Ellul. But I was amazed to find so many of us gathered in one place, with Ellul central to so many of the papers given, and with Ellul-talk filling the conversation over every meal (contact Christopher Dufour, Continuing and Distance Education, The Pennsylvania State University, 225 Penn State Conference Center Hotel, University Park PA 16802–7002, for information on the soon-to-be-published papers from the conference).

My experience at Penn State encourages me to believe that Ellul's ability to clarify and stimulate thinking has not diminished since his death in 1994. On the contrary, his web keeps spreading more widely, touching more and more people. Books and articles about him continue to be written, the second posthumous book by Ellul has just been published in French, another Penn State conference is planned for 1999, and there is

## My Encounter with Jacques Ellul

Bill Vanderburg

My encounter with Jacques Ellul began with the reading of his book *The Technological Society*. I had purchased it at the recommendation of an acquaintance but did not read it until I had to make some important decisions. While I was a doctoral student, a good deal of time was spent with some fellow students discussing the implications of the Club of Rome Report and the environmental crisis. It appeared to me at the time that the very possibility of serious resource crises or an environmental collapse would force our civilization to rethink its steps. The implications for my profession were clearly immense: the engineering, management and regulation of modern technology would have to change fundamentally. To explore the possible nature of these changes, I decided to continue my studies in technology on the post-doctoral level via the social sciences and humanities to see what these disciplines knew about technology that I in my profession would have to become more knowledgeable about

I began reading *The Technological Society* to see if Jacques Ellul might be a possible mentor for my post-doctoral work. After reading about a chapter and a half, I had a powerful intuition that I had found the person I was looking for. However, the encounter was not without ambivalence. On the one hand, the description of technique corresponded exactly to my experiences in the world of engineering. On the other hand, it implied a critique of the technical mind-set that I had spent many years in acquiring. This was rather depressing, because I had always been considered the "philosopher" in the Faculty and had received a great deal of support and encouragement from the assistant dean and the academic vice-president. *The Technological Society* was telling me that the problems were not merely "out there" but that I was an integral part of the technical mind-set and spirit that dominate our age.

My letter of enquiry as to the possibility of studying with Ellul received a negative reply. He explained to me that he would welcome the possibility of working with an engineer, but that he was already so over-committed that he did not dare to take on yet another project. In the meantime, I had received a post-doctoral fellowship from the only non-military committee of NATO, The Committee for Challenges to a Democratic Society. Hence I wrote Ellul again, offering to limit the time I would request of him to seven hours a year on the assumption that, by auditing all his courses, I could probably figure out most of what I needed to know by myself. He accepted, and we packed our

bags to move to Pessac where we spent four and a half years, during which time I rethought everything I had learned.

Upon my return to Canada, I had in my pocket one job offer — if it might be called that — from the University of Toronto to teach a course on technology and contemporary society in the sociology department, a course on the relationship between society and engineering for the Institute for the History and Philosophy of Science and Technology (a service course to engineering students), and a teaching assistantship in a full-year course on the history of technology. It was a foot in the door, which eventually led to the creation of a new tenured position to develop that part of engineering education which deals with technology-society-environment interactions and their implications for engineering theory and practice. Five years later, I received tenure and at the same time became the founding Director of the Centre for Technology and Social Development.

The mission of the Centre was simple: to reach engineering students to take into account social and environmental considerations along with technical and economic ones so as to make technology as compatible as possible with human life, society and the biosphere — what I now call preventive approaches. I developed from scratch three undergraduate courses and two graduate courses that would give students a conceptual framework for understanding how technology as an integral part of technique is embedded in, interacts with and depends on human life, society and the biosphere, and to use this understanding in their design and decision-making.

What does my conceptual framework and professional approach owe to Jacques Ellul? First, an iconoclastic attitude to science in the sense that it knows things only through abstraction, that is, out of their usual context and in the intellectual context of a specific discipline and, where applicable, in a laboratory. There is no science of the sciences capable of producing a comprehensive understanding of our world and the forces that shape it. Science, like all other human creations, has its place but the limitations of scientific knowing are rarely recognized. Ellul's scholarship includes science, but goes well beyond it in recognizing that human life and society cannot be understood in a piecemeal fashion one discipline at a time. I have tried to illuminate this aspect of Ellul's thought through my book *The Growth of Minds and Cultures*. I can still recall his first reaction after reading it. "Have I not said all of this already?" I could not say I had read all of his work so I asked him for the appropriate references. Thinking for a moment, he said that there were none. What we finally agreed on was that, without a doubt, my theory of culture was implicit in all his work but that nowhere had he made it explicit. His concern was that the book was too systematic and could possibly be assimilated by the "system" to create even more powerful techniques — a problem he had encountered with some of his own writings.

As the Hennebach Visiting Professor at the Colorado School of Mines this year, I have a lot of time to write and hope to complete the second and third volumes of my series entitled *Technique and Culture*. These develop two themes. The first is what can be done with preventive approaches for the engineering, management and regulation of

modern technology to resolve or reduce the many problems humanity currently faces. The second theme deals with what cannot be resolved in this way, namely the influence of technique on human life and society, and ponders what else must be done to make modern civilization more sustainable with respect to the biosphere and with respect to human life itself.

In terms of seeking the best possible understanding of where our most powerful creations of the second half of the twentieth century are taking human life and modern civilization, I believe the thought of Jacques Ellul is second to none for our age. I am not at all sure that it will be recognized as such. One of the reasons may well be his iconoclasm of technique, but I hardly think this is the whole story. In describing individual and collective human life as best he could for the second half of the twentieth-century, Ellul, like other great thinkers who attempted this for their times, goes where science cannot follow. This is because making any claim of alienation or reification implies a norm that human life was meant to be different. This is equally true for the work of Karl Marx and Max Weber, but I believe Ellul goes further than either one of them. The reason I believe this to be the case is that Ellul is much more iconoclastic towards his own position as a person of his time, place and culture. For example, in the case of Karl Marx, if one proceeds to eliminate the great myths (in the sense of cultural anthropology) of progress, work and happiness that dominated Western civilization during the nineteenth century, his entire work comes apart at the seams. Why would the fifth stage in human history be better than the fourth? Why would a political revolution improve the human condition? Why should the characteristics of technology magically change when it is publicly rather than privately owned?

To be iconoclastic with respect to your own culture by means of which you make sense of and live in the world is like cutting the ground from underneath your feet. Of course, this can not be done in an absolute sense, for then we would cease to be people of our time, place and culture. However, even attempting to do so requires what I do not hesitate to call a spiritual struggle that is extremely difficult (I cannot help speculating that Max Weber's long illness had a great deal to do with what he was describing about the human condition). The few people who I regard as having a good understanding of Ellul's work have themselves gone through this iconoclastic journey with respect to their being people of their time, place and culture. It tends to force us toward the periphery of our intellectual disciplines, professions, and institutions and also marginalizes us in our personal lives away from our political, ethical and religious roots. It is like attempting to grow new roots without being able to shed the existing ones.

This aspect of Ellul's life and work was clearly evident in his approach to teaching. In his course on Marx (and only those readers who appreciate the French cultural setting will be able to understand the implications of what I am saying), Ellul stated in his introductory lecture that he recognized that everyone in that room had a position on Marx. He expressed the hope that, when they were finished with the course, they would know better why they held the position they did, and why they could not accept

alternative ones. In other words, as a young French person, it was essential to think through your own life and its commitments of whatever kind with respect to what Marx had to say. There had to be a measure of iconoclasm with respect to one's own position. Otherwise, it would be impossible to understand Marx.

In the Bible studies he organized for students who had approached him with existential difficulties, Ellul proceeded in much the same way. The ideal composition of a group, he told me, would be one quarter agnostics, one quarter Jews, one quarter Catholics and one quarter Protestants. (Today, he would have probably added another group). To my amazement, he pretty much was able to have that mix during the years I was there. The study of the Bible demanded a certain iconoclasm with respect to one's own traditions, profoundly influenced as these are by the spirit of our age. The challenge of the text to all of us, regardless of our commitments, was to be iconoclastic but not to fall into relativism or nihilism. On the contrary, what is demanded is what in secular terms may be expressed as the recognition, in the sense of cultural anthropology, that human life during a particular historical epoch is rooted in myths, and that this cannot be otherwise. In terms of the Judaep-Christian tradition, it is a constant struggle not to bow down to idols or, to put this in more contemporary language, not to be alienated or reified by one's own culture and the spirit of one's age.

I think I can safely say that my intellectual life is unthinkable now without the work of Jacques Ellul. I have sought to build on that work in general, and on its iconoclasm with respect to science and technique in particular, so as to find ways in engineering that can help create some play in the present system. Hopefully this may contribute to the mutation that many recognize is essential. I know there are others who struggle in much the same way with their own profession and their roots. As I already mentioned, this struggle necessarily marginalizes those who engage in it. However, there appears no place or opportunity deliberately and consciously designed to facilitate the sharing of these intellectual, professional and personal ventures. We have all heard about invisible colleges and their fundamental role in the development of science. In closing, I will argue that all of us stand much to lose if we somehow, in the very near future, do not establish an invisible college within which we can each flourish in our endeavours through communication, critical reflection and sharing. I am obviously not thinking of a learned society, not anything that would directly look good on our curricula vitae (if you happen to be a professor or teacher), but a completely informal group where people discuss the intellectual and existential struggles in which they are engaged. At present, there is no such grassroots association, yet I believe that on this tenth anniversary this is what should happen.

# Ellul and the Sentinel on the Wall

Marva J. Dawn

A chance remark to John H. Yoder, my dissertation /jkdiretor atthe Universityof Notre Dame, changed my Ay^Hife in more ways than I can enumerate here. I had just read Jacques Ellul's *The Ethics of Freedom* and mentioned to John that Ellul's comments in that volume about the biblical notion of the principalities and powers intrigued me. John answered that this was a subject that needed much more study — and the rest is, as they say, history. I had planned to do my dissertation On economic redistribution, but that moment led me to exchange this for Ellul's insights into contemporary manifestations of the powers. The requirements of dissertation writing compelled me to read as much of Ellul as possible; his incredible grasp of things, in turn, propelled me into numerous changes of thinking, working, and living.

## Principalities and Powers

The extent of Ellul's influence on my life and work can't even begin to be indicated by the fact that my notes from his publications and my own writings about him Ell a branch of my computer hard disk with almost 6 million bytes, not counting books of mine on other subjects, yet heavily impacted by his insights. Though ultimately not the most important, the most comprehensive element of that influence is his insight into the biblical notion of the powers. The section, "Freedom in Relation to the Powers," in *The Ethics of Freedom* lists the following possibilities of interpretation for biblical passages about principalities:

Are they demons in the most elemental and traditional sense? Are they less precise power? (thrones and dominions?) which still have an existence, reality, and, as one might say, objectivity of their own? Or do we simply have a disposition of man which constitutes this or that human factor a power by exalting it as such...? In this case the powers are not objective realities which influence man from without They exist only as the determination of man which allows them to exist in their subjugating otherness and transcendence. Or finally, at the far end of the scale, are the powers simply a figure of speech common to the Jewish-Hel-lenistic world so that they merely represent cultural beliefs and have no true validity?<sup>1</sup>

Ellul situates himself somewhere between the second and third interpretations, for these reasons:

On the one side, I am fully convinced with Barth and Cullmann that the New Testament *exousiai* and the power of money personified as Mammon correspond to authentic, if spiritual, realities which are independent of man's decision and inclination and whose force does not reside in the man who constitutes them. Nothing that I have read to the contrary has had any great cogency for me. Neither the appeal to Gnosticism nor reference to the cultural background seems to me to explain the force

---

<sup>1</sup> trans, and ed. Geoffrey W. Bromiley (Grand Rapids, MI: William B. Eerdmans Publishing Company, 1976), pp. 151–2. Page references to this book are given parenthetically in the following text I have chosen not to muddy quotations by changing Ellul's use of 'man' to inclusive language.

and emphasis of the New Testament writers in this area, in particular the opposite view has to follow the common practice of ignoring certain essential passages where Paul cannot be adequately demythologized ,

On the other side, however, the powers do not act simply from outside after the manner of Gnostic destiny or a *deus ex machina*. They are characterized by their relation to the concrete world of man. According to the biblical references they find expression in human, social realities, in the enterprises of man. In this sense the occasion of their intervention is human decision and action... [T]he world of which the New Testament speaks is not just a spiritual and abstract reality but one which is identical with what man in general calls the world, i.e., society (152).

Specifically, Ellul asserts that the way in which the powers transform “a natural, social, intellectual, or economic reality into a force which man has no ability either to resist or to control” and the way in which this force “gives life and autonomy to institutions and structures” or “attacks man both inwardly and outwardly” and “alienates man by bringing him into the possession of objects” correspond to biblical passages such as Ephesians 6:12 (152–3). Consequently, Ellul continues as follows:

Political power has many dimensions, e.g., social, economic, psychological, ethical, psycho-analytical, and legal. But when we have scrutinized them all, we have still not apprehended its reality. I am not speaking hastily or lightly here but as one who has passed most of his life in confrontation with their question and in their power. We cannot say with Marx that the power is an ideological superstructure, for it is always there. The disproportion noted above leads me to the unavoidable conclusion that another power intervenes and indwells and uses political power, thus giving it a range and force that it does not have in itself.

The same is true of money ...[and] technology (153–4).

Ellul's own insistence that he speaks out of a lifelong confrontation with the question of the powers raised for me the issue of how this notion was manifested in his immense and diverse corpus. Especially by means of some of his earliest writings in which he links spiritual causes with economic and political problems, I discovered that from the beginning Ellul's separate tracks of theology and *sociologie* had a profoundly deep connection, that the biblical notion of “the principalities and powers” is that correlating link. His sociological assessments of the all-encompassing influence of such contemporary forces as technology, politics, and economics undergird the intensity of his ethical calls to Christians to be “sentinels on the walls” recognizing and warning of the dangers. Ellul wanted the hope and grace of his theology to be related to the concrete situation of the powers at work in the world. On the other hand, he insisted that only on the basis of true freedom through faith was he “able to hold at arm's length these powers which condition and crush me... [and to] view them with an objective eye that freezes and externalizes and measures them...” (228–33). One of the goals

of my dissertation, consequently, was to demonstrate how the concept of “the powers” thoroughly grounded — and thereby could help us understand -Ellul’s thinking.<sup>2</sup>

In my work of leading clergy conferences transdenominationally I have found that pastors and other church leaders find this “principalities and powers” language extremely helpful for understanding the forces that make their work difficult—such as the passivity fostered in our culture when persons are bombarded by such large amounts of information that they feel incapacitated or immobilized?<sup>3</sup> Learning that the obstructions to ministry are not mere “flesh and blood” (Eph. 6:12), but larger forces often interrelated enables my colleagues to ask better questions to discern what is inimical to the gospel, what should be resisted, what can be modified. The terminology also provides immense hope, since Christians believe that Christ has triumphed over the powers by exposing and disarming them; my teaching and writing can thus offer not only the unmasking of such forces, but also biblical tools for standing against them.<sup>4</sup>

## Money as *Mammon*

Ellul’s insights into the principalities have not only undergirded my teaching; his perceptions have also shaped my personal life. Though I had already been asking critical questions about such forces as technology and money in my daily life, Ellul’s article, “L’Argent,” and its larger development in the book, *Money and Powers*, influenced my decisions about my salary and book royalties. In these works Ellul insists that money becomes a god in more ways than we customarily realize. I had always thought that I was safe from its seductions since I didn’t have too much (to be, therefore, tempted to hoard it), nor too little (and thus tempted to chase after it). Money, I presumed, was an area of life over which I had sufficient control.

But Ellul blasted me out of that complacency with his discernment that we sometimes sacralize money by being such a good steward of it that we aren’t generous. I felt compelled to go to the person whose Study carrel was next to mine and whose husband was unemployed to ask her if she would help me desacralize what remained in my grocery budget that month by taking it off my hands. She answered that she would never have accepted my gift (it was only \$10) if I had offered it as such, but that she would gladly help me de-divinize that money. The delight and laughter of the occasion helped me recognize the freedom inherent in Ellul’s astuteness.

---

<sup>2</sup> See Marva J. Dawn, “The Concept of ‘the Principalities and Powers’ in the Works of Jacques Ellul” (Notre Dame: PhD. dissertation, 1992) and also Marva J. Dawn, trans, and ea., *Sources and Trajectories: Eight Early Articles by Jacques Ellul that Set the Stage* (Grand Rapids, MI: Wm. B. Eerdmans Publishing Co., 1997). The commentary in the latter attempts to overcome some of the barriers to reading Ellul’s work and to introduce new readers to Ellul’s larger corpus .

<sup>3</sup> See Neil Postman, *Amusing Ourselves to Death: Public Discourse in the Age of Show Business* (New York: Viking Penguin Inc., 1985) and *Technopoly: The Surrender of Culture to Technology* (New York: Alfred A Knopf, 1992).

<sup>4</sup> See, for example, Marva J. Dawn, *Is It a Lost Cause? Having die Heart of God for the Church’s Children* (Grand Rapids, MI: Wm. B. Eerdmans Publishing Co., 1997).

Now married to a man who shares my desire to desacralize money, I experience the same freedom in not requiring more income than his work as an elementary school teacher provides. Not needing royalties, which are given away, I can write books out of passionate concern for the Christian community and without cares about the market. The Board of “Christians Equipped for Ministry,” under which I freelance, similarly shares Ellul’s perspective and helps decide Where our income tithes should be sent and to which places, such as Mexico and Poland, I can go to serve for free. Of course, Ellul was primarily concerned with economics on the global scale, but his constant invitation to “act locally” invites each of us to counteract the world’s constantly expanding “need” for more stuff and larger incomes (to prove our worth?) by de-divinizing money in our own lives and in our churches.

## The Subversion of Christianity

The work that I had already been doing as a freelancer was confirmed and intensified as a result of Ellul’s works on faith and ecclesiology — works which have not received due attention, perhaps because of his penchant for overstating his case to make a point. Particularly *The Presence of the Kingdom* (and *False Presence*) and *The Subversion of Christianity* heightened my efforts to encourage pastors to resist the unbiblical advice of the church marketers and the economic and political pressures that pervert the gospel — though I disagree with how Ellul in the latter book limits his definition of the powers to six functions in a way that contradicts his earlier elaborations, especially in *Money and Power*.

My disagreement on that issue also aided in developing for me a new independence in my scholarship; not having any real mentors for the kind of work that I do, I had often experienced difficulty previously relying on my own work when I found myself objecting to ideas or methods in thinkers whom I trusted. Ellul’s constant insistence that he didn’t want “disciples,” but that he intended to motivate more thorough thinking gave me permission to protest his conclusions while still acknowledging my intellectual inferiority.

One of the main weaknesses in Ellul’s work is his lack of attention to the Christian community — a weakness that he blamed, in conversation, on his own bad experiences with Church bureaucracy. Convinced that the deficiency of true community is a major source of churches’ lifelessness, efforts to equip church leaders with biblical resources for building it comprise a principal portion of my teaching and writing.<sup>56</sup>

<sup>5</sup> “L’Argent,” *Etudes Theologiques et Religieuses* 27,4 (1952), 29–66, and *Money and Power*, trans. LaVonne Neff (Downers Grove, IL: InterVarsity Press, 1984).

<sup>6</sup> See, for example, Marva J. Dawn, *Truly die Community: Romans 12 and How to Be die Church* (Grand Rapids, MI: Wm. B. Eerdmans Publishing Co., 1992).

## Hermeneutics

Ellul's widely ranging books on biblical texts accentuated my need to discern when I can agree with him (or, more exactly, when his astuteness opens texts for me in entirely new ways!) and when he stretches texts beyond faithfulness to their intent to make his point I can't say that Ellul's book on the *Apocalypse* affected my own writing on the subject since my book was fleshed out (though the final polishing took twelve years!) before I read his, but his attention to large themes rather than to precise interpretations of minute symbols seemed to support my own approach to the book as a perfect vehicle for encouraging those who suffer handicaps and chronic illness.<sup>7</sup>

Ellul's biblical books which influenced me most were *The Politics of God and the Politics of Man* (on II Kings), *The Meaning of the City*, and *Reason for Being: A Meditation on Ecclesiastes*. The first is one of the finest expositions of the dialectical tension between God's sovereignty and human free will that I have ever found, and the second awakened me to the broad sweep of God's grieving over the rebelliousness of human beings which I had never before seen in connection with all the scattered references to cities in the biblical narratives.

Ellul's book on Ecclesiastes has become helpful for my critique of postmodernism in that Ellul deconstructed the myth of progress from *within* the metanarrative of the Bible. His "Preliminary, Polemical, Non-definitive Postscript" joins his "Notes innocentes sur la 'question hermeneutique,'"<sup>8</sup> in reproaching those exegetes who judge the text instead of letting

it judge them. I first read the latter article at a time when I was deeply disturbed by the ways academia so often begins studying biblical texts with a presupposition against their credibility. Since I serve the Church rather than academia, I see the destruction of such extreme "hermeneutics of suspicion" (which often become instead "henneheutics" of blatant rejection), and I find that pastors especially need the encouragement of Ellul's insistence for our hermeneutical methods that we cannot understand anything of *any* Signified whatever it might be, "if [we] do not receive and believe the Revealed [One]."<sup>9</sup>

## Doing Ethics as a Lutheran

In the field of ethics Ellul primarily influenced me by making clear the reason that Lutherans (the tradition in which I was raised) have not been particularly good at doing ethics.-In his insistence that we must have an ethics of freedom and in' his claim

---

<sup>7</sup> See Marva J. Dawn, *Joy in our Weakness: A Gift of Hope from die Book of Revelation* (St Louis: Concordia Publishing House, 1994). —

<sup>8</sup> The latter is published in *L'Evangile, trier et aujourd'hui: Melanges offerts auprofesseur Franz J. Leehardt* (Geneve: Editions Labor et Tides. 1968), pp. 181–190, and translated in *Sources and Trajectories*, pp. 184–203.

<sup>9</sup> *Sources*, p. 192.

that we destroy ethics by turning it into a system Ellul is especially faithful to Martin Luther and antagonistic to his Calvinist roots. If we begin with grace and understand questions of ethics as Holy Spirit-inspired responses to that grace, then it is impossible to legislate moral behaviour.

Consequently, as I presently work on my own ethics textbook, I am developing a model of nurturing Christian character by means of immersion in the biblical narratives so that moral behavior will be the (unlegislated and unsystematized) result. Ellul's influence will be apparent throughout, though, at the current stage, I am only wishing that I could produce books as quickly as he did.<sup>10</sup>

## Meeting Ellul

Finally, I must comment on the influence of meeting Ellul personally in the summer of 1987. I had already been surprised by his graciousness in responding to the letters of an unknown graduate student and was further amazed that he would take the time to meet with me. Due to his decline in health, he had written that he would limit the time of our conversation, but then when that time was spent he continued to talk and afterward his lovely wife served raspberries from their garden. Some of my Ellulian colleagues seemed to be frustrated with me that I did not spend my time asking Ellul about his future writing projects, but for me it was far more valuable to discuss his life patterns rather than his work (although we did do some of that, especially concerning his ideas about the principalities and powers). Professor Ellul asked questions about my work, too—especially about some articles I had written on teaching ethics to children in Lutheran schools. This stands out in my memory because for me Ellul served as such an excellent model of a profound scholar who is also able to relate well to other people. Concerning the common split in theologians between the head and the heart he said, “it is contrary to the Gospel.”

We talked about many practical issues that day — the situation in South Africa, the ecology movement, U.S. intervention in Nicaragua, caring for the poor and the handicapped, euthanasia. As would be expected, Ellul stressed the importance of avoiding propaganda and political games, of thinking about each problem as a whole (thinking globally), and of seeing what we can modify practically in our own communities. He urged the U.S. to fight with economic justice rather than armies and to help the poor not only materially, but also with fellowship, spiritual security, and support in their anguish.

Though Ellul often can seem harsh in his writings, his personal presence was of the utmost gentleness and profound sincerity, the generous character of a deeply committed Christian. —

When we discussed presenting our work in publishable ways, Ellul said that he had created his own market/but that it had taken a long time. When I responded that

---

<sup>10</sup> See Marva J. Dawn, *A World of Difference. Biblical Ethics for the Daily Life of Common People*

I'm too impatient, he replied, "you must *always* be impatient" Both of those points have been constructive for me since my work as a freelancer has had to create its own market over time. '

I wanted to know Ellul as a person encountering, in the struggle to live out faith and ministry, typical obstacles—such as the one we acknowledged in common of dividing our time between study and relating to people when involved in speaking engagements. He revealed himself as I expected — a wonderful model of a gracious man incarnating the Gospel in practical ways, a brilliant man choosing carefully the values of the kingdom of God.

## All That Counts

Daniel B. Clendenin

summer of 1981 was an important time for me. I had finished seminary in June and then married two weeks after graduation ceremonies, It was also the summer that one of my closest friends in seminary, David Werther, gave me a copy of a book by an author I had never heard of—*The Technological Society* by Jacques Ellul. By the end of that summer I had fairly well decided that I wanted Ellul to be the focus of my doctoral studies. Four years later I had finished my dissertation on Ellul's theological method, and perhaps one of the greatest tributes I can make to the impact he has had on my thought and life is to say that I never grew bored, as so many do, with my dissertation topic, either back then or even today. Since that summer when my friend David introduced me to Ellul, he has always been a living and active force for me.

What attracted me to Ellul or, in a more academic way, what was the true nature of his genius? No doubt his provocative writing style, which in the long run clearly decreased the size of his potential reading audience and the extent of his influence, was attractive. In the academic world where nearly every sentence must be qualified with a tip of the hat to the experts, it was life-giving to read someone who wrote almost without nuance. But style alone would hardly commend a lifetime of influence, and to be sure, entertaining writers are a dime a dozen.

The breadth and depth of Ellul's knowledge was amazing, and is often touted, but, by itself, that is not really too unusual in the university or intellectual worlds. And even if he was in a class by himself in this regard, so what? What has the world gained by someone who is nothing more than a mere intellectual titan? As Paul Johnson has shown in his depressing book, *Intellectuals*, mere intellectual brilliance can sometimes be a sorry measure indeed by which to measure a life. I am not suggesting that this aspect of Ellul was unimportant—far from it—only that he was much more than a "mere" intellectual giant, and that for me personally, intellectual brilliance by itself is not very interesting, and that sometimes is both dangerous and deforming.

---

(forthcoming from Eerdmans).

Like many people, I found a number of Ellul's signature ideas to be extremely fertile and provocative •—the nature and threat of technique, the propagandistic effect and ultimate powerlessness of all politics regardless of their content, the anarchist nature of Christian discipleship, his critique of the mind numbing contemporary “commonplaces”, the new demons of our resacralized world, his unapologetic faith in biblical revelation, and so on. But are these ideas so veiy unusual? I think not. Other authors have explored similar themes. Perhaps Ellul was a man before his time, in that he wrote about some of these issues before others had discovered them or made them popular, but I think one could easily show that many other authors have explored these same ideas with a similar depth, breadth, and provocative nature.

Ellul has had a singular impact on me, I think, for a different reason. As was his explicitly stated intent, when I read Ellul, he somehow seemed to articulate — albeit in an intellectual manner—what I experienced as an ordinary person in everyday life. Put in Kiekegaardian terms, Ellul captured me, his reader, as that “single individual” whom he hoped to move to action. Every time I read Ellul, I felt like I alone was that “single individual” for whom he wrote.

In the spring of 1985 I was in Bangui, Central African Republic. As when my friend gave me a copy of *The Technological Society*, I have a very vivid memory of the exact time place and setting of a conversation I had with an American missionary scholar who had spent much of his life in francophone countries—and thus, I figured, he would be interested in Ellul. I had given Jack a book or two by Ellul to read, and his analysis of them that day was short but profound. I still remember his exact words: “He writes about what I experience.”

Ellul understood as Paul Johnson put it, what intellectuals a too often forget, that people are more important than ideas, or better yet, that people of ideas must somehow connect with the normal everyday world of common people (the theme of Richard MouW's little book *Consulting the Faithful*). Ellul joined the world of ideas to the world of the ordinary person and he did this both in the books he wrote but, perhaps even more significantly, in the way he lived his own life for others.

How many intellectuals of Ellul's caliber can we think of today who spend significant personal time, energy, creativity and the like with disenfranchised people, as Ellul did with street gangs (long before it was a fashionable cause ), to the extent that a national organization was formed to help these people? Or how many professors of whatever religious persuasion have the vision, the personal skills and the commitment, not to mention the interest, to hold regular church services in their home for blue collar people, preach, and, when the group expanded to four services, because so many people were coming, donate the financial resources for the church to build their own building? Or we could mention Ellul's political activism (at least early on as deputy mayor of Bordeaux, before he grew totally disillusioned with all politics), his environmental causes, work with his Reformed denomination for two decades at the national level, mountain hiking with his students, his remark that above all things he was a man of important friendships, and the like.

When I interviewed Ellul in 1985 he told me the story of a young woman and child who approached him after he had delivered a paper at some conference. "You don't know me, do you?", she asked. Ellul said no, and the young woman went on to remind Ellul who she was and how that ten years earlier he had counseled her not to have an abortion. She then delivered a one-liner that I will never forget: "I wanted to show you the child you saved." For me, Ellul remarked in the interview, "it was extraordinary." An extraordinary experience, to be sure, but rather typical for the way Ellul lived his life and wrote his books.

Ellul's ability to connect both in an intellectual manner and in practical ways with the normal human experiences everyday people is, I would argue, at the center of his overall vocation as he understood it. As he says in *In Season, Out of Season*,

**We are touching on a trait that I consider important I never write ideas. I have always attempted to transmit exactly what I have experienced, in objectifying it I have always thought on the experiential level. And my wife has had a considerable influence in this. I was, before her, pretty much a bookworm; I relied heavily on categories and concepts. She continually brought me back to the living reality which is all that counts. From that point on, my thinking was guided by concrete experience. I tried to think only in relation to what I had experienced and to transmit only what I was capable of living. That is why my work is inevitably incomplete and does not appear to be very systematic.**

**I have never tried to make a theoretical system conceived in itself and for itself.**

Model, Mentor, Sage Admonisher, Questioner, Sufferer, Friend to Many, Faithful to Vocation and Revelation."

In Galatians 5:6 the Apostle Paul writes that "the only thing that matters is faith working in love." This is incarnation, living out one's faith in what Ellul describes above as "the concrete reality" which, in the end, is likely to be "all that counts."

**I claim to be an ordinary man, and I am absolutely convinced of it. I have always seen myself as an ordinary man, immersed in the same environment as everyone else. At the movies, I am an ideal spectator. I laugh when everyone laughs, cry when everyone cries; I am emotional. I am not aloof; I only become aloof later. After returning home, I say to myself, "you reacted in this spot and in this way and here is how the others reacted." And I carry out a minute notation of all that happened. But I am really a split personality. The one watches a play at the theater, and the other observes the setting. A recollection: I told you that I was trained in painting, but I had no musical education. I had never heard the least bit of music before the age of twenty or twenty-one. One evening, I decided to go to a concert I felt almost nothing, followed nothing, understood nothing. I was completely bored. But what was passionately interesting to me was the audience, and I spontaneously began to do a psychological study of the**

audience as a whole and of the individuals as I could observe. I learned a lot that evening. And music seemed like a strange magic to me.

The exact same thing happened when I went to political meetings or mass marches. I was the typical participant and later the analyst of what happened.

The proof that I am indeed an ordinary man is that there are always a lot of people who tell me, “What you write there is exactly what we felt.” The only difference is that I have this ability of verbalizing, of intellectual analysis, that they have developed less than I. That is the only difference.”

A similar way to express this idea is to say that Ellul lived a holistic life, rather than a life that is deformed by an unhealthy absorption with only one area of life — in the instance of intellectuals, too often, nothing more than ideas and books. Marva Dawn captures this nicely when in the dedication of her collection of early articles by Ellul *Sources and Trajectories* (1997) she honors Ellul for who he really was — not merely a brilliant intellectual with fascinating ideas about important matters but as a “Prophet, Social Critic, Scholar, Bible Study Leader and Preacher, Nurturer of Young People, Professor, Advisor, Writer, Resister, Fanner, Environmental Activist,

## Reflections on Ellul’s Influence

by Gabriel Vahanian

If nothing else, the table of contents of my various books I should suffice to give an idea of the extent to which, in fact, Ellul has accompanied me for the last fifty years, and shaped my own thinking for the better part of my life, though I wouldn’t, of course, attribute to him whatever defects still linger on in the subsequent evolution, whether of my commitment to theology or of my academic career. Needless to say, without his support, I would not have been elected to a professorship in Strasbourg; nor would I, without his influence, have been able to deepen and broaden in the first place the problematic of the death of God. Which brings me back to the ‘table of contents’.

Jacques Ellul has left at least two full length manuscripts. Under the title of *e’thique de la sanctification*, one of them deals with the ethic of hallowing. The Other deals with theology and technology, and I have known its existence for almost a quarter of a century. He had told me about it, and told me also that, somehow as a matter of habit, he, so to speak, kept certain manuscripts on reserve. And, so to speak again, but to me more important, the reason for this disclosure had to do with the publication in 1977 of my book entitled *God and Utopia*, upon reading which, he added, he had significantly had to revise his own manuscript on the same subject. The table of contents does indeed show that he had wrestled with *God and Utopia*. In our conversation, he had also remarked in passing that, if people should think this was a difficult book, it would

be because they simply would not want to understand it lest they should discard a number of comfortable beliefs. Ellul knew, as I hoped he would, that though we were not cast in the same theological mould, we nonetheless were fellow-iconoclasts.

No, he did not have major difficulties with my theological reformulations', and, so far as I was concerned, I could put up with his own substantially conservative approach. Surely, and why should I not acknowledge that, at a deeper level, he continued to intrigue me. I hold from him just about everything I know about technology. And that is exactly where the question, "What Ellul has meant for me, personally" bursts forth in a manner few would suspect, considering the critical stance which I have on occasion displayed if only because I deemed him not only *worthy* of it but calling for it. After all, one can only tackle a giant No matter how rough my remarks could be, they never allowed me to lose sight of that. So much so, that what he has meant for me could and should probably be best answered by, chronologically, Jim Holloway, Darrell Fasching, Sylvain Dujancourt, and Andrew Goddard — to wit

Outside of the New York Times Book Review, the first notice of *The Death of God* was given by Duncan Taylor-Norton in his introduction to *The Space Industry*, a collection of articles written by the editors of *Fortune* (Prentice-Hall, Inc., Englewood Cliffs, NJ 1962). Whether this was to be taken as a nod towards Ellul, the fact is that, ever since, I have for my part understood technology as being neither more nor less than our new *milieu* instead of, though not exclusive of "nature" or "history". The rise of technology has been tied in and woven with the death of God as a cultural phenomenon: the term "post modern" has today become quite fashionable and fashionably acceptable: in those days I used to say "post-christian\*."

I still remember Jim Holloway's phone call. He wanted an article for his journal *Katallagete*, and explained that the reason for this request was simply the fact that his attention had first been drawn to Ellul by reading *The Death of God*. Holloway had no doubt that accordingly I had taken Ellul most seriously: there must be a connection between theology and technology, since they both deal at bottom with our mode of being.

Why conceal it? I have always been skeptical of the Barthianism that infested Ellul's own theological endeavors. Had he not himself once told me that he had swerved away from Barth's political commitments, adding that the great trouble with Barth was that he knew nothing about politics? That did not prevent *him*, however, from remaining — by and large faithful to the framework of Barth's theology. Ellul would certainly not have written, as I did, an article entitled "From Kari Barth to Theology — which in part, at least on the continent, explains why I 'have mostly fallen on deaf ears; why, as Ellul said, they would not understand me: French protestant theology has become frozen with Barth

In spite of that, Ellul had not shied away from admitting to a certain connivance between us. He had been on the main *rappporteur* during the oral examination I underwent for the "super-duper" — and for that matter now defunct — French degree known as *doctoral d 'Etat*. In fact, that was the only time Ellul and his wife were

to come to Strasbourg in many decades. Nor would he do so again in spite of my stubborn efforts. He traveled by train and now, because of his declining health, even that became for him unbearable — just as previously he had always turned down my repeated invitations to come to Syracuse: he would not take an airplane.

Ultimately, the reason I took Ellul most seriously or switched from Barth to Ellul is, simply, because unlike Bultmann, Barth never talked about technology. And, though with Ellul theology and technology tend to look like Luther's two kingdoms, here was at least a theologian who did not pursue his task in total abstraction from our inescapably technological milieu! I could not but take him seriously. And the extent to which I did so is, I surmise, is still remembered by Darrell Fasching and Sylvain Dujancourt if not Martin Kastelic, if only because of the number of times they had to revise their respective dissertations. Not that such revisions are what I systematically expect whenever Ellul is the subject-matter: Andrew Goddard was spared from that, but then, at Oxford, the thesis director— which I wasn't— never is the examiner, which I was.

Undoubtedly, whether the two manuscripts I know of will ever be published depends on Ellul's children and those that advise them. All I know is that Ellul appreciated my efforts such as *God and Utopia* and even wanned up to the notion of utopia, while in other respects he always spared me from the sharp criticisms he leveled at various exponents of the death of God.

Was not his subsequent notion of the "silence" of God" his way of coping with the cultural demise of the ontotheistic notion of God? '

I have in front of me notes I took on the 6<sup>th</sup> of June 1946 during a lecture Ellul gave on Communism in Basel. No wonder, I had awaited the publication of his *La technique or I I 'enjeu du siecle b Duntil 1954*. Subsequently, thanks to Enrico Castelli and his series of colloquiums, we had met regularly at the University of Rome La Sapienza. For many years we also met just about every six months to discuss the 'fate' of *Foi et Vie*, the journal of which he was the director until his resignation for reasons of health.

No wonder, either, I myself cannot tell what that giant of a man has really meant for me, personally.

## Jacques Ellul Was the First

Pieter Tijmes

For me Jacques Ellul was the first author who has introduced me into the field of philosophy and technology. That is the reason why I am grateful to him. Even possibly justified criticism of him provokes defensiveness in me. This is a sign of my warm feelings for Ellul who was, in ; my view, carefree yet pessimistic. His political engagements were not crowned with success, but nevertheless he continued his way whistling. In a sense, he was unassailable and had a firm confidence in the successful outcome of every thing in the world, in the end. It was a Barthian spirituality that guaranteed

this trust. Concrete obstacles he was confronted with in his career as political activist were treated as minor details. I do not know Jacques Ellul in person nor have I ever talked with him, but I read and have read his books on technology in this mood. I would not like to see things differently, but what I do not like might be necessary.

His books *La technique ou l'enjeu du siècle* and *Le Système Technicien* were fascinating. He did not claim to be a philosopher but always emphasized his sociological approach. Strange to me was his claim to be inspired by Marx. Unfortunately, I could not find a spark of the Marxian tradition, but afterwards I realized that he said so during the climax of the cold war which was evidently a sign of his independent way of thinking — and most independent of Marx, in my view. I was impressed by the way he explained that technology was the decisive characteristic of our contemporary and future life. His typical slogan of “autonomous technology” did its work on me. He showed quite clearly that modern technology was a new phenomenon not to be compared with traditional forms of technology and that this technology evoked a technological universe. I became still more convinced of the symbolic fall-out of technology, to use an intriguing Ulichian expression. It is unnecessary to explain all these insights in *The Ellul Forum*.

In the last book of his trilogy on technology *Le Bluff technologique* he holds the conviction that each phase of technology provides more problems than solutions. Technologists are simply deceivers by bluffing. Ellul is merciless in showing that the view that unexpected and undesirable side effects can be overcome in a technological way is absolutely false. This book in comparison with the other two was still more massively negative and more somber with regard to the irresistible and enslaving power of technology — it was, even for me, too much. The book also irritated me methodologically, because any viewpoint was embraced on the condition that it was blacker than black, even when the insight did not fit Ellul's own frame of reference. He spoke about technology's ambivalence but in fact he meant technology as *massaperditionis*. Ellul's joy of discovering new insights, in my perception, was gone in this book. And he was repeating his original and impressive insights in an inelegant and sometimes boring way. I was relieved to have reached the last page of the book. In a certain sense it was unmanageable to me. To be honest, I was not allowed to cherish such a vision on technology as a protestless consumer of flights and computers.

Nor did I have the courage to tell my students that they were blindly promoting the evils of technology. In my opinion this Ellulian trade was not fruitful for me any more. This is my memory but I know that memories are very manageable by people. The first two books had a freshness of saying new things to me, the last book of the trilogy could be said in fifty pages as for me. His Calvinistic ethos that sought its fulfillment in writing books turned out to be counterproductive as technology. But why pass a negative sentence on an author of whom the last book turns out badly?

- Still, as the readers of Ellul Studies know, I did my best to defend Ellul's vision of technology as a legitimate vision of an outsider. His vision should be comple-

mented with a point of view of an insider or actor (*Ellul Forum, Jan | 1995*). As (Durkheimian) outsider you are allowed to speak about the autonomy of technological decisions, etc., but as an actor or insider you know better, or more precisely you have other insights. The problem how to integrate the truths of the outsider's perspective and the insider's perspective I gladly leave to sociologists. It is the question how to exercise Durkheim's spirit. On the other hand, it is also an existential question how to lay bare relevant moments of decisions in the technological process.

In short, Ellul was a good beginning for me, and I am interested how people explore his possibilities to continue Jacques Ellul's line of thought-In this formulation it is clear that I do not consider this explorative work with Jacques Ellul as a point of departure to be my task. In the philosophy of technology there are on this moment more interesting starting points. I have to make here a great reservation. Ellul's theological passion was not a secret but I do not possess an intimate knowledge of it. I am open to be instructed that the theological insights on the technological universe are more revealing than what is brought into the open from other point of views. I am open to it, but I have not had that experience up to now.

# Book Reviews

## Andrew John Goddard. “The Life and Thought of Jacques Ellul with Special Reference to His Writings on Law, Violence, the State, and Politics.”

Ph.D. thesis, Faculty of Theology, University of Oxford, 1995. Pp. 495.

Reviewed by Joyce Hanks

Andrew Goddard’s dissertation makes a refreshing and much-needed contribution to Ellul studies. Once published, I believe it will prove indispensable, both for those in need of a careful explanation of Ellul’s fundamental theological and sociological concepts, and for those who desire to know more in detail about his life and work.

One of the study’s many excellent features is the manner in which it integrates matters too often separated in works on Ellul: his life and his theoretical stances (see p. 285 on anarchy, for example, and p. 217 on his involvement with the “Associations Professionnelles Protestantes”), his “dialogue” with Karl Barth at different stages of his life, and, especially, his sociological and theological writings. Goddard outlines Ellul’s concerns for society as manifested in both his works and his experience.

Like most dissertations that treat Ellul as their central subject, this one gives an overview, as suggested by its title. But, with the possible exceptions of Bill Vandenburg’s *Perspectives on Our Age* (trans. Joachim Neugroschel; Toronto: Canadian Broadcasting Corp., 1981), and the translated interviews in *In Season, Out of Season* (interviews by Madeleine Garrigou-La-grange; trans. Lani K. Niles; San Francisco: Harper & Row, 1982), I cannot think of any work in English that begins to offer the wealth of biographical information we find here. Goddard appears to have read and digested everything imaginable on Ellul in French and English. Patrick Chastenet’s *Entretiens avec Jacques Ellul* (Paris: La Table Ronde, 1994), was published too late to permit the incorporation of its revelations into the body of this dissertation, but Goddard has made very detailed reference to it in his footnotes.

Goddard has made extensive use of the Ellul collection at Wheaton College’s library and other sources, incorporating many course outlines and unpublished articles by Ellul into his analysis, and confronting these writings with each other (as well as with Ellul’s published books and articles). This early, unpublished material proves especially valuable as Goddard traces Ellul’s thought on society prior to the publication in French of *The Technological Society* (1954).

Following his initial, insightful biography chapter on Ellul, the author considers Ellul's theology (the keys to which for Goddard are the Fall, or the "rupture," and communion with God) and ethics, and then his sociology (in which the concept of "civilization" plays a central role, along with Technique and modernity). The focus on Ellul's theology and sociology separately, and then in dialectical tension, constitutes the structure of virtually the entire dissertation.

Readers will find this arrangement especially illuminating, I believe, in connection with the three "case studies" examined in depth by Goddard in the second part of his study: law, violence, and the State and politics. To deal with each of these themes, Goddard devotes first a chapter to Ellul's sociology as related to the topic, and then a chapter devoted to his theological treatment of it. But throughout, Goddard shows how the two kinds of writing relate with respect to the question at hand. I found Goddard especially provocative on this fundamental issue of the separation and relationship of Ellul's two approaches (see, for example, p. 164, where he ties Ellul's proposed reforms for seminary studies to this dialectic).

Goddard's treatment of Ellul on law may prove rather challenging to non-specialists, but it constitutes a major contribution to Ellul studies, since this significant aspect of Ellul's work has received so little attention in published articles. Goddard offers a welcome explanation for the difficulty many find as they attempt to understand Ellul's *Theological Foundation of Law* (trans. Marguerite Wieser, New York: Doubleday, 1960; French edition 1946), and summarizes the book carefully (along with several of Ellul's articles on law).

Goddard also shows how Ellul's technical studies on law relate to his writings on the theology of law, and explores the relationship of Christian believers with law and institutions. Throughout the dissertation, especially in his chapters on law, Goddard routinely incorporates relevant material from *Histoire des institutions* (Paris: Presses Universitaires de France, 1955-; multiple editions, usually in four volumes), customarily ignored in studies on Ellul. The author traces in detail what he believes are essential changes over time in Ellul's theological approach to law. Another significant change in Ellul's theology as seen by Goddard surfaces often in the dissertation: the disappearance in later works of Ellul's early insistence on a "divine order of preservation" of the world.

Although Goddard finds Ellul less original when he writes on violence than on law or the State and politics, he calls violence "the one subject where theological concerns are unambiguously the context for the presentation of Ellul's sociological reflections" (p. 248). He shows how violence, in Ellul's view, stems from humanity's broken relationship with God, and thus relates to the deepest layer in society's structure, forming a constant throughout our history.

Leaving some questions relating to Ellul and the State unresolved, particularly the theological issues, this dissertation outlines a convincing relationship between Ellul's experiences in the 1930's and 1940's and his view of politics (especially anarchy). Goddard offers a helpful distinction between the personal power wielded by governmental

authorities, as seen in Romans 13, and the abstract power exercised in modern states, under the domination of the “powers,” with a view to explaining Ellul’s varying positions with respect to Biblical passages on Christians’ relationship with authority.

Goddard has helpfully divided his dissertation into clearly differentiated sections within each chapter, building to significant conclusions throughout. Readers will also discover more than thirty pages of substantive quotations from difficult-to-find works by Ellul in French, organized in an appendix of endnotes. Goddard mentions several misleading English translations in Ellul’s books, and spots errors in bibliographies of Ellul. His bibliography runs to more than 100 pages.

We should all hope that publishers will vie with each other to obtain the right to bring this important study into print—with the addition of an index, and references to English editions of Ellul’s works, where possible. We would profit from future “case studies” of Ellul on art, the church, propaganda, revolution, the sacred, etc., pursuing the lines of Goddard’s approach. Ellul himself would urge us, however, to go beyond understanding what he has to say, in order to apply his principles and insights to matters he did not address.

Joyce M. Hanks

For readers wishing to purchase *Silences*, it sells for 75 French francs through Editions Opales, 13 Cours Gambetta, 33400 Talence, France (Telephone/FAX: 011-33-557-96-93-28).

## **Jacques Ellul. *Silences: Poemes.***

Talence, France: Editions Opales, 1995. Pp. 92.

Reviewed by Olivier Millet. Editor of *Fel et Vie*

(originally published in *For et Vie*, vol. 94, no. 3 (July 1995), p. 109. Translated and published here with permission.)

Poems by Ellul: the reader may be surprised, especially to learn that shortly before Ellul’s death, he expressed a desire that they be published. His modesty, as a man and as a thinker, undoubtedly caused him to delay their disclosure.

But reading these poems now, after his death, we realize that the work of Ellul the thinker and the theologian was rooted in an experience and in writing that accompanied the “public” forms of his expression. His deep inner life and his lyricism are located behind his ideas and his witness, or go beyond them. This is probably the meaning of the title, *Silences*.

This volume does not offer us unveiled secrets, but rather visible flashes, rhythmical impulses, and verbal signs that are rich in imagery and in evocative allusions. Showing

through them we can sense an inner life that has both a serious and a gratuitous side (Ellul goes so far as to use nursery rhyme forms).

This inner life is both moral and witty: Ellul's irony with respect to the world and life (understood as a pathos-filled and humorous game), and his humor with respect to himself, do not seek to impress or captivate us. Far from it. Instead, his irony and humor extract from successive moments both the ephemeral and the promise-filled portions contained within the concrete existence of a man. Ellul as poet in this volume reaffirms himself as the reader-exegete of Ecclesiastes we have admired

Waves, flames, fountains of water—these are momentary Visions stemming from Ellul's poetics of vicissitude. Often in a very simple way, sometimes with a rather rare charm, by means of syntax and vocabulary, these images evoke the strangeness of the world (whether natural or civilized) for humanity, or the strangeness of humanity for this world.

To live freed from vanity and concern for self, and to stand in Hope: these constitute the two main poles of this lyricism, which does not seek to coordinate them by means of any discourse.

Instead, the poet records the tensions and the deep currents of his sensitivity, unable to separate Spirit from flesh. Such knowledge is not destined for human beings:

**No one will notice my wretchedness any more dedicated will I be to the works of prayer in the mortal secret of who I am.**

A single poem ("Pelerinage a la civilisation de la mort" [Pilgrimage to the civilization of death]) mentions the collective world that Ellul took pains elsewhere to analyze, in its socio-technological ins and outs. But he describes it as a sort of Apocalypse, sombre and syncopated, from which the Sun of Justice is still absent.

## About This Issue

This issue of the *Ellul Forum* is devoted to the work of the Trappist monk and social critic, Thomas Merton. Merton was born on January 31, 1915 in Prades France. His mother died when he was six and his father when he was fifteen. He grew up without any significant exposure to religion. However in the summer of 1933, traveling in Italy, he found himself drawn to the churches of Rome. It was the beginning of a journey that led him to baptism in the Catholic Church in November of 1938 and then to enter the Trappist monastery of Gethsemani in Kentucky on December 10<sup>th</sup>, 1941. His literary career took off with the publication of *Seven Storey Mountain* in 1948, an autobiographical account of his conversion, which his superiors in the monastery asked him to write. It became an immediate best seller in post WWII America.

While *Seven Storey Mountain* is a powerful book, it is a pious story of conversion that in itself would not make Merton the remarkable figure that he is. It was for Merton just the first installment on a series of biographical reflections on his spiritual journey, whose honesty and power make him a unique author. Two of the most important were *The Sign of Jonas* in 1953 and the *Asian Journal* in 1972. Merton died exactly twenty-seven years to the day that he entered the monastery (Dec. 10, 1968) at a conference on Monasticism, East and West, in Bangkok.

Merton's power as a religious author lies not in writing original theology but in his willingness to make his life transparent to others in the midst of his monastic vocation to solitude. Indeed, being a monk and an author, at the same time, was the most difficult spiritual paradox of his life. Like Jonas, he found himself "in the belly of a paradox" —pulled in two directions. Merton chronicled this spiritual crisis of his first ten years in the monastery in his book, *The Sign of Jonas*. It was only after this "dark night of the soul" that Merton came to accept that he was called to be both a monk and an author. As a result, by the sixties a whole new Merton emerged, a powerful social voice in critique of racism and segregation in America, in critique of the cold war and nuclear war, and in critique of the Vietnam war. At the same time he entered into serious dialogue with religious figures and spiritual traditions around the world, especially the religions of Asia. The framework for his critique of modernity was his own developing spirituality in dialogue with the spiritual traditions of Asia as the basis for a critique of the illusions of modern technological civilization.

For anyone who has read Ellul, the similarity of Merton's critique of technological civilization is startling and impressive. Virtually point for point, Merton and Ellul, writing about the same time, echo each other. Just how much mutual influence, if any,

there was between them would be an interesting subject for a doctoral dissertation. In this issue, Christopher J. Kelly, details the scope of Merton's criticism of modern technological society and its roots in the monastic tradition of the *via negativa* - the way of negation. Christopher Kelly, completed his Masters degree in Religious Studies at the University of South Florida in Tampa in 1998. His essay here is adapted from his Master's thesis on Merton. He is now a doctoral student in the School of Religion at the University of Iowa.

Also in the *Book Review* section of this issue you will find a review of a doctoral dissertation on "Christian Freedom" in Ellul's work. The dissertation, written in Italian, is by Gianni Manzone,. It is reviewed here by Virginia Picchietti, of Scranton University. We are grateful to Gianni Manzone for his fine work and to Professor Picchietti « for her willingness to review it for the benefit of our readers.

## Manzone, Gianni. *La liberta cristiana e le sue me-diazioni sociali nelpensiero di Jacques Ellul.*

Milano: Glossa, 1993. Pp. 290.

Reviewed by: Vigienta Pichietti. University of Soantine

Gianni Manzone's dissertation provides a systematic and detailed analysis of the philosophical thought of French theologian Jacques Ellul. It aims to "reconstruct the theology of Ellul's Christian liberty" (177). The work is divided into three parts, each dealing with Ellul's notion of Christian freedom, and includes a general introduction to both Manzone's opus and Ellul's thought. It also contains a comprehensive bibliography, while each chapter is supported by extensive notes.

The "General Introduction" is divided into six parts. The first part discusses Ellul's biography, including his evolution as a scholar of both legal and Christian philosophy. The second part defines his style. According to Manzone, the style giving shape to Ellul's philosophical writings is the product of tensions arising from his position as a Christian thinker who is firmly *engage* in social reality. Ultimately, Ellul's style aims at provoking decisions on the part of society (12). Part three of the introduction delineates Ellul's production, while parts four through six focus on his theological methodology. Manzone classifies the methodology as theological dialectics, and sees Ellul's thought as being heavily influenced by Barth and Kierkegaard. From Barth, Manzone concludes, Ellul draws such notions as God is Other, God is different from man, and time is different from eternity. From Kierkegaard, meanwhile, Ellul gleans an approach to theological inquiry as a systematic type of thought working with abstract concepts (16). Manzone identifies the richness and originality of Ellul's philosophical approach, which consists of a sociological inquiry and epistemological perception of reality and a theological approach to the Bible, as well as a focus on Christian ethics in the context of theological dialectics. Significantly for Manzone, Ellul's thought can be succinctly described as a "theology of confrontation," an approach that differs from Tillich's "theology of reconciliation." Ellul's philosophical thought, Manzone concludes, is a confrontation between Marxist thought and Christian philosophy, sociology and theology, all "mutually critical" (20).

Part I of Manzone's work focuses on Christian freedom as the governing principle of Ellul's work and life as a Christian thinker. Although noting Ellul's resistance to the "systematization" of his work, Manzone nevertheless recognizes the urgency with which

Ellul's philosophy aims to recuperate the concept of Christian freedom, which has been "ignored and rejected" even by the Church (41). Ellul, Manzone notes, considers liberty as one of the most important values Western society has contributed to humanity. Given this premise, Manzone dedicates the rest of Part I to the diverse permutations of the notion of liberty, from its origins in God and Christ, to its manifestations in God's glory and in love for one's neighbor, to its evolution and realization through faith and action.

In order to provide a clear definition of Ellul's notion of Christian liberty, Manzone examines the "seven misunderstandings or erroneous notions of liberty" Ellul opposed in various articles and books (43). According to the author, the French philosopher rejects the idea of liberty as inherent to human nature and independent of the individual's social milieu and physical and mental condition. Indeed, while Ellul refutes the notion of liberty as a purely spiritual or internal experience, he stresses its correlation to "concrete external restrictions" (45). Moreover, he renounces the idea of liberty as a choice, since choice is artificial and limited. Ellul offers as an example the role technology plays in creating choices, a role he defines as "determinism" (110). An individual cannot approach these choices "freely," the philosopher contends, because they are predetermined and delimited, a concept Manzone expands in Part II. For Ellul, liberty is discontinuous from human nature, something to be achieved and originating from an external source, or God. It also assumes diverse permutations because, Manzone notes, "individuals must construct their own personal lifestyle based on the circumstances in which they live and their own conscience" (47). While performing good actions does not guarantee liberty, liberty can be achieved "answering the personal call from God and accepting the liberation that Christ offers" (47).

Part II of Manzone's opus is entitled "Christian Liberty as Criterion for Socio-Ethical Judgment." The purpose of this part, Manzone clarifies in the premise, is to "understand if and how the concept of Christian liberty becomes the standard for all moral life and for the ethical reflection of the Christian individual" (107). Questions shaping Manzone's inquiry are "Does liberty play a structurally central role and does it shape every aspect of the individual's comportment?"; "Which categories and concepts does Ellul employ to develop an 'ethique de la liberte' and how are they applied in the phenomena he most analyzed and considered most relevant to us today?"; "How does the concept of Christian freedom function in the Christian individual's judgment and action in a technological society, in politics, in mass media, and in law?" To answer the questions he sees as essential to understanding Ellul's work, Manzone divides Ellul's approach into two categories, the concrete realm, in which facts are described, and the philosophical realm. In the former sphere Manzone characterizes the French philosopher as a positivist who distinguishes between fact and norm. In the latter sphere, he identifies Ellul as an existentialist for his focus on freedom.

In his consideration of these questions, Manzone dedicates a section to each of the components that make up Ellul's investigation of Christian freedom. According to Manzone,

Ellul's relationship to politics is one of "total confrontation" in which he sets out to abolish "political illusion" (137). This confrontation also defines the Christian individual's participation in politics, a participation marked by tension and not "distinguishable from other manifestations of faith, but simply a proclamation of the Gospel" (137). For Ellul, according to Manzone, politics are "irredeemable" and cannot be transformed by Christian liberty. In the section on freedom and mass communication, Manzone investigates the relationship between mass media and Christian freedom. More specifically, he examines how according to Ellul "the interaction between technology, politics, and 'propaganda' [the media] constitutes the heart of our civilization" (145). Manzone categorizes Ellul "among the apocalyptic" for whom mass media create people no longer capable of "critical thought" or "autonomous behavior" (150). Finally, in the section on the relationship between Christian freedom and law, Manzone concludes that for Ellul faith is not applicable to the juridical organization of society because law is secular. According to Ellul, Manzone notes, human law is relativistic (169) and "does not express religious values or divine justice... [W]hen thinking of human law, Christians must... not see it as an ideal law derived from their religion" (167).

Part m of Manzone's opus, "Christian Freedom and Social Ethics: Beyond Ellul," performs an "evaluative and critical analysis of Ellul's attempt to define Christian freedom as the measure of Christian life and especially of the Christian individual's presence in society" (177). In the premise to this part, Manzone proposes an analysis based on the "confrontation between Protestant theology and Catholic theology on social ethics" (177). His aim is to understand the way in which the notion of Christian freedom becomes a means through which believers become socially *engages*.

In this section Manzone assesses Ellul's analysis of society and social action, of civil institutions, and of social justice. He asserts that Ellul develops a sociological investigation based on a "neutral methodology" (198). The author recognizes the French philosopher's relativistic tendencies. However, he concludes that Ellul's philosophy of human action and freedom lacks an "anthropological dimension" (199), which would shed light on, for example, "the significance of individual acts for those who perform them" (198). In conclusion Manzone notes that the fact that Ellul does not "consider judgment of individual behavior as a moment intrinsically connected to judgment on institutional actions renders incomplete the dynamics of Christian freedom in its endeavor to relativize and modify norms and social institutions" (256). For Manzone, Ellul considers this undertaking in negative terms because he does not adequately consider the anthropological notion that freedom "incorporates both the individuals' socio-cultural milieu and their personal history" (257). In the end, Manzone contends, human beings are capable of relating to God because they can grasp "Revelation," or the Word of God in human form, because they see themselves in it (257).

# Forum: Thomas Merton's Critique

## Contemptus Mundi: Thomas Merton's Critique of Modern Technological Civilization

by Christopher J. Kelly

### INTRODUCTION

The works of Thomas Merton reflect a combination of intellect and honesty that tends to stir the conscience of even the most casual reader. A vocal social critic, Merton was no stranger to controversy. He spoke critically on the most troubling social and political issues of our time. His work continues to be applicable to today's increasingly postmodern world. Through the concept of *contemptus mundi* Thomas Merton engages in a postmodern critique of modernity. Well before the post-structuralist critique, Merton found his own monastic path "beyond modernity". His is not a pre-modern rejection of the world in the traditional Christian monastic sense, but a postmodern rejection of the subject/object duality of modern techno-bureaucratic European civilization in order to provide a different frame of reference from which one may deal with the *agonia* of existence. Merton's use of the *via negativa* negates the modernist notion of self and liberates the individual from the collectivist pattern of life in modern technocratic society. Merton is postmodern in a historical rather than ideological sense of the word. He is postmodern precisely because he offers post-European and post-Christian critique that opens a path beyond modernity.

My argument is that Merton's experience of the *via negativa*, as reflected in his book *The Sign of Jonas*, led him into a postmodern framework from which came his critique of society. Merton's experience of the *via negativa* is the pivotal point in his personal spiritual growth and his social commentary. Before his experience Merton wanted only to turn his back on the world in order to find God, afterward he saw his vocation as finding solitude in compassion for others. This took two forms: 1) vocal social criticism that attacked the injustices of racism, the Vietnam War, the development of nuclear weapons and 2) a discovery of the spiritual wisdom of other religious traditions, most notably Zen Buddhism, Taoism, and Gandhi's Hinduism. At the end of his life, Merton seemed to have embraced both Taoism and Zen while remaining a devoted Christian. This was possible because he had moved beyond any modernist Eurocentric and Christian-centered spirituality to discover the ethical importance of

other spiritualities, which Merton saw as complementing rather than competing with his own Christian spirituality. As we move from a planet of isolated nations to a global community, Merton's cross-cultural and interreligious orientation speaks to our time. I think this is a significant note, for while European Christianity sought to make the world Christian, Merton's pluralism, especially his interest in the East, led him to speak out against an attitude toward the world that sought to destroy or convert that which was not European and Christian.

## MERTON'S CRITIQUE OF MODERNITY

Even in the early days of his writing Merton attempted to sound an alarm meant to awaken his contemporaries to the dangers around them. The first line of *The Ascent to Truth*, published in 1951, reads. "The only thing that can save the world from complete moral collapse is a spiritual revolution." According to Merton, human beings are in a precarious position, for "the exposure of the nineteenth-century myths — 'unlimited progress' and the 'omnipotence' of physical science — has thrown the world into confusion" (1951:3). He believed that the violence and hatred he saw around him presented and continue to present a serious challenge to the very existence of the human race. For Merton, the root cause of the crisis of the modern age lies in a misunderstanding of who we are as human beings. "Our ordinary waking life is a bare existence in which, most of the time, we seem to be absent from ourselves and from reality because we are involved in the vain preoccupations which dog the steps of every living man" (1951:10). Merton believed that modern human beings are preoccupied with trying to find some comfort in life by becoming loyal consumers, by surrounding ourselves with material possessions that flatter our own egos. We have become alienated individuals.

Modern individuals are alienated not only by the material world they have created but by the ideological world that undergirds it. According to Merton, Cartesian duality splits the world into subject/object relationships and thereby alienates people from their true natures, in which there are no ultimate distinctions. Descartes' "*Cogito, ergo sum*" is "the declaration of an alienated being, in exile from his own spiritual depths, compelled to seek some comfort in a *proof for his own existence* (Y) based on the observation that he 'thinks'" (1952:80). Merton believed that rather than determining a foundation for truth and reality, the Cartesian ego-self only succeeds in con-

fusing one's understanding of him/herself, the world, and the ineffable divine. By reducing him/herself to a concept and objectifying the rest of existence, the alienated being makes it impossible to experience the true nature of his/her own being. Merton writes:

The world itself is not a problem, but we are a problem to ourselves because we are alienated from ourselves, and this alienation is due to an inveterate habit of division by which we break reality into pieces and then wonder why, after we have manipulated

the pieces until they fall apart, we find ourselves out of touch with life, with reality, with the world and most of all with ourselves (1992:387).

The true nature of the human being and its relationship to the world is existential and intuitive. One cannot come to an understanding of this through a process of deductive reasoning, especially one that has a false sense of self as a starting point.

For the contemplative there is no *cogito* ('I think\*') and no *ergo* ("therefore") but only SUM, I Am. Not in the sense of a futile assertion of our individuality as ultimately real, but in the humble realization of our mysterious being as persons in whom God dwells, with infinite sweetness and inalienable power (1972:9)

The contemplative life cannot be lived by anyone who considers him/herself as an ego-self. Yet, Merton laments, modern human beings steadfastly cling to an illusory sense of identity in an effort to come to terms with what Merton terms "*agonia*." Merton characterizes the concept in the following way. "Life and death are at war within us. As soon as we are born, we begin at the same time to live and die (1996:3)." One may not be fully aware of it, but, according to Merton, there is within each person an anxious agonizing over the nature of existence. We may not think about it but the knowledge that we are mortal is always present. It manifests itself in a wrestling of the spirit in which one confronts the *agonia* of "being and nothingness, spirit and the void" (1996:3). The more one becomes aware of one's mortality the greater the distress. This wrestling with the angst of existence is

manifested largely in desperation, cynicism, violence, conflict, self-contradiction, ambivalence, fear and hope, doubt and belief, creation and destructiveness, progress and regression, obsessive attachments to images, idols, slogans, programs that only dull the general anguish for a moment until it bursts out everywhere in a still more acute and terrifying form (1966:55).

In an effort to find relief from the problem, human beings identify themselves; they give themselves a name or a function. Merton concludes that human beings would rather have a false identity than risk being nothing. However, this false identity results in an alienation of human beings from their true natures as indefinable reflections of an indefinable God. What remains is an ego-self who sees him/herself as the basis of reality and objectifies everything else, including God.

Merton's work seems to imply that there is a subconscious belief among men and women that the *agonia* of existence can be numbed or overcome if people come together as a unit. Here we encounter a nuance in the modern experience of alienation. For Merton, the structure of modern society is configured in such a way that people tend to give up all effort towards understanding their true natures through misguided attempts at forging a common identity with others. People are willing to reject the agonizing responsibility of discovering who they are and become part of the crowd. As a result, people are not only alienated from themselves by asserting the foundation of the ego-self, but they also become alienated from the ability to realize themselves by surrendering all personal independence. Merton writes:

One of the characteristics of “mass society” is precisely that it tends to keep man from fully achieving his identity, from operating as an autonomous person, from growing up and becoming spiritually and emotionally adult (1966:59).

The situation is further complicated by the fact that the modern West is fundamentally capitalistic and materialistic. Its goal is the acquisition of material things. Merton believed that people consume in order to avoid the *agonia* and find some direction in life. The economic structure of the modern West is geared toward providing instant gratification without further need of responsibility. People buy what they want, or think they want, use it and then discard whatever is left over because there will always be more available. Merton was acutely aware of the dangers inherent in pursuing materialistic goals. He writes:

Man is a consumer who exists in order to keep business going by consuming its products whether he ‘wants them or not, needs them or not, likes them or not. But in order to fulfill his role he must come to believe in it. Hence his role as consumer takes the place of his identity (if any). He is then reduced to a state of permanent nonentity and tutelage in which his more or less abstract presence in society is tolerated only if he conforms, remains a smoothly functioning automaton, an uncomplaining and anonymous element in the great reality of the market (1966:29).

The role of advertising, or “propaganda” in Merton’s words, is of paramount importance in keeping the system running efficiently. Mass media is the vehicle through which advertising procures its effect. Television, newspapers, and magazines are all willing to tell us what is wrong with us and then prescribe a remedy available on an easy payment plan. However, the advertising is sophisticated enough, or the public is blind enough, that it gives the impression that we are actually thinking for ourselves. Merton believed that people gain the impression of assuming some measure of responsibility and management over their lives, yet in actual fact they merely accept what is given to them through economic, political, and social advertising and propaganda.

This is one of the few real pleasures left to modern man: this illusion that he is thinking for himself, when, in fact, someone else is doing his thinking for him...This very special and tempting force of propaganda — that it helps sustain the individual’s illusion of identity and freedom — is due to the isolation of the individual in mass society, in which he is in fact a zero in the crowd in which he is absorbed, it is this simple act of apparently thinking out what is thought for him by propaganda that saves the individual from totally vanishing into the mass. It makes him imagine he is real (1966:216–217).

Merton takes care to note that the word “alienation” is also used by those already firmly entrenched in mass society. However, for these people the alienated individual is the one who does not conform to the way things are done, does not participate in the general myth. He or she is different and rebellious, quite uncomfortable with the collective “rightness.” When understood in this sense, Merton would be considered an alienated person. Indeed, anyone who voluntarily leaves the world and consciously abandons the *status quo* of massive collectivism and consumerism would be considered

a little odd, to say the least. But this interpretation of alienation is very different from Merton's understanding of the alienated individual, who "though 'adjusted' to society, is alienated *from himself*. The inner life of the mass man, alienated and leveled in the existential sense, is a dull, collective routine of popular fantasies maintained in existence by the collective dream that goes on, without interruption, in the mass media (1992:268)."

### ***Technology and the Myth of Progress***

For Merton, technology plays such an important role in fostering alienation that it deserves special attention. According to Merton, the world we live in is governed by systems and techniques. The reverence for nature, which began to decline with the onset of urbanization, has been replaced by a trust in technology and mass media that is reinforced by the secular myth of progress. Merton was very familiar with the idea of a "better world" promised by the Enlightenment and the Industrial Revolution, but he believed the claims of science and technology to bring happiness and fullness of life to be fraudulent. A technological society, he claimed, does not concern itself with the value of the human being. One's dignity as a member of the human race is disregarded in an effort to determine how one may be most efficiently used. Techno-bureaucratic systems exist merely to promote the functioning of their own processes. For Merton, rather than initiating a golden new age, the results of the Enlightenment and the secular myth of progress only succeeded in further removing human beings from their authentic state.

Unshakable confidence in the ability of technology to provide all that is necessary for human life is a particularly persuasive step in the process of alienation.

It is precisely this illusion, that mechanical progress means human improvement, that alienates us from our own being and our own reality. It is precisely because we are convinced that our life, as such, is better if we have a better car, a better tv set, better toothpaste, etc., that we condemn and destroy our own reality and the reality of our natural resources. Technology was made for man, not man for technology. In losing touch with being and thus with God, we have fallen into a senseless idolatry of production and consumption for their own sakes. We have renounced the act of being and plunged ourselves [s/c] into *process* for its own sake (1992:202).

The problem is nothing new, but what makes it more pressing and international are the tremendous effects that technology can and does have on the modern world. We are far more capable now of destroying ourselves and our environment than in the 18<sup>th</sup> century, for instance. Yet, Merton believed that the majority of the people of his day considered it unthinkable to challenge the veracity and good will of science.

The central problem of the modern world is the complete emancipation and autonomy of the technological mind at a time when unlimited possibilities lie open to it and all the resources seem to be at hand. Indeed, the mere fact of questioning this emancipation, this autonomy, is the number-one blasphemy, the unforgivable sin in the eyes

of modern man, whose faith begins with this: science can do everything, science must be permitted to do everything it likes, science is infallible and impeccable, all that is done by science is right. No matter how monstrous, no matter how criminal an act may be, if it is justified by science it is unassailable (1992:62–63).

As a result of this development, science and technology are now the bearers of absolute power. The desire to apply their ideals is so pervasive that it has no rivals. They need not answer to any control, for, it is believed, whatever they demand must be the best course of action. There is no ethical dilemma in the application of science for it has become an autonomous entity subject only unto itself.

Needless to say, the demands of ethics no longer have any meaning if they come into conflict with these autonomous powers. Technology has its own ethic of expediency and efficiency. What *can be done efficiently must* be done in the most efficient way— even if what is done happens, for instance, to be genocide or the devastation of a country by total war (1992:63).

Merton recognized that questions of morality tend to impinge upon the efficient application of science and technology. He believed that bureaucratic systems that mask any moral responsibility by removing any personal involvement have been organized in order to counter the effects of personal conscience. Modern Western governments, in Merton's opinion, have become preoccupied with getting things done in the most expedient manner as possible by whatever means necessary.

We are concerned only with 'practicality' — " efficiency\*: that is, with means, not with ends. And therefore we are more and more concerned only with immediate consequences. *We are* the prisoners of every urgency. In this way we so completely lose all perspective and sense of values that we are no longer able to estimate correctly what even the most immediate consequences of our actions may turn out to be (1992:102–103).

Merton saw the effect of the secular myth of progress as a surrendering of human freedom and spontaneity to an unseen yet pervasive principle of efficiency that promises to fulfill our desires if we accept our roles as cogs in the machine. However, recent history has shown that whenever systems and techniques are allowed to operate without question a culture of death is not far away. Merton lived during a turbulent time in which the possibility of nuclear war was quite real. The United States and the Soviet Union faced off against each other in global competition, each seeing the other as a demonic force in the world. Yet, almost insidiously, the most dangerous threat to humanity lay at the heart of each country's social policy. American democracy was identified in its capitalism, which enticed the individual into mass society. Soviet communism lauded the dissolution of privacy into the collective of the people. However, neither system was aware of the alienating force of its own social structure. The two countries were, and to some extent still are, bent on destroying the other without realizing their own self-destructive natures. In a letter to Bernard Haring dated December 26, 1964 Merton writes:

For one thing, the whole massive complex of technology, which reaches into every aspect of social life today, implies a huge organization of which no one is really in control, and which dictates its own solutions irrespective of human needs or even of reason. Technology now has reasons entirely its own which do not necessarily take into account the needs of man, and this huge inhuman mechanism, which the whole human race is now serving rather than commanding, seems quite probably geared for the systematic destruction of the natural world, quite apart from the question of the 'bomb' which, in fact, is only one rather acute symptom of the whole disease (1965:383).

### *Failure of Organized Religion in an Organized Society*

Secularization is a concern for Merton, but the problem of alienation is not only to be found in the secular world. One gets the sense from reading the works of Thomas Merton that while he was no religious anarchist, he did find fault in those religious organizations that were overbearingly authoritarian and so caught up in tradition and rigid doctrine so as to be part of the problem rather than the solution. It is just as easy for an individual to become alienated within his or her own religious tradition as in popular society. This is entirely possible, Merton believed, in a system that sees God as the mathematical first cause and the operator of a giant machine held together by reliance on a sacramental complex. Merton worried that the church was in danger of becoming simply a mirror of the technological world.

To a certain extent, according to Merton and others, science has become a form of religion. We hold it sacred, because it provides answers in the here and now. Its possibilities astound us and we marvel at each new invention, each new refinement. There is seemingly no end to the power of scientific and technological know-how. People trust in their political leaders to do what is appropriate, but those leaders themselves act on the same principle of efficiency that technology espouses. As a result, political agendas are often directed towards placating the masses in a manner that reinforces their alienation.

Merton believed that rather than conditioning individuals to be productive members of collective society, organized religion should seek to reflect the thoughts of the individual back upon him/herself and the *agonia* of his or her existence.

If in practice the function of organized religion turns out to be nothing more than to justify and to canonize the routines of mass society; if organized religion abdicates its mission to disturb man in the depths of his conscience, and seeks instead simply to 'make converts' that will smilingly adjust to the status quo, then it deserves the most serious and uncompromising criticism. Such criticism is not disloyalty. On the contrary, fidelity to truth and to God demands it (1992:273).

For Merton, the Church has an obligation to promote inter-subjective love between persons rather than the individualistic isolation of mass society that reduces existence to a state of impersonal, formal relationships between objectified entities. By destroying the intimate, personal bonds between extended families and small sub-groups, a process

begun by the advent of urbanization, “mass society segregates the individual from the concrete and human ‘other’ and leaves him alone and unaided in the presence of the Faceless, the collective void, the public (1992:274).” The role of the Church is not to aid the process by “giving it an inviolable religious sanction and tranquilizing the anguish of the alienated mind by injunctions to obey the state (1992:274).” Instead, the Church must do all within its power to help men and women to resist the seductive lure of anonymous conformity, which alienates people from themselves and each other. It must be critical of technology and the exercise of power for its own sake.

## **MERTON’S POSTMODERN CONTEMPLATIVE VISION**

If Merton rejected the world, his was a rejection of the illusory world created by technological mass media society. It was a rejection only for the purposes of transformation. Merton’s espousal of a contemptus mundi and his own experience of the via negativa led him into a postmodern framework for his critique of society. What results from Merton’s experience is a turn toward the social concerns of his day and a vibrant interest in the spiritual disciplines of the East

According to Merton, we are alienated from our true selves by the false identification of self with the Cartesian ego-self. It is a self who subconsciously surrenders all personal identity to the mass organization of society. The alienation is not freely chosen but is, in part, a result of the natural human condition as it is perceived in the West. However, the situation is worsened by an affirmation of an illusory individual identity or dissolution into collectivity. According to Merton, the social, political, and economic spheres of the world seem to act in accord to dissuade any idea of nonconformity or of questioning the status quo. Western governments have more power at their disposal now than at any other time in history, yet their citizens are more alienated and estranged from what Merton calls the “inner ground of meaning” than ever. According to Merton, the situation has reached crisis proportions because of the loss of the sense of contemplation in the modern world. For Merton, honest engagement in spiritual exercises in the West is, for the most part, a thing of the past. Religion has become routine, requiring little effort on the part of the believer. If one is to have any hope of overcoming one’s alienation, then he or she must enter into a contemplative lifestyle. “Far from being irrelevant, prayer, meditation and contemplation are of the utmost importance in America today (1971:375).” It is within the contemplative vision that a contemptus mundi occurs that allows one to see him/herself and others in their proper context.

### ***The Role of the Contemplative Lite***

The monastic ideal has been an important part of Christian history since its inception. It has had an uneasy relationship with the world at large for much of the time. The question has always seemed to hinge on just how far the aspiring monk or nun should be removed from society. Early Church Fathers like Tertullian (153–222

CE) urged that all Christians should shun the inherently evil world around them and band together in an effort to remain righteous before the eyes of God. The theme carried over into the Middle Ages but was considerably modified. Although a rejection of the world for the good of one's spiritual life was considered praiseworthy, Benedictine monastic communities throughout Europe were actively engaged in improving the social and material well-being of the human community. Yet, in much of Western monasticism there still persisted a strong insistence that one must renounce all worldly pleasures and concerns in order to make any progress on the path towards holiness. This insistence found expression in the formation of orders like the Carthusians and the Cistercians, the latter of which Merton was to join in 1941. Orders such as these were founded on a form of *contemptus mundi* that assumed that

theology had nothing to learn from the world and everything to teach the world. That theology was a store of static and eternal truths which were unaffected by any conceivable change in the world, so that if the world wanted to remain in touch with eternal truth it would do well to renounce all thought of changing (1966:39).

Although it may have been beneficial during its time, such a *contemptus mundi* has little relevance for the modern world. To reject the world in an exercise of self-absorbed contemplation is an act of folly, according to Merton. It assumes, firstly, that one can entirely retreat from the world in monastic isolation, and, secondly, that one can come to self-understanding without the presence of other human beings. Such an exercise simply will not work, for neither the individual nor the monastic community can ever truly be separate from the web of life that is the world.

As long as I imagine that the world is something to be "escaped" in a monastery — that wearing a special costume and following a quaint observance takes me "out of this world," I am dedicating my life to an illusion (Cunningham, editor, 1992:377).

It does one no good to turn his or her back on the world either because it is inherently evil or because it is full of distractions that avert attention away from personal contemplation. In fact, Merton argues, any attempt at spiritual growth that places the individual first is doomed to failure.

The purely individualistic concept of asceticism and of prayer is, paradoxically, very harmful to the development of true personal identity. The identity of the person is fully realized only in a conscious and mature collaboration with others (1971:76).

Merton's *contemptus mundi* is not a blanket rejection of the world. It is a rejection of the secular myth of progress and the domination of systems based on efficiency, and a rejection of the subject/object dualism that alienates humanity from its true nature. This kind of rejection is evident in other religious traditions as well: the Hindu concept of *Maya* or the Buddhist "emptiness of the world," for instance. According to Merton, neither of these traditions rejects reality, but rather seeks to unmask the illusion that the world exists as an absolute and purely objective structure that must be accepted for what it seems to be for the individual subject. For Merton, one has to annihilate the illusory sense of distinction between the divine and the human, and between the human and the world. His is a contempt for the self and the world that

ultimately frees one from the restriction of identity and brings one to the realization of the interdependence of all being. He rejects a society

that is happy because it drinks Coca-Cola or Seagrams or both and is protected by the bomb. The society that is imaged in the mass media and in advertising, in the movies, in tv, in best-sellers, in current fads, in all the pompous and trifling masks with which it hides callousness, sensuality, hypocrisy, cruelty, and fear. Is this “the world?” Yes. It is the same wherever you have mass man (1966:36–37).

It is vitally important to note that for Merton one need not enter a monastery in order to have a healthy contemptus mundi. The spiritual life is by no means confined to the walls of the cloister. It is a “special dimension of inner discipline and experience, a certain integrity and fullness of personal development, which are not compatible with a purely external, alienated, busy-busy experience (Cunningham, 1992: 369).” Although physical solitude and silence are extremely beneficial to spiritual progress, the true isolation is a wandering in the desert within ourselves, and this isolation leads to an awareness of our inherent communal nature. Merton believed it was entirely possible for all human beings to espouse a healthy contemptus mundi through a contemplative lifestyle that is present and active in the midst of society.

The contemplative life offers one a different point of view or vantage point from which to re-examine his or her own existence. It delivers one from the standards of efficiency imposed upon the world by a technological imperative which demands that if something can be done it must be done. In his own affable style Merton succinctly identifies a certain independence gained by those who have espoused a healthy contemptus mundi:

One of the “tyrannies” of “the world” is precisely its demand that men explain and justify their lives according to standards that may not be reasonable or even human. The monk is not concerned with justifying himself according to these standards. Today a man is required to prove his worth by demonstrating his “efficacy.” In such a world the monk may simply decide that it is better to be useless — perhaps as a protest against the myth of illusory efficacy. As an American monk I am forced to view with shame and compassion the lengths to which the myths of “efficiency” and ‘practicality’ have led American power in Viet Nam. To the machinery of an organized efficiency that produces nothing but mass murder I certainly prefer the relative “inefficiency” of my own monastic life, which produces only some milk, some cheese, some bread, some music, a few paintings, and an occasional book (1971:229)

While the contemplative lifestyle is not held to the standards imposed upon the rest of mass society its contemptus mundi is of little benefit if one remains aloof. In order to be fully human one must “re-enter” the world and act for social change. Merton argues that a certain level of involvement in the contemplative life is a necessary component for any successful social action or creative work. Anyone who tries to better others around him or her or the world at large without having a clear self-understanding, freedom, and integrity will not be successful. “He [or she] will communicate to them nothing but the contagion of his own obsessions, his aggressiveness, his ego-centered

ambitions, his delusions about ends and means, his doctrinaire prejudices and ideas” (Cunningham, 1992:375). —

Ultimately, the role of the contemplative life is to focus one’s attention upon oneself in order to unveil the illusion of individual selfhood. Spiritual isolation sets the stage for the realization of our true selves through the experience of direct union with a God who is all in all.

### *The Via Negativa*

The via negativa experience was a watershed in Merton’s life. The focus of his writing and activism after the publication of *The Sign of Jonas* was on social justice and the value of other religious traditions. What follows is an attempt to clarify what is meant by the “via negativa” and to show how Merton’s experience shifted his position from a world-denying monk to a world-embracing proponent of social change.

Throughout this paper the reader has been presented with an idea of the Cartesian ego-self in conflict with a “self” that has yet to be explained. Although Descartes’ thinking subject can be explained and defined, the same cannot be said for a notion of “self” that has ineffable origins. As noted, Merton firmly believed that human beings have divine origins; they are made in the image and likeness of God. Yet, the God of the Judeo-Christian tradition is a God without image. The result is a being made in the image of a God without image. The tradition of the via negativa, or “negative way,” is an approach to theology and a spiritual practice that maintains that it is not possible to say what the divine, or the self, definitively is, but it is possible to come closer to an understanding by determining what it is not through a separation from the world and deep introspection. The contemplative life allows one to dissolve the dualistic and alienating understanding of human identity. The process by which this dissolution occurs is the via negativa.

The tradition of the via negativa denies that either God or the self can be identified or defined by any human concepts or knowledge. It is an apophatic approach to theology that affirms that God is and always will be a mystery because the divine transcends all human modes of thinking and rationalization. No conceptions or categories offered by empirical science can ever come close to describing the true nature of God.

Traditionally, the via negativa as a spiritual discipline was definitively applied to Christianity by Dionysus the Areopagite (Pseudo-Dionysus) around 500 CE. Dionysus, according to Denys Turner, was primarily responsible for forging the language that has become characteristic of the Western Christian apophatic tradition. He made a theology out of “metaphors of negativity” contrasting light and darkness, ascent and descent, etc. Turner argues that Dionysus owes his use of such metaphors to a convergence of Greek and Hebraic influences on Western Christian thought, more specifically, the synthesis of Plato’s “Allegory of the Cave” (Book 7 of Plato’s *Republic*) and Moses’ encounter with God on Mt. Sinai in the Book of Exodus (Ex. 19 and 20).

The prisoner in Plato's allegory at first has a limited view of reality. For him, reality consists of shadows. However, once he is freed and makes his way up to the cave entrance he is overwhelmed by the brilliance of the sun as it exposes the "true" reality of the physical world. Plato's allegory describes the experience of the philosopher as he "ascends" from ignorance into the light of wisdom, which is so bright that it blinds. The philosopher ascends from the pseudo-reality of a world of shadows and is initially plunged into a deep darkness brought about by intense light.

In the story of Moses' encounter with God, the people of Israel are warned not to venture near the foot of Mt. Sinai lest they see God and thereby perish. Moses, however, is permitted to climb the mountain and is enveloped in a dark cloud, wherein he meets God. God shields Moses from the glory of his countenance for no one is permitted to see the Lord and live.

Turner recognizes that in both the Allegory and in Exodus "there is an ascent toward the brilliant light, a light so excessive as to cause pain, distress and darkness: a darkness of knowledge far deeper than any which is the darkness of ignorance. The price of the pure contemplation of the light is therefore darkness, even, as in Exodus, death. This darkness is not the absence of light, but rather of its excess — therefore a 'luminous darkness (Turner, 1995:17).'" As Turner points out, Gregory of Nyssa, one of the Cappadocian fathers of the fourth century, was well aware of the Platonic imagery of Moses' encounter with God. For Gregory, when Moses entered the dark cloud he was gaining knowledge of the incomprehensible; he was seeing without seeing.

According to Turner, the theologians of both the Greek and Latin traditions wanted to bring together Plato's story and Moses' experience. What resulted was the development of metaphors of negativity. However, what Dionysus and the early mystics meant by these terms and what has come to be understood by "mystical experience" in much of contemporary scholarship are two different things. When Dionysus spoke of a "descent into the darkness of God" he was using a metaphor to describe something that transcends experience, for the *via negativa* through which one "descends" is a loss of everything, including experience. Later interpretations have tended to give a psychologized experiential quality to these metaphors that was never intended by their authors. These interpretations limit the *via negativa* to a psychological experience. What is important to note is that the *via negativa* is not a means of achieving some experience in the contemplative life but is, rather, a complete loss of self and surroundings in that which is beyond experience.

Merton's own experience of the *via negativa* de-centered his own viewpoint and turned him toward the world. Published in 1953 *The Sign of Jonas* is a collection of diary entries made by Merton between the years 1942 and 1952. It reflects the thoughts and anguishes of a man who after ten years in the monastery is unsure of his progress in the spiritual life, a man filled with fear and doubt. It is within the pages of *The Sign of Jonas* that Merton begins to lose his identity and enters what John of the Cross calls the "dark night of the soul." For John, the surest measure of one's progress in the spiritual life is the apparent lack of progress accompanied by intense feelings of

depression and despair. One cannot journey through the Dark Night, the *via negativa*, without feeling doubt, fear, and anguish. They are all part of the process that strips the person of the false sense of self. The Sign of Jonas reflects Merton's struggle. He writes,

It is fear that is driving me into solitude. Love has put drops of terror in my veins and they grow cold in me, suddenly, and make me faint with fear because my heart and my imagination wander away from God into their own private idolatry. It is my iniquity that makes me physically faint and turn to jelly because of the contradiction between my nature and my God. I am exhausted by fear (1953:254).

Merton, the enthusiastic monk who had rejected the world and embraced the silence of the Abbey of Gethsemani in The Seven Storey Mountain, discovered that his desire to give himself completely to God was not easily realized. Between 1940 and 1950 the Abbey grew from about 70 to 270 members. Instead of finding the solitude and silence he expected, Merton encountered a growing number of brethren busying themselves with the construction of new buildings. His own writing seemed to him to be a distraction from true devotion. He became more and more frustrated. He was constantly tempted to leave the Cistercians and join the Carthusians, who enjoyed a much more isolated lifestyle. Instead of drawing closer to God, Merton believed he had lost all spiritual direction. It was only his obedience to his superiors that gave him any respite from the doubt concerning his contemplative vocation, which constantly confronted him.

However, Merton persevered through his anguish until he came to a new understanding of the contemplative life. True contemplation, he came to realize, does not concern itself with how to contemplate or the environment in which one contemplates. What was necessary for true contemplation was to "shut up" and be still. The more one is concerned with the trappings of the contemplative life the less one achieves its goal. True contemplation surfaces from deep within when all self-centered thoughts and actions are dispelled, when one no longer attempts to achieve it by one's own efforts. His quest to find God by rejecting the world and concentrating on his own spiritual progress had led him to doubt his vocation as a Cistercian. He felt compelled to isolate himself entirely.

Merton came to understand, however, that true solitude is not supposed to bring one a sense of satisfaction. "Solitude means being lonely not in a way that pleases you but in a way that frightens and empties you to the extent that it means being exiled from yourself (1953:249)." It means undergoing a *kenosis* in which the self is purged through fear, helplessness, and isolation in God. "True solitude is a participation in the solitariness of God — Who is in all things. His solitude is not a local absence but a metaphysical transcendence. His solitude is His being (1953:269)."

It is here that we encounter the language commonly associated with the *via negativa*. Merton speaks of becoming "lost in the darkness of God" and entering the "desert" within himself. With no certainty in his ambitions and no sense of self he is overwhelmed by the infinite light of the divine, which is so bright that it is perceived as darkness.

Decentered by the *via negativa* Merton finds a home in that which has no center, for it is every where. All of a sudden he is able to perceive the world in a different way. The spiritual desert he encountered in the temptations and distractions that beset him purged him of his ego-self and became a desert of compassion. In his solitude he became ever more acutely aware of the interdependence of all things. Merton had “progressed” far enough along the path of the *via negativa* that he emerged with a new understanding and embraced the world around him, for in it he recognized the presence of God.

Merton began to realize that solitude is not the absence of company, just as silence is not merely the absence of noise. They are, rather, interior conditions that are cultivated by removing all concerns of the self. Ambitions and desires, even though they may seem well intended, only serve to reinforce the self-constructed barrier between God and human beings. At first Merton viewed his writing as a distraction that needed to be resolved. Paradoxically, Merton discovered that instead of being a hindrance his own writing turned out to be the means by which he was to embrace these newly found understandings of solitude and silence. His works became the vehicle through which he emptied himself.

In his work as a writer, Merton discovered also a new experience of poverty. By his writing he had made himself and his most inner feelings and thoughts a public possession. In this way he had disowned himself and allowed others to enter into his monastic silence (Nouwen, 1991:45).

Not only did Merton empty himself through his writing, but it also became for him a means of communicating with leaders of nations, scholars, religious figures, and lay men and women about the most pressing concerns of the day. It is clear that following his *vianegativa* experience Merton began to question the injustices around him. This is, perhaps, most evident in his attack on racism in America. Merton was adamant that racism, most demonstrative in the South, was actually a white problem. He writes that the irony is that the Negro...is offering the white man a ‘message of salvation,’ but the white man is so blinded by his self-sufficiency and self-conceit that he does not recognize the peril in which he puts himself by ignoring the offer (1964:53).

For Merton, the non-violent protest of African Americans was not only a means for them to obtain their freedom but was also an opportunity for whites to de-center themselves and recognize the dignity of all life. It was up to whites to look into themselves and realize that black people were not their enemies or their rivals or subhuman objects of contempt. The motivation behind Merton’s words lay in a profoundly different understanding of human nature that sprang from his passage through the dark night. Because Merton no longer was self-centered he was able to describe the plight of African Americans through their own eyes and identify racial tension as an opportunity for spiritual growth on the sides of both black and white.

In the years after *The Sign of Jonas* Merton turned not only toward the world but also to the various religious traditions of the East. His awakening to a de-centered reality beyond all differentiation reflects his keen interest in Zen Buddhism. Zen strives

for an intuitive communion with the infinite. It seeks to negate a “consciousness of things” in order to experience consciousness itself. To be awakened to consciousness one must empty oneself of self-consciousness. The Zen Buddhist searches for his or her “original face” or “mind” which exists beyond identification and transcends the duality of subject and object. Merton states, “Like all forms of Buddhism, Zen seeks an ‘enlightenment’ which results from the resolution of all subject-object relationships and oppositions in a pure void (1992:13).” The real self is realized when one “achieves” no-self (anatman). Having undergone this kenosis one “experiences” Satori (enlightenment) and is immersed in Sunyata (the Void). Liberated from the confining sense of self one becomes aware of the unity of life and is moved by compassion to help others.

Merton believed that Christianity could learn much about itself from Zen Buddhism. According to James Baker, Merton recommended that Christians maintain the discipline of Zen, which is effective in overcoming self-attachment. He did not And any theological or philosophical difficulty in making such a recommendation, for the Christian ideal itself advocates selfless service to one’s neighbor. Zen’s emphasis on experience could also help steer Christianity away from what Merton saw as its preoccupation with dogma and doctrine. Merton observed that “Zen seeks the direct, immediate view in which the experience of the subject-object duality is destroyed. That is why Zen resolutely refuses to answer clearly, or abstractly, or dogmatically any religious or philosophical question what-ever(Cunningham, 1992:311).” To be sure, Merton recognized the importance and validity of theological investigation and clarification. However, caution must be taken to remember that the essence of Christianity, for Merton, is an active “living experience of unity” that must not be clouded by doctrine.

As Baker notes, Zen could also help Christians to better understand contemplation. It neither teaches nor denies anything, and “enlightenment comes neither by quietistic inactivity or by self-conscious overactivity, for both attitudes tend to make the person a subject and all others objects, creating a false and dangerous dichotomy (Baker, 1971:144).” Merton writes, “Buddhist meditation, but above all that of Zen, seeks not to explain but to pay attention, to become aware, to be mindful, in other words to develop a certain kind of consciousness that is above and beyond deception by verbal formulas — or by emotional excitement (Cunningham, 1992:404).” In satori all distinctions vanish for it is an awareness of pure being beyond all subjects and objects. Merton believed that such an enlightenment was part of Christian contemplation, as well. Christian “satori” is experienced when all distinctions between the human and the divine are dissolved.

For Merton, the *via negativa* is the means by which humans realize their true natures. It is a leap into the darkness of the infinite. It is a loss of identity that defies logic and reason. The subjective ego-self would propose that it in itself is the measure of what is real. But the *via negativa* offers an avenue through which to negate all subject/object duality, thereby freeing one to experience that which is both transcendent and immanent “In order to be open we have to renounce ourselves, in a sense we have to die to our image of ourselves, our autonomy, our fixation upon or self-willed identity

(1966:204).” This death takes place through the act of contemplation in which one becomes fully awake and aware of the sacredness of life, of the unity of being itself, and of the infinite source of life, which is recognized as the divine. Through self-negation one loses oneself in order to regain one’s being beyond identification.

To reach a true awareness of Him as well as ourselves, we have to renounce our selfish and limited self and enter into a whole new kind of existence, discovering an inner center of motivation and love which makes us see ourselves and everything else in an entirely new light (Cunningham, 1992:372).

True self-realization is the perception of openness to the infinite in the very core of our being. This is the nature of the “true spiritual self” that Merton is concerned with.

We become real, and experience our actuality, not when we pause to reflect upon our own self as an isolated individual entity, but rather when, transcending ourselves and passing beyond reflection, we center our whole soul upon the God Who is our life. That is to say we fully “realize” ourselves when we cease to be conscious of ourselves in separateness and know nothing but the one God Who is above all knowledge (1996:122).

Merton’s dissolution of the subject/object duality that isolates one from the physical world owes much to his interest in Taoism. His separation from society at Gethsemani afforded him almost constant contact with the natural world. References to nature are scattered throughout his works, and even in *The Seven Storey Mountain* he seemed to be particularly attentive to whatever physical environment surrounded him. By the time he had retreated to a private hermitage on the monastery grounds, however, Merton’s understanding of his place in the natural world reflected his belief in the unity of all life. From studying the works of the great Taoist master Chuang Tzu, he was convinced of the interdependent nature of all life. By objectifying the natural world human beings make it easy for science and technology to seize command. Taoism proposes a cessation of activity in the sense that true understanding of one’s place in the world is not something that can be systematically and technically deciphered. Merton writes, “Chuang Tzu is not concerned with words and formulas about reality, but with the direct existential grasp of reality in itself. Such a grasp is necessarily obscure and does not lend itself to abstract analysis (1992:xvi).” The way to “find” oneself is to be awakened to being through wu wei.

Wu wei is not passivity but action “that seems both effortless and spontaneous [when] performed ‘rightly,’ in perfect accord with our nature and with our place in the scheme of things. It is completely free because there is in it no force and no violence. It is not ‘conditioned’ or ‘limited’ by our own needs and desires, or even by our own theories and ideas (1992:34–35).” Nature does not objectify anything; it simply “is.” By negating a separate self that is concerned with defining itself one is immersed in all that is. According

to Merton, detachment and spiritual isolation, two of the most beneficial attributes of the contemplative life, must be cultivated if one is to remove the mask of the ego-self that hides the divine within. However, it must be noted that while there may exist

certain guidelines along the way for the aspiring pilgrim who enters the via negativa, there is no formula one may use to unerringly find his or her way beyond the subject/object duality and the various pitfalls of a self-centered consciousness. Indeed, to focus on any set of actions as a means to an end, according to Merton and Zen, is to entirely miss the point.

By its very nature the via negativa is anti-technique. It defies the ability of technical systems to dominate the individual precisely because it is not a system. It is the way that is no way. It is the loss of all foundations and distinctions, a journey through fear and confusion. Yet, it is ultimately liberating for it destroys all perceived boundaries and classifications. It is able to counter the alienating effects of mass society because it puts one in a different frame of reference than the constant barrage modern humans undergo from mass media. It affords a liberating and intuitive experience of reality rather than the scientific view of an objective world. For Merton, it offers hope to a world inhabited by mindless automatons who feel alienated from themselves yet lack the courage to stand against the masses.

By denying absolutes and all definitions, the via negativa introduces doubt into one's spiritual life that leads to a healthy questioning of all authority. This doubt is not easy to suffer through but is fundamental to the realization of the interdependent nature of all life. Merton states:

Let no one hope to find in contemplation an escape from conflict, from anguish or from doubt. On the contrary, the deep, inexpressible certitude of the contemplative experience awakens a tragic anguish and opens many questions in the depths of the heart like wounds that cannot stop bleeding. For every gain in deep certitude there is a corresponding growth of superficial 'doubt'. This doubt is by no means opposed to genuine faith, but it mercilessly examines and questions the spurious 'faith' of everyday life, the human faith which is nothing but the passive acceptance of conventional opinion (1972:12).

Doubt throws into question any action taken in the name of an absolute authority, even if the authority is no identifiable figure but a principle of efficiency promoted by a well organized bureaucracy.

### *Interdependence*

According to Merton, the one who is open to the infinite sees the world from a very different perspective. To him or her the world no longer is limited to a plane of physical space in which human beings perform the daily routines of their lives. Instead, it becomes a "complex of responsibilities and options made out of the loves, the hates, the fears, the joys, the hopes, the greed, the cruelty, the kindness, the faith, the trust, the suspicion of all (Cunningham,1992:378)." We all assume some level of responsibility for any pain and suffering in the world. "In the last analysis, if there is war because nobody trusts anybody, this is in part because I myself am defensive, suspicious, untrusting, and intent on making other people conform themselves to my

particular brand of death wish (378).” The other, the stranger, immediately poses a threat by his or her difference. However, when the existence of all people in the divine is experienced, the openness to the infinite transcends all defining characteristics and renders ultimate differentiation impossible.

The deepest level of conscience “is beyond both consciousness and moral conscience; it is beyond thinking and self-awareness and decision. It is the conscience of God in us, it is where the Holy Spirit operates (1988:130).” Merton calls it the spiritual conscience. It is not a state of individual experience only, but is, rather, a kind of communal conscience. It is in the spiritual conscience that one encounters God and everyone else, for God is the source for all beings. We all share in the divine. The contemplative life offers one the chance to experience community in the spiritual conscience.

Here Merton notes the importance of prayer. For him, there is no such thing as individual prayer.

When I pray I am, in a sense, everybody. The mind that prays in me is more than my own mind, and the thoughts that come up in me are more than my own thoughts because this deep consciousness when I pray is a place of encounter between myself and God and between the common love of everybody (1988:135).

We do not meet other people merely in our external contact with them, we also meet them in the depths of our own hearts.

This is what is experienced in the spiritual conscience. It is neither restricting nor constricting. When one renounces self-identification he or she is opened to the infinite and is able to accept other people as interdependent equals rather than identifying and defining them as separate objects.

In the modern world the contemplative life of prayer and detachment is the surest measure of maintaining a liberating sense of community. On August 22, 1967 Merton wrote to Dom Francis Decroix saying:

We should bear in mind that Marx taught an interesting doctrine about religious alienation, which is a consequence of regarding God as distant and purely transcendent and putting all our hope for every good in the future life, not realizing God’s presence to us in this life, and not realizing that prayer means contact with the deepest reality of life, our own truth in Him. Also we should point out that prayer is the truest guarantee of personal freedom... It should certainly be emphasized today that prayer is a real source of personal freedom in the midst of a world in which men are dominated by massive organizations and rigid institutions which seek only to exploit them for money and power. Far from being the cause of alienation, true religion in spirit is a liberating force that helps man to find himself in God (1985:159).

The realization that one is interconnected with everyone else in that which transcends all yet is intimately present in all, necessitates a reevaluation of how we interact. It calls into question all claims to absolute truth, thereby eliminating the desire of one group to dominate another.

The concept of dignity is paramount here. Human dignity is understood to be what we all have in common despite our differences — race, gender, ethnicity, etc. It is not

definable because it is based on our semblance to the image of a God without image. It can only be considered in terms of “not this” and “not that,” and this is why the via negativa is helpful in affirming it. The moment dignity is defined it is defiled, dignity is a sharing in the infinite that transcends and finds expression in all religions.

For Merton, a recognition of the innate dignity of the human being required a commitment to non-violence. Merton was adamant in his support for peaceful protest. His role model in this regard was Mahatma Gandhi. In Gandhi, Merton recognized a kindred soul who was well aware of the interdependence of all life. Merton wrote that Gandhi’s spirit of nonviolence

sprang from an inner realization of spiritual unity in himself. The whole Gandhian concept of nonviolent action and satyagraha is incomprehensible if it is thought to be a means of achieving unity rather than as the fruit of inner unity already achieved...The spiritual life of one person is simply the life of all manifesting itself in him. [It] is very necessary to emphasize the truth that as the person deepens his own thought in silence he enters into a deeper understanding of and communion with the spirit of his entire people (1965:6).

The one who is aware of the unity of life does not consider the use of violence to be a valid option, even in the cause of justice. Gandhi epitomized the struggle of a people against a powerful colonial nation. Yet, his call to revolution was manifest in his devotion to silence and interior reflection. Merton respected that even in the face of cold-blooded murder,

Gandhi’s respect for human dignity would not allow him to return blow for blow,

Gandhi believed that the dignity of all is mitigated if one responds to violence with violence. “To punish and destroy the oppressor is merely to initiate a new cycle of violence and oppression. The only real liberation is that which liberates both the oppressor and the oppressed at the same time from the same tyrannical automatism of the violent process which contains in itself the curse of irreversibility (1965:14).”

Nonviolent response stands as a witness to the dignity of all persons. It challenges the conscience of those who unquestioningly follow the orders of institutionalized authority by transcending the roles of oppressor and oppressed. According to Merton and Gandhi, those who resort to physical aggression are not much more than slaves to their own violent actions. By refusing to acknowledge the innate dignity of all they cut themselves off from the true freedom that emerges from the recognition of the communal nature of all life. If one recognizes oneself in the other it liberates him or her from the confining nature of prejudice.

There are certain principles, however, that can be used to guide the interaction between humans and governments and between individual people. According to Merton, authentic social action must emphasize three things. First, it must emphasize the human being over the collective automaton who is a slave to technology. Human beings have an innate dignity that must not be surrendered by becoming a cog in the machine, a mere step in the process of production. Authentic interaction must focus on the “liberation of man from the tyranny of the faceless mass in which he is submerged

without thoughts, desires, or judgments of his own, a creature without will or without light, the instrument of the power politician (1966:69).” Second, authentic social action must emphasize the personal aspect of the human being. It is not enough to respect the human above the automaton. Every human being’s personal values, which, according to Merton, are spiritual and incommunicable must be taken into account. “To respect the personal aspect in man is to respect his solitude, his right to think for himself, his need to learn this, his need for love and acceptance by other persons like himself (1966:70).” Attempting to convert others to a particular point of view, or even spoon-feeding those who are already converted, does little more than prepare the way for mass society.

Third, authentic social action must emphasize wisdom and love. A sapiential view of society is “less activist, more contemplative; it enables men and institutions to see life in its wholeness, with stability and purpose, though not necessarily in a politically conservative sense (70).” Only when these three criteria are met can men and women hope to effect a significant change in their interaction that will release them from mass society and keep them open and accepting of the other.

In *Conjectures of a Guilty Bystander* Merton reiterated his belief in accepting others for what they are by stating that the more I am able to affirm others, to say ‘yes’ to them in myself, the more real I am. I am fully real if my own heart says yes to everyone. I will be a better Catholic, not if I can refute every shade of Protestantism, but if I can affirm the truth in it and still go further.

So, too, with the Muslims, the Hindus, the Buddhists, etc. This does not mean syncretism, indifferentism, the vapid and careless friendliness that accepts everything by thinking of nothing. There is much one cannot affirm’ and ‘accept,’ but first one must say ‘yes’ where one really can (1966:129).

While there may exist significant doctrinal discrepancies between faiths, one is not faced with an either/or situation, for we are all interdependent. To become blinded by the differences is to miss the underlying wholeness and unity that has its source in the divine infinite. Merton’s advice to the Christian community is to love others “with a love completely divested of all formally religious presuppositions, simply as our fellow men, men who seek truth and freedom as we do (1966:298).”

## CONCLUSION

Thomas Merton possessed not only the ability to recognize and understand what he was feeling at any given time but also the ability to express himself in a manner comprehensible to the conscientious reader. The message that resonates in Merton’s writing is a dissatisfaction with the state of men and women in today’s world.

The basis of Merton’s critique is the extent to which people have become alienated from themselves. Ultimately, the nature of human beings cannot be defined. For Merton, men and women are created by and sustained by the divine. There is no absolute distinction between the human and God. This realization, in turn, dissolves any ulti-

mate distinction among individual human beings. However, modern society does not view reality in this way. It is still firmly entrenched in the modernist paradigm, which begins with self and objectifies everything else. For Merton, this is anathema. By establishing the basis for reality in individual self-consciousness, modern human beings have only succeeded in alienating themselves from their own true nature.

According to Merton, the secular myth of progress blossomed under the objectification of the world and envisaged a new age in which humans would be the masters of their domain and be privy to the highest levels of maturity and freedom. However, instead of inheriting a bright future human beings have become mindless slaves to technological systems that promise instant gratification if one performs one's part as a cog in the machine as efficiently as possible. For Merton, the only way out of the crisis of modernity is the cultivation of a contemptus mundi that removes one from the status quo and enables him or her to come to terms with the agony of existence in a way that negates any subject/object duality and opens one to the infinite.

Merton rejects the world in order to truly embrace the world. He negates himself in order to realize his lack of isolated, individual identity. The contemplative lifestyle is the embodiment of his contemptus mundi. Originally, Merton sought only solitude and silence; he wanted nothing more to do with the world. But the more he renounced all selfish claims the more he began to realize that solitude and silence are things one carries within the heart and are only fully effective when they are put to use in the world. A person is never truly alone when he or she unmasks the illusion of selfhood and is exposed to the interdependence of all beings. The contemptus mundi removes one from the preoccupations and imposed standards of a world bent on maintaining a consumeristic ideal. In such a world the only respite one gains from agony is a fleeting moment of gratification experienced when some new material possession is consumed. The false self briefly clings to a sense of satisfaction at having accomplished something.

The *via negativa* is the means by which one is able to escape the confining effects of false identification. It decenters one's consciousness as the basis of all reality and throws him or her into darkness and confusion. All foundations and footholds are dissolved and one languishes in despair. But this despair is purgative. By giving up all claims to self-control we die to ourselves and are liberated from the confining labels that identify us as objects in a material world. Without identity and definition we experience the true freedom that is part of the source of all life, the infinite divine. By denying absolutes and refusing to define, the *via negativa* calls all authority into question. By removing oneself *from the machine* one immediately offers an alternative to the unquestioning obedience of mass society. The person who empties him/herself is no longer concerned with any doctrinal differences that may separate religious traditions and refuses to deny the one who is different, precisely because differences cease to exist when there is no foundational identity in which they could take root.

Merton's critique of his society is a postmodern response to the claims of modernity. It is postmodern because: a) Merton critiques the myths that form the foundation of modernity: the illusion of individualism, the collectivism that it engenders, and the

myth of progress that fuels it; and b) It does so without reverting to a pre-modern "Orthodoxy." Merton replaces such an orthodoxy with a de-centered approach to all religions and cultures. It should be noted that Merton is not merely making disinterested observations about the world around him. He is actively engaging in a systematic critique of what he considers to be the most pressing problems for a world in considerable turmoil. The earliest works of Merton, *The Seven Storey Mountain* in particular, have a sarcastic tone to them. They do espouse a rejection of the world, but it is not a critique. Before the *via negativa* experience of *The Sign of Jonas* Merton rejected the world because of its failings. After his passage through the *via negativa* he embraced the world as a realm of interdependence. Merton's writing took an obvious turn toward social issues. Now from the vantage point of no-self he attacked those elements that were dehumanizing. Titles like *Conjectures of a Guilty Bystander* and *Contemplation in a World of Action* are highly critical of the unquestioning conformity that characterizes mass society. *Seeds of Destruction* and *Faith and Violence* make no apology for their criticism of racial segregation and the use of violence as a political tool. The fact that he identifies and critiques certain elements of modernity without reverting to a pre-modern ideal is what makes him postmodern without being ideologically so. He was surrounded by a Western Christian paradigm yet was able to take a step back, reflect upon what he saw, and voice his disapproval.

Merton does not revert back to a pre-modern standard when critiquing modernity. He does not see the answers lying in a retrieval of some noble, beneficent European golden age of Christendom. His response is clearly something different. He does not judge other religions and cultures by Western standards. Indeed, Merton rejects those standards precisely because they turn the physical world and all people in it into isolated objects. Recognition of the interdependence, dignity, and equality of all life immediately removes him from any Eurocentric world view and, in fact, makes him decidedly post-European.

Merton's response cannot be characterized as traditionally Christian — in the sense of embarking on a world mission to convert everyone. His ability to embrace the thought of and adopt some of the principles of Mahatma Gandhi, Chuang Tzu, and various Buddhist figures clearly makes him post-Christian. He is a Christian who points the way beyond "Christendom." For Merton, authentic Christianity is not threatened by other faith claims and does not find it necessary to turn all people into model Christians. He sees Taoism, Buddhism, and Christianity as converging and diverging in the *via negativa* and is able to learn more about his own potential from his encounters with other traditions in a manner that transcends cultural distinctions and doctrinal differences.

Readers of many of Merton's later works could question to what extent he remained a Christian. His immersion in the religions of the East that do not profess a belief in the traditional Judeo-Christian God, could cause many to misinterpret his message or avoid his thought altogether. Yet his description of Christianity in relation to various aspects of Buddhism *The Asian Journal* for instance, he remained fundamentally Christian and

essentially biblical. The problem with Merton is that he cannot be boxed in. The tone of his early works is doctrinal; the issues seem black and white. After *The Sign of Jonas*, however, Merton's writing changes considerably enough in content that one could question if the same man wrote *The Seven Storey Mountain*. In fact, Merton himself insisted that he was not the same man. Like Abraham, he was a man who set out on a journey, not knowing where he was going but trusting God to lead the way. As such he opened a path into a postmodern world that still awaits full articulation.

## About This Issue

Welcome to Issue number 22 of the *Ellul Forum*. This issue is a special treat, for the entire issue reflects contributions from Ellul himself. Although he is no longer with us, thanks to these publications, he is still very much apart of our lives. Our *Forum* features excerpts from anew book of conversations with Jacques Ellul by Patrick Troude-Chas-tenet Chaste net worked as Ellul's research assistant for over ten years and published these conversations in a French edition, *Entretiens avec Jacques Ellul (La Table Ronde)* in 1994. The English translation is being published by the *University of South Florida-Rochester-St. Louis Studies on Religion and the Social Order* through Scholars Press. We express our appreciation to Scholars Press for permission to publish these excerpts from *Jacques Ellul on Religion, Technology and Politics* by Pierre Troude-Chastenet. See the ad on page two for details if you wish to order a copy. In addition, we have selected poems translated and reviewed by James Lynch. Lynch reviews two books of Ellul's posthumously published poetry. These books reveal yet another side to this complex scholar. We owe both Chastenet and Lynch a great debt for bringing Ellul to us in these contributions.

The next issue of the *Ellul Forum* (July 1999) will devoted to the issue of human rights in relation to Ellul's work. Articles included will be: "Natural Law or Covenant: Human Rights and the Rights of Others" by Sylvain Dujancourt, "Law Rights and Technology" by Andrew Goddard and "Human Rights and the Natural Flaw" by Gabriel Vahanian.

Jacques Ellul on Religion, Technology and Politics

Conversations with Patrick Troude-Chastenet *Patrick Troude-Chastenet Joan Mendes France, translator*

Jacques Ellul (1912–1994), historian, theologian and social philosopher, was among the very first to look upon Technique as the key to our modernity. Because of the gloomy picture he paints of a society delivering humanity up to the manipulations of propaganda, state oppression and political illusion, this prophetic thinker has often been accused of describing today's world as little more than a wasteland. Yet hope and liberty are at the very heart of all his thinking. This book tells the story of Ellul, the anarchistic Christian, through a series of conversations where, for the first and last time in his life, he bares his heart to reveal to us what is tantamount to an intellectual legacy. It also gives us an overview of an immense lifework as yet insufficiently known.

Patrick Troude-Chastenet is a senior lecturer in Political Science at the Institut d'Etudes Politiques in the University of Bordeaux in France. He has published three books and numerous articles on Jacques Ellul. He is a member of the editorial board of The Ellul Forum.

# Forum: Jacques Ellul in Conversation with Patrick Troude-Chastenet

## Jaques Ellul: on Religion, Technology and Politics Conversations with Patrick Troude-Chastenet

### From Chastenef s Introduction:

"I describe a world with no prospects, but I believe that God accompanies man throughout his whole existence". This is what Jacques Ellul told me one day. The man who wrote *La Foi au prix du doute* (The price of faith is doubt) died with this certitude on the 19<sup>th</sup> of May 1994 at his home in Pessac, just a few kilometers from the Bordeaux campus.

Right to the very last his long illness was to provide an illustration of one of his favourite themes namely that of the ambivalence of technological progress. It was to prevent him from completing our last two interviews. He, who used to thank his Maker continually for having given him an iron constitution and computer-like memory suffered agonies at not being able to find the name of this or that poet or painter that he had so loved. In the twilight of his life his body, which he had for so long overlooked, claimed its due forcing itself in a myriad ways into our conversation. My *maitre* was made of more than just his great intellect. Having to face this fact left me feeling very uneasy.

I should point out that for more than ten years, no doubt out of a sense of propriety, so-called personal questions, even the usual platitudes about general well-being, had been singularly absent from our conversations. The name of the collection where this book was originally to appear left no doubt as to the biographical nature of the undertaking, but by tacit consent we were constantly putting off the moment when we would leave the work and talk about the man.

It is probably not a coincidence that our relationship took a new turn following the death of his wife on the 16<sup>th</sup> of April, 1991. From that date on Jacques Ellul's life was never the same again. He was overcome by grief. For a while I thought he may never be able to get over it. He had covered the walls of his sitting-room with photos of his wife, Yvette. This is where he used to receive all his guests. I think he was filled with

regret and felt that it was urgent that he bear witness to how important she had been in his life. He wanted to convince me that his wife had shaped his destiny and that without her he would never have achieved his life's work.

I remember once when he handed back the manuscript of an introduction to his ideas that I had written, having conscientiously corrected the misprints and spelling mistakes, like the good teacher that he was, he turned to me and said: "That's good work but you haven't once mentioned my wife." I found this remark rather unjust since I was presenting the work in an academic context, nevertheless I promised to repair the oversight. In fact it wasn't an oversight but a deliberate, admittedly debatable, decision on my part to treat the work without systematically referring to the author's life.

If one is to go by the definition given by the German philosopher Wilhelm Dilthey the work of a biographer is firstly to determine the objectives of the subject of the biography and then use these to throw light on how he lived his life and did what he did. There are extremely few lives that actually lend themselves to such a mechanical approach but if one were to apply this method to Jacques Ellul one would have to say that he always wanted to be a free man and a free spirit. Too bad if the word free has become a hackneyed term today; there is no better word to describe the underlying value that guided Ellul in all fields and in all circumstances.

Ellul cherished this freedom throughout his whole life having received it, as he said, as his father's legacy to him. Just six months before his own death, at an international conference dedicated to his work, Ellul revealed to us that his father had bequeathed him three guiding principles: never lie to anyone including yourself, be charitable towards the weak and stand up to those more powerful than yourself.

## **From the Interviews:**

### **Chapter One**

Patrick CHASTENET — *You seem to be the perfect personification of the old adage, "no man is a prophet in his own country" / In your opinion, what explains your success abroad and your belated popularity in France? Far from Paris, no salvation?*

Jacques ELLUL — To a large extent my success abroad was due to the fact my book on the technological society came out in America at a time when the Americans were experiencing the sort of problems I was talking about. As far as France is concerned, being provincial is always a determining factor if one wants a career as a writer or a philosopher. Several years ago a Parisian journalist came home here to interview me and asked: "But how can you be an intellectual if you live in the provinces?" That was a very typical reaction ! Anyhow I've always been quite marginal in all the activities I have been involved in.

I had a university career but did little work in my speciality. I am a Christian, but being a Protestant I am in a minority religion and within Protestantism I belong to an even smaller minority. Naturally I've always been on the side-lines because I've always

refused to join any of the mainstream political currents. Perhaps this has something to do with my character. I have the habit of always starting by criticizing all the things I like, which does not necessarily endear me to those who are close to me. Consequently I don't tend to criticize right-wing ideas or people since I have nothing in common with them, but I do criticize the left because I have friends there and a certain affinity for them. So it is obvious that I have always found myself alone and out of place...

*Without God, does your-work still have a meaning?*

Without God, my work would have an eminently tragic meaning. It would have driven me to taking the same way out as Romain Gary: suicide. I describe a world with no prospects but I have the conviction that God accompanies man throughout history.

*You are aware that some of your readers are atheists?*

Yes, but I believe that what I have to say about Christianity is open to everyone including non-believers. By that I mean that hope is transmissible, even without reference to a given God. Hope is the link between the two sides of what I write, which communicate back and forth in a sort of dialectical exchange in which hope is both the crisis point and the solution.

Chapter 4 ur

What is your earliest recollection?

It must have been in 1914 when I was two and a half. I was playing in the park, the Jardin Public, and I remember being drawn towards the sound of music, military music, when I saw some soldiers coming towards us carrying rifles and my mother saying to me: "Look at them they are soldiers going off to the war". Then I don't really know what got hold of me but I went over to a flower-bed picked a small bunch of flowers and took it over to one of the soldiers and said: "Here soldier this is for you".

I remember that he then took me in his arms and kissed me. I was extremely moved by that procession. Naturally at that age I had no idea what war was but I did understand that something extremely serious was going on...

*You once described yourself as being "cold and calculating". Is this true?*

I would say so. Even though I am very moved by poetry for example. I am both very passionate and very cold. I would describe myself as being cold insofar as I cannot help distancing myself from events. When I take part in social gatherings I do so wholeheartedly, I share the emotions of those who are close to me and afterwards I "ponder the matter". I try to analyse why certain things had been said and done.

*What would you say has changed in your character over the years?*

I have become more open towards other people this has happened under the influence of Christianity and of my wife. At sixteen I was a little brute interested in absolutely no-one except my friend Farbos and I was an absolute ghrton for work. Work and books were my passion. You mustn't forget I was an only child.

*In your spare time did you have a typical loner's activities?*

Not as far as my taste for a good fight was concerned. But it is true that I did have a hobby which was rather unusual for an antimilitary type like me (laughs). I would spend

whole afternoons making lead soldiers. I would take the little lead figures and work on them with a soldering iron. Then I would paint them taking care to be absolutely faithful to real-life uniforms because I was already deeply fascinated by history. I can show you my collection, I still have it I believe it must be rather unique...

*Do you see yourself as an austere and undemonstrative Calvinist?*

First of all I am not a Calvinist. I am a follower of Kari Barth who was just the opposite. He was joyful and warm-hearted. Calvin wanted to introduce an unshakeable logic into a domain that I consider not as intellectual. I can't go along with that.

*But you were a Calvinist at the outset?*

No. I was much more influenced by Luther and by Kierkegaard than I ever was by Calvin. I've studied Calvin (Laughs). When I was reading theology I was landed with the task of writing a critical summary of Book IV of the *Christian Institutes*. I read the whole work and believe me I found it deadly boring. I have never been attracted by that kind of rigour.

*You would agree, wouldn't you, that you are rather cold, even though this does not stem from your spiritual convictions?*

Yes. Despite the fact that I am Latin I am not demonstrative.

*How do you account for this reserve?*

I would say that it comes from the distance that existed in my feelings for my father. He was always extremely kind with me but he was never demonstrative. I suppose I've followed his example.

*I can't put my finger on it but I feel that you are leaving something out when you describe the influence of your parents.*

Perhaps I should have mentioned that my mother passed on her love of poetry to me. Fortunately I always had intelligent teachers who let us choose our own recitation texts. Mother, who adored poetry, always guided me towards the better poets. From the age of six or seven I have had a taste for poetry. Poetry is the art form which pleases me the most and in which I find deep meaning.

*Have you ever thought of publishing your own poems?*

No. I believe I've told you before if my heirs feel like publishing my note-books of poems, if they feel it's a good idea, they can. That is the way I am. In poetry one bares one's soul and I don't like baring my soul. [Forum editorial note: Some of Ellul's poems are published in this issue.]

*For those of us who have read your "What I believe" it is clear that you do not like confessions.*

Quite honestly I have to tell you that I am not enormously interested in myself. For example I've never been able to stand Proust's style. All that business of writhing tormented souls, tearing things to shreds, and going deeper ever deeper, it all leaves me stone cold. I may not be demonstrative but I am very outward-looking.

*But surely in order to understand others you must also understand yourself? Is introspective work necessarily self-satisfying?*

That is what I have always experienced, even in sociology. I watch a film or a T. V. program and feel this or that about what I've seen. My feelings are spontaneous, I'm a very good audience. It is afterwards that I start to turn it over in my mind.

I analyse my own feelings which I later transpose. I use myself as a model of the average man, usually I react like any man in the street. I'm rarely mistaken, quite simply because I'm well-equipped intellectually and that I don't consider myself as being different in any way...

Chapter 5 ve

*At what age did you discover the Bible?*

I began reading the Bible at the age of seven or eight. It was a book that I found fascinating. Of course there were lots of things I didn't understand in it.

*Don't you think that that is rather normal for an eight-year-old?*

It wasn't the actual content that I had trouble understanding. In the version of the Bible that we had at home some words were printed in italics. I asked my mother what that meant. She was unable to come up with an answer so she sent me off to a preacher she knew. I took my Bible along to show him but he couldn't give me an answer either. I was very disappointed and put a second question to him.

There's a passage in the Bible where God says he will spare all those he loves for a thousand generations but those who sin against him he will punish for three generations. I asked the preacher to explain to me how the calculation worked. What happens if in the middle of the thousand generations one man should disobey, this would imply that the next three generations should be punished, in which case what happens to the remaining five hundred generations who were entitled to be spared? He just stood there dumb struck, unable to answer this my second question. At which point I felt extremely frustrated and I said to myself: "You're going to have to manage on your Own. Grown-ups simply don't understand anything." This episode pretty well illustrates how I would read the Bible later on.

*When and how did your conversion occur?*

I would have preferred not to talk about that. When it did occur it was overwhelming I would even say violent. It happened during the summer holidays. I was staying with friends in Blanquefort not far from Bordeaux. I must have been seventeen at die time as I had just taken my final exams at school. I was alone in the house busy translating Faust when suddenly, and I have not doubts on this at all, I knew myself to be in the presence of a something so astounding, so overwhelming that entered me to the very centre of my being. That's all I can tell you.

I was so moved that I left the room in a stunned state. In the courtyard there was a bicycle lying around. I jumped on it and fled. I have no idea whatsoever how many dozens of kilometers I must have covered. Afterwards I thought to myself "You have been in the presence of God." And there you are.

*Could you physically see or hear this presence?*

No. No words were uttered. I saw nothing. Nothing. But the presence was unbelievably strong. I knew with every nerve in my body that I was in the presence of God.

*What happened to your usual critical faculties, which in any other situation would make you doubt your first impression, would make you check again and search out any counter-evidence? They didn't come into play here, did they?*

I very quickly realized that I was experiencing a conversion and that indeed I should put it to the test to see if it held strong or not. So I set about reading antichristian writers. By the time I was eighteen I had read Celsus, Holbachref EX “de Holbach Paul Henri” and also Marxref EX “Marx Karl” whom I’d come across earlier. My faith did not budge. It was for real.

*At the moment that this “revelation ” occurred did it cross your mind that perhaps your senses were playing tricks on you?*

No. I was in excellent shape both physically and psychologically. I was well-balanced. Of course I did entertain that possibility but finally I rejected it

*Have you ever felt like writing about your conversion and how it happened?*

I have never written about it and have no intention of ever doing so. Once again, I don’t like talking about myself. As I have already explained for my poems, they give away too much about me. And I certainly wouldn’t like to behave like a second Claudel. After all my conversion is a matter between me and God and it really isn’t anyone else’s business.

*Perhaps it’s because you are afraid of ridicule that you don’t -want to?*

Don’t wony on that score. I’ve never been in the least afraid of ridicule.

*From your description it was sudden, violent and disturbing. There was nothing of the beatific illumination about what happened?*

Certainly not. And it didn’t involve fear either but I was stunned. Meeting God had brought a complete change in my whole being. To begin with this meant a re-ordering of my ideas. I would have to think differently now that God was near me.

*Following this “startling ” encounter I believe your actual conversion happened at a much slower pace?*

Yes, it was a process which went on for years. On the one hand I knew that I had experienced something fundamental and unquestionable but on the other hand I wanted to avoid God’s presence in my life. No doubt this has to do with my need for independence. I didn’t want to have to depend on anyone in my life. What I hadn’t understood was that faith can bring extraordinary freedom. For me Christianity was a sort of orthodoxy, a moral constraint and not at all a sort of liberation.

*You spoke of having to re-order the way you thought. Does this mean you already had a structured mind at this stage?*

I had an academic mind. In secondary school we didn’t do anything too fanciful, believe me. I had done very well in my final year, majoring in the humanities. I had studied metaphysics but that left me cold. Intellectually I was in good working order but nothing more...

*When and in what circumstances did you meet Bernard?*

We were together from the beginning of the secondary school onwards. He was already remarkably eccentric and untidy. I was fascinated by his brilliant mind but was rather put off by his savage wit which frightened me somewhat. He was just the opposite of me. He did not work hard, he did not do well. We had nothing in common until one day, during our freshman year at the university, he invited me to go camping with him in the Pyrenees.

There were just the two of us, entirely by ourselves in our camp up in the mountains. I was bedazzled to find myself with someone who was ten times more cultivated than myself, who could talk about loads of writers I'd never even heard of and who miraculously seemed to have found something in me that he appreciated. Perhaps it was my gravity or perhaps my ability to listen. And goodness knows Bernard needed someone to listen to him. (Laughs). After that we often went on camping holidays together and became close friends.

*What did you get out of this friendship?*

Charbonneau EX "Charbonneau Bernard" taught me how to think and how to be a free spirit. Between the way I had been brought up by my father and the education I had received at school I had the single track mind of the good student. He got me out of this mindset and taught me how to think critically. Among other things he taught me, a confirmed city-dweller, to love nature and the countryside.

*You were a self-confessed Protestant and he was rather antichristian?*

Strictly speaking Bernard could not be described as antichristian. The Protestant scouts had left a deep mark on him but from the very outset he always claimed to be an agnostic and from that he never wavered even though he was to go through some experiences which would bring him closer to Christianity.

*Do you consider him as your intellectual equal?*

Today the answer is yes, but for years he was my intellectual master. He was the one who told me what to read and influenced my views on society. Make no mistake about it he was the captain and I was an excellent first-mate.

*Can you explain why his work has gone unrecognized?*

As Bernard used to say "I attacked society at its most sensitive points. If you attack society, society will hit back, the weapon it uses is silence." I believe he was right.

*Can you tell me more about your activities during your student days?*

I divided my time between attending classes, reading and working to keep myself. I used to give private classes every evening for a couple of hours. From 1932 or 1933 onwards much of our time was taken up with meetings of the Bordeaux section of the Friends of Esprit EX "Esprit". By then Bernard was studying History at the university and we saw each other every day. We would organize camping holidays to which we would invite along fellow students we found interesting.

*Were these mixed-sex camps?*

Of course.

*What were your views on that matter?*

Strange as it may seem Bernard who always seemed to be rather lax was very straight-laced on sexual morality and so was

I. As far as I was concerned it was out of the question to have a steady relationship with a girl if I didn't intend to marry her.

Indeed, but surely nobody even thought of you as being "lax" did they?

No. (Laughs). But then I suppose the fact that I didn't have a cent to my name was a bit of a godsend from that point of view too. While all my friends were able to treat their girlfriends to dances or take them for coffee, there wasn't the slightest chance that I could do the same. I couldn't even treat myself to such things I simply had no money. I never tried to approach a girl and indeed I never met any girls.

*Didn't this make you feel frustrated?*

No. I was happy with my private life, my reading and the more time went on the more I withdrew into my books. It was my wife who got me out of that, but that was much later on.

*Did you feel any antagonism towards people who were different from you, did you feel contempt for womanizers?*

Not at all. My best friend at university a young man named Ldca, was an incredible womanizer. He used to have a new girlfriend every three months, and that didn't shock me one bit. I was very strict with myself as far as morals went but completely openminded towards what others got up to. It was this attitude that enabled me to work with delinquency prevention clubs in later years. Ldca was to become very useful to me, he was an extremely good boxer, so after 1934 when the serious fighting began he became my bodyguard...

*You just mentioned the strikes over Jeze Gaston! What happened exactly?*

They happened in 1934 or 1935 shortly after Mussolini's EX "Mussolini Benito had invaded Ethiopia. Professor Gaston Jezeret EX "Jtee Gaston" was defending the cause of Ethiopia before the International Court of Justice in the Hague. This provoked an incredible mobilisation of extreme right-wing students in all the law schools throughout France, who called for the resignation of Jdze on the grounds that, in their view, fascist Italy was acting within its rights.

In the turmoil I can still see myself grabbing demonstrators by their jacket lapels out of the fray and asking them "But do you have the faintest idea who Jdzeref EX "Jeze Gaston" is?". They had no idea but kept on shouting "Jeze must go 1". For me that was quite a revelation into the base mentality of the masses.

In the end there were only three of us left standing against these baying hounds. There was Henri Rodelref EX "RCdel Henri", who was shot by the Germans during the war. There was a girl, who looked as if she may be Dutch and who was trying to curb the demonstrators. And there was me.

*And who was the Dutch-looking girl?*

She was my future wife. We married in 1937. She was a first year law student and I was working for my doctorate. When we met she had already trained as a nurse. Her father lived in South Africa and didn't look after her at all. It was her grandfather

who had decided that she wasn't strong enough to be a nurse, which was quite true. On his advice she had turned to law, but that didn't interest her at all.

*Was she involved in politics?*

Strictly speaking, no. She had leanings towards the Jeune Republicref EX "Jeune Republique" movement but what really disturbed her deeply was crowd behavior. It was enough for the crowd to shout against a man for her to leap at once to his defence.

*Was she a Christian?*

She had been an ardent Catholic. She was brought up by a former nun of an order that had been secularized who was a most admirable woman indeed, and whom I came to admire enormously later on. At about the age of eighteen she started asking herself the usual questions one asks at that age so she sought out a chaplain to help her. He listened to her veiy patiently with a gentle smile on his face then said: "My dear little Yvette, I've already dealt with all your questions in the catechism class. Now you just look back through what you learned and you'll find all the answers."

Yvette stood up and said "Goodbye. You won't be seeing me again." That was how she broke with Christianity as a whole, to the great sorrow of the former nun who had brought her up.

*Was that in Bordeaux?*

Quite near, in Cadaujac. My mother-in-law lived in Paris. By the time I met Yvette she had become antichristian and was very much under the influence of Nieztscheref EX "Nieztsche"Error! Bookmark not defined.. One day I had invited her to come camping with me. There were three or four of us on that trip. I used to read the Bible quietly in my comer. Now this intrigued her as she had never opened a Bible herself. She then asked me to explain certain passages to her and that is how, thanks to the Bible we became close. We would always read and discuss the Bible together from that time on...

*Chapter 6*

*Around 1930 when you organized yourfirst camping expeditions in the Pyrenees were you actually unaware of the Wandervogel" which after all had been in existence for some time?*

Completely unaware. Our goal was simply to get closer to nature and to enable young city-dwellers to come and live in the countryside. This corresponded deep-down to what we were and to our own experience.

*Wasn't there something ofa initiation rite in what you were doing which could be compared with the ideology of those German youth movements?*

No, we did not share the same ideology. But it is true that we required anyone who wished to take part in our camping expeditions to be able to spend a weekend alone in the mountains. No-one actually did that however I As for the rite of diving into ice-cold water, that was something we had already been doing for a long time, from the time of the Protestant post-scout movement in fact. We took those scouts who were able to stand an extremely tough existence. Among other things they had to go

though there was the what we idiotically called “the drawing of lots” every morning which involved diving completely naked into one of the lakes in the Vosges.

*Were you all around the same age?*

Paulo Breitmayerref EX “Breitmayer Paulo was the eldest. Then there were two or three boys of my age, that is to say less than twenty. One of those was Pierre Fouchienef EX ’Touchier Piene” who was later to become a remarkable pastor. We were the organizers of this movement which was supposed to be anti-boyscout We would perform some of the scout rituals backwards. For us the scouts were far too disciplined and far too likely to become a youth movement in the service of the State. Whereas what we were proposing was totally anarchistic. I can still remember some of the things we got up to at night that were extremely funny.

*Can you give me an example?*

Certainly. Two or three of us would decide to create havoc throughout the camp. We would start by pulling up all the tent pegs sb that the tents collapsed on their sleeping inhabitants. we would walk twenty-five kilometers through the mountains because we wanted to get to such and such place.

*So this was in no way linked to a belief in physical effort or a glorification of virile strength?*

Not at all. Not at all. Absolutely not. We never ever held that kind of belief. Charbonneauf EX “Charbonneau Bernard” was always saying to anyone who would listen to him that he did whatever he pleased. Of course this quest for what pleased him could entail the most incredible marches through snowflows high up in the mountains.

*I believe you attended a Nazi meeting in the thirties. Is that right?*

Yes, I went to Germany for the first time in 1934. I went again in 1935 when I attended a Nazi gathering in Munich.

*Had this any connection with your activities in the personalist groups?*

Not at all I had been invited to Germany by some Protestant associations.

*So how did you wind up attending a Nazi meeting?*

I went out of curiosity. There were such meetings taking place all over at that time, you know.

*Did these meetings give you foodfor thought for your later work on propaganda?*

Absolutely. It was fascinating to see how easily a crowd could be whipped up and welded into a single unit... No-one, absolutely no-one, had any individual reactions left.

*Was this a Protestant scout movement?*

No it was rather a Protestant anti-scout movement. (Laughs)

*Did you have a uniform?*

Absolutely not. The scouts made a ritual of raising the flag. So we performed a mock ceremony for the lowering of the flag.

*Did Bernard Charbonneauf EX “Charbonneau Bernard” come along with you?*

No. He had once been a scout but after that he refused to let himself be dragooned into any organized group whatsoever.

So at the same time as you were attending the anti-scout camps and you were also attending those of Bernard Charbonneauf EX “Charbonneau Bernard”. Did he attach any importance to tests of endurance?

He didn’t devise endurance tests specifically. Our endurance was tested by the activities we indulged in. For instance

*What about you? Did you get caught up in the crowd reaction at that instant?*

No, but it was difficult not to raise my arm in the general salute. We did get lots of funny looks but somehow managed to contain ourselves nevertheless...

*Chapter Seven*

*What did you actually do in the Resistance?*

I was never involved in any fighting. Basically I did relief and liaison work We were able to help a good number of Jewish families from our area. We also worked with friends from Poitiers who redirected “deliveries” from Paris to us from time to time. Despite being very run down our home was very large so we were able to house anyone who turned up: French resistance-workers, escaping Spaniards and even three Russian refugees from prison camps in Germany.

These three guys had crossed the whole of Germany and the whole of France and it wasmy job to get them into fit condition. They were as nice as could be. It brings a lump to my throat when I remember our first evening meal together. My wife had served them soup and invited them to start. All three of them had their heads bowed and their hands joined. They only began their meal when they had finished grace and crossed themselves with a flourish. This had me flabbergasted I can tell you. These were members of the Komsomol I We got on extremely well together all the time they stayed with us the only thing that bothered us was their complete lack of sense of danger. They were tall and blond so they were recognizable from miles away and these silly fools roamed all over the place.

The reason we had so many people coming through our house was that it was situated only a few hundred meters from the demarcation line. I spent most of my time helping people get across into the free French zone. I was in cahoots with an organization thatdealt in forged papers. So I was able to provide a whole series of people with forged identity cards or forged ration books.

I was also in contact with three neighbouring maquis in Pellegrue, Frontenac and Sauveterre-de-Guyenne and was able to transmit messages from one to the others.

*So you were a go-between, in fact?*

Yes I was. I was there to warn them of any danger as well. One day a German motorized company came and camped for a while in our garden. When I saw them preparing to head off towards Pellegrue I leapt on my bike. Since I knew all the side roads I managed to get to the maquisards to warn them just in time.

*Was anyone aware of your clandestine activities?*

Yes. Of course. Whenever the gendarmes came to make inquiries about us the mayor would always answer: "No you've got nothing to worry about with the Elluls. I've got nothing on them. They are O.K." And nothing more came of it. Now the mayor was a wily old peasant. He knew perfectly well what we were up to but always covered for us. I never talked to anyone in the village about things but everybody knew. Moreover just before the Germans began their retreat some of the older inhabitants of Martres came to see me to offer their services. Their rifles dated back to the first world war but they wanted to join the fray.

*Was it because of your convictions about non-violence that you didn't take up arms?*

I didn't have a theoretical position on the subject. At the end of 1943 I had brought several young people to live with us who were coming to the end of their studies. We came to the conclusion that it would be better if we were armed. I got in contact with the network that provided forged documents but was never able to track down any weapons. That's all there is to it. Had we been able to lay hands on some revolvers or tommy-guns no doubt we would have joined the maquis in Sauveterre. I was perfectly well aware that if I got involved in the fighting I would be crossing over into the realm of necessity but if I had to I was quite prepared to give up my liberty...

*Chapter Nine*

*Locally I believe you are very much involved in the prevention of juvenile delinquency?*

Yes indeed, this is all due to a meeting I had with Yves Charrierref EX "Chanier Yves" in 1958. He came to me asking for legal and spiritual advice. He had been working as community instructor with a public organization and he felt that very little could be achieved for maladjusted boys by keeping them in institutions. In other words, he wanted to work with young delinquents, not in an enclosed environment, but in their natural surroundings: the street. We therefore founded the Prevention Club in Pessac and I worked there with Yves until he died in 1969 as a result of a diving accident.

*Concretely, what was your role?*

Basically I was an intermediary. I was a buffer between Charrier, the police, the courts and the Social Services Department who paid his salary but wanted assurances. Actually I was the local personality who was there as a sort of caution for the running of such a marginal club. At that time in France there were no more than two or three such experiments being carried out

*Do you have any direct contact with these youngsters?*

Yes, I often went to the club and they knew that I was "The boss" as they would say. I was very well received by these young people who could in fact be very violent. I never had any problems. Something quite extraordinary happened as the deviant behaviour changed pattern from bomber jackets to the beat generation to drug addicts, some of them asked Charrierr if he knew of someone who could explain the Bible to them. So once a week I gave Bible classes for thirty or so misfits who I must say turned up very regularly.

*Was Charrier a Christian?*

Not explicitly ! Whenever I asked him about it he would always say, “Look, I’ll look after doing what has to be done and you can do the believing for. me.”. (Laughs) He wasn’t a Christian but he behaved as a Christian should.

I believe Yves Charrier took great personal risks, and to his cost, by physically confronting hooligans.

*How did he cope with drug addicts?*

Chanier had less success with the new style delinquents than with the black-leatherjacket brigade. He once said to me: “When all is said and done, what can I do? I know a young boy who lives in the basement of a tower block in Burck. He spends all day on a mattress on the floor. There are some girls who bring him food but he does nothing, simply nothing”. In other words Charrier felt he could only do something with delinquents whose delinquency took an active form. As he often explained to me: “They have bags of energy but they bum it all up in deviant behaviour. What I do is to try to get them to channel it into doing something good”. With lethargic, indolent youngsters he didn’t know where to start

*Has the Prevention Club survived his death?*

Yes. After his death I took over the directorship of the club which was not easy. Then I found an excellent instructor, Luc Fauconnet, who was almost the complete opposite of Charrier, but who was the sort of person who could deal with this new type of misfit. He was a man of words. And it’s true that drug addicts, although they are very sluggish in behaviour, can be immensely talkative. The most difficult part, as the new director told me, was that they wanted to start talking at two in the morning.

*Chapter 10*

*If you had to sum up in a few words what your wife has brought you, apart from her love, what would you say it was?*

I think I can answer that question by quoting something she said herself. We were not yet engaged but were seeing a great deal of each other and I was preparing for the agregation exam at the time when she said to me: “Do you realize that if you go on like this you’ll end up being nothing more than a bookworm?”

I replied that I couldn’t really see what else there was to do, to which she replied: “But you must live your life !” I was completely baffled by that because I had no idea what living actually meant

That is what she did for me. She helped me learn to live. This meant that I learned to relate to others. I wouldn’t say that before knowing her I was completely insensitive to the simple pleasures of life, but with her I learned to appreciate and enjoy so many things. She also taught me to listen. That is something I didn’t know how to do. That’s absolutely true. Being a teacher by nature I was someone who talked and who didn’t listen (Laughs)

Learning to listen was useful to me in my job and even more so for me as a Christian and the work I had to do there. She used to say to me, “You can’t be a good Christian if you don’t listen to other people. How can you help people to understand if you don’t listen to their problems and questions?”

Obviously, and I don't want this to be taken as a criticism, I had been modeling my attitudes on those of my friend Charbonneau. He was completely impervious to other people's questions too. He would air his own views without a thought for what others might think. I was rather like that when I was twenty.

*So your wife was able to change your character?*

She changed my whole way of being. After that receiving people and listening to them became a very important part of my life...

*What were your wife's interests and her tastes when you first met her? Which of her passions did she pass on to you?*

What she passed on to me was more a certain sensitivity that she possessed than her position on different matters. She was extraordinarily sensitive to atmosphere. Sometimes when we were in a group she would pick up any feelings of unease or tensions between various people there. As for me as long as I was talking I never noticed if anything was the matter. I was completely oblivious of anything else going on.

It was very important for her that the relationships of those people around her should be free-flowing both with her and between themselves. She found it very hard to stand the roughness of exchange that had always existed with my old friends. We could be very violent in our arguments and then be the best of friends when it was over. She would defend her ideas with much more delicacy...

*What do you regret most in your life?*

This is going to sound very pretentious but I don't really regret anything. Nothing apart from having been a little impatient with my wife towards the end of her life. Otherwise I regret nothing in my life, even if I have sinned. I'm not a saint.

*I was thinking in terms of what you would have liked to have done or to have seen achieved. Or of an area which may have disappointed you?*

First of all there are books that I would have liked to have written and that I never got round to. For example I would really have liked to write a book about what the sea has meant to me. Next I regret having several hundred unfinished poems that I can't be bothered to go back to. I criticize myself for that sometimes.

*So that is what you regret about writing. Are there any regrets concerning your life as a man of action or simply your life as a man?*

I don't regret much in fact. Perhaps I focused too much on my self that is true. I always succeeded what I wanted to succeed in. Perhaps I didn't help others enough. Although I do know that my students appreciated me, liked me and I helped them to the best of my ability. I don't judge myself severely even though I wasn't always what I should have been as far as my wife was concerned.

# Book Reviews

## The Poetry of Jacques Ellul

An Essay-Review & Translation by James Lynch

After Jacques Ellul's death in 1994 (at age 82) there were added to his *oeuvre* two small books of poems: *Silences: Poemes* (Bordeaux: Opales, 1995) and *Oratorio: Les quatre cavaliers de l'Apocalypse* (Bordeaux: Opales, 1997). Both volumes were published with the assistance of l'Institut des Sciences de la Nature et de rAgro-alimentaire de Bordeaux. Neither book contains an introduction or a preface, or any explanation to the poems that they contain, save for a blurb on the back cover of each.

*Oratorio* is composed of poems Ellul wrote during the 1960s and embodies many of the major themes of his life work: nature, technology, death, God, man, isolation, and freedom. These poems, divided into five chapters, form a unified whole narrating Ellul's vision of the Apocalypse. As the seals are broken, various narrators describe the world's destruction and the roles they play in it. These monologues are interspersed by different "choruses," whose purpose, as in Greek tragedy, is to comment on and forward the action taking place.

Ellul has chosen to write these poems in a variety of forms and meters, but has a tendency towards alexandrines, often rhymed, which fit his lofty, tragic subject matter. The poems are at turns reminiscent of the mysticism of St Teresa of Avila and St. John of the Cross:

Quand le Seigneur des Temps accepte de mourir et que la liberty s'affirme en cet instant dans l'accueil de ce pas qu'homme peut seul subir soumis au plus profond dernier depouillement (Mort amere ou la fleche retombe au sommet de sa course)

(from "Quatrieme partie: La Mort, III")

*When the Lord of all Times agrees to die and liberty's affirmed at that moment in the welcome of the step man alone can suffer subjected to the final, deepest examination (bitter Death when the arrow falls again to the summit of its course)*

or of the beautifully-described horror of Baudelaire:

Pour cet appel!—a ce cheval—le quatridme— arrachd lourdement des mondes inférieurs flechissant sous le poids des victoires certaines et A son cavalier couronné de tumeurs (from "Quatrieme partie: La mort, I")

*As for that call—to such a horse—the fourth dragged heavily from inferior worlds sagging with weight of certain victories and that of his horseman, crowned with tumors.*

*Silences*, by contrast, is a less unified collection of sixty-six poems originally handwritten by Ellul in a notebook and later gathered into their present format by his secretary, Claude Fauconnet, and his oldest son, Jean Ellul. These poems are more varied in both their themes and forms than those from *Oratorio*, as well as being more personal. The majority are untitled, as one might expect from poems taken from such an intimate source. Despite the shift in focus, these poems deal with many of the same themes as those found in *Oratorio* and in Ellul's work as a whole.

I have chosen for the purpose of my translation two poems from each book which I consider to be representative of the collections in general. I have alternated stanzas of Ellul's original French with my English approximation.

From *Oratorio*:

"Troisième partie: Le cheval noir"

II: Choeurs alternés

Premier chœur

*Part Three: The Black Horse*

*11: Alternating Choruses*

*First Chorus*

L'homme a dit: "Je produis" — Les richesses écloses au terme du travail des générations ont répondu sans frein au viol total des choses — Détruite la Nature, et l'homme en est caution!

*Man said: "I produce"—The riches budding at the end of the toil of generations responded unchecked to the absolute rape of things— Nature Destroyed, and man is the guarantee!*

Ah! quand seront comblés les fossés de ton âme assainis les marais et constants les remparts répandus dans la plaine et bunkers et silos — Érige cette Tour d'où tu comptes tes biens!

*Ah! when will the gaps in your soul be filled the swamps drained and the ramparts constructed and scattered across the plain with bunkers and silos— Erect that Tower where you count your wealth!*

Contemple l'esclavage où tu mis ta fortune Les fleuves avortés les conduites forcées Et les monts déboisés qui pleurent leur absence Les Elons épuisés et les poches vides

*Consider the slavery in which you place your fortune The aborted rivers the forced canals*

*And the deforested mountains that weep their lack The exhausted veins and emptied pockets.*

Les monceaux de scories restants seuls de ta rage et seul libra, le vent qui disperse tes biens...

Devant tant de richesse — regarde donc les mains qui se tendent en vain — reflétant ton image

*Only the slag heaps of your rage remain and, solely free, the wind that scatters your goods... Before so much wealth—look at your hands that grasp in vain—reflecting your image*

Chaque instant te dévoile un besoin ddsold Tant de travail pour rien que plus d'oeuvres encore ndeessaires toujours vide toujours encore oil s'enchame l'dcho des travaux consommés

*Each moment reveals to you a sorry need*

*So much work for nothing but still more work (always necessary always ringing hollow) following the echo of accomplished tasks*

Où prendrais-tu ce qu'il faut pour répondre? usure de la terra et de ta propre vie quand pour l'entretenir et combler ton envie tu t'dnerves, te chatres

*Where will you find what is necessary for responding? the wearing-away of the earth and of your own life when, in order to maintain it and fulfill your desire, you become nervous, castrate yourself*

Pour ta force tarie tu t'es fait relayer et tu comptes pour vivre en cette ardente quete sur les monstres actifs qu tu as embrayés — Sombres founders en toi de l'implacable Bete.

*With your forces run dry, you make yourself step down and, to live on that ardent quest, you count on the active monsters that you have set in motion Somber harbingers for you of the Implacable Beast.*

Mais te voici maintenant soude a tes machines et rien ne pent plus te ddgager de leur destin La Machine elle fonctionne— elle fonctionne de nuit, de jour

Tu te fatigues, tu te crispes, tu te tends tu te trompes — Tu la suis.

*But here you are now fused with your machines and nothing can extricate you from your destiny The Machine it operates— it operates by night, by day*

*You grow weary, you grow tense, you strain, you fool yourself—*

*You follow it.*

Bientot dormir! Non ton repos ou le prendras-tu? quand la machine tourne encore et ton bras fatigud n'a plus d'ardeur mais elle continue ignorante — aumemeiythme ettedepasse te laisse loin derridre endormi au long des routes ou san faiblir tourne le fer.

Soon to sleep! Where will you take your repose? while the machine still turns and your weary arm no longer has fervour, but It continues ignorant—at the same rhy thm and it surpasses you It leaves you far behind, asleep along the routes where, without weakening, the iron turns.

Deuxieme choeur

Second Chorus

Reve, oh combien, avant que l'Inexpiable t'arrache le bras de ses ongles de fer

avant que l'Impardonnable arrache ta cervelle oublieuse

Elle qui n'oublie jamais — et ne peut supporter qu'on l'oublie

Reve de ta possession, de ta maitrise, de ta gloire

Reve

de ta production, de ton bonheur qui vient

Ce qui vient e'est la calculante Broyeuse.

Dream, oh how much, before the Inexpiable tears up your arm

with Its iron nails  
 before the Unpardonable extracts your forgetful  
 brain  
 the Machine that never forgets—and cannot bear that another forgets it  
 Dream of your possession, of your mastery of your glory Dream  
 of your production, of your coming happiness  
 What comes is the calculating Grinder.  
 From Silences:  
 Pdlernage & la civilisation de la mort  
 Pilgrimage to the Civilization of the Dead  
 Quelle ombre, Messeigneurs, je n'eusse cru si dense L'absence oh je m'enfonce et  
 m'ignore moi-meme Simple question de r^flexe sans doute.  
 Mais nous sommes ddpassds par ce jeu provisionnel dont nous avons l'impression  
 de faire les frais sans en etre encore certains.  
 Such darkness, Sirs, I wouldn't have believed so dense The absence into which I  
 plunge and ignore myself A simple question of reflexes no doubt.  
 But we are outmatched by that provisional game of which we have the impression  
 of bearing the brunt without yet being certain of it  
 Quoidonc? unedtoile?  
 Le matin?  
 Quelqu'obscur souvenir, ou le choix d'un destin.  
 On ne nous la fait plus. Nous avons laissd tout cela a la ddrive.  
 Et c'est trds loin de nous—Introduction  
 au monde de la Terreur—Parade sur l'echafaud.  
 Nous avons cet azur dans le ventre.  
 Mais oui—et pas ailleurs—pas meme sur le drapeau Rouge.  
 What then? a star?  
 The morning?  
 Some obscure memory, or the choice of a destiny.  
 We can do it no longer. We have set all of that adrift.  
 And it is very far from us—Introduction to the world of Terror—Parade on the  
 Scaffolding.  
 We have that blue in our bellies.  
 Of course—and not elsewhere—not even on the  
 Red flag.

## About This Issue

Welcome to Issue number 23 of the *Ellul Forum*. This issue focuses on Jacques Ellul's views on human rights. Although human rights come up in a variety of places in Ellul's work, he wrote surprisingly little directly on this subject. Our guest editor for this issue is Gabriel Vahanian, Professor Emeritus of Strasbourg University. Professor Vahanian asked two of the most impressive new Ellul scholars from England and France to analyze Ellul's views on human rights and to respond to each other's papers. The first, Andrew Goddard, on the theology faculty of Oxford University, analyzes Ellul's views on law, rights and technology. The second, Sylvain Dujancourt, a pastor in the French Reformed Church, examines the themes of natural law and covenant in Ellul's treatment of rights. Vahanian's own essay both introduces and responds to Goddard and Dujancourt. These authors manage to pull together Ellul's views on human rights, evaluate their adequacy and offer some creative insights of their own. We owe them a debt of gratitude for framing the issues, suggesting constructive future directions and encouraging further dialogue among us on this important theme in contemporary ethics.

Jacques Ellul on Religion, Technology and Politics

Conversations with Patrick Troude-Chastenet *Patrick Troude-Chastenet*

**Joan Mendes France, translator**

Jacques Ellul (1912–1994), historian, theologian and social philosopher, was among the very first to look upon Technique as the key to our modernity. Because of the gloomy picture he paints of a society delivering humanity up to the manipulations of propaganda, state oppression and political illusion, this prophetic thinker has often been accused of describing today's world as little more than a wasteland. Yet hope and liberty are at the very heart of all his thinking. This book tells the story of Ellul, the anarchistic Christian, through a series of conversations where, for the first and last time in his life, he bares his heart to reveal to us what is tantamount to an intellectual legacy. It also gives us an overview of an immense lifework as yet insufficiently known.

Patrick Troude-Chastenet is a senior lecturer in Political Science at the Institut d'Etudes Politiques in the University of Bordeaux in France. He has published three books and numerous articles on Jacques Ellul. He is a member of the editorial board of The Ellul Forum.

# Forum: Ellul on Human Rights

## Human Rights and the Natural Flaw

by Gabriel Vahanian

Obviously, this specialist on institutions that was Jacques Ellul, was by and large, in his writings if not in his personal life, rather unappreciative of a chief and once most conspicuous one amongst them, the church. At best, he was scarcely more appreciative of it than he was suspicious of the state. Just as he shunned developing a theory of the state, he seems to have deliberately refrained from investing in a theory of the church. A jurist and, therefore, a debunker of all that claims to represent the law (*Droit*) together with the rights (*droits*) it implements, he does not believe in the technicalized and sociological promotion of human rights, deeming them to be non-biblical. A theologian, he revels in the linguistic anachronisms of a so-called biblical theology and never thought real help if any might ever come from philosophy. Influenced by Barth's *Church Dogmatics* as he was, his own theology is more ethically oriented than it is church-bound. At best, it aims at a future church above and beyond its current confessional or denominational demarcation lines.

\*\*\*

As a matter of fact, with the advent of modernity the church is bound to be no longer as it used to be. Better put, or worse yet, the church itself can no longer afford to be as it used to be, if only for one reason, namely religion. Religion is on the path of shrinking further and further, but what is actually shrinking is religion in its traditional structures. And it will unavoidably go on withering until or unless it is grasped through a different set of parameters, as for example Schleiermacher will point out. But, then, how different? From religion as feeling of absolute dependence to the emergence of the absolute state by way of papal infallibility, the fact is that belief is becoming more a matter of private choice than of social consensus. Even the private individual is turning from believer to citizen. And that probably explains, in part, why both sociology and ecclesiology come into being as inventions of that same modernity, no facet of which is spared from Ellul's unrelenting critique, sooner or later.

By training as well as by calling, Ellul inevitably becomes aware of the fact that a significant, and probably not the least, upheaval caused by the rise and spread of modernity came precisely in the wake of the gradual — and perhaps not so gradual — process by which ecclesiology was supplanted by sociology, though perhaps more in the latter's pretense than in its actual appearance. Not that the demise of the church

was not echoed in the larger cultural arena. But even the overshadowing of ecclesiology by sociology might legitimately be viewed as expressive of yet another need, namely a new understanding of the church.

Indeed, if the shift from ecclesiology to sociology does point to various aspects of the secularization of a social order till then informed by the Christian faith and shaped in the shadow of the church, whether in its sacerdotal and sacrificial or in its prophetic and charismatic guise, a question still remains. Insofar as, in keeping with the Christian tradition, the secular does not exhaust tire religious but is fulfilled through it, and vice versa, is not that shift in the construal of the social scheme of Western culture to be understood as becoming really radical only if, and when, from religious to secular or, for that matter, from mythological to technological, it is viewed as beckoned by the need for a new albeit somewhat repressed understanding of the church, rather than its mere demise?

The shift becomes radical only to the degree in which the church, instead of being superimposed on society and overshadowing it, is viewed at one and the same time as concomitant with and iconoclastic of the social order. Or put differently, to the degree in which the church implements a principle inherent to its faith and whose focus consists in changing the world rather than changing worlds rather than, as seems to be the case with Ellul and his penchant for the two kingdoms, driving a wedge between creation and redemption. That such seems still to be the case with Ellul is to me undeniable, though not beyond a point of no return. He does compensate for that wedge, somehow. He thus exhibits a rather incongruous if genuine emphasis on an alternative, not to say an oxymoron: universal salvation. Which he pits against another type of oxymoron, predestination. Claiming, though perhaps for the wrong reason, that the latter is for him much too philosophical a notion, he nevertheless construes it in chronological rather than eschatological terms, historicisti-cally rather than temporally, and so to speak as a story rather than as a scenario — as a plot in search of actors rather than on account of actors in search of the plot, yet one in .constant re-enactment, much in the sense of repetition.

\*\*\*

Given their task, neither Dujancourt nor Goddard use this kind of language. They keep to Ellul's own whose re-establishment does in some way approximate re-enactment, at stake in which is the life lived here and now, once and for all, in and through that autonomy which enforces the secular, allowing it thereby at once to come into its own and to be put into question. However muted, it seems to me, a sense of this pervades Ellul's re-establishment, although Dujancourt, correctly, hears it in terms of the God who saves against whose blocking of the God who creates Goddard rightfully protests — and all of them, however, overlook the God who reigns. This is the God who is all in all, only because, whether as God who saves or as God who creates, God was and is as God will ever be — radically Other. So radically other that in Christ there is neither Greek no Jew, that Zion is no place unless it is a birthplace for all people, and that if I am created in the image of God, then God is closer to me

than I am myself. No self being self-sufficient, I have no self unless I am claimed by another. I have no rights unless they are granted by others, or by that God who is radically other.

Rights are gifts, not “givens”. Gifts that can be denied only by those who take them for granted as givens. And what through them is at stake is what the Jews called Torah, i.e. religion overcoming itself, while the Greeks called it *nomos*, i.e. physics overcoming itself, allowing for nature to become second nature. Moreover, what Jews’ and Greeks’ have in common is the fact that neither the Jews nor the Greeks approach is immune from the confusion of the theological and the juridical. This confusion can feed on a misbegotten craving for some Natural Law, just as it can profit from a short-changed, adulterated Divine Law, since no God is worshipped that cannot become an idol or since even the individual Jew who as such has no rights before God compensates for their lack by claiming the right not to be like other people. A sham, for which the people of the Covenant are rebuked by the prophets and Jesus alike. The very person who becomes an individual by reason of a divine calling ends up behaving as though it was by some inalienable self-justifying right. Which amounts to courting Ellul’s critique of rights under the guise of which and hence under any kind of sky, Jewish or Greek, always “the strong man is right” But no sooner is the gift spun off into a given and human rights are taken for granted than they hark back not so much to the Law, whether Torah Or *nomos*, as to a flaw whether natural or supernatural.

Not that Ellul is wrong all the way. Solidarity is not always the winner when, under the guise of human rights, what is sought after is scarcely more than the satisfaction of some newfangled tribalistic drive. But his critique of both Natural Law and human rights as stemming from a basic flaw of it, does not fully shelter him from a perhaps equally grievous suspicion that of substituting a supernatural flaw for a natural one. Not that he is unaware of this temptation, or that he succumbs to it entirely. Somehow he even warns against it, especially when, as Dujancourt reminds us, he rejects von Rad’s contention of a supposedly biblical distinction between a profane law (*droit*) and a sacred law (*loi*). To the contrary, Ellul argues that not only does the Bible know of no profane law, but that it even secularizes the law. But then, paradoxically, therein seems to lie for him the root of his rejection of all pretention to human rights. This makes no sense. On the one hand, he correctly repels the dualism of sacred and profane and adheres to the biblical dialectic of the holy and the secular which he perhaps inadvertently reduces to the dualism of the two kingdoms. On the other hand, he sticks to a purely spiritualistic understanding of the law, altogether shearing it of any secular authentication. It is as if there could be a Promised Land, but no Canaan. It is as if Ellul the theologian has been shortchanged by Ellul the sociologist. And, by the way, considering the extent to which sociologists have been addicted to the dualism of sacred and profane, it is safe to assume that likewise, they too have fallen short of understanding the impertinent relevance of secularization as a way of implementing the biblical dialectic of the holy and the secular. Or is it that Ellul simply does not let his theology interfere with his sociology? That would sound like him.

Are we then in a quandary? Yes and no, for the simple reason that there is no Christian ethic, a contention vastly and deeply demonstrated by Ellul's own construal of an ethic of hallowing. But — given his reservations about human rights fanned by flaws of a technicalized nature — would he go so far as to construe this ethic of hallowing as an ethic allowing for the re-enactment of a secular morality always in need of forgiveness or, simply, always reformable? There is no answer to that question unless it is a reformable one. Even more significant is the fact that, rather than letting us wallow in our holier-than-thou presuppositions, Ellul has led us to the brink of such a question.

\*\*\*

All the more regretful to my mind is therefore Ellul's general conception of technology: as Goddard points out, it is much too sociologically and materialistically oriented. Nor am I in turn surprised that, accordingly, "his" ecclesiology, even as interface of faith and culture, is much too sociologically and spiritualistically oriented. No wonder the anarchist that he was deserves to be rescued from the bear-like hug of sociology or from the swan song of theology. And he fully deserves it, especially since he does impel us towards a new conception both of the church and of society if we must cope with the globalization of our parochial questions, yet without penalizing the human person — much less when that person must cope with the worldhood of a world come of age, with the secular as theater of the glory of God. The wholly other God is not God at the expense of the person each of us is, whether by grace or by virtue of so-called rights. However usurped, should they be shunned? Admittedly, in terms of a person's relation to God they are undeserved. And so they are neither more nor less deserved or, for that matter, usurped than the grace of God. A God whose sun shines on the just and on the unjust.

Ellul correctly construed Christian involvement in the world in terms of anarchy .categorically refusing thereby all subservience to any sacralized order of things. No gap hence needs to be kept yawning between holiness and the secular, between *Dieu et mon droit*.

## Law Rights and Technology

by Andrew Goddard

Jacques Ellul wrote so much on so many different subjects that few realise that his primary area of academic expertise was law. Apart from his five-volume untranslated legal textbook, *Histoire des Institutions*, legal issues are discussed briefly in a number of his other works but it is only his first published book which focusses on the subject<sup>1</sup>. Unfortunately, this book and over thirty subsequent journal articles developing an elaborate sociology of law and re-formulating his earlier theology of law have attracted

---

<sup>1</sup> *The Theological Foundation of Law*, Doubleday, NY, 1960.

little attention, even from Ellul scholars. In the short compass of this article my aim is to highlight four central theses in Ellul's work relating to law, rights and technology. I shall then sketch three proposals of my own which seek to demonstrate that both in the history of Western thought and in our contemporary world there are important inter-relationships between these four Ellul theses.

*Thesis 1:*

*The modern world is dominated by Technique and the State in a way which renders our society qualitatively different from all previous societies in history.* This is probably Ellul's most famous and widely known argument which, from the time of his earliest unpublished personalist writings in the 1930s, drives and shapes his varied sociological studies.

*Thesis 2:*

*Law today is not only technical law (a phenomenon found in other periods of history), it has undergone such a total transformation that it is no longer truly law.* One of the great strengths of Ellul's classic work, *The Technological Society*, was that it traced the effect of Technique on so many aspects of human life, including law<sup>2</sup>. In several articles from the 1960s onwards he further develops this argument, providing an analysis of the transformation and dissolution of law in the modern world. His central claim here is that such factors as the non-normative status of law and its subordination to the state means that law no longer has the functions it had in all historic civilizations and that what we still call "law" has now become the means of state administration and regulation.

*Thesis 3:*

*We are now obsessed with the idea and language of subjective rights.* This is probably the least controversial of Ellul's theses presented here but it is also the thesis he develops least in his writing. His major discussion of the subject bemoans the wholesale juridicisation of our society and claims that "The idea of 'having rights' has become essential in contemporary human and social relationships...Everyone in our society demands 'his rights'"<sup>3</sup>

*Thesis 4:*

*There are serious dangers in any conception of rights which focusses on the individual as a possessor of rights.* Although Ellul uses the language of "rights" in his initial theological foundation of law, this becomes less prominent in later writings. He consistently takes care to emphasise that "human rights" in his understanding are not the human rights of modern liberal rights theory and are most certainly not natural, inherent rights of individuals: "Man cannot have any rights except as part of society...It is therefore man in relationship...who has rights. These are not inherent in his bare existence"<sup>4</sup>. This is one reason why, throughout his later writing, Ellul remains highly

<sup>3</sup> "Recherchesur le droit et l'Évangile" in Cristiane-simo, *Secolarizzazione e Diritto Moderno* no 11/12 (1981), Luigi Lombardi Vallauri & Gerhard Dilcher (eds.), pp 16, 122.

<sup>4</sup> *Theological Foundation of Law*, op. cit., p 80.

sceptical of all Charters of Human Rights and unsympathetic to the many Christians who seek to provide a theological justification for human rights<sup>5</sup>. These four theses are central to Ellul's thinking on law, rights, and technology but each is developed and discussed largely without reference to the others. With the obvious exception of the first two theses (where Ellul demonstrates at some length that the fundamental change in the character of contemporary law is derived from the dominance of Technique and the State in our society) there is no sustained attempt to develop the important inter-connections between them. In what follows I will therefore attempt a more holistic approach by proposing that Ellul's theses are inter-related in three significant ways:

(1) The conception of rights currently dominant in the Western world (which is focussed on the individual as possessor of rights) arises from the same nexus of ideas as that which also fuels the growth of Technique and the power of the state.

(2) This "liberal" conception of rights (and its dominance in popular thinking about law) can take a form which represents another distinctive and dangerous feature of contemporary law.

(3) The substantive content of subjective rights is now highly elastic and constantly increases as a result of the state's increasing power and the development of new techniques.

### *The Common Theoretical Roots of Modern Liberal Rights Theory, Modern Technique & the Modern State.*

"This century of technique was also the century of the 'Rights of Man'...The idea of human rights appeared at the same time and in the same country as modern technique, and I do not think that there is much that is accidental in history, certainly not here"<sup>6</sup>. These sentences, framing a very short discussion of human rights in Ellul's last major volume relating to Technique, show that he had a sense that this first proposal was correct. Ellul however did not develop that sense in any detail and this omission reflects a wider problem in Ellul's account of the historical development of modern Technique: its neglect of philosophical developments and an over-emphasis on material, sociological changes. As with each of my three proposals, what follows may often appear to be as much a matter of assertion as a fully developed argument but its aim is to begin to plug this major gap in Ellul's work and thereby also to assist further reflection on the inter-relationship of law, rights and Technique in our society.

Attempts are often made to trace the history of rights back to the ancient world, including the Old and New Testaments. Although some small traces of continuity may be discernable, our contemporary conception of rights (certainly in the West) is totally

---

<sup>5</sup> Amongst the most influential Christian theologies of human rights are the writings of Jürgen Moltmann and Jacques Maritain. See Ellul's comments on WCC discussions on rights in "Some Reflections on the Ecumenical Movement?", *Ecumenical Review* Vol 40 (1988), pp 387-8.

<sup>6</sup> *The Technological Bluff*, Eerdmans, Grand Rapids MI, 1990, pp 128, 129.

unknown to the world of the Bible or Roman civilization. Its origins can perhaps be traced back to scholastic writers of the thirteenth and fourteenth centuries but its full formulation was the work of seventeenth and eighteenth century thinkers, notably Hobbes and Locke who “typify the emergence and classical consolidation of the liberal ideology of individual rights”<sup>7</sup>.

Three fundamental philosophical shifts occur in the course of these two centuries. They provide the necessary intellectual context for the rise of Technique, shape liberal rights theories, and alter the character of both law and the state.<sup>8</sup> First, there is the diminution and effective disappearance of the previously dominant classic Christian conception of objective laws higher than human law (natural and divine law) which determine “right” in human society and provide a normative limit to the human will and human activity. Second, centre stage in social and political theory is seized by the abstract individual who contracts with other individuals. The primary significance previously attached to community and persons-in-relation within human society is thus lost. Third, the goal of human freedom not only becomes of much greater significance but it ceases to be conceived of as set within a wider objective, limiting order and is instead replaced with the ideal of the individual’s will being free from external constraints and free to create its own order. Ellul’s account of the reasons for the eighteenth century explosion of technical progress does not acknowledge the significance of these three key developments in the history of ideas even though they provide the intellectual foundation and justification for many of the social changes he highlights. The first shift brought to an end the constraint on technical development previously exercised by Christian moral judgment which required that every change “had to fit a precise conception of justice before God”<sup>9</sup>. The second fuelled the campaign against natural social groups and so increased social atomization and plasticity<sup>10</sup>. The third provided the spur both to removing taboos and to the creation of a “technical intention”<sup>11</sup>. These developments not only provided the necessary theoretical context for the modern dominance of Technique, they also transformed the theory and the reality of both human law and political power (and they did so in large part via rights theories).

In social and political theory conceptual priority is given to the individual subject who is held to have fundamental, natural rights. These rights are anterior to any social or political relationships and are not founded in any divine law which would impose obligations as well as granting subjective rights. As a result, in relation to the law and the state, most individuals today view themselves as rights-bearing and

<sup>11</sup> *Ibid.*, p 52.

rights-claiming subjects and the actual content of these putative subjective rights is increasingly shaped by the belief that individuals should be free to live as they wish without external influence or powerful social constraints such as the law. Political power is, from this period onwards, regularly viewed as something derived from a contract in which individuals divest themselves of certain individual rights, powers and freedoms and grant certain rights and powers to a governing authority. Law is also re-conceived. It is no longer a society's common work which is formulated, perhaps through a representative ruler, with reference to some higher normative law. It becomes instead the locus for establishing individuals' competing rights-claims as legal rights in positive law and the means by which the political authority, usually claiming popular sovereignty, exercises its own rights and powers in order to shape the social body according to its free and sovereign will.

### ***Rights as a Distinctive & Potentially Dangerous Feature of Modern Law***

"I have a right to...". This form of statement is now a commonplace in both legal and moral debates. Its dominance is one of the most important distinctive features of modern law. It is also potentially a very dangerous one for law because a focus on individual rights-claims can help to undermine law's traditional relationship to an agreed social morality and set of values. Ellul argued that whereas historically law always reflected a particular society's values and represented a common objective for that society to attain, modern law had become purely technical. Our contemporary concern with "rights" and the law as adjudicator in disputes over competing rights claims has played a significant role in this transformation because it has meant that the important quest for social agreement on the good is often forgotten or ignored in legal disputes.

This development is sometimes positively encouraged by those who extend the traditional liberal belief that there are certain areas of the moral life on which the law should not pass judgment into the much more dubious claim that the law should not be concerned with any definition of the good because law is a matter of limited public social regulation while morality is a matter of private individual preference.

The importance of the phrase, "I have a right to...", demonstrates two major problems which arise from any concentration on individual subjective rights rather than the formulation of a community consensus on what is right. First, except in those cases an individual protests that a clearly defined legal right has been violated (e.g., the legal right, after a specific time under arrest, to be either released by the police or charged with a crime) the claim to a right is actually equivalent to a moral claim. Despite this, the legal system and society as a whole is often reticent about engaging in serious moral debate about substantive issues concerning the conception of the good implicit in any particular rights claims. This is in large part because the modern

intellectual framework pushes both the legal and moral discussion into the terms of individual freedoms and subjective rights without addressing in sufficient detail the more fundamental issues of the content of the good and what is right.

Second, although claims to rights are common currency and this form of expression is now almost universally accepted as valid, there is clearly only limited agreement as to the substantive content of claimed rights. Globally, there are regular debates about whether non-Western countries must accept liberal democratic conceptions of human rights as universally valid. Nationally, we find regular and often heated contention over rights-claims. In the United Kingdom this has recently occurred over different elements of “gay rights” (e.g., an equal age of consent and protection from discrimination in employment) and the meaning of “the right to life” in relation to artificial feeding of people in a permanent vegetative state. Even where it might be thought rights are clearly stated and legally agreed upon, we discover strong disagreements (e.g., the rulings of the European Court of Human Rights are often vehemently opposed by many who recognise its legal standing as interpreter of the Convention on Human Rights).

In short, the dominance and widespread agreement on the importance of “rights-talk” can prevent discussion of the more fundamental moral question of a society’s common conception of the good and the shared values which must be the foundation of rights claims. It can also mask the fact that the often heated disputes over rights really reflect that the protagonists each have “a different view of humanity, society, and power, and of the relation among them”<sup>12</sup>. The effect of these changes on any legal system is serious. Rather than providing procedures to enable civil peace based on an agreed set of values shared in society as a whole, the legal system regularly becomes an open battleground between the competing and conflicting rights claims of individuals and cause groups.

This battle is of such significance to the participants because contemporary law now functions, in part, as an effective technical means by which society as a whole is given its shape and direction. The most powerful group will therefore benefit greatly if they succeed in establishing their conception of rights within society’s law. Unfortunately, the result is often that the law becomes a means of securing power and so sections of society become increasingly alienated from the legal system. This occurs, of course, in other legal systems but in our Western technological and democratic society, the liberal conception of rights plays a much more important role than is often recognised. The underlying reason for this was stated by Ellul in his first book, “The affirmation of one’s rights actually becomes the justification for oppressing others...Whenever man pretended that he could found his rights on his own strength and contain them within himself, his pretention was built upon violence. Any distinction between violence and justice breaks down. The strong man is right”<sup>13</sup>. Any doubting the validity of this

---

<sup>12</sup> *The Technological Bluff*, op. cit., p 129.

<sup>13</sup> *The Theological Foundation of Law*, op. cit., p 84.

analysis need look no further than the long-standing conflict between “right to choose” and “right to life” groups campaigning over abortion legislation in the heartland of liberal, democratic, technological society.

### *Technique, the State and the Demand for Rights*

The demand for legal recognition of claimed rights is often driven today by technological progress and the increasing power of the state. Our conception of rights therefore provides an important medium by which these dominant social forces shape both our juridical system and society as a whole. The importance of the state in relation to rights theories can be traced back to the origins of modern liberal rights theory outlined above.<sup>14</sup> As the power of the state has increased this century, citizens have responded by attempting to limit it by the legal entrenchment of basic rights.

With the development of more and more sophisticated techniques in the hands of the state (e.g., in relation to surveillance and the invasion of privacy), there arises the need to claim and to defend new rights in order to protect individuals against the state and the techniques it can employ. Of course, as Ellul regularly pointed out, the basic problem is that the state itself now so dominates the legal system that it is almost impossible to limit state power effectively by legal means. In addition to this negative source of the demand for legal rights in the face of growing state power, there is also the increasing claim to certain positive rights arising from the development of powerful new techniques in numerous spheres of life. [Paradoxically, these rights (especially in relation to social welfare) are often demanded from the state in its more benevolent guise]. Oliver O’Donovan has argued that, “technology derives its social significance from the fact that by it man has discovered new freedoms from necessity. The technological transformation of the modern age has gone hand in hand with the social and political quest of Western man to free himself from the necessities imposed upon him by religion, society, and nature”<sup>15</sup>.

That social and political quest is now often expressed in the juridical language of rights with claims that there is a right of access to new technological developments (e.g., in health care) which assist the individual’s quest for liberation from traditional necessities. Due to technological innovations and the intellectual environment created by the three philosophical shifts noted above, this right of access to technical progress in turn generates previously incredible rights-claims which can become widely accepted and defended (even almost unquestionably) in modern society. Perhaps the best example of this is the claim, based on the growth and success in the development of reproductive techniques, that any woman has a right to her own child (and, increasingly, her own healthy child). This utilisation of the language of “rights” by those who would

---

<sup>14</sup> See Paul Marshall, *Human Rights Theories in Christian Perspective*, Institute of Christian Studies, Toronto, 1983, p 11–16.

<sup>15</sup> Oliver M.T. O’Donovan, *Begotten or Made?*, OUP, Oxford, 1984, p 6.

benefit (financially or physically) from new techniques makes it increasingly difficult for society as a whole to place effective and long-standing legal limits and controls on their development and deployment. When this difficulty is combined with the speed of technical advances we discover that modern law finds itself lagging far behind the social reality it is meant in part, to shape. Even when one country does attempt to use the law to restrain newly developed techniques, other countries will refuse to do so and eventually legal constraints will become increasingly redundant and have to be relaxed or removed.<sup>16</sup> In contrast to these legal problems generated by the conjunction of technical progress and rights-claims, there is a further important correlation developing between technology and rights. Not only do the beneficiaries of Technique seek to prevent legal inhibitions on technical progress by reference to their rights but those who wish to defend those suffering in contemporary society (particularly as a result of elements of the modern technological enterprise) likewise reach for the terminology of rights.” Thus, as already noted, opponents of the massive rise in abortions performed in technological cultures seek to reform the law by advocating rights for the foetus and, similarly, in the face of the impact of Technique on man’s relationship with the natural world (particularly in relation to food technologies and genetic manipulation), there is a growing acceptance of the validity of “animal rights” or even “creation rights”. The scope and the specific content of rights claims is therefore highly elastic and it is the powers of the state and Technique which now play a crucial part in setting the agenda for defining new rights and generating much of the legal debate.

## *Conclusion*

Ellul always insisted it was impossible to understand any particular social phenomenon without reference to the wider society of which it was part. His own work applied this in an illuminating way to aspects of law within the context of our technological society. This article has recalled four of Ellul’s central theses concerning law, rights and technology and argued that there are important inter-connections between them which were not developed in Ellul’s own work, largely because he did not give sufficient weight to the fundamental intellectual shifts of the seventeenth and eighteenth centuries which underlie both the rise of modern Technique and the development of modern liberal rights theories.

## **Comments on Goddard**

by Sylvain Dujancourt

---

<sup>16</sup> This is illustrated by the recent British case of Diane Blood’s claim to a right to artificial insemination with her dead husband’s semen. She was eventually allowed to export the sperm to another European Union country even though its use in the UK was judged illegal because the original removal

Often taken for a philosopher, Ellul had always been careful not to make such a claim for himself. For a good reason: dealing as his works do with technology, their major concern is the fruit of a method of social analysis as simple as it is original. Intimately steeped in Marx's thought, and convinced that "If Marx lived today, he would make neither the same analysis of society nor the same proposals for the correction of its ills," Ellul wondered "How would Marx describe the dominating central phenomenon of this society of the twentieth century?" And it is fortunate that, in order to answer this question, Ellul did not try to philosophize about it. Otherwise, given what philosophers have written about technology or about law, one could easily bet that his work would be devoid of any relevance; it would lack depth as well as breadth. Abstraction, insofar as it only engages in a game of the mind, hardly interested him.

One should not, however, draw any hasty and erroneous conclusions: he does come to grips with philosophy in the formulation of his thought and the expression of his work. One need only read his assessments of ethics and realize how inseparable they are from his analysis of technological society before one is immediately convinced not only that Ellul had a perfect knowledge of philosophy (his lectures and conferences were regularly studded with quotations from and references to the best philosophers), but also that he used certain philosophical tools, if only to criticize them. In this respect, one can usefully go back to the pages devoted to the axiomatic foundations of ethics in *Le vouloir et le faire*.

It would accordingly seem difficult to hold that Ellul gave little attention to the fundamental transformations of our conceptual framework, in particular those that took place in the seventeenth and eighteenth centuries. His historical output amply shows the preeminence of ideas over facts, even in the making of history. To wit, his five-volume *Histoire des Institutions*, not to mention his dissertation on the *man-cipium*. And with respect to liberal theories, a mere glance at his impressive bibliography would suffice to show that he not only knew about them, but also knew them well enough to be their keenest critic — and the same of course applies equally to liberal or subjectivist theories of law.

Admittedly, Ellul did not produce a systematic work, in the manner of a philosopher, whether on law or the history of ideas. But that would be a lack if it were not compensated for by references scattered throughout the exposition of his thinking in the pursuit of an original position. And were it a lack, it would possibly hinder a better assessment of his work. But even so, would that not be sufficiently offset by the creativity this work displays, especially in an area as fluctuating as is that of law?

## Natural Law or Covenant?

### Human Rights and the Rights of Others

---

and preservation of the specimen had occurred without her late husband's consent.

by Sylvain Dugancourt  
(Translated by Andrew Goddard)

There can be no real dispute that Ellul wrote much on a variety of subjects and that he did so with talent, pertinence, erudition, lucidity, and perhaps even prophetic insight. His writing on so many areas (often where he was not a specialist) sometimes evidence a bulimic character which can damage the literary quality of his work, if not its intelligibility or coherence. Nevertheless, his numerous publications are marked by a paradox: this jurist by training, this historian of law, this specialist on institutions from Antiquity until the present day (the success of his five volume *History of Institutions* has never been denied and Ellul willingly confessed in private that most of his royalties came from this volume), this teacher of Roman Law at Bordeaux's Law Faculty, wrote little on the subject of law. He published only a single work on law: *Le fondement theologique du droit*<sup>17</sup>) and a number of articles, generally on the philosophy of law.<sup>18</sup>

The paradox is even greater when it comes to human rights. Ellul's work is contemporaneous with the expansion of human rights in the juridical realm and in the world at large. Developed after the First World War, the internationalisation of human rights declarations became prominent after the Second World War: Universal Declaration of Human Rights (10 December 1948), International Covenant on Economic, Social and Cultural Rights (16 December 1966), International Covenant on Civil and Political Rights (16 December 1966), American Convention on Human Rights (1969), The Helsinki Final Act (1975), African Charter on Human and Peoples' Rights (1981), UN Convention against Torture and Other Cruel, Inhuman or Degrading Treatment (1984), Universal Declaration of the Rights of AIDS and HIV Sufferers (1989), Declaration of the Rights of the Family (1989), UN Convention on the Rights of the Child (1989). Despite all these occurring while Ellul was writing, it is not possible to find any article by him specifically devoted to this highly debated discipline within modern law, and Joyce Hanks' bibliography contains very few references to human rights. In fact, anyone wishing to know Ellul's thinking on this subject is condemned to reading his work as a whole (especially the articles) in order to discover here and there, always within discussions on some other subject, scraps of analysis of human rights.

This is not noted simply to highlight the difficulty of dealing with this subject over a number of pages. It is noted above all to draw attention to how much Ellul ultimately felt rather uncomfortable with the law as a social phenomenon and an object of theological reflection, and how much his opinion on the subject of human rights was a critical and negative one. It is significant that, in the fifth volume of his *History of Institutions*, the treatment of human rights is kept to the bare minimum with only three pages on the subject (mostly devoted to a critique) and no reference to "Human Rights" in the index. Similarly, the exhaustive bibliography of Ellul's works

<sup>17</sup> ET *The Theological Foundation of Law*, SCM Press, London 1960.

<sup>18</sup> For details see, Sylvain Dugancourt, *La pensee Juridique de Jacques Ellul* (Mmoire de maitrise, Faculte de Theologie protestante), Strasbourg 1989.

produced by Joyce Hanks, does not contain “Human Rights” in its subject index while in her index of publications on Ellul, although “Human Rights” appears, the entry is empty and refers readers instead to the articles under “Humanism.”<sup>19</sup> The explanation for this silence, which almost amounts to a defiant refusal to discuss the subject, is twofold. On the one hand, his reasoning as a jurist, his distancing as an historian, and his analysis as a sociologist lead *him* to perceive human rights more in a political and ideological framework than a juridical one. On the other hand, his theological stringency, his bringing of everything back to the Bible as the basis of his ethics, pushes him to discern the profound spiritual ambiguity and perhaps even the incompatibility of human rights with biblical faith. This is despite the fact that a number of theologians, especially Protestants, have sought to demonstrate that human rights have a biblical and evangelical origin.

In my research, I have found only a single article by Ellul entirely devoted to human rights. This appeared in the weekly *Reforme* (7 January 1989) in the bicentenary year of the Declaration of the Rights of Man and of the Citizen which was issued on the 26<sup>th</sup> of August, 1789. The ironic, mordant and polemical title gives the tone of the article: “Du vinaigre dans la Declaration des Droits” (Vinegar in the Declaration of Rights). In a few lines, he delivers a juridical reading of articles that in the 1789 Declaration refer to equality and liberty. Noting first that equality is not classified among the “imprescriptible” rights belonging to man in his standing as a human being, he observes that the extent of equality is greatly weakened by recognising only equality “in rights.” This is done in such a manner that in fact real inequality (rich and poor, superiors and inferiors) is legitimated by the “common good.” For Ellul, liberty is an imprescriptible right which attains “bliss” in that it permits resistance to oppression. But for Ellul, oppression today lodges itself in technicalised administration and in the offices which produce decrees, circulars, regulations, and other orders. And so he exclaims, “Citizens, to arms ! Take your hunting rifle when Bridges and Roads wishes to expropriate your land, or Electricite de France wants to build a Power Station, etc. You have the law [*le droit*] on your side — the very Declaration of Imprescriptible Rights. If you prevent the works, you are not terrorists, but the representatives of these rights !” Concerning private property as the proclaimed guarantee of liberty he insists: “It is with a gun in the hand that it is necessary to defend one’s own property [...] Private property, inviolable and sacred ! Well, pardon the expression, but that makes me laugh.” Few readers of this article will respond positively to Ellul !

### ***Human Rights and The Natural Law***

These criticisms by Ellul of the 1789 Declaration are already expressed — although in a less scathing style — in his *History of Institutions*. Presenting human rights as

---

<sup>19</sup> Joyce Main Hanks, *Jacques Ellul: A Comprehensive Bibliography*, Research in Philosophy & Technology, Supplement 1, 1984, JAI Press Inc., Greenwich, Connecticut, p.266.

“the affirmation of natural rights, attached to man’s nature, superior to the State and to the Nation itself” he uncovers several sources of these rights, quoting the teaching of the Roman Catholic Church, then the 1776 American Declaration of Independence, Enlightenment philosophers, and the precedents of the French Monarchy. This list largely summarises the standard presentation of the sources of human rights although it should be noted that the theological source is here given first place and there is no reference to the British antecedents which are generally referred to in the history of human rights. Describing succinctly the Declaration’s content, Ellul emphasises the preamble that adheres “to the doctrine of natural law based on the existence of God, as the foundation of the social order”

The Declaration of the Rights of Man, like all subsequent declarations and conventions on the subject, emanates from natural law. Ellul underlines this because it is this which constitutes the original and conceptual flaw within human rights. If there is a constant within Ellul’s juridical thought it is certainly his opposition to natural law. All his students who followed his doctoral course on natural law will admit that he knew his subject perfectly and that his arguments ended up by convincingly “deconstructing” this natural law. What is natural law for Ellul? “The confusion of the theological and the juridical,” Ellul replies.<sup>20</sup> Whether they be philosophical, juridical, or theological in form, theories of natural law have never found favour in Ellul’s eyes. He reckoned that particularly those theories of natural law elaborated by theologians have in common the desire “to find a common ground for encounter between Christians and non-Christians.”<sup>21</sup> They rest either on a conception of man as not totally separated from God by the Fall and on a conception of justice as eternal and something which man can know by himself (the catholic idea), or on a conception of God’s Law, with opposition between the Law and the Gospel (the Protestant idea).

Ellul never changed in his opposition to natural law.<sup>22</sup> For him, natural law does not exist, whether inherent in human nature, created by God, woven into the order of creation, formulated in the Revelation of the Torah, written in the human conscience, or produced by reason.<sup>23</sup> His criticisms of natural law are both juridical and theological.

Natural law is a “creation of the human mind,” and rests on a “blurred notion of nature,” a “variable common principle,” and “doctrinal differences.”<sup>24</sup> What is more, it no longer corresponds to the current state of the law and is ineffectual for all the new

<sup>20</sup> Jacques Ellul, “Loi et sacré. Droit et divin, de la loi sacrée au droit divin,” in Enrico Castelli, ed., *Le sacré: Etudes et recherches* (Actes du colloque organisé par le Centre international d’études humanistes et par l’Institut d’Etudes philosophiques de Rome, Rome 4–9 janvier, 1974), Aubier/Montaigne, Paris, 1974, p. 194.

<sup>21</sup> *Theological Foundation of Law*, op. cit., p10.

<sup>22</sup> Jacques Ellul has also very often drawn his doubts about any explanatory doctrine without practical and concrete consequences. So, in the introduction to his thesis, he expresses his annoyance with “theories, based on easy solutions, with the appearance of cohesion” (Jacques Ellul, *Etude sur l’évolution juridique du mancipium*, Delmas, Bordeaux 1936, p5).

<sup>23</sup> *Theological Foundation of Law*, op. cit., pp10-12.

<sup>24</sup> *Ibid*, p36.

rights which have arisen with Technique: “this doctrine is based on juridical observations related to a situation which has ceased to exist.”<sup>25</sup> Ellul adds that natural law is “anti-scientific”<sup>26</sup> and observes that this doctrine “has been ineffective in preventing the evolution of our law in a direction which is absolutely contrary to it.”<sup>27</sup> That direction, which Ellul challenges, is the technicalisation of law, its submission to the state, and its assimilation to being merely a social fact.

To these sociological and juridical arguments, Ellul adds theological considerations. Already in 1939, he wrote that “every theory of natural law is a negation of the eschatology of the Kingdom.”<sup>28</sup> It allows man to define what is suitable as a social rule. He reproaches natural law theory for reducing God to “a convenient hypothesis” and refusing God as “Creator, Saviour and Revealer.”<sup>29</sup> Natural law allows man to escape from the “radical nature of revelation.”<sup>30</sup> Ellul thus shares with Niebuhr the refusal “to seek some common ground between Christians and non-Christians on which they are able to agree among themselves and construct a juridical system.”<sup>31</sup>

By taking this position, Ellul places himself in a current of Christian theology which, although a minority one, sets itself apart from the naturalist temptation of law and seeks a foundation to law other than that of nature. “Wherever nature comes to an end, there creation can begin” writes Vahanian,<sup>32</sup> adding that “nature ignores God as, indeed, it ignores evil,”<sup>33</sup> meaning thereby that the categories of nature are not those of God nor those of morality. Which “means that since God is no longer confused with nature or bound to history, at the same time man is removed from determinism, from the realm of necessity characterizing history and nature.”<sup>34</sup> In other words, with the Bible nature is no longer divinised nor to be feared any more than it is to be ignored or ridiculed, because man is no longer dependent on it. Consequently, it seems difficult to accept human rights which originate in natural law.

But Ellul adds others arguments in opposition to human rights: the reduction of man to the individual, the ideological function of human rights, and their ineffectiveness. Ellul does not make man into a value. He never considers man as Man with a capital M, because he rejects the idea of an abstract, perfect man of whom therefore nothing new can be said in his life. This man does not exist for Ellul who, following in the

line of Marx's thought, knows only men and women in their situation. Ignoring human nature, he knows only the human condition.

That man has rights is not a recent invention. The learned historian that he is, he can say that the idea is very ancient. Apart from the Stoics, he can also appeal to the Bible: "You shall not violate any of these rights, you shall not show partiality" (Deut 16.19). The problem with rights as they have been conceived and formulated since the eighteenth century is, according to Ellul, that they no longer concern people but individuals. The individual is an abstraction which places the person outside of humanity, opposing them to other people and to society? These human rights are thus opposable rights to use the juridical terminology. On the contrary, man is the person included in society, within humanity, who is situated among his contemporaries but also in relationship with his ancestors and his descendants. He is a man who is representative of other men. This man does not oppose his rights to those of other men but rather transforms rights into obligations. The notion of duty or obligation constitutes the most interesting critique addressed to the traditional idea of human rights. Outside this milieu, man loses his rights, says Ellul, either because he abolishes them or because he cannot profit from them. In contrast to the individual who places himself in a situation of conflict, man places himself in a situation of reciprocity in his relation to others: "Man is called upon to acknowledge the rights of others, since he requests his own to be recognised."<sup>35</sup> According to Ellul, to claim to found human rights on the individual reverts to founding law and right on a relationship of permanent forces, on violence, and on the reason of the strongest.

### *Privacy and the Bible*

For Ellul, the Bible shows that man is man only when he is in relationship with others, particularly with his God whose revelation confirms to him once and for all that he is no longer alone in life. Just as there is not any individual in the Bible, similarly there is no private life, no sphere reserved to man from which God will be excluded. "What appears surprising to me is that in the Bible man appears to me extraordinarily delivered over to others. He is always a prey to others."<sup>36</sup> The only moment, Ellul concedes, where this man becomes alone is when God calls him. Calling is always individual, a call by name which extracts a man for a time from his social group in order to place him in that unique and revelatory relationship with his God.

Ellul calls into question not only this reduction of man to the individual by human rights but also their ideological function. In his commentary on the 1789 Declaration he underlines two characteristic elements of the political function of human rights: the Declaration aims first to destroy politically the Ancien Regime, and its rights have the

---

<sup>35</sup> *Theological Foundation of Law*, p83.

<sup>36</sup> Jacques Ellul, "Information et vie privée: perspectives," *Foi et Vie*, Vol 66, No 6 (novembre-décembre 1967), p60.

purpose of limiting the State, essentially the king. The theoretical reference implicit to it all is the law-abiding state (*I 'Etat de droit*). This is an idea that will carry different meanings, from the 19<sup>th</sup> century German school of public law (which, inspired by the Hegelian conception of the State, subjugated law and right), to the narrow linkage between the law-abiding state and democracy which dominates today. For Ellul there is no possible doubt—the creation of the notion of the law-abiding state is “a subterfuge.”<sup>37</sup> The great fear Ellul felt in the face of the state is well known. He saw it as the focus of most of the powers and oppressions of the twentieth century. He was never a positivist jurist nor a supporter of human rights because he always reckoned that the law could not stand up to the state in a situation where it was principally the state which created the law. The idea of limiting — indeed judging — the state by the law seemed perfectly unrealistic to Ellul, who at the most would concede that the law is able to act as a “guarantee against the arbitrariness of the state.”<sup>38</sup>

It is on this basis that Ellul also raised the argument of the ineffectiveness of human rights. Concerning the Declaration of 1789 he notes that, despite the proclamation of liberty, of equality, of defence against the encroachments, abuses and arbitrariness of the royal state, “this declaration does not protect all the classes of the nation,”<sup>39</sup> mainly because of the absence of any interest in social and economic questions. In his thought on the new powers generated especially by Technique, Ellul coherently shows that this Declaration “does not protect citizens from the eventual tyranny of powers other than the King.” But for Ellul this lack of effectiveness is inherent within human rights. He judges the principles of these rights to be “very theoretical and hardly revolutionary,” noting that from the beginning there was set up a discrepancy (which increasingly grew) between the actual politics of the revolutionary assemblies and the Declaration. That “politics of pretence” will justify the multiple derogations from the principles of the Declaration such as basing the right to vote on a property qualification.

This analysis of a jurist taking formal note of the distancing of human rights from an effective, accepted law, evolving by osmosis with opinion — and we must not forget that for Ellul the model of law remains the Roman law, the opposite of a law with an ideological connotation and function<sup>40</sup>—explains his distrust and even automatic rejection of the principles related to human rights. His outlook as an historian and jurist prevails over that of the moralist who will not let himself be deluded or fooled by words or declarations. We can take as one example that of private life and information. Here are two areas that, from the viewpoint of human rights, clash as regards principles: the right to respect for private life and the right to information. Observing that information

---

<sup>37</sup> Jacques Ellul, “Remarques sur l’origine de l’etat,” *Droits, revue française de théorie juridique*, 15 (1992), p14.

<sup>38</sup> *Ibid.*

<sup>39</sup> Jacques Ellul, *Histoire des Institutions*, Presses Universitaires de France, 6<sup>ème</sup> Edition, tome 5, Paris 1969, p12.

<sup>40</sup> “Human rights are part of the attempt to give a feeling of security to the law” wrote Ellul, “Sur l’artificialité du droit et le droit d’exception [suite] ,” *Archives de Philosophie du Droit*, 10 (1965), pl 92.

is, as well as a communication, a participation in society and therefore only a matter of organisation, Ellul concludes there does not exist a right to information belonging to the individual because he is human. “It is useful, in the society in which we find ourselves, to be informed; this is something on the level of the useful and there is no need to inscribe that in the great principles, in the charters of the rights of humanity. It did not exist one hundred years ago and perhaps will not exist any longer a hundred years from now. It is a transitory matter on which we need not focus our attention.”<sup>41</sup> The same relativisation of principle is found concerning private life in regard to which Ellul insists on the haziness that surrounds this notion whose content varies in different societies. Sparta ignored the private life whereas two centuries later Rome erected around the domus a wall which could not be breached even by the lictors. It is necessary, writes Ellul, “to reject all private life that has a static character, that is simply the private domain, [...] to show that there is no clear, objective, marked limit to what we call private life.”<sup>42</sup> Ellul strengthens his argument with more biblical and theological considerations. According to his biblical analysis, man has no private life before God. This is because he hasn’t a private domain — this God touches all aspects of man’s life, even the deepest. To put it differently, any private life would be subverted by that relationship with God which reaches “all of man and all men” (G. Vahanian).

### *From Natural Law to Covenant*

We are now able to examine Ellul’s theological views on human rights more deeply. There are here two arguments to consider, that can be summarised in two theses: man has no right before God, his right is in God through Jesus Christ.

Claiming a biblical basis, Ellul holds that man has no right before God. This affirmation is not his alone as it is also the opinion of Barth and Bultmann: “The Jew as such has no right before God.”<sup>43</sup> Such an assertion raises two questions. Firstly, why is there law from a theological viewpoint? To which Ellul replies that it is quite simply because man is a sinner, living in the order of sin and a ruptured relationship with God; but that, because no human community would know how to live without such “rules of the game” (which is what the law is for Ellul), the existence of human law is a sign of the patience of God towards these human sinners. Secondly, where is the right of man? In God, replies Ellul. More precisely in that particular relationship God establishes with man called the covenant and in that particular act of God towards men which is the act of judgement

The word “covenant” betrays a juridical connotation that it is helpful to clarify. According to Ellul, the covenant explains both the situation of human law and the origin of human rights. What is this covenant? It is a gracious act an election, a choice

---

<sup>41</sup> “Information et vie privée: perspectives,” op. cit., p58.

<sup>42</sup> Ibid, p61.

<sup>43</sup> Rudolf Bultmann, *Jesus, mythologie et demythologisation*, Seuil, Paris 1968, p61.

of God to *find* a partner for himself in that relationship of love which characterises him and which is brought to us by his word. Over and above this bond with this quality, the biblical covenant also has a content: the Law which defines the conditions of the covenant. These conditions, according to Ellul, have certain similarities to “a contract requiring adherence,”<sup>44</sup> a contract in which one of those contracting fixes the totality of obligations such that the other partner can only accept or refuse (as, for example, in the contract represented by a train ticket).

The covenant, as the fruit of God’s revelation to a person or to his people, restores that relationship which was broken by sin. It is far from static and so the Bible knows several covenants (Adam, Noah, Abram, Moses) with the last covenant being with Jesus. In covenant, the law of God is nothing other than “the prerequisite for maintaining the situation which God has re-established in his covenant.”<sup>45</sup> It is in this framework of the covenant that God recognises human rights and Ellul cites a number of examples: to rule the creation, to be avenged if one is killed, to kill for one’s own food. This list is not complete and we could never know an exhaustive list because “the biblical revelation does not contain a chart of human rights” and “the content of these human rights is essentially contingent and variable.”<sup>46</sup> These rights are determined by thought-forms, political and social structures and economic constraints, but above all by two elements: the mission conferred on man by God and the demand of personal rights judged necessary if man is to be able to live.<sup>47</sup>

The main consequence of the covenant is the acceptance by God of human law. Between God and man, man is little, God is all, and the relationship between the two, being one of faith, turns out to be differentiated and unequal. Ellul shares the opinion of Bultmann: “The distancing of God has the same origin as the proximity of God, that is to say the fact that man belongs to God and that God issues him with a law.”<sup>48</sup> But he goes much further than his illustrious Marburg colleague and insists on the absence of any interference between the law of God and human law: “the law of God cannot be used to elaborate a human law.”<sup>49</sup> However, countering von Rad who distinguishes sacred and profane law (*droit*) in the Bible, Ellul supports the thesis of the secularisation of law by the Bible in such a manner that he does not hesitate to assert that there is no profane law (*droit profane*),<sup>50</sup> nor any “sacred law (*loi sacree*) on which all human laws depend and which measures all law.”<sup>51</sup> This remark is crucial and very revealing of the deep reason for Ellul’s indifference, even hostility, to human rights. In effect, his theological approach to law opposes all the foundations

<sup>48</sup> Bultmann, op. cit, p!65.

<sup>49</sup> Jacques Ellul, “Loi et sacré,” op. cit., pl 87.

<sup>50</sup> *Theological Foundation of Law*, p49.

<sup>51</sup> Jacques Ellul, “Loi et sacré,” op. cit., pl 87.

habitually attributed to human rights. To nature it opposes the covenant, a gracious act of God. To the “metajuridical normativity” advocated by some philosophers of law<sup>52</sup> it opposes a refusal of any objective law from which all other rights could be derived. To so-called imprescriptible principles that would be the measure of all law it opposes the apprehension of law in concrete situations. To a law that organises it opposes a law that is “a condition for life imposed on man [by God].”<sup>53</sup> And Ellul categorically concludes, “Anything that man builds up under the name of law is precisely non-law. It engenders the antijuridical situation.”<sup>54</sup>

If Ellul sharply separates human law and the law of God, he separates just as sharply two conceptions of law and refuses as energetically the idea that human law could take its source in divine law. There is law and law for Ellul. The reference of law is the justice of God, understood as the manifestation of the divine will. The law is therefore an act of God in that it is formed by the judgements of God, formulated in relation to human rights, rights here understood in a positivist sense as the totality of the law elaborated by human beings. But for Ellul that justice is fully expressed, revealed and affirmed by Jesus on the cross, which, in a quasi-mystical formula, he describes as the “ultimate manifestation of God’s justice.”<sup>55</sup> In Christ re-establishment (a fundamental notion for Ellul) is at work: the reestablishment of the relationship between men and God, the reestablishment of the relationship between men, the reestablishment of the situation of humanity for all men, the reestablishment in the juridical order of man in his rights. This is because, Ellul clarifies, the judgement of God intervenes “according to the law of man” (in reference to Ps 7:9). It is in the covenant with Jesus Christ, a covenant “giving meaning and value to all previous covenants”<sup>56</sup> that God fully shows his justice. This covenant is distinctive because Jesus Christ, being the only man God has accepted, is *de facto* by his blood — and why not *de jure* — a man who contracts with God for all humanity and “through him God views all mankind.”<sup>57</sup> Thanks to Jesus, man acquires rights in an absolute manner and becomes the subject of law. In the framework of his covenant with God, Jesus acquires new rights that, since he acts for all men, he shares with all those who from now on relate themselves to him. By the miracle of substitution, no one is any longer without a right, the first right being the ability to claim Jesus Christ for oneself.

From this theological perspective, Ellul draws two conclusions. The first is that Jesus accepts human law, all the more easily than the covenant which does not provide this law with some sort of divine meaning. Jesus makes of this human law “an instrument

<sup>54</sup> *Ibid.*, p49.

<sup>55</sup> *Ibid.*, p47.

<sup>56</sup> *Ibid.*, p56.

<sup>57</sup> *Ibid.*, p57.

for the justification of man.”<sup>58</sup> Inspired by Proverbs 29:26 and John 5:30, the second conclusion is that God makes himself the guarantor of a person’s right when that right is held up to ridicule by other men. For Ellul, quoting Is 49:4, because the right of man is in God, the right of the powerful or the rich is not a right. On the other hand, God is supremely concerned with the right of the widow, the poor and the orphan, who are those to whom the law gives its full attention. He is concerned in order to assure or preserve for them a just relationship with others even though, as those cursed by every society, they do not have at their command the strength or money to assert their right.

It is obvious that we are here far from the habitual conception of human rights which was more ideological than juridical, more moral than theological. Even if Ellul did not explicitly do so himself, it is possible to extend his thought through the development of a juridical ethic valid for and shared by all men whether Christian or not, whether they refer to the Bible or not. It is well known that Ellul found repugnant the idea of a “ready-to-consume” ethic and preferred to leave his readers and hearers to elaborate for themselves their own ethic through reflection on the elements which he provided for them.<sup>59</sup> It is clear, however, that for Ellul human rights do not constitute an ethical base relevant for the modern law which elsewhere he judges to be in crisis. From his analysis there arises the need for a deepening and an elevating of our law and of our relationship to it. Perhaps, despite their incantatory character, human rights conceal the difficulty of taking into account the spiritual dimension which inhabits all acts of social and human life, particularly the law. Ellul is able to make his own Bultmann’s phrase: “At every instant the law of God reaches man. That signifies that man is in decision, in the here and now”<sup>60</sup> — all the more so because, Bultmann insists, the man who has rights does not hold these rights simply “in his bare existence, but only in his situation as a responsible human being.”<sup>61</sup> Man has these rights on the basis of his capacity to take decisions, to develop responses to problems, to face up to difficulties, and to establish, in the face of life’s vicissitudes, some distance for reflection, a return to fundamental values and engagement.<sup>62</sup>

<sup>61</sup> *Theological Foundation of Law*, p80.

<sup>62</sup> Other writers have often highlighted the profound influence of Karl Barth on Ellul’s theological thinking. This is certainly the case regarding his juridical thought looked at from a theological viewpoint. The ideas used by Ellul are all found in Barth’s *Dogmatics*. [For example: Re-establishment: “The death of Jesus Christ preceded His resurrection. God established and maintained His own right against man and over man, and the right of man Himself. This makes it clear in what sense in the resurrection of Jesus Christ He willed to justify both Jesus and Himself, and has in fact done so, proclaiming His own twofold right and the right of man as His creature as they were there established and maintained to be the basis and the beginning of a new world” (Karl Barth, *Church Dogmatics*, IV/1, 59.3, p3U) — Judgement: “Divine judgement in the biblical sense means that God vindicates Himself against man, but

## Concluding Remarks

Our purpose is not to minimise the distinctiveness of Ellul's thought but rather to detect some of the influences and the original manner in which he uses them to elaborate his Christian ethic. The most profound influences are theological ones and so any understanding of his work is incomplete unless it takes into account his theological choices. It is by that measure that it is also necessary to appreciate his work concerning human rights for it is, we believe, that which truly clarifies all his thought. This is shown, for example, by his conclusion of a very penetrating juridical analysis of the Nuremberg trial. This trial marked the revival of natural law in the 20<sup>th</sup> century since it used all the juridical concepts which arise from natural law. For Ellul, this trial also marks the degeneracy of contemporary law in that it shows contempt for the bases of law and profits a perverse use of the law in which it is reduced to being a political instrument and part of the propaganda of power (in this case that of the victors of the Second World War). Here retroactivity, circumstantial laws, the creation of penalties after the crimes, the invention of unknown juridical concepts after the facts, and the superficiality of human rights are all seen clearly and Ellul does not fail to denounce them. Is this just the backward-looking reaction of a jurist fascinated by Roman law, the bitterness of the humanist who sees the nobility of principles made fun of by *raison d'Etat*, the excessive rigour of a moralist who refuses to accept that one can get away with talking a lot of hot air, the disarray of the Christian before a change judged to be incompatible with his faith? Here, in this area and on this occasion as in others, Ellul displays clarity of thought and rigour but also a hope. These establish the richness of his thought and encourage us to pursue working through his oeuvre. The judicial history of human rights justifies the precocity of his critique. The long drawn-out trial of Maurice Papon arouses an uneasiness comparable to that generated by the other trials of war criminals accused of crimes against humanity. A recent international conference<sup>63</sup> has underlined how much the struggle against such crime overturns the traditional principles of criminal law such as individual responsibility, the non-retroactivity of laws, the presumption of innocence, and prescription. At the end of the war, in which his life was a semi-clandestine one of resistance, and at the moment where the growth of human rights was asserting itself, Ellul furnished us with a proposition on human rights which appears both original and representative of his thought:

---

that in so doing He vindicates man against all that is alien and hostile to him. It means that God does what is right for Himself and therefore for man" (op. cit, III/2,43.2, p32). — Grace: "the divine grace is the mercy and justice of God operative mid revealed in the divine decision" (op. cit, m/2, 44.3, pl64). — The role of Jesus Christ: "[Jesus Christ] lives in His time as the Judge by whose Word and work the right of God is vindicated in the sight of men, and therefore that of men is vindicated before God and among themselves; by whom the kingdom of God is thus established among men and His covenant with them fulfilled" (op. cit, III/2,47.1, p439).]

<sup>63</sup> "Du proems 4 l'histoire," Berlin Colloquium, 25–27 January 1998, organised by Centre Marc Bloch (the German extension of Ecole des Hautes Etudes en Science Sociales), Centrum Judaicum of

”The only humane international law will be that which, valid for all countries, assures, within each country, a minimum of rights for all people, guaranteeing them a minimum of freedoms and an individual security which allows each person to choose their own destiny and to respond, by themselves, either ‘Yes’ or ‘No’ when God speaks.”<sup>64</sup>

## Jaques Ellul and Human Rights — A Short Response to Sylvain Dujancourt

Andrew Goddard

*“Is there any other point to which you would wish to draw my attention?”*

*“To the curious incident of the dog in the night-time.”*

*“The dog did nothing in the night-time.”*

*“That was the curious incident,” remarked Sherlock Holmes.*

—Sir Arthur Conan Doyle

Sylvain Dujancourt’s article powerfully draws attention to the curious incident of Ellul writing almost nothing on human rights. The strangeness of this is increased given Ellul’s regular engagement with his socio-political context, his own legal expertise, and the brief outline of a theology of human rights in his first published volume. By focusing on this curious incident Dujancourt offers an illuminating account of the various reasons — sociological, theological, legal and political — for this relative silence.

There is little I would dispute in Dujancourt’s account of this although I would, I think, add one further major reason for Ellul’s refusal to follow those of his contemporaries such as Moltmann and the World Council of Churches who were developing a theology of human rights. That is Ellul’s consistent and fundamental opposition to all forms of justification. This stance, rooted in his Protestant objection to man’s self-justification by his works, is perhaps most memorably expressed in his unpublished 1975 lectures on authority:

”Although it is our permanent temptation we do not have to add a small spiritual hat to whatever exists. This is always the risk. The power of the state exists. How are we going to explain that doctrinally, theologically? The power of the head of the family exists (well, it no longer exists, it used to exist). How are we going to justify that.. Understand that from the moment where you engage in this system of justification, you set yourself to justifying everything.”

To my mind there can be little doubt that as he looked at the political and juridical world around him with the prevalence of human rights Ellul felt exactly the same — the sudden rush of certain Christians to baptise this language and ideology was simply another form of the temptation into which the church regularly fell and which he constantly resisted.

---

Berlin, and the Einstein Forum (cf. *Le Monde*, 25 Feb 1998, p10).

<sup>64</sup> Jacques Ellul, “Notes sur le proces de Nuremberg,” *Verbum Caro*, Vol 1 (Aug 1947), pl 12.

Dujancourt's article does not, however, only shed light on Ellul's refusal to address human rights in more detail. He also signals some ways in which Ellul's wider theology of law and his largely unexplored critique of modern technical law may be constructively elaborated into a more positive response to the dominance of human rights theories.

In particular, Dujancourt's sympathetic account of Ellul's rejection of the individualistic emphasis of modern rights theories and the need to develop a more personalist understanding in which obligations play a role is one which merits further development. It is one which has been much aired in recent liberal-communitarian debate in political philosophy and on which some biblical work has already been done by the Old Testament scholar Christopher Wright. In sketching a biblical account of human rights Wright argues that "to say that B has certain rights is simply the entailment of saying that God holds A responsible to do certain things in respect of B...Rights do not exist apart from the demand of God upon someone."<sup>65</sup> Dujancourt's work, in dialogue with Ellul, offers further important contributions to this task of developing a fuller conception of "human rights" in which humans are viewed not as abstract individuals but as persons in a wider community under God.

However, as Wright's work shows, any Christian attempt to reshape contemporary rights theories must also pay close attention to God's purposes in creation and here the spectre of "natural law" looms. Dujancourt emphasises that human rights theories grow out of natural law, highlights Ellul's criticism of all traditional natural law theories, and claims that "Ellul never changed in his opposition to natural law." He helpfully sketches the diverse arguments Ellul advanced to "deconstruct" natural law. While all this is certainly true it fails to recognise that elements in Ellul's legal thought share some important common features with certain natural law theories and that these may in fact prove necessary for the task of developing an alternative Christian account of human rights.

In the 1939 article, which Dujancourt cites to show Ellul's early explicit opposition to natural law (nl2), Ellul gave the Decalogue and human conscience a role in relation to human law which in his later book he rejected as too similar to natural law theories. However, even in that book (on which Dujancourt relies for most of his account of Ellul's theology of law), Ellul's theory of institutions given in creation again presents ideas which, in his own earlier writings, he had accepted were a "sort of natural law." This important strand of Ellul's juridical thinking was partially developed in a number of later articles but as with his early writing on human rights it unfortunately remained an aspect which failed to get the further attention it deserves.

By failing to recognise this part of Ellul's juridical thought and by giving insufficient attention to some significant changes within his developing theology of law, Dujancourt has perhaps missed an important point of tension in Ellul's own work. One focus of that tension is found in Dujancourt's own account where he begins by stressing Ellul's rejection of a common ground between Christian and non-Christians in the creation

---

<sup>65</sup> C. Wright, "Walking in the Ways of the Lord," *Apollos*, Leicester, 1995, p253.

of a juridical system (n5 and n15) but later writes, “it is possible to extend Ellul’s thought through the development of a juridical ethic valid for and shared by all men whether Christian or not” It may well prove that any such shared juridical ethic and any substantial account of “a minimum of rights for all people” (for which Ellul calls in the final quote by Duj ancourt) must ultimately be related to a more substantial theological account of the calling and function of human beings as created beings within a wider created order such as that originally sketched in his account of human institutions.

Ellul, perhaps because of his voluntaristic emphasis on freedom and his antipathy to both natural law and teleological ethics, failed to provide such a theological account. As a result, despite the great insights shown in his critique of much modern human rights theory, his attempt to refound rights on God’s covenant remains rather insubstantial. We are left with only the rather general statement that these rights are “essentially contingent and variable” (n30) as they are founded on “the mission conferred on man by God and the demand of personal rights judged necessary if man is to be able to live” (n31). In a century which has witnessed not just the growth of human rights language but, as Ellul himself pointed out, the ineffectiveness of that language to prevent a terrifying increase in man’s inhumanity to his fellow humans, that statement is not sufficiently specific to be of any real practical use. If, however, it is to be made more concrete and given substance, then a deeper study of the covenant of creation, an explanation of some form of created order and institutions, and the calling of human beings within that is — despite its overtones of natural law — probably required.

## From the Editor

My thanks to our guest editor, Dan Clendenin. And my heartfelt thanks to Daryl Fasching for faithfully editing *The Ellul Forum* for more than a decade. Daryl had a vision for going beyond a newsletter on Ellul activities to a roundtable on our technological civilization. And he has made it happen splendidly, actively involving a broad membership from Europe, North America, and elsewhere in dialogue on Ellul and technology. Daryl has been a superb leader, and I'm pleased he'll be vitally involved henceforth as a member of our editorial board. Now that we've made the transition to the University of Illinois, we'll be on our regular publication cycle of two issues per year appearing in January and July. Send your possible articles and book reviews to me. Topics for guest editing an issue are welcome too.

Clifford G. Christians, Editor

## About This Issue

Whatever else Jacques Ellul was or sought to be, he was first and foremost a Christian, and that not merely by chance or coincidence but by choice. About half of his written work explores themes of the Biblical revelation and much of his time was spent in direct Christian ministry such as pastoring the blue-collar French Reformed church that met in his home, or serving on his denomination's committee for pastoral education and training. Ellul was typically unapologetic about his Christian journey; but on the other hand, he was consistently cryptic about his conversion experience. To my knowledge his two-volume autobiography that he wrote some time ago remains unpublished (in an interview he told me it would be left to his family to decide whether to publish it after his death).

Ellul was a man of formidable intellect and ideas, but he always wrote about his experiences. That is, he wrote out of his personal story. I suspect that many of the people like myself who have been so deeply influenced by Ellul were attracted by elements of his personal narrative.

A common but mistaken cultural assumption is that the modern university, to quote a physician friend from Yale, is "a Christless hellhole." This generalization has at least some merit, but people like Ellul belie its ultimate accuracy. A spate of recent books have chronicled the personal stories of believers who, like Ellul, work at the highest

levels of the academy and likewise locate themselves squarely in the Christian community.<sup>66</sup>

In the fall of 1997 a group of Christian professors at Stanford formed what has become known as the Christian Faculty Fellowship. A year later a second group of physicians at the Stanford Medical Center did likewise. In the last three years about 70 people have attended one of these groups (not all from Stanford and not all professors). Both groups meet on a weekly basis. In this issue of *The Ellul Studies Forum* three of these professors explore their specifically Christian journeys as university intellectuals—a truly Ellulian theme.

## Science and Faith — A Personal View

by William T. Newsome

It is a privilege to contribute to this volume of the *Ellul Studies Forum*. Preparing this paper has “pushed” me more than any of the 80 or so papers I have published in my professional life, precisely because I have never before written for a public, academic readership on any aspect of religious faith. I do not, however, come to the topic completely unprepared. Across twenty-five or so years of adult life, I have tried to discern for myself whether there is anything in the universe worth having faith in, what it means for me personally to live in faith, and how my faith is related to all other facets of my life—including the science that I do. In a sense, then, my search for

---

<sup>66</sup> See, for example, Kelly Monroe, *Finding God at Harvard* (Grand Rapids: Zondervan, 1997) or Paul Anderson, *Professors Who Believe* (Downers Grove: InterVarsity Press, 1998).

an authentic faith is as much a part of me as eating, sleeping and breathing, and it is certainly a more essential part of who I am than is the science I do.

I wish to begin with a disclaimer. I consider myself to be an expert-in the academic sense-only on the neurophysiology of visual perception, and I will have *nothing at all* to say about visual perception in this paper. However, my topic demands that I consider the nature of reality, the nature of meaning, ways of knowing, and the foundations of ethics—and I state openly that I am an expert in *none* of these subjects. While I have little formal training in philosophical analysis, I am a philosopher in the sense that every one of us is a philosopher in the sense that we all must get out of the bed every morning and *act* in numerous situations throughout each day. I believe that every action we take, and every decision we make, form a living philosophy in the sense that our actions imply certain beliefs about what is real and about our ultimate sources of meaning and value. This is the spirit in which I write, and this spirit is reflected in the title I chose for this paper, “Science and Faith: A Personal View”. I readily acknowledge that many readers have pondered these matters longer and more searchingly than I have. I am not writing to *instruct* anyone. Rather, I want only to share my own experience and reflections concerning the life of faith in a secular academic setting.

Many readers of this volume are probably Christians or perhaps theists of other stripes. Others are likely to be agnostic, perhaps tending toward atheism, simply because they have not been able to see a way to any form of faith that is both reasonable and nurturing in a deeply personal sense. A few readers may be strongly convinced atheists. My remarks are aimed predominantly toward that middle group—most of whom are authentic seekers—because this is the group that I seem to encounter most often in private conversations within the academic community.

I want to relate one such conversation because it captures the essence of many others I have had over the past couple of decades. When I was a junior faculty member at SUNY Stony Brook, my wife and I invited a young couple over for dinner at our house. Karen and Dan were both postdoctoral fellows in other neurobiology labs, but they loved children and did some baby-sitting for us on occasion. Karen and Dan were aware that Zondra and I were members of a local Presbyterian Church. Vaguely religious topics had cropped up in conversation among us on previous occasions, mostly concerning childhood religious backgrounds, as I recall. As fate would have it, religious matters came up during after-dinner conversation on this particular evening, and Karen finally blurted out, rather indelicately, “I don’t understand how a smart guy like you can believe in all that stuff!” Perhaps this unusually candid declaration was facilitated by the wine we had consumed during dinner, I don’t know. But I relate this story because Karen’s reaction is fairly common even though it is rarely expressed so straight forwardly. More often it is conveyed merely by a raised eyebrow or by a vaguely embarrassed or surprised facial expression when a friend discovers that I—a respected scientist (in some circles, at least)—am a Christian. What I would like to

do in this paper is to answer Karen's question as straightforwardly as I know how, because it is fair, it is authentic; and, it arises so often.

Karen's question can be answered on a number of levels. At one obvious level, I am a Christian today because I was born in the United States of America rather than in a Moslem or Hindu country. Yet many native born Americans are not Christians, so this cannot be the entire explanation. At another level, one might say that I am a Christian because I was raised in a deeply religious family. I am the son and grandson of Southern Baptist ministers, and thus am a conspicuous outlier in the community of academic scientists. Obviously, my family milieu played an important role in my spiritual development, but neither was this a completely determinative factor. The stereotype of the rebellious 'preacher's kid,' in fact, might lead one to expect the opposite outcome. People raised in deeply religious families go on to a wide variety of lifestyles and belief systems as adults.

Historical factors—biological, cultural, and familial— influence all of us profoundly, but any of us with two wits to nib together will (or should, at least) examine and question these influences critically at some point in our lives. To some extent then, I am a Christian today because I consciously *choose* to be. For me, the simplest answer to Karen's question is that I am a Christian because my life makes more sense to me with my faith than without it. Now I would be the first to admit that there are times when my life doesn't seem to make much sense from any point of view. But on the whole, I have not found any other system of belief—or disbelief—that accounts as well or as consistently for the world as I experience it, from deeply personal matters of ethics and hunger for meaning to my sense of awe at the physical universe.

Before getting to the heart of my remarks, I would like to clear away a bit of underbrush. When I speak with academic friends about religious faith, I often find that they have certain mental blocks that prevent them from taking the Christian faith seriously, and many of these obstacles appear to me unnecessary because they can be dealt with fairly straightforwardly. I want to mention four of them briefly, simply because I encounter them so frequently. I will not deal with any one in depth, but I hope merely to point toward ways of thinking that can perhaps defuse these issues a bit.

1) One obstacle is the perception that Christians, and evangelical Christians in particular, are intolerant. Claims for possession of ultimate truth are generally viewed with suspicion in academia, and attempts to make converts on this basis are viewed even more harshly. Let me state plainly that I believe in evangelism, but my model of evangelism differs importantly from other commonly encountered models. As anyone who knows me realizes, I am not out to beat anyone over the head concerning matters of faith. On the contrary, I am actually fairly private about my faith. To use a metaphor (not original with me), evangelism, properly understood, is simply "one bum telling another bum where he can find some food." For me, the achingly good news of God's love is most effectively offered out of a very deep sense of humility, within a relationship, and to a demonstrated need. From this perspective, faith is *communicated* in

dialogue, arising from a sense of common humanity, not from a sense of arrogance or triumphalism I have no problem with this sort of evangelism, either as a human being or as an academic. But, let me say something further about intolerance. To some extent intolerance is a virtue. If we are *tolerant* of everything, then we *stand* for nothing. For example, Stanford University—where I am employed—has values that it espouses, including academic freedom, dialogue by reasoned discourse, and mutual respect for the diverse members of the university community. Stanford is properly intolerant of gross violations of those values. If nothing else, the modern university is intolerant simply of intolerance! So it should not be surprising that Christians, or feminists, or scientists, or environmentalists, to name just a few, have certain bedrock values that they refuse to compromise. All such groups are entitled to a voice in our academic communities as long as they abide by the basic rules of reasoned discourse and respect for others.<sup>67</sup>

2) A second obstacle is the perception that in terms of moral conduct, people inside the Christian community are no better, and may be worse in some respects, than people outside the community. For a community whose basic *raison d'être* is to be the hands, the feet, and the voice of Christ in the world, this perception can be particularly damaging. I think about this issue on two levels. First, realize that Christians make no claim to be different at a fundamental human level than anyone else. We are all needy. We have all experienced the brokenness of this world in the pain that we inevitably inflict on others and the pain that is inflicted on us. Most of us have experienced despair at the way small people are damaged by the frenetic thrashings of our political and economic culture. Christians are simply a subset of ordinary people who have found a beacon of hope and light in a world that is all too often bleak. At a second level, however, the expectation of moral growth and leadership in the Christian community is entirely justified; most Christians I know would certainly affirm a desire to become more Christ-like as their journey of faith progresses, and that something is wrong if this is not happening at least in some feeble way. Contrarily, as C.S. Lewis<sup>68</sup> has pointed out, however, the key issue is not whether some large collection of Christians is morally superior to a similar collection of non-believers. The central problem is whether each individual believer is growing in moral stature *more* than if he or she were a non-believer, and whether each individual non-believer *could grow more surely* if he or she were a believer. I am certain that the positive moral influence of my faith is real for myself, for my wife, and for most of my close friends who are believers; one can only make that judgment for oneself by trying I think. In statistics, of course, the concept I am driving at is *partial correlation*. For those of you who speak statistical lingo, I am convinced that this effect is highly significant

---

<sup>67</sup> This point is argued at length in GM Marsden, *The Outrageous Idea of Christian Scholarship*. New York: Oxford University Press. 1997.

<sup>68</sup> C.S. Lewis, *Mere Christianity*. New York: Macmillan Publishing. 1952.

3) A third obstacle that I want to mention is the perception that the things that go on in churches are simply irrelevant to modern life, even if one is sympathetic in principle to some form of religious faith. Church gatherings are frequently perceived as little more than events for forming social and business contacts, and the forms of worship are sometimes perceived as outmoded relics of another age. While these criticisms have some truth to them, I can say emphatically that my primary experience of church is positive and directly relevant to the cutting edge of life. The best times are usually in small group gatherings or in retreat settings. At these times I see people struggling with grievous or impending loss, searching with each other for strength to continue the journey, in optimism and faith. I experience in these settings, and in corporate worship as well, clarion calls to remember who I really am, to constantly refresh my moral priorities, to be attentive to my highest intuitions, to be a servant as well as I can to my family and to those I work with each day. This is indeed food for the soul. Where do you go to get yours? I don't know how I could live without it.

4) A fourth obstacle is the perception that Christians are anti-science, and I must admit that there is some justification for this view. Every Christian should study the history of the Church's interaction with Copernicus and Galileo in the 16<sup>th</sup> and 17<sup>th</sup> centuries. As most of us know, Galileo provided the first compelling evidence that the celestial bodies in our solar system revolve around the sun rather than around the earth. While some of Galileo's difficulties arose more from palace intrigue than from theological considerations, he was nevertheless brought before the Church's Inquisition and forced to recant his beliefs, and remained essentially under house arrest for the rest of his life. It is the textbook example of how one of the greatest intellectual achievements in history was suppressed, the scientist himself persecuted, and the entire process rationalized religiously by narrow, very literal interpretations of specific passages of scripture. In our own age, a vocal segment of Christianity flirts dangerously with the same mistake by *engaging* in knee-jerk denunciations of biological evolution without open-minded consideration of the scientific evidence. Most Christians, however, value science deeply. One of the foremost achievements of liberal Protestantism in the United States was the establishment of our great research universities, including Stanford, and the nurture of the spirit of free inquiry that drives science today.<sup>69</sup> The founders of our great universities realized that Christians should have no fear of truth from any source. We believe that there is only one author of truth, and that is God. All truth is a gift from God. Unlike some segments of academia, however, Christians realize that the truth offered by science is limited and cannot speak to our deepest questions and hungers concerning value, purpose and meaning. We believe in science, yes, but we believe in much more than science. Which brings me to the issues at the core of this paper what are the proper roles of science and faith in my life or in anyone else's life? And, where does the power of one end and the power of the other begin?

---

<sup>69</sup> G.M Marsden, *The Soul of the American University*. New York: Oxford University Press. 1994.

It seems to me that we should make at least two major distinctions in thinking about the proper roles of science and religious faith. First, we should realize that science aims primarily to answer questions about *mechanism*, whereas religious faith seeks answers to questions about *purpose, meaning and value*.<sup>70</sup> Much confusion arises when we look to science for ultimate answers to our quest for meaning and value, and I will have more to say about this shortly. Similarly, painful confusion arises if we look to religion for answers about mechanism. We need only look at the example of Galileo to see this. I believe that there is no necessary conflict between the two; I view mechanism and purpose as complementing each other, not as exclusive of each other. A balanced view of the world will realize the importance of both mechanism and purpose in almost every realm of endeavor. Many readers of this paper are deeply interested in mechanistic issues. For example, we wonder how physiological events within the brain give rise to perception, memory, and learning. We are curious about the fundamental forces that bind all matter together. We ask what molecular events turn a normal cell into a cancerous one. We seek to understand how macroeconomic phenomena arise from countless microeconomic decisions made by individuals. But all of us care deeply about issues of purpose and value as well. For example, is there any *absolute* difference between Hitler and Ghandi, or were their differences simply a matter of taste, or perhaps a matter of different gene pools competing for survival? Should our country's relationship with any other country be governed more by economic and military considerations, or by issues of human rights and social justice? What *is* justice anyway? Do the countless ethical decisions that I make during a given year have any ultimate significance, or are they essentially hollow and transient?

I can illustrate this difference between mechanism and purpose with a simple, almost trivial, example. Someone who has never before seen a computer might rightly be amazed that the letter 'a' appears on the video monitor when the matching letter 'a\*' is pressed on the keyboard. If our observer is the curious type, she would want to know all about this spectacular phenomenon. Now I could offer her two types of explanation. A mechanistic explanation would talk about the key press closing a switch, which sends a particular voltage into the CPU over a particular input line, which exerts multiple effects on myriad transistors, flip-flops, etc. and eventually causes the monitor's electron beam to excite R, B & G phosphors at specific pixel locations to create a replica of the letter 'a.' A purposeful account, on the other hand, would simply

---

<sup>70</sup> realize that the distinction between mechanism and purpose is not a black-and-white cleavage. Upon scrutiny, neither mechanism nor purpose is likely to remain tidily contained in its separate box. The evolutionary idea of a "niche", for example, reaches outside the confines of "mechanism" into some aspects of "purpose". Nevertheless, the distinction that I am making is fundamental, and it captures substantial truth about the relationship between science and religion. For present purposes, it is most important to get the primary distinctions clear; extended analysis of exceptions is beyond the scope of this paper. The view of complementarity between science and religion along the lines of mechanism and purpose is, of course, not remotely original with me. I follow in the footsteps of a host of others, including recently, S.J. Gould, *Rocks of Ages: Science and Religion in the Fulness of Life*. New York: Ballantine Publishing Group, 1999.

note that the computer is a powerful machine that can perform remarkable services for the user, but only if the user has a way to communicate effectively with the computer. The keyboard/monitor system was designed to accomplish that communication. Now these are very different accounts, but both are obviously true. One concentrates on mechanism; the other on purpose. The levels of explanation do not compete with each other, they are complementary. The *key* question in any given situation is exactly what kind of truth are we looking for?

My point, of course, is that all of us have a stake in both kinds of questions—those of mechanism and those of purpose. We should not parse ourselves into scientific and religious communities who believe that truth lies substantially in one or the other camp. Rather, we should be clear about what kind of truth we are searching for when we ask a particular question, and then search for it in the proper place.

An important corollary to this distinction between mechanism and purpose or value is that science cannot provide adequate grounds for ethics. Science can tell us how to build nuclear weapons, but there is no experiment I can do in a laboratory that will tell us unequivocally whether it is ever right to use them. Science can tell us how to clone an organism from one of its cells, but cannot define for us when it is right to do so. Science can show us how to create pregnancies for infertile ; couples, and it can show us how to terminate pregnancies. But, it cannot tell us when we should or should not do either. Anyone who seeks to act ethically in the world or influence our political and economic culture in an ethical manner must obviously look beyond science for guidance.

The second major distinction we should make is that science is primarily concerned with public, repeatable events whereas religious faith is often most concerned with unique events. The phenomena that science likes best are those that occur reliably given a specific set of initial conditions, and can therefore be repeated again and again with various subtle but enlightening twists. Religious communities, on the other hand, are frequently concerned with *unique, life-changing* events that occur in the lives of individual believers, whose initial conditions can never again be replicated. Christianity, in particular, is concerned with unique events that happened 2000 years ago in the life of Jesus of Nazareth. I would argue once *again* that these realms of experience are not in competition, but that all of us have a stake in both. If we want to know precisely what *makes* a normal cell cancerous—and what we might *ultimately* do about it—then we have a stake in the public, repeatable world of scientific investigation. We want as many bright young people as possible manipulating cells in all conceivable ways to discern the complex chains of molecular events that lead to uncontrolled cell division. But, all of us have an overwhelming interest in unique events as well. Anyone who has been a parent, especially of teenagers, knows all too well the excruciating decisions that must be made on the basis of very limited data. And once the moment of decision is past, we can never return to it We can never start again at the same place, *make* a different decision, and see how it comes put In *scientific* parlance, we can never do the control experiment Although I used parenting as a specific example, anyone in

an intimate relationship will find her or himself in the same boat. Decisions must be made and actions taken on the basis of woefully incomplete knowledge: incomplete knowledge of our partner, of ourselves, and of the deepest sources of behavior of either party. We are all afloat on a sea of unique events, and we must all try to discern deep patterns and truths that lie beneath the ever-changing surface. All of us have a stake in any source of wisdom, religious or otherwise, that will help us discern those truths and steer a stable course.

From these remarks, it should be quickly perceived that I perceive no necessary conflict between science and faith. Science, rightly understood, has no quarrel with religious faith unless religious authorities attempt to establish by fiat “facts” concerning mechanism that are properly in the domain of scientific investigation. Similarly, religion, rightly understood, has no quarrel with science itself. However, religion does have a major quarrel with the many attempts in our century to establish—in our universities in particular—a specific materialistic “faith” under the guise of science. Various forms of this faith have dominated the intellectual ethos of our major research universities for half a century at least. The core tenets of this faith, or world-view, are several-fold:

1) The universe and all that is in it works entirely by blind, cause-and-effect mechanism.

2) Mechanistic explanations, based on reductionist analysis, are the surest and perhaps only road to truth.

3) Phenomena which cannot be studied and verified by scientific means are either not real, or not meaningful, or simply not worth worrying about (As Frederick Buechner has pointed out this seems a bit like a blind man who believes that anything that cannot be heard, touched, tasted or smelled is a figment of the imagination.<sup>71</sup>)

4) Attempts to fashion a personal life in this world must be based, in the eloquent words of Bertrand Russell, on the foundation of unyielding despair.

5) Advances in scientific understanding are the best hope for addressing the world’s many ills. (This one is going out of vogue faster than the rest)

As should be easily observed by now, I have many misgivings about this particular world-view, but I will try to restrict myself to a few key observations. First, we should acknowledge that this world-view is not science or a necessary result of science. It is indeed a specific faith and interpretation of reality, arrived at by a segment of people. There is no experiment that one can do in a laboratory, and no unequivocal chain of reasoning, that can demonstrate any of these tenets to be true. Adherents to this world-view cling to it, I suppose, because it accounts for their experience of the world better than any alternative they have found. Or perhaps many cling to it simply because it represents a modern intellectual consensus, just as many academics in previous centuries adhered uncritically to theistic points of view that formed the intellectual consensus then.

---

<sup>71</sup> F. Buechner, *Wishful Thinking*. New York: HarperCollins Publishers, 1973.

My problem is that this materialistic faith does NOT account well for my experience of the world. The most deeply meaningful issues of my existence cannot be addressed on mechanistic grounds or by reductionist analysis. To give one outstanding example, how does one design a reductionist approach to the question: “Is it better to live or to die?” This is likely to be a live issue for some readers of this journal, or for some among their loved ones. I would argue that it is one of the most important questions a person can ask Or how do we address a question that is surely a live one for many readers: “Should I marry this person? Do we have what it takes to form a life-long bond that can endure through severe difficulties?” Or how about the question asked by many bright but disaffected high school students: “Do I want to buy in to this society and its educational, political and economic values? Is there another way?” Such questions can certainly be reasoned about, but they cannot in the end be answered by scientific method. In contrast to the materialist ethos, I would argue that the importance of any question is in general inversely proportional to the certainty with which it can be answered.

Let us make no mistake about it: the central crisis of our culture is a crisis of meaning,<sup>72</sup> and the dominant intellectual ethos of our academic communities does a paltry job of addressing the crisis. The world hungers for meaning, and our intellectual communities offer the spiritual equivalent of a stone. We need only consult many of our best scientists for confirmation of this critique. The astronomer, Stephen Weinberg, closed his widely read book, *The First Three Minutes*, with the observation that “The more the universe seems comprehensible, the more it also seems pointless.”<sup>73</sup> In his highly acclaimed book, *The Selfish Gene*, the Oxford biologist Richard Dawkins concludes that all of the living, striving, loving and valuing of arty human being serves only to abet one set of DNA molecules in its competition with other sets of DNA molecules.<sup>74</sup> That’s the whole ball of wax! This is the faith that is frequently presented under the guise of science; it is a faith that does not sustain, uplift or ennoble; it is a faith that I resist, both within the academy and without<sup>75</sup>

So what does Christianity offer as an alternative? A retreat to a discredited if more cozy past? An opiate to ameliorate our pain? An altar upon which to abandon our minds in favor of dogma? A lifetime of boring church services and stifling piety? I don’t think so. These certainly are traps that can be fallen into, but they can be avoided with reasonable judgment

---

<sup>72</sup> See, for example, V. Frankel, *Man’s Search for Meaning: An Introduction to Logotherapy*. New York: Simon and Schuster, 1984.

<sup>73</sup> S. Weinberg, *The First Three Minutes*. New York, Basic Books Inc., 1977.

<sup>74</sup> R. Dawkins, *The Selfish Gene*. Oxford: Oxford University Press, 1976.

<sup>75</sup> I argue vehemently here against a particular materialistic philosophy, substantially devoid of meaning, that is peddled on our campuses and in popular culture as a “scientific” world view. In so arguing, I do not mean to neglect or denigrate the many reflective academics who are sensitive to the transcendent dimension of life but are seeking patterns of meaning outside the usual religious traditions. A recent example is Ursula Goodenough’s book, *The Sacred Depths of Nature* (New York: Oxford University Press, 1998). Ursula, in fact, has gently chided me for the “caricature” of a scientific world view

At its best Christianity offers a balanced, holistic view of the universe in general, and each of our individual existences in particular. It offers a sense of awe at the majesty and intricacy of God's creation in the physical universe. It provides a deep appreciation of scientific inquiry. (In one of Einstein's most memorable phrases, the process of scientific discovery is learning to think God's thoughts after him.) Christianity points the way toward an ecologically sound ethic: this is not our world, it is God's—we are only stewards. Christianity provides perhaps the best, most saving personal news that we can ever hear, that we are known and loved deeply and fully, that our highest values and intuitions are not a farce, but rather point more or less faithfully toward the essential core of reality. It frankly acknowledges the brokenness of our self-centered psyches, but offers us forgiveness and healing. It does not shrink from the pain of our existence, but points toward a man on a cross and says that no horror, however dark, cannot yield some good. It offers as much challenge for the future as any human being can embrace—to become as fully Christ-like in the time we are allotted on earth as God gives us the grace to be. It is a coherent view of existence that tolls the depths of our being, that calls out from us the very best that we have to offer. It reveals to us a world that is permeated with holiness at every turn, if only we have eyes to see it

Charles Birch, an Australian biologist, has captured much of this vision in a memorable reflection on the book of Job.<sup>76</sup> Job, as most readers will recall, was a righteous man who lost all that he had—wealth, family, health—but sought to remain faithful to God. In the end, broken and embittered, he lashed out at God with great anger and frustration. In a dramatic passage, the Almighty finally responds to Job's ranting, confronting him with his own finitude:

Who is this obscuring my designs with his empty headed words? Brace yourself like a fighter; now it is my turn to ask questions and you to inform me. Where were you when I laid the foundations of the earth? Tell me, since you are so well-informed! Who decided the dimensions of it, do you know? Have you Journeyed all the way to the sources of the sea, or walked where the Abyss is deepest? Have you been shown the gates of Death or met the janitors of Shadowland? Have you an inkling of the extent of the earth? Tell me all about it if you have! Who carves a channel for the downpour, and hacks a way for the rolling thunder, so that rain may fall on lands

---

presented in this paragraph. In response, I can only say that this "caricature" is very much alive and well in the corner of academia that I inhabit I recently spoke with a faculty colleague at Stanford who declared his (hyperbolic) desire to "bomb" Memorial Church (a campus landmark established by the Stanford family) because it is a "monument to irrationality." More importantly, I frequently speak with Stanford students who are grappling with this materialistic world view as the received wisdom of our academic culture, they are usually amazed and gratified to find a Stanford faculty member who will argue strongly what they already suspect—that this particular emperor is short on clothing.

<sup>76</sup> Quoted from L. Charles Birch, "Nature, Humanity and God in Ecological Perspective". Address delivered at the Conference on Faith, Science and the Future, sponsored by the World Council of Churches. Boston, MA, July, 1979.

where no one lives, and the deserts void of human dwelling giving drink to lonely wastes, and making grass spring where everything was dry? Who gave thee; this wisdom and endowed the cock with foreknowledge? Does the hawk take flight on your advice when he spreads his wings to travel south? Does the eagle soar at your command to make the eyrie in the heights?

Job 38 & 39, Jerusalem Bible

In reflecting on this passage, Birch says:

Some of these questions are still questions to us, though not all. For we have more than an inkling of the extent of the earth, even of the universe. Someone has calculated the number of electrons in the universe and has come up with the round figure of  $10^{80}$ ! We have journeyed all the way to the sources of the sea and beyond to the moon. We have walked where the abyss of the sea is deepest and now we plan to dig it up. We know something, of how the cock got its wisdom and the cock foreknowledge. We think we know something about the beginnings of the universe and the beginnings of life. But our dominant scientific-technological world view provides no framework within which we can find comprehensible answers to questions of point and purpose.

Birch then tries to imagine what God would say to the modern questioner:

Who is this obscuring my designs with his mechanistic models of the universe so that there is room neither for purpose, mind nor consciousness?

Brace yourself like a fighter, for now it is my turn to ask questions and yours to inform me.

Where were you at the big bang?

How is it that out of a universe of pure hydrogen you have come into existence?

Did life begin when the first cell came into existence or do elements of life exist in the foundations of the universe?

How can you be so sure that all is contrivance? How can mind grow from no-mind? How can life grow from the non-living?

Do people grow from blind mechanism? Is not a universe which grows human beings as much a human [ or humanizing universe as a tree which grows apples is an apple tree?

Or do you think that figs grow on thistles and grapes on thorns?

Does not the life of Jesus tell you something about the life of the universe? Was he not there in some sense from the foundations of it all?

You who live in rich countries, can you not see how every increase in your standard of living reduces that of someone in a poor country now, as well as threatening the survival of future generations?

Who is madly Christian enough among you to cut his standard of living by a third for the sake of the poor?

Do you think the world and all that is in it is simply for your use? Has it no other value?

Because there are accidents and chance in the world, why do you think there is therefore no room for purpose? Can you not have both?

And when you have analyzed life down to its molecular building blocks in DNA, why do you think you have discovered the secret of life when you have not yet discovered the source of love and all feeling?

And why do you want to make of me either an all-powerful engineer or an impotent non-entity when I am neither?

To all of which we can only reply as Job replied:

*I have been holding forth on matters I cannot understand, on matters beyond me and my knowledge. I knew you then only by hearsay; but now, having seen you with my own eyes, I retract all that I have said, and in dust and ashes I repent.*

Job 42 (Jerusalem Bible)

I hope that by now everyone is beginning to see the shape of my answer to Karen's question—"How can a smart guy like you believe in all that stuff?" I write in one sense as a successful, middle-aged neuroscientist. But in a more profound sense, I figure out, in a semi-bewildered way, what sort of mess I have landed in. I am convinced—most of the time—that it is a holy mess. I struggle for coherence and consistency, and this holy view of existence is the one that accounts best for life as I experience it, both with my mind and with my heart.

One of the saints in my personal pantheon is the Christian writer and minister, Frederick Buechner. Buechner gets to the essence of this holy world-view in a memorable reflection on the creation story in the first chapter of Genesis:<sup>77</sup>

"Who knows what I have in me of the [woman and the man] who in their heyday begot me? Who knows what all of us have in us not just of our parents but of their parents before them and so on back beyond any names we know or any faces we would recognize... Who knows what we carry in us, either, from those unspeaking, unthinking creatures that slithered and crept their way through the millennia until they turned

---

<sup>77</sup> F. Buechner, *Telling Secrets*. New York: HarperCollins Publishers, 1991.

into foe likes of you and me and who have never stopped speaking and thinking since? And you ‘can cany it back farther even than that to whatever unimaginable event took place, in one instant of time to bring time itself into being, and space itself and that basic matter of which you and I and foe star of Aldebaran and foe tooth of the great white shark and foe petal of foe rose are all composed. As individuals, as a species, as a world, our origins are lost in mystery.

“The passage from Genesis points to a mystery greater still. It says that we come from farther away than space and longer ago than time. It says that evolution and genetics and environment explain a lot about us but they don’t explain all about us or even foe most important thing about us. It says that though we live in foe world, we can never be entirely at home in foe world. It says in short not only that we were created by God but also that we were created in God’s image and likeness. We have something of God within us foe way we have something of foe stars.

“...I believe that what Genesis suggests is that this original self, with foe print of God’s thumb still upon it, is the most essential part of who we are and is buried deep in all of us as a source of wisdom and strength and healing which we can draw upon, or with our terrible freedom, not draw upon as we choose. I think among other things that all real art comes from that deepest self.. I think that our truest prayers come from there too, the often unspoken, unbidden prayers that can rise out of the lives of unbelievers as well as believers whether they recognize them as prayers or not And I think that from there also come our best dreams and our times of gladdest playing and taking it easy and all those moments when we find ourselves being better or stronger or braver or wiser than we are.”

I share Buechner’s belief here, and I say this acknowledging fully foe peculiar nature of religious belief For me at least this is always composed of roughly equal parts of cognitive assent intuition and unspeakable yearning, leavened with a dash or three of doubt We are all probing at the edges of a very great mystery, or perhaps the best way to say it is that we *are being probedby* the greatest of mysteries. To paraphrase the Apostle Paul, now we see through foe glass darkly, but we hope for a day when we see face to face.

I would like to conclude by saying to those who are trying to walk in Christian faith, I think you are on foe right track, that the path you are following is the path that leads *home* in foe truest sense of foe word. For those who are interested skeptics—and believe me, that is all of us most of the time—I would encourage you simply to try this path and see where it leads. It can be a tough road to go alone, and finding (or forming!) a small group of like-minded travelers to share foe journey is a tremendous gift For those who disagree with everything I have said and are searching for answers to ultimate questions elsewhere, I can only say in foe parlance of my teenage sons: “Hey, that’s cool, dude!” I certainly admit that in the end, you may be right and I may be wrong. I would urge you, however, to attend closely to your “best dreams, times of gladdest playing, and those moments when you find yourself being better, stronger, braver or wiser than you are.” The voice that rises up within us in those moments, I

*think*, is an eternal voice that beckons us to our truest being, our most joyous selves, our ultimate destiny. And I would also ask, if you reach a point in life where the way is dark and the spiritual hunger overwhelming, remember that there is a place where you can find some food. The path of Christ *is* a living option.

Acknowledgments. This paper originated in a talk I delivered to the Veritas Forum at Stanford University on November 6, 1997. I thank Daniel Clendenin for helpful comments on the manuscript, and I thank the members of the Faculty Christian Fellowship at Stanford University for the resources of Christian “*community*” they provided during preparation of the original talk and the written version as well. Please address all correspondence to William T. Newsome, Department of Neurobiology, Stanford University School of Medicine, Fairchild Buildings Room D209, Stanford, CA 94305. Email: bill@monkevbiz.stanford.edu.

**Bill Newsome** received a Bachelor of Science degree in physics from Stetson University in DeLand, Florida, and a PhD. in biological sciences from the California Institute of Technology. He is currently Professor of Neurobiology at the Stanford University School of Medicine, and is an Investigator of the Howard Hughes Medical Institute. Dr. Newsome is an international leader in the fields of sensory and cognitive neuroscience. He has made fundamental contributions to our understanding of how the primate brain mediates visual perception, and is currently attempting to unravel the neural mechanisms underlying simple decision processes within the cerebral cortex. The high quality of his research has been recognized by several awards and prestigious lectureships, including the Rank Prize for Optoelectronics in 1992 and the Spencer Award for Highly Original Contributions to Neurobiology in 1994, and the King Solomon Lectures in Animal Behavior at Hebrew University of Jerusalem in 1996.

## Experiences of God’s Guidance

By Richard H. Bube

In a number of wonderful ways my life’s journey, by the grace of God, has involved personal commitment to Jesus Christ, as well as to authentic scientific descriptions. It is not surprising that exploring the interaction between science and Christian faith has been a major activity of my life.

My first book was published in 1955, *To Every Man An Answer: A Textbook of Christian Doctrine*.<sup>78</sup> It was written to explore the Biblical revelation following the birth of our first child. My first paper on science and Christianity was published the following year, “The Relevance of the Quantum Principle of Complementarity to Apparent Basic Paradoxes in Christian Theology.”<sup>79</sup> I started work on my second book in

---

<sup>78</sup> *To Every Man an Answer: a Textbook of Christian Doctrine*. Moody Press, Chicago (1955).

<sup>79</sup> “The Relevance of the Quantum Principle of Complementarity to Apparent Basic Paradoxes in Christian Theology,” *Journal ASA* 8, No. 4, 4(1956).

1955, *Photoconductivity of Solids*,<sup>80</sup> the first of seven scientific books related to photo-electronic and photovoltaic properties of semiconductors. In the following forty years I gave talks on science at many scientific meetings and conferences around the world, and I also spoke on science and Christian faith at over sixty colleges and universities. I almost continuously participated in Adult Education programs in at least seven local churches. A particular focus of my efforts has been to clarify what a whole vocabulary of words involving science and *Christianity* really mean, as opposed to the ways they are often popularly used to argue for various special agendas. The central theme of these reflections is the many ways in which critical riecí sinns and opportunities in my life can be traced with *thanksgiving* to the providential guidance of God.

## *Early Years*

I grew up in Providence, Rhode Island, with parents who were loving and supportive, but were not believing *Christians* in my first year at Classical High School I became good friends with another student in my class. One day he told me that his church, the Lutheran Church — Missouri Synod, was building a new church building not far from my home, and he invited me to attend the dedication service. I always remembered that the first hymn in the service was *Holy, Holy, Holy*. The church, the people, and the service spoke to me, and I started to attend Sunday School shortly thereafter. I do not know how long it was—but probably not very long—before my kindly Sunday School teacher clearly presented the Christian Gospel of God’s grace in Jesus Christ to us teenagers in the class as part of the regular lesson. My heart said “Yes” to God almost immediately, I was a member of the 1941 Confirmation Class, and I began my walk with Christ as one for whom He had died and risen again.

### *Brown University*

After Classical High School, where I started my writing and editing experience by editing the school newspaper for two years, I went on to Brown University during the nontypical war years. My fundamental concern in choosing a career program at Brown was to find some kind of activity for which I had some talent, and which promised to provide gainful employment. I was, after all, a child of the Great Depression, and the ability to find a job that would enable one to support a family, live a reasonably constructive life, and be a helping member of society dominated the list of job requirements. I think I subconsciously assumed that any honorable job could (and should!) be done to the glory of God.

These were very nontypical days for life on a university campus. There was only a handful of civilians on campus. My own list of courses was almost totally limited to those related to science: physics, chemistry, mathematics, and a single course in astronomy. The few non-science courses consisted of required Freshman English, two

---

<sup>80</sup> *Photoconductivity of Solids*, Wiley, N.Y. (1960); Russian translation (1962); reprinted by Krieger, Huntington, N.Y. (1978).

semesters of French (I knew that ultimately, to fulfill the requirement for a PED., I would need to be able to read in two languages other than English, and I already had some education in German.), and my major excursion away from the standard science curriculum: two courses in Political Science.

The two Political Science classes were a radical departure from my technical curriculum and reflected a growing interest I had in some of the ideas involved. The two courses I took were “From Luther to Hitler”, and “The United Nations”. I took the latter around the birth of the United Nations, when there were high hopes for major changes because of its existence. I even wrote a major paper entitled, *Religion and Internationalism*, which had a section titled, “Religion and Science”; I was overjoyed when this paper was awarded the Samuel Lamport Prize. It is interesting to note that I was later strongly criticized by a physics faculty member for having done an inappropriate thing for a physics major to seriously spend time thinking about political science! “You’ll never succeed in physics that way!” I was warned. You can imagine the response that my Christian faith stimulated.

There are a few other papers, written while I was at Brown, related to the interaction between science and Christian faith. One of these is not specifically dated and is titled simply, *Science and the Christian*. Its major concern is the development of a positive treatment of the meaning of science for a Christian, and it sets forth the capabilities and the limitations of science in a way that foreshadows my more complete treatment of these issues in later years.

### *Other Examples of Divine Guidance*

Several times in my life I made crucial, life-shaping decisions that in many ways were not really mine at all. Some of these can be seen in the early years described above. In the following I have called these ‘special occasions of divine guidance’ and have singled them out for particular attention.

#### *Princeton University*

My eight consecutive semesters at Brown during the war came to an end in February 1946. Considerably before this, however, came the consideration of how to continue my education after receiving my Bachelor of Science degree in Physics from Brown. Again, I had very little experience to draw on, but for a variety of reasons I decided that good choices would be Cornell, Yale and Princeton. I felt it important to get my graduate education in a different environment from my undergraduate education. I applied to each, with the obvious proviso that I couldn’t come without financial aid in some form, and waited to hear what would happen.

Cornell admitted me, but regretted that they had no financial aid available in the middle of the academic year. Yale responded in the same way. Finally Princeton admitted me, with the happy news that they did have a Teaching Assistantship for me if I chose to accept I had no trouble in making a decision between them.

I have always regarded this particular set of circumstances as a focal point for God's providential activity in my life, and as an example of how God often does choose to act in a person's life. I did not make the independent decision to attend Princeton rather than Cornell or Yale; God made the choice through the circumstances in which the events happened. Left to myself, and with my limited knowledge, Princeton might well have been my last choice among these three Universities. But the opening of the door to Princeton—and particularly the delay of the offer of financial aid from Cornell until too late—set the entire framework for the rest of my life. The wonderful relationship with the woman who became my wife, my growth as a Christian, and my fulfilling scientific career all grew out of the Princeton experience in unique ways.

While I was a graduate student in physics, I was on the founding committee for a new Lutheran Church in Princeton; however, I was too young to serve on the first governing board of the church. I received notice that I had been hired to work on the cyclotron project at Palmer Physics Laboratory during my first summer at Princeton. The cyclotron in question was a 12-ft diameter model, which was quickly replaced over the next few years in the field by machines orders of magnitude larger and more complicated. I came away from the experience with the reinforced conviction that I did not want to do 'big machine' physics.

In 1947 I did some of my most careful reflection on what kind of a future career I felt called to pursue. Should I continue my path toward a career in science, or should I consider instead a calling to some specific theological ministry? It was obviously a critical point in my life; a number of crucial events occurred in the next couple of years. First, I became convinced by the end of my PhD. degree work that I had better gifts for scientific research than I did for pastoral ministry. Second, there was born within me the conviction that God was calling me to serve Him through my science, especially through my witness as a respected Christian scientist, a member of both the scientific and Christian communities. Third, a whole new field of physics, solid-state physics—or as it has become known in recent years, condensed matter physics—was just opening up. This was exactly the kind of challenging, 'small machine' science that appealed to me at that time.

While I was a grad student in physics at Princeton, I attended a talk given by a distinguished and respected Old Testament scholar, who had written a book stressing the literal interpretation of Genesis One. At the end of his talk in the question period, one of the students asked him, "How can one reconcile the scientific theory of evolution with a literal Genesis account of creation?" He replied, "Until evolution is proven to be true, I do not really need to consider its possible interactions with the Genesis account" This answer struck me as being so inappropriate that it triggered my lifelong concern for dealing with the interactions between science and Christian theology in a way that preserves the integrity of each.

## *The love of my life.*

While I was a 20-year old grad student at Princeton, I met Betty, a wonderful Christian woman with whom I quickly fell deeply in love. We had a brief period of turmoil when we tried to come to grips with the fact that she was 10 years older than I which neither of us had earlier suspected. After a brief straggle with some of the socially defined issues in such a relationship, we both came to the conclusion that God had called us together. We shared life together for the next 48 years passionately in love, with our four children, until God called her home to him in 1997. Certainly no single experience in my life could express so powerfully the loving guidance of God in my life.

### *Choice of scientific field of research.*

My first two summers at Princeton I worked on projects at the university, but there did not seem to be a suitable opportunity for the third summer. Since Betty was working at the nearby RCA Laboratories, I applied to them to see if a summer appointment might be available. Providentially there was.

When I began this work, my supervisor said to me, "Which would you rather do: grow crystals or measure luminescence?" Because of my background in physics, I said, "measure luminescence," and this simple choice set in motion the main focus of much of my scientific research in following years. ;

### *Opportunity for Ph.D. research*

Betty and I wanted to get married in the Fall of 1948, and I had heard that it might be possible to do my Ph.D. research while employed at the RCA Laboratories. So I was led to the situation where I was able to do my complete Ph.D. thesis research to fulfill my requirements at Princeton University, while being employed full time for the next two years at the RCA Laboratories, supported by a Navy Contract

My first summer's research at RCA resulted in my first scientific publication, "A Correlation between Cathodoluminescence Efficiency and Decay as a Function of Temperature".<sup>81</sup> My interactions with my group director provided me with valuable instruction in a variety of activities essential to a successful scientific career in addition to the actual experimental and theoretical scientific work itself. Every member of our little research group was required to speak at each weekly meeting, even if it was to confess that no progress had been made in the previous period. Week after week of this activity through the years provided essential training in public speaking.

We also had a monthly written Progress Report to which each member of the staff was required to contribute. In addition to the experience gained by several years of this activity, in subsequent years I was assigned the job of putting together and integrating all of the individual progress reports into one total Progress Report for the whole group. This gave me valuable experience in scientific writing that was very important to me in the future, as well as helping me to develop my general editorial and writing skills.

---

<sup>81</sup> "A Correlation between Cathodoluminescence Efficiency and Decay as a Function of Temperature," *J. Optical Soc. Am.* 329,681 (1949).

An extension of my thesis work, *summarizing* the principle thrust of my research in luminescence, was published in 1953 as “Electronic Transitions in the Luminescence of Zinc Sulfide Phosphors”.<sup>82</sup> This work began to involve explicitly the phenomenon of photoconductivity—a change in the electrical conductivity of a material upon absorption of light—which was soon to become the principal focus of my research in the future. Again I was providentially at an exciting place at the right time. The September 1951 issue of the *RCA Review* was devoted to the subject of “Photoconductivity in Insulators,” and included a *fundamental* paper, “An Outline of Some Photoconductive Processes”.<sup>83</sup> Throughout my years at RCA, the author of this paper served as a continuing example and mentor for me in my research. In this paper he had laid the foundation for a thorough investigation of photoconductivity phenomena; almost the only thing that was needed was someone to carry out the experiments, test the models, and contribute to the theoretical descriptions. What a wonderful spot to be in!

While my own research in photoconductivity was developing, I started to write *Photoconductivity of Solids* in 1955.<sup>(1)</sup> This bode proved to be one of my best-received contributions. It sought to describe—all of the developments in photoconductivity and its applications since it was first discovered in 1873. It included 1009 references, was published by John Wiley & Sons in 1960, and stayed in print for 26 years. It is interesting that an invited article on “Photoconductivity” by me was published in 1999 in the *Wiley Encyclopedia of Electrical and Electronics Engineering*.<sup>84</sup>

I also started the practice of including a Bible passage on the dedication page of each technical book that I wrote. In *Photoconductivity of Solids*, the reference was to Romans 1:20: “Ever since the creation of the world His invisible nature, namely, His eternal power and deity, has been clearly perceived in the things that have been made.” The book had the good fortune to become a worldwide classic in its field, and for years afterward I met researchers from many countries who instantly knew me because they had read the work when they were students. It was even republished in a Russian language edition. I probably partially owe my appointment to the Stanford faculty to the general reputation associated with this book.

In the early 1950’s I joined an organization named the American Scientific Affiliation, an association of men and women with commitments to both Christianity and science. The ASA had been formed in 1941 by a small group to be of service to college and university students as they encountered questions relating science and their Christian faith. For the years of my association with the group, I have repeatedly testified that it is one of the few such groups in the world (like the Research Scientists Christian Fellowship in England—today known as Christians in Science, and the Cana-

(1) Repeat of footnote 3.

dian Scientific and Christian Affiliation) that seeks to maintain both the integrity of authentic science and the integrity of authentic Christian theology. It has certainly played an important role in the development of my own thinking. As part of its work the ASA publishes a quarterly journal, originally known simply as the *Journal of the American Scientific Affiliation* for which I served as Editor from 1969 to 1984 (now known as *Perspectives on Science and Christian Faith*), holds an annual meeting, and is supported by local groups around the country that also hold occasional meetings.

#### *Moving to Stanford*

For several years I had been taking a look at other opportunities to use my research skills in other organizations. Things were changing. When I first came to RCA, it was almost unthinkable that anyone on the staff would actually leave. The '50's were a Golden Age for research at RCA, as well as a number of other industrial research laboratories. The principal emphasis was on the quality of the research and the possibility of its results leading to new patents, which could be licensed to anyone in the entire electronics industry. Now with each passing year, the emphasis shifted more and more to guiding research efforts at the Laboratories by the immediate manufacturing needs of other parts of the company, or obtaining Government Contracts to support desired research

And so it was at such a time that I had attended my first scientific meeting ever in California, the Spring American Physical Society meeting at the Naval Postgraduate School in Monterey, after my first cross-country flight I had attended these Spring APS meetings around the country every year because of their concentration of interest in solid-state physics. It was March, things were cold and dead in New Jersey, and things were warm, blossoming, and beautiful in Monterey. I have said often my feelings were like those of Moses viewing the Promised Land. I was impressed and began to reflect that perhaps there might be an opportunity for employment in California.

In another of those marvelous providential events in our lives, I realized that a former member of the RCA staff whom I knew was currently Director of Research of an electronics company in Palo Alto, California. My friend went out of his way for us, set up interviews at several local companies, and even made contacts for us with the School of Engineering at Stanford University, who were looking for someone with my qualifications. The Department of Materials Science at Stanford appeared to be very interested in someone who could bring inputs on electronic materials into their program. We visited the campus, had dinner with a group of the faculty, and I gave a basic talk on photoconductivity.

On the next-to-last morning in California, Betty and I were discussing events at breakfast at our motel I had about decided not to accept an offer from Stanford, since it was such a major move away from my 14-year research program at RCA and all the way across the country, disrupting our lives and the lives of our four children. That morning I was scheduled to have a meeting with the Stanford Provost. In the course of our conversation, he said to me, "Dr. Bube, we really want you to come." It was all I needed! What a difference to the rest of my life it would have made if I had not had that last-day

appointment I returned to tell Betty that I thought that we should come to Stanford. At any rate I received an offer to be appointed Associate Professor of Materials Science and Electrical Engineering at Stanford, starting in Summer Quarter 1962, and accepted. A new research program in Materials Science was just being started, supported by a major grant from the Advanced Research Projects Agency (ARPA).

And so, we brought to an end 14 years of married life in Princeton, and began to make plans to move across the country and start a new life. Immediately upon arriving at Stanford, I became involved as one of two faculty sponsors for the undergraduate InterVarsity Christian Fellowship group, an association that has continued since then. In the last few years the ministry at Stanford has broadened to include an active *Graduate* Student Christian ministry, and a Christian Faculty *ministry*.

I was editor and author of *The Encounter Between Christianity and Science* (1968),<sup>85</sup> which was the first of my five books on science and Christianity; it included a set of personal memoirs, *One Whole Life*.<sup>86</sup> My most recent book was *Putting It All Together: Seven Patterns for Relating Science and Christian Faith*,<sup>87</sup> which summarized a theme I had been developing for a number of years, dating back to before the 1985 joint ASA-RSCF conference at Oxford.

At Stanford I started another tradition in 1968: an Undergraduate Seminar in “Science and Religion”, which I taught for academic credit relatively continuously one quarter each year for 25 years. I prepared a reading list and a syllabus for this seminar, which focused in the first half of the 10-week series on the history of the interaction between science and Christianity and the importance of different worldviews, the definition of science and its potential and limitations, the interaction between science and theology, determinism and chance, and the significance of being human. In the last half it considered test areas of practical, interaction such as creation and evolution, abortion, euthanasia, genetic engineering, and the environment. Since the seminar was an elective, it was taken primarily by students who already had a Christian commitment. Indeed, one of its contributions was to help students who had been taught that as Christians they could have nothing to do with science, to not forsake their faith when they realized that there were inputs from science that they could not in good conscience ignore.

In 1971 my book *The Human Quest: A New Look at Science and Christian Faith*<sup>88</sup> was published with a Foreword by a Fuller Theological Seminary Professor. Written within the context of the issues raised by my Undergraduate Seminar, and with topics for discussion at the end of each of the ten chapters, it represented my most complete attempt to date to deal with a broad range of questions. In spite of the fact that the time it remained in print was rather brief, it received a good reception by those

interested in these issues, and references to it continue even after more than twenty years have passed.

### *Beginning research in photovoltaics.*

My research during my first decade at Stanford was concerned primarily with a variety of issues related to photoconductivity and photoelectronic properties of semiconductors. My first PhD. student completed his work in 1965, and over the next 30 years I mentored a total of 56 PhD.'s at Stanford.

A significant new ingredient entered our research pattern with the beginning of our 25-year research program dedicated to the photovoltaic conversion of sunlight into electricity (solar cells). Our entrance into the field came about in a very providential way. One day I received a phone call from an Electrical Engineering Professor (one of the inventors of the first silicon solar cell when he was at the Bell Laboratories), who said, "I have in my office a man from NASA, who would like to get some work started at Stanford on cuprous sulfide/cadmium sulfide (Cu<sub>2</sub>S/CdS) thin-film solar cells. I haven't worked with cadmium sulfide, but you have. Would you be interested in getting involved?" The opportunity afforded by this offer from NASA, particularly with the broad non-military applications for solar cells as one considered the environmental and energy needs of the future, was particularly appealing to me. It was close to my areas of previous interest and experience, and it seemed to afford a special opportunity to live out a Christian sense of stewardship for God's world.

Many years later when I wrote *Photoelectronic Properties of Semiconductors*,<sup>89</sup> I included a special section that I called, "Cu<sub>2</sub>S/CdS: Theater for Photoelectronic Effects." A colleague, Alan Fahrenbruch, who had done his PhD. work with me, and I wrote a book on *Fundamentals of Solar Cells* (1983),<sup>90</sup> and more recently I wrote a book on *Photovoltaic Materials* (1998).<sup>91</sup>

#### *Opportunities to see the world*

One of the great blessings given to my wife and me was the opportunity to establish contacts around the world. In one way the world came to us, as more than 40 international scholars came to Stanford to spend time with my research group over the past 35 years. And in another way I was encouraged to travel to many places in the world, making many friends along the way—some under quite providential circumstances. This started with my teaching a NATO Summer School in Ghent, Belgium two weeks after we moved to California, and included later participation in scientific conferences in Berlin, Hamburg, and Montreux, with sidetrips to other research centers. We were also able to participate in two conferences on science and Christian faith in 1965 and

1985 at Oxford, between the ASA and the Research Scientists Christian Fellowship of Great Britain.

Certainly one of the most wonderful experiences for us personally was making eight trips in eleven years to Switzerland, with sidetrips into Germany. My elderly parents had moved to California in 1967 and care for them made long absences impossible in the last 15 years of their life. In 1984 our first opportunity for a traditional Sabbatical came up. I had had a Visiting Scholar from Neuchatel, Switzerland, working with me on photovoltaics during 1982, and so I was providentially led to spend our first Sabbatical at the University of Neuchatel, while also giving a class on photovoltaics at the Ecole Polytechnic Federate Lausanne. We made friends with a number of families in Neuchatel, and were active both in the Egjise Evangelique Libre of Neuchatel, and the state Eglise Reformee in nearby Cortaillod. I was even enabled to give a sermon in French with the help of one of the good friends whom we had met in Neuchatel earlier. The sum of those eight trips enabled us to live a little over a year in Switzerland and we were thankful for every minute.

## Summary

As I look back over my life, I am filled with gratitude to God for His providential leading and guidance on so *many* occasions.

The central emphasis of my perspective is that authentic science and authentic Christian theology—both of which must be carefully defined—give us valid insights into what reality is like. Each gives us descriptions from a different perspective, and yet they tell us about aspects of the same reality. They should be regarded as complementary and then be appropriately integrated, while preserving the authenticity of each approach.

**Richard H. Bube** is Emeritus Professor of Materials Science and Electrical Engineering at Stanford University, Stanford, CA 94305, where he served as Chair of the Department of Materials Science and Engineering from 1975 to 1986. He has been engaged in scientific research on the photoelectronic and photovoltaic properties of *materials* for 45 years, and has written seven books on these subjects. He has also been involved with the interaction between science and Christian faith, has written four books on this subject, and served as Editor of the *Journal of the American Scientific Affiliation* from 1968 to 1983. He has been blessed with 48 wonderful years of love with his wife Betty, who went to be with the Lord in 1997, and their four children.

## Now a Convinced Theist

by Robert G. Olsen

I was in bom in Brooklyn, New York, and grew up in New Jersey. My family was Christian, and almost all of my social life was within this group. I was expected to go

to Sunday School, Morning Church, Youth Group, and Evening Church every Sunday as well as all other organized youth activities. Although I attended public schools and participated in sports, questionable activities such as dancing were discouraged. As a result, I was on the periphery of the high school social scene and did not experience much of the world.

As far as I can remember, I believed in God since I was a small child. But as I grew older I had serious difficulties with fundamentalist culture. Looking back on it, I find things for which I am grateful (such as a family-including uncles, aunts, etc.-clearly committed to the “best” for me, the importance of the fact that you believe something to be true, and the importance of an individual decision to believe in God). Other things I still have a great deal of difficulty with (such as family devotions, the tendency to believe in salvation by perfectly correct theology, and an unnecessarily judgmental spirit).

Most people in my subculture were expected to go to Christian Colleges. Since I found open rebellion unpalatable, my quiet rebellion was that I did not consider it and broke the mold. To my parents’ credit, they did not choose to enforce the unwritten rule. With simultaneous fear and relief, I enrolled at Rutgers University. My interests were to prepare for a good job and to find out what the world was like since I had been separated from it in my high school years.

I found out quickly that without God, the world (from which I had been isolated to a great degree) was not bright I remember my neighbor, he always wanted sex with his girlfriend, but when asked if he would marry her said no— because she had no principles. Somehow he failed to see the inconsistency that was so obvious to me. I also remember seeing people plastered after weekend drinking binges and wondering if they had anything to live for.

I came to realize that something about life without God didn’t add up, but couldn’t fully articulate it until later. I quickly found and became associated with InterVarsity Christian Fellowship (TVCF); that group became a source of great stability for me. For the first time, I became publicly committed to the faith. In my undergraduate years I learned about my responsibilities as a Christian, but I did not grow much in the faith intellectually.

The first inkling of the way I was to develop intellectually came in response to a challenge to read through the Bible. Most of my reading was perfunctory. However, when I came to Ecclesiastes I couldn’t put it down. For example, I read

*2:10, I denied myself nothing My heart took delight in my work... Yet when I surveyed all that my hands had done...everything was meaningless.*

*12:13, Here is the conclusion...Fear God and keep his commandments for this is the whole duty of man.*

This hit home but I didn’t really know what to do with it

After graduating from Rutgers with a degree in Electrical Engineering in 1968, I enrolled in graduate school at the University of Colorado-Boulder. During my studies there, the Anti-War, counterculture, and Jesus movements all peaked. Exposure to

these produced many challenges to my faith, including: 1) the counterculture claim as pursued in the United States that middle class life is meaningless; 2) the Jesus movement assertion that preaching (especially about salvation and the end times) is the only meaningful thing to do since the end of the world was near. This was a challenge to my brand of *Christianity*, which fit in well with middle class life; 3) the antiwar movement statement that the government was corrupt to its core and war was always wrong. This was a special challenge to me since I had been commissioned an Army Lieutenant through ROTC.

I matured as a Christian in Boulder in many ways. I had several outstanding Christian teachers and began a program of serious reading about Christian issues. However, I have never had any formal training, such as seminary classes. During the time of growth I faced numerous intellectual challenges. I was developing as a scientist, and for the first time learned that doing research is fundamentally different from doing homework problems. I spent two years trying to solve a problem, and learned that that process of science is one of proposing a theory and trying to disprove it by comparison to consistency, plausibility argument, and experiment. If you can't disprove the theory, then you can accept it as tentative. In retrospect, I learned a great deal about becoming a researcher from this frustration.

By having to struggle with what I could believe scientifically, I came to believe that there was never proof of any belief only corroborating evidence which makes the belief plausible. In fact, scientific models were not necessarily a representation of the real world (or "truth"), but only successful at predicting the results of experiments. This would haunt me later.

During this time, I became interested in a career in academics. In fact, I came to believe that God had called me to this. If you ask me today *how* I knew, I'm not sure that I could give you a satisfying answer. This led me to another defining period in my life.

I had backed into a ministry to street people from the counterculture by living at a house with fourteen Christians in the Hill district of Boulder, and by being asked to be part time manager of the local Logos bookstore. During that time, I remember that within (I think) a few days I had two distinct conversations about God. One was with a street person to whom I said that feeling something is right is not sufficient I stated ; that you must also have a reasonable basis for your belief. Another was with my Ph.D. advisor, to whom I said that reasons alone are insufficient but that you must also just "know" some things.

The apparent incongruity of my statements—plus my scientific belief about proof and truth—started me on a spiral downward to as close to agnosticism/atheism as I could go. I felt that I could not come up with good enough reasons for many of ; the things I claimed to believe. I was moved by those who said that then you should simply leave those questions unanswered and live your life as an agnostic. Somehow I never could go all ; the way because I believed (and still do) that agnosticism i necessarily leads to despair, and I could not embrace that I p continued reading but my reading

list (at least of Christian L books) got narrower and narrower. One writer I could read was ; Pascal, and I was impressed with the *preface* to his wager. In the wager, Pascal concedes that you cannot prove or disprove God. He then suggests that it is more rational to wager your life on God than on atheism because you have more to gain by belief than unbelief. The wager didn't mean much to me, but the preface to it did. In the preface, Pascal was confronted by a skeptic who said that he would not condemn Pascal for either wagering on God or atheism but for taking any stand at all He said that without "proof you should take no position at all (i.e. agnosticism). Pascal's response was to say that *you must wager*. You have no choice. Since you are in this life, you wager by default Your only choice is which way to wager. This hit me; I recognized that everyone makes a decision about belief in God and that not deciding was not an option. Despite this insight, the transition out of my black period was neither easy nor quick

I remember praying a number of times in desperation for God to unequivocally show himself to me. Among other things, I prayed for the more public gifts of the Spirit-which I never received. I also never received any *unequivocal* demonstration of God's presence. Once I prayed the following: I said that I believed that I was called into an academic career and that (despite the feet that there were no jobs at that time in p academia) I would not accept employment in industry. I l remember getting up and feeling rather silly, since it would be at least a year before I finished my Ph.D., and no answer to this prayer was possible before then. Nevertheless within a few days Westinghouse Georesearch Lab in Boulder called and wanted me to consider coming to work for them. I knew that they were looking for a permanent replacement for an employee who had left I went for an interview, which was quite humorous (at least to me) since I had decided to be true to my promise. I told them all the reasons not to hire me and why some of the other graduate students were more well suited for the job; I didn't tell them the real reason. They called back and still wanted me. I struggled, and finally told them that I was committed to a career in academics and would consider the job only if it was part time, and if I left after my Ph.D. They offered me the job anyway.

The feet that I was able to cany through was one small step back to God. Further, it played a part in a bigger picture later.

When I finished my Ph.D. in 1973, there were still *almost* no advertisements for faculty positions in Electrical *Engineering*. In feet, I was advised to not bother looking. Then one appeared from Washington State University (WSU) in *Pullman* that seemed to be written for me. I was quite skeptical that I could get it, but said I would apply because "I owed it to God" to try. I knew I had no chance. Later, when I got the job as an Assistant Professor, I found out that I surfaced to the top in part because I had some industrial experience. Was this God? Is it true that when you pray, coincidences happen more often?

Shortly after I arrived in Pullman, I met Marsha (a student, though not mine). We were married the next year. We now have 3 children: Erik (who is a senior in

Management of Information Science at WSU), Kari (who is a junior in Mechanical Engineering at WSU) and Kari (who is beginning the seventh grade).

I have had a wonderful career. This is in part because the expectations of WSU when I first arrived were not as great as my own expectations of myself. Because I was not under as much pressure to produce, as is now the case, I was able to study many different issues within electromagnetics, from fiber optics to underground wave propagation, antenna theory, radar scattering, and applications to power systems (which is what brought me to Electric Power Research Institute). I have also enjoyed teaching at all levels, from freshman to Ph.D. students.

During the last 20 years, I have not been very vocal about my faith. I have only shared my faith in small ways with individual students. I do, however, hope that part of my witness is that I have been more moral as a Christian than I would otherwise have been. I also hope that I have been salt and light in a number of other ways. I have concentrated on career and family matters and am now reaping the fruits of this. My family is a great source of joy (not always of course!). Now perhaps it is time to give back

Often, I wonder why I have been as silent as I have been. I think it is partly (at least) because I fear being put in a “fundamentalist” box without a chance to defend myself and partly that I don’t have confidence in some of the responses I give to questions. I also worry about living consistently with my stated faith when there are so many temptations around. And, I also honestly continue to struggle with doubt

I am a convinced theist, and am very strong in this because I cannot live with the thought of the consequences of being an atheist I am sure that it leads to despair. Going beyond that to exactly how God interacts with us has always been difficult for me. I sometimes feel that Mark 9:22–24 describes my Christian life rather well. Here a father requests help from Jesus for his son.

*“..Ifyou can do anything, take pity on us and help us.” “Ifyou can?” said Jesus. Everything is possible for he who believes. ” Immediately, the boy’s father said, “I do believe; help me overcome my unbelief}”*

I have found the book *Disappointment with God*, by Phil Yancey, to be a favorite of mine. I identify with those in the book who have desired but not experienced unambiguous evidence of God’s presence and yet continue to believe and serve. Despite these doubts, I identify with Peter in John 6: 66–68.

*No one can come to me unless the father has enabled him. From this time, many of his disciples turned back and no longer followed him. “You do not want to leave too, do you?” Jesus asked the twelve. Simon Peter answered him, “Lord, to who shall we go? You have the words of eternal life. ”*

Let me add just a few further comments on my beliefs. I have no interest in atheism or rationalism. They appear to me to lead nowhere. For example, morality cannot be based on science. What *is*. is not the same as what ought to be. Without God, there is no morality. This is one theme of Dostoevsky. For example, in *The Brothers Karamazov*, one of his characters said, “If there is no God, all things are permissible.”

*Humanism* (while on the surface appealing) appears to be solidly grounded in mid-air. I don't understand how I can simultaneously say that we are the product of nothing but time and chance and yet infinitely valuable. I also have no interest in many of the more modern religious ideas. It seems to me that the basic idea is to find a concept of God with which you are comfortable and to adopt it. This circumvents the issue of truth. If there is a God, then the fact that I believe something has very little, if anything, to do with whether it is true. God is to be discovered-not invented.

Robert G. Olsen received a BS degree in electrical engineering from Rutgers University in 1968, and the MS and Ph.D. degrees in the same from the University of Colorado, Boulder in 1970 and 1974. He presently serves as Boeing Distinguished Professor of Electrical Engineering at Washington State University (WSU) in Pullman, WA. During his service at WSU he has been a visiting scientist at GTE Laboratories in Waltham, MA and at AEB Corporate Research in Vasteras, Sweden, a Visiting Professor at the Technical University of Denmark. During the 1997–98 academic year, he was a visiting scientist at the Electric Power Research Institute in Palo Alto, CA. Prof. Olsen has published more than 65 refereed journal articles on many topics, including electromagnetic interference from power lines, the electromagnetic environment of power lines, electromagnetic compatibility and electromagnetic scattering. He is a Fellow of the Institute of Electrical and Electronics Engineers (IEEE) and presently serves as chair of the IEEE Power Engineering Society Corona Effects Fields Working Group, as Associate Editor of the *IEEE Transactions on Electromagnetic Compatibility* and as US National Committee representative to the Conference Internationale des Grands Reaux Electriques & Haute Tension (CIGRE) Study Committee 36.

## About this Issue

Jacques Ellul lived in the public arena. He was an academic who mentored doctoral students, lectured, fulfilled university assignments and wrote scholarly treatises. But his defining orientation was public life as a whole. His thinking was geared to citizens, church members and consumers. Intellectuals were especially vulnerable, in his view, because they prized their independence and magnified their critical powers. His prophetic voice engaged the community.

Those influenced by Ellul's work continue to make public space their home. Some are scholars in the traditional sense, but most have a special heart for everyday life and the non-specialist. They write in magazines, work in social services, participate in public organizations, build activity centers, or preach. *The Ellul Forum* this time gives us some illustrations of the way our technological civilization can be discussed and critiqued among general audiences.

Andrew Goddard is a Tutor in Christian Ethics at Wycliffe Hall and a member of the Oxford University Theology Faculty. He presented this address at Wycliffe Hall's Open Day festivities on June 9, 2000. Each year the Hall invites former members (most of them ordained Anglican clergy), council members who govern the college, local clergy, the staff and others who help the college, to an open house. As the newest staff member, Mr. Goddard was asked to address them and he chose to introduce them to Ellul.

Rev. Dr. Randall Otto is the pastor of the Deerfield Presbyterian Church in New Jersey. He is also an adjunct instructor in philosophy and religion at Cumberland College and an instructor at the Eastern School of Christian Ministries. His tongue-in-cheek essay identifies trends in contemporary culture that seem to lead ineluctably to the

virtual Christianity of the Internet. His incisive critique and calls for reconsideration make *The Ellul Forum* an obvious home.

Phillip M. Thompson sets Ellul in the context of Thomas Merton, kindred spirits nourishing each other for everyday life outside the academy and monastery. Mr. Thompson has two degrees in law and a PhD. in the History of Culture from the University of Chicago. He is currently the Director of the Center for Ethics and Leadership at St. Edwards University in Austin, Texas. In that capacity he works at the interface of the university and public life. A different version of this article appeared earlier as “Full of Firecrackers: Jacques Ellul and the Technological Critique of Thomas Merton,” in the *Merton Seasonal* (Spring 2000), pp. 9–16. —

Clifford Christians Editor

## Jacques Ellul: 20<sup>th</sup> century prophet for the 21<sup>st</sup> century?

by Andrew Goddard

I want to begin with a pattern I will return to at the end — to give you a sense of Ellul by letting him speak for himself. We open with two passages from the book *The Presence of the Kingdom* which we will focus on in this lecture. These passages make clear why both Ellul’s style and content have led many to classify him as a prophet. They also sketch out the task he set for himself in all his writing.

The will of the world is always a will to death, a will to suicide. We must not accept this suicide, and we must so act that it cannot take place. So we must know what is the actual form of the world’s win to suicide in order that we may oppose it, in order that we may know how, and in what direction, we ought to direct our efforts. The world is neither capable of preserving itself nor is it capable of finding remedies for its spiritual situation (which controls the rest). It carries the weight of sin, it is the realm of Satan which leads it toward separation from God, and consequently toward death. That is all that it is able to do...Our concern should be to place ourselves at the very point where this suicidal desire is most active...and to see how God’s will of preservation can act in this given situation...We are obliged to understand the depth and the spiritual reality of the mortal tendency of this world...

Then, picking up the language of God’s will which the Christian must seek, Ellul also writes,

The will of the Lord, which confronts us both as judgment and as pardon, as law and as grace, as commandment and as promise, is revealed to us in

the Scriptures, illuminated by the Spirit of God. It has to be explained in contemporary terms, but in itself it does not vary.

Those two passages demonstrate the two-fold structure of Ellul's work and its prophetic style. On the one hand, there is a challenge to the world and its false religions. On the other, there is a challenge to us as the people of God to be faithful and fulfil our calling in the world. For the majority of our time I want to fill out those twin challenges and explain why Ellul can be viewed as a 20<sup>th</sup> century prophet who still speaks to us today at the start of the 21<sup>st</sup> century. First, however, I would guess that for many here, Jacques Ellul himself is rather a mysterious figure, and so before exploring that theme a brief introduction to his life and work may be helpful.

Perhaps the first sign that Ellul may be classed as a 20<sup>th</sup> century prophet is found in his own life story. Born in Bordeaux in 1912 and dying in the same city in 1994 he lived through most of the main events and developments of the 20<sup>th</sup> century. And yet, he was someone who was ill at ease with and constantly critiqued the path that the world (and to a large extent the church) was taking throughout this period. It was the crucial decade of the 1930s which in many ways made Ellul the person he was. Historically, of course, this was the period of the rise of Fascism and Nazism, the firm establishing of communism in Stalinist Russia, the growth of liberal democracy in Europe and North America, and the crisis in international capitalism. These ideologies and the reaction against all of them by small groups of personalist thinkers in France shaped Ellul's life and thought decisively. Personally, this was also when Ellul came to living Christian faith and made his spiritual home in the minority Protestant French Reformed Church. There he was to be shaped theologically not just by the broader Reformation heritage but by Kierkegaard's thought and the work of Kari Barth. While his analysis of the world was developing through his involvement in personalist groups and his discovery of Kari Marx, Ellul was also completing his legal studies at Bordeaux University. His first teaching post — at Strasbourg — was interrupted by the Nazi invasion of France and after returning briefly to Bordeaux he and his young family then fled to the countryside where he was involved in the Resistance.

During the war years Ellul drew on his reflections in the previous decade to plan out what would become his life-work. By his death this amounted to 50 published books and hundreds of articles. While obviously his writing responded to events, his work was undoubtedly conceived as a whole from the start. He himself said in 1981, "It is true to say that I haven't written books but rather 'one' book of which each is a chapter."

In particular the structure of this work was carefully thought through from the beginning. There were to be two strands of writing in a dialectical relationship with each other. These two strands are reflected in the quotations with which we began and the structure we will follow shortly — the will of the world and the will of the Lord. On the one hand there are books which study the structure and development of the social, political and cultural world — the will of the world. These often show no sign

of any explicit Christian commitment on his part. On the other hand there are books which seek to discern and explain the will of the Lord. They do so through biblical studies, theological reflections on important themes (the city, money, faith, hope), and the developing of a Christian ethic. These tracks in broad terms can be classed as sociology and theology. Though they often seem to run in parallel, these two tracks are actually in dialogue with each other throughout.

During the five decades which followed the planning of his work Ellul was not just thinking and writing. He was also living out his thinking. Employed as Professor of the History and Sociology of Institutions in the Law Faculty at Bordeaux University and Professor in the Institute of Political Studies he was also active in many other spheres. As a lay Christian he was active in the World Council of Churches and French Reformed Church, leading a local congregation, editing a major theological journal, and contributing in the highest levels of church government, including reform of theological education. After a brief period as Bordeaux's Deputy Mayor at the end of the war, he continued political involvement but more from the margins than within the established structures. Locally he supported groups defending his Aquitaine region from development plans and initiated major work with young delinquents.

In *The Presence of the Kingdom* Ellul defines a prophet as “not one who confines himself to foretelling with more or less precision and even more or less distance; he is one who already lives it, and already makes it actual and present in his own environment” (p. 38). Although time prevents further details of his life, they would I think provide further confirmation that he was indeed, on his own definition, a 20<sup>th</sup> century prophet.

It would be impossible in the time we have to do justice to Ellul's massive corpus of writing and the intricacies of his thought. I will therefore introduce him and what he may still have to say to us today through the book which he later confessed he realised “could be the introduction to the complete work” (x). Indeed on re-reading it at the end of working on my thesis I was astonished at how often I found a sentence or paragraph which gave the heart of one of his later books.

Known in English as *The Presence of the Kingdom* it was first translated in 1951, and its reissue in 1967 and again in 1989 demonstrates its continuing significance and relevance. As Daniel Clendenin writes in the new introduction to the 1989 edition,

The book deserves a wide readership not only because it is the necessary primer for all Ellul study (it is the first book one should read by him), but because it examines issues that remain . perennial problems in church and society...Ellul demonstrates in this book a timeless quality in his ability to examine issues far ahead of his time in a creative way. Despite its having been written a generation ago, *The Presence of the Kingdom* will provoke new dialogue today (xxxviii).

In getting a sense of this importance and the purpose of the book, the French title is perhaps more informative — *Presence au monde moderne*. While we may today think our task is to be present in the monde post-moderne, Ellul's subtitle was not only radical at the time of its publication in 1948 but highlights the deeper truth about our world

than whether it is modern or post-modern. The work was subtitled, “*Problemes de la civilisation post-chretienne*”. It was this sense as early as the 1940s that our civilization must now be understood as post-Christian which was truly decisive for Ellul. It shaped both his analysis of the world and his vision for the church.

The book originated in 4 talks he gave in 1946 to the World Council of Churches Ecumenical Institute in Bossey on the theme of the “Christian in modern society”. Ellul took as his guide a biblical passage which remained a favourite throughout his life — “Do not be conformed to this present age, but be transformed by the renewing of your mind, so that you may discern the will of God, what is good, what is pleasing to him, and what is well done”. What, he asked himself if we are to take this seriously, might the stand and attitude of the Christian be in the world?

Rather than trying to offer a detailed chapter-by-chapter account or critique of this short work, I want simply to highlight some themes to give you a flavour of its contents and what I believe is its prophetic character and continued relevance today. I will take the two subjects outlined in the opening quotations, likewise the two strands of Iris later writing — the will of the world and the will of the Lord. I want to pinpoint in each of these four challenges we still need to hear today over 50 years later.

As our opening quotation said, “The will of the world is always a will to death, a will to suicide”. What, then, can we say about the world in its contemporary post-Christian situation?

First, Ellul stresses that we need to face the reality of the world. Here is, of course, a standard prophetic challenge that we are dangerously deluded about the state we are really in. That we think things are not as bad as they are. That we think and even proclaim that there is peace when there is no peace. Ellul sees this as a real problem in our world: “In the sphere of the intellectual life, the major fact of our day is a sort of refusal, unconscious but widespread, to become aware of reality” (82). This is — and here we find a common theme in Ellul’s sociological analysis — a totally new situation. We face it because of a combination of the world’s complexity and the forms of communication within it. We are left, he says, oscillating between the surface phenomenon — the presentations of the world given by the media — and the explanatory myth which seeks to give people coherence in the face of confusion. Personally I find it amazing that in the 1940s — half a century before CNN and 24 hour news — Ellul could write of how “every day modern man learns a thousand things from his newspaper and radio”. He speaks of how the average person is “submerged by this flood of images which he cannot verify” and “news succeeds news without ceasing”. As a result we are unable to master all we are given by the media. So we must either drown in confusion or grasp for some explanatory myth or failsafe ideology — the Islamic threat, the conspiracy of multinationals, the attack on traditional values — which gives us some handle to make sense of the world. The first challenge Ellul then gives us is the challenge to reflect on our own experience of reality, to face up to it in all its complexity and its negativity, and to seek to understand it. This is a challenge

we particularly need to hear today in our churches — do we really encourage and equip God’s people to think critically and deeply about God’s world?

Secondly, Ellul highlights one particular cause of our blindness in relation to our world. We refuse, he says, to question the way our world is because of our respect for facts. We will not judge a fact. We just accept it. And this, he argues, is nothing short of a new form of religion in our day and age. We feel bound to adapt ourselves to the fact which becomes in effect divinised. So Ellul writes that “Anyone who questions the value of the fact draws down on himself the most severe reproaches of our day: he is a reactionary, he wants to go back to ‘the good old days’...”.

In his time, the great example of this was the atom bomb. We did not, would not stop and refuse to develop or use it, or question this fact and the demands it made on us. We became instead dominated by it. It became, in biblical terms, an idol, one of the principalities and powers which rule our lives.

Today, in the 21<sup>st</sup> century, the atom bomb is perhaps less of an obvious and pressing issue. But does our world not show the same subservient attitude to facts? What about the fact of globalisation or the supposed power of the market? It is claimed to be simply impossible to question certain economic policies no matter how destructive they are. What about the fact of reproductive technologies? Can anyone seriously question this established project to produce human life? What, more recently still, about the fact of cloning? Again and again we can see the accuracy of Ellul’s analysis today. We seem to have developed a refusal to consistently and persistently challenge what is presented to us as a fact. We have shown a constant unwillingness to ask of such alleged facts whether they are themselves good or bad. We refrain as a society from rejecting or even questioning what claims to be unchallengeable facts.

The third area to which Ellul draws attention is illustrated by some of these examples of facts. It is the area for which he became most famous but is also one where he is often misunderstood. Perhaps Ellul’s most famous book is *The Technological Society* which appeared in English in 1964. It originally appeared in French in 1954 as “*La Technique*” but received little attention. This French title is significantly different, for technique of course goes much wider than what we usually think of when we speak of technology.

In *Presence of the Kingdom* Ellul discusses what he later analysed as Technique in terms of “means”. Chapter 3 is called “The End and the Means” and argues that our world has been overtaken by “means” and we have lost any sense of concrete “ends”. Tied to this, he argues, is our fixation with efficiency and usefulness in all spheres of life.

On re-reading the book for this lecture I found the following passage which I must confess I had totally forgotten, but again perhaps illustrates the prophetic insight Ellul has here. He wrote,

Anything that does not serve some purpose must be eliminated or rejected, and in matters that concern men and women the same view prevails. This is what explains the practice of euthanasia (for old people and incurables) in the National Socialist State.

Anyone who is not useful to the community must be put to death. To us this seems a barbarous practice, but it is simply the application of the universal predominance of means, and to the extent in which this feat is developed we may expect to see the introduction of this practice into the whole of civilization (53).

One can imagine the outrage such an extreme claim must have caused in 1946! Yet we have already seen changes in the law in the Netherlands and parts of the USA and Australia and doubtless these will soon be picked up and support for legalised euthanasia grow in this country. When they do, Christians will rightly challenge them but perhaps what we also need to do is learn from Ellul to look deeper. We should see and question the more fundamental driving spiritual forces such as the exaltation of usefulness and efficiency which make such views so acceptable to our culture.

Perhaps closer to home we need to ask whether the church has not also bought into this great concern of the world with means, efficiency and usefulness. One may think of the effort put into marketing the gospel effectively or restructuring church institutions. More controversially there is the highly technical mindset driving various contemporary evangelistic programmes such as Alpha and parts of the church growth movement. That is a challenge to which we will return later when we look at Ellul's counter-proposal.

Finally, in relation to the world, Ellul argues that what the world needs is nothing short of a revolution. This theme runs through his work from the 1930s onwards and, although influenced by Marx, is not simply Marxist analysis. There is rather a sense that the world being formed, the world we today have inherited, is destructive of human beings and genuine civilization. In typically purple prose he writes,

If this revolution does not take place, we are done for, and human civilization as a whole is impossible. At the present moment we are confronted by a choice: either a mass civilization, technological, "conformist" — the "Brave New World" of Huxley, hell organised upon earth for the bodily comfort of everybody — or a different civilization, which we cannot yet describe because we do not know what it will be; it still has to be created, consciously, by men. If we do not know what to choose, or, in other words, how to "make a revolution", if we let ourselves drift along the stream of history, without knowing it, we shall have chosen the power of suicide, which is at the heart of the world (31).

As we look around Britain and Western Europe as a whole today with the quest for economic growth, greater material goods, more and more technological gizmos, do we not, in that striking phrase, "hell organised upon earth for the bodily comfort of everybody" hear something which still speaks to us? Are we not challenged as Christians to face up to the need for a real deep-seated revolution in our world?

Here then, I suggest, are four prophetic words which Ellul spoke back in 1946 concerning the world, words we still need to hear and heed today:

- Face up to reality and seek to understand it
- Don't be afraid to challenge what are asserted to be simple facts of life

- Don't get obsessed with means and technical efficiency
- Recognise a major revolution is needed in our world

Alongside this fourfold challenge in relation to the world and its false religions there is also a prophetic fourfold challenge to us as God's people to be faithful and to fulfil our calling. This begins where we ended a moment ago with Ellul's emphasis on revolution. In the title of his second chapter Ellul calls for "Revolutionary Christianity". The revolution that we have seen Ellul believes the world needs is one which Christian faith offers. This is not, of course, a political revolution but something much deeper. And it depends not ultimately on us but on Christ at work in us and through us. We are called to be His ambassadors and representatives in this alien world and as such we will be revolutionaries in the world.

Ellul vividly draws out the implications of various biblical images here.

In the world, the Christian belongs to another, like a man of one nation who resides in another nation...A Chinese residing in France thinks in his own terms, in his Own tradition. He has his own criterion of judgment and of action...He is also a citizen of another State, and his loyalty is given to this State, and not to the country in which he is living...The Christian stands up for the interests of his Master, as an ambassador champions the interests of his country...From another point of view he may also be sent out as a spy...to work in secret, at the heart of the world, for his Lord; to prepare for his Lord's victory from within (33-4).

If that is how we as the church understand ourselves, if that is how we live, then the faithful Christian must be revolutionary. I wonder how many faithful, committed Anglicans have really come to terms with the fact that, in Ellul's words, "in consequence of the claims which God is always making on the world the Christian finds himself, by that very fact, involved in a state of permanent revolution" (36-7).

The second insight is intimately connected with this revolutionary Christianity. It is the need to focus on and understand rightly the place of the Christian in the world. This is the title of Ellul's first chapter and in one sense the theme of his whole book. We are called to be in the world but not of the world. It's a phrase we all know well but one we perhaps too often fail to take seriously.

Ellul fills out its meaning by reference to three New Testament images. We are to be the salt of the world which, interestingly, he reads as an allusion to Leviticus 2:13 pointing to our calling to be a sign of God's covenant with the world in Jesus Christ. We are to be the light of the world, removing its darkness and giving meaning and direction to its history. We are — in an image we perhaps less often think about — to be sheep in the midst of wolves. Not a nice situation to be in. An image which speaks of sacrifice and refusal to dominate. An image which reminds us that, to use Ellul's terms, we are called as Christians to an "agonistic" way of life, a life of tension and suffering.

One of the aspects of that tension and agony is that in the world the Christian is torn between two truths — "on the one hand it is impossible for us to make this world

less sinful; on the other hand it is impossible for us to accept it as it is" (9). That insight itself speaks volumes about Ellul's own prophetic position, reflecting as it does the anguish and pain of the situation in which the biblical prophets found themselves. And yet surely he is right when he warns us, "If we refuse either the one or the other, we are actually not accepting the situation in which God has placed us...We are involved in the tension between these two contradictory demands. It is a very painful, and a very uncomfortable situation, but it is the only position which can be fruitful for the action of the Christian in the world, and for his life in the world" (10).

We may and do try all sorts of escape from this calling. Sometimes we separate the spiritual from the material and focus simply on the interior life. Sometimes we work away to moralise and supposedly Christianise our world. Both Ellul warns us are serious errors. We need instead to engage fully in the world of death as witnesses to the God of life.

And this focus on the Christian in the world means, thirdly, that Ellul emphasizes the centrality of the lay Christian in the Church's mission. This is a biblical truth which we probably feel the church has rediscovered in the decades since Ellul wrote. "Every member ministry" is now in theory and often in practice something the church acknowledges and encourages. And yet even the phrase itself points to the danger. Have we simply been clericalising the laity, getting them to do things on Sunday and in and for the church which traditionally the clergy did? Ellul — himself not ordained — biting comments, "there are no 'laymen' in our churches; because on the one hand, there is the minister, who does not know the situation in the world, and on the other hand, there are "laymen", who are very careful to keep their faith and their life in different compartments..."(11).

A cruel caricature perhaps. Aren't many prophets guilty of that too? But how often in our churches do those at the cutting edge of life in the world get the opportunity to share and reflect in depth on what it means to be a Christian in business, in a union, in education, or wherever they are called to live the agonistic life of being in but not of the world? Where do lay Christians find guidance and practical support in their calling to be salt, light and sheep among wolves? If we undertake it seriously this task will not be an easy one. Ellul himself discovered that. Following these talks he set up various Protestant Professional Associations to try and meet these needs. After initial success all the groups gradually died because the task was too hard and people lost interest or lacked the time to make the groups work. Yet, in our 21<sup>st</sup> century post-Christian world surely Ellul is still right, that we need to be equipping and encouraging lay people to be the presence of God's Kingdom in the world.

Fourth, Ellul warns us against thinking that all this simply requires us to develop techniques which enable us to do certain things effectively and in Christian ways. He insists that all this is more a matter of being than of doing — not something easy in our activist culture, including our activist evangelical culture.

Ellul roots this call to be in a theological challenge to our society's fixation with means and efficiency. Christ he says is our end and He is also our means by making

that end present to us now. Means and end are therefore united in Him. We do not therefore as Christians have to find means which will secure our end for us because both means and end are God's gift to us in Christ. Ellul therefore urges the Christian to have a different attitude from the world.

It is not his primary task to think out plans, programs, methods of action and of achievement. When Christians do this...it is simply an imitation of the world, which is doomed to defeat...It is not our instruments and our institutions which count, but ourselves, for it is ourselves who are God's instruments...We, within ourselves, have to carry the objective for which the world has been created by God...Christians have received this end in themselves by the grace of God (65).

So then four more specific challenges to us as God's people at the start of the 21<sup>st</sup> century:

- We are to be revolutionaries in a world requiring revolution
- We are to be truly in the world and yet quite different from it • Lay Christians are therefore central in the mission of the church
- It is who we are rather than what we do which is crucial.

In conclusion, I want to draw these various challenges together and again let Ellul speak for himself through three somewhat longer quotations taken from the book's final chapter. They can be summed up in three words — calling, lifestyle and community.

FIRST, Ellul challenges us to realise our Christian calling our difficult calling, our prophetic calling as God's people in His world.

We cannot give everything into the hands of God (believing that God will open the eyes, ears, and hearts of men), until we have wrestled with God till the break of the day, like Jacob; that is, until we have struggled to the utmost limits of our strength, and have known the despair of defeat. If we do not do this, our so-called confidence in God and our "orthodoxy" are nothing less than hypocrisy, cowardice and laziness. All that I have already written will be useless unless it is understood as a call to arms, showing what enemy we have to confront, what warfare we have to wage, what weapons we have to use. Then, in the heart of this conflict, the Word can be proclaimed, but nowhere else. When we have really understood the plight of our contemporaries, when we have heard their cry of anguish, and when we have understood why they won't have anything to do with our disembodied gospel, when we have shared their sufferings, both physical and spiritual, in their despair and desolation, when we have become one with the people of our own nation and of the universal church, as Moses and Jeremiah were one with their own people, as Jesus identified himself with the wandering crowds, "sheep without as shepherd", *then* we will be able to proclaim the Word of God — but not till then! (116).

SECOND, to fulfil this calling Ellul insists we need to develop a certain way of being in the world, a Christian lifestyle.

In order that Christianity today may have a point of contact with the world [it is necessary] to create a new style of life. It is evident that the first thing to do is to be faithful to revelation, but this fidelity can only become a reality in daily life through the creation of a new way of life: this is the “missing link”...There is no longer a Christian style of life. To speak quite frankly, without beating about the bush, a doctrine only has power (apart from that which God gives it) to the extent in which it is adopted, believed, and accepted by men who have a style of life which is in harmony with it...The whole of life is concerned in this search. It includes the way we think about present political questions, as well as our way of practicing hospitality. It also affects the way we dress and the food we eat...as well as the way in which we manage our financial affairs.

It includes being faithful to one's wife as well as being accessible to one's neighbour... Absolutely everything, the smallest details we regard as indifferent, ought to be questioned, placed in the light of faith, examined from the point of view of the glory of God. It is on this condition that, in the church, we might possibly discover a new style of Christian life, voluntary and true (119–20, 122–3).

THIRD, we can do all this only in Christian community. And here is perhaps a particular challenge for us who lead parish churches or who will be leading them in the near future.

It is impossible for an isolated Christian to follow this path...It will be necessary to engage in a work that aims at rebuilding parish life, at discovering Christian community, so that people may learn afresh what the fruit of the Spirit is...We shall need to rediscover the concrete application of self-control, liberty, unity, and so on. All this is essential for the life of the church, and the function of Christianity in the world. And all this ought to be directed toward the preaching and the proclamation of the gospel (124).

We stand, today, over fifty years later, facing the real challenges of living as God's people in a post-Christian, postmodern world. Surely we can discern in Ellul's challenge to make God's Word known, the words of a 20<sup>th</sup> century prophet to us in the 21<sup>st</sup> century, being faithful to our calling, creating a Christian lifestyle, and building Christian communities.

Like all prophets, Ellul's words confront and challenge us. They may disturb, perhaps even run the risk of disheartening us. He knows that. He was often enough accused of being a hopeless pessimist in his writing! And so it is only proper to end as he ends his book — with words of hope and encouragement:

The enemies of the church seek to turn it aside from its own way, in order to make it follow their way; the moment it yields it becomes the plaything of the forces of the world. It is given up to its adversaries. It can only have recourse to God in prayer, that he may teach it his way, which no one else can teach it. This means not only the way of eternal salvation, but the way which one follows in the land of the living, the way which is truly impossible to find unless God reveals it, truly impossible to follow with our human power alone. The problem is the same in the social and the individual

sphere. From the human point of view this way of the church in the world is foolish, utopian, and ineffective, and we are seized with discouragement when we see what we really have to do in this real world. We might throw the whole thing up, were we not sure of seeing the goodness of the Lord in the land of the living: but we have seen this goodness, it has been manifested, and on this foundation we can go forward and confront the powers of this world, in spite of our impotence, for “in all these things we are more than conquerors through him that loved us. For I am persuaded that neither death nor life, nor angels nor principalities, nor things present, nor things to come, nor powers, nor height nor depth, nor any other creature, shall be able to separate us from the love of God which is in Christ Jesus our Lord (Rom 8.37–39) (126–7).

## The Trend Toward Virtued Christianity

by Randall E. Otto

In his article “Welcome to The Next Church” (*The Atlantic Monthly*, August, 1996), Charles Trueheart summed up the megachurch phenomenon: “Seamless multimedia worship, round-the-clock niches of work and service, spiritual guidance, and a place to belong; in communities around the country the old order gives way to the new.” Regardless of whether they are megachurches, many congregations today are incorporating mass marketing methodology such as an entertainment orientation, slick packaging, multi-media imaging, a variety of options, along with a minimization of history and an accent on anonymity. The question remains, however, whether this methodology will ultimately be self-defeating. Is it possible that contemporary American pragmatism will find all of these elements more fully realized in the electronic Christianity of the Internet? Perhaps the virtual Christianity of electronic churches such as The First Church of Cyberspace and the Virtual Church of the Blind Chihuahua is “The Next Church.”

### *The Entertainment Orientation*

Walt Kallestad, pastor of the Community of Joy church in Arizona, says, “If Jesus Christ were alive today, I’m certain he’d be using every form of entertainment that’s out there to make God relevant and practical in people’s lives.” Most young people today want an entertainment orientation. Because many churches are targeting Baby Boomers and Generation Xers who have grown up on the visual stimulation and slick packaging of television and special effects movies, their worship has a fast pace and lots of entertainment allure. While often architecturally non-descript, contemporary “worship centers” are loaded inside with the technology for maximum visual stimulation, with screens for the projection of chorus lines as well as the faces of those on the stage, whom one can otherwise hardly see. Recently, as I worshiped from the balcony of a large church in Arkansas, I found myself looking steadily at the screen for the images of those little people down on stage who were giving testimonies, singing, or preaching. It

was almost like watching them on TV! In fact, I wonder if my worship experience would have been much different had I stayed home and watched a service on my television screen. True, watching anything on a screen can make the experience seem distant and objectified, as preaching and prayer on television sometimes appear theatrical and almost silly, but that's the price of good entertainment!

The transmission of images via the screen is fundamental to modern religion. When Billy Graham's evangelistic sermons are broadcast throughout the world, he is visible to all but a relative few only on a screen, even if they are in the same venue—yet thousands respond to his preaching. God speaks to people through the screen! When the thousands of men at a Promise Keepers convention in Washington are linked via an audio-video hookup to another convention meeting simultaneously in a stadium in Atlanta to sing a chorus together, it is a virtual taste of heaven. A couple decides to get married and arranges a legally valid wedding in which the participants are at remote locations and the vows are typed in via computer keyboards. Having observed in some non-traditional religious groups' computerized rites of passage “something close to an actual neopagan congregation, a community of people who gathered regularly to worship even though they had never seen each other face to face,” Stephen D. O'Leary says that there is little difference between the Christianized form of computerized screen relationships and the neopagan form, save for institutional approval. In “Cyberspace as Sacred Space: Communicating Religion on Computer Networks” (*Journal of the American Academy of Religion*, Winter, 1996), he says that Christianized forms “are not fanciful predictions of what is to come; they have already taken place. They are no more or less ‘unreal’ than than [sic] the neopagan gatherings on CompuServe, insofar as the criterion is considered to be physical presence.”

The entertainment orientation of many contemporary churches advances to a new level in the cyberchurch. What can happen on its screen is virtually limitless. The First Church of Cyberspace (<http://www.godweb.org/index1.html>) offers a number of options, all instantly available at the click of a mouse. One can listen to inspirational music and hymns, pick from a variety of sermons by different religious leaders, look at art from the Vatican and the Sistine Chapel in Gallery One and Rembrandt and Byzantine art in Gallery Two, with options to link to other religious sites, discussion forums, and reviews of religious books, movies and more; there is even Java Theology! Now this is *really* a church with options and high quality entertainment! One can choose from the music of J. S. Bach to a Congolese mass and read “sermons for every season” while enjoying famous art from around the world, all at any time in the convenience and comfort of one's own home.

The cyberchurch not only has greater entertainment appeal than any contemporary church; it also has a greater consumer value to the church shopper. Shoppers can stay as long as they wish and leave whenever they want. Virtual Christianity might possibly satisfy the interest level — as well as efficiency of time and resources — of the technology icon himself, Bill Gates, who has said (*Time*, January 13, 1997), “just in terms of allocation of time resources, religion is not very efficient... There's a lot

more I could be doing on a Sunday morning.” Were he a virtual parishioner in the First Church of Cyberspace, Gates could do whatever he wanted on Sunday morning and surf in for a virtual religious “hit” whenever it seemed convenient. He could come *-whenever* and *however* he’d like. The “come as you are” approach of the contemporary church still requires casual apparel generally suitable for public display. In the virtual church, Gates, well-known for “dressing down,” could come in literally anything (or nothing) at all!

More of today’s young people want to be like Bill. In actuality, they are increasingly being created in Bill’s image. As Wendy Murray Zoba notes in “The Class of ’00” (*Christianity Today*, February 3,1997), studies show that teens today are:

- bombarded by frequent images, so that they need continual “hits”
- sufficiently aloof that the remote control symbolizes their reality
- so engrained in consumerism that they take it for granted
- a cyber-suckled community

If so, the consumer-driven and entertainment-oriented contemporary church must eventually make a transition toward the virtual Christianity of the cyberchurch or risk losing its market share of today’s youth.

In 1996 the Roman Catholic Church in Germany failed to take advantage of these new technologies and so improve market share. A new software program entitled “Confession by Computer” marketed by the Cologne-based Lazarus Society, offered sinners the chance to confess to their computers from a list of 200 foilings, a list which, as the Reuters report noted, could be “customized for especially original sinners.” “As soon as the sin is selected on the basis of the Ten Commandments, the computer searches out an appropriate penance,” the program’s promotional literature stated. The program would then display or read out audibly the words to the prayers “Our Father” and “Hail Mary,” with suggestions on how to get in touch with a priest or minister on the Internet.

To these technological innovations, which could have electrified repentance and streamlined priestly duties, the Church issued a stalwart and predictably passe rejection. A spokeswoman for the German Conference of Bishops said, “You cannot have sins forgiven by the push of a button.” Surely the Church has not recognized that Jesus himself urged *ease* in the pronouncing of absolution! When chastened by the scribes for telling a paralytic he had just healed that his sins were forgiven, Jesus responded, “Which is *easier*, to say to the paralytic, ‘Your sins are forgiven,’ or to say, ‘Rise, take up your pallet and walk’?” (Matt. 9:5).

The non-sacramental character of many contemporary churches may further impel them toward virtual Christendom. Their general perception of the sacraments as mere memorials means no Real Presence is involved in Holy Communion; and, since baptism

is typically administered in private gatherings at someone's pool, little real presence is involved there either. In fact, computerized simulations can create images so real as to make the technological community "come to life." As Erik Davis (*Journal of the American Academy of Religion*, Winter, 1996) observes of neopagan communities meeting on the Internet:

The technopagan community comes to life with the creation of performative rituals that create their virtual reality through text, their participants interacting with keyboards, screens, and modems. This is certainly odd for those who conceive of ritual strictly in terms of situated *actions*, as a drama involving chant, gesture, and props such as chalices, bread, wine, incense, etc.; yet in the entire experience as revealed in archive files at least, such elements are replaced by textual simulations.

Moreover, with advances in CD ROM, video morphing, and virtual reality technology, simulations may appear almost indistinguishable from real-time events. Besides, in the postmodern world, signs no longer imitate or duplicate the real, but simply substitute for it. The sacraments are merely signs pointing to something unseen anyway.

Ease of *approach*, well-packaged *entertainment*, and multiple *options*—these *key-words* of many contemporary churches are taken to an enhanced level in the virtual church.

#### *Transcending Denominations*

Another emphasis of many contemporary churches is the transcending of denominations. Although many contemporary churches are in theology and polity simply independent Baptist churches, they avoid sectarian bias by dropping any denominational affiliation from their name. For some, the hope of gaining greater market share means not just dropping a denominational identification, but also dropping any reference to Jesus Christ himself. A church in California decided it might have broader appeal by changing its name from Church *of the Master* to Church *in the Foothills*. Location, location, location! The important thing is that the consumer can find the church's *physical* location, not that the church have any *theological* location.

People don't care much about theology anyway. They just want to attend someplace where they can feel good and where everybody gets along. For this reason some contemporary church pastors demur from preaching on divisive social issues. As Trueheart observes, "Like the mainline denominations, though perhaps with more success, new, large, independent churches attempt to live with intense divisions among their flock over abortion and homosexuality."

The cyberchurch, however, is equally savvy in being nondescript and broad in appeal. The Virtual Church of the Blind Chihuahua (<http://www.dogchurch.org/narthex.shtml>) combines in its name the appeal of the non-descript with comic relief. How many would dare name their church *after a dog*? Yet its outrageousness almost guarantees youth appeal! As "a sacred place in cyberspace named in honor of a little old dog with cataracts who barked sideways at strangers because he couldn't see where they were," the Virtual Church of the Blind Chihuahua has maintained that humans relate to God in the same way, "by making a more or less joyfiil noise in God's

general direction with the expectation of a reward for doing so.” The church’s creed is extremely simple and ostensibly Christian: “We can’t be right about everything we believe — thank God, we don’t have to be.” This creed certainly transcends all denominations and includes virtually everyone. It has great market appeal! It is simple, much easier to remember than the Apostles’ Creed and truly a basis on which people can get along.

The Virtual Church of the Blind Chihuahua grapples with divisive social issues, though inconclusively. The pastor of the church posts an *irenica* position on a bulletin board in which he encourages all sides to come together in moral discourse taken from the realm of politics. The value of the cyberchurch approach is that everyone has access to the pastor and can post his or her thoughts without fear of acrimony, since the writer need not leave an actual name. The anonymity in much of contemporary church life is in the cyberchurch turned into a positive good.

The cyberchurch not only transcends the parochial, the doctrinal, and the denominational; it transcends both time and history. While some lament the a-historical nature of computer technology, the cyberchurch is utilizing an approach already at work in postmodern society. While undoubtedly driven by an interest in having the broadest appeal possible, the present concern among some churches to transcend denominational affiliations is also a tacit acknowledgment of their a-historical nature. Denominational affiliations typically describe the doctrine and history of a particular church body. Lutherans, for example, have their origin in the historical context and doctrinal formulations of Martin Luther and his successors. Presbyterian and Reformed churches have theirs in the context and formulations of John Calvin and his theological heirs. Such churches tell the prospective worshiper what their historical and doctrinal moorings are.

Many contemporary churches intentionally avoid any reference to church history, the theologians, and doctrinal formulations of any branch Of Christendom. Their intention is to be broad in scope, but the effect is clearly a-historical. The average contemporary church consumer probably has no more notion of who Martin Luther and John Calvin are than the most avowed atheist, despite the fact that Luther and Calvin have provided the theological groundwork for what many of these churches believe, such as justification by faith. These churches thus build on borrowed capital, and state as their theology (and of course, the theology of the Bible) what is actually derived from someone in time and history who shall likely forever remain nameless. After all, namelessness is part of the appeal in many churches.

The cyberchurch again takes this impetus to a new level. A-historicity is an admitted part of the on-line environment, an extension of what contemporary society desires, the here and now, not the then and there. Howard Besser has observed, “the on-line environment of the fixture is the logical extension of postmodernism. Everything is ahistorical and has no context” (*Resisting the Virtual Life: The Culture and Politics of Information* [San Francisco: City Lights Books, 1995]). The cyberchurch recognizes the a-historicity of postmodern humanity and gives opportunity for every voice to

be heard and every idea to be shared, provided, of course, that the voice is electrified in the form of an on-line message.

#### *Who We Are*

Numerous assumptions of the contemporary church are enhanced in the cyberchurch, suggesting its transitional nature to electronic Christianity. The *residual* element hindering this transition remains the insistence on bodily meeting as the form which its community will take, be it in the relative anonymity of the megachurch auditorium or in the genuine personal interaction of the small group. This insistence on physical togetherness is a holdover from those primitive days when human beings were considered a combination of body and spirit, a psychosomatic union. Along with this lingering belief remains the occasional interest in personal touch, hearing voices, and feeling the warmth of another close by. However, these are fading memories of a bygone era, the silly sentiment of “the good ol’ days” when people met together on the front porch just to chat. If, as Douglas Groothuis says in *The Soul in Cyberspace* (Grand Rapids: Baker, 1997), “much of the technological imperative finds its restless energy in the desire to lessen or eliminate the agonies of embodied existence,” then decrying the decentered self and the fluidity of personal identity concomitant with this technological imperative as “Gnostic” will mean little, particularly to an a-historical mindset. The future, virtually deified by the German theologian Jurgen Moltmann as “the mode of God’s being,” is calling us. The communications and information age of the future bid us live in a different, disembodied world.

Computer scientists inform us that the future will be virtual. Professor Nicholas Negroponte at MIT says in *Being Digital* (New York: Alfred A. Knopf 1995), “computing is not about computers anymore. It is about living.” In the future, he writes, “you will be able to purchase personality modules that include the behavior and style of living of fictitious characters.” In other words, we will be able to be someone else, live a virtual life. David Gelemter, computer science professor at Yale, says in his *book Mirror Worlds* (New York: Oxford University Press, 1991) that reality will be replaced, piece by piece, by a software imitation, and that human beings will live inside that imitation. This is the virtual world that lies ahead. In order to adapt to this new world and maximize its role in it, the contemporary church will have to make the transition to the virtual Christianity of the cyberchurch.

Making this transition, therefore, requires that humans recognize they are really thinking machines. MIT sociologist and psychologist Sherry Turkle says in *The Second Self: Computers and the Human Spirit* (New York: Simon and Schuster, 1994), “We cede to the computer the power of reason, but at the same time, in defense, our own sense of identity becomes increasingly focused on the soul and the spirit in the human machine.” In other words, the more we enter into the virtual world the more we will realize our true selves. As an MCI advertising campaign not long ago said, there are no bodies and there are no ages, genders, or infirmities—only minds. Each one of us is a mind and the closer we coalesce our minds to that of the computer, the more we will realize who we really are: minds that can be united with one another through the

online community of virtual Christianity in an artificial world. The Virtual Church of the Blind Chihuahua says it “is all in your mind. If your mind is real, that’s good enough for us.” If artificial reality is the authentic postmodern condition, the market-driven church must meet its seekers on those terms, in the authenticity of artificiality.

Once the mind-body problem is overcome in the Greek recognition and Idealist sublation that we are mere minds, the transition may continue to the *virtual community* of which Howard Rheingold has spoken (*The Virtual Community* [New York: Harper & Row, 1993]). Some may resist the virtues of the virtual, such as James Brook and Iain A. Boal, who say in the Introduction to *Resisting the Virtual Life: The Culture and Politics of Information*, “virtual technologies are pernicious when their simulacra of relationships are deployed society-wide as substitutes for face-to-face interactions, which are inherently richer than mediated interactions.” To these curmudgeons we may reply: If these personal encounters are so much richer, then why are they so much less pursued? The postmodernist impulse has been set by developments in science and technology: the world is understood to be relative, indeterminate, and participatory; it is not composed of stuff but rather of dynamic relations. The twentieth-century process philosopher Alfred North Whitehead described the world not in terms of substances, i.e., things, but in terms of events, i.e., temporal units of relatedness. This is the vision of the world in which dynamic temporality rather than static substantiality is the central factor for life and relationships. Our critics are much more to the point when they admit that the cyberspatial way of life “seems to represent a crypto-religious ideal of our society.” And if it is the religious ideal of our society, then the entertainment-oriented and consumer-driven church of tomorrow must adapt or lose market share. The transition must be made to the virtual church.

Of course, for those churches that refuse the entertainment-oriented, market-driven approach there can be little hope. Their failure to adapt has already cost them a significant segment of the religious market. Those that remain resolute against the impetus to change and adapt to cultural pressures will become increasingly insignificant. As Neil Postman says in *Technopoly: The Surrender of Culture to Technology* (New York: Vintage, 1992), technopoly is totalitarian technocracy which eliminates alternatives to itself by making them invisible and therefore irrelevant: “It does so by redefining what we mean by religion, by art, by family, by politics, by history, by truth, by privacy, by intelligence, so that our definitions fit its new requirements.” Irrelevant and laughable will be the one who refuses to see the new metaphysical status of information and the virtual deification of the virtual. Postman notes that the phrase “The computer shows ...” is technopoly’s equivalent to “It is God’s will.” Silly and simple will be those who continue to believe in a historical creed of an historic church and meet with other such obscurantists to interact personally on a Sunday morning in resistance to culture, to sing old hymns and hear lengthy sermons declaring objective truth. The world will be busy surfing the Net.

Why bother with Sunday? A culture that demands convenience and ease of accessibility requires that it be viewed as a day like any other. Those few who remain from the

historic and traditional church, who continue to meet together personally for Sunday worship, must then serve to remind us that *Sunday morning is who we as human beings really are*. It is the day of Christ's resurrection, the central tenet of the Christian faith, the firstfruits of the resurrection of all to eternal life or condemnation, body and soul. To gather together on Sunday morning means we humans *are indeed a psychosomatic union*, our souls will live in eternal joy or torment after death *and* the bodies integral to who we are will rise. To fail to meet together to worship on Sunday morning means that we do not consider our bodies essential to our experience, that we have already imbibed the disembodied disdain of physical relationships involving personal touch, love and care. As George Lakoff says in *Resisting the Virtual Life*, "The more you interact not with something natural and alive, but with something electronic, it takes the sense of the earth away from you, takes your embodiment away from you, robs you of more and more of embodied experiences. That's a deep impoverishment of the human soul." To lose the "sense of the earth" is to lose sense of who we are, for *humans* came from the earth (*humus*) and to the earth will return, though only till the resurrection.

Who are we? If mere minds or machines, we may continue toward the virtual illusion of actual Christianity. If we are made in God's image, however, we are soul and body rooted in time and history to know, worship, and serve God and one another together.

## Jacques Ellul's Influence on the Cultural Critique of Thomas Merton

by Phillip M. Thompson

*The Context of the Ellul and Merton Connection*

Simone Weil described the West as a "motorcar" that is "launched at full speed and driverless across broken country."<sup>92</sup> The reckless and dangerous trajectory of Western culture also troubled the Trappist monk and writer, Thomas Merton (1916–1968). Merton's cultural critique of technology, and most importantly the mentality developed and affirmed in technology, lacked a certain depth and coherence until it was annealed by his close reading of contemporary social critics, particularly Jacques Ellul.

Ellul might seem a curious choice for inspiration. Generally, the ellipses of the man Martin Marty labeled the "quintessential Protestant" and other Catholic intellectuals crossed infrequently.<sup>93</sup> Those Catholics expressing an opinion have offered mixed reviews. There is a general consensus that Ellul adroitly adumbrated the reach and

impact of technology on contemporary culture.<sup>94</sup> Some Catholics have viewed Ellul not only as an accurate prophet of doom, but as offering a Christian “hope” that offers a breach, a “heteronomy in a closed age.”<sup>95</sup>

For other Catholics, Ellul’s Augustinian dualism in the political realm is suspect. It appears to reflect a profound pessimism about human influence in the realm of social and political action. This perspective can initiate a self-fulfilling prophecy.<sup>96</sup> In addition, while Ellul correctly discovers a comprehensive techno-scientific system in the West, he fails to concede that it has positive and negative values. Catholics have not discounted elements of truth, verification, and rationality in technology and science.<sup>97</sup>

From Ellul’s side of the table, he is — not surprisingly — leery of certain elements of Catholic teaching. In *Le Fondement Théologique du Droit* (1946), he denounced the lack of Biblical grounding in the revival of the natural law tradition. The natural law tradition was then at the height of its revived influence in Catholic theological and legal circles.<sup>98</sup> There were also institutional problems in the structure of the Catholic Church. They had mistakenly adopted the pagan forms of the Romans.<sup>99</sup>

Despite his firm beliefs and polemical style, Ellul is too subtle to be trapped indiscriminately into any mold, including that of a Protestant crusader. For example, he expressed appreciation for the creativity and spontaneity of John Paul II. He also graciously recognized the value and insight of some Catholics whose position was relatively sympathetic to his own. An entire issue of his journal *Foi et Vie* was devoted to Charles Peguy.<sup>100</sup>

The mild interest in the French sociologist among Catholics primarily occurred after the fall of 1964 when a copy of *The Technological Society* was sent to a hermitage in the woods of Northern Kentucky. Merton was thrilled to discover in its first pages someone who shared his deep distrust of a technical mentality exemplified by the machine. A personal journal records the impact of the new find.

<sup>100</sup> Jacques Ellul, “Celui qui est toujours ailleurs...” *Sud-Ouest Dimanche* (August 14,1983), 2; Jacques Ellul, “Rehabiliter Peguy” *Foi et Vie* (1982), 9–27.

Reading Jacques Ellul's book, *The Technological Society*. Great, full of firecrackers. A fine provocative book and one that really makes sense. Good to read while the council is busy with Schema 13 (as it is). One cannot see what is involved in the question of "The Church in the Modern World" without reading a book like this.

I wonder if the Fathers are aware of all the implications of the technological society? Those who resist it may be wrong, but those who go along with all its intemperances are hardly right.<sup>101</sup>

The timing of Merton's reading was fortuitous. In the midst of the Catholic Church's aggiornamento (opening) to the world, the book was a prudent warning. Why the monk was so smitten by this book, however, goes beyond the immediate timing of the reading and requires at least a cursory understanding of his perspective in relationship to his more general cultural criticism.

Merton devoted a couple of articles, a lecture to his novices, and a fair portion of *Conjectures of a Guilty Bystander* to the issue of technology. The main body of his thinking regarding technology is derived, however, from fragmentary and episodic explorations in journals, letters and other writings. All of his writings reflect his search for a spiritual orientation that seeks reality and meaning amidst a disorienting century. This yearning for meaning could be exceedingly naive or excessively enthusiastic about a momentary concern. Nonetheless, Merton's insights provide valuable "clues as to how we might live and how we might view the world even when we find ourselves in circumstances quite different from his own."<sup>102</sup>

On the perimeter of his society and imbued with the values of a monastic regime, there is a peculiar freedom to assess the impact of scientific and technological advances. As a Christian, he "takes up a critical attitude to the world and its structures" and declares that the claims of the world are often fraudulent. In this prophetic resistance, each "witness" must shoulder "the 'burden' of vision that God lays upon him."<sup>103</sup>

Contrarily, the prophet in the contemporary context can not impose a spiritual 'pattern of thought' To participate in the dominant secular discourse, he or she must address religious concerns within the language and understandings of a post-Christian culture. This approach is acceptable, since a Christian assumes that this world, for better or worse, is the scene of our redemption and our creative response to God's love.<sup>104</sup>

*The Journey from the Monastery to the World*

An extended engagement with the scientific and technological culture of the external world would be advanced in Merton's social critique of his later years. The seeds of tins engagement were first sown in an internal dissent against the intrusion of technology into monastic life in the 1940's and 1950's.

The assumptions that were brought to the Abbey of Gethsemani in 1941 are not easily ascertained since the evidence is slight. A few random comments suggest some awareness of the corruptive possibilities in technology. There was admiration for Aldous Huxley's *EndsandMeans*, in which the Englishman asserted that evil means such as violence and war, even in a just cause, corrupts the user by asserting the primacy of material and animal urges. Each individual must reassert their mind and will through prayer and asceticism.<sup>105</sup>

Following his entry into the strict asceticism of a Trappist monastery, it is not surprising that his early pronouncements advocated a *fuga mundi*, a "total rejection of the business, ambitions, honors, activities of the world." Years later, he described himself in this period as having "Thoreau in one pocket, John of the Cross in another, and holding the Bible open at the apocalypse."<sup>106</sup>

Tins apocalyptic and isolationist perspective was reinforced when the monastery was besieged by a "small mechanized army of builders" in the 1940's and 1950's in order to meet the physical needs of a flood of new postulants. The intrusions of the machines often shattered the solitude of the contemplative life.<sup>107</sup>

While Merton vented personal frustrations about such intrusions, he was more concerned about the technological mentality abetted by the machines. In order to make the abbey secure and prosperous, the brothers departed for their work assignments "like a college football team taking the field." Many monks were "restless and avid for change and new projects" and after operating machinery had difficulty adjusting to silence.<sup>108</sup>

Where many machines are used in monastic work ... there can be a deadening of spirit and sensibility, a blunting of perception, a loss of awareness, a lowering of tone,

a general fatigue and lassitude, a proneness to unrest and guilt which we might be less likely to suffer if we simply went out and worked with our hands in the fields.<sup>109</sup>

The mentality fostered by continuously adopting novel and faster methods at the monastery was hostile to a consciousness of spiritual conversion where rapidity and efficiency are not possible. The contemplative life cannot be mass produced, sold or quantified. Moreover, the technical mentality advanced the false belief that proper techniques in the form of rules, regulations, etc. could achieve salvation. The success of this mentality of progress reflects a failure in the monastic ideal and a failure to build a proper understanding of the ascetic life. In its place there was a false individualism, an accommodation to the American myth of progress.

By the early 1960's Merton's heightened interest in social concerns could not ignore issues of science and technology. Increasingly, there was a distressing capitulation to the primacy of man's desire to better himself and his world by science." He feared that the "...lack of balance between technology and the spiritual life is so enormous that there is every chance of failure and accident."<sup>110111</sup>

The Mertonian cultural critique thus assumes that technology is an inevitable — but potentially dangerous — aspect of human life that can wound or even destroys its maker. The objective, therefore, must be “to save modern man from his Faustian tendencies, and not become a sorcerer's apprentice while doing so.”<sup>112</sup>

In searching for sources of insight on technology, he was frustrated within his own tradition. With a few exceptions, Merton believed the Catholic Church was inattentive to the dangers of the technological revolution in the West. The relatively few Catholics who addressed the issue of technology either completely embraced or rejected it. Finding the cupboard of tradition relatively barren, he turned to scripture. In Genesis, there appeared to be an anthropological explanation of the source of the problem. Adam's Fall, in part, is an attempt to improve the “wisdom and science” of the Garden of Eden. Humanity, through Adam, exchanged a “perfectly ordered nature elevated by the highest gifts of mystical grace for the compulsions, anxieties and weaknesses of a will left to itself...”<sup>113</sup>

---

<sup>109</sup> “Merton, *Conjectures of a Guilty Bystander* (New York: Image Bodes, 1966), 25.

<sup>110</sup> “Thomas Merton, “Technology” in *Merton Collected Essays* (Louisville: Thomas Merton Center, Bellarmine College), vol. 6, 53–55. These are notes for an oral lecture to the novices on technology. Merton, *A Search for Solitude* (August 22, 1956), 72; This idea is also partly drawn from Hannah Arendt, *Die Human Condition*, Thomas Merton, *Turning Toward The World* (June 12, 1960), Victor A. Kramer, ed., *Die Journals of Thomas Merton* (San Francisco: HarperCollins, 1996), vol. 4, 11; (August 13, 1961), 150, 151.

<sup>111</sup> “Merton, “The Christian and the World” (May, 1966) *Merton Collected Essays* (Louisville: Thomas Merton Collection, Bellarmine College), vol 6, 49; Thomas Merton, “Letter to Elbert R. Sisson” (February-March, 1962) in Thanas Merton, *Witness to Freedom*, William H. Shannon, ed. (Harcourt Brace & Co., 1994), 38.

<sup>112</sup> Merton, *Dancing in the Water of Life* (April 15, 1965), 228.

<sup>113</sup> Merton, *The New Man* (New York: Farrar, Straus & Cudahy, 1961), 110, 111.

It is worth considering Ellul's similar view of Genesis. He objected to any exegesis that justified a regime of constant technological fine tuning of the divine creation. Nature, in its preFallen state was "perfect and finished." God had finished his work and it "was good." Human beings were and should be the passive receptors of this beneficence. Human beings work within, but should not complete or expand creation. As was true in Merton's analysis, Adam participated in the fullness of the wisdom of God. This wisdom did not need to subordinate, exploit or utilize nature.<sup>114</sup>

For Merton, the consequence of the Edenic Fall and a search for a more complete "wisdom" was a devotion to a false humanism, i.e. for some ideal other than the love of God. This disobedience to God results in an "orgy of idolatry" which has polluted much of contemporary life. An idolatrous devotion to the works of humanity produced a fractured and consuming devotion to activity which never integrates the spiritual and the physical. Technology abets a relentless quest for money and status as an anodyne for the human predicament. This Pascalian "divertissement" attempts to hide the reality that such actions are idolatrous diversions and not true ends.<sup>115</sup>

Merton's Biblical and other occasional speculations on technology were complimented and extended by the insights of contemporary social critics in the early 1960's. The works of Lewis Mumford, Rachel Carson and Jacques Ellul provided some depth and breadth to an instinctive distrust of a technological mentality.<sup>116</sup>

#### *The Impact of Jacques Ellul*

Merton was introduced to Jacques Ellul in 1964 at the recommendation of his friend, Wilbur Feny, at The Center for Democratic Institutions in Santa Barbara, California. Ferry had arranged a translation of *The Technological Society*. Merton may also have heard of Ellul from another contact, Will Campbell, the editor in chief of *Kattalagete*, who was a fervent supporter of the French writer.<sup>117</sup>

Whatever the source, Merton delighted in finding a kindred spirit on technology who clarified many of his positions. Ellul's analysis of technology was "entirely convincing" with a "stamp of prophecy which so much writing on that subject seemed to lack." He immediately recommended *The Technological Society* to friends and even theologians at the Second Vatican Council.<sup>118</sup>

<sup>118</sup> Thomas Merton, "Letter to Pere Herve Chaigne" (December 28, 1964); (April 21, 1965), in Merton,

From his reading of *The Technological Society*, Merton posited the source of the contemporary cultural errors to a mentality of progress and change, a “technique” that has trumped all other ideological or institutional principles. Technique had become both an instrument and an ethic. With efficiency as the regnant ethical principle, technique imprisons humanity “in a gigantic inhumane machine.”<sup>119</sup>

The “Calvinism” of Ellul may be “too pessimistic” for Merton, but it correctly illuminated the fundamental reality that the West was being dominated by a technological mentality that has corrupted any alternative humane vision.<sup>120</sup> For example, the primacy of technique abets the contemporary delusion that each person is an autonomous creature capable of constant personal improvement. Paradoxically, the result of this quest for personal freedom through “technique” is often bondage, not liberation. Indeed, the truth is

...technology alienates those who depend on it and live by it. It deadens their human qualities and their moral perceptiveness. Gradually, everything becomes centered on the most efficient use of machines and techniques of production, and the style of life, the culture, the tempo and the manner of existence responds more and more to the needs of the technological process itself.<sup>121</sup>

The totalizing discourse of “technique” must “serve the universal effort’ (of continual technological development and expansion).” Ellul warned that “Technique has no place for the individual; the personal means nothing to it.” Assuming this mandate, the hermit will soon be an anachronism since no person can be disengaged from the manifold obligations of efficiency and progress.<sup>122</sup>

If religion and ultimate principles are circumscribed, however, then what are the ethical foundations for this brave new world? Morality becomes allegiance to progress. If more effective means of production are possible, they are deemed necessary. There is minimal reflection on the consequences or humanity of the system and “there seems to be at work a vast uncontrolled power which is leading man where he does not want to go in spite of himself...”<sup>123</sup>

Technique coarsens human relations by a movement from religious to market values. The market orientation of contemporary society presumes that human beings are “biological machines endowed with certain urges that require fulfillment.” Love becomes

<sup>123</sup> Thomas Merton, “Una Sociedad que Esta Peligrosamente Enferma” 11 *Punto Fina* (September 75,

a deal and emotional needs are fulfilled through a negotiated exchange, a *contract*. The primary desire of each consumer is to constantly upgrade the product and no transaction is final. There are always more deals and new customers. The terms of the deal are determined by shifting market values.<sup>124</sup>

We unconsciously think of ourselves as objects for sale on the market. We want to be wanted. We want to attract customers. We want to look like the kind of product that makes money. Hence, we waste a great deal of time modeling ourselves on the images presented to us by an affluent marketing society.<sup>125</sup>

This consumer version of love is problematic in other ways. The deal is often based on momentary considerations of the potential packages without any consideration of the lasting effects. It is emotional strip mining. The object is not love, but the effectiveness of the deal.<sup>126</sup>

The problem with this consumer approach is that “love is not a matter of getting what you want.” Loving is about giving; it is about sacrifice, not exchange. It is thus a form of worship which responds to “the full richness, the variety, the fecundity of living experience itself: it ‘knows’ the inner mystery of life.” The individuals participating in this mystery are transformed into a new entity through the conversion of love. This conversion confirms our deepest spiritual identity.<sup>127</sup>

The corrupting mandates of technique, exhibited in the contemporary example of marriage, have the potential for massively altering the psyche of the human species. There is the very real possibility of a serious “depersonalization of man in a mass-technological society”. Technique has increased and improved the range of options, but it has also ceded individual creativity, authentic experience, and choice to technocrats and processes. There are profound symptoms of alienation such as “boredom, emptiness, neurosis, psychoanalytic illnesses, etc.” To avoid these symptoms, humanity occupies itself with endless forms of diversion.<sup>128</sup>

The rudderless system of “technique” absorbs the individual into a mass society. The individuals drawn to this system can not accept the challenge of discovering within themselves the “spiritual power and integrity which can be called forth only by love.” They are instead molded and shaped for the ends of a greater social, economic or

political entity. In these mass movements, they are easy targets for those with wealth and power who wish to “crush and humiliate and destroy humanity”<sup>129</sup>

The computer is a perfect instrument for this manipulation. Merton’s cybernetic ideas were influenced by a paper entitled, “The Triple Revolution”, from The Center for Democratic Study. This pamphlet received in the same year as *The Technological Society* explored the social consequences of cybernation. “The Triple Revolution” contended that the cybernetic revolution would unleash immense capacities by combining thinking and action in a single machine, the computer. The result would be an almost unlimited potential for productivity.<sup>130</sup>

The computer is dangerous, because it has no independent capacity for thought or judgment and yet it can engage in very sophisticated and rapid calculation. If it is not balanced by any humanistic or religious principles, it can be employed on behalf of “technique.” Human complexity is reduced by IBM cards to labels such as “priest”, “Negro” or “Jew.” To demonstrate the danger of cybernation, Merton sketched in one of his journals a story line about the mindless efficiencies of a computer. The story is centered on the diary of a machine still operational after a nuclear apocalypse. The computer comments on the nothingness around it, but does so “brightly, busily, efficiently, in joyous and mechanical despair.

There are many other examples of broader social problems in the mass society developed by a technological hegemony. The more technique attempts to control all processes, the more nature rejects its control. The result is an unprecedented ecological disaster. Rachel Carson’s *Silent Spring* illustrates the capacity of nature to resist human exterminators through the survival of insecticide resistant insects. This situation is rendered even more destructive because preexisting ecological controls have been eliminated by insecticides.<sup>131 132</sup>

The destruction of nature is more than matched by the rising violence of the technological war. The productivity of military machinery is measured by predation and effectiveness and not by a cost/benefit analysis. Ellul asserts in *The Technological Society that*

Nothing equals the perfection of our war machines. Warships and warplanes are vastly more perfect than their counterparts in civilian life. The organization of the army—its transport, supplies, administration—is much more precise than any civilian

<sup>132</sup> Merton, “Technology”, 54; Rachel Carson, *Silent Spring* (Greenwich, Connecticut: Fawcett Crest Books, 1962), 217–231.

organization. The smallest error in the realm of war would cost countless lives and would be measured in terms of victory or defeat.<sup>133</sup>

The consequences of applying technique to the military is not lost on the monk listening to tire distant volleys of tanks at Fort Knox. On the very first day that he was reading *The Technological Society*, Merton records that a SAC (Strategic Air Command) bomber swooped near his hermitage. In frustration he heralds the plane as another dangerous example of “the technological socity!”<sup>134</sup>

The Vietnam War, however, was the greatest example of the technological sodety engaged in a process of asserting power without clear or coherent ends.

His book [*The Technological Society*] was not liked in America (naturally) but for that very reason I think there is a definite importance in his rather dark views. They are not to be neglected, for he sees an aspect of technology that others cannot or will not recognize: it does, in spite of its good elements, become the focus of grave spiritual sicknesses... To begin with, the folly of the United States in Vietnam-certainJy criminal-comes from the blind obsession with mechanical effidency to the exdusion of all else: the determination to make the war machine work, whether the results are useful or not.<sup>135</sup>

Cliches about liberty, frith and an adherence to material prosperity are advanced to disguise the “essential emptiness” ofwar aims. The embracing of this emptiness allows for the creation and spread of a “motiveless violence.” The weapons and strategies in Vietnam, such as napalm, burring villages, etc., are not the responsibility of evil sdentists, but the result of a “moral ignorance and callousness” in the very “fabric” of the technological sodety which places a priority on effidency.<sup>136</sup>

This “motiveless violence” and “moral ignorance” was personified in Lyndon Johnson’s Secretary of Defense, Robert McNamara, who was trained at Ford and was brought to Washington to effidently direct the machineries of death. He is typical of the modem bureaucrat who has “incredible technical skill and no sense of human realities.” Such men are lost in “abstractions, sentimentalities, myths, delusions.” The war is thus the product of “good ordinary people” whose “surface idealism” and “celebration of warm human values” mask an unreflective technological paradigm of capacities and progress.<sup>137</sup>

Why would a society accept the violence and dehumanization of “technique” which can end in a military or environmental catastrophe? It is a Faustian bargain which cedes

moral authority and principle for the lure of unprecedented powers. This bargain is reminiscent of Prometheus' pride. Prometheus is to be pitied, because, like Adam, he did not have to steal the knowledge. It was always there as a gift.<sup>138</sup>

The Faustian bargain is also the consequence of the modern penchant for a "systematic" application of what had formerly been an occasional capacity to create objects. This capacity becomes a new religion, the "sect" of the product. As a result of the preaching of advertisers, there results a fevered "acceleration" of this process which results in a "technological revolution." The problem with these breakthroughs is that they result "in a climate of practicality for its own sake and a contempt for value and principle." Pragmatism vitiates any moral standard, preferring intellect instead of reason. The intellect distinguishes between the possible and the impossible, while reason distinguishes between the sensible and the senseless. The only remaining questions for the triumphing intellect are "will this work" and "will it pay off?"<sup>139</sup>

If a society is guided by intellect, then it will not have the mental resources to constrain technology. Merton affirms with Ellul that "technique" will then subordinate the individual to its ends. The machinery of this system becomes autonomous while man, the "biomechanical link", is gradually eliminated. There is no compromise with this agenda and the citizenry must "take it or leave it" Most Americans do not opt out of the system because the prosperity resulting from the productivity are "signs of election," a divine blessing.<sup>140</sup>

#### *Conclusion*

It was only in 1964 and 1965 that Merton specifically references Jacques Ellul in his letters and journals. As with many of his enthusiasms, Ellul faded before new readings and issues. Still, the impact of the contact continued as many of the insights in *The Technological Society* were fully assimilated into the Mertonian perspective on technology and culture. The Frenchman provided invaluable ballast for an honest and constructive assessment of technology.

Indeed, this leavening impact can be observed in Merton's subsequent analyses of war, ecology, personal relations, computers and many other areas. The potential fecundity of the Frenchman's ideas was recognized during the initial reading of *The Technological Society*.

I am going on with Ellul's prophetic and I think very sound diagnosis of the Technological Society. How few people really face the problem! It is the most portentous and

---

<sup>138</sup> Merton, *The New Man*, 23-29.

<sup>139</sup> Merton, "Technology", 53,54; Merton, *Turning Toward the World* (July 9,1962), 230; Merton, "Answers for Hernan Lavin Cerda" in Merton, *The Courage for Truth*, 205,206; Ellul, *Die Technological Society*. 133-149 (the system of technique); 406-408 (advertising).

<sup>140</sup> Merton, "Technology", 54; Merton, *A Search for Solitude* (December 7, 1958), 234; Merton even before reading Ellul had recognized the onerous effect of the regnant ideal of process in Hannah Arendt's *The Human Condition*. Merton, *Turning Toward the World* (June 12,1960), 11; Ellul, *Die Technological Society*, 79-94.

apocalyptical thing of all, that we are caught in an automatic selfdetermining system in which man's choices have largely ceased to count.<sup>141</sup>

This enthusiasm was only slightly diluted by a recurring note of hesitation about Ellul's excessive pessimism. This hesitation was only tentatively held. In one journal entry, Merton notes that Ellul is "excessively pessimistic", but then countered in the following sentence that he was "not unreasonably" pessimistic. Merton, unlike some other readers, intuitively hesitated to label the Frenchman as only an inveterate pessimist.<sup>142</sup>

This intuition was merited. The corpus of Ellul's writings clarifies that he never wished "to maintain that technology was to be deplored." Technique provides an opportunity for either progress or destruction. Humanity can "steer", "alter" or "frustrate" this mentality. In the best scenario, technique is demythologized and new avenues of communication reopened. Each person must reassert his or her essential freedom. This objective is assisted by separating technique from ideology and decentralizing state power.<sup>143</sup>

While there are some reservations about *The Technological Society*, Merton clearly sides with Ellul against those espousing a "new holiness" of a technological cosmos. A dash of Calvinist pessimism is preferable to the excesses of an evolutionary optimism as exhibited in his fellow Catholic, Pierre Teilhard de Chardin. There is "impiety" in Teilhard's "hypostatizing of mechanical power as something to do with the Incarnation, as its fulfillment, its epiphany."<sup>144</sup>

intimately, Merton holds that the positive achievements and capacities of technology must be balanced by spiritual values. In this balanced judgment, each person should gratefully accept the positive impact of the techno-scientific world and they must also demand an accounting of the ethos of progress. This was the ultimate lesson of *The Technological Society*. The reflective individual must carefully, but firmly, reject the "universal myth that technology infallibly makes everything in every way better for everybody. It does not."<sup>145</sup>

# About the Ellul Forum

## History

*The Ellul Forum* was first published in August of 1988. Two issues are produced each year (in January and July). The goal of the *Forum* is to honor the work of Jacques Ellul by analyzing and applying his thought to aspects of our technological civilization and by carrying forward the analysis and critique of technological civilization in new directions.

The *Forum* is not intended to be a vehicle for true disciples. The whole thrust of Ellul's work has been to encourage others to think for themselves and invent their own responses to the challenges of a technological civilization. Although we do review and discuss Ellul's work, it is not our intention to turn his writings into a body of sacred literature to be endlessly dissected. The appropriate tribute to his work will be to carry forward its spirit and its agenda for the critical analysis of our technical civilization. Ellul invites us to think new thoughts and enact new ideas. To that end we invite you to submit essays on appropriate topics.

## Manuscript Submissions

Original manuscripts and manuscripts responding to essays in previous issues should be sent to Clifford Christians, Editor, *The Ellul Forum*, c/o Institute of Communications Research, University of Illinois at Urbana-Champaign, 228 Gregory Hall, Urbana, Illinois 61801. Hard copy and a computer diskette should be sent together, indicating software used, including version number. End notes should be typeset as text and end note numbers in the text itself should also be typeset as text. Length may vary from five to twenty double spaced pages. Suggestions of themes for future issues are also welcome.

## Subscriptions

To subscribe to *The Ellul Forum* for one year (two issues), send your name and address and a check made out to The Ellul Forum in the amount of \$6.00 (\$8.00 outside the U.S. The check must be drawn from the foreign branch of a U.S. Bank or be a U.S. Postal Money Order). Back issues are available at \$4.00 each.

## From the Editor

As we enter the 14<sup>th</sup> year of *The Ellul Forum*, it has the same mission as always, but now in partnership with the International Jacques Ellul Society. You can read about this new home on the back page of this issue. UES is the English-language sister-society of the Association Internationale Jacques Ellul. (See its website for full information: [www.ellul.org](http://www.ellul.org)). For those who become members of UES, *The Ellul Forum* is sent without cost. I applaud David Gill and others who have taken the leadership in forming this society.

And I am grateful to Joyce Hanks for serving as guest editor for this issue. It is immensely informative, and opens new vistas on Ellul and Charbonneau as lifelong friends and academic colleagues.

Clifford G. Christians, Editor

## About This Issue

I find it an immense privilege to serve as guest editor for the first issue of *The Ellul Forum* to publish information about the newly-formed Societe Internationale Jacques Ellul/International Jacques Ellul Society, which should be legally incorporated by the time you read this. All of us involved in the *Forum* and the Society hope that you as a reader will freely send us your comments, suggestions, and criticisms as we launch this new venture.

Bernard Charbonneau's intellectual journey with Ellul forms the core of this issue of the *Forum*. We would all do well, I think, to reflect on their friendship as a pattern for us. Neither thinker could have made his contributions without the original stimulus and continual input and criticism of the other. Their work forms a whole in ways not always recognized. In his personal reflections on what Ellul meant to him as professor and mentor, Patrick Chastenet mentions the Ellul-Charbonneau teamwork. In my article, I try to show the influence they had on each other, but also the consistent respect and honor they gave to each others' ideas and work. Jean-Louis Loubet del Bayle's article contains information not widely available in English that is foundational to their early thinking as well as to their later development.

For further information on Charbonneau, scheduled for 2001, see the published form of Daniel Cer6zuelle's final lecture in a series of six given at Colorado School of Mines during the school year 1999–2000: "Nature and Freedom: Introducing Bernard

Charbonneau" (forthcoming in *Colorado School of Mines Quarterly Review of Engineering, Science, Education and Research*, vol. 101). Thanks to Carl Mitcham for this information.

Also in this issue, note two book reviews: Carl Mitcham reviews briefly (I hope we will see a more extensive review in these pages at a later date) an important new book by Willem H. Vanderburg, *The Labyrinth of Technology* (Toronto: University of Toronto Press, 2000). And David Gill reviews my *Jacques Ellul: An Annotated Bibliography of Primary Works* (Stamford CT: JAI Press, 2000). This bibliographic volume replaces my earlier bibliography (1984) and updates (published in 1991 and 1995), as far as works by Ellul are concerned. Volume 2, the bibliography listing books, articles, etc., on Ellul, should come out in 2002 or 2003.

## About the Ellul Forum

### History & Purpose

*The Ellul Forum* has been published twice per year since August of 1988. Our goal is to analyze and apply Jacques Ellul's thought to aspects of our technological

civilization and carry forward both its sociological and theological analyses in new directions.

While *The Ellul Forum* does review and discuss Jacques Ellul, whom we consider one of the most insightful intellectuals of our era, it is not our intention to treat his writings as a body of sacred literature to be endlessly dissected. The appropriate tribute to his work is to carry forward its spirit and agenda for the critical analysis of our technical civilization. Ellul invites and provokes us to think new thoughts and enact new ideas. To that end we invite you to join the conversation in *The Ellul Forum*.

*The Ellul Forum* is an English-language publication but we are currently exploring ways of linking more fully with our francophone colleagues.

## Manuscript Submissions

Send original manuscripts (essays, responses to essays in earlier issues) to:  
Clifford Christians, Editor, *The Ellul Forum*  
Institute of Communications Research  
University of Illinois  
810 S. Wright Street, Suite 228  
Urbana, IL 61801 USA

Please send both hard copy and computer disc versions, indicating the software and operating system used (e.g., Microsoft Word for Windows 98). Type end notes as text (do not embed in the software footnote/endnote part of your program).

Essays should not exceed twenty pages, double-spaced, in length.

Manuscript submissions will only be returned if you enclose a self-addressed, adequately postaged envelope with your submission.

*The Ellul Forum* also welcomes suggestions of themes for future issues.

## Books & Reviews

**Books.** *The Ellul Forum* considers for review books (1) about Jacques Ellul, (2) significantly interacting with or dependent on Ellul's thought, or (3) exploring the range of sociological and theological issues at the heart of Ellul's work. We can not guarantee that every book submitted will actually be reviewed in *The Ellul Forum* nor are we able to return books so submitted.

**Book Reviews.** If you would like to review books for *The Ellul Forum*, please submit your vita/resume and a description of your reviewing interests.

Send all books, book reviews, and related correspondence to:

David W. Gill, Associate Editor, *The Ellul Forum*  
North Park University  
3225 W. Foster Avenue  
Chicago IL 60625 USA

## Subscriptions

A subscription to *The Ellul Forum* is included in the annual membership fee for the International Jacques Ellul Society. To become a member (and receive *The Ellul Forum*) send a check payable to "UES" in the amount of \$20 (U.S.). Checks or money orders must be drawn in U.S. funds. Send check with your name and complete address to

## Jacques Ellul and Bernard Charbonneau

by Joyce Hanks

Traditionally, when someone outlines the primary human influences on Jacques Ellul's thought, Karl Marx, Soren Kierkegaard, and Karl Barth head the list. In terms of historical influences, most scholars would find it hard to argue with the importance

of those three names. When it comes to contemporary thinkers, however, Bernard Charbonneau must receive the credit for helping Ellul see the significance of certain ideas that became central to his life's work: freedom, nature, and Technique. Ellul frequently praised Charbonneau's insights, and claimed to owe him an immense personal and intellectual debt, especially for his input during Ellul's formative years.

These two lifelong friends met in secondary school in Bordeaux, according to Ellul, but began to have serious conversations during the period when Ellul studied law at the University of Bordeaux, during the late 1920's and early 1930's. Charbonneau, something more than a year older than Ellul, had reached firm conclusions about trends in society he considered dangerous, and gradually convinced Ellul of many of his views. He and Ellul disagreed throughout the rest of their lives, however, on most spiritual issues, and continued to enjoy extremely lively debates as a result.

Along with many of their contemporaries, Charbonneau and Ellul sensed that their world had begun to come crashing down around them. Nothing seemed to work right anymore. People's driving concerns were grossly misplaced, and the means they used to achieve their ends were unthinkable. Many members of the generation coming of age in the early 1930's in France felt that the civilization they had known was rapidly coming to an end.

A typical North American view of the crises in twentieth-century France would certainly include two world wars, a depression and a cold war, but might omit the early thirties, at least until the delayed effects of the American depression began to affect European economies. In fact, however, these early years of the 1930's constituted some of the most agitated of the century for French society. Especially for the generation coming to maturity in this period, but also for many of their elders, civilization seemed to be undergoing a fundamental crisis.

If we oversimplify, we can trace almost all the apparent causes of this sense of a crisis of civilization to the "nothing works anymore" syndrome. Values seemed to have disappeared, swallowed up by encroaching materialism; confidence in the future had come to an end with World War I and its aftermath; French politics, in pendulum swings back and forth between right and left, had become so unstable that many felt ready to try something new—almost anything—to see if somehow an end could be brought to a cycle of do-nothing governments.

Although far from the Parisian center of power, Charbonneau and Ellul and some of their friends were not about to let their world die a quiet death. Disgusted with feeble national attempts to "put France back together again," they felt a need to start over from scratch. Civilization was crumbling, and would have to be reinvented, piece by piece. Everything had to change. Significantly, this view of civilization and the way society is organized, this sense of a need to reinvent the whole, remained central to Ellul's thinking for the rest of his life. For him, it was no passing notion. As late as 1981, in *Changer de revolution* (Paris: Le Seuil), Ellul spelled out in some detail how society would have to undergo fundamental, overall change if it was to avert approaching

disaster. Many issues remained constant for him, in spite of the many changes since the 1930's.

Ellul and Charbonneau were not subject to any delusions of grandeur, and harbored no dreams of bringing everything right by themselves. But they believed it was essential to analyze the situation and to begin righting what they could, where they were. Thus they called together small groups of young people in the Bordeaux area for times of reflection and discussion. Some of these groups associated for a time with the *Esprit* movement, and they had contact with *Ordre Nouveau* leaders as well (see Jean-Louis Loubet del Bayle's article elsewhere in this issue of the *Ellul Forum*).

These groups met in natural settings, in camps in southwestern France, in homes and church-related meeting places—anywhere they had the freedom to gather as a small group. By 1935, Charbonneau and Ellul had spent enormous amounts of time camping in southern France and elsewhere (a new experience for the citified Ellul!), usually taking with them other young people interested in studying societal issues. In recent years I have had the privilege of interviewing some who attended, and they attest unanimously to the powerful effect of these and subsequent camping trip discussions. The format was free and open: participants who wished to present their ideas for evening discussion were invited to inform the leaders of their topic in advance of the camp. Mornings and afternoons were often spent hiking in the Pyrenees.

Charbonneau and Ellul also wrote. Ellul's confidence in the power of the word, both spoken and written, comes through clearly in much of his subsequent work, especially *La parole humiliée* (Paris: Le Seuil, 1981; English translation, *The Humiliation of the Word*, Grand Rapids: Eerdmans, 1985). But as early as the 1930's, Ellul and Charbonneau believed it important to issue a written call to action. One of their first joint efforts produced a statement of 83 ideas intended to help other thoughtful French people in their revolt against society as constituted in the 1930's. They called it "Directives pour un manifeste personnaliste" ("Outline for a personalist manifesto," first circulated in mimeographed form in 1935 or 1936, and recently published for the first time, with notes by Patrick Troude-Chastenet, in *Revue Française d'Histoire des Idées Politiques*, no. 9,<sup>146</sup> pp. 159–177; see also Troude-Chastenet's article, "Jacques Ellul: Une jeunesse personnaliste," pp. 55–78 of the same issue). It begins with these words:

A world was organized without us. We entered it as it was beginning to lose its balance. It obeyed deep-seated laws we did not know, which were not like those of earlier Societies. No one took the trouble to ferret them out, because this world was

---

<sup>146</sup> Such rules are designed to create "affiliation" between the customer and the business. Personnel are recruited, selected, and retained in part on the basis of being willing and able to display this "positive affect." (There is, of course, a technical term for the technical effort: "Emotional labor.") D. Wagner et al., "Driving It Home: How Workplace Emotional Labor Harms Employee Home Life" 67 *Personnel Psychology* 487 (2014); J. Allen et al., "Following Display Rules in Good or Bad Faith?: Customer Orientation as a Moderator of the Display Rule-Emotional Labor Relationship." *Psychology Faculty Publications*, Paper 90 (2010).

characterized by anonymity: no one was responsible, and no one attempted to control it. Each person simply kept to the post he was assigned in this world, which came into being by itself, through the interplay of these deep-seated laws.

Thus we also found our place marked, and we were obligated to obey a kind of social determinism. All we could do was to play our role well, unconsciously assisting in the interplay of the new laws of Society. Faced with these laws, we were disarmed—not only by our ignorance, but also by the impossibility of changing this anonymous product. Humanity was completely impotent as over against Banks, the Stock Market, contracts, insurance, Hygiene, the Radio, Production, etc. We could not struggle, one person against another, as in previous societies, nor could ideas challenge one another directly.

In spite of our impotence, however, we felt the need to proclaim certain values and to incarnate certain forces...

These few lines give the flavor of Charbonneau and Ellul's sense of revolt, their utter rejection of the society in which they found themselves, and their determination to begin anew, constructing a fresh, completely different society, one that would be ready to replace the old civilization whenever it died a natural death. They felt the need to understand and oppose a long list of contemporary societal ills: lack of human freedom, lack of justice, materialism, excessive profits, idealism, fascism, communism, growth of the state, totalitarianism, propaganda, growth of cities, growing anonymity, reliance on Technique, use of human beings as means to various ends, etc.

The last paragraph of their fifteen-page "Outline" challenges the reader to participate with them in the "personalist revolution" they are undertaking in spite of themselves: "Let all those who believe they have a role to play in the coming Revolution, against a civilization that sustains its life only by means of our death, begin their inner preparation. Then, let them come and help us."

Charbonneau and Ellul did not simply sit and wait for others to join them in their effort, however. They sought out the *Esprit* movement led by Emmanuel Mounier, who shared many of their ideas. In a June 1996 interview, I asked Henriette Charbonneau, the widow of Bernard Charbonneau, why she believed Ellul and her husband found themselves so strongly attracted to the young personalist movement in *Esprit*, traveling to Paris to contact it, in spite of their strong sense of provincial identity. Her response was three-fold: because of the movement's emphasis on the person, because of its refusal to fit in with existing political categories (including its search for a "third way"), and because elsewhere in society, people were asking the wrong questions. In a separate interview, Charbonneau's son, Simon, suggested that his father felt drawn to the personalist movement because it shared his conviction that the worship of progress was essentially dehumanizing. My own view is that the personalist movement's concerns and views coincided remarkably with Ellul's and Charbonneau's, including the importance of small, independent groups meeting all over France to reflect on the current crisis and take appropriate action. Political philosophies of the time tended to negate the importance of the individual, reducing people to their role in society or

the economy. Drawing on their experience, and only secondarily on their already vast knowledge derived from reading, Charbonneau and Ellul felt moved to challenge this state of things.

On the basis of such affinities, and after initial contacts in Paris, Charbonneau and Ellul decided to affiliate with the *Esprit* movement. But important differences of emphasis, if not of belief, soon surfaced: Mounier clearly preferred to give priority to reflection, rather than action, contrary to the Bordeaux groups' insistence on attending to both. In addition, Mounier concentrated on the journal *Esprit* (first published in October 1932), the mouthpiece of his movement, rather than on the small groups spread here and there around the country. He conceived of the groups as support structures for spreading the personalist message rather than as loosely federated groups, each with its own regionally-based agenda and emphases.

Other differences contributed to the cleavage: Mounier's strong Catholicism (as opposed to Ellul's strong protestantism, and Charbonneau's reticence with regard to organized religion), and his use of the word "person" to refer to the community rather than the individual. Charbonneau and Ellul sensed that they had failed in their effort to midge the national personalist movement in the direction they believed to be essential—that of a revolution coming up from below, rather than one organized from the top down. Mounier and other personalists seemed generally to prefer a gradual, reformistic approach to a simultaneous revolution across the whole of society. Other differences moved them still farther apart: Mounier proved too nationalistic, too inclined to approve current ideologies of progress and Technique, and too authoritarian to suit Ellul and Charbonneau. Finally, in early 1937, they and the groups they sponsored in southwestern France resigned from the *Esprit* movement.

World War II of course put most of their projects on hold, along with Ellul's university teaching post, which he lost through his refusal to cooperate with the Vichy government (although the pre-war camping trips took hold again after the war). He spent the war years farming in order to feed his family, and helping Jews and others to hide and escape the German dragnet. Charbonneau did not participate actively in the Resistance, nor did he share Ellul's hope that the confused aftermath of the war might possibly offer an opportunity for the birth of a new civilization along the lines they had dreamed of. Ellul's hopes for a such a revolution following World War II were dashed when he saw how quickly old loyalties and desires for revenge took over after the Liberation.

Neither Charbonneau nor Ellul, however, gave up the revolutionary convictions they had arrived at together in the early days of their friendship. After the war, they failed in their attempts to establish a kind of "parallel university," in which students could pursue their interests without concern for bureaucratic requirements. But several strands from their 1930's proposal eventually came together in the birth of the French ecological movement. Although widespread concern for the environment in France is commonly considered to have begun after the events of May 1968, its roots can be traced to Charbonneau and Ellul in the 1930's, in their opposition to the cult of

progress, their concern over the rapid advances of technology, and their insistence on the importance of nature (see Roger Cans, “La France ’ecolo,” *Le Monde*, 10 June 1992, p. 14).

These concerns moved them to organize a local movement in opposition to the national government during the 1970’s. Charbonneau appears to have initiated their mammoth effort to resist bureaucratic designs for “developing” the Aquitaine coast as a magnet for tourism. But Ellul soon joined his friend in the struggle, uncovering and heading off unpublicized plans before they could become realities, exposing faulty “studies,” and encouraging the populace to withstand the government’s illegal maneuvers. A glance at Ellul’s articles published during the 1970’s and early 1980’s gives some idea of the effort he put into this resistance, which for him epitomized the principle he had long espoused: “think globally, act locally.” I well remember how my earliest interviews with Ellul, in 1981, were frequently interrupted by telephone calls asking for his advice and help on matters related to opposing this government project, which would have ruined the coastal environment and local fishermen, had it succeeded. Ellul consistently gave credit to the economic crisis of the early 1980’s for the defeat of the “mission” to develop the Aquitaine coast. But it remains clear that he and Charbonneau played a major role in publicizing and thwarting attempts by centralized government to outwit local citizens.

Charbonneau and Ellul’s collaboration extended to making each others’ work known, each through his own writing. The earliest Ellul review of a book by Charbonneau I have found dates from 1952, on *L’Etat* {*The State*; in *Le Monde*, 16 Dec. 1952}. Originally published privately by Charbonneau, this book got a chance in the late 1980’s for wider circulation when a Parisian publisher agreed to give it a second edition, if Ellul would simultaneously agree to allow publication of a second edition of his *La Technique*, which was sure to attract buyers. Ellul, who had never understood why Charbonneau’s books did not manage to get published and sell at least as well as his own, readily agreed. In 1974, Ellul reviews two of Charbonneau’s books, one on ecology {*Notre table rase*, Denoel, 1974) and one criticizing development {*Le systeme et le chaos*, Anthropos, 1973), and in 1980, he reviews *Jefus* (another publication by the author, 1980). Finally, Ellul publishes a 13-page “Introduction to the thought of Bernard Charbonneau,” including a fresh review of *L’Etat* {*Ouvertures*, no. 7, Jan.-March 1985).

Over the years of his editorship of *Fol et Vie* (1969–1986), Ellul repeatedly publishes articles by Charbonneau (especially the series “Chronicle of the year 2000”), and also arranges for some of his friend’s articles to see the light in *Reforme*, a Protestant weekly. For his part, Charbonneau includes Ellul in a seminar he hosted on ecology in 1972, and publishes two of Ellul’s papers in the proceedings of that meeting. When he and Edouard Kressmann found “Ecoropa,” a continent-wide environmental group, they include Ellul.

Finally, six months after Ellul’s death, Charbonneau publishes a long obituary in which he traces their friendship, their intellectual journey together, and their influence

on each other (*Combat Nature*, no. 107, Nov. 1994, pp. 36–39). Charbonneau claims that each halfway “converted” the other, Charbonneau convincing Ellul of the importance of the impact of science and technology on human freedom, Ellul helping to nudge Charbonneau away from atheism. Charbonneau says he finally realized, after the war, that his love of nature and freedom had its source in Christianity, and that this, together with Ellul’s disillusionment with certain aspects of the institutionalized church, drew them closer together. According to Charbonneau, one shares pleasure with most friends, but not the meaning of life, whereas he and Ellul shared “what gives value and content to life.” He survived Ellul by less than two years, dying on 28 April 1996, shortly before a conference in Toulouse probed his thought, his relationship with Ellul, and his legacy (see the proceedings: *Bernard Charbonneau: Une vie entiere a denoncer la grande imposture*, ed. Jacques Prades; Toulouse: Eres, 1997).

## Bernard Charbonneau and the Personalist Context in the 1930s and Beyond

By Jean-Louis Loubet del Bayle

”We must try to crush all the forms of centralization crystallized by the blind forces of Technique and money.”<sup>147</sup>

Bernard Charbonneau, “Journal intime,” *Esprit*, 1936.

”Both of us, at that time, were very attracted to politics. Bernard, for that matter, was much more advanced than I in knowledge of the social, sociological, and political structures. His criticism of society seemed to me to go further than Marx’s, and what I still find extraordinary, he made a global interpretation of society. When today I reread his writings of that period, I am stupefied by their timelessness. [...] We had formed some small groups in the southwest of France. [...] And we looked for a home for our revolutionary yearnings. The adventure of *Esprit* took place in this setting. We both went to a meeting of *Esprit* in 1934. Bernard was, by the way, extremely skeptical. To begin with, the word *esprit* seemed ambiguous to him, allowing the greatest possible misunderstanding and embracing all sorts of compromise. But we met some people there who had conducted the same criticism of modern society that we had in our little group in the southwest. It was therefore a very important encounter. [...] And all the more so because at about the same time, we met Alexandre Marc, Denis de Rougemont, and their group, *Ordre nouveau* [The New Order]. Bernard and I were between the two positions.”<sup>148</sup>

---

<sup>147</sup> [Translator’s note: originally published as “Bernard Charbonneau, le contexte personaliste des années trente et sa posterite,” in *Bernard Charbonneau: Une vie entiere a denoncer la grande imposture*, ed. Jacques Prades (Toulouse: Editions Eras, 1997; ISBN 2-86586-464-2), pp. 23–34. Translated by Joyce M. Hanks, with the permission of Jean-Louis Loubet del Bayle and Editions Eres].

<sup>148</sup> Jacques Ellul, *In Season, Out of Season: An Introduction to the Thought of Jacques Ellul*, based on interviews by Madeleine Garrigou-Lagrange, trans. Tani K. Niles (New York: Harper & Row, 1982),

These recollections of Jacques Ellul, in his book of conversations with Madeleine Garrigou-Lagrange, suggest very explicitly that we situate the development of Bernard Charbonneau's thought in these years with respect to two groups: *Esprit* and *Ordre Nouveau*. More broadly, we can trace Charbonneau's thought as it relates to what we might call the "nebula" of non-conformist groups of the 1930's or the "nebula" of the personalist movement of the 30's.

\*\*\*

Setting aside the details behind our analysis for the moment, we can distinguish three tendencies within this nebula:

1) the first group is that of the journal *Esprit*, which clusters around Emmanuel Mounier beginning in 1931. Some people today are tempted to reduce 1930's personalism to this group;

2) the second group is *Ordre Nouveau*, created through the organizational drive of Alexandre Marc. This group centered on a doctrinal corpus based primarily on the theoretical thought of Arnaud Dandieu, whose work was brutally interrupted by his death in 1933;

3) finally, at least until 1934, we must leave room for a third trend, which Mounier called the "Young Right." It consisted of young intellectuals in disagreement with *Action Française*<sup>149</sup> to some degree, who centered especially around Jean de Fabregues and Thierry Maulnier.

This outline applies to what we could call the early appearance of this movement, between 1930 and 1934. We will not embark at this point on a complete and detailed analysis of the stands taken by each of these groups, but the following rather brief reference points will serve to situate their tendencies.

First, very importantly, the thought of these groups developed within the framework of a typical complex problem which we might call a "problem of civilization." All these groups in fact shared the feeling that they were living through a "crisis of civilization"; that is, an all-encompassing crisis which called into question *all* aspects of human existence. This crisis concerned the relationship of people with each other and with their destiny, as well as with their social or natural environment.

This overall set of problems led to a certain number of consequences which we can summarize rather briefly:

1. First, an extremely *critical* attitude toward the *liberal society* of the time, in its political manifestations (a criticism of mass democracy, parliamentary government, and the party system) and in its economic forms (a criticism of capitalism and the "reign of money"). At the beginning of the thirties, this tendency especially took the form of a virulent questioning of "Americanism" and the Americanization of modern societies.

---

pp. 33–35. See also Jacques Ellul, *Jacques Ellul on Religion, Technology, and Politics: Conversations with Patrick Troude-Chastenot*, trans. Joan Mendes France (Atlanta: Scholars Press, 1999), Chapter VI

<sup>149</sup> [Translator's note: for background on *Action Française*, See Eugen Weber, *Action Française: Royalism and Reaction in Twentieth-Century France* (Stanford, CA: Stanford University Press, 1962)].

2. In addition to challenging political, economic, and social structures, this criticism also claimed to be *moral and spiritual*. The three groups mentioned above called into question a tendency they perceived in modern society toward *rationalism, productivism, and materialism*, which were becoming more and more stifling. These trends were seen as condemning people to a kind of mutilation, coming from both above and below, that reduced persons to an abstraction whose flesh-and-blood roots and spiritual personality had been amputated.

3. At the same time these groups lined up in opposition to this “established disorder,” they challenged other contemporary movements that also claimed to offer “total” answers to the crisis (namely *communism* and *fascism*), denying that such movements were truly revolutionary. They were not revolutionary because, rather than combatting the drift of modern societies toward governmental control, totalitarianism, and materialism, they exacerbated these tendencies.

4. To remedy this crisis of civilization, these groups declared that they were *revolutionary*, using and abusing what some people ironically labeled their “neither-nor-ism.” Critics used this term because these groups, in their frequent refusal of antithetical solutions, tried to find a hypothetical “third way” in most areas. As a result, they often used such slogans as “neither right nor left,” “neither communism nor capitalism,” “neither governmental control nor anarchism,” “neither individualism nor collectivism,” “neither idealism nor materialism.”

5. They wanted this revolution to be *all-encompassing*-, that is, not just an institutional revolution that would modify societal structures, particularly political and economic structures, but also a “spiritual revolution.” They wanted to transform individuals’ values and mentality—a simultaneous transformation of people and things.

6. This “total,” “spiritual” revolution was to find its foundation in a philosophical approach they called “personalist.” This reference to the idea of the “person” seemed especially appropriate as a means of challenging philosophically the idealist/materialist antithesis, and as a way to challenge the individualist/collectivist divide on political and social grounds. Over against any “monistic” materialism or collectivism, these groups intended to maintain and safeguard the spiritual and unique transcendence of the person in relation to each individual’s biological or social conditioning. At the same time, they took care not to separate the person from each one’s existence as incorporated within society and history.

7. This “personalism” especially entailed an approach to political and social problems that was characterized by very anti-statist positions, which were declared “decentralizing,” “corporatist,” or “federalist” These positions had in common an emphasis on the importance of “intermediate bodies”— *spontaneous* forms of organization in civil society, as opposed to the drift toward governmental control seen in modern societies, be they democratic or totalitarian.

8. Finally, this “personalism” expressed itself in the idea of a “personal revolution,” which implied the notion of *commitment*. Militants were expected not only to engage in an “outward” action in order to transform the world and society, but also to make

an individual effort to embody in their daily life the values and the “lifestyle” of the future “personalist” revolution.<sup>150</sup>

\*\*\*

Until 1934, the relationships between the three groups we have outlined were not idyllic, but outside observers were conscious of similarities in the stands they took. The most striking evidence of their resemblance was the October 1932 publication of a special issue of the journal *Nouvelle Revue Française* dedicated to them. In it Denis de Rougemont, who coordinated the special issue, asserted that he saw a kind of common front taking shape among these groups, resting “on a basic similarity of standpoints.”

On the other hand, however, this embryonic common front did not survive the shock of the events of February 1934 or their ensuing consequences.<sup>151</sup> Under the pressure of events, the groups had difficulty escaping their traditional habits. In particular, they experienced within their ranks the resurgence of earlier references to the division between right and left, from which they had tried to free themselves. Based on this development, we might be tempted to end their story at this point. But that would surely be a mistake, since this movement, which emerged at the very beginning of the 1930’s, as we have seen, had a posterity and later a significant ideological and intellectual influence, in France and beyond.

Nevertheless, it is not easy to analyze this influence, for two reasons that are somewhat connected. First, because their influence was based more on personal commitments and relationships and on phenomena of intellectual cross-fertilization than on the existence of institutional affiliations. Second, because this influence was therefore *diffuse*, running along different paths. In the course of these twists and turns, personalist ideas flowed together with other currents, influencing them, but also being influenced by them. In other words, we can say that the growing reach of the influence of these ideas exacted a price in return: the diluting of the identity of personalist concepts to some degree.

This particular kind of influence, which surely stemmed in part from the intellectual nature of personalism, and in part from circumstances, seems to have been well summed up by a phrase coined by Gabriel Marcel. When someone asked him about the influence of these groups, he answered that it had been “a pointillist influence”; that is to say, diffuse and partly *subterranean* in its advance.

To clarify this advance, it seems wise to take three dates as reference points: 1934, 1940, and 1945. At each of these stages, we find both growth and diluting of personalist influence, compared to what we found at the previous stage.

\*\*\*

The first reference year is 1934. During the period that follows, from 1934 to 1939, institutional reference points remain, since the previously established groups continue

---

<sup>150</sup> For more on these points, see Jean-Louis Loubet del Bayle, *Les non-conformistes des années trente: Une tentative de renouveau de la pensée politique française*, ed. (Paris: Le Seuil, 1987).

<sup>151</sup> [Translator’s note: for details, see Eugen Weber, *The Hollow Years: France in the 1930s* (New York: Norton, 1994; ISBN 0393036715)].

to exist, more or less, especially as evidenced by the continuing publication of their respective journals. But the pressure of events forces them to engage in alliances or political redefinitions that isolate them from each other. They also lose some of their originality in this way:

1. The “Young Right” continues to express itself by means of publications like *La Revue du XX siecle* and *Combat*, but it takes stands on current events that tend to relegate it to the fringes of the far right and *Action Francaise*. After 1934, it is clear that in the mind of Bernard Charbonneau or Jacques Ellul, the “Young Right” is not associated with the type of thought that *Esprit* and *Ordre Nouveau* represented for them.

2. During the same period, *Esprit* also undergoes the pressure of events. Just as the “Young Right” drifts towards the political right, the *Esprit* group is also led to become political. Beginning in 1934, it gives up its “neither right nor left” slogan, and adopts a stance of critical association with the left. This development will have repercussions on the relationship of *Esprit* with Bernard Charbonneau and his friends in 1937 and 1938.

3. Only *Ordre Nouveau* seems to have resisted this movement toward politics, but it did so at the price of a doctrinaire hardening in the expression of its positions. Thus it became increasingly isolated, and this fact is related to the disappearance of its journal in 1938.

Movement of the “Young Right” or *Esprit* toward the more traditional circles of the right or left resulted, however, in some penetration of these circles by the ideas that each of these groups continued to defend. In addition to the influence of their publications, we must take personal influence into account. For example, although *Ordre Nouveau* as a movement remained aloof from very politicized commitments, some of its leaders and rank and file became involved in efforts of the right or left to renew the terms of political debate. Thus they found themselves working alongside people of the *Esprit* movement or representatives of the “Young Right.” *Ordre Nouveau* members might be working on the left with members of Gaston Bergery’s *frontiste* movement and its weekly *La Fleche*, or with leftist Catholic publications such as *Sept* or *Temps present*. On the right, this phenomenon took place, for example, in certain circles associated with the “leagues,” around 1935 and 1936, especially with the *Croix de feu* [Fiery Cross] and its affiliate, the *Volontaires nationaux* [National Volunteers]. Also on the right, members of *Ordre Nouveau* sometimes worked within the framework of the first *Parti populaire fran ^ais* [Popular French Party], in 1936 and 1937.<sup>152</sup>

To all the above we must add a more or less identifiable influence in the study groups that continued to spring up until the beginning of World War II. Usually short-lived, these groups had rather hazy ideological identities (*La Lutte desjeunes* [Youth Struggle],

---

<sup>152</sup> [Translator’s note: for further information on these movements, see Robert Soucy, *French Fascism: The Second Wave, 1933–1939* (New Haven: Yale University Press, 1995; ISBN 0300059965), and Eugen Weber, *The Hollow Years: France in the 1930s* (New York: Norton, 1994; ISBN 0393036715)].

*L'Homme reel* [True Man], *L'Homme nouveau* [New Man], *La Justice sociale* [Social Justice], *Travail et nation* [Work and Nation], *La Croisade* [Crusade], *Communautd* [Community], *Le pays reel* [The True Country], etc.).<sup>153</sup> During these same years, at the juncture of the influence of *Esprit* and *Ordre Nouveau*, the nucleus of a movement forms around Bernard Charbonneau and Jacques Ellul. Christian Roy calls it "Gascon personalism."<sup>154</sup>

Out of these phenomena emerges a diffuse influence that Mounier will refer to rather bluntly in these terms in 1939: "Several new words that we now see floating around just about everywhere." In this way, the defense of the "eminent dignity of the human person" and the struggle for "spiritual values" became some of the watchwords in the antifascist struggle, whereas the nationalistic leagues and the *Parti populaire frangais* of Jacques Doriot appropriated such slogans as "neither right nor left" and "neither communism nor capitalism." In brief, the upshot of these years can be seen in the mutual permeation at the fringes of the traditional right and left, and in a somewhat influential presence in the more or less successfull attempts of both right and left to modernize the terms of political debate. Another result was a certain number of international contacts between *Esprit* and *Ordre Nouveau*.

\*\*\*

France's collapse when attacked by Germany in 1940 redealt the cards, so that personalist influence could be found both on the side of the Vichy government and with the Resistance. Two significant reasons explain each of these associations. On the one hand, we see the generalized desire to break with the society of the Third Republic. On the other, a generational phenomenon appears: the thirty-five and forty year olds, who had previously been the "youth of the 1930's," begin to move into leadership positions. This generation had been more or less influenced by the currents of ideas that surfaced in the pre-war period.

In the Vichy government, mainly during the early period,<sup>155</sup> we can see traces of personalist influence in the circles close to the secretariats of Youth and of Information. Sometimes, living under the same governmental "roof," amidst much conflict, one could find former adherents of the "Young Right," *Ordre Nouveau*, and *Esprit*. They might be thrown together in the movement of the *Compagnons de France* [Companions of France], in the cultural association *Jeune France* [Young France], working on the journal *Iddes* [Ideas], or in the schools for leaders, like Uriage.<sup>156</sup> But in such situa-

<sup>155</sup> [Translator's note: from 1940 to 1942].

<sup>156</sup> [Translator's note: for background on tire *Compagnons de France*, see Eugen Weber, *The Hollow Years: France in the 1930s* (New York: Norton, 1994; ISBN 0393036715); for Uriage, see Tony Judt, *Past Imperfect: French Intellectuals, 1944-1956* (Berkeley: University of California Press, 1992; ISBN 0520079213)].

tions the influence was based on a personalism warped by communitarianism and the authoritarian tendencies of the Vichy regime.<sup>157</sup>

In the Resistance, the first networks to organize were often no kinder than the partisans of the Vichy regime in their analysis of what they considered the decay in French society during the years preceding Germany's easy victory in 1940. For this reason, the Resistance also experienced the reappearance of themes and men from the personalist groups of the thirties. This happened, for instance, in Henri Frenay's movement "Combat," in *Defense de la France* [Defense of France], *Liberer et federer* [Liberate and Federate], and in the movement *Temoignage chretien* [Christian Testimony].<sup>158</sup> In these contexts, personalism was induced to compromise with the principles of the republican tradition, and became tinged with a degree of socialist and marxist influence.

Besides those who made such direct, instant commitments, there was the additional influence of those who moved somewhat rapidly from one tendency to the other, from Vichy to the Resistance. Mounier furnishes us with an example, when he ends up back in "Combat" after a very brief interlude with Vichy. Or the School of Uriage, which swung over to the Resistance in 1942. We should note that Uriage was a milieu where personalist influence touched young men who would launch their careers after the war, such as Hubert Beuve-Mery, the future founder of *Le Monde*, and Paul Delouvrier, an important figure in the upper echelons of the Gaullist administration of the Fifth Republic.<sup>159</sup>

Our third period opens in 1945. After the Liberation, the most easily spotted heirs of personalism are divided into two branches. The first is formed by the European federalist movements, which favor both the idea of a united Europe and the federalizing of the European nation-states. Many of the driving forces behind the 1930's groups (such as Robert Aron, Daniel Rops, Jean de Fabregues, Alexandre Marc, Thierry Maulnier and Denis de Rougemont), come back together again after the war. First they come across each other in the *Union europeenne des federalistes* [European Union of Federalists], and later in the context of the *Mouvement federaliste francais* [French Federalist Movement] or the *Mouvement federaliste europeen* [European Federalist Movement].<sup>160</sup> It is important to note that these bodies brought in men who in some cases came directly from the Resistance, whereas others had more or less flirted with some of the circles related to Vichy that we have mentioned earlier. It is also within this European framework that Jacques Ellul and Denis de Rougemont started a network of ecological study groups in the 1970's, related to the association *Ecoreupa* [Ecoropa, acronym for "Ecological Europe"].

<sup>159</sup> See B. Comte, *Une utopie combattante: L'école des cadres d'Uriage* (Paris: Fayard, 1991).

<sup>160</sup> See A. Greilsammer, *Les mouvements fédéralistes en France de 1945 à 1974* (Nice: Presses d'Europe, 1975); *Du personnalisme au fédéralisme européen: En hommage à Denis de Rougemont* (Geneva: Editions du Centre Europe & de la Culture, 1989).

The second branch of the heirs of personalism after 1945 is the *Esprit* movement. Although some former members of *Esprit* were to be found as individuals in the European context, the journal itself, with Emmanuel Mounier, remained aloof, especially because of the anti-communist tendency which commitment to Europe seemed to entail. This stance calls into question the personalist identity of *Esprit* during the immediate post-war period, in spite of what Michel Winock has called its “philocommunism,”<sup>161</sup> a term that applied to the journal primarily between 1946 and 1949. In spite of this reservation, it is nevertheless true that *Esprit* was one of the great intellectual journals of the period just after the war, and that it has remained so to some degree until the present. Thus it constitutes one of the contemporary elements of the legacy of 1930’s personalism, even if its identity as a personalist journal has been somewhat diluted as a result of the ups and downs it has suffered in recent decades.

Along with the *Esprit* networks, we must also mention the importance of the *Vie Nouvelle* [New Life] movement, which had connections with *Esprit*. Standing where social and religious commitment meet, *Vie Nouvelle* was founded by Andre Cruizat, who had come up through the Boy Scouts and the Vichy-related movement of the *Compagnons de France*. Both networks, *Esprit* and *Vie Nouvelle*, contributed to the continued presence of personalism in the intellectual left and in left-leaning Catholicism.<sup>162</sup>

We can consider that beyond this first circle, and through it, but also arriving by means of other routes, certain elements of personalist philosophy also had a rather profound influence on the overall landscape of French politics. In this way personalism has been one of the intellectual reference points of the popular republican movement, and thus of the Christian Democratic tendency, since the end of World War II. Etienne Borne, the intellectual spokesman for this movement, has never hidden his philosophical closeness to *Esprit*. Through some of its themes (participation, for example), and, more widely, through some of its social aspects, Gaullism also has some relation to personalism. This is all the more true considering that some intellectuals close to General de Gaulle came from the circle of *Ordre Nouveau* (such as J. Chauveau, A. Ollivier, and Daniel Rops, who was one of De Gaulle’s first editors with Pion publishers). And before the war, De Gaulle himself was a reader of *Temps present*, the weekly that replaced *Sept* in 1937. There was a certain social liberalism, allied with the Christian Democratic movement in the centrist tendency of the Fifth Republic, in which we can also recognize some relationship with personalist inspiration.

Finally, through the role it played in the development of left-leaning Catholicism, personalist influence had an impact on the evolution of the French political left. This influence took two different routes: on the one hand, it came through trade unionism,

---

<sup>161</sup> Michel Winock, *Histoire politique de la revue “Esprit” (1930–1950)* (Paris: Le Seuil, 1975; ISBN 2020026791); 2<sup>nd</sup> ed., *“Esprit”: Des intellectuels dans la cite, 1930–1950* (Paris: Le Semi, 1996; ISBN 2020282224).

<sup>162</sup> *Le personnalisme d’Emmanuel Mounier, hier et demain. Pour un cinquantenaire* (Paris: Le Seuil, 1985).

with the evolution of the *Confederation Française des Travailleurs Chrétiens* (CFTC), and then with the creation of the *Confédération Française Démocratique du Travail* (CFDT). On the other hand, personalism had an impact by means of politics, through certain clubs for political thought, such as Jacques Delors' *Citoyen 60*,<sup>163</sup> and through certain circles within the *Parti Socialiste Unifié* (PSU). Going on from there, we can consider that personalist influence contributed to the emergence of what the 1980's called the "Second Left."<sup>164</sup> Personalism also surely contributed to softening up the statist Jacobinism of the traditional left, by emphasizing the importance of such themes as decentralization, community life, and joint worker-management control.

This personalist diaspora spans the period from just after World War II until the present. We can illustrate it somewhat anecdotally by means of two quotations. The first comes from Charles Millon, who was at the time leader of the representatives of the UDF party (*Union pour la démocratie française*) in the National Assembly. He declared the following, in an interview with *Le Monde*, speaking of what he called the "personalist family": "I am a child of this family, and I believe all the more strongly that it is the path to follow at this time when our society is adrift"<sup>165</sup> At about the same time, we find in a book by J. F. Kesler on *La gauche dissidente et le nouveau parti socialiste* ["The dissident left and the new socialist party"], a statement by Michel Rocard saying that he owed the bulk of his early intellectual formation to three influences: Marx, Jacques Pirenne, and Meunier.<sup>166</sup>

To finish this survey, we must also mention the influence of personalism on what we could call "conciliar Catholicism," through French personalist intermediaries, but also through personalism's international influence. For example, the first post-communist head of government in Poland, Tadeusz Mazowiecki, was an avowed personalist. Furthermore, he contributed to the spread of personalist ideas with his journal *Wiercz*, before he became Solidarity's adviser.<sup>167</sup> We can also note that this Polish influence poses a question that goes well beyond Poland, namely that of the relationship of personalism with the political and social thought of Pope John Paul II, who was a personal friend of Tadeusz Mazowiecki when he was Archbishop of Cracow.<sup>168</sup> More generally, we may add that in the course of the last fifty years, international references to personalism have been found in various and sometimes surprising contexts, from the Diem regime in South Vietnam to the Bathist party in the Middle East, from the

\*\*\*

This personalist influence has been genuine, but it has also been a *diffuse* influence, diluted through its coexistence with other currents of thought. We can wonder about the reasons for this influence, and may be tempted to find two basic causes for the attraction people have found in it:

1. The first seems to lie in the "problem of civilization" we spoke of earlier; that is, in personalism's comprehensive approach, which tends to consider humanity in all dimensions of its existence. Humanity is called into question by the evolution of modern societies, and not just by some political or economic dimension. If there is a crisis of modernity, it concerns our entire personality.

2. The second is more ambiguous, and seems to stem from what we can call the temptation of the "third way"; that is to say, from the concern to escape from the constraints of choices between two alternatives. Such alternatives, experienced as mutilating, have often seemed to be imposed by the realities of twentieth-century life: left/right, capitalism/communism, individualism/collectivism, idealism/materialism.

In this second perspective, part of personalism's appeal has probably been its ability to attain a synthesis beyond the usual pairs of options. It has allowed people to satisfy and reconcile aspirations that seemed at first to be contradictory. But here lies the problematic question of whether this dimension of synthesis has not sometimes amounted to a syncretistic dimension, the expression of a certain eclecticism.

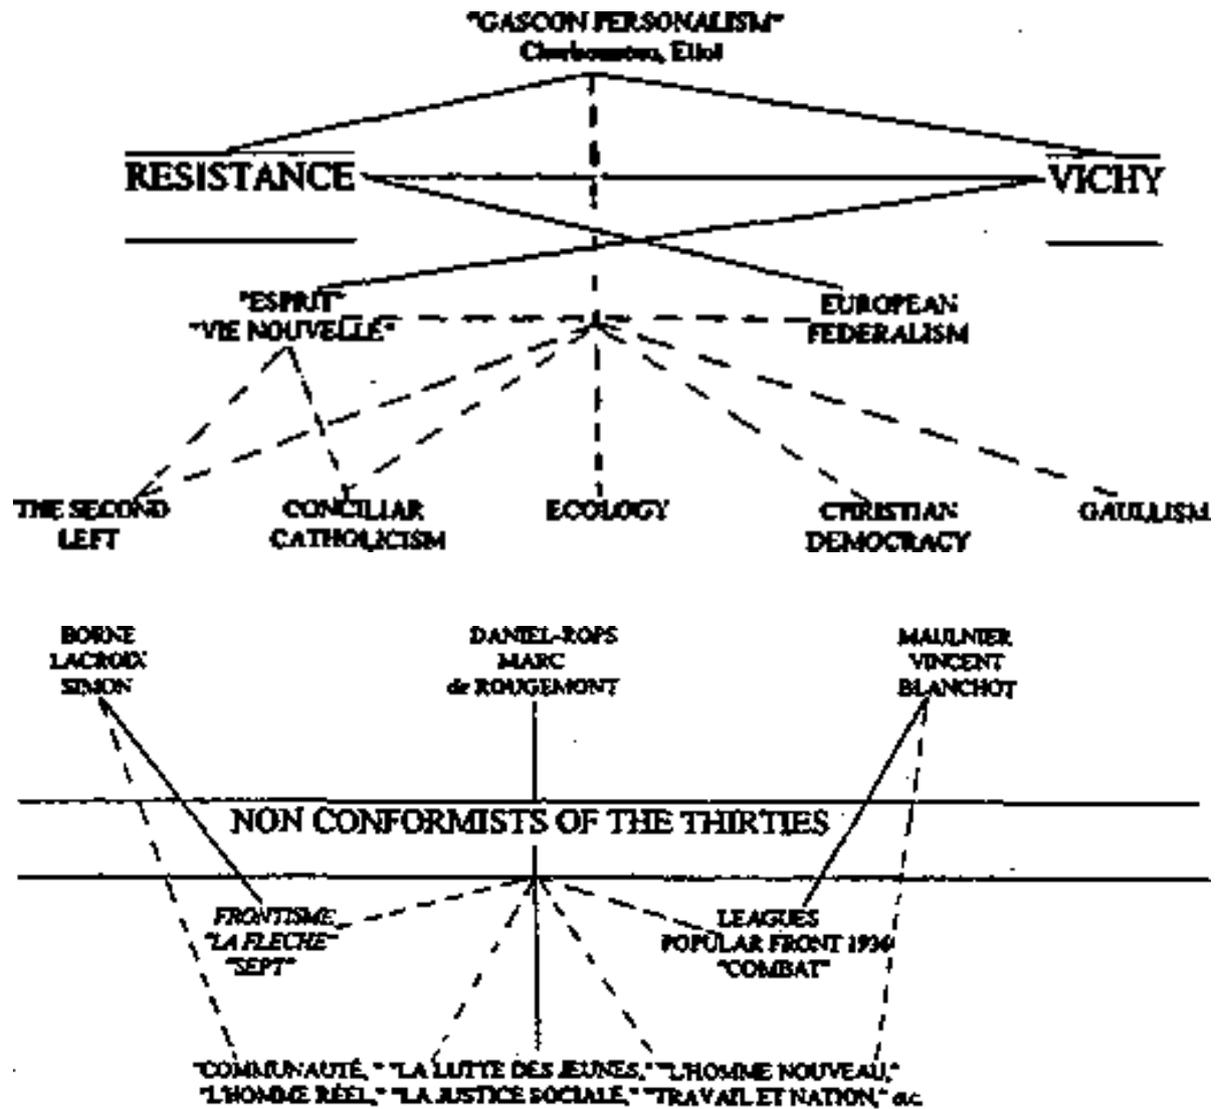

This question seems all the more justifiable in the light of what we have observed, which we might call the "plasticity" or "polymorphism" of personalism: its ability to adapt on occasion to contexts with considerably different characteristics and orientations. This may lead some to wonder if we should use the singular or the plural: whether we should speak of "personalism" or "personalisms." The philosopher Jacques Maritain asked this question right after World War II, and history since that time has not diminished its relevance: "Nothing would be farther from the truth than to speak of 'personalism' as a school or doctrine. It is a phenomenon stemming from reaction against conflicting errors, an inevitably mixed phenomenon. There is no personalist doctrine—just personalist aspirations. There are at least a dozen personalist doctrines, and often all they have in common is the word "person." Some of these doctrines lean toward one of the opposing errors between which they place themselves. There are personalisms with a Proudhonian slant, personalisms tending towards dictatorship, and personalisms tilted towards anarchism."<sup>169</sup>

Even if we do not necessarily share all the points of view expressed by Maritain in this quotation, his words offer a particularly interesting basis for reflection on the extent and the ambiguities of the later influence of the personalism of the 1930's, as

---

<sup>169</sup> Jacques Maritain, *La personne et le bien commun* (Paris: Desclée de Brouwer, 1946), pp. 8–9.

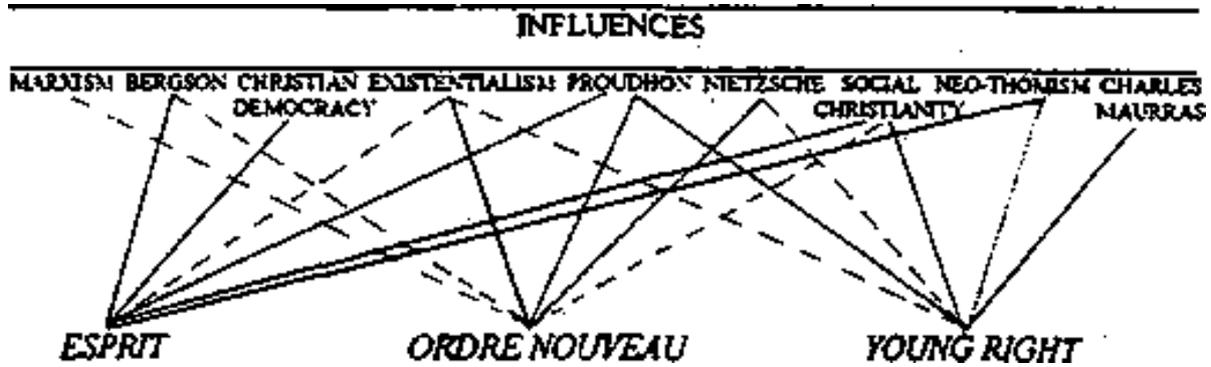

we have examined it, especially when we add to Maritain's various "personalisms" the "ecological personalism" or the "personalist ecology" of Bernard Charbonneau.

## Patrick Chastenet Remembers Jacques Ellul

"It is not possible to build a just society with unjust means. It is impossible to create a free society based on slavery. These assertions lie at the heart of my reasoning."<sup>170</sup>

<sup>170</sup> [Translator's note: these originally untitled lines were written shortly after Ellul's death in 1994, and intended for inclusion in the *Ellul Forum's* commemorative issue (no. 13, July 1994), but were inadvertently not included. Since that time, the author has received the coveted "Agregation" degree,

- Patrick Troude-Chastenet, *Jacques Ellul on Religion, Technology and Politics: Conversations with Patrick Troiwe-Chastenet*, trans. Joan Mendes France; Atlanta: Scholars Press, 1998, p. 28.

My first encounter with Jacques Ellul must date back to the fall of 1974, on the Talence campus of the University of Bordeaux. I had just turned 19 years old, and I was a second-year student at the Institute of Political Studies of Bordeaux at the University. Right from the first meeting of Ellul's course, my fellow students and I were struck not only by the size of the class, but also by its unusual makeup. The "lower hall" was full to overflowing (having no other way of distinguishing the Montesquieu Auditorium from the Siegfried Auditorium, we had taken to calling them the "lower hall" and the "upper hall." That terminology caught on, and is still in use).

About thirty American students, easily recognizable by their backpacks (not yet common on French campuses at that stage), crowded around to hear him. In the first rows, we could also see a blind man using a tape recorder to record the master's words<sup>171</sup>, and several austere gentlemen who looked like pastors who would have seemed more at home attending classes for senior citizens.

Even before hearing him speak, we said to each other under our breath that we were going to be dealing with an unusual professor. I was not yet acquainted with the work of Ernst Junger, but later, I could not help seeing something of the Ellul I had known in this character in *Eumeswil* (1977): "Vigo is one of those prophets who enjoy a wider reputation abroad than in their own country. His name is a byword among those in the know, from Beirut to Uppsala, provoking secret anger among his colleagues. And explaining why listeners come from afar are always found at his lectures.

The first course of Ellul's that I attended was called "The Philosophy and Thought of Karl Marx." I have just looked up my notes from those lectures for the purpose of writing these lines. As I reread them, I cannot find a trace of one of his remarks, deeply engraved on my memory, which went more or less like this: "It does not really matter

having moved up the academic ladder from Assistant Professor ("Maitre de Conferences").

<sup>171</sup> Only Willem Vanderburg could say if he was the person in question.

to me if you are marxist or anti-marxist. In either case, I want you to be what you are for good reasons; that is, knowing what you believe and why.”

A concern for objectivity should be the most basic rule for every teacher. And we know, at least since Max Weber, that we must distinguish value judgments from judgments of fact, and that the scholar’s vocation differs from that of the politician. But in the area of the social sciences, especially in the 1970’s, university lecterns sometimes turned into veritable political grandstands.

In what context did Ellul expound Marx’s thought? Valery Giscard d’Estaing had just begun his seven-year presidential term. The political right was in power. But although the Socialist candidate Francois Mitterrand had been beaten again, the political left held sway over people’s minds. Most intellectuals’ thought was leftist, and marxism and its various permutations dominated the social sciences as a whole. On the local scene, the Law School of Bordeaux remained very conservative, whereas the majority of the students in “Sciences-Po” (the Institute of Political Science) had leftist convictions.

As for me, I had several Trotskyite friends, but I was moving more in a situationalist and libertarian direction. I will always remember the disappointment of a fellow student, a Maoist leader of the PCMLF (Marxist-Leninist Communist Party of France), as we left one of Ellul’s lectures. Although this student had admired for weeks our Wednesday professor’s presentation of marxist philosophy, suddenly he charged Ellul with betraying Marx. But I had not noticed any change of direction in Ellul’s tone or in his method.

Was this professor objective? As much as a person can be when treating such a subject Beginning in 1977,<sup>1</sup> I had cause to re-read, and to learn, the content of this course. I had been given the responsibility of assisting Ellul by giving some of the oral examinations his students had to take. Between file two of us, we had 250 students to evaluate. At the same time, I had the job of instructing the American students who took courses at the Institute of Political Studies. In this role I supervised about 30 students every year from universities in California and Colorado. It was my job to explain Ellul’s course to them, and I found real pleasure in doing this usually unrewarding job of tutoring.

It goes without saying that in both the oral examinations of French students and my instruction of the Americans, I made it a point of honor to respect scrupulously the vision of Marx given by the author of *The Betrayal of the West* (French, 1975; English, 1978), even if my own ideas at that time were somewhat different. Ellul, for example, considered that Lenin was not the successor of Marx, but that Marx was the precursor of Lenin. Was it “objective” to assert that Lenin was already contained within Marx, or to claim that if Hitler had won the war, marxism would have disappeared off the face of the earth?

As for the rest, Ellul demonstrated admirably that marxist thought constituted a veritable system, from which it was impossible to detach any one of its elements without the risk of distorting it. Thus it was impossible to separate its method and its

content, or to try to eliminate materialism from the theory as a whole. A warning to Christians who find the author of *Das Kapital* appealing!

Ellul avoided speaking explicitly of this in his classes, but at the time, both the Communist Party's "politics of the outstretched hand" and the Church of Liberation Theology were in fashion.. Bookstores were inundated with books of encounters between the principal communist officials (such as the ineffable Georges Marchais) and Christian leaders enamoured of dialogue with the officially recognized defenders of all the damned of the earth.

At the end of the 1970's, within this context, when part of the Church was flirting with the Communist Party, Ellul published *Jesus and Marx* (French, 1979; English, 1988). In this book, Ellul again went against the stream, as he showed the radical incompatibility between the Biblical message and marxist doctrine. For Ellul, both the Old and New Testaments lead one to dispute all forms of political power. For this reason, as he wrote in his books (although he never said so in his classes), one should choose Bakunin over Marx.

Ellul's various stands, always unusual, finally had the Parisian intelligentsia placing him in the category of "rightist thinkers," the abomination of abominations on any campus! I was unaware at the time that starting in the mid-1930's, with Bernard Charbonneau, and prompted by "Gascon" leanings within Personalism, Ellul had refused to submit to the very reductionist and very French distinction between left and right.

Rereading just now my notes from another of Ellul's courses, "Marx's Successors" (1977-78), I reflect on the fact that 20 years have passed, and that I am now Assistant Professor at Montesquieu University and at the Institute of Political Studies of Bordeaux, where I teach political science. Which of my present students would be capable of handling the examination questions I used to assign to Ellul's students: revolution and strategy in Bernstein; economic and tactical criticisms addressed by Kautsky to Bernstein; Rosa Luxembour's explanation of the economics of imperialism; Lenin's responses to the criticisms formulated by Kautsky?

Although it enjoyed hegemony for a long period in French universities, marxism had already fallen from fashion when it failed to survive the implosion of the Soviet regime. Ellul, however, taught me to distinguish the "vulgarization" of Marx's thought from the work of Karl Marx, and, above all, I believe, an ethic that consists of presenting ideas one does not agree with as faithfully as possible . This is a matter of "scientific" honesty of the most elementary sort, but primarily a question of respecting the freedom of the individual that lies dormant within each student.

Going well beyond marxism, Ellul also taught me to be on my guard against any thought structured in the form of a system. Freedom of thought implies giving up all forms of intellectual complacency.

In a more personal vein, Ellul only increased my distrust, which has grown over the years, concerning all forms of political power. He believed in relativizing politics; that is, in refusing just as vigorously both the political illusion and its symmetrical opposite: apolitical smugness. Relativizing politics means recognizing the adversary in

my enemy, and the neighbor in my adversary. In other words, putting politics back where it belongs.

Much later, I began to read the theological side of Ellul's work, in preparation for writing my book *Lire Ellul: Introduction a l'oeuvre socio-politique de Jacques Ellul*.<sup>172</sup> I discovered that, although perhaps I could not be *leaven*, or a bit of that *salt of the earth* the Scriptures speak of, I could at least act as the "sentry" called for by the prophet Ezekiel. In this way, at my humble level, I could join with the long cohort of watchmen magnificently exemplified by another . famous Aquitanian: Etienne de la Boetie. The "watchman" is the one who lives not isolated, but *at a distance* from the struggles of the City.

Hanks); “‘Good’ Development and Its Mirages” (Serge LaTouche); review of David Lovekin, *Technique, Discourse and Consciousness: An Introduction to the Philosophy of Jacques Ellul* (Timothy Casey).

#9 July 1992 Ellul on Communications Technology

”Ellul on the Need for Symbolism” (J. Wesley Baker); “Where Mass Media Abound, the Word Abounds Greater Still: Reflections on Robert Cole’s Study of Children, Movies and Ethics” (Darrell J. Fasching); “Communication Theory in Ellul’s Sociology” (Clifford G. Christians); review of Quentin J. Schultze, Roy M. Anker, et al, *Dancing in the Dark: Youth, Popular Culture and the Electronic Media* (Philip Lee); review of William F. Fore, *Mythmakers: Gospel, Culture, and the Media* (Mark Fackler); review of Robert Abelman and Stewart M. Hoover, eds., *Religious Television: Controversies and Conclusions* (Gudm. Gjelsten); abstract of J. Wesley Baker’s 1991 Ph.D. dissertation, *The Hope of Intervention: A Rhetorical Analysis of the English Translations of the Writings of Jacques Ellul-*, abstract of Lawson Liat-Ho Lau’s 1991

Ph.D. dissertation, *The Technological City: 1984 in Singapore*; “Bibliographic Notes on Theology and Technology” (Carl Mitcham).

#8 January 1992 Ivan Illich’s Theology of Technology

”Health as One’s Own Responsibility: No, Thank you!” (Ivan Illich); “Against Health: An Interview with Ivan Illich”; “Reflections On ‘Health As One’s Own Responsibility’” (Lee Hoinacki); “The Teddy Berracks” (David B. Schwartz); “Posthumous Longevity” and “Toward A PostClerical Church” (Ivan Illich); “Dear Kelly’ Memo” (Lee Hoinacki).

#7 July 1991 Jacques Ellul as a Theologian for Catholics

”In Memory of Mme Yvette Ellul” (Joyce Hanks); review of Jacques Ellul, *The Technological Bluff* (Nicola Hoggard Creegan); review of Jacques Ellul, *Reason for Being: A Meditation on Ecclesiastes* (Daniel Clendenin); review of Gene L. Davenport, *Into the Darkness: Discipleship in the Sermon on the Mount* (Darrell J. Fasching); “Jacques Ellul and the Catholic Worker of the Next Century—*Therefore Choose Life*” (Jeff Dietrich); “Jacques Ellul: A Catholic Worker Vision of the Culture” (Katherine Temple); “Bom Again Catholic Workers: A Conversation Between Jeff Dietrich and Katherine Temple”; “Jacques Ellul and Thomas Merton on Technique” (Gene L. Davenport); review of Jeffrey Stout, *Ethics After Babel* (David Werther).

#6 November 1990 Faith and Wealth in a Technological Civilization

Review of Jacques Ellul, *Money and Power* (Daniel Clendenin); review of Max L. Stackhouse, *Public Theology and Political Economy: Christian Stewardship in Modern Society* (Daniel Heimbach); review of

Justo L. Gonzalez, *Faith and Wealth* (Michael Novak); “Some Reflections on Faith and Wealth” (Justo L. Gonzalez); “Luke 14:33 and the Normativity of Dispossession” (Thomas E. Schmidt);

5 June 1990 The Utopian Theology of Gabriel Vahanian

Review of Robert Wuthnow, *The Struggle for America’s Soul: Evangelicals, Liberals, and Secularism* (David L. Russell); “Gabriel Vahanian’s ‘Utopian Connection’—Speaking of God, the Human and Technology” (Darrell J. Fasching); review of Gabriel Vahanian, *God and Utopia: The Church in a Technological Civilization* (Lonnie D. Kliever); review of Gabriel Vahanian, *Dieu anonyme, ou la peur des mots* (Philippe Aubert); “Theology of Culture: Tillich’s Quest for a New Religious Paradigm” (Gabriel Vahanian); “Law and Ethics in Ellul’s Theology” (Sylvain Dujancourt); “Notes on the Catholic Church and Technology” (Sergio Silva); “Bibliographic Notes on Theology and Technology” (Carl Mitcham and Jim Grote).

4 November 1989 Judaism & Christianity after Auschwitz & Hiroshima

Review of Jacques Ellul, *Un Chretien pour Israel* (Darrell J. Fasching); review of Jacques Ellul, *What I Believe* (Daniel J. Lewis); review of Jacques Ellul, *Le bluff technologique* (Gabriel Vahanian); “After Auschwitz and Hiroshima: Judaism and Christianity in a Technological Civilization” (Darrell J. Fasching); “On Christians, Jews and the Law” (Katherine Temple); “Vemard Eller’s Response to Katherine Temple”; “Michael Bauman’s Response to Jacques Ellul”; “Bibliographic Notes on Theology and Technology” (Carl Mitcham and Jim Grote).

3 June 1989 Eller and Ellul on Christian Anarchy

"Be Reconciled" (Jacques Ellul); "Response to Michael Bauman" (Jacques Ellul); "The Paradox of Anarchism and Christianity" (Jacques Ellul); "Ellul's Crowning Achievement" (Hu Elz); "Christian Anarchy" (Vemard Eller); review of Jacques Ellul *Anarchic et christianisme* and Vemard Eller *Christian Anarchy* (Katherine Temple); review of Jacques Ellul, *Jesus and Marx* (Daniel Clendenin); Bibliographic report on some recent British discussions regarding Christianity and technology" (Carl Mitcham).

2 November 1988 Ellul's Universalist Eschatology

Review of Willem Vanderburg, *The Growth of Minds and Cultures* (Katherine Temple); Review of Jacques Ellul, *Jesus and Marx* (Michael Bauman); "The Importance of Eschatology for Ellul's Ethics and Soteriology: A Response to Darrell Fasching" (Ken Morris); "A Second Forum Response to Fasching" (Marva J. Dawn); "Fasching's Reply to Morris and Dawn"; "Bibliographic Notes on Theology and Technology" (Carl Mitcham and Jim Grote).

1 August 1988 Debut Issue

"Welcome" (Darrell Fasching); Review of Daniel B. Clendenin, *Theological Method in Jacques Ellul* (Marva Dawn); "Freedom and Universal Salvation: Ellul and Origen"; "The Ethical Importance of Universal Salvation" (Darrell Fasching); "A Visit with Jacques Ellul" (Marva Dawn).

# Book Reviews

## **The Labyrinth of Technology by Willem H. Vanderburg, Toronto: University of Toronto Press, 2000**

Willem H. Vanderburg's extensive (476 + x pages) new volume has just appeared. In his own words, he has been influenced by the "assistance of many people, including my French mentor, the late Jacques Ellul, who taught me the dialectical method for doing interdisciplinary research" (p. xvi). In an analysis that has extensive implications for, especially, engineering education, Vanderburg examines preventive approaches to technological problems (part one); mapping the ecology of technology, upon which he argues the development of preventive approaches depends (parts two and three); and applying preventive approaches (part four). According to Vanderburg, "modern civilization is lost in a labyrinth of technology created by its social and environmental implications." His effort to map this terrain is thus an effort to find a way out.

Reviewed by Carl Mitcham, Professor of Liberal Arts, Colorado School of Mines, Golden, Colorado.

## **Jacques Ellul: An Annotated Bibliography of Primary Works by Joyce Main *Hanks***

*Research in Philosophy and Technology*, Supplement 5. Stamford CT: JAI Press, 2000. xiii., 206 pp.

This is the fourth major bibliographic work on Jacques Ellul published by Joyce Main Hanks (Professor of French, University of Scranton). The earlier volumes were also published in the *Research in*

*Philosophy and Technology* series (1984, 1991, 1995). The current effort is confined to Jacques Ellul's own works (books, articles, reviews, interviews) and omits the secondary literature about him.

With the corrections and additions Joyce Hanks has made to this version, it is the most accurate and comprehensive bibliography of Ellul's work ever available. The listing by itself is a monumental achievement of tenacity and detective work in several languages. But this volume is further enriched by a fine three-page biography Of Ellul

and by Hanks's helpful annotations on all fifty of Ellul's books and most of his thousand articles and reviews. Because of these annotations all Ellul scholars and students will find great pleasure in browsing each page. One learns a great deal about Ellul just from this volume. The annotated bibliography runs to 140 pages (not 99 pages as the errant table of contents suggests). It is followed by a thirty page "select subject index" and a thirty-three-page list of Ellul's publications in alphabetical order.

I thought I found a mistake and an omission when I first looked over this book—and that would hardly be a shock in view of the mass of details on its pages. However, when I checked again, more carefully, I discovered the bibliography was right after all. The only mistake I could find was on the table of contents pagination!

Bibliographic work like this is not very glamorous and does not make any best-seller lists but its value to scholars and students is impossible to praise sufficiently. We are once again, more than ever, indebted to Joyce Main Hanks for a wonderful effort and to Carl Mitcham and *Research in Philosophy and Technology* for their support.

## International Jacques Ellul Society

### *Berkeley, California*

#### ☒ **an association of scholars and friends**

The UES links together scholars and friends of various specializations, vocations, backgrounds, and nations, who share a common interest in the legacy of Jacques Ellul (1912–94), long time professor at the University of Bordeaux. Our three objectives are (1) to preserve and disseminate his literary and intellectual heritage, (2) to extend his penetrating social critique, especially concerning technology, and (3) to extend his theological and ethical research with its special emphases on hope and freedom.

The DES is the English-language sister-society' of the French-language *Association Internationale Jacques Ellul*. Together, we maintain a web site—[www.ellul.org](http://www.ellul.org)—as our common communications link for announcements and news of interest to our members, and as a resource for anyone with an interest in Jacques Ellul.

From time to time we announce meetings, lectures, and conferences (small or large, formal or informal, sponsored by the DES/ADE or by others) related to Ellul and his concerns.

#### ☒ **preserving a legacy**

Jacques Ellul published more than fifty books and nearly a thousand articles and reviews. Our mission is to preserve and make broadly available this great legacy by

- (1) completing the publication of Ellul's work in French (several works remain),
- (2) completing the English translation of his work and encouraging translations in other languages,

(3) republishing (in electronic as well as print formats) works that are no longer available,

(4) publishing a critical edition of Ellul's complete works in both French and English,

(5) maintaining a current, comprehensive bibliography of works by and about Ellul,

(6) organizing and making available the audio and video recordings of Ellul's lectures and interviews,

(7) making available an accurate biography of Ellul.

**☒ extending a critique**

Jacques Ellul is best known around the world for his penetrating critique of "la technique"—of the character and impact of technology on our world. The forces and institutions which shape 21<sup>st</sup> century life and which pose the greatest challenges to the health and future of humanity and nature were Ellul's critical interest. Our mission is to encourage continued research and critical thought in this tradition, with a special focus on technology but also including politics, economics, globalization, education, art, language, communication, religion, and popular culture. The UES is not an antiquarian society interested only in a reverent inspection of Jacques Ellul's works; it is, in the spirit of Ellul himself, a movement to encourage the extension of a serious critique of technological civilization.

**☒ researching a hope**

Jacques Ellul was not just a social critic but a theologian and activist in church and community. Because of his profound faith in the "Wholly Other" breaking into human history, he refused to become a pessimist about the predominantly negative social trends he studied. He insisted that he was above all a man of hope and freedom and searched for signs of hope in Holy Scripture and in history. Our mission is to encourage continued theological and ethical research on hope and freedom, with a special focus on the Jewish and Christian Scriptures.

**Join the IJES**

Anyone and everyone is welcome to become an DES member— on two conditions:

(1) agreement with the society's statement of purpose

(2) payment of the annual membership dues

— if your address is *in the USA* send a check for the annual dues of \$20 U.S..

— if your address is *outside the USA*, send a bank check or money order drawn in US dollars for the amount of \$25

Send your payment with your name, complete address including postal code, and *your e-mail address if you wish* to be on our DES news e-mail distribution list

DES membership automatically confers membership in the French ADE.

**Contact the UES**

**e-mail: UES@ellul.org**

**post:** DES, Box 1033, Berkeley CA 94701

**Support the UES**

The major publication projects which the DES is undertaking require substantial funding. The DES pursues such funding from charitable foundations, grant-making

organizations, and publishers, but this is a long and unpredictable process. However, with the generous support of DES members and friends, we can achieve a great deal together. Please contact us by e-mail or letter if you would like more detailed information on our budget, plans, and giving opportunities.

The DES is a 501(c)(3) non-profit corporation. All gifts are taxdeductible for U.S. taxpayers.

## **UES Activities**

Please forward any news or announcements relevant to the members and friends of the DES. We want to do whatever we can to promote the discussion of Jacques Ellul and the extension of his critical interests.

We encourage the formation of study groups and sections of scholarly societies devoted to Ellul studies. We are currently exploring the best strategies for organizing annual gatherings in North America to discuss Ellul's sociology and his theology and ethics.

With the Association Internationale Jacques Ellul we are currently exploring how best to organize a series of international colloquia.

## **UES Leadership**

The International Jacques Ellul Society and L'Association Internationale Jacques Ellul have been founded by a group of long-time students, scholars, and friends of Jacques Ellul, with the counsel and support of Jean, Yves, and Dominique Ellul, and as a French-American collaboration.

## From the Editor

Ellul is often listed with the great intellectuals of the 20<sup>th</sup> century in which he lived. As an indication of his stature, he was debated by the leading academics of his era. Ellul disdained elitism, for himself and others. He disapproved of cultic attention. However, he did engage the theorists of his time—social philosophers, political scientists, economists, theologians, and historians. He knew that ideas matter, and held his own with integrity and passion.

This issue of *The Ellul Forum* sets Ellul in the intellectual context of his contemporaries. Antonio Gramsci continues to be widely cited in the scholarly literature. This issue compares his notions of hegemony and civil society with Ellul's *la technique* and the technological order. Calvin Troup argues for including Ellul among the academics who dominate courses in rhetorical theory and criticism at today's universities—Jacques Derrida, Michel Foucault, Frederic Jameson, Jean-Francois Lyotard, Jurgen Habermas and others. Troup challenges his colleagues to take Ellul seriously even though he questions many of the sacred assumptions of their academic heroes.

This issue only introduces a tiny fraction of the important issues at stake. How Ellul's ideas compare with and contradict those of other influential scholars has a host of important dimensions. Over its 14 years, the *Forum* has dealt with many of them and will continue to do so in the future. In the process, the *Forum* recognizes that Ellul himself worked in a large public arena not confined to academics. As described in Issue #25, Ellul's "defining orientation was public life as a whole. His thinking was geared to citizens, church members and consumers." He had a heart for everyday life and the non-specialist. His prophetic voice engaged the community.

And this larger framework we capture in the *Forum's* subtitle, "For the Critique of Technological Civilization." Coming to grips with the technological society and living distinctively within it is our common and public obligation as citizens. It requires collaborative work, international and cross-cultural understanding, and interdisciplinary thinking. The *Forum* is not limited to Ellul but a roundtable on the challenges of the technological order.

Clifford G. Christians, Editor

Henriette Charbonneau, the widow of Bernard Charbonneau, kindly offers two corrections for the article "Jacques Ellul and Bernard Charbonneau" by Joyce Hanks in the January 2001 issue (326) of the *Forum*. First, contrary to Hanks' statement that Charbonneau and Ellul broke with the personalist movement "in early 1937" (p. 4), Mme.

Charbonneau correctly states that this rift took place after the 28 July-1 August 1937 personalist congress held in Jouy-en-Josas. She adds that Ellul and Charbonneau began to consider their project of a “free university” during the summer of 1938 rather than after World War II (also on p. 4 of Hanks’ article).

## About the. Ellul forum

### History & Purpose

*The Ellul Forum* has been published twice per year since August of 1988. Our goal is to analyze and apply Jacques Ellul’s thought to aspects of our technological civilization and carry forward both his sociological and theological analyses in new directions.

While *The Ellul Forum* does review and discuss Jacques Ellul, whom we consider one of the most insightful intellectuals of our era, it is not our intention to treat his writings as a body of sacred literature to be endlessly dissected. The appropriate tribute to his work is to carry forward its spirit and agenda for the critical analysis of our technical civilization. Ellul invites and provokes us to think new thoughts and enact new ideas. To that end we invite you to join the conversation in *The Ellul Forum*.

*The Ellul Forum* is an English-language publication but we are currently exploring ways of linking more fully with our francophone colleagues.

### Manuscript Submissions

Send original manuscripts (essays, responses to essays in earlier issues) to:

Clifford Christians, Editor, *The Ellul Forum*  
Institute of Communications Research  
University of Illinois  
810 S. Wright Street, Suite 228  
Urbana, IL 61801 USA

Please send both hard copy and computer disc versions, indicating the software and operating system used (e.g., Microsoft Word for Windows 98). Type end notes as text (do not embed in the software footnote/endnote part of your program).

Essays should not exceed twenty pages, double-spaced, in length.

Manuscript submissions will only be returned if you enclose a self-addressed, adequately postaged envelope with your submission.

*The Ellul Forum* also welcomes suggestions of themes for future issues.

## Books & Reviews

**Books.** *The Ellul Forum* considers for review books (1) about Jacques Ellul, (2) significantly interacting with or dependent on Ellul's thought, or (3) exploring the range of sociological and theological issues at the heart of Ellul's work. We can not guarantee that every book submitted will actually be reviewed in *The Ellul Forum* nor are we able to return books so submitted.

**Book Reviews.** If you would like to review books for *The Ellul Forum*, please submit your vita/resume and a description of your reviewing interests.

Send all books, book reviews, and related correspondence to:

David W. Gill, Associate Editor, *The Ellul Forum*  
363-62<sup>nd</sup> Street  
Oakland, CA 94618

## Subscriptions

A subscription to *The Ellul Forum* is included in the annual membership fee for the International Jacques Ellul Society. To become a member (and receive *The Ellul Forum*) send a check payable to "IJES" in the amount of \$20 (U.S.). Checks or money orders must be drawn in U.S. funds. Send check with your name and complete address to

UES  
P.O. Box 1033  
Berkeley CA 94701 USA

### Back Issues

Back issues of *The Ellul Forum* are available for \$5.00 each, postage included. Send your requests, with your complete mailing address and a check or money order drawn in U.S. funds for the correct amount, to

UES  
P.O. Box 1033  
Berkeley CA 94701 USA

## Ellul versus Gramsci

By Clifford Christians

Radical scholarship today appeals often to Antonio Gramsci. His ideological hegemony is widely considered a framework of unusual power. For many, Gramsci sets the standard for critical theory and propaganda studies.

But this essay contradicts the conventional wisdom by contending that Jacques Ellul has actually given the totalizing view its most sophisticated formulation. While likewise critical, covert in inflection, and all encompassing in his assumptions, Ellul centers the problem on the technological order and thereby offers a more surehanded direction for social change.

*Gramsci's Civil Society*

The workers' movement in northern Italy failed after World War I. No insurrection against Fascism developed among the laboring class of western Europe, and Antonio Gramsci had a prison lifetime to account for the defeat.

During student days at the University of Turin he joined the Italian Socialist Party, and wrote for the socialist newspapers *Il Grido del Popolo* and *Avanti*. In 1919 he founded the weekly journal, *L'Ordine Nuovo*, interpreting the Russian Revolution for

Italian factory councils and aiming to build working class power.<sup>1</sup> He developed into a formidable commentator whose influence extended far beyond the ranks of the party itself. From 1922–24 he collaborated with the Comintern in Moscow and Vienna, all the while believing the urban and rural poor would unite in rebellion against capitalism.<sup>2</sup> Upon his election to the Italian Parliament in 1924, Gramsci returned home, took control of the Italian Communist Party, wrested it from sectarianism, and molded the ICP toward a mass-based revolutionary force.

But by 1926 the Fascist police had conquered, sentencing him to twenty years behind bars. Doctors had earlier attempted to cure his malformed spine by suspending him for long periods from a ceiling beam; but the treatment left him hunchbacked, and barely five feet tall. Gramsci suffered with nervous disorders and precarious health. He never met his second son born soon after his jail term began, and his wife's nervous breakdown destroyed family contact forever. Prison censorship and the unavailability of books or archival resources crippled him too. Only when Mussolini intervened was he moved terminally ill to the Formia Clinic midway between Rome and Naples where he died a few months later of a cerebral hemorrhage at forty six. Meanwhile, his sister-in-law Tatiana Schucht and cellmate Trombetti had smuggled out thirty-three notebooks via diplomatic bag to Moscow — 2,848 handwritten pages, published posthumously in seven volumes with arguments impacted on each other, but guaranteeing that this national anti-Fascist hero had become an original Marxist theoretician of historic importance.

To account for the absence of a revolutionary consciousness, Gramsci centered on the profound political transformations of monopoly capitalism. Politics can no longer be understood as a specialized and separate activity, but as a struggle for power permeating social life on all levels. A narrow, legal-institutional state apparatus coercing the masses is inverted in Gramsci's political theory to a protracted "war of position" over occupying civil society as a whole (Gramsci, 1971, pp. 108–10, 229–39).<sup>3</sup> And the instrument for mobilizing public support into a power bloc Gramsci identified as ideological hegemony. He launched the concept already before imprisonment, but brought it to precision in the isolation of his cell:

What we can do, for the moment, is to fix two major superstructure! levels: the one that can be called "civil society," that is the ensemble of organisms commonly called private, and that of "political society" or the State. These two levels correspond on the

---

<sup>1</sup> Turin was a sophisticated laboratory for Gramsci's writing and analysis during this period. It was home of Italy's most advanced industry—armored cars, airplanes, and Fiat tractors. More than *Vi* million of its population were factory workers in 1918, and the city was rocked with labor revolts between 1912 and 1920.

<sup>2</sup> Q. Hoare and G. N. Smith (Gramsci, 1971, p. xlvii) conclude: "Until more is known about Gramsci's life and activity in Moscow (May 1922 — November 1923) and Vienna (December 1923 — May 1924), it will not be possible to reconstruct fully his political biography for these crucial years."

<sup>3</sup> For elaboration, see Gramsci's (1971, pp. 206–276) essay "State and Civil Society." For a review of the ambiguities in his use of this distinction, see Anderson (1977). For detailed autobiographical accounts, see Ellul (1981b, 1982, 1989).

one hand to the function of hegemony which the dominant group exercises throughout society and on the other hand to that of direct domination or command exercised through the State and juridical government (Gramsci, 1971, p. 12).

By *Prison Notebook 4* hegemony assumes its classic Gramscian dimension as a fusion of economic, moral, political, and economic objectives through ideological struggle. A hegemonic class, in other words, absorbs the value systems of other social groups into its own. Previous ideological terrain is transformed when a common worldview emerges as the “unifying principle for a new collective will” (Mouffe, 1979, p. 191). “Politics thereby ceases to be conceived as a separate specialist activity and becomes a dimension which is present in all fields of human activity ... There is not one aspect of human experience which escapes politics and this extends as far as commonsense” (Mouffe, 1979, p. 201). A nation-state is not fundamentally a political order but a social system.

Gramsci defines ideology as a conception of the world “which becomes a cultural movement, a ‘religion,’ a ‘faith,’” implicit in all “manifestations of individual and collective life” and producing practical activity. Given this definition, “the problem is that of preserving the ideological unity of the entire social bloc which that unity serves to cement and unify” (Gramsci, 1971, p. 328). And Gramsci insists that a power bloc in advanced capitalism does not merely impose its ruling ideology on the subservient. An extensive struggle is essential to forging control, “first in the ethical field and then in that of politics proper” (Gramsci, 1971, p. 333). Whereas coercion may be the province of the State apparatus, hegemony in civil society is an ongoing and historically contingent process of containment, of mobilizing diverse ideological elements into a coherent discourse and common set of practices. For Gramsci, in its normative meaning, hegemony is the “political, intellectual and moral leadership of the working class over all anti-capitalist sectors” (Mouffe, 1971, p. 15). But that normative sense cannot obscure historically contingent and unpredictable outcomes in constituting social power.

Hegemony is not the always, ever-present, guaranteed position of dominance of a ruling class or a dominant social bloc. Rather it represents the struggle of such a bloc to articulate a variety of social and ideological practices within a “structure-in-dominance” so as to achieve a dominant social alliance to exert leadership, direction and authority over a whole social formation, including over the dominated classes within it (Grossberg and Slack, p. 89).

The road to hegemony is creating consensus by a revolutionary dialectic of disarticulation and rearticulation — coopting rival hegemonic principles and colonizing the popular consciousness into a controlling worldview. Intellectuals who organize the web of beliefs which infuse civil society are particularly crucial as a social force, and intellectuals were Gramsci’s (1971, p. 5–23) starting point in the prison notebooks. Through intellectuals, broadly understood, the ideology that wins the war of position becomes exercised through all available hegemonic apparatuses: schools, churches, the media, art and architecture, the legal system, economic activity, and even the name of the streets (Mouffe, 1971, p. 187). The hegemony of a particular historical bloc occurs

when there is intellectual and moral unity on the fundamental questions that drive the struggle, thus creating the dominance of “a fundamental social group over a series of subordinate groups” and constituting an organic popular unity for the life of the state as a whole (Gramsci, 1971, p. 182).

In recapturing a non-instrumental and permeating politics, Gramsci contributes substantially to theoretical debates in Marxism. Orthodox Marxism defines ideology as false consciousness directly determined by relative class position. Rather than reducing hegemony to inculcation by an already constituted class power, Gramsci understands it as a terrain on which social groups acquire consciousness of themselves. Thus he rejects a unified ideological subject — for example, “the proletarian with its ‘correct’ revolutionary thoughts or blacks with their already guaranteed anti-racist consciousness.” He favors instead “a multifaceted... complex, fragmentary and contradictory conception” of pluralistic selves (Hall, 1986, p. 22). Moreover, in the Marxist tradition Gramsci develops a total and radical critique of a mechanistic, shrunken economism in which a society’s economic foundations alone are determining. The Second International presumed that capitalism’s collapse followed inevitably from economic contradictions; believing in economism, Gramsci concluded, was the root cause of the massive worker defeats.

As an alternative to such reductionism in which political and ideological factors become epiphenomena, Gramsci substitutes a philosophy of praxis. In hegemony a national popular culture becomes dominant, with ideological superstructures primary and the economy determinant in the last instance. Likewise, Gramsci’s hegemonic collective renounces a strict corporatist conception of “class-belonging aimed at cultivating pure proletarian values.” As a result, “Gramsci has left us much more than a theory of politics: in fact his legacy to us is a new conception of socialism” (Mouffe, 1971, p. 15). He was a political journalist lacking the general theoretical scope of Emile Durkheim or Max Weber, but without him “Marxist theory cannot adequately explain the complex social phenomena which we encounter in the modern world” (Hall, 1986, p. 6). Gramsci is a major starting point for critical theorists who integrate the culture-politics relationship. His enlarged state combining a system of coercion plus consent has opened the way for understanding how power operates in the social order. Chantal Mouffe (1971, p. 188) insists that the *Prison Notebooks* anticipated Althusser: “The material nature of ideology, its existence as the necessary level of all social formations and its function as the producer of subjects are all implicit in Gramsci.” Mouffe’s post-Marxist theorizing with Ernesto Laclau (1985, p. 4) “goes far beyond Gramsci,” yet they rank Gramsci “of capital importance” nonetheless. Raymond Williams (1977, pp. 108–14) devotes a chapter to him. *Policing the Crisis*, a key text in the history of cultural studies, represents Stuart Hall’s return to Gramsci. As Hall characterizes it, cultural studies had been struggling over two dominant paradigms, the one semiotic or intersubjective (represented by Raymond Williams) and the other structuralist in character (represented principally by Althusser). Gramsci releases us from a dead-end debate, enabling us to identify power conceptually while deeply grounding it in con-

crete historical conditions. As a practical consequence for Hall, Gramsci's hegemony brings ethnicity and gender decisively into our analysis. Todd Gitlin (1979) has organized his understanding of entertainment and news around Gramsci. John Fiske (1987, pp. 40–41) quarrels with some of the applications, but does not question hegemony's conceptual power.

In order to critique Gramsci adequately, this expanded body of work with all its trajectories ought to be included in the assessment. But given his seminal role and in order to deepen the argument, I concentrate on Gramsci's framework itself. He is clearly a heavyweight in Marxist political theory regarding the modern state. Every serious critical theory of public opinion formation finds hegemony inescapable. But Gramsci also serves as a philosopher of social transformation, and in this arena I find his framework fundamentally flawed.

For all of his sophistication in integrating power, politics, and discourse, Gramsci includes no philosophy or sociology of technology. His social theory does not radically account for the impact of twenty-first century technology on ideological formation.<sup>4</sup> And it is this lacuna that Jacques Ellul fills in a distinctive manner without sacrificing political vibrancy.

#### *Ellul's Technocratic Culture*

Ellul's political activism matches the intensity of Antonio Gramsci. He participated briefly in the Spanish Civil War, joined the Paris riots against the Fascists, and openly opposed the Vichy government in 1940 until he was dismissed from his professoriate at the University of Strasbourg. During World War II, along with Camus, Malraux, and Sartre, he was a leader in the French Resistance, operating from a small farm outside Paris. After liberation, Ellul worked for three years as the deputy mayor of Bordeaux concentrating on commerce and public works. On the national scene, he spearheaded a group of intellectuals who forced the French government to withdraw from Algeria.

While Gramsci's crusades landed him in prison, Ellul spent the bulk of his career (1947–1980) as a Professor in the Institute of Political Studies at the University of Bordeaux — specializing in the history and sociology of institutions, Marxism, Roman law, technology, and propaganda. Ellul's assessment of political involvement becomes integrated with his historical and theoretical analyses of social institutions, leading him to a different conclusion about twentieth century culture than Gramsci's. Instead of the latter's civil society, Ellul focused on technocratic culture.

Ellul developed the argument that the technological phenomenon decisively defines contemporary life. We can no longer divide society into capitalists and workers as Gramsci did; the phenomenon is completely different and more abstract. We now have technological organizations on one side and all humanity on the other — the former driven by necessity and human beings demanding freedom. Ellul insisted that we read the world in which we live, not through the window of capitalist structures, but in

---

<sup>4</sup> For the general failure of ideology theory to anticipate fully modern technology, see Gouldner (1976).

terms of the technological order. From Ellul's perspective, we have now entered a technological civilization. Technology is not merely one more arena for philosophers and sociologists to investigate, but a new foundation for understanding the self, human institutions, and ultimate reality. A society is technological, Ellul argues, not because of its machines, but from the pursuit of efficient techniques in every area of human endeavor. Unlike previous eras where techniques are constrained within a larger complex of social values, the pervasiveness and sophistication of modern techniques reorganize society to conform to their demand for efficiency. Scientific techniques are applied not just to nature, but to social organizations and our understanding of personhood. Civilizations across history have engaged in technical activities and produced technological products, but modern society has sacralized the genius behind machines and uncritically allowed its power to infect not just industry, engineering, and business but also politics, education, the church, labor unions, and international relations.

Ellul's concern is not primarily with machines and tools but with the spirit of machineness that underlies them. In his view, modern society is so beguiled by technical productivity that it unconsciously reconstructs all social institutions on this model. Because of their extraordinary prowess, modern techniques tend to subordinate all other, less efficient values to their requirements. As a result, all appearance of change created by techniques remains fundamentally an illusion. In this sense, for Ellul, finding freedom in a technological civilization is in essence a religious problem. Unable to establish a meaningful life outside the artificial ambience of a technological culture, human beings place their ultimate hope in it. Seeing no other source of security, and failing to recognize the illusoriness of their technical freedom, they become slaves to the exacting determinations of efficiency. The transition to a technological society is for Ellul (1989, pp. 134–5; cf. 1980) more fundamental than anything the human race has experienced over the last five thousand years.

#### *Critical Consciousness*

The absence of a critical consciousness is the enemy for Ellul as it was for Gramsci. But rather than resistance in the face of political coercion and consensus, Ellul centers on defying the technological imperative. He is not calling for opposition to technological products, but to technicism. He is not a medievalist, a neo-luddite, or an anti-technologist. The issue is the psycho-political imaginary universe which humans constitute and reinforce. A critical consciousness entails that we desacralize technology, and we free our language from technological metaphors. Those empowered with a critical consciousness condemn technicism. The essential condition for social transformation, is destroying technicism as unacceptable worship of a modern god. The empowered resist the idolatrous attitudes, intentions, and aims that drive technology forward. They condemn unqualified worship of the technological enterprise for its own sake. Against an overweening technocratic mystique that ridicules the spiritual as invalid, a culture must be developed in which questions of meaning, life's purpose, and moral values predominate. To demythologize technology effectively means to sever at its root the blind faith that technological prowess will lead to one achievement after

another. It drives home the contrast between a technology touted as ~ humanity's best hope for the future and one of limited means to achieve particular ends, between a technology that becomes an end in itself and an instrument in achieving chosen ends. Ellul (1964, p. vi) castigates the mind-set that is "committed to the quest for continually improved means to carelessly examined ends." He opposes the powerful phenomenon of machineness as a dehumanizing force and exposes it as contrary to the norms of love and justice.

Technicism in politics insists on direct participation as the catchword for effective government. Through sophisticated communications technology, everyone can share in the decisionmaking process and finally achieve in practice the popular democracy long heralded in theory. Electronic hardware, we are assured, can provide accounts so detailed, swift, rich and accurate that at last people will bring their "intelligence to bear on resolving the central problems of society" (Westin, 1971, p. 1). In that spirit, technicians anticipate a vast decentralization of political authority made possible by mechanized information networks. By contrast, Ellul regards direct democracy—in all its variations—as a dangerous delusion which actually resolves nothing since the fundamental issue lies elsewhere, embedded in the nature of technology itself.

Being liberated from technicism is not merely a question of message, but of the medium as well. There can be no isolated, neutral understandings of technology as though it exists in a presuppositionless vacuum. Instead technology proceeds out of our whole human experience and is directed by our ultimate **commitments**. Technology is value-laden, the product of our primordial valuing activities as human beings. It not only arises as technology interacts with political and social factors, but emerges from the basic fact that technological objects are unique, not universal. Any technological instrument embodies particular values which by definition give to this artifact properties that other artifacts do not possess.

Gramsci's social theory, sharpened in the teeth of Italian Fascism, generates a rich conceptual capital: hegemony, traditional and organic intellectuals, civil society, passive revolution, historical bloc, and transformism. These motifs invigorate socialist theory across a broad spectrum; but they are still centered on political transformation within monopoly capitalism. On the other hand, Ellul's technocratic culture, situated in terms of the broad patterns of history, forces advanced industrialism to the forefront. Even if Fascist hegemony were replaced by progressive democracy, Ellul (1971) would argue, or Stalinism by enlightened socialism, without a radical reversal of the technicism in those political orders, the revolution is illusory. And in the process of orienting the debate around technology, Ellul builds up a repertoire of crucial distinctions about technology and its role in the body politic.

Ellul is thus more detailed and precise than Gramsci regarding the enemy identified by a critical consciousness. And while both emphasize resistance, Gramsci's opposition involves an ongoing struggle without guarantees. Ellul's resistance is as stridently oppositional but aims in a normative direction. One label for Ellul's (1969) strategy is radical nonviolence, a careful decision to withhold some vital part of self, a con-

scientific exclusion of all physical and psychological violence. The critical matter for Ellul, as it was for Max Weber (Mayer, 1943, p. 128), is withstanding a pre-emption, protecting oneself from “the parcelling out of his soul, from the supreme mastery of the bureaucratic way of life.” Ellul does not advocate ideological or pietistic pacifism, but our taking deliberate exception to today’s monolithic apparatus. He (1967b, p. 221) does not recommend that we abandon all interest in the *res publica*, “but on the contrary... achieve it by another route, come to grips with it again in a different way, on a more real level, and in a decisive contest.” Pre-emption is the initial phase, not the conclusion.

Ellul places himself in that powerful tradition of moral philosophy, self-realization ethics, where effectiveness emerges only from opinions fundamentally altered, lives nourished deeply at a fresh source, reordered patterns not under *la technique*’s tutelage. However, Ellul is very careful here. Our choices are always existential ones, their precise content freely determined at each new moment of decision. Any prefabricated programs may simply be another realm of necessity which prevents our liberation. Thus Ellul does not construct a fixed model, always insisting instead that we think out for ourselves the meaning of our involvement in the modern world.

Certainly we should be concerned about cataloguing various forms of oppressive power — sexual, economic, psychological, and political. However, Ellul continually asks how we can empower people instead. He understands how easily we make people cannon fodder for our own self-styled revolutions. He deals with personal issues, but not at the expense of structural ones. He merely insists that we must first fill our own political space before our revolutionary action can mean anything. Ellul presents a theory of non-oppressive praxis, but it is systemic, too. The question is how we develop a process of social transformation that is totally opposite in character from *la technique*.

The revolutionary axis is at the interstices of institutions. While most social institutions are oppressive and warrant confrontation, Ellul believes that for any groundswell to continue we must build a new culture. The revolution can only be nurtured in the open spaces, that is, within voluntary associations, among families and neighborhoods and tribes not completely bureaucratized by the political and economic elite. It is futile to presume an entire restructuring of the political-industrial system in the absence of vital insurgency at the interstices. Only an infrastructure autonomous from dominant power will develop the appropriate conscientization — as long as it is not seen merely in negative terms as retreat or a hostile barricade. Ellul is concerned that sub-groups be agents of activism and not just centers of contemplation or protest. To argue against action at the interstices rather than at the institutional center, Ellul believes, entails fullscale destruction and bloodshed, and may even be a misguided primitivism.

#### *Conclusion*

A cultural shift is evident currently in the humanities and social sciences, though the axis on which a theory of culture turns remains in dispute. Is it hegemony or technicism? Or could it be ideology (Stuart Hall), meaning (Clifford Geertz), the public

(James Carey), symbol (Ernst Cassirer), moral order (Robert Wuthnow), the dialogic (Paulo Freire), liminality (Bernard Lonergan), or interpolated self (Louis Althusser)? While not defending technology as the central problematic of culture vis-a-vis its competitors, this essay at least exemplifies how cultural theory with a technological epicenter operates.

My intention has not been to treat Gramsci and Ellul in evenhanded terms. I indicate Gramsci's central influence among those with a totalizing view, but do not elaborate on the ways his disciples have applied and patched up the theory. Nor should I be misunderstood regarding Ellul's legacy. His weaknesses in detail and with sub-units are obvious, and I have shared elsewhere in articulating the criticisms myself.

Yet I have entered enough of the argument to indicate how the technological imperative can be integrated into our theories of culture. The failure to do so becomes particularly obvious when a solution is articulated. I believe Ellul gives us a solid framework within which to plot our future course. Gramsci indicates the contradictions in capitalist societies, while Ellul brings all technological cultures — capitalist and socialist — under the same urgency to confront technicism. Gramsci saw his task as reconstructing political philosophy. In Ellul's scheme, our compelling need at present is not merely a political theory but a theory of technology which encompasses politics in its philosophical purview.

It would be appropriate to conclude that these two paradigms represent antinomies in the sense that both sides can be justified independently as internally consistent. No mighty fulcrum or grand experiment stands outside of them to render a final judgment. Yet Ellul's focus on technicism—in contrast to Gramsci's ellipsis between economism and statism—avoids three crucial weaknesses.

First, Gramsci leaves us trapped in the distributive fallacy. He places intellectuals in the vanguard, though Gramsci's broad scope includes all clearthinking humans across the social spectrum and not merely the academic bourgeoisie. But such admirers as Alastair Davidson (1977, pp. 254–5) have noted an increasing elitism in Gramsci's appeals, especially after 1930. On the other hand, Ellul (1965, pp. xvi-xvii, 110) maintained that intellectuals are even a readier mark for sociological propaganda than ordinary citizens. Their self-styled superior discernment beguiles them into the subtle trap of *la technique*. Nothing in Gramsci's social philosophy precludes it from the distributive fallacy where one strategic slice of the social structure represents the whole. Even though for him every normal person is rational—hence an intellectual, broadly speaking—only some of them actually have an intellectual function. What in Gramsci's ideological hegemony guarantees that his enlightened cadre, or, if not them, a revolutionary working class, or a persecuted minority, or a panoply of protestors—violent and benign—are not made universal by a faulty logic of substitution?

Second, Ellul brings the media technology literature into our calculus, while Gramsci unwittingly sides with those who presume technology is neutral, merely a tool which can be applied rightly or wrongly. I find that definition deficient in scope; technology is a cultural activity driven by our ultimate commitments (Christians, 1989). If tech-

nology does not exist in blank space but arises from our worldviews, then an ethical framework becomes a self-evident need for orienting the technological process responsibly. Ellul puts a theory of normative technology squarely on our agenda, and that is a scholarly task the ideology and hegemony literature tragically undervalues. Ironically a value-saturated view of technology is more compatible with Gramsci's hegemony than the neutral view which he adopts by default.

Third, Ellul opposes technological necessity to human freedom. Thus in communication theory, the radical alternative entails a dialogic model of communication and such a theory is alien to Gramsci. Through language we continually re-enact our humanness and maintain a social order. When our everyday discourse is coopted by technological, mass-mediated symbols, we become complicators in technocratic culture. And as the Russian linguist Mikhail Bakhtin argues correctly in *The Dialogical Imagination*, only oral language under those circumstances represents a dependable source of opposition and struggle.

For Ellul, the technical artifice is decisively new. Thus Gramsci's theorizing, for all its revolutionary intent, is anchored in a previous era. The realities of modern technology create a firestorm of complicated issues at present. Global information systems are redefining national boundaries and economic structures. Ellul's penetrating discourse strikes at the heart of today's conundrums and paradoxes. While we never encounter truth pure, Ellul orders the territory around theoretical insights of the highest magnitude.

# Include the Iconoclast: The Voice of Jacques Ellul in Contemporary Criticism

By Calvin C. Eroup

Continental theorists of the postmodern era have become “must reads” in courses on rhetorical theory and criticism (Ivie, 1995, p. 266). A common, though not exhaustive, list of theorists and critics who appear in anthologies and syllabi for such courses includes names like Louis Althusser, Roland Barthes, Jacques Derrida, Michel Foucault, Jurgen Habermas, Frederic Jameson, Jacques Lacan, and Jean-François Lyotard. These thinkers have influenced scholarship in the field of communication and rhetoric, most evidently in the advent of critical rhetoric and what has been termed the “ideological” turn in criticism. The recent debate between critical rhetoric and textual criticism reflects the intellectual authority vested in continental versions of postmodernism among practicing critics and theorists in the field. Work in contemporary rhetorical theory and criticism demands a certain fluency with the ideas of French and other continental postmodernists. Serious rhetoric scholars have read their works.

Contemporary rhetorical theory stands to gain what Kenneth Burke refers to as “perspective by incongruity” (Burke, 1954, pp. 69–70) on the continental postmodern canon of theorists by including Jacques Ellul’s *Humiliation of the Word*, in which Ellul argues against many of the basic assumptions of postmodernism, calling poststructuralism an error. In this essay I raise the question about Ellul: Can and should we include such an irreverent voice in any canon of contemporary rhetorical theory? Theorists we venerate, he considers as colleagues to be engaged and challenged; he addresses their ideas as idols for destruction.

Ellul’s perspective integrates two decisive factors. First, his novel sociological ideas on technique and the technological system offer a radical reorientation to ideological, social, and cultural issues and to that which drives them. Second, he advocates human speech as a continuing paradigm for language, an ancient assumption in a postmodern context. From these axiomatic commitments, Ellul presents us with a novel incongruity: he suggests that poststructuralists are not revolutionary but are in ideological lock-step with the forces of technological society-bureaucracy, domination, and oppression.

## *Canonicity, Textuality, and Absence*

A number of ironies emerge from the status of postmodern theorists among communication scholars. First, to canonize the works of people considered “canon smashers” is no small paradox. Barthes and Foucault have provided some of the most elegant arguments proclaiming the anonymity of texts and the demise of “authority” (Barthes, 1989, p. 716; Foucault, 1989, p. 724). Furthermore, the canon of postmodern thinkers is just as certainly imposed by people in authority (professors, publishers, 8

editors, etc.) and just as effectively excludes texts that might rightfully be included, as any canon of literature (or speeches) that has ever been authorized. Scholars still argue about the value of the chosen theorists’ contributions and debate the comparative

quality of interpretations in the secondary literature. Today, the portion of our work in contemporary theory and criticism that deals with postmodernism—especially — French postmodernism—orients itself to language based on thinkers who concentrate primarily on writing and literary texts, paying little attention to spoken public discourse (Davis and Finke, 1989, p. 718). While French masters give us a diversity of perspectives and places from which to theorize and criticize discourse, on the question of the relationship of speech and writing they share a predisposition to prioritize the written text over the spoken word.

In the “Father of Logos,” among other places, Jacques Derrida makes a case for giving precedence to writing and textuality over speech. Although Derrida may be the most explicit apologist for the superiority of the written word, the ascendancy of textuality has already been mentioned as commonplace within the canon of French postmodernist intellectuals introduced at the beginning of this essay. Derrida, the father of deconstructionism, argues in “The Father of Logos” that writing need not come to speech “like a kind of present offered up in homage by a vassal to his lord” to have its value assessed by speech (pp. 750ff.). Indeed, textual discourse emerges as the only means of assessing the value of speech, which Derrida correlates with fatherhood. Speech (the father) presents itself as speaking from a point outside language, “But the father is not the generator or procreator in any ‘real’ sense prior to or outside all relation to language” (p. 753). Roland Barthes, similarly, states that the limit condition of human language is the written word, not the spoken word. In *S/Z*, Barthes lays out his assumptions about language in reference to semiotics, saying that the science of semiology must finally acknowledge itself as “*writing*” (p. 8). In his theorizing, Barthes (1989) concerns himself exclusively with “text,” a two-dimensional field of written discourse (pp. 714–715).

The third irony is the virtual absence of oppositional voices being taught alongside postmodern critics and theorists of discourse to counter the simple equation of all discourse with text and the critical primacy of written over spoken language. In many if not most cases, critics must begin with a text, and in that regard the directives above are entirely unobjectionable. However, the only voice in the textbook quoted above is the voice of the critic. The focus of critical attention is always a “text.” The lack of questioning on this point suggests the possibility that when we visit and elevate the canon of French postmodernism in courses on contemporary theory and criticism, we risk assuming the priority of written text over spoken word *without ever explicitly raising the question*, one that has been crucial for our field and throughout the history of rhetoric.

My purpose, in the remainder of this study, is to consider this third irony, and to propose Ellul’s *The Humiliation of the Word* as one voice we could employ as interrogator of some of the most popular works from the continental canon for courses in contemporary rhetorical theory on the distinction between the written and spoken word. Iconoclast or not, we stand to gain much by including Ellul in our theoretical-

critical dialogue, especially when considering the ideas of Barthes, Derrida, Foucault, and Lacan.

*Sacralization and Desacralization*

Debunking, demystifying, demythologizing, and desacralizing are prime critical activities in the modern/ postmodern world. Among postmodernists who hold to post-structuralist views of language (like Barthes and Derrida) such critical moves are the logical outworking of their philosophical commitments about language and meaning. They deny any transcendental meaning, and attempt through critical acts to depose the idea that foundational and essential meaning can ever exist, in language or otherwise (Eagleton, 1983, pp. 130–138). Demythologizing and the other critical activities noted above assume that the sacred emerged to account for the unexplainable, the fearful, and the uncontrollable things in the world (Wennemann, 1991, p. 238). This sociological perspective, which Ellul affirms, considers as sacred “whatever form of power human beings believe themselves to be dependent on for their existence and well being” (Fasching, 1991, pp. 82–83). In this sense, Ellul shares much in common with the postmodern theorists mentioned so far.

However, critics who purport to liberate us from antiquated or oppressive ideas of the sacred often presume that deliverance means escape from the sacred altogether into a rational, non-religious world (Wennemann, 1991, p. 240). Ellul advocates liberation but denies the existence of a non-religious world. He argues that one sacred replaces another and that the desacralizing agent becomes the new sacred (Fasching, 1983, p. 83; Wennemann, 1991, p. 240). Ellul distinguishes between the sacred and the holy. The sacred is a construct of human society of which religion is one manifestation while the holy is Wholly Other than human society. Therefore, critics may “demystify” a traditional religion and replace it with a new sacred-one which may look nothing like traditional religion. But the human cycle of sacralization and desacralization has no effect on the holy. In other words, Ellul critiques the corruption of human religious institutions without relinquishing ultimate, transcendent meaning. Holy and sacred are antonyms for Ellul because people construct the sacred through language, but the holy is not a human construct (Fasching, 1991, p. 88). However, Ellul argues that the successful subversion of religious institutions has not eliminate the sacred or rampant religiosity. Ellul calls the new sacred *La Technique* (Lovekin, 1991, p. 89).

The form of consciousness Ellul calls “technique” circulates around the dual poles of technology and politics, which became sacred in late 20<sup>th</sup> century society (Fasching, 1991, p. 83; Wennemann, 1991, p. 243). Ellul’s critique of technique gravitates toward current questions regarding speech, writing, language, discourse, and symbols in his later work. For example, David Lovekin’s work is based primarily on *The Humiliation of the Word*. In this work, as in others, Ellul (1985) argues that technology and politics have been enshrined in the wake of technique’s desacralizing presence:

Our reality is no longer nature, the gods chosen for us to see are those of the technical and political world. They are the gods of consumerism, power, and machines, and they range from dictators to atomic piles. Now everything is invested with an

extra dimension: it is not lived reality, but since this reality is visualized, it is magnified, idealized, and made sacred, through the symbolization accomplished by the mass media (pp. 228–229).

The *Humiliation of the Word* engages the issue of the impact technique has had on human communication; particularly the study of human language, symbol, and discourse. Ellul focuses his attention throughout his work on the effects of technique on language and meaning. He identifies structuralism and what we refer to as post-structuralism as the application of technique to language and considers their effect on communication and the human communication from this unique vantage point.

*Technique and the Critique of the Structuralisms*

In the *Humiliation of the Word* Ellul raises a crucial issue for rhetorical theory and criticism that we may not be accustomed to thinking about: How do structuralism and/or poststructuralism affect our assumptions about spoken language and speaking? Ellul claims, in a variety of ways, that people who build their theories of communication on structuralist and poststructuralist assumptions hate language and the spoken word and, although they take language very seriously, apply technique in an attempt to subdue it entirely (p. 165).

Ellul moves toward this claim by beginning with the enduring question of the comparative value of speaking versus writing. He comes down squarely on the side of the spoken word (p. 1). Speech is the exclusive and definitive human language, that “ushers us into another dimension: relationship with other living beings, with persons. The Word is the particularly human sound which differentiates us from everything else” (p. 14). By contrast, “The written word is continually repeated and always identical; this is not possible for the true word. Ask the person speaking with you to repeat the explanation he has just given, and it will be different. But you can reread a page” (p. 44). The inability of the written word to provoke dialogue signals its secondary status to speech: “The word is, of necessity, spoken to someone... It calls for a response” (p. 16).

The status of spoken versus written language should be a contested issue among rhetoricians in communication departments. By canonizing the likes of Barthes, Derrida, Foucault and Lacan as guides, we may have implicitly adopted a position that works to manufacture reams of text efficiently at the expense of neglecting the dynamics and meaning of human speech in the process. Ellul calls this condition “logorrhea” and suggests that technique demands the decisive rupture between speaker and word, finally accomplished by post-structuralism (pp. 156–157). He says specifically in *The Technological System*:

Language has to take on an objectivity permitting it to correspond to the objectivity of the technological system...The “one,” and “it,” the field (all Lacanism, etc.) is purely and simply magianism—just as incidentally, the style of Lacan, and so many other writers, is—very significantly—sheer incantation. It is a *mechanical* expression of the compensatory reaction by the technological system. But on the other hand, language must itself be integrated into the system in order to play its role. Hence, the

structuralist studies of language, which are precisely characteristic of that technicization; hence, likewise, the trend toward viewing the text as an entity in itself, an object. And the orientation toward focusing on *how* one says something rather than on *what* one says, in order to demonstrate technologically. Here, Roland Barthes is very directly one of the reducers of language to its function of compensating for the technological system (pp. 115–116).

Nevertheless, Ellul does not argue that depositing the word by image is impossible, but that speech in all its once-comprehensive fullness has been emaciated efficiently by the dominance of the image. He further argues that intellectuals, far from defending the human, spoken word, have overseen its demise by unwittingly applying the technical imperative for visualization to language. Ellul identifies the technical imperative as the driving force of technique which insists that “when a technological possibility exists, it must be applied” (1985, p. 148). The application of technique to word is structuralism/poststructuralism.

*The Obedience of Poststructuralists to Technique*

Ellul argues that poststructuralist theories of language are not anti-modern but hyper-modern. They demonstrate technique—a child of modernism—at work. We noted earlier that the authors under consideration tend to privilege written texts over speech. The significance of the assumption in favor of writing is that written text is an image of spoken language that “has placed the word in an ambiguous and defensive position” (Ellul, 1985, pp. 160–161). Technique can arrest, observe, and analyze text, which is impossible with the spoken word.

An advocate for the primacy of written text over the spoken word might dispute the distinction between speech and writing, claiming that the voice is every bit as material as the written word (Eagleton, 1983, p. 130). But a living voice is not material and does not “mean” merely by signs. The human voice is not digital. It may be digitized and analyzed as text via writing, printing, or audio recording—subjected to technological manipulation. But the voice itself and the meaning it carries cannot finally be subsumed under the simple process of “difference and division.” A living human voice cannot be captured. Any honest analyst must contend with the fact that what is being analyzed is only a material trace. The issue rests exactly here: that the voice must be nothing more than material if technique is to control it. The equation of word and text apparently subjects the word to complete human control. If we can control words by techniques, we can then make pronouncements about their meaning or meaninglessness and definitively explain why. As Ellul (1985) comments:

The word has become image: the word made for computers, dominated by writing, inscription, and printing, and changed into a thing, into space and something visible. Now it must be seen to be believed, and we think we have finally fathomed all of language when we apply a semiotic diagram to it (p. 160).

By transposing text for speech as the paradigm for human language, technique sets us up to accept the image as not only real, but also as the truth about language. Then we interpolate the “truths of language” learned from writing back into the realm of

the spoken word and human reality (Ellul, 1985, p. 141). In other words, we analyze an artificial image to examine the realities and truths of human life, neither of which textual analysis can provide as such.

Part of Ellul's iconoclastic tendencies show in his insistence that although post-structuralists may not be aware of it, they appropriate semiotics as the truth about language. He implies that the poststructuralist move is not a bold stroke against the status quo establishment, but a reinstatement of the technical imperative. In the early seventies he was already taking the offensive: "Structuralism is in no sense an intellectual advance, a better way of understanding. It is a reflection of the current human condition in this closed and organized society" (Ellul, 1974, p. 6). In one of his last books, he continues to press the point home:

The word always refers to something beyond it. A phrase apart from the speaker and hearer has no meaning. What gives it value is the secret intention of the speaker and the individuality of the heart. In other words, language is never neutral. We cannot analyze it objectively. It depends on the makeup of those in dialogue, and it is inseparable from these persons. We can engage in as many analyses as we like; the essential point escapes us (Ellul, 1989, p. 27).

He makes his case most clearly in the *Humiliation of the Word* stating that "by making the word an object, we elevate excessive scientism to its highest point;" that semiotic study of language reduces it to an exclusively visual project; and that structuralism is the mode and method consistent with visual images (pp. 153, 159, 165). Much detailed analysis of the intricacies of Ellul's argument with structuralism/post-structuralism could be laid out, however for the purposes of this essay, I will concentrate on the primary issues he raises in his critique of familiar postmodern icons.

#### *Iconoclast at Work*

Ellul states, without hesitation, that the poststructuralist ideological complex fits comfortably within technological society. His project is to rescue the "degenerate" word from the prison house of technique. He argues that language cannot be reduced to a visual code or system of visual signs (Ellul, 1985, p. 4). Further, he posits the direct link between speaker and language, a link that Derrida holds up for derision, as the affirmation of personality and security of the existence of meaning (pp. 24, 39). Language doesn't speak itself, people speak language (p. 16). In all of this, Ellul presents an enigmatic view of language, allowing that how language actually functions is mutable—that the connections of personality and meaning and the way language functions in a society can change and be altered—but he maintains a strict line on the appropriate perspective on and use of language. For instance, in his comments on Lacan's play with language he concludes by saying This [free play with signifiers] is a frightening step to take, and its effects have spread to the entire language: you can do anything, and make words say anything. You can construct any discourse with them: they do not defend themselves. But our very human life—and not only our reason or our intelligence—is profoundly altered by this process (Ellul, 1985, p. 165).

Obviously, Ellul is not concerned, like E.D. Hirsch (1967) might be, that one just cannot do what Lacan does with language (pp. viii-ix). Ellul is concerned with the consequences when society and language get to the point where one can do such a thing, as though it were a liberating activity. Again, he defies the now-conventional wisdom that targets language as the source of oppression and looks to deconstruction, and various other post-structuralist strategies as revolutionary and freeing. He parrots disgust at being bom into language as violating his supposed right to linguistic self-construction, "I am forced to enter a prefabricated scheme; I am taught to speak according to a certain model. Scandalous!" and then continues his parody saying, "Language is an instrument of oppression and alienation used by the ruling class to keep the oppressed classes in bondage" (Ellul, 1985, pp. 173-174). But he dispenses with these commonplaces as "para-Marxist" employing a mechanistic and rigid concept of language and the word, mixed with a certain ignorance of the history of revolutions and the role of language in them. To the contrary, he argues that the expressed hatred of the word accomplishes the goals of the ruling classes-neutralizing challenges and promoting propaganda, which depends on a lack of clear referents to work effectively (1985, pp. 175-177). But he cannot easily shake the pervasiveness of the anti-language sentiment:

We are left with a nagging question: however did these things manage to come into being-this collection of cliches (hollow but thought to be profound!), this hatred of language, and this simplistic equation: "established discourse = ruling class = language"? (1985, p. 181).

In his answer to the question he gestures toward Foucault, "the lunatic's language suddenly seems fascinating because it fails to transmit any idea or continuity." Later he argues more extensively that the fascination with the asylum testifies to "the basic catastrophe of our society: human solitude and the technicalization of relationships" (Ellul, 1985, pp. 181, 372). He lauds the motive of such studies that attempt to open language up and destructure social stereotypes, but judges that they fail because the "passion for the language of mental illness destroys reasonable language" and instead "produces utterly closed discourse" (p. 373). This points to Ellul's primary attack on poststructural theory at its basic, linguistic level. He says, "The rupture between the speaker and his words is the decisive break" (p. 157).

This puts Ellul also directly at odds with Roland Barthes, over the issue of whether or not. language is an open or closed system. Barthes (1974) asserts that no place exists outside of language; Barthes is also a major proponent of the notion that language writes subjects into existence (p. 8). Ellul further denies any importance to meaning, finding the interesting question to be how language works, not what it says (1980, p. 116). Again, Ellul notes how this point suggests that Barthes marches to the beat of technique:

We want to see how a thing works: the process of circulation and deformation. As we indicated above, the process is what matters. It just so happens that this is what

interests the technician. Finalities do not concern him, nor does meaning! Without knowing it, structuralists are possessed by the spirit of technique (1985, p. 170).

Ellul ends up affirming that language is an open system, one that is neither totalizing nor immutable. People speak, and language is more elusive than can ever be captured in writing. Not held captive to technique, it is not subjected to analytical vivisection in the sense that anyone can ever declare it to be meaningless or deconstruct it. Of course a text can be constructed and deconstructed, it simply does not follow that such operations can be performed on language, which is the hope that the word offers to people in relationships of all kinds, including people suffering injustice and oppression. The word Ellul loves cannot be found on a page, it can only be heard.

#### *Inclusion*

In this essay, I have traced some of the basic moves Ellul makes to desacralize poststructuralism as an icon of the sacred technique and have highlighted a few direct connections to a few prominent and influential authors in our canon of contemporary theorists.

That Ellul argues for a radical Word that integrates faith, theology, ideology, and language may challenge students of rhetoric, should they assume that a relationship between faith, language, and rhetoric belongs only in the rhetoric of religion or theology courses. Ellul (1989) himself declares elsewhere that his views of speech, word, and language are grounded in faith in God and the incarnate Word, “because the God I believe in is Word. Hence every human word is for me decisive and irreplaceable” (p. 23). These commitments are deeply intertwined and unmistakable, leading some readers of the *Humiliation of the Word* to declare Ellul a typical protestant iconophobe (Jay, 1993, p. 14). But the reasons for adding Ellul to the canon of contemporary theory are not primarily religious. In fact, in his own way Ellul is more intensely anti-religious than the voices of poststructuralism.

I have attempted to weave together an argument for the inclusion of Jacques Ellul with his poststructuralist colleagues in the study of contemporary rhetorical theory for a few simple reasons. First, he raises the substantial issue of the precedence of speech versus writing and contests the assumption of a number of influential poststructuralist in his stand for speech as paradigmatic. Second, he engages the issue of whether language is a closed, totalizing, universal object-the same in every place and time-from a provocative perspective. Third, he defies the conventional wisdom about the comparative value of certain theoretical authorities in contemporary rhetorical theory and criticism.

Finally, he advocates a robust role for rhetoric that values the word, speech, and its necessary role in rescuing society from the brutalizing grasp of bureaucracy and self-validating technology. He promotes public dialogue and believes it can be meaningful; more and less than a mask for the will to power. He is rigorous in his consideration of theory and a friend of criticism:

Criticism is the preferred domain of the word. In its relations with images, the word is called

on to criticize the image, not in the sense of accusing it, but in the more basic sense of separation and discernment of true and false. This is one of the noblest functions of the word, and discourse should relate to it (Ellul, 1985, p. 34).

Clearly, to include Ellul's *Humiliation of the Word* in the canon of contemporary rhetorical theory and criticism is to risk dialogue with an interlocutor who would question many sacred assumptions and perhaps be rejected as impious. Of course, the benefit is in advocating that good minds should take such risks.

## *Technology as Magic: The Triumph of the Irrational* by Richard Stivers

New York: Continuum, 1999

Richard Stivers provides insights into the practices of magic in the context of technology and its social and psychological consequences. Connecting technology and magic, two disparate phenomena that on the surface seem totally unrelated, makes for a refreshing intellectual journey.

With Ellul's *Technological Society* as his primary inspiration, he constructs a paradigm that juxtaposes the human experience grounded in spiritual ritual with modern and postmodern promises of social, managerial and political efficiency. The result, Stivers fears, is a world falsely enlightened through magical slights of hand with the purpose of adjusting humans, "to a technological civilization, to bring them in line with technical progress" (p. 8).

Illustrating that Ellul's seminal ideas still resonate with twenty-first century problems, Stivers argues in his introductory chapter that today's managerial techniques have social and psychological consequences that result in efficient ordering of our world, an order that for the most part is almost invisible to the unwary observer. Examples include corporate models that are designed to beguile and herd employees with scientific and humanistic management techniques inspired by administrative magic. Citing best-selling authors Robert Greenleaf and Peter Drucker, he suggests that scientific, statistically measurable techniques are, "actually a means of manipulating employees into being servants to their managers ... Psychological techniques such as these, I argue, are forms of magic" (pp. 10–11).

Stivers does more than simply expose the problems. He provides counterpoints and countervailing arguments. He suggests that human activity that is truly qualitative cannot be measured and predicted. He cites Henry Mintzberg, who goes against prevailing management technique by advising that the most valuable kind of information in organizations is intuitive and holistic, informal and nonstatistical.

By narrowing the term magic to mean "an attempt to influence, predict and control the future" through symbolic means, Stivers does a convincing job of connecting magic with science and technology. Symbolic words and actions of magic "work according to the principles of persuasion, retribution and causality" (p. 42). They provide an "indirect or symbolic link between information and outcome." Here is where Stivers

invokes Ellul's theory of the three milieus: nature, society, and technology. The nature of the magic you practice changes with the milieu you live in, because magic deals with the most powerful force in your milieu. The most powerful force is different in each of the three milieus. In our technological milieu, our magic acquires the image and aura of technology, but the function and effectiveness of a placebo.

The most powerful of magics in our technological milieu is the mass media. In terms of emphasis, Stivers gives more than double the coverage to his advertising critique compared with public relations. He might have given the invisible magic of public relations a more critical examination. Although he addresses its power and influence, he fails to recognize that public relations may be more influential than advertising. Audiences tend to be more skeptical of advertising and they always know its source. In contrast, people readily accept public relations messages as more credible. Indeed, compared to advertising, public relations should have been characterized as the more magical slight of hand because consumers believe most of their daily news is coming from the media rather than from a company or institution.

Stivers makes a convincing argument that advertising symbolically links consumption to happiness. Not only does advertising sell technological products; it promotes the notion of commodification of all things human. It creates a magical Disney-like kingdom of happiness framed in the milieu of consumption. "Advertising's magic is the visualization of the commodity for spiritual consumption. In the process, human beings become objectified as commodities, and as such are equal to their image. Ultimately, human image becomes more important than lived reality itself (p. 121). Stivers transfers this argument to the topic of celebrity as "crucial to advertising, celebrities are themselves first and foremost commodities" (p. 122). Citing Kierkegaard, Stivers questions the ethics of celebrity worship in advertising because it capitalizes on the deadly sin, envy: "envy is the negative unifying principle" in celebrity worship in advertising.

Television and other mass media are less important than advertising in Stivers' view. He proposes that television "programs are ads for advertisements" (p. 40). Television programs also sell the philosophy underlying the technological milieu by focusing on forms of power, sex, and violence.

Perhaps Stiver's most promising critique centers on the magic that emanates from the institutions of higher learning. He laments the humanities that were at one time a preparation for reflective participation as citizens and for intellectual labor. Our evolution into an industrial society is now infatuated with the magic of simulated images and the requirement for high-salary careers rather than soul satisfying intellectual labor or even manual labor. "The public, business, and parents demand technicians, and we give our customers what they want" (p. 208).

Many scholars would agree that the modern university is becoming almost completely technical and magical in its administration, teaching, research, and student services. "Our educational administrators are magicians par excellence as they recycle models and magical practices from the business world, including various assessment and accountability measures and planning exercises" (p. 208). The distressing conclu-

sion is that in our magical, technologically driven universities we give our students the impression that all knowledge can be quantified, precisely measured, and most importantly, reduced to logic and rationalism without the intellectual labor of critical examination.

A key point Stivers revisits throughout his text is that the technological society, with its drive for efficiency in all things, has corrupted language and eroded its symbolic, ritual value. In its place, magical techniques fill the symbolic vacuum by weakening language and they fill it in such a way as to reinforce the hegemony of the technological society, a society that Stivers urges us to resist in his admonitions throughout the book.

On the whole, Stivers does an excellent job of revitalizing the Ellulian premise that people must remain awake and alert to recognize that democracy is elusive, and that it is a human enterprise, not a technologically efficient machine run by untouchable political celebrities. He concludes with an admonition that the struggle is not against technology, but against a technological system of production and consumption. "Without magic, technology would have no fatal sway over us. It is here that the struggle for freedom must begin" (p. 212).

## *Technology and the Good Life?*

Edited by Eric Higgs, Andrew Light, & David Strong Chicago and London: University of Chicago Press, 2000

Critics and theorists who take on the mantle of 'philosopher of technology' do so at the risk of having their best thoughts ignored, certainly within the larger field of philosophy. Editors of *Technology and the Good Life?* illustrate the point by describing a volume that the United Kingdom Royal Institute of Philosophy published on the theme of philosophy and technology. Despite the stated purpose to have respected philosophers address concerns about technology relevant to their work, "there is not one reference in any of the papers in the volume to any of the prominent members of the Society for Philosophy and Technology, and thus, we can assume, to any of the prominent philosophers who have considered themselves doing philosophy of technology" (p. 372). The impacts of contemporary technologies continue to emerge as "the most pressing issue of our age" (p. 2). Yet, those commentators who are specifically committed to forming "discriminating judgments" about the character of technological practices discover that the subfield they have created and advanced is placed "curiously on the sidelines" (p. 5) when visible and influential disciplinary discussions involve their subject matter.

An even more fundamental concern inspires the contributors to *Technology and the Good Life?*. This is the limited success that philosophy, or any other scholarly discipline,

has had in enlarging the current, constricted public discourse that surrounds technology. Albert Borgmann, whose seminal works in philosophy of technology are the subject of the collected essays in this volume, declares a “task for philosophy” that the editors endorse, “to engage the public more broadly in a reflective conversation about matters of great concern to all” (p. 20). The essays assembled here attempt to model for readers what such a reflective conversation about technology should look like as it attempts to address broad questions about human wellbeing. Extending beyond their own project, the editors envision that the eventual dialogue “must be much more widespread than a debate among a handful of academic specialists.” This volume proves to be a fruitful start in this direction.

The goal of active public involvement is a difficult one to achieve. And the contributors’ own reservations must be taken seriously about whether intellectual advances in the “discipline of philosophy” (p. 20) can be made more relevant to the public “task of philosophy,” particularly as it may entail actively intervening in the apparently irresistible trajectory of technological developments within contemporary society and culture. Accordingly, the contributions brought together in this volume are characterized by a shared concern to clear an intellectual space where the limiting preoccupations of mainstream philosophical traditions can give way to more public forms of discourse. The project encompasses a rethinking of technology in its socio-cultural, economic, political, and ecological significance, as well as in its overall impacts on the spirit and ethos of our age. The scope and seriousness of this effort, which inspires the volume, deserves attention and appreciation.

The choice of Albert Borgmann’s work as the thematic focus for the essays was both deliberate and fortuitous. A yearlong series of conferences, workshops, and seminars culminated in a 1995 gathering in Alberta, Canada devoted to the topic of “Technology and the Character of Contemporary Life,” which is also the title of Borgmann’s major treatise on technology. The fortuitous aspect is that the tenth anniversary of the appearance of Borgmann’s book, published in 1984, coincided with the intensified interest in his subject matter that the sequence of programs and discussions occasioned among the relatively small, but dedicated, philosophy of technology community. The chapters of this volume began as presentations at the Alberta workshop and are brought together for publication under five major headings that provide a survey of the field along with appreciative and critical paths into Borgmann’s work.

The first section, “Philosophy of Technology Today,” summarizes a trajectory of work originating with Jacques Ellul, Martin Heidegger, and Lewis Mumford, continuing through the related and often derivative writings of Herbert Marcuse, Daniel Bell, Langdon Winner, Bernard Gendron, David Noble, Andrew Feenberg, Hans Jonas, and Don Hide, to arrive at Borgmann’s “neo-Heideggerian” perspective in *Technology and the Character of Contemporary Life*, (TCCL). Borgmann’s work, and especially his theory and analysis of the “device paradigm,” are viewed as a crystallization of major themes that have inspired this lineage of thinkers.

Considering the significant disciplinary barriers and public challenges confronting philosophy of technology, Borgmann's work takes on a two-fold relevance for the field. First, he provides an assessment of the philosophy of technology in specific relation to a central question that concerns all of philosophy, namely, the character and quality of the good life. Second, Borgmann frames his philosophical discussion in terms of "extratheoretical questions of practice" (p. 320) focused on "our bonds of engagement with things." Thus, Borgmann points the direction towards greater disciplinary rigor in linking technological themes with broad philosophical traditions. And, most promising from the standpoint of interest in the transformation of technological practices, his philosophy has the potential to "appeal to a very wide audience partly because it illuminates our shared, ordinary everyday life, such as with 14

things and devices, and partly because the issues it probes cut across the full range of the disciplines" (p. 7).

Paul Durbin, in his overview essay, directs attention back to the appearance of Ellul's *The Technological Society* (particularly the 1964 English translation), as a founding moment for philosophy of technology. Ellul provided seminal, systematic treatment at the level of theory of what had begun to worry philosophers and social commentators as practical and political concerns: "negative impacts of nuclear weapon systems, chemical production systems, the mass media and other (dis)information systems" (p. 38). In addition, *The Technological Society* took seriously the call for intellectuals not only to philosophize but also to intervene in the technological formation of a "new milieu" for contemporary society by discovering means to "live out our freedom in the deterministic technological world we have created for ourselves" (p. 39). Reception of Ellul's work was conditioned, as Durbin remarks, by the fact that his was "[a]mong the first broadly philosophical works to say to those early philosophers of technology (myself included) that this might be a difficult struggle" (p. 38). Overlooking the "*dialectical* nature of Ellul's thinking" (p. 39), many were left asking "how can we act, given Ellul's pessimistic thinking?" Durbin leaves open the question of how one should respond to Ellul's position on "technicized society as an unmitigated disaster, inimical to human freedom" (p. 46). However, he supports the case for focusing attention on Borgmann by observing that while "an Ellulian school has persisted for twenty-five years, so far it has produced no other thinker of note" (p. 44). Might Borgmann be that next seminal thinker?

The chapters in part two and part three of the volume, "Evaluating Focal Things" and "Theory in the Service of Practice," explore various ways in which Borgmann's critique of the "device paradigm" and his advocacy of "focal things and focal practices" take up the challenge. The device paradigm is a sensitizing concept that highlights the technological "transformation of our material world" (p. 28) that has occurred since the advent of industrialization. Under the influence of this paradigm, engagement with "things" — which have "ties to nature, culture, the household setting, a network of social relations, mental and bodily engagement" (p. 29) — is replaced by the "*machinery* ... of the device," which "makes available a particular commodity" in a manner that

encourages pervasive concern with “*mere means and mere ends.*” The resulting technological dependencies entail the loss of a capacity to appreciate fully “that practices ... [can be] ... experienced as good in their own right and useful too.”

The focal things and practices that Borgmann wants to recover are cooking a meal; chopping wood for the hearth; fishing for trout; arts and crafts of producing painting and pots; long-distance running over a natural course; backpacking through wilderness; grooming, training, and riding a horse. Contributors take up these themes in chapters that consider the ideal of focal commitments in its broad contours and in specific manifestations.

The discussions often focus on philosophical concerns that could seem overly technical were it not for the authors’ unifying determination to demonstrate how philosophical inquiry can enhance our capacities to evaluate and to make discriminating judgments about everyday tensions between the technological device and the focal thing and practice. For example, Lawrence Haworth’s (pp. 55–69) explication of four different models for understanding how focal practices/things are counterposed to machinery/commodity (“parallelism model,” “guarding model,” “internal goods model,” “synthetic model”) proceeds to evaluate these models in relation to Studs Turkel’s narratives of ordinary occupational lives. Haworth points out how people create layers of meaning for work as a focal practice, often striving “against the odds” (p. 67) that the imperative “to earn a living” can be transformed into a practice “worth doing provided only that it is done right.”

Similarly, Gordon G. Brittan, Jr. directs his reflections on “the two great concepts of moral philosophy, excellence (*arete*) and happiness (*eudaimonia*)” (p. 75) towards consideration of such concrete examples as “the case of the rural doctor whose ‘engagement’ in the practice of medicine is threatened by the use of expert diagnostic systems [which] reduce her role to that of a mere go-between” (p. 85). In common with other contributors who blend theoretical with practical concerns in their essays — e.g., Larry Hickman on the Deweyan model of education (pp. 89–105); Carl Mitcham on how sacraments confer character in Buddhist and Christian traditions (pp. 126–148); Philip Fandozzi on the potential of films to critique devices and to celebrate focal practices (pp. 153–165); Paul Thompson on farming as a foundational, even “salvific” focal practice (pp. 166–181); Jesse Tatum on design as the possibility of choosing focal commitments (pp. 182–194); Eric Higgs on ecological restoration as an instance of such design (pp. 195–212) — Brittan concludes that Borgmann’s work, by identifying the “special hallmarks of our freedom” as our engagement with focal things and practices, displays distinctive value for “reopening” consideration of the conditions of the good life in a “‘devicive’ world” (p. 87).

Part four, “Extensions and Controversies,” views Borgmann’s concepts and examples in the light of contemporary issues raised by feminist thought (Diane Michelfelder, pp. 219–233), postmodern critiques of the ideal of focal realism (Douglas Kellner, pp. 234–255), and cyborg ‘mythology’ with its celebration of irony and ambiguity (Mora Campbell, pp. 256–270). Chapters by Thomas Michael Power (pp. 271–293) and An-

drew Feenberg (pp. 294–315) help to distill the concerns expressed about Borgmann’s work into questions about the underlying “fundamentalism” (Power) or “essentialism” (Feenberg) that Borgmann arguably evinces. Power focuses his commentary by means of a response to Thompson’s earlier chapter on fanning. Arguing against an “economic fundamentalism” (p. 288) that valorizes what are seen as “quintessential focal practices” such as those that directly support human biological survival, Power argues for a more pluralistic conception of focal values. He emphasizes how “it is within that margin of safety where we are protected against imminent loss of life that our art, thought, play, love, and hope evolve into human cultures” (p. 289). Power acknowledges that here he stands on common ground with Borgmann who advocates “communal celebration built around focal things and practices” (p. 291). But he also raises the further question of how the determination should be made about what it means to commit oneself *appropriately* to focal things and practices. Citing Borgmann’s dictum that “In a finite world, devotion to one thing will curb indulgence in another,” Power urges a broader critical perspective on how social institutions “structure the choices so that only the truly heroic and saintly can afford to make the right choices” (p. 292). — If our “moral failures” are aided and abetted by the economic and social institutions that provide context for actions, then we need to comprehend the processes at work and to challenge them politically so as not “to lash at ourselves and our neighbors as we sink into the cynicism and sullenness Borgmann rightly decries.”

Andrew Feenberg carries critique of Borgmann further, arguing that “Borgmann’s conclusions are too hastily drawn and simply ignore the role of social contextualizations in the appropriation of technology” (p. 301). Among the examples Feenberg cites is the “Prodigy Medical Support Bulletin Board devoted to ALS (amyotrophic lateral sclerosis or Lou Gehrig’s disease)” (p. 302). Carrying discussion back into the deep thickets of philosophy of technology and the lineage of thinkers that the book began with, Feenberg questions how the Heideggerian position from which Borgmann’s work derives would account for such contemporary instances where the technological medium “opens doors that might have remained closed in a face-to-face setting.” Feenberg concludes that “[w]hen modern technical processes are brought into compliance with the requirements of nature or human health, they incorporate their contexts into their very structure, as truly as the jug, chalice, or bridge that Heidegger holds out as models of authenticity” (p. 313). On the basis of this claim, Feenberg envisions the possibility of technological support for “reskilled work, medical practices that respect the person, architectural and urban designs that create humane living spaces, computer designs that mediate new social forms.” Feenberg concludes with a note of skepticism about whether Borgmann’s philosophy is adequate in itself to point the way “from essentialism to constructivism,” which is the path that Feenberg believes we must follow towards “general reconstruction of modern technology so that it gathers a world to itself rather than reducing its natural, human, and social environment to mere resources.”

Borgmann has the opportunity to respond to Feenberg and other contributors in a Postscript, which includes the editors' "Afterword" (pp. 371–374) and Borgmann's "Reply to My Critics" (pp. 341–370). This valuable chapter provides the opportunity for Borgmann to summarize the prospects for reform he envisions in "The Completion of the Philosophy of Technology." Borgmann argues that the rise of technology's promise "is not the transhistorical cause of technology but its first epiphany" (p. 347). Accordingly, technology's mature 'epiphany' must embody a "new cosmology" (p. 369). Conceiving the future as a new Atlantis, Borgmann figures "focal things as islands, once the high country of an ancient continent and still anchored and connected with one another beneath the surface of technology." Will we be able to raise this lost world and make it new again? Will our steps be steady as we travel its terrains with reformed technologies rescued from being mere devices?

It may be too much to expect of a philosophy of technology that it should provide answers to such questions. Nevertheless, the reflections that Borgmann's work has inspired in *Technology and the Good Life?* represent a valuable initial mapping of the world of meaning that Borgmann believes we should conscientiously seek, obscured beneath the depths of our technological involvements.

## From the Editor

Joyce Hanks contacted me in October about an article she was working on from Daniel Cerezuelle about the September 11 attacks on New York and Washington, D.C. Meanwhile, I had read Dan Clendenin's piece, and Andrew Goddard's in *The Third Way*. This issue came together at that moment. The other Contributing Editors of *The Ellul Forum* were contacted, and Patrick Chestenet, Darrell Fasching, and David Gill sent me their reflections shortly thereafter. Several essays recommended for republication by our proactive Board could not be included for lack of space.

Ellul understood the history of ideas and examined with exceptional care the history of socio-political institutions. But he was also an astute observer of ongoing events, one of the keenest inquisitors the 20<sup>th</sup> century West ever knew. Reflection on the tragic events of September 11 and their aftermath

is vintage Ellul. The technological order, violence, political institutions, religions—all of them served as Ellul’s frame of reference, and they are vantage points for our Editorial Board members as well.

Patrick Troude-Chestenet’s carefully wrought essay was not translated for this issue. Since *The Ellul Forum’s* inaugural in 1988, we have consistently translated all contributions into English. But with an expanded issue, and for the sake of precision, the original French is included this time. *The Ellul Forum* is now a unit of the International Jacques Ellul Society, the sister-society of the French-language Association Internationale Jacques Ellul. This two-language number pays tribute to Ellul’s bi-lingual legacy.

## About The Ellul Forum

### History & Purpose

*The Ellul Forum* has been published twice per year since August of 1988. Our goal is to analyze and apply Jacques Ellul’s thought to aspects of our technological civilization and carry forward both his sociological and theological analyses in new directions.

While *The Ellul Forum* does review and discuss Jacques Ellul, whom we consider one of the most insightful intellectuals of our era, it is not our intention to treat his writings as a body of sacred literature to be endlessly dissected. The appropriate tribute to his work is to carry forward its spirit and agenda for the critical analysis of our technical civilization. Ellul invites and provokes us to think new thoughts and enact new ideas. To that end we invite you to join the conversation in *The Ellul Forum*.

*The Ellul Forum* is an English-language publication but we are currently exploring ways of linking more fully with our francophone colleagues.

### Manuscript Submissions

Send original manuscripts (essays, responses to essays in earlier issues) to:

Clifford Christians, Editor, *The Ellul Forum*

Institute of Communications Research

University of Illinois

810 S. Wright Street, Suite 228

Urbana, IL 61801 USA

Please send both hard copy and computer disc versions, indicating the software and operating system used (e.g., Microsoft Word for Windows 98). Type end notes as text (do not embed in the software footnote/endnote part of your program).

Essays should not exceed twenty pages, double-spaced, in length.

Manuscript submissions will only be returned if you enclose a self-addressed, adequately postaged envelope with your submission.

*The Ellul Forum* also welcomes suggestions of themes for future issues.

## Books & Reviews

**Books.** *The Ellul Forum* considers for review books (1) about Jacques Ellul, (2) significantly interacting with or dependent on Ellul's thought, or (3) exploring the range of sociological and theological issues at the heart of Ellul's work. We can not guarantee that every book submitted will actually be reviewed in *The Ellul Forum* nor are we able to return books so Submitted.

**Book Reviews.** If you would like to review books for *The Ellul Forum*, please submit your vita/resume and a description of your reviewing interests.

Send all books, book reviews, and related correspondence to:

David W. Gill, Associate Editor, *The Ellul Forum*  
363-62<sup>nd</sup> Street  
Oakland, CA 94618

## Subscriptions

A subscription to *The Ellul Forum* is included in the annual membership fee for the International Jacques Ellul Society. To become a member (and receive *The Ellul Forum*) send a check payable to "UES" in the amount of \$20 (U.S.). Checks or money orders must be drawn in U.S. funds. Send check with your name and complete address to

## On September 11<sup>th</sup>

by Daniel Cereguelle

I was deeply shocked on Tuesday Sept. 11<sup>th</sup>, when I heard about the attacks against the World Trade Center. Of course what makes this tragedy more atrocious than an «ordinary» technological disaster is that it has occurred because some people have decided that it should happen, have summoned all their skills and their spiritual strength to destroy as many civilian lives as they could! But the political dimension is just one aspect of this tragedy. There are other dimensions which should not be neglected.

**The ordinary causes of exceptional disasters: What** Americans and all of us who live in a modern technological environment are reminded of through this tragedy is that the possibility of deadly events of this magnitude is an intrinsic component of the world which we have created. The 1995 Oklahoma City blast is the sign that a technological society provides imaginative, determined and flawed minds with an unlimited supply of powerful destructive devices. As the French philosopher Jean Brun wrote “ *it is in the essence of the tool that sooner or later it can be turned into a - weapon*”. There is no way we can prevent powerful tools used in daily life such as planes, fertilizers, or computers from being turned into powerful weapons.

The World Trade Center attack is a reminder that we live in a technological environment which, independently of evil doings, is by itself a source of danger. Great causes have great effects. Buildings of the size of the World Trade Center are a potential disaster. Their height and bulk result in a huge accumulation of potential energy which is hidden by the counteraction of equally huge bracing forces which impose a static balance to the structure. The dreamy appearance of these buildings makes us forget that at any time those forces can be unleashed by some unexpected accident. The concentration of population which is the mercantile *raison d'être* of such structures makes the human impact of such a collapse as gigantic as the forces which allow it. It is not impossible that a disaster of this type might occur because of some accident. One may answer that the occurrence of such an accident is so unlikely that we take a reasonable risk when we build skyscrapers or huge aircraft. But of course we say it is unlikely as long as we do not know how and why it will happen.

**A culture of denial: A** long time ago, at the beginning of the industrial civilization, the American poet Edgar Allan Poe in his grotesque tale *The angel of the odd*, published in 1844, pleasantly warned us against the metaphysical flaw of our current way of assessing risks: when the probability of occurrence of a dangerous event is low, we believe that we can reasonably neglect this risk, whatever the magnitude of the consequences might be; we are prone to forget that an odd concatenation of seemingly unlikely events remains always possible, as is exemplified by the recent *Concorde* accident. Poe knew that we moderns have such a strong reluctance to acknowledge and take into account the potentially unpleasant consequences of our technological endeavours that only some kind of angel can compel us to do so. History tells that we are often ready to accept huge losses of human lives, provided we do not know in advance which individuals will die; and when we claim afterward that we have been taken by surprise we should not be believed since as social beings we are ready to accept mass killing. We should not forget that today our technological prowess currently results

in technological disasters of a much bigger size than the attack on the World Trade Center: the American transportation system kills almost 50,000 people every year and medical technology around 70,000; but these risks have become socially acceptable because they have grown slowly and their huge impact is spatially dispersed so we cannot see the heap of corpses. Nevertheless, in term of risk assessment, compared to driving or going to the hospital, terrorism is still peanuts. Of course this may change since it is difficult not to think that the next step could be nuclear or biological terrorism which might be easier to organize and as difficult to detect and prevent.

**The grapes of growth:** Terrorism is not an external and unlikely phenomenon which can be eradicated by an appropriate policy; it is -and has been-a normal feature of the modern world. Fascination for destruction and self-destruction has always been an essential component of the human psyche. History provides us with countless examples of individuals as well as entire societies seized by morbid frenzies resulting in mass slaughter or suicide. Education or, more generally, civilization which provides ethical codes and traditional behaviour-patterns reinforced by strong symbolic overtones is a fragile attempt at limiting the power and the seductiveness of this death instinct. Unfortunately what we today call *development* creates not only ecological and technological risk, but also cultural disorganization which is an underestimated factor of risk in our technological world. All over the world rapid technological and economical change has resulted in the large scale disruption of communities, of ways of life. The process of destruction-creation which is essential for a dynamic economy results also in the disruption of the symbolic patterns which organize life and provide a barrier to our violent compulsions. Exposure to the unprecedented power of modern technology not only creates frustration and resentment but also has a dramatic counterpart in the downgrading of spiritual traditions and of established symbolic ethical models. The history of the twentieth century tells abundantly how this predicament has nurtured all sorts of individual and collective neuroses, loss of meaning, perversion of values and of spiritual traditions. Development is a humus on which -among many other venomous flowers-terrorism seems to prosper. The generous but naive ideas of the Enlightenment enticed us into believing that the diffusion of science and technology is a buttress against fanaticism and jingoism; but since Fedor Dostoevski and Joseph Conrad we should know better. As a matter of fact many of the modern terrorists have training in science and technology; significantly they have not been recruited in traditional communities but in modern universities; these *heimatloss*, dreaming of a fantastic fatherland, are typically modern. Not only is it an illusion to believe that rapid economic and technological change will result in peaceful universal brotherhood and democracy but, on the contrary, we can be certain that it will result in various sorts of dangerous social and political pathologies.

**A bad example:** The evil projects of modern terrorists do not stem from some unique wickedness; they are an expression of the modern predicament and of modern culture. We should not forget that everything terrorists do or plan doing to hasten the coming of their own version of the Kingdom of Justice has been already publicly

planned, done and justified during the twentieth century by our so-called rational Nation-States. What is embarrassing is that we have given them the example of what can be done and the tools to do it. During World War I France and Germany gave the world a lesson in mass killing of human beings with gasses. The possibilities of biological warfare were first explored in western (including American) military laboratories and some of the best places where terrorists can go shopping for anthrax and other biological niceties are the military warehouses of “civilized” countries. During World War II, in the name of civilization, the English and the Americans carried out mass bombing of civilians in Dresden, Hamburg and Hiroshima on a much greater scale than the blitz of nazi Germany. Finally, accepting the idea that *everything* should be done to defend a country, western societies, disregarding the teaching that no dominion is eternal on Earth, have built enough atomic bombs to destroy human life on Earth; by so doing Christian nations of the West have in practice turned the Nation-State into an absolute to which all mankind may be sacrificed. But once a State has authorized itself to do so in the name of national sovereignty, it thereby implicitly grants all the other States permission to do the same; why would anyone convinced of the sanctity of his mission resist the temptation of using such means if he could?

**The price of development:** Our belief that thanks to “progress” we could enjoy not only an abundance of commodities and services at a low price but also peace and democracy is dangerously short sighted. Focusing on technological and economic assets we forget too easily that development is a multidimensional process with far-reaching societal consequences. Rapid techno-economic development creates both technological vulnerabilities and scarcity of some essential cultural resources such as symbolic ethical patterns and vigorous traditions. For a long time we have ignored these indirect costs of development. But when the two distinct trends towards technological vulnerability and depletion of strong symbolic guidelines, which characterize the modern world, finally intersect, then the world may become a dangerous place to live in. Limiting the dangerousness of our predicament will be very difficult. So far cultural creation cannot be engineered: the establishment of strong symbolic ethical guidelines is a slower process than their destruction by an ever-changing technological and economical environment; at any rate it is difficult to conceive how such a cultural creation could be achieved without a serious slowing-down of techno-economic development and, obviously, we are not ready for that. Another path to security, more akin to the modern mind, consists of enhancing social control to the same level as we have developed technological power. As Bernard Charbonneau used to say: *The greater our power grows, the stricter order must be.* Today our techniques of social control are lagging far behind the destructive potential of our technologies; in order to obtain security we may devote our energy to overcoming this discrepancy between power and control. But this again is a risky path: not only is it far from certain that this huge task can be achieved at all, but it is likely that it could be achieved only at the expense of individual freedom, as Aldous Huxley warned us in 1921.

The pursuit of development will not be the cure to insecurity; it is part of the problem.

## September 11<sup>th</sup>, 2001: On Violence, Divine and Human

by Darrell J. Fasching

On September 11<sup>th</sup>, like Americans everywhere, I sat stunned watching again and again as those two planes crashed into the World Trade Center. There was no escaping those images. Every time I changed the channel, seeking relief, the images would reappear. And as I watched the ball of fire repeatedly explode from those towers I could feel the wave of hatred that motivated these acts sweep over America. Thousands tragically died that day, but all Americans knew they were equally desirable targets, although not all were equally accessible. Never in my life had I experienced so unambiguously the reality of being hated by people I didn't know and hadn't ever met.

On the day the bombing of Afghanistan began, a tape of Osama bin Laden was broadcast explaining to us our situation. "These events have split the whole world into two camps: the camp of belief and the camp of disbelief. There is only one God, and I declare that there is no prophet but Muhammad." Bin Laden and the al Qaida, according to a discovered terrorist manual, are clear about the goal: "overthrow of the godless regimes and their replacement with an Islamic regime." This goal, says bin Laden, authorizes Muslims to kill Americans and all unbelievers. The killing of even innocent women and children is not only permitted but religiously required.

At first bin Laden explained his actions as a response to the religious offense of American soldiers, whose very presence in Saudi Arabia during the Gulf War, profaned the land that harbors the most sacred places of Islam. In bin Laden's eyes, it seems, it was the most flagrant sign of the pollution of the sacred world of Islam by the secularity of modern Western civilization. As the conflict escalated, bin Laden widened the scope of his enemies list to embrace all nations who participate in the United Nations including "those who pretend they are leaders of the Arab world and remain members of the U.N." — an organization that divided Palestine in 1947 and "gave the Muslim country to the Jews."

The power of the sacred, Ellul would have reminded us, when left unchecked, always divides the world into two camps, one sacred and the other profane. Such a sacral vision offers war as a ritual of purification by which to cleanse the world of everyone and everything profane.

Nevertheless, if we wish to call into question such sacral interpretations of Islam we had better be prepared to call into question certain sacral interpretations of Christianity as well. We have heard bin Laden's style of dualistic rhetoric before. It has infected

significant strands, not only of Islam but of Christianity and of Western civilization. “Two world’s face one another” said Hitler in *Mein Kampf*, “the men of god and the men of Satan! The Jew is the anti-man, the creature of another god... Today I believe that I am acting in accordance with the will of the Almighty Creator: by defending myself against the Jew, I am fighting for the work of the Lord.” Hitler took his inspiration from many sources, including Martin Luther: “Know Christian that next to the devil, thou hast no enemy more cruel, more venomous and violent than a true Jew.” And the well from which Luther drew goes deep into the past — all the way back to the anti-Judaism of the Gospel of John (Chapter 8) where Jesus is portrayed as saying to “the Jews”: “Do you know why you cannot take in what I say? It is because you are unable to understand my language. The devil is your father, and you prefer to do what your father wants. He was a murderer from the start... he is a liar, and the father of lies ... If you refuse to listen it is because you are not God’s children.”

We can no longer afford to indulge in the apocalyptic rhetoric of the cataclysmic struggle between good and evil that infects these sacral visions and permits the “cleansing” of the earth through the “removal” of all who are profane and therefore portrayed as “less than human” or worse “demonic.” The sickness that infects important strands of the biblical religions (Judaism, Christianity and Islam) is in great part rooted in a vision of God’s “final solution” to the problem of evil as an act of cosmic violence that separates believers from unbelievers, in order to give the world over to the former. As the history of Christian anti-Judaism and the role it played in the Holocaust well illustrates, it is not an unimaginable leap from “the Jews are not worthy of eternal life” to “the Jews are not worthy of life.” This is the kind of leap bin Laden, it seems, has been able to make with regard to both Christians and Jews, from within his Islamic apocalyptic world view.

Jacques Ellul taught us that we are not inevitably locked into a sacral reading of the scriptures, not even of *The Apocalypse* or *Book of Revelation*. Ellul embraced what he called the biblical tradition of the holy that comes to expression in hospitality to the stranger and rightly rejected the interpretation that the final solution to evil offered by the Book of Revelation is through God’s violence. He looks instead to the suffering Christ and Christ’s teachings on love of one’s enemies as the central message and finds in the Book of Revelation, the message of salvation for the whole human race.

The command to welcome the stranger is not only the most often repeated commandment in the Torah it is also the core of Jesus message of non-violence in the Sermon on the Mount, where we are asked to love our enemies and do good to those that persecute us. In the biblical tradition, to welcome the stranger is to welcome either God, the Messiah or an angel (messenger) of God. And to reject the stranger is to turn one’s back on God.

How are we to respond to Islamic terrorists after September 11<sup>th</sup>? I am not suggesting that returning love for hate in any direct way would have any influence on bin Laden and the members of al Qaida. However, I do believe that in the long term only hospitality and compassion can solve the terrorist problem. Two days after the

destruction of the World Trade Center the New York Times took a poll that showed that 85% of those surveyed said we should respond with military violence. Of these 75% said, even if innocent civilians are killed, and of these 85% said even if thousands of innocent civilians are killed. At that moment, Americans showed that they too are willing to become terrorists.

Fortunately, indiscriminate bombing in Afghanistan has not been our policy so far. While it may be possible to win the battle against Osama bin Laden and al Qaida by violence, it is quite possible that we could win that battle and yet lose the war against terrorism. Our response to September 11<sup>th</sup> must not be that revealed in the New York Times poll. To retreat into insular patriotism and see the world as “us against them” is to play into the apocalyptic vision of Osama bin Laden who wants to divide the whole world into two camps as a precursor to an apocalyptic struggle to cleanse the world.

We do not need to give the fire of hatred that spewed forth from the World Trade Center the power to divide us — whether along, religious or nationalistic/political lines. That fire of hatred is best answered with the living flame of love and compassion. Two things happened to Americans after September 11<sup>th</sup> .that offer us this option — an option that undermines the violence of the sacred and embraces the hospitality of the tradition of the holy. (1) For the first time in the experience of many Americans we knew personally and viscerally what it was like to be the object of hatred and prejudice by people who only know us through stereotypes. Many minorities in this country know what it is like to be viewed in that way but most middle and upper class white Americans do not — or rather, did not before September 11<sup>th</sup>. (2) For perhaps the first time in our history, all Americans were perceived as victims and received unprecedented expressions of compassion from countries and their citizens around the world. Far from dividing us, one from another, September 11<sup>th</sup> demonstrated that compassion for victims can transcend international political and religious boundaries.

Knowing what it is like to be the victim of hatred and prejudice and what it is like to receive compassion should awaken in us a compassion for victims everywhere in the world. No longer can we distance ourselves from the suffering found in the world. September 11<sup>th</sup> should move us to engage in those personal, community and public actions and policies that will build an international wall of compassion to circle the world and turn back the wall of hatred and violence that washed over the world on September 11<sup>th</sup>. Only such a wall of compassion can choke out the fires of hatred that motivated the terrorist acts of September 11\* , rendering their stereotypes implausible. Before September 11<sup>th</sup> the Bush administration was pursuing an arrogant international policy of unilateralism (in ecological policy, missile defense, etc) Now such policies should seem to us unthinkable. Now we should know and act on the truth, that *we are members of one another*. Now we should turn our back on the god of violent “final solutions” and embrace the stranger. There is no other way either to God or to peace except through hospitality to the stranger.

# The Dysfunctions of a Global Technological Era

by David W. Gill

Jacques Ellul's writings provide not one but several perspectives from which to view critically the horrors of September 11. Most immediately, perhaps, one thinks of Ellul's discussion of violence and counter-violence. What will be the result of relying on overwhelming force to suppress Al Qaeda? Could American Christians with any legitimacy claim God's support for their military actions against their Muslim enemies? Is it possible to break the cycle of violence? What would it take? Ellul's answers to such questions would not be likely to please large numbers of people.

Ellul's thinking about religion is also pertinent. He was very critical of various aspects of the Muslim tradition (cf. *Subversion of Christianity*, 1984; Eng. trans. 1986; ch. 5 "The Influence of Islam") including its legalism, repression of women, and its support for slavery, colonization, and holy war. One wonders where Muslims and non-Muslims could possibly find common ground for peaceful co-existence after reading Ellul (and his longer book-length study of Islam was never published because the French publishers thought it politically too hot to handle!).

But it should not be thought that the critique of Islam ends the discussion of religion for Ellul. He was tougher still on Christians for selling out their unique witness for an unholy political/cultural/economic replacement faith that in practice worships money, power, and technology. The outrage that many Muslims feel toward the West and America is most emphatically not due to the "offense of the Gospel" or the "scandal of the cross" as the New Testament puts it. It is not the suffering, redemptive love of the cross but the blustering, arrogant greed of corporate and cultural imperialists that has won the west and now is a stench in much of the world's nostrils.

Ellul's views of revolution, revolt, and social change would also provide interesting lenses through which to view the rise and character of Muslim Fundamentalist movements like the Taliban and the Iranian leadership. Are these mere revolts in protest of a juggernaut technological development? Or do they have genuine revolutionary potential?

Nevertheless, what interests me most in thinking about Ellul and 9/11 is his description of the irresistible "universalism" of Technique (cf. *Technological Society*, 1954; Eng. trans. 1964; pp. 116–133). In our contemporary terminology, globalization is inevitable: all parts of the globe will be conquered by technology and technological rationality. In all parts of the globe, distinctive, traditional values, habits, and techniques will yield to a common technological platform.

Wherever technology invades, it conquers and replaces old cultures. Ellul argues that religion is receding before technology. Buddhism and Hinduism are collapsing. He does not mention Islam or Christianity but he clearly intends us to think that they too must yield to technological development.

September 11 demonstrates this triumphant universalism of technology in several ways. It is globalized technology that has invaded Afghan societies, arming them to

fight against the Soviet Union in the 80s. It is global technology that brings an increasingly homogeneous and aggravating media diet into homes and neighborhoods around the globe. It is global technology that enabled the organization of Al Qaeda and it was advanced technology that was used to bring down the World Trade Center. Our lives are thoroughly interwoven by technology. And, of course, the anti-terrorist response is also carried out on the most advanced global technological platform. The whole experience will knit us more tightly together technologically than ever. Commerce and war were the great drivers of technological universalism in the past, Ellul argued. Looks like little has changed there.

But we must come back to Islam. For it appears that Islam is not so easily disposed of or coopted by technological society. Ellul criticized technological society as being ultimately meaningless and dehumanizing, and so it is. But isn't this why Islam has such an appeal? It is a powerful counter-narrative of history and meaning.

Can a fundamentalist Muslim civilization stand up to and overcome technological civilization? I doubt it. But I also doubt that it will take "No" for an answer from the global technological society. A succession of progressively more destructive "revolts" and rebellions (in effect "suicide bombings") is probably in our future, more so after the bombing of Afghanistan than before, because of the inexorable laws of violence.

Unless! In the face of what looked like technological determinism, Ellul was steadfastly a man of hope throughout his life. He believed in a Wholly Other" God breaking into human history in surprising ways. He believed that individuals and small communities could have tremendous long-term impact if they stopped trying to manipulate and calculate such impact and instead gathered intransigently and wholeheartedly around truth and then lived out that truth in the midst of the world's reality.

## Something Still Stands

by Andrew Goddard

The terrorist attacks on New York and Washington DC released a welter of emotions, from horror to grief to rage. But is there an authentic Christian response?

For those first few hours on the 11<sup>th</sup> September, as live pictures streamed into our homes and offices, silence seemed the only proper response. So many powerfull feelings were stirred up — horror, incredulity, shock, anger, grief, fear, pain, vulnerability — words failed us. Even now, after the explosions have been endlessly replayed, we struggle to find language, for each of us personally, for our society, for our world, that enables us to make some sense in the face of such non-sense. That enables us to think and act and live aright in response to great evil.

Christians, too, must find a language with which to speak. If we are to do that our vocabulary must express a perspective shaped by God's revelation in Jesus and in scripture. We must beware of just using the same words everyone else is using.

Unless we are discerning and critical, we run the risk of repeating what is, in effect, propaganda, hiding the truth rather than speaking it in love.

As we continue to mourn with those who mourn, almost everyone, whatever their nationality or religion, concurs with two basic truths: first, that the acts of the hijackers and of the men who directed and financed them were wholly wicked, and must be totally and unreservedly condemned. In cold blood to murder thousands of human beings, and terrorise millions! No suffering, however cruel, no end, however just, could ever legitimate such acts of violence by anyone.

Second, we must also speak of signs of grace and hope — the courage and self-sacrifice of thousands in response to such horror, the countless acts of human love in the face of such unspeakable human evil.

But here we are on the brink of falling into the first trap. We have divided those involved in this affair into those who have done great evil and those who have done good — and those who have done evil this time are those who are most different from us, while those who have done good are those who are most like us.

Two days after the attack, the headline in the *Times* read: ‘Good will prevail over evil.’ That as it stands is a vital message of hope with which all who believe in a God who raised the crucified Jesus from the dead must agree.

We may then think that we will prevail. But we must never identify any nation, or any political or economic system, with ‘good’ and with the work of God in the world. Nor can we subscribe to the view that good achieves its victory over evil through military and economic might.

In the immediate aftermath, other words fell easily from many lips. The language that was used was revealing, and needs to be examined. The attack, we were told, was not only evil but ‘cowardly.’ But why is it cowardly to be so devoted to one’s goal (however wicked) that one is willing to die to achieve it? Is it not more cowardly to wage war by dropping bombs from miles up in the sky, secure from enemy fire, or by firing cruise missiles from a safe distance?

Again, we have been told repeatedly that this was an attack upon ‘civilisation.’ But this is at best only half true. Inasmuch as the Pentagon has developed weapons of mass destruction and given funding and training to both military regimes and violent insurgents, it is hardly a symbol of civilisation.

Perhaps more than anything else in the immediate aftermath we heard the opinion expressed that ‘the world will never be the same again.’ And yet the scale (at least) of this horror is sadly not unparalleled. As I stood watching the live pictures, someone, struggling to find words, said: ‘Surely no major city has ever seen anything as sudden and destructive as this?’ To which the obvious response was one unsettling name: Hiroshima.

One does not need to go back to the war to appreciate that such a massacre is not unprecedented. What about the seven thousand Muslim men and boys murdered in the ‘safe haven’ of Srebrenica? Or as many Tutsis killed in a single church in Rwanda? What of the ‘turkey shoot’ of fleeing Iraqi forces — mostly conscripts — on the road

to Basra at the end of the Gulf War? Or even the slaughter of 1,800 Palestinians in the Sabra and Chatilia refugee camps?

So, why does what we have just lived through feel qualitatively different? In part, it is because the cameras were there and so we saw it happening. In part, because they were people like us, living like us, who were terrorised and killed. We all feel, 'It could have been me on one of those planes, in one of those offices.' And so it makes us feel vulnerable in a way those other, distant atrocities never could.

Rowan Williams, the Archbishop of Wales, who was in Manhattan at the time, spoke of this experience of powerlessness and observed that it is a real and frighteningly regular experience for millions of people. We have, in our emotional response to this horror, been provided with an opportunity not for vengeance but for grace. We have glimpsed what it would really mean to identify with victims of war and terrorism and oppression around the globe. We have sensed what it would really mean to 'remember ... those who are being tortured as though [we ourselves] were being tortured' (Hebrews 13.3).

It is crucial that such feelings are not overwhelmed by the (understandable) popular reaction that talks of being unbowed, of getting back to normal and of inflicting punishment or seeking revenge. Perhaps the particular calling of Christians now is to find a distinct language that can express those feelings and assist reflection to shape a different response.

Scripture gives us various examples. The Book of Lamentations reminds us how Israel reacted to the destruction of Jerusalem, and offers a pattern of prayer and worship which is sadly missing from so much of our church life, but is essential in times like these.

Job, struck suddenly and devastatingly by enemies, 'arose, tore his robe, shaved his head, and fell on the ground and worshipped'. He did not deny his weakness, but acknowledged, 'Naked I came from my mother's womb, and naked shall I return there; the Lord gave, and the Lord has taken away; blessed be the name of the Lord' (Job 1.201).

That peaceful attitude of humility and prayerful dependence not on one's own resilience but on God is also expressed in many of the psalms:

God is our refuge and strength, a very present help in trouble.

Therefore we will not fear, though the earth should change, though the mountains shake in the heart of the sea...

'Be still, and know that I am God!

I am exalted among the nations,

I am exalted in the earth.' (Psalm 46. If & 10)

It is when we come to God in this frame of mind that we may begin to discern a deeper reason why this particular massacre seems so different — seems, indeed, to have changed the world. We are already aware that the strength of our reaction is not simply explained by how many were killed, and how suddenly and publicly. It is also because of where it took place. This was an assault not only on civilians but also on

the great symbols of the economic and military might of the world's one remaining superpower.

On the Sunday following the attack, the church I attended found its own alternative to the media's response in the words of a great hymn of trust in God, 'All my hope on God is founded.' Its second verse suddenly had new depths of meaning:

Pride of man and earthly glory,  
Sword and crown betray his trust;  
What with care and toil he buildeth,  
Tower and temple, fall to dust.  
But God's power,  
Hour by hour,  
Is my temple and my tower.

Even secular commentators, without recognising its significance, have compared the World Trade Center to the tower of Babel. That ancient skyscraper represented the zenith of human power and achievement and the urge to make a name for ourselves and dominate the world (Genesis 11.4). How many people, witnessing the 'apocalyptic' scenes that Tuesday afternoon, thought of the disturbing words of Revelation 18: 'Fallen, fallen is Babylon the great!'

There, in that chapter, may we not find another reason why this attack on the US mainland has been so shocking to so many?

'In her heart she says,  
"I rule as a queen;  
I am no widow,  
and I will never see grief'...'

And the kings of the earth ... weep and wail over her when they see the smoke of her burning; they ... stand far off, in fear of her torment, and say,

'Alas, alas, the great city,  
Babylon, the mighty city!  
For in one hour your judgment has come'  
(Revelation 18.7b & 9f)

The Book of Revelation is notoriously difficult to interpret. Many have sought to read into it a literal timetable for future world politics, reducing its bold language of the imagination to a crude code for particular states and events. I do not think we should ever use God's word in that way. Nevertheless, the possible implications for our present situation of this difficult and much abused part of scripture are extensive and uncomfortable if we allow it to give us a glimpse behind the veil of human history.

Its graphic account of a sudden, devastating attack on a secure and confident economic and military power, and its traumatic global repercussions, bears powerfully on what we have just witnessed. It suggests that we can only really make sense of what has happened within the framework and through the language of a biblical theology of principalities and powers and the rise and fall of empires.

But, like the hymn, this passage calls us above all — as individuals, societies and nations — to examine ourselves and the way our pride and power represent a lack of trust in God that distorts and destroys human lives, and indeed the whole world.

Jesus' response to people's struggle to make sense of lives cut short by falling masonry and murderous intent is unsettling. His warning is simple: 'Unless you repent, you will all perish just as they did' — and he supplements this with a vivid story of a fruitless vineyard being given its last chance (Luke 13.1–9).

When we are confronted with our frailty and our powerlessness in the face of great evil, the temptation is to focus on what has attacked us. But scripture calls us instead to concentrate on God. The fundamental responses it seeks to elicit from us are those of lament, penitence for our own sin, humility, patient prayer and worshipful trust in God. The good news of the Book of Jonah is that when these, rather than retaliation and revenge, are our response, even the rebellious imperial spirit of a superpower (then, the Assyrians) can be truly vanquished, not by human violence but by divine grace.

But what of justice? Was this evil not an act of war that requires retribution? Christians find themselves unable to agree on a common language here. Some believe that the teaching and example of Jesus demand that we must always oppose all forms of violence. Others think there are circumstances in which a political authority can, and sometimes should, use coercive military power against others.

But even Christians who subscribe to this latter, just war' theory must be cautious about its application in the present situation. At its heart is the belief that the pursuit of justice God requires of political authorities (see, for example, Romans 13.1–7) cannot be limited solely to actions within the geographical boundaries of their jurisdiction or restricted to the normal juridical means of legal processes. In the fight against injustice and oppression in this world, such an authority may under certain conditions properly use what the apostle Paul called 'the sword' outside its own legislative realm.

There is absolutely no doubt that a monumental act of injustice and inhumanity has been perpetrated on US soil, against citizens of the United States and many other countries. It is therefore incumbent on all those with political and judicial power — particularly the US government — to seek to bring to account anyone who survives who planned this dreadful crime and to prevent any more such atrocities.

However, only actions whose aim is to secure that specific and limited end — and that have a reasonable prospect of achieving it — can ever be justified. Only actions that distinguish between the guilty and the innocent can ever be right. Only actions that are controlled and constrained by the goal of ensuring justice are legitimate. Such stringent conditions distinguish just war from terrorism.

In struggling to understand what had happened and the mentality of those involved, Jack Straw, the British Foreign Secretary, was quick to condemn the terrorists for being trapped in a psychosis in which their ends justified any means. It is frightening, and sadly ironic, that much of the subsequent discussion about how we are to respond has betrayed signs of exactly the same psychosis. How many voices have we heard saying that we must, or shall, 'do everything in our power'? We must insist that there may

be technically and politically possible means to secure a just end that ought never to be used because they are morally wrong.

In fact, describing the assault on Manhattan and Washington DC as an ‘act of war’ is highly debatable, on both technical and moral grounds. The language of war is best used for conflicts between political authorities that claim legitimacy as representative leaders of an identifiable political community. It may, therefore, be better to consider those attacks in terms of crime (though their ferocity and scale could justify speaking of a private war).

This crux of definition draws attention to another fundamental, and frightening, problem we now face in seeking to enact justice. Since the perpetrators lack any public political function and any established political and military structure, it is very difficult to wage a just war against them. A real danger then arises that, in a reversal of George Bush’s claim, war waged against terrorism ceases to be just, as it can itself now only take the form of terrorism. Some of the more belligerent responses that have been suggested would appear, under the cover of a justified war, to amount to a form of mass societal torture.

It is vital that, whether we are pacifists or committed to the ‘just war’ tradition, Christians should find a language that is truthful about our response to this evil and that discerns what is right and what is wrong. If we do not, we face the real and terrifying danger that the governments of the US and Britain and our allies, carried along by their own propaganda, will become like the terrorists they oppose, slaves to an unquestioning belief in their own ideology, and willing to use disproportionate and indiscriminate violence in their cause.

Does this Christian language leave us powerless in the face of such wickedness? In one sense, yes. Political rhetoric that promises that we will not rest until we have eradicated evil from our world represents a fundamentally godless politics which, because it no longer believes in the final judgment by God, thinks that such a judgment can and must somehow be enacted by us. But when we exert human power in the face of great evil we run the risk of allowing evil to triumph even more through our own actions, and thus finding ourselves under God’s judgment.

Instead, the biblical response acknowledges that when we ourselves are powerless, evil is not victorious, because God is God and he will judge:

O Lord, you God of vengeance, you God of vengeance, shine forth!

Rise up, O judge of the earth...

O Lord, how long shall the wicked, how long shall the wicked exult? (Psalm 94. Iff)

We not only await God’s future judgment of evil but look back to his past judgment of it in Jesus. Here is the event — a demonstration of the power and wisdom of God which is so momentous that we may truly say the world will never be the same again.

We have, quite rightly, heard much talk of our enemies; but Jesus called us to love our enemies and pray for those who persecute us (Matthew 5.43f). His enemy-love, his turning the other cheek, led him to the cross — and there he reconciled us to each other and to God, and there he overcame the principalities and powers. He achieved

this by having his body broken and his blood poured out. He suffered the terrorism of the cross, sharing the fate of the zealots who sought to defeat Rome by violence — and it was, amazingly, in this way, while we were his enemies, that God showed his love for us.

And that past judgment is something in whose light we must now live in the Spirit of Jesus. It gives us an understanding of God, and of our own sinfulness in the face of great evil, that does not leave us powerless but, rather, grants us the wisdom to make sense of these difficult times, the language with which to speak and help others to speak, and the power to respond by living the truth in love.

As Paul urged us: ‘Bless those who persecute you; bless and do not curse them. Rejoice with those who rejoice, weep with those who weep. Live in harmony with one another; do not be haughty, but associate with the lowly; do not claim to be wiser than you are. Do not repay anyone evil for evil, but take thought for what is noble in the sight of all. If it is possible, so far as it depends on you, live peaceably with all. Beloved, never avenge yourselves, but leave room for the wrath of God; for it is written, “Vengeance is mine, I will repay, says the Lord.” No, “if your enemies are hungry, feed them; if they are thirsty, give them something to drink; for by doing this you will heap burning coals on their heads.” Do not be overcome by evil, but overcome evil with good’ (Romans 12.14–21).

## Bombs Bursting in Air

by Dan Clendenin

This week American and British bombs began raining down upon Afghanistan. Defense Secretary Rumsfeld has declared the skies are now clear for us to bomb 24 hours a day, although some jets now return to aircraft carriers with missiles intact due to a paucity of targets. No doubt the Presidents ratings will spike in the polls.

As a Christian who worships the Lord who loves all peoples and nations, this fills me with deep sadness. Terrorized by the Taliban, devastated by its war with the Soviet Union (1 million deaths, 4 million refugees), Afghanistan, like many places in the world today,<sup>1</sup> is hardly a nation in the normal political sense of the term, What it is is an unqualified humanitarian catastrophe.

I am greatly inspired by the pacifist possibilities proposed by King and Ghandi, but it seems like non-violence as a national policy would allow evil to rule unchecked. So, I believe that some sort of military intervention is called for on our part, just as it was in the Second World War or, more recently, in Yugoslavia. In both of those cases wholesale genocide was taking place and military intervention helped to stop it. There

---

<sup>1</sup> See Robert Kaplan, *The Ends of the Earth* (New York: Random, 1996).

is an argument to make, too, that if we had intervened sooner and more forcibly in Europe and the former Yugoslavia, we might have saved even more lives, just as we might have in the Rwandan genocide where we did nothing at all.

Given the apparent necessity of a military response, I nevertheless have tried to identify in my own mind just what it is that disturbs me as a Christian about our war against terrorism. Three matters come to mind: the ambiguous consequences of violence; the inflated sense of national cause to make it almost contiguous with God's cause; and the restricted sense of justice to exclude our opponents' moral claims.

First, violence often begets more violence. I wonder whether the bombings will prevent future terrorist acts (which the Taliban have already promised) or actually provoke even more of them by radicalizing and inflaming the militant fringe, and drawing in even moderate Muslims. Only time will tell.

Further, although I recognize our military response as somehow necessary, I feel very uneasy about calling it morally good. To me the bombings are necessary, regrettable and morally ambiguous. What disturbs me the most is the rhetoric of religious nationalism that is invoked to narrate our cause, namely, the idea that God is on our side in a uniquely special way, that our cause is His cause. Senator John McCain put it this way: "They hate us because we are good and they are evil." Defining the kingdom of God in nationalistic terms, or one's national interests in divine terms, is nothing new. Compare these four examples.

Adolf Hitler stated his case this way. "I believe that I am acting in accordance with the will of the Almighty Creator ... By defending myself against the Jew, I am fighting for the work of the Lord." His rival General Eisenhower used the language of jihad: "This war was a holy war; more than any other in history this war has been an array of the forces of evil against those of righteousness."<sup>2</sup> Now fast forward to the present crisis.

On October 7, 2001, after the United States and Britain launched its attacks on Afghanistan, the Arab television news network al Jazeera broadcast a speech by Osama bin Laden. We don't know exactly when this tape was made, and I have made some slight paraphrases to improve the awkward translation of bin Laden's speech.

America has now tasted only a small portion of the humility we have experienced for 80 years.. In Palestine, Lebanon, Iraq, Sudan, and the like, no one complains when innocent children and civilians are killed. No guilt is attached to this. No one thinks of these as war crimes ... I say that these events have split the whole world into two camps: the camp of the believer and the camp of the infidel ... God has given America back what they deserve ... This is America, God has sent one of the attacks by God and has attacked one of its best buildings. And this is America filled with fear from the north to the south, and east to west, thank God.

Here, America is the great Satan.

---

<sup>2</sup> Cited by James Canoil, *Constantine's Sword* (New York: Houghton Mifflin, 2001), pp. 256–257,

George Bush likewise invoked divine sanction for our country's actions. In his September 20 speech to the joint session of Congress (viewed by 82 million people, according to Nielsen) he remarked:

Every nation, in every region, now has a decision. Either you are with us, or you are with the terrorists ... I will not forget this wound to our country, or those who inflicted it.

I will not yield. I will not rest... I will not relent in waging this struggle for the freedom and security of the American people ... The course of this conflict is not known, yet its outcome is certain. Freedom and fear, justice and cruelty, have always been at war, and we know that God is not neutral between them ... Fellow citizens, we will meet violence with patient justice assured of the rightness of our cause.

In this instance it is the militant Muslims who constitute an evil empire.

Let me be clear. To me there is no moral comparison between Hitler and the allies, or between terrorist values that turn jets into bombs and western liberal political values enshrined in the likes of the UN Declaration of Human Rights (1948). But all four people above invoke God for their cause and divide the world neatly into the evil infidel and the righteous believer. That makes me nervous. Flying the flag in a church or a mosque, as if to signify either figuratively or literally that the interests of the kingdom of God coincide with the interests of one's country, is a more benign example of the same phenomenon.

Thirdly, sometimes our sense of justice is truncated, tailored to serve our own narrow cause while myopically ignoring our enemy's moral claims. Having traveled in numerous countries of the two-thirds world, I must say that I get frustrated when Americans fail to appreciate why many people around the world "hate us."

I resonate with some of what bin Laden says about the political humiliation, economic exploitation, military domination, and overall "cultural colonialism" that nations like his feel. What about the the moral filth we export around the world for a handsome profit, from movies by Madonna and Schwarzenegger to MTV (which, as the world's largest television network, can now be viewed in 342 million households in 140 countries).<sup>3</sup> Does our sense of justice weep as much for the 100,000 Iraqis killed in the Gulf War (1991) as for the 148 allied casualties,<sup>4</sup> as much for the one million deaths in the Iran-Iraq war (1980–88) as for our 44 Americans slain in Mogadishu (1992)? Bin Laden's terrorist response is tragically flawed and will do his cause harm; but his analysis has at least some merit. From the vantage point of the world's disenfranchised, western triumphalism is not a pretty picture.

Bombs are not a quick fix and may, in fact, cause not only collateral damage but unintended consequences. The kingdom of God is something far different than a national

<sup>4</sup> These are the US government estimates; some human rights groups put the figures much higher.

cause. And a consistent sense of moral justice does not know any national boundaries. May God have mercy on our country; and on Afghanistan too.

## Terrorisme international et communication politique dans les sociétés techniciennes

by Patrick Troude-Chastenot

”Je n’ai pas l’habitude de faire des amalgames faciles, et je dis donc en pesant exactement mes termes que les terroristes sont des nazis.” Jacques Ellul, *Les combats de la liberté*, 1984

L’Histoire, la grande, nous dira peut-être un jour si nous avons eu raison de faire commencer le XXI<sup>ème</sup> siècle à la date du 11 septembre 2001. Quoiqu’il en soit, si l’attaque terroriste, et surtout la riposte militaire, a donné lieu aux interprétations les plus contradictoires, personne n’a osé contester l’importance de cet événement inouï, “radicalement nouveau” pour Claude Lanzmann, événement pur, “l’événement absolu” selon la formule de Jean Baudrillard.

L’ampleur de ce drame ne doit pourtant pas nous empêcher de considérer le terrorisme moderne comme une forme particulière de communication politique dont la signification profonde est inséparable du caractère technique des sociétés contemporaines. Cet “hyperterrorisme” fonctionne à la fois comme indicateur de niveau de vulnérabilité des sociétés techniciennes et comme révélateur de la fragilité intrinsèque des démocraties pluralistes. Il a aussi pour effet de rappeler — par sa brutalité spectaculaire — que la force sinon la violence est toujours et partout le moyen spécifique, l’ultima ratio, de l’action politique.

La contestation armée de la prétention de l’état moderne au monopole de la violence physique légitime, renouvelle partiellement le thème de l’articulation de la politique et de la guerre. Enfin, si le terrorisme “*intrinsèquement mauvais*” selon Jacques Ellul, n’est pas — en soi — une nouvelle forme de totalitarisme mais seulement une arme aux mains de différents groupes ou régimes totalitaires, les solutions employées pour le combattre posent à leur tour la classique question des moyens et des fins.

Sous cet angle, peut-on désormais tirer quelques leçons de la tragédie du 11 septembre 2001 en revenant d’abord sur le film de l’événement tel que nous l’avons vécu, avant d’examiner ensuite ses conséquences, c’est-à-dire la guerre multiforme qui s’en est suivie et les questions, morales et politiques, qu’elle soulève des deux côtés de l’Atlantique?

I. L’événement - l’Amérique attaquée au nom de la Justice

Que s’est-il passé ce jour-là? Si l’on essaie de se reporter mentalement en arrière, comment avons-nous — sur le moment — réagi et perçu cet événement encore inédit?

## 1. Images du pouvoir et pouvoir des images

Au-delà de ce qui a été immédiatement présenté comme une déclaration de guerre à l'Amérique et/ou au monde occidental, voire comme le début de la première guerre du XXI<sup>e</sup> siècle, la première interrogation concernait le choix des cibles. Leur nature. Ce qui revenait à poser cette série de questions élémentaires: qui a fait quoi, comment, et avec quels résultats?

Et l'interrogation persistante sur l'identité du ou des auteurs — la question du qui — a eu tendance à eclipser la question du quoi. La question du comment étant littéralement absorbée par l'image — diffusée en boucle — des Boeing s'encastant dans les tours.

Nous reviendrons sur la dimension symbolique des cibles mais il n'a échappé à personne que ce sont des lieux de pouvoir — des représentations, des images du Pouvoir — qui ont été visés. Pouvoir économique et financier: le World Trade Center. Pouvoir militaire: le Pentagone. Pouvoir politique: l'attentat avorté contre la Maison Blanche.

La dimension visuelle est essentielle dans le sens où, de bout en bout, l'affaire a pris la forme d'un spectacle — tragique certes — mais d'un spectacle, et qui plus est télévisé... en direct live.

Le 11 septembre a marqué le retour en fanfare, du temps et de l'image CNN<sup>5</sup>. Un retour, qui s'avèrera très provisoire du reste, non pas de la chaîne de Ted Turner en tant que telle mais d'un genre si critique, en France du moins, durant et au lendemain de la Guerre du Golfe (1991).

Diffusion universelle d'images provenant d'un émetteur unique, risque de manipulation et de censure, information sous influence, omniprésence des généraux et des experts sur les plateaux de télévision, étouffement de toute voix discordante...

Pendant quarante-huit heures environ des spécialistes en aéronautique, en contre-espionnage et en terrorisme international se succéderont sur les écrans dormant & l'événement des airs de déjà vu, sans pour autant se montrer capables de se hisser à sa hauteur. Le soir même, la question n'était déjà plus de savoir si, mais quand, les Américains riposteraient.

Par le truchement de la chaîne d'information en continu CNN, allons nous revivre cette obscène spectacularisation de la guerre: le ciel de Bagdad illumine par des bombes aux allures de feux d'artifice, les raids aériens filmés sous l'angle d'innocents jeux vidéo?

Mais revenons aux attentats. Qu'avons-nous vu ce 11 septembre? *America under attack*, en direct sur tous les téléviseurs de la planète.

La première frappe (tour nord) a eu lieu à 8h45 heure de New-York (14h45 Paris). Elle n'a été vue par personne<sup>6</sup>. La seconde frappe (tour sud) a eu lieu à 9h06, soit 21

---

<sup>5</sup> De façon symptomatique, la chaîne Qatarie d'informations en continu Al-Jazira sera immédiatement qualifiée par les médias français de "CNN du monde arabe".

<sup>6</sup> La scène a néanmoins été filmée par un Français cinéaste amateur dont les images ont été diffusées par CNN seulement vers minuit heure locale.

mn plus tard, comme si la fonction de la première attaque avait été, non seulement de commencer par faire des victimes mais surtout d'attirer l'attention des télévisions, et des téléspectateurs sur le véritable carnage qui allait suivre. Et en effet, l'attaque du second Boeing a pu être filmée en direct par une caméra automatique de CNN, et vue en direct l'après-midi en Europe et le soir au Proche-Orient et en Asie.

"Ce moment a été l'apothéose de l'ère postmoderne" notera plus tard le romancier Martin Amis. Mais quels ont été dans l'instant les effets sur nous, spectateurs involontaires et captifs de la catastrophe qui se déroulait en direct sous nos yeux? Oserait-on en la circonstance parler de dommages collatéraux?

*Punir l'Occident par la ou il a péché? Le culte de l'image*

Devant la mort en direct & la télévision, on ne pense pas ou plus, le cerveau en apnée, scotch & l'actualité spectaculaire des images qui défilent en boucle sur nos écrans. L'énormité même de l'événement nous empêche de décoller les yeux du téléviseur. On assiste impuissant à la mise entre parenthèse de certaines de nos fonctions "vitals", dont la fonction critique.

Comment échapper à la tyrannie de l'image qui hypnotise les consciences. Choc des images, état de choc... On est submergé par les images de la catastrophe que l'on nous passe et nous repasse sur toutes les chaînes. Le "on" désignant tous les *heavy viewers* que nous sommes devenus pour l'occasion.

Il y a soudain comme une impossibilité de se débarrasser de ce drame si télévisuel. Après la catalepsie, l'addiction? Nous oscillons entre deux maux: le risque d'overdose et l'état de manque.

La diffusion répétée de ces images qualifiées par tous les témoins d'incroyable, d'impensable, d'inimaginable, finit par créer un besoin supplémentaire d'images, comme pour donner une sorte d'authentification à un spectacle jugé "invraisemblable", "hallucinant." Conditionnement, accoutumance, dépendance...

La vue de ces Boeing décrasant les tours fait naître chez le téléspectateur indigné par tant de cruauté un nouveau besoin, insatiable, une sorte d'attente inconsciente: celle d'images des préparatifs de la riposte militaire, des avions qui décollent, de jeunes militaires américains, blancs et noirs, tous unis dans le même désir de venger leur pays...

Autrement dit, des images héroïques dignes du meilleur (ou du pire) cinéma américain.

*L'effet boomerang ou l'arroseur arrosé*

En 1998 déjà, *Couvre-feu* d'Edward Zwick, mettait en scène une série d'attentats islamistes visant New-York. En fait depuis plus de trente ans, Hollywood inonde les écrans du monde entier de ses films-catastrophes.

De *Airport* (1969) à *Couvre-feu* (1998) en passant par *L'Aventure du Poséidon* (1972), *La Tour Infernale* (1974), *Piège de cristal* (1988), *Independence Day* (1996) et *Mars attacks!* (1997), l'industrie cinématographique américaine déverse un flot ininterrompu de ces productions à grand spectacle.

Le genre a ses lois. La catastrophe opère à la fois comme révélateur et comme moyen de redemption. Elle permet généralement à des timorés de se comporter en aventuriers intrepides, à des médians déclarés de racheter leurs crimes tandis que de faux courageux tombent le masque et que des gens apparemment biens sous tous rapports se conduisent en parfaits salauds.

Par une ironie dont seule l'Histoire a le secret, les terroristes ont retourné cette arme idéologique, ou ce message culturel contre son émetteur. Conçue à l'origine comme une fiction de divertissement, le scénario catastrophe est brutalement transposé dans le monde réel par les ennemis de l'Amérique. Une sorte de retour -sanguin- à l'envoyeur

1  
"Il se pourrait bien qu'ils aient intentionnellement utilisé le langage des films américains. Ils ne semaient pas simplement la terreur, ils créaient aussi des images"<sup>7</sup> *This time, the scene was real*. Du coup, les experts de la CIA consultent les scénaristes d'Hollywood pour anticiper la forme de nouvelles attaques.

Au cinéma, la catastrophe révèle aussi le héros qui sommeille dans le *regular guy*, le type ordinaire. Dans la réalité, beaucoup d'Américains considèrent que La Maison Blanche a été sauvée du vol 93 de United Airlines, l'avion qui s'est écrasé près de Pittsburgh, par une poignée de sportifs amateurs.

## 2. Symboles du pouvoir et pouvoir des symboles

Ce ne sont pas des immeubles qui ont été attaqués mais avant tout une métaphore, ou si l'on préfère des symboles. Et pas n'importe lesquels, les symboles de l'hyperpuissance américaine, symboles du pouvoir économique, du pouvoir militaire et du pouvoir politique.

Les clichés journalistiques contiennent toujours leur part de vérité. "On a visé le cœur de l'Amérique." "L'Amérique touchée en plein cœur." Les tours jumelles constituaient bien le haut lieu symbolique de la puissance économique et financière des USA. Situées à quelques pas de la Bourse de Wall Street, la presse désignait parfois le World Trade Center comme le *Temple du Commerce*.

La connotation religieuse s'applique également au Pentagone lorsqu'il est qualifié de *Sanctuaire de la guerre*. Quant à La Maison Blanche, elle symbolisait bien évidemment le siège du pouvoir du chef de l'état le plus puissant du monde. Autrement dit, un lieu sacré par excellence.

Dans les trois cas, attaquer ces lieux symboliques de pouvoir prend valeur de sacrilège. Par leur gigantisme même, les *twin* avaient en effet des allures de cathédrales. D'ailleurs, même si l'aveu ne fait pas nécessairement le coupable, on notera que l'inspirateur présumé de ces attentats (l'auteur du "message") est venu confirmer, un mois après les faits, ce qui n'était encore qu'une interprétation; parmi d'autres possibles. "Les vraies cibles étaient les icônes du pouvoir militaire et économique américains."

En utilisant le terme d'icônes, Oussama Ben Laden semble vouloir donner raison à Jean Baudrillard, dont il n'a vraisemblablement jamais entendu parler. "Cette violence

---

<sup>7</sup> Neal Gabler, New York Times, 16/9/2001

terroriste n'est pas "re'eZZe". Elle est pire, dans un sens: elle est symbolique."<sup>8</sup> Selon ce dernier, nous aurions tous revê de cet événement et dans leur stratégie, les terroristes savent "qu'ils peuvent compter sur cette complicité inavouable." En se situant délibérément sur le terrain de l'inconscient collectif, le philosophe français échappe ainsi à toute discussion mais s'interdit du même coup la moindre prétention scientifique.

Le fondateur d'Al-Qaïda justifie le massacre d'innocents par une rhétorique politico-religieuse tendant à gommer la réalité physique des victimes pour mieux souligner la puissance symbolique des cibles. Ainsi donc, les victimes n'étaient pas visées en tant que telles mais avaient pour seul tort de se trouver au mauvais endroit au mauvais moment. Elles en sont mortes. Et d'une certaine façon Ben Laden les tue symboliquement une seconde fois en leur déniait le statut de cibles véritables. Que lui importe si la destruction de ces prétendues icônes impliquait la mort de milliers de personnes bien réelles, faites de chair et de sang.

Le lendemain du drame, le dessinateur Plantu croquait l'Oncle Sam en géant, marchant au milieu des gratte-ciel new-yorkais, blessé aux jambes par l'impact du premier avion. L'image n'était pas sans évoquer quelques scènes fameuses du film fantastique King-Kong (1933), les jumeaux ayant d'ailleurs remplacé l'empire State Building dans le remake de John Guillermin. Mais comment ne pas songer au Colosse aux pieds d'argile ou même au Colosse de Rhodes des siècles d'antan.

Précisément, si l'on veut mesurer le pouvoir symbolique de la cible, il faut se rappeler que le colosse grec mesurait seulement 32 m de haut, que les ziggourats de Mésopotamie ayant inspiré la parabole biblique de la tour de Babel mesuraient de 40 & 100 m alors que les tours jumelles atteignaient 420 m de haut.

Pour un religieux fondamentaliste, le *skyscraper* américain n'est-il pas l'équivalent moderne de la tour de Babel? "Une tour dont le sommet pénètre les cieux" (Genèse, 11). Une sorte de défi lancé par l'homme Prométhée à Dieu pour affirmer sa puissance. Le gratte-ciel considéré comme gratte-Dieu? L'épisode biblique de la tour de Babel évoque bien une faute de mesure.

D'ailleurs, pour des chrétiens ultra-conservateurs comme pour des musulmans intégristes, New-York c'est Babylone ou Sodome et Gomorrhe. Une ville cosmopolite aux mœurs décadentes qui mérite destruction et chatiment divin.

Serait-ce faire injure à la psychanalyse que de la mêler à un lieu commun? Les tours comme représentation de la puissance sexuelle, le gratte-ciel comme symbole phallique? Dans cette perspective, l'attentat équivaudrait à une sorte de castration, architecturale et urbanistique. L'Amérique atteinte dans sa virilité, emasculée en direct par un ennemi encore inconnu mais forcément sauvage.

*Statue ou idole de La Liberty?*

À la une du quotidien *Le Monde* date du 13 septembre, sur le tiers gauche de la photo, on ne voit plus que la Statue de la Liberté. En arrière plan, on observe

---

<sup>8</sup> Jean Baudrillard, "L'esprit du terrorisme", *Le Monde*, 3/11/2001

une épaisse fumée noire. Comme si l'effondrement des tours jumelles du World Trade Center faisait resurgir le symbole même de la liberté.

De son côté, le numéro spécial de l'hebdomadaire TIME consacré à la tragédie montre en couverture recto les deux tours en flamme, et en "quatrième" au verso, la Statue de la Liberté en premier plan, tendant haut le bras, silhouette étincelante au milieu d'un rideau de fumée noire. L'image de cette statue intacte contemplant impavide un champ de ruines fait naître une curieuse impression.

Au lendemain des faits, il existe au moins deux "lectures" possibles de cette nouvelle skyline. En l'absence de revendication immédiate, la célèbre statue apparaît dans le ciel new-yorkais comme une sorte de signature. Un attentat commis au nom du droit à l'indépendance? La libération des territoires occupés, la libération des Lieux saints, l'arrêt des bombardements américains en Irak, la libération de tous les opprimés du monde! Preuve qu'il fallait détruire le temple du mercantilisme occidental pour replacer à l'horizon le symbole même de la liberté.

A contrario, on peut considérer qu'elle illustre l'échec même des terroristes qui ont détruit des immeubles et tué des innocents sans parvenir à écorner l'essentiel, l'immatériel, l'âme de l'Amérique, son principe, ses valeurs, symbolisés par cette statue célèbre dans le monde entier. D'ailleurs, si la liberté est la véritable religion des États-Unis, la sculpture de François Bartholdi en constitue la première icône, c'est à dire une "représentation symbolico-hypostatique," une simple image conductrice et l'origine qui, par nature, risque toujours de susciter l'idolâtrie.

De ce point de vue, la statue de la Liberté aurait constitué une cible autrement plus symbolique que les Twin ou le Pentagone. L'objectif était sans doute plus difficile à atteindre et le message risquait de devenir plus confus. Car si l'on prend au sérieux le discours d'Oussama Ben Laden, le terme d'icône peut conduire à penser que la cible des attentats n'était pas l'Amérique en soi mais le modèle incarné qu'elle incarne aux yeux d'une poignée de leaders corrompus du Moyen-Orient, à commencer par ceux de son pays d'origine l'Arabie-Saoudite.

Enfin, on notera que la découverte de citoyens américains parmi les combattants talibans n'est pas le premier ni sans doute le dernier paradoxe de toute cette affaire. De même qu'on a pu qualifier le milliardaire terroriste, expert en circuit financier, de "secret de famille de l'Amérique" ou de "double noir de son président" (A. Roy), on peut se demander si les pirates de Fair kamikaze qui avaient séjourné aux États-Unis suffisamment longtemps pour se fondre dans la masse n'étaient-ils pas, eux aussi, par leur mode de vie et surtout par leur culture technicienne, un peu Américains?

### **3. Techniques de communication et communication de la technique**

Qui pourrait nier que les États-Unis représentent l'archétype, sinon la matrice, des sociétés techniciennes? À l'heure du cyberterrorisme, l'attaque terroriste du 11 Septembre permet de poser la question plus générale du rôle de la technique dans les sociétés modernes.

*La communication Internet*

Internet passe pour être une invention d'ingénieurs américains utilisée à l'origine par l'armée puis par les universitaires américains désireux d'échanger plus rapidement des informations avec leurs collègues à l'étranger. L'enquête policière tend à établir que les organisateurs de l'opération ont privilégié cette technique de communication pour assurer la coordination des attentats.

Plus discret que le téléphone, le courrier électronique permettrait la dissimulation de messages par une combinaison de cryptologie et de *steganographie*. Les messages seraient au préalable codés puis dissimulés (dans la partie grise non visible à l'œil humain) au milieu de photographies d'apparence anodine (notamment les images les plus banales sur la Toile, c'est à dire des photos pornos) et transmis sous la forme de fichiers attachés.

Selon, Ron Dick, directeur adjoint du FBI, non seulement les pirates se servaient d'Internet, mais ils "s'en servaient bien."

#### *Le choix des armes*

La dimension paradoxale de l'événement ne pouvait échapper à personne. Alors que le président George W. Bush tentait d'imposer son projet de "bouclier antimissiles" censé transformer le sol américain en sanctuaire, en le protégeant des "Etats voyous/Rogue States," ce sont de banales cutters que l'on retrouve à la base de ce désastre.

De même que le danger n'est pas venu d'armes nucléaires, pas même d'armes conventionnelles, mais de simples avions civils transformés en armes de guerre. Il y a eu d'abord, dans les deux sens du terme: des avions détournés de leur route et détournés de leur objet.

Mais il y a eu aussi un retournement ou un "effet Frankenstein." La technique a bel et bien retourné contre son inventeur ou promoteur. Des avions américains, des Boeing 767, jugés parmi les plus sûrs du monde en raison même de la complexité de leur système de commande et de régulation. Des compagnies américaines également prestigieuses: United Airlines et American Airlines. Des pirates de formation par des pilotes américains, sur du matériel américain et sur le territoire américain (écoles de Floride).

Quant à l'argent, nerf de la guerre, on se contentera de rappeler deux éléments trop connus pour être développés. Si le régime des talibans a persécuté les cultivateurs de pavot, une partie non négligeable de la fortune d'Al-Qaïda provient du trafic d'opium. Ou comment s'enrichir en empoisonnant les infidèles? L'heroïne consommée par les toxicomanes américains provient majoritairement d'Afghanistan alors qu'en même temps l'administration Bush finance la lutte antidrogue dans ce pays. Qui parlait de vendre aux capitalistes la corde pour les pendre?

Second paradoxe: le rôle pour le moins ambigu des banques américaines travaillant régulièrement pour le compte de riches hommes d'affaires de la péninsule Arabe ou du Golfe Persique. Avec un peu plus de curiosité sur l'identité exacte de ses clients, la Citibank aurait peut-être pu se dispenser de financer les pilotes kamikazes installés en Floride. Au moins depuis les attentats contre les ambassades américaines en Afrique de l'Est et le dernier en date visant l'*USS Cole*, on pouvait s'attendre à un minimum de

vigilance. Or Moustapha Ahmad, le tresorier d'Al-Qaida, n'a eu semble-t-il aucune difficulté pour transférer des fonds au chef des commandos, l'Égyptien Mohammed Atta, par le truchement du siège new-yorkais de la Citibank.

*Ambivalence de la puissance technique*

L'attaque terroriste contre le World Trade Center et le Pentagone est à replacer dans le contexte global des sociétés techniques. Il y a déjà à presque un demi-siècle, Jacques Ellul a montré que le phénomène technique se caractérisait notamment par l'unité et la totalisation<sup>9</sup>.

La technique fonctionne comme un réseau de ramifications complexes qui vient bousculer les distinctions traditionnelles opposant la forme au contenu, ou le civil au militaire. Qui peut garantir, par exemple, l'usage pacifique de l'industrie nucléaire, pharmaceutique ou chimique? À part la couleur de la bache, qu'est-ce qui différencie un camion militaire d'un camion civil?

Si les terroristes utilisent désormais des fournitures scolaires dans leur panoplie (les cutters), ils savent aussi transformer un avion de ligne en arme de guerre. On retrouve cette unité d'un système composé d'éléments interdépendants dans le phénomène des factions en chaîne déclenchée par l'attaque du 11 septembre: krach boursier, faillite des compagnies aériennes, licenciements dans l'industrie aéronautique et dans le secteur du tourisme, réduction des budgets de communication, baisse de la consommation, récession économique...

En outre, la spécialisation implique une totalisation. Chacune des parties compte moins que le système de connexions les liant entre elles. Ce qui fait la force du système technique mais aussi sa faiblesse. La structure par réseaux augmente la fragilité de sociétés techniques rendues vulnérables du fait même de leur haut degré de sophistication.

Pour les terroristes modernes, les cibles ne manquent pas. On pense aux virus sur la Toile, aux maladies transmises par voie postale (on a recensé en France une moyenne de 100 fausses alertes par jour au bacille du charbon), & l'empoisonnement du réseau d'eau potable d'une ville ou au système de climatisation d'un grand hôtel ou d'un hôpital sans parler des *nauds de communication*: aéroports, gares, centrales électriques ou nucléaires.

Les tours géantes où l'on concentre la population d'une ville moyenne sont l'illustration parfaite de la fragilité de ce que Alain Gras<sup>10</sup> nomme les macro-systèmes techniques.

Les auteurs de l'attentat du World Trade Center ne s'y sont pas trompés, se payant le luxe de passer auprès d'une partie de l'opinion internationale pour les nouveaux David terrassant le Goliath américain.

Dans nos sociétés modernes, la technique est ambivalente car elle libère autant qu'elle aliène. Elle crée des problèmes aussitôt qu'elle en résout et s'accroît d'elle-

---

<sup>9</sup> Jacques Ellul, *La technique ou l'enjeu du siècle*, Armand Colin, 1954.

<sup>10</sup> Alain Gras, *Grandeur et dépendance, Sociologie des macro-systèmes techniques*, Puf, 1993.

même par les solutions — techniques — qu'elle apporte. De nouveaux équipements sont déjà à l'étude pour renforcer la sécurité des transports aériens. Ils seront déjoués un jour par une nouvelle génération de terroristes qui suscitera à son tour de nouvelles parades.

Mais le progrès technique a un prix qui n'est pas seulement financier. Ses effets négatifs sont inséparables des effets positifs et ce progrès comporte toujours un grand nombre de conséquences imprévisibles. Il est sans doute du devoir de nos gouvernements de chercher à tout prévoir. Il est non moins certain que la prudence nous invite à garder à l'esprit la part de risques inhérents à toute société fondée sur la puissance technicienne.

Il est également sage de se méfier de tous les discours promettant de concilier sécurité et liberté à l'intérieur de l'état comme de tous ceux prétendant combiner la guerre et la justice à l'extérieur. À cet égard, le nom de code de la riposte militaire, *Infinite Justice* puis *Liberté immuable*, peut être interprété comme le titre du film de propagande projeté par le gouvernement américain sur le grand écran mondial.

## II. La riposte: l'Afghanistan bombarde au nom de la liberté

La guerre est-elle "la continuation de la politique par d'autres moyens" ou au contraire, Michel Foucault a-t-il raison d'inverser la formule de Clausewitz en faisant de la politique la continuation de la guerre? En l'occurrence ici, on a pu dire — non sans quelques raisons — qu'elle était "l'absence de politique par d'autres moyens."<sup>11</sup>

Dès l'après-midi du 11 septembre, commence la guerre des images et des mots. Plus tard, George W. Bush qualifiera l'action militaire engagée en Afghanistan de "bataille de la civilisation."

### 1. Guerre des mots et mots de la guerre

La communication est sans doute à la propagande ce que la publicité est à la réclame mais si l'habillage change, l'objectif demeure. Jacques Ellul a démontré que, contrairement aux idées reçues, l'information (domaine du Bien et de la Vérité) ne se distingue pas si facilement de la propagande (instrument du Mal et du mensonge). Loin de s'exclure l'une l'autre, l'information est la condition d'existence même de la propagande. En outre, la propagande est une nécessité pour les gouvernements comme pour les gouvernés. Elle répond à une volonté de participation politique et rassure en simplifiant une réalité rendue plus complexe par la multiplication de l'information. Le discours politique du Président Bush constitue une excellente illustration de ses thèses.

"La lachete sans visage s'en est prise ce matin à **la liberté**, et **la liberté** se défendra. Je veux rassurer le peuple américain," déclare George W. Bush le mardi 11, "les États-Unis poursuivront et puniront les responsables de ces viles attaques."

Au-delà du recours à la classique figure de rhétorique de la personnification, le discours présidentiel se situe immédiatement au plan moral, pour mieux évacuer la

---

<sup>11</sup> Jean Baudrillard, artcit.

dimension politique. La lâcheté (terroriste) s'oppose à la vertu (américaine). Ce n'est pas un Etat, ce n'est pas une superpuissance voire ce que certains nomment aujourd'hui une *hyperpuissance*, qui a été attaquée, pas même un pays, c'est une valeur, et la plus belle, la plus noble: La Liberté (incarnée par l'Amérique).

Ici les "blancs" du discours comptent largement autant que les idées exprimées. Le Président ne prononce pas un seul mot sur la politique étrangère de "l'Empire le plus puissant de l'Histoire" (Amo J.Mayer), sur ses intérêts stratégiques dans le monde ou sur ses alliances au Moyen-Orient.

Le soir même, en direct du bureau Ovale, il poursuit sur le registre de l'omission:

"Ces meurtres en masse visaient à effrayer notre nation et à la plonger dans le chaos et le repli. Mais ils ont échoué. Notre pays est fort. Un grand peuple s'est levé pour défendre une grande nation."

Parler de meurtre est encore une façon de dépolitiser en criminalisant l'adversaire. Il s'agit là aussi de rassurer la population en réveillant la fibre patriotique. Grand peuple, grande nation. Les variantes sont destinées à marteler la même idée. La redondance est volontaire. Bush utilise à nouveau la personnification: L'Amérique s'est levée comme un seul homme ! Dans ce contexte de crise majeure, le Président cherche à renforcer le sentiment d'unité nationale.

"Aujourd'hui notre pays a vu le mal, ce qu'il y a de pire dans la nature humaine. Nous y avons répondu par ce qu'il y a de meilleur en Amérique: l'audace de nos sauveteurs, les soins portés à autrui. (...)

George W. Bush reste sur le registre de la personnification: voir le Mal. Comme s'il s'agissait -du mal absolu, et comme s'il était tout entier contenu dans les images de l'attentat. Le pays a vu le mal comme on dirait "il a vu le diable." Au pire, on répond par le meilleur. Le Président exprime la une représentation manichéenne du monde. La noirceur de l'âme humaine oppose à un concentré de vertus américaines. Il s'agit d'une symétrie factice dans la mesure où l'aide aux victimes constitue une obligation dans le cadre des sociétés modernes (Etat-Providence et/ou Etat Zorro) et que la véritable réponse viendra plus tard, sous la forme de représailles militaires.

"Ce sont la liberté et la démocratie qui ont été attaquées," déclare-t-il le mercredi. "Ce sera [a *monumental struggle of good versus evil* ] un combat monumental du Bien contre le Mal. Mais le Bien l'emportera."

George Bush père comparait Saddam Hussein à Adolf Hitler. Son président de fils ressuscite la terminologie Reaganienne de *l'Empire du Mal* désignant à l'époque l'URSS et traduit — inconsciemment? — sa vision simpliste pour ne pas dire infantile du monde. A croire qu'il annonce un nouvel épisode de "Starwars" ! Le 13 septembre enfin, il lâche le mot de "croisade" au moment où l'on redécouvre les thèses de Samuel Huntington<sup>12</sup>, terme particulièrement mal choisi pour quelqu'un voulant éviter l'amalgame entre Islam et terrorisme.

---

<sup>12</sup> Samuel Huntington, *Le Choc des civilisations*, Odile Jacob, 1997, (*The clash of Civilizations*. 1993 Foreign Affairs).

On pourrait multiplier à l'infini les déclarations où le manichéisme se dispute au simplisme binaire: le Bien contre le Mal, la Démocratie contre l'archaïsme, la Civilisation contre la Barbarie, la Lumière contre les ténèbres, le Bon contre le Méchant... Oussama Ben Laden jouant à merveille le rôle du croque-mitaine, de génie du Mal, un chef du *Spectre* version James Bond converti à l'islamisme radical.

Comme en écho du lapsus (?) présidentiel, sur le même mode manichéen opposant l'Oumma (la nation musulmane ou la communauté des croyants) au reste du monde, les dirigeants d'Al-Qaïda lui répondront le dimanche 7 octobre, moins de deux heures après le début des frappes américano-britanniques sur le sol Afghan.

"La guerre des croisades promises par Bush a effectivement commencé," affirme le porte-parole de la secte politico-religieuse. Après avoir appelé au djihad, il évoque ces "milliers de jeunes qui veulent autant mourir que les américains veulent vivre."

Le musulman authentique est décrit par ces "fous de Dieu" comme celui qui tient plus au respect de sa foi qu'à sa propre vie (ici bas). Le thème est récurrent dans le discours de l'islamisme radical: la cause mûrit que l'on sacrifie sa vie pour elle et les moudjahidins n'ont pas peur de mourir. Les propos de Ben Laden s'inscrivent dans cette logique.

"Voici l'Amérique frappée par Allah, dans son point le plus vulnérable, détruisant, Dieu merci, ses édifices les plus prestigieux, et nous remercions Allah pour cela. Voilà l'Amérique remplie de terreur, du nord au sud et d'est en ouest, et nous remercions Dieu pour cela."

Tout au long de sa déclaration, Ben Laden se réfère à **l'Amérique** et non pas à un pays particulier, les États-Unis. L'Amérique non comme continent mais comme entité maïefique. Outre l'omniprésence des références à Dieu, il est question de "point le plus vulnérable" (le talon d'Achille ou le colosse aux pieds d'argile) et d'édifices "prestigieux" (prestige, honneur, humiliation: confirmation que les cibles étaient bien avant tout des symboles). L'Amérique "remplie de terreur": divine bien sûr!

"Ce que l'Amérique endure aujourd'hui ne constitue qu'une infime partie de ce que nous [les musulmans] endurons depuis des dizaines d'années."

Le procédé rhétorique de légitimation consiste à présenter l'attentat sanglant du 11 septembre comme un juste retour des choses, et encore, la souffrance causée serait infiniment moins grande que la souffrance subie. Il s'agit de faire passer la victime pour le bourreau, de justifier auprès de l'opinion publique — musulmane en particulier mais pas exclusivement — l'opération consistant à faire payer à des employés de bureau anonymes, à des gens ordinaires y compris des musulmans, les conséquences de la politique internationale du gouvernement américain.

D'où l'importance du recours au terme générique d'Amérique. La personnification permet ce tour de passe-passe. Ce ne sont pas des milliers de citoyens américains qui ont été tués, blessés, endeuillés, ou seulement traumatisés... mais **l'Amérique**, un être abstrait et maïefique selon la thématique du "Grand Satan" utilisée naguère par l'Iran de l'ayatollah Khomeini.

”Notre nation [*Oumma*] subit depuis plus de 80 ans cette humiliation ; ses fils sont tués et son sang coule ; ses lieux saints sont agressés sans raison.”

”Notre nation.” Ben Laden s’adresse à cette nation encore imaginaire qu’il s’agit précisément de construire. Il parle en son nom. Il parle d’elle, à elle, et à ses ennemis. Ce faisant, il commence à la faire exister réellement... dans les esprits ou les représentations mentales. “Quand dire, c’est faire.”<sup>13</sup> Il s’agit de passer de la nation potentielle (plus d’1,2 milliard de musulmans répartis dans le monde) à la nation réelle. Si l’on accepte de définir le nationalisme comme l’adoration de la société par elle-même, n’oublions pas que ce ne sont pas les nations qui engendrent les nationalismes mais le nationalisme qui crée les nations<sup>14</sup>.

”Dieu a dirigé les pas d’un groupe de musulmans, un groupe d’avant-gardistes, qui a détruit l’Amérique, et nous honorons Allah d’élever leur rang et de les recevoir au paradis.”

Conformément à la stratégie habituelle du réseau terroriste Al-Qaïda, l’attentat n’est pas expressément revendiqué. Ben Laden se félicite du succès de l’opération sans toutefois s’en attribuer la paternité. Il entretient le doute en privant l’ennemi d’aveux circonstanciés. On peut y voir le respect de la ligne suivie dès l’origine de la confrontation opposant le régime des Talibans au gouvernement américain : arguer de l’absence de preuves pour justifier le refus de livrer Ben Laden.

L’argument servira d’ailleurs de leitmotiv en terres d’Islam : “Si Oussama est bien le responsable des attentats du 11 septembre, pourquoi l’Amérique n’en donne-t-elle pas les preuves ?” “On peut aussi interpréter cette absence de revendication à la lueur de l’information selon laquelle le fondateur d’Al-Qaïda ne serait qu’un “scélérat d’oprette,” manipulé par un “gouvernement international de l’Islam” commanditaire de l’assassinat du Commandant Massoud et des attaques terroristes ayant ensanglanté les États-Unis<sup>15</sup>.

Mais la thématique des aveux et des preuves formelles vise surtout l’opinion publique occidentale et elle fait sens dans le cadre d’une justice humaine. Or le message a ici un second destinataire : l’opinion publique musulmane qui s’adresse à l’information principale : le véritable instigateur de l’attentat du 11 septembre n’est autre que Dieu lui-même ! Ben Laden, en la circonstance, n’étant que son humble porte-parole ou son modeste interprète.

”Quand ils [le groupe de musulmans] ont riposté, au nom de leurs fils opprimés et leurs frères et sœurs en Palestine et dans beaucoup d’autres pays musulmans, le monde entier s’est indigné, comme Pont fait les mécréants et les hypocrites.”

Le verbe “riposter” vise à légitimer l’attentat. Il s’agissait après tout d’un acte de légitime défense. Les musulmans sont opprimés par les Américains, il est normal qu’ils se défendent. La référence à la Palestine — très récente dans son discours — vise à

---

<sup>13</sup> John L. Austin, *How to do Things with Words*, Oxford University Press, 1962.

<sup>14</sup> Ernst Gellner, *Nations and Nationalism*, Oxford, 1983

<sup>15</sup> Alexandre Khokhlov, *Izvestia*, Courtier International, 31 Octobre 2001.

etendre son potentiel de sympathie. Depuis la creation de l'etat d'Israel, l'antisionisme constitue un puissant vecteur d'unification de l'opinion publique musulmane, bien au-dela du Proche et du Moyen-Orient. Il a touche la une corde sensible comme en t^moignera l'explosion de sa cote de popularity auprs de la me arabe et d'une partie de la jeunesse africaine.

Dans le contexte de la seconde Intifada (*the Aqsa intifadeh*), Ben Laden instrumentalise la cause Palestinienne. Il se garde bien de dire que l'O.L.P. a condamnd l'attentat et que Yasser Arafat s'est fait filmer en train de dormir son sang en signe de solidarity avec les victimes amdricaines.

"Les Amdricains sont des ddbauchds qui se sont allids au mal en soutenant le bourreau contre la victime et l'injuste contre l'enfant innocent, et Dieu leur a inflig ce qu'ils myritent."

Aprs une allusion on ne peut plus transparente au soutien des Etats-Unis i la politique israyienne, il martelle Tidde selon laquelle l'attentat est en ryalitd un chatiment divin et que les terroristes n'ont fait qu'exycuter la volonty d'Allah.

"Ces yvynements ont divisy le monde entier en deux parties: ceux qui ont la foi et gont sans hypocrisie, et ceux [qui sont] des mycryants ; que Dieu nous en pryserve !"

Le simplisme du discours contraste avec la complexity du ryel. Le message de Ben Laden constitue le symytrique inverse de celui de George W. Bush: "*Either you are -with us, or you are with the terrorists.*" Mais si le premier prtend combattre l'injustice (au nom de l'Islam) et le second dyfendre la liberty (*immuable*), les discours sont en partie interchangeables. Ben Laden revendique la liberty pour tous les musulmans opprimys et Bush conduit sa guerre de reprysailles pour faire oeuvre de justice.

Au serment du fondateur d'Al-Qaida rypondra, un mois plus tard, celui du prysident americain devant l'Assembiye gynyrale de l'ONU: "L'heure de la justice viendra. (...) Je fais cette promesse a toutes les victimes de ce regime: les jours des talibans qui protegent les terroristes, font du trafic d'heroine et brutalisent les femmes sont comptes. (...) Nous avons l'occasion d'ecrire l'histoire de notre dpoque, celle du courage ddfaisant la cruautd et de la lumiere triomphant des tenebres. "

Les deux locuteurs partagent la meme vision manichdenne du monde. On se trouve en presence d'une veritable relation de rivalitd mimdtique pouvant illustrer la thdorie de Rene Girard. La ressemblance va se nicher dans des domaines inattendus conune celui de la santd. Le president Bush jurant publiquement qu'il n'a pas contracts la maladie du charbon (*anthrax*) , Ben Laden expliquant a la presse pakistanaise que ses "reins vont tres bien."

"Tout musulman doit se **dresser** pour defendre sa religion car le vent de la foi et du changement a souffle pour aneantir **l'injustice** dans la peninsule de Mohamed."

Aux amdricains qui se Idvent rdpondent done les musulmans qui se dressent. La pdninsule arabique est une terre saerde car le prophete est nd et a vecu a La Mecque. Ben Laden reproche aux actuels dirigeants de l'Arabie Saoudite de toldrer la presence d'infideles (militaires amdricains stationnds depuis la guerre du Golfe) & proximitd des lieux saints de l'Islam

”A l’Amérique, j’adresse des mots comptés. Je jure par Dieu que l’Amérique ne connaîtra plus jamais la sécurité avant que la Palestine ne la connaisse et avant que toutes les armées occidentales athées ne quittent les terres saintes.”

Il y a là comme une figure de construction réciproque du monstre. Dans les heures ayant suivi l’attaque terroriste le nom seul de Oussama Ben Laden a été jeté en pâture à la presse et à l’opinion. La rhétorique présidentielle et médiatique s’est focalisée sur cet épouvantail. L’intéressé collé donc à son personnage avec application et non sans talent. En prophète inspiré d’Allah, il prend complaisamment la pose du justicier défiant l’empire à lui seul.

## **2. Guerre des images et images de guerre**

Au-delà des menaces proférées <1 l’encontre de l’Amérique, ce dimanche 8 octobre, le succès de l’opération de communication réside d’abord dans l’effet de contraste entre nos écrans neigeux où l’on ne voit rien des bombardements (quelques points verts dans la nuit noire) et l’apparition soudaine, à la hauteur du jour, de l’ennemi public N°1, une fois sa diatribe terminée sirotant son thé devant sa cavagne avec la sérénité du prophète.

Si l’on veut s’arrêter quelques instants sur la communication non verbale, la mise en scène audiovisuelle de ce discours ne peut que déconcerter le téléspectateur occidental habitué à d’autres codes. Elle provoque chez lui un sentiment de fascination/repulsion ou pour le moins d’inquiétante altérité. À contrario en terre d’Islam, elle contribue à renforcer l’aura du leader charismatique.

Une grotte dans le désert pour seul décor. Les musulmans du monde entier savent que Mahomet s’était caché pendant trois jours et trois nuits dans une grotte près de La Mecque, pour échapper à ses ennemis qui avaient juré sa mort. En son temps, le prophète haranguait la population pour lui demander de renoncer au culte des idoles et d’adorer le Dieu unique. Son clan (des Hachémites) subit alors des persécutions. En proie à l’hostilité des oligarchies et des chefs religieux polythéistes, Mahomet dut alors fuir La Mecque, contraint de s’exiler, en Abyssinie d’abord puis lors d’une seconde migration (L’Hégire) dans l’oasis qui deviendra Médine.

Ben Laden aujourd’hui, comme le prophète jadis, a lui aussi été expulsé de son pays l’Arabie Saoudite (1991), puis renvoyé du Soudan (1996) avant de trouver refuge à Kandahar, chez les talibans. Mahomet avait du lui aussi se cacher avant de faire triompher sa cause par les armes: en 630, à la tête d’une troupe de 10.000 hommes, il était retourné à La Mecque en chef de guerre victorieux.

Les mains croisées, les yeux mi-clos, dans une attitude de méditation Ben Laden est sagement assis sur les talons au milieu de trois autres barbus assis en tailleur. La position du corps est conforme au rite musulman codifiant les cinq prières quotidiennes. Il adopte à la fois la posture du sage et du guerrier. Comme le prophète! Barbe de religieux. Treillis militaire et turban blanc. Une lampe à pétrole est posée sur un rocher, au fond, dans l’alignement de l’égyptien Ayman Al-Zawahri, ex-leader du Djihad islamique, médecin et conseiller de Ben Laden.

Son arme fétiche, le Kalakov (AK-74), prise à un soldat russe à Tissue d'un combat, posée sur la paroi de la grotte, est visible mais seulement en arrière plan durant une bonne partie de son intervention. Elle est là pour rappeler le Djihad, et peut-être aussi que l'Islam des temps héroïques a triomphé par l'épée. Dans les précédentes cassettes de propagande, le chef d'Al-Qaïda entretenait sa réputation de cavalier intrépide et de tireur d'élite. Le Kalakov évoque également la guerre victorieuse contre l'Armée Rouge. Message: les musulmans vaincront demain le "tigre de papier" américain comme ils ont vaincu hier le Grand Satan soviétique.

Mais Oussama Ben Laden n'aurait pas pu jouer les *Fantomas* sans la complicité de la chaîne d'information en continu Al-Jazira et surtout sans le suivisme des télévisions occidentales converties à la seule religion du profit, donc de la course à l'audience.

Au nom de la défense nationale, dès le lendemain 8 octobre, les responsables des principaux *networks* américains seront rappelés à l'ordre par le gouvernement après ce moment d'égarement. Sous le prétexte fallacieux que les vidéos d'Al-Qaïda pouvaient contenir des messages codés destinés à déclencher de nouvelles attaques terroristes, la Maison Blanche demanda aux grandes chaînes américaines de visionner, avant diffusion, toutes les images fournies par la télévision Qatarie.

Le résultat a sans doute dépassé les espérances des conseillers pour la sécurité nationale puisque les images de Ben Laden ont pratiquement disparu totalement des écrans. L'autocensure a également joué dans la presse écrite. Alors que dans son numéro du 1<sup>er</sup> Octobre, TIME publiait en couverture la photo de Ben Laden avec pour seule légende: *Target* (la cible) ; il fallait les semaines suivantes scruter attentivement les pages intérieures pour trouver de maigres extraits de sa déclaration de guerre à l'Amérique.

Le philosophe Bernard-Henri Lévy a exprimé l'opinion de nombreux Français en qualifiant Al-Jazira de "chaîne de Ben Laden." D'un point de vue occidental, l'accusation n'est pas sans fondements. Elle mériterait toutefois d'être relativisée sinon nuancée. Il est un fait que jusqu'à la prise de Kaboul par l'Alliance du Nord, la "CNN du monde arabe" a bénéficié d'une situation de monopole obligeant les télévisions du monde entier à rediffuser ses images affublées d'un large bandeau en indiquant la provenance.

Mais précisément Al-Jazira s'est trouvée en Afghanistan dans une position comparable à celle de CNN durant la guerre du Golfe. Alors que la chaîne de Ted Turner passe toujours aux yeux de l'opinion publique internationale pour un pur produit culturel "made USA" au même titre que Coca-Cola, son correspondant avait été le seul autorisé à rester à Bagdad. Le pouvoir irakien[-] avait ainsi accordé des moyens exceptionnels à Peter Arnett qui jouissait de l'exclusivité en contrepartie de la censure. Parce que CNN montrait au monde entier les dommages causés par les bombardements américains sur la population civile, elle fut accusée de faire le jeu de Saddam Hussein.

Il en est allé de même avec Teysir Allouni, l'unique reporter autorisé à rester dans la capitale afghane avant l'inversion du rapport de forces militaire. Insistant sur les erreurs de frappes et les victimes civiles, montrant complaisamment des cadavres

dans des villages bombardés par l'aviation américaine, donnant la parole exclusivement aux Kabouli dénonçant cette guerre contre l'Islam, exhibant les propres enfants de Ben Laden armés jusqu'aux dents chantant les louanges de "l'admirable des croyants," le mollah Omar, avec pour toile de fond les carcasses d'un hélicoptère et d'un avion prétendument abattus par les talibans, le journaliste a rendu Al-Jazira très populaire auprès de Washington.

Accusé par les autorités américaines de diffuser la propagande d'Ai-Qaida, la chaîne arabe répondit par une retrospective diffusée en boucle de visages mutilés sur des lits d'hôpitaux, d'enfants estropiés et de bébés défigurés au nom de cette prétendue "bataille de la civilisation." De son côté, la direction de CNN contraint ses employés d'associer chaque image de victimes civiles des bombardements américains d'un rappel en forme de rituel: "les talibans protègent des terroristes responsables de la mort de 5000 personnes innocentes."

Si Al-Jazira n'a pas convaincu les occidentaux de sa neutralité en refusant de trancher entre "la guerre contre le terrorisme, comme dit l'Amérique" et "la guerre contre les impies, comme dit Al-Qaida," le pays de la liberté de la presse et du Premier Amendement a battu tous les records en matière de contrôle des images. Au nom de la sécurité de ses soldats, le Pentagone a même étendu son emprise aux documents photographiques. Pendant la moitié du conflit, faute de journalistes indépendants sur place, les médias désireux d'illustrer la présence américaine au sol ont dû se contenter des seules images des commandos US prises et sélectionnées par le département de la Défense.

La fièvre patriotique déclenchée au lendemain des attentats ne s'est pas limitée à l'explosion des ventes de bannières défilées. Alors qu'à la différence du conflit vietnamien, la presse américaine a plutôt pâché par excès d'autocensure, les journalistes ont dû être accusés de mettre en danger la vie des "Boys" en fournissant à l'ennemi des renseignements trop précis. Procès d'intention quand on sait que les dites informations venaient des briefings ou du site web des charges de communication du Pentagone mais ce type de fantasme en dit long sur les attentes d'une bonne partie de l'opinion. Les journaux s'étant risqués à publier les images de bébés Afghans tués par des bombes américaines ont été agoués d'injures. Le concept de "dommages collatéraux" est acceptable, à condition précisément de rester au niveau d'une abstraction désincarnée !

Jacques Ellul ne se trompait pas lorsqu'il décrivait la relation de complicité unissant le propagandiste au propagande. Le citoyen de base n'a aucune envie de voir de photos de nourrissons massacrés alors que le président Bush en personne lui a parlé d'une lutte du Bien contre le Mal, menée par une nation résolument bonne et pacifique mais dystopique car incomprise. "Le peuple Afghane va connaître la gynécologie de l'Amérique. En même temps que nous frapperons des cibles militaires, nous larguerons des vivres et des médicaments" avait-il promis le jour même où Ben Laden proférait ses menaces à la télévision.

Les petits containers jaunes contenant les rations alimentaires ayant la même couleur que les explosifs dispersés par les bombes à fragmentation ont enfilé bien des apprises, pour employer un euphémisme. Combien de victimes pour combien de vies sauvées? Le bilan “humanitaire” de ces largages ténébreux pourrait s’avérer un exercice cruel pour son promoteur. Mais quel était l’objectif visé: persuader le monde de la bonté américaine ou entretenir la bonne conscience des partisans de cette guerre (plus de 80% selon les sondages), déjà ultra-majoritaires dans le pays?

”La parole est seule relative à la Vyrity. L’image est seulement relative à la ryality.” Aux consommateurs d’images que nous sommes, devenus boulimiques depuis le 11 septembre, Jacques Ellul nous rappelle que nous aurions tort de prendre le ruel pour le vrai. Alors que la parole relève de la vyrity — et donc aussi du mensonge —, l’image peut parfaitement coller à la ryality sans jamais être vraie. La vue donne à voir l’yvidence, la parole toujours incertaine l’exclut.

### 3. Guerre contre la démocratie et démocratique dans la guerre

La guerre oblige chacun de nous à choisir son camp. Elle oriente notre regard, conditionne notre mémoire visuelle, nous fait voir ce que nous voulons voir et oublier les images qui ne cadrent pas avec nos grilles de lecture. La propagande rassure car elle filtre, ordonne et simplifie. Mais il faut faire montre d’une belle outrecuidance intellectuelle pour croire la propagande (mensongère) réservée au bon peuple et l’information (vyritable) aux yrites. Il faut pareillement faire preuve de beaucoup de candeur ou de cynisme pour croire au discours de la **guerre juste**. Car il n’y a pas de guerres justes, il n’y a que des guerres nécessaires !

Non, la contre-attaque américaine n’est pas la guerre de **La** liberty contre **Le** terrorisme mais celle d’un Etat — démocratique — défendant légitimement ses intérêts de puissance au nom de valeurs & prétention universaliste.

D’abord, la liberty ne peut pas faire la guerre, même si l’on prétend la faire en son nom. La violence est toujours du domaine de la nécessité, c’est à dire l’antithèse de la liberty. Ensuite, le terrorisme est une notion inévitablement subjective pouvant recouvrir des réalités très différentes. On se souvient que les nazis l’utilisaient pour disqualifier la résistance française durant l’Occupation. On voit bien aujourd’hui l’intérêt d’un Vladimir Poutine à présenter ainsi les indépendantistes Tchétchènes qui risquent d’être sacrifiés sur l’autel de l’antiterrorisme, avec la benédiction honteuse des Occidentaux.

À défaut de pouvoir les empêcher, les organisations internationales se sont contentées de codifier les guerres. Les membres de l’Union Européenne ont défini comme terroriste “tout acte destiné à tuer ou blesser gravement un civil, ou toute autre personne qui ne participe pas directement aux hostilités dans une situation de conflit armé, lorsque, par sa nature ou son contexte, cet acte vise à intimider une population ou à contraindre un gouvernement à accomplir ou s’abstenir d’accomplir un acte quelconque.”

Qui pourrait jurer que cette définition n’englobe pas les bombardements et l’embargo dont souffre la population irakienne depuis dix ans? Comme à son habitude, la critique de Noam Chomsky est encore plus impitoyable à l’égard des puissants:

“En pratique, le terrorisme est la violence commise contre les Etats-Unis — quels qu’en soient les auteurs. On aura du mal à trouver à cela une exception dans l’histoire.”<sup>16</sup>

L’article 51 de la Charte des Nations Unies reconnaît un droit naturel (*inherent right*) à la légitime défense en cas d’agression armée. Ce droit pose alors la question de la **proportionnalité** de la riposte. Les conventions de Genève distinguent objectifs civils et militaires et tendent à proscrire l’usage disproportionné de la force. Le problème de la proportionnalité ne se réduit pas à sa dimension juridique et pose à l’évidence des questions d’ordre moral.

La stratégie du tapis de bombes adoptée dans le cadre de l’opération “Liberté Immuable” n’est pas sans susciter de malaise au sein des esprits les mieux disposés à l’égard des Etats-Unis. Les moyens employés en Afghanistan en décembre risquent de susciter des remords chez ceux-là même qui, sous le coup d’une émotion légitime, s’étaient proclamés « tous Américains » en septembre.

Fallait-il brûler la botte de foin pour trouver l’aiguille? Sous prétexte que Ben Laden était aussi difficile à chercher qu’une aiguille dans une botte de foin, avait-on le droit de bruler toute la botte, et une partie du champ? En bombardant à outrance un pays déjà ravagé par la guerre et la famine, on ne fait qu’ajouter des victimes aux victimes. Selon les organisations humanitaires, les tonnes de bombes déversées autour de Tora Bora ont déjà causé la mort de nombreux civils.

Sans oublier ce que cette comptabilité a de sordide, on peut déjà prévoir, dans les mois à venir, une révision à la hausse des « dommages collatéraux » en Afghanistan inversement proportionnelle au nombre des victimes avérées des attentats new-yorkais, évaluée en septembre à plus de 6000 et en décembre à moins de la moitié.

Le président Bush a feint de découvrir récemment le sort atroce réservé aux femmes Afghanes. Sans le savoir, il a employé pour justifier sa guerre — o ironie de l’histoire — les arguments invoqués à l’époque par Georges Marchais, leader du Parti Communiste Français, pour se féliciter de l’intervention soviétique de 1979: mettre fin à un régime féodal humiliant les femmes.

La violation des droits de l’homme en général et ceux de la femme en particulier, sans parler de la scandaleuse destruction du Bouddha géant de Bamiyan, n’ont pourtant pas empêché l’administration américaine de négocier avec les talibans jusqu’en juillet dernier: la livraison de Ben Laden contre une reconnaissance internationale du régime. Avec pour toile de fond le lobby pétrolier, cher au clan Bush, interfessé par les gisements de l’Asie centrale ! D’un strict point de vue de Real Politik, l’avenir a montré qu’il eût été plus judicieux d’aider le principal adversaire des talibans: le commandant Massoud.

Pour rester sur le registre de l’hypocrisie et du cynisme, faut-il rappeler que l’instigateur présumé des attentats du 11 septembre fut longtemps un auxiliaire précieux des Etats-Unis, armé et formé par une C.I.A. prête à tout, — et n’importe quoi —, dans son combat contre le communisme international. En équipant ses troupes, de missiles Stinger notamment, les Américains en ont fait un héros victorieux de la lutte

---

<sup>16</sup> Noam Chomsky, Cette Afrique qui n’apprend rien, *Le Monde*, 22/11/2001

antisovietique en Afghanistan. Pour des raisons qui lui appartiennent, la erfiature s'est retounee contre son erfiateur a Tissue de la guerre du Golfe. Oil l'on dficouvre que les ennemis de nos ennemis ne sont pas toujours nos amis...

Dans le meme sens, le partenariat pour convenances mutuelles unissant Washington a Islamabad a conduit les USA a fermer les yeux sur les violations des droits de l'homme au Pakistan et sur la fabrication iltegale d'une arme nucleaire, qualifiee symboliquement de "bombe islamique" par le president Bhutto lui-mfime. Sans l'aide du gouvernement Pakistanais, sous-traitant les interfits amfiricains dans la region, sans l'appui de ses "volontaires" et de ses services secrets, les talibans n'auraient jamais pu s'emparer de Kaboul.

Parce qu'ils continuaient de raisonner dans un contexte de guerre froide, les Etats-Unis ont soutenu les militaires Pakistanais qui ont installe au pouvoir les talibans qui ont ensuite protege les rfiseaux de Ben Laden. L'idfie fitait anglaise, le financement saoudien, l'exfcution pakistanaise mais la conception de cette bombe fi retardement incombe au gouvernement amfiricain.

Il ne saurait fitre question ici de faire passer ici une explication historique pour une justification subreptice. Aucun crime, reel ou supposfi, du gouvernement des Etats-Unis ne peut prfitendre excuser l'horreur des attentats. Inutile d'invoquer Dilthey ou Weber pour bien distinguer, au plan analytique, les differences entre expliquer, comprendre et justifier.

La meilleure propagande, e'est a dire la plus efficace au plan technique, ne se construit pas sur des mensonges mais a partir d'informations incomplfites ou partielles.

Au nom de l'anti-imperialisme, un certain nombre d'intellectuels se sont empresses de se dfisolideriser de la riposte amfiricaine en invoquant sa politique inique au Proche-Orient et cruelle a l'figard du peuple Irakien. Or le conflit israfilo-palestinien n'explique pas plus l'attaque terroriste du 11 septembre que la crise economique n'explique la Shoah. En outre, on aurait du mal a citer le nom d'un seul chef d'Etat europfien en ayant fait plus que Carter et Clinton pour essayer de ramener la paix dans cette partie du monde. Quant a l'Irak, ceux qui parlent des enfants irakiens morts des consfiquences de l'embargo — en gonflant outrageusement des chiffres dfija terribles: 600.000 selon l'UNICEF, de 1 fi 1,5 million selon leurs propres statistiques — n'fivoquent jamais le sort des 150.000 Kurdes exposfis aux armes chimiques et biologiques selon la volontd de Saddam Hussein. En une seule jounfie, le 17 mars 1988, son armfie a gazfi une ville du Kurdistan Irakien provoquant la mort de 7000 civils dans une atroce agonie.

On ne peut pas reprocher en mfime temps aux Amfiricains de ne pas avoir de politique et les rendre responsable de tous les malheurs du monde. Si comme le pensent les belles ames, le terrorisme est le symptome et non la maladie, si la misfire ficonomique rfisultant de la globalisation libfirale — done Amfiricaine 1 — en est a la source, alors il faudrait nous expliquer pourquoi Ben Laden est un milliardaire Saoudien et non pas rm paysan du Sahel.

Le terrorisme pose un terrible dilemme aux dfimocraties en les condamnant soit fi renier leurs principes vitaux, soit fi disparaître sous les coups. Pour rfisister en tant

que régime politique, hier et maintenant, elle n'a pas d'autres choix que de bafouer les valeurs qui la fondent en tant qu'édifice normatif.

Restriction des libertés publiques, chasse aux sorcières dans la presse et pressions sur les médias, arrestations arbitraires, prolongation de la durée de garde à vue des étrangers, mise en place d'une justice d'exception et de tribunaux militaires, fouille des véhicules et des personnes, développement des écoutes téléphoniques et de la surveillance des courriers électroniques...

Y compris dans un cadre légal (loi antiterroriste dite *USA patriot Act* aux États-Unis, loi sur la sécurité en France) et avec l'assentiment d'une opinion publique trop désireuse d'échanger sa liberté contre la promesse du retour à l'ordre, les dérives sécuritaires à l'intérieur contredisent l'esprit démocratique aussi dangereusement que les violations du droit de la guerre à l'extérieur. Une enquête nous dira peut-être un jour dans quelles conditions exactes sont morts les centaines de prisonniers détenus dans la forteresse de Qalae-Jangi?

Cette guerre était sans doute inévitable à défaut d'être aimable mais elle n'était en rien une guerre juste, car s'il existe de justes causes il ne saurait exister de guerre juste.

«Les plus nobles fins assignées à la guerre sont pourries par la guerre» nous rappelle Jacques Ellul pour qui non seulement la fin ne justifie pas les moyens mais pour qui les moyens corrompent les fins. Plus les fins seront réputées nobles, plus les méthodes employées pour les atteindre se révéleront cruelles. Tout le discours du gouvernement américain a consisté, précisément, à justifier l'usage de moyens inhumains en Afghanistan en guise de riposte à une «agression contre l'humanité tout entière.»

La politique n'est pas une industrie fondée en morale. Max Weber cite un personnage des 'Histoires Florentines' déclarant qu'il fallait séduire ceux qui avaient prêté la grandeur de leur Cité au salut de leur âme. Machiavel nous a appris qu'en politique la force était juste quand elle était nécessaire. Weber nous a montré qu'en politique on obtenait pas toujours le Bien par le Bien. Ellul n'a cessé, quant à lui, de proclamer que l'on ne pouvait fonder un monde juste avec des moyens injustes, créer une société libre avec des moyens d'esclaves<sup>17</sup>.

## International Jacques Ellul Society

*Berkeley, California*

**an association of scholars and friends**

The UES links together scholars and friends of various specializations, vocations, backgrounds, and nations, who share a common interest in the legacy of Jacques Ellul (1912–94), long time professor at the University of Bordeaux. The UES is the English-

---

<sup>17</sup> Jacques Ellul on Religion, Technology and Politics, Conversations with Patrick Troude-Chastenet, Scholars Press, 1998.

language sister-society of the French-language *Association Internationale Jacques Ellul* Together, we maintain a web site— *www.ellul.org*—as our common communications link for announcements and news of interest to our members, and as a resource for anyone with an interest in Jacques Ellul. From time to time we announce meetings, lectures, and conferences (small or large, formal or informal, sponsored by the UES/AUE or by others) related to Ellul and his concerns.

---

### **Join the IJES**

Anyone and everyone is welcome to become an UES member—on two conditions:

(1) agreement with the society's statement of purpose

(2) payment of the annual membership dues of \$20.00. Please send a check or bank draft drawn in U.S. dollars.

Send your payment with your name, complete address including postal code, and *your e-mail address if you wish* to be on our UES news e-mail distribution list. UES membership automatically confers membership in the French AUE.

### **Contact the IJES**

**e-mail:** [IJES@ellul.org](mailto:IJES@ellul.org)

**post:** UES, P.O. Box 5365, Berkeley CA 94705

### **IJES Activities**

Please forward any news or announcements relevant to the members and friends of the UES. We want to do whatever we can to promote the discussion of Jacques Ellul and the extension of his critical interests. We encourage the formation of study groups and sections of scholarly societies devoted to Ellul studies. We are currently exploring the best strategies for organizing annual gatherings to discuss Ellul's sociology and his theology and ethics.

### **IJES Leadership**

The International Jacques Ellul Society and L'Association Internationale Jacques Ellul have been founded by a group of longtime students, scholars, and friends of Jacques Ellul, with the counsel and support of Jean, Yves, and Dominique Ellul, and as a French-American collaboration.

### **Board of Directors**

*Religiosity and the Sacred in Postmodern America: Rethinking Ellul's Theory On the Role of Technology*

by Dell deChant

The Two Faces of Religiosity in Postmodern Society

by Darrell J. Fasching

International Jacques Ellul Society

Clifford G. Christians, Editor

## From the Editor

In this Issue, Dell deChant uses Ellul to critique American society. He focuses on consumerism in the United States through that fabric of American life known as its annual festivals. While utilizing Ellul to critique a specific culture, the audience and the problem are understood to be far-reaching and multi-national. One country's public celebrations become a laboratory for fulfilling the *Forum's* purpose, that is, critiquing technological civilization.

In previous issues of *The Ellul Forum*, we have used Ellul's framework to reflect on a particular event — September 11, 2001. Through Ellul we have examined Christian anarchy, communications technology, and human rights. In all these case, the particular illumined the general. As with this Issue, the vitality of scholarship in Ellul's legacy becomes transparent.

Dell deChant's essay and Darrell Fasching's response have the added benefit of interrogating the adequacy of a major component of Ellul's theory. DeChant disagrees with Ellul's primacy of technique, arguing for the economy instead. While defending and clarifying Ellul's central thesis, Fasching celebrates deChant's bringing Ellul into the postmodern debate. Members of the University of South Florida faculty in its Department of Religion, deChant and Fasching are both indebted to Ellul—especially his *New Demons*—for demonstrating how to call our age into question.

# About the Ellul Forum

## History & Purpose

*The Ellul Forum* has been published twice per year since August of 1988. Our goal is to analyze and apply Jacques Ellul's thought to aspects of our technological civilization and carry forward both his sociological and theological analyses in new directions.

While *The Ellul Forum* does review and discuss Jacques Ellul, whom we consider one of the most insightful intellectuals of our era, it is not our intention to treat his writings as a body of sacred literature to be endlessly dissected. The appropriate tribute to his work is to carry forward its spirit and agenda for the critical analysis of our technical civilization. Ellul invites and provokes us to think new thoughts and enact new ideas. To that end we invite you to join the conversation in *The Ellul Forum*.

*The Ellul Forum* is an English-language publication but we are currently exploring ways of linking more fully with our francophone colleagues.

## Manuscript Submissions

Send original manuscripts (essays, responses to essays in earlier issues) to:

Clifford Christians, Editor, *The Ellul Forum* Institute of Communications Research University of Illinois  
810 S. Wright Street, Suite 228  
Urbana, IL 61801 USA

Please send both hard copy and computer disc versions, indicating the software and operating system used (e.g., Microsoft Word for Windows 98). Type end notes as text (do not embed in the software footnote/endnote part of your program).

Essays should not exceed twenty pages, double-spaced, in length.

Manuscript submissions will only be returned if you enclose a self-addressed, adequately postaged envelope with your submission.

*The Ellul Forum* also welcomes suggestions of themes for future issues.

## Books & Reviews

**Books.** *The Ellul Forum* considers for review books (1) about Jacques Ellul, (2) significantly interacting with or dependent on Ellul's thought, or (3) exploring the range of sociological and theological issues at the heart of Ellul's work. We can not guarantee that every book submitted will actually be reviewed in *The Ellul Forum* nor are we able to return books so submitted.

**Book Reviews.** If you would like to review books for *The Ellul Forum*, please submit your vita/resume and a description of your reviewing interests.

Send all books, book reviews, and related correspondence to:  
David W. Gill, Associate Editor, *The Ellul Forum*  
363–62<sup>nd</sup> Street  
Oakland, CA 94618

## Subscriptions

A subscription to *The Ellul Forum* is included in the annual membership fee for the International Jacques Ellul Society. To become a member (and receive *The Ellul Forum*) send a check payable to “UES” in the amount of \$20 (U.S.). Checks or money orders must be drawn in U.S. funds. Send check with your name and complete address to

UES  
P.O. Box 1033  
Berkeley CA 94701 USA

### Back Issues

Back issues of *The Ellul Forum* are available for \$5.00 each, postage included. Send your requests, with your complete mailing address and a check or money order drawn in U.S. funds for the correct amount, to

UES  
P.O. Box 1033  
Berkeley CA 94701 USA

## Religiosity and the Sacred in Postmodern America

by Dell deChant

While it certainly can be maintained that American holidays have become secular events, this paper proposes that it is precisely their “secular” (materialist/ commercial/ consumerist) dimension that makes them most obviously religious events in the context of postmodern/ latecapitalist culture. Rather than being casualties of the struggle between commercial interests and traditional values for dominance in the cultural marketplace, it appears equally plausible that the loss of conventional holiday meanings may actually be the consequence of the inability of older civic and religious institutions to successfully compete in another sort of marketplace — the marketplace of religion.

The theoretical basis for this type of understanding was initially sketched in a paper I presented at the American Academy of Religion in 1996. In that paper, I argued that contemporary American holidays (and Christmas in particular) reveal affinities with festivals of ancient cosmological cultures. In this regard, it can be observed that post-modern holidays have not so much lost their religious or cultural significance as their *transcendental* religious significance and their *traditional* cultural significance. More-

over, what is witnessed here is more of a transference rather than a loss of significance; from transcendental to cosmological,<sup>18</sup> in the case of religion, and from traditional to postmodern, in the case of culture. This line of inquiry represents an updating and slight reconfiguring of an argument first presented by Jacques Ellul about twenty-five years ago.<sup>19</sup>

The premise of this variation of Ellul's argument is that America's late-capitalist, postmodern culture is best classified as cosmological and, if so, America's holidays, as representative religious events of such a culture, necessarily manifest characteristics of a cosmological engagement with the sacred. This paper offers a sketch of the theoretic background for this sort of understanding and how it might be utilized methodologically in the analysis of contemporary culture. Although my particular focus is on American culture, and specifically its holidays, I believe the general approach outlined here is potentially applicable to other postmodern cultures — e.g., those of Western Europe and Japan. A more detailed exposition of my methodology is offered in my forthcoming book, *The Sacred Santa*<sup>20</sup>

The paper is divided into five parts. The first two parts present working descriptions of religion and postmodern culture (respectively) as used in this analysis. Part three brings together the two descriptions to form a theory of religion in postmodern culture. Building on this theory, part four contains an analysis of consumption as a sacred ideal and part five briefly outlines how contemporary holidays may be understood as the functional holy days of postmodern culture. The conclusion specifies the possible implications of this method of inquiry and analysis.

### **Probing the Sacred Ground of Contemporary Culture: What Is Religion?**

The first and perhaps most obvious concept to explicate in the context of studies of this type is the notoriously ambiguous, yet theoretically unavoidable concept of *religion* itself. The understanding offered here is essentially functional, but only in so far as the functional approach is seen as acknowledging the legitimacy of a sacred realm as an object of human intending. The other theoretical issues dealt with in the paper, and the general line of analysis are necessarily related to this working description of religion:

Religion is about power. It mediates our relationship with the source(s) of ultimate (sacred) power by suggesting, teaching, or commanding (1) a *belief* that the ultimate truth and meaning of human life is derived from and related to an order and purpose

---

<sup>18</sup> In brief “cosmological” refers to religions and cultural systems that locate the Ground of Being or Ultimate Power in the natural world. Such systems are contrasted with “transcendental” systems, which locate the Ground of Being in a supernatural dimension —literally, a realm beyond and radically different from nature. The use of terms “cosmological” and “transcendental” to distinguish these two types of systems was introduced by Eric Voegelin. See Voegelin *The New Science of Politics* (Chicago: University of Chicago Press, 1952) and *Israel and Revelation* (Baton Rouge: LSU Press, 1956).

<sup>19</sup> See Jacques Ellul, *The New Demons* (New York: Seabury Press, 1975).

<sup>20</sup> Dell deChant, *The Sacred Santa: The Religious Dimensions of Consumer Culture* (Cleveland, The Pilgrim Press, 2002).

based on or decreed by the ultimate (sacred) power (e.g. gods, God, nature, cosmic principles, social order). (2) This belief is necessarily shared by a group or *community*. (3) This belief is *maintained* because of (a) the community's participation in certain special and uniquely patterned actions either personal or communal, typically called *rituals*, and (b) special (numinous) narratives, typically called *myths*, which deal with unique persons and/or events related to the sacred concerns and elements. (4) This belief in the foundational truth and meaning of human life is understood by participants in the religion to allow them (as individuals and as a community) a certain degree of *power over material conditions* (in so far as they live and act in harmony with the ultimate power) and to supply them with *answers to ultimate questions* regarding nature and the human condition (such as death, the afterlife, evil, one's place in society, why one succeeds or fails).

Of special note here is the character and function of myths and rituals. Myths are narratives about the sacred and humanity's relationship to the sacred. Typically, these narratives are set in a primordial time of origins and depict the actions and teachings of venerated ancestors, heroes, saviors, and gods. These actions and teachings disclose both the foundational reality of life and articulate the relationship of the believer to this reality. For the believer, myths communicate truths of such profundity that they cannot be doubted; truths so fundamental that even in the face of falsifying material and/or historical evidence the believer accepts the reality of the myth. To the degree that myths lose their radical truthfulness, they lose their primary religious function.

Myths can be divided into three classes: "meta," secondary, and tertiary.<sup>21</sup> The meta-myth is the master story of a culture, which articulates "the true motivating and psychological foundations of [a] civilization... expressions of the very being of the collective and universal civilization in which we are living."<sup>22</sup> Secondary and tertiary myths are narratives that offer more accessible versions of meta-myth, serving to personalize, vivify, and make it immediately relevant to individuals. In their secondary and especially their tertiary forms, myths guide and motivate religious activities. In their most formal sense, such activities are called rituals.

For the believer, rituals are the formal processes through which one participates in or otherwise affirms a proper relationship to the sacred. In this regard, the "texts" that religious rituals follow are the myths of the religion, because these are the narratives that articulate the sacred realm and humanity's relationship to that realm.

In a religious sense, then, rituals and myths are intertwined in such a way that rituals reenact myths and myths illuminate rituals. Through rituals, the believer experiences the sacred realm described in myths and is brought into communion with the

---

<sup>21</sup> The specification of three classes of myth is derived, with some modifications, from Jacques Ellul. My meta-myth corresponds to what Ellul refers to as the "basic" or "essential" myth of a culture. My designation of secondary and tertiary myths is derived from Ellul, although, in my deployment, the two are more precisely distinguished from each other. See Jacques Ellul, *New Demons*, trans. C. Edward Hopkin (New York: The Seabury Press, 1975), 88–121, esp. 100–110.

<sup>22</sup> *Ibid.*, 109.

foundational reality of life. In a practical sense, the interrelation of myth and ritual is revealed in the relationship between mythic narratives such as the Exodus story and the ritual of Passover; the narrative of the Last Supper and the ritual of communion; or the narrative of the Buddha's enlightenment and the ritual of meditation. There is, thus, a dynamic nexus when the sacred reality disclosed in myths is fully experienced through the performance of rituals. In an analysis of New Year's festivals in the ancient world, Mircea Eliade uses the term "mythico-ritual" to characterize this synergy.<sup>23</sup> And as argued in *The Sacred Santa*, many contemporary American holidays reveal this same sort of mythico-ritual dynamism.

Although healthy religions routinely reveal the positive dimension of the synergy of myths and rituals, it can also be reflected negatively because the loss of plausibility for one may undermine the meaningfulness of the other. In other words, when believers begin to doubt either the radical truth of the myths or the re-creative power of the rituals, the religious significance of both may decline. Doubt of the truth of the myths leads to a weakening of the meaning and value of the rituals, just as doubt of the power of rituals causes a corresponding erosion in the plausibility of mythic verities. As such doubts become more widespread among participants, religious communities decline.

\*\*\*\*\*

This exploration and analysis of myth and ritual is undertaken in the context of what Paul Tillich introduced and first developed under the heading of "Theology of Culture" and as further detailed in Darrell Fasching's contemporary interpretation of Tillich's method as a form of social ethics.<sup>24</sup> There are two crucial elements in this approach. First, as Tillich recognized, "every culture has an inherent religious dimension, even as every religion is shaped by the culture in which it emerges [and] culture is driven by its religious 'substance,' which is the human need for meaning expressed and embodied in its... 'ultimate concerns'"; and second, theology of culture is specified as "a critique of the religious dynamic at work in the diverse autonomous spheres of human endeavor that typify modern culture."<sup>25</sup> I argue that this religious dynamic is found in the myths and rituals of a culture and most explicitly in what Eliade called its mythico-ritual dynamic.<sup>26</sup> Following Tillich's proposal, then, as a theology of culture, my subsequent inquiry into contemporary myths and rituals can be understood as a "theological questioning of all cultural values,"<sup>27</sup> since the myths

---

<sup>23</sup> For example, see Eliade's usage of the term in *Cosmos and History: The Myth of the Eternal Return* (New York: Harper Torchbooks, 1959), 68–70.

<sup>24</sup> See Darrell Fasching, *The Ethical Challenge of Auschwitz and Hiroshima: Apocalypse or Utopia?* (Albany: State University Press of New York, 1993), chap. 4, esp. 134–141.

<sup>25</sup> Tillich as explicated by Fasching in *Ibid.*, 137, 139.

<sup>26</sup> For example, see Eliade's use of the term in *Cosmos and History*, trans. Willard R. Trask (New York: Harper and Row, Harper Torch Books, 1959), 68–70.

<sup>27</sup> Paul Tillich, "Über die Idee einer Theologie der Kultur," in *Kanstudien* (Berlin: Pan Verlag, Rolf Heise, 1920). Found in translation in *What Is Religion*, trans. James Luther Adams (New York: Harper and Row, Harper Torchbooks, 1969), 165.

and rituals of this culture form the religious “substance” of these values –affirming their basis in truth and allowing experiential interaction with the reality of this truth.

As Tillich understood theology of culture to be a “critique of the religious dynamic at work in ... modern culture,” in my application, the critique is of the religious dynamic at work in a postmodern culture, which is seemingly secular. It is also, necessarily, a postmodern critique. What, however, does a postmodern critique of the religious dynamic of postmodern culture look like? I think the jury is still out on this, but to my mind it involves irony, indirection, and no small bit of playfulness and humor — at least those are elements I tried to deploy in developing the critique offered in *The Sacred Santa*. Postmodern critique aside, however, for purposes of this paper, my use of Tillich and Fasching, bring into focus two other terms that require contextual explication: “religious dynamic,” and “postmodern culture.” Postmodern culture will be dealt with first.

### **Probing the Sacred Ground of Contemporary Culture: What Is A Post-modern Culture?**

My intent here is not to resolve the complex nest of issues commingled in and around the term, postmodern. The term is in extreme flux today, in part due to its magnificent popularity in both popular and academic culture. One of those ferociously alluring labels, postmodern can at once classify an incredibly vast array of cultural phenomena while simultaneously (and necessarily) defying any and all efforts to stabilize its meaning with anything close to precision. It is a term of conjure and conjecture, and ultimately, I suspect, uncertainty for many. This uncertainty may not be diminished here, although it is my hope to approach postmodernism from a new direction that brings into focus an overlooked element in the ever-expanding discussion of its meaning. For this purpose, a helpful place to begin is with Fredric Jameson’s explication of postmodernism.

Jameson’s theory of post-modern culture follows Ernest Mandel’s thesis in his *Late Capitalism*, and in a Marxist reading, Jameson argues that cultural changes follow changes in modes of production and technology. Thus, Mandel’s market capitalism corresponds to the cultural period Jameson refers to as “realism”; Mandel’s monopoly capitalism corresponds to Jameson’s “modernism”; and Mandel’s third stage (variously termed postindustrial-, multinational-, late-, or consumer-capitalism) corresponds to Jameson’s “postmodernism.”<sup>28</sup>

Of primary interest here are Jameson’s comments on changes that have occurred in both the modes of and the popular attitudes *toward* consumption in postmodern culture due to the impact of late capitalism’s incredible capacity to produce and reproduce both material objects and images. For Jameson, late capitalism or “consumer capitalism ... is the purest form of capitalism yet to have emerged, [which witnesses]

---

<sup>28</sup> Fredric Jameson, *Postmodernism, or, The Cultural Logic of Late Capitalism* (Durham, NC: Duke University Press, 1991), 35–36.

a prodigious expansion of capital into hitherto uncommodified areas,” such as the “unconscious” through “the rise of the media and the advertising industry.”<sup>29</sup>

In the postmodern world, “commodity production [is based on the] frantic economic urgency of producing fresh waves of ever more novel-seeming goods (from clothing to airplanes), at ever great rates of turnover,”<sup>30</sup> in which there is “an immense dilation of... the sphere of commodities ... a commodity rush, our ‘representations’ of things tending to arouse an enthusiasm and a mood swing not necessarily inspired by the things themselves” (x). The “‘culture of consumption’ is presented as a dynamic force, which when ‘unleashed’ consumes persons ‘to the point of being unable to imagine anything else’” (207). Moreover, “‘we are *inside* the culture of the market and ... the inner dynamic of the culture of consumption is an infernal machine from which one does not escape by the taking of thought (or moralizing positions)” (206). It offers “an infinite propagation and replication of ‘desire’ that feeds on itself and has no outside and no fulfillment” (206). He notes that “the force, then, of the concept of the market lies in its ‘totalizing’ structure’...; that is, in its capacity to afford a model of a social totality” (272).

Jameson’s reading of consumption as the dominant characteristic of postmodern culture is affirmed and advanced further in the work of Jean Baudrillard. As noted by his critical exegete, Douglas Kellner, Baudrillard interprets postmodern culture as a culture of consumption in which “participation ... requires systematic purchase and organization of domestic objects, fashion and so on into a system of organized codes and models.”<sup>31</sup> In Baudrillard’s words:

We have reached the point where “consumption” has grasped the whole of life, where all activities are connected in the same combinatorial mode... In the phenomenology of consumption, this general climatization of life, goods, objects, services, behaviors and social relations represents the perfected, “consummated” stage of evolution which, through articulated networks of objects, ascends from pure and simple abundance to complete conditioning of action and time and finally to the systematic organization of ambience, which is characteristic of the drugstores, the shopping mall, or the modern airports in our futuristic cities.<sup>32</sup>

Kellner further interprets Baudrillard: “The consumer ... cannot avoid the obligation to consume, because it is consumption that is the primary mode of social integration and the primary ethic and activity within the consumer society. The consumer ethic and ‘firm morality’ thus involve active labor, incessant curiosity and search for novelty, and conformity to the latest fads, products and demands to consume.”<sup>33</sup> Through the

<sup>32</sup> Baudrillard, cited in Ibid.

<sup>33</sup> Ibid., 16.

acquisition of commodities, “our entire society *communicates* and speaks of and to itself.”<sup>34</sup> Finally, and most importantly, Baudrillard “describes the consumer mentality as a form of *magical thought* which reigns over consumption. It is a miraculous mentality which rules everyday life, a primitive mentality in the sense that is defined as a belief in the omnipotence of thoughts: in this case, belief in the omnipotence of signs.”<sup>35</sup>

It is the premise of this paper that Jameson and Baudrillard are correct in their interpretation of postmodern culture as fundamentally a culture of consumption; a culture defined materially and psychically in and through the consumption of objects and images. Moreover, this interpretation should be expanded and further clarified to include the observation that mere consumption does not adequately describe our relationship with objects and images. The association is more complex. Rather than simply consuming objects and images, postmodern culture can be understood as explicating meaning and value through a three-stage process, which begins (1) with the acquisition of items, (2) is clarified in the consumption of items, and finally (3) is fulfilled in the disposal of items. In critical texts, the first and third stages are typically subsumed by the second, as in Jameson, Baudrillard, Miller, and Schor,<sup>36</sup> but the first and third make both logical and psychical claims to equal importance. The first stage is of absolute importance for without it, actual consumption cannot occur. One must first acquire the item before the item can be consumed. In light of this, it is notable that studies of compulsive/ addictive behavior indicate the compulsive/addictive subject is often driven as much (or more) by the desire to acquire as by the actual possession/consumption of objects. The final stage is equally important because it allows the process to begin again, and preferably with a higher quality object or image within a particular class of items. Although researched studies of compulsive behavior have not revealed particular interest in this feature of the process, the satisfaction of disposing of the consumed item may well equal the satisfaction of acquiring it initially, because only when the item is disposed of can the process begin again.

What is largely missing in the interpretation of the process of consumption (or the process of acquisition-consumption-disposition as argued here) is the recognition that the process may be decidedly religious in character. It is here that the work of Jacques Ellul and Eric Voegelin provide the critical hermeneutic machinery.

### **Probing the Sacred Ground of Contemporary Culture: What Is Religion In A Postmodern Culture?**

While there are a number of good ways to go about investigating the religious character of postmodern consumerist culture, the work of Jacques Ellul and Eric Voegelin supply especially reliable theoretical instruments for such an inquiry. Unlike Jameson

<sup>36</sup> Jameson, *Ibid.*; Baudrillard, in Kellner, *Ibid.*, Daniel Miller, ed., *Unwrapping Christmas* (Oxford: Clarendon Press, 1993), 18–19; and Juliet B. Schor, *The Overspent American* (New York: Basic Books, 1998).

and Baudrillard, Voegelin and Ellul do not minimize or marginalize the religious dimension of what typically is presented as secular culture. Rather than relegating religion to its classical forms and explicating it in the context of its eclipse or its problematic status in postmodern culture, Voegelin and Ellul allow interpreters to recognize what Tillich calls the “religious dynamic” in the seemingly secular process of acquisition-consumption-disposal. More than a quarter of a century ago, first Voegelin and then Ellul developed theories that designated the religious substance of contemporary culture as something substantially different from what ordinarily passes for religion. In application, their theories recognized that the institutions typically characterized as religion may neither be the dominant material embodiments of contemporary religiosity nor the belief systems that accurately serve to mediate human relations with the sacred.

For them, those material institutions and theoretical assemblages typically classified as religion (namely, classical and modern embodiments and sectarian variations of traditional transcendental’ religions [post-Vedic Hinduism, Buddhism, Judaism, Christianity, and Islam] ), face a serious challenge from alternative forms of religiosity that are at once uniquely contemporary in form and function while also being incredibly ancient in foundational structure. Ellul and Voegelin recognized that these alternative forms of religious expression are not only completely unrelated to the traditional religions with which culture is most familiar, they are the antithesis of such religions. Where traditional/normative religions are transcendental (in their locus of the divine) and anthropological (in their locus of human meaning and value), the alternative religions recognized by Ellul and Voegelin are cosmological (in their locus of the divine) and sociological (in their locus of human meaning and value).

In a description of the cultures of the ancient Near East, Peter Berger offers a helpful summary explication of the term, cosmological, as used in this context. Crediting Voegelin as the source for the term, Berger observes that in cosmological systems:

[T]he human world (that is, everything we today would call culture and society) is understood as being embedded in a cosmic order that embraces the entire universe. This order not only fails to make the sharp modern differentiation between human and non-human (or “natural”) spheres of empirical reality, but, more importantly, it is an order that posits continuity between ... the world of men and the world of the gods. This continuity, which assumes an ongoing linkage of human events with the sacred forces permeating the universe is realized (not just affirmed but literally re-established) again and again in religious ritual.<sup>37</sup>

The cosmological worldview is the starting point for Ellul’s analysis of religion in contemporary culture. Illuminating the character of the sacred in cosmological cultures, in *The New Demons* he writes: “In a world which is difficult, hostile, formidable, man...attributes sacred values to that which threatens him and to that which pro-

---

<sup>37</sup> Peter Berger, *The Sacred Canopy* (Garden City, NY: Anchor Books, 1969), 113. Berger cites Voegelin as the source for the term “cosmological.”

fects him, or more exactly to that which restores him and puts him in tune with the universe.”<sup>38</sup> In ancient cosmological cultures, which depended on the cycles of nature and fertility of the natural environment, nature and the natural environment were the ground of the sacred — the ground of ultimate concern, awe and fascination, dread, and enchantment.

Today, however, Ellul argues that technology has replaced nature as the sacred ground and locus of ultimate concern. As he notes: “The novelty of our era is that man’s deepest experience is no longer with nature... Hence [nature] is no longer the inciter and place of the sacred”(100). Instead, “the modern western technical and scientific world is a sacred world” and “technology is the god who saves”(70, 73). In essence, in today’s world, technology has come to occupy a place analogous to that of nature in antiquity. It is the source of ultimate power and ultimate dread, what Rudolf Otto would call the *mysterium tremendus et fascinans*; and so, like nature of old, technology elicits a religious response. Importantly, although Ellul analogizes the sacred power of this era (technology) with the sacred power of traditional cosmological religions (nature), he does not equate it with the sacred power of the traditional transcendental religions of the West (God), at least, not in a conventional manner. While Ellul is correct in his general approach, he may err when specifying technology as the sacred ground. For reasons to be discussed later, the Economy may better embody the sacred in contemporary culture.

As with the cosmological systems of yore, modern cosmological religious expressions seek to relate persons and all of culture to the source of sacred power. Just as the ancient cosmological religions utilized myth and ritual to establish and legitimate this relationship, so too does the modern cosmological religion; but because the source of sacred power has changed, so too have the myths and rituals. In Ellul’s reading, where once the myths told of a sacred time of ancestors and heroes, gods of nature and fertility, today they tell of the sacred origins and mysterious processes of a technological world and one’s right relationship with technology (113). Here again, Ellul’s commitment to technology as the ground of the sacred may weaken his analysis of contemporary myths.

Following his specification of technology as the sacred, Ellul designates the “two fundamental myths of modern man” as “history and science”(98) and the sacred texts of the “secular religions” as *Das Kapital*, *Mein Kampf*, and *The Little Red Book*. Importantly, he also recognizes advertising as “the liturgy and the psalmody of the consumer religion”(146), but he does not quite tell us how the liturgy relates to the myths or the sacred texts. Ellul may be somewhat off the mark in designating history and science as the dominant myths of today and quite a bit off the mark in his designation of the sacred texts (although we can certainly excuse his citation of specific texts that carried more political power in the time of his writing than they do today). He comes closer to the mark in citing advertising as the liturgy of the consumer religion, but his failure to

---

<sup>38</sup> Ellul, *New Demons*, 50. Subsequent citations in this section are given parenthetically in the text.

clearly explain how the liturgy relates to the myths points up a fundamental problem in his analysis.

Consumption as a religious expression is not legitimated (mythically) by history and science, and while its liturgy may well be advertising, this liturgy seems significantly disconnected from Ellul's sacred technology — notwithstanding his own observation that it would not be difficult to “show how it [advertising] is planted in the sacred and in the religious structure” (146). Rather than history and science being the dominant myths of today, we might look to narratives that articulate the meaning and order of life in a world dominated by the Economy — perhaps focusing on narratives of economic success and material acquisition. The delivery system for these myths is the mass media, with television being the primary vehicle.

In the case of ritual, for Ellul, it is political activity, for politics is the process through which citizens participate in the sacred work of the state, which mediates their engagement with technology. In fact, in chapter six of *The New Demons*, Ellul offers a rather elegant argument supporting his claim that politics is the religion of the contemporary world. As noted above, the sacred texts of today are political texts; and, looking more closely, Ellul finds messiahs (for example, the proletariat, in Marxism), theories of resurrection (of the race and the Volk in Nazism), millennialism (as with the Chinese cultural revolution), dogmas (Marxist theory), clergy, and heretics. Of course, there is also worship and liturgy; these are the great political festivals, such as those at Munich and Nuremberg or “Chinese assemblies of Tien Am Mem.” Curiously, and somewhat inaccurately, I believe, Ellul finds these political religions to correspond perfectly with Christianity (189), and their modification from radical movements to “guarantors of the established order” (circa the mid-1970s) to be analogous to the modification of Christianity when it became politically successful (196–7). Although his primary focus is on totalitarian states, he observes: “there is a sacralizing of all political activity elsewhere, in the liberal democratic, bourgeois and capitalist countries” (197). He does not support or develop this observation, but it seems that this could be done easily enough, following his thesis. Especially keen is his analysis of the ritualistic function of politics in the technological society. As he writes:

The political behavior of the modern citizen makes manifest the sacred of the state, and the fact that the participating citizen is endowed with an exciting grandeur. Politics has become the place of final truth, of absolute seriousness, of radical divisions among men, of the separation of good from evil... In the end it is there [in the political domain] that people experience the deepest conviction that everything is at stake. (198)

Thus, as with the source of sacred power and the myths that illuminate it, the religious rituals that relate persons to this power are decidedly different from those of traditional religion. But is Jacques Ellul correct? I think he is, but only up to a point.

Like Baudrillard, whom he cites, Ellul observes: “Consumption... is no longer a materialistic fact. It has become the meaning of life”(144). And he does recognize a distinctive religious quality to consumption. Still, for Ellul, politics functions as the de-

cisive form of religious expression in technological societies, and these political religions are presented as essentially variations on Christianity, a transcendental religion.<sup>39</sup>

Voegelin, for his part, also sees modern political movements as religions.<sup>40</sup> In his analysis of contemporary culture and his reading of politics as religion, Voegelin, like Ellul, recognizes that the fundamental impulse of such cultures is harmonial and integrative, and like Ellul, he cites Soviet Marxism and Nazism in this regard. What Voegelin does, and Ellul does not (at least not thoroughly or convincingly), is recognize the similarities between these and other contemporary social and political systems and the cosmological religions of antiquity.<sup>41</sup> In his words:

The self-understanding of a society as the representative of cosmic order originates in the period of the cosmological empires in the technical sense, but it is not confined to this period. Not only does cosmological representation survive in the imperial symbols of the Western Middle Ages or in continuity into the China of the twentieth century; its principle is also recognizable where the truth to be represented is symbolized in an entirely different manner. In Marxian dialects, for instance, the truth of cosmic order is replaced by the truth of a historically immanent order.<sup>42</sup> cosmos and the immediate natural environment. It also served to maintain collective unity in the society. In fact, and in distinction to contemporary transcendental religions, religion was not a discrete institution in these cultures. It simply was, and through myth and ritual it affirmed and acted out (in a heightened and intensified sense) the truth that the way things were, was the way they should be. For these cultures, is was ought.

Like Ellul, Voegelin clearly recognizes that contemporary culture evinces this same sort of worldview. He also misdiagnoses the religious character of this culture by looking to politics as the religious institution that typifies this worldview. Again, like Ellul,

---

<sup>39</sup> Ibid., chap. 6. Ellul notes that he is following Aron and Simondon in his analysis of politics as “secular religion” and this approach may ultimately account for his too-brief depiction of consumption as religion (144–147) and the internal contradiction this depiction sets up with his argument that politics is the functional religion of the contemporary world.

<sup>40</sup> See Eric Voegelin, *The New Science of Politics* (Chicago: University of Chicago Press, 1952); *Science Politics and Gnosticism* (Chicago: Henry Regnery Co., 1968); and his early work *Die Politischen Religionen (The Political Religions)* (Vienna; Bermann-Fischer, 1938). Curiously, Voegelin interprets “political religions” as variants of ancient Gnosticism.

<sup>41</sup> There are important similarities between Ellul and Voegelin and I think that when used together, as here, they disclose much more than either of them when used independently. Darrell Fasching has done the best job yet of revealing the significant affinities between the work of Voegelin and Ellul and then successfully deploying both their theories, essentially in tandem, to illuminate contemporary ethical dilemmas. See especially, *The Ethical Challenge of Auschwitz and Hiroshima*, chap. 4. In short, Fasching argues that Voegelin’s distinction between cosmological and anthropological is the same as Ellul’s distinction between sacred and holy, with the latter term in both being essentially analogous to what I have termed “transcendental” and the former term functioning essentially as Voegelin and I (here) have used the term. I think the analogy works well in terms of the sort of ethical analysis Fasching is doing, and could possibly work here to reconfigure Ellul’s analysis of political religion. But it would take a *reconfiguration* of Ellul, and this is hardly necessary when Voegelin’s theory works perfectly well as a *clarification* of Ellul.

<sup>42</sup> Voegelin, 59–60.

he nicely analyzes the structures of politics and other cultural institutions as religious in character, but then, despite what would seem to be his own overwhelming evidence, he concludes that these institutions are Gnostic — dependent on a mystical sort of salvific knowledge about history and human destiny. This is no more satisfying or accurate than Ellul's efforts to analogize these institutions to Christianity. And although Voegelin labored long and hard to make this argument, ancient Gnosticism itself was, at best, minimally cosmological, while in Voegelin's own presentation, contemporary Gnosticism is clearly cosmological, with myths of history and progress serving to illuminate the sacred realm and political movements serving the religious function of integrating persons and whole societies with this realm. Voegelin's much disputed "Gnostic thesis" is probably the greatest flaw in his far-reaching and highly regarded inquiry into the order and process of history. How much better it would have been had he forgone the problematic Gnostic thesis altogether, and expanded his brief and passing analogies of contemporary culture with cosmological civilizations into a working argument.

Despite their flaws, Ellul and Voegelin, when used together in a complementary fashion, supply what was missing in Jameson and Baudrillard — the basis for an analysis of the religious dimension of contemporary culture. The question remains, however, what is the proper way to interpret this dimension? This is a fundamental question, because if Ellul and Voegelin are correct about the cosmological character of contemporary Western culture (and it is the presumption of this paper that they are), then the religious expression of this culture is cosmological and so the rituals and myths of this culture should reveal characteristics of a cosmological engagement with the sacred. It is here that the Ellul-Voegelin theory seems to fall apart, for although they both seem to strongly suggest that the essence of contemporary culture is cosmological (notwithstanding their clumsy attempts to Christianize or Gnosticize specific religious expressions), they fundamentally misdiagnose the religious dimension itself by looking to politics rather than to a more clearly cosmological phenomenon — consumption. Ellul and Voegelin, thus, need to be linked with Jameson and Baudrillard. This is what I attempt to do in developing a theoretical basis for the study of religion in postmodern culture presented in *The Sacred Santa*. In short, I bring Ellul-Voegelin together with Jameson-Baudrillard — which might well have troubled the former pair of thinkers. How this somewhat paradoxical combination works can now be sketched.

In ancient cosmological cultures, religion functioned to integrate society and internal social structures with the

### **The Idea of Sacred Consumption**

The central problem with designating politics as the religious dimension of contemporary culture is found in the failure of politics to generate sustainable representative myths and associated rituals. If what we are dealing with in the postmodern era is a cosmological culture, politics does not offer a reasonable approximation of religion because the myths and rituals of political reality lack the sort of massive plausibility and culturally unifying dynamic demanded of the religious expressions of such cul-

tures. While Ellul is accurate in recognizing the quasireligious role of consumption, his designation of politics as the process through which moderns “manifest the sacred,” experience “exciting grandeur,” and find the basis of “final truth” simply overstates the religious function of politics. Today, politics is typically dismissed as a charade at the level of popular culture and its substance (the quest for and maintenance of social power) tends not to generate community-sustaining myths and rituals, but instead, communitydestroying narratives and socially disorienting activities, often of the most disconcerting type.

The search for the religious character of postmodern culture must therefore lead elsewhere, and the elsewhere to which it leads is back to Jameson and Baudrillard and their carefully articulated study of the social function of commodity consumption. Following Baudrillard (and entirely in the context of Jameson), Kellner observes:

[T]he consumer ... cannot avoid the obligation to consume, because it is consumption that is the primary mode of social integration and the primary ethic and activity within the consumer society. The consumer ethic and “fun morality” thus involve active labor, incessant curiosity and search for novelty, and conformity to the latest fads, products and demands to consume.”<sup>43</sup>

In this regard (to the degree that he follows Jameson and Baudrillard), Ellul is absolutely correct when he writes that “consumption ... is no longer a materialistic fact. It has become the meaning of life”; but he errs in not recognizing that consumption, as the “meaning of life,” is (much more so than politics) revealed to be the basis of ultimate legitimation of individuals and society as a whole. Through consumption, which begins with ritual acquisition, one gains significance in the cosmic scheme of existence by engaging in a sacred activity and actually penetrating the sacred realm itself. Thus, rather than technology serving as the sacred ground of contemporary culture, it is the Economy; and rather than politics serving as the religious mediation of sacred reality, it is consumption, or more accurately, the experience of acquisition-consumption-disposition.

Using the description of religion given earlier as a guide, consumption may now be described as that which relates persons to the sacred (Economy) through the shared myths and rituals of a community, which, in the case of cosmological religion, is an entire culture. Religion is the phenomenon that harmonizes individual and collective activities and integrates culture as a whole with the order and process of the sacred (Economic) realm. In cosmological systems, this phenomenon is not isolated in discrete institutions, but rather, it is embedded in the collective beliefs of the entire culture. These beliefs give order, guidance, and legitimation to culture as a whole and its residents specifically. It is that which articulates one’s right relationship with the sacred and reveals the cosmic meaning of existence, which is also the culturally normative way of life and living. The Sanskrit term and Hindu religious concept *dharma* (sacred/social duty), perhaps best approximates this notion.

---

<sup>43</sup> Kellner, 16.

Thus, if the order and process (or order-process) of the Economy can be read as the ground of the sacred, then religion in its cosmological form and function is the interrelated, comprehensive, and incredibly complex collection of cultural beliefs and practices that explain and motivate one's right relationship with the Economic order and its process. This right relationship is illuminated and vivified in culturally embedded myths. Such myths must be at once believed as elemental (unquestioned) truths of existence. This, by the way, is true of all myths, whether cosmological or transcendental, but it is not true of Ellul's myths of history and science and Voegelin's similar myths of history and progress, which seem to function mythically only in some sort of abstract, academic manner. Rather than myths of history, science, or progress, the myths that relate postmodems to the sacred realm of the Economy are the much more vital, robust economic narratives of late capitalism.

The paradigmatic model of these narratives can be referred to as a meta-myth.<sup>44</sup> As such, it is the overarching story that communicates the culture's sacred ideal. It is the myth that contains and generates all other myths and to which all other myths in some way refer. In principle and (ritual) practice, the great meta-myth of postmodern culture is the myth of success and affluence, gained through a proper relationship with the Economy, and revealed in the everexpanding material prosperity of society and through the ever-increasing acquisition and consumption of products by individuals. From this meta-myth, all other (more accessible, relative, and domestic) myths derive.

Although the meta-myth is seldom articulated explicitly, the secondary and tertiary myths it spawns are communicated in narratives derived from popular culture and told as much through images as words. Secondary myths are narratives about the masters of business and finance; the stars of movies, sports, and the music industry; persons who win lotteries, make fortunes e-trading, win gameshows—and then “live large” as a consequence of their success. They are the stories of Bill Gates, Michael Jordan, Madonna, Shaquille O'Neal, Tom Hanks, Jody Foster, the person on TV we never heard of who receives the check for millions of dollars, or the one who catches some record-breaking home run ball. Most commonly, secondary myths are spun out in the endless round of talk-shows, sports broadcasts, and to a lesser extent sitcoms and sitdrams. But they also are communicated through news reports, supermarket tabloids, mainstream periodicals, and all the media instruments of culture. Each and all of these stories, in their own way, constantly tell and retell the meta-myth — the myth of material success and achievement, gained through mastery of the mysteries of the Economy. Besides these stories are the wide range of tertiary myths. These generally tend to focus on representative persons from the public at large and reveal how they too participate in the sacred reality of prosperity and affluence through personal rituals of acquisition and consumption.

Like the myths of any era, the myths of contemporary America are the stories its citizens know best, that they listen to most closely, tell to one another, and never tire

---

<sup>44</sup> My “meta-myth” is analogous to Ellul's “basic” and “essential” myth. See n. 4.

of hearing. They want to be like the heroes in the myths, they want to experience the world as the stars experience it; see as they see, live as they live, do what they do, and, in some way, consume as they consume. Stories of history, science, and progress are not in this category; they are academic explanations, theoretic maneuvers. Religious myths are much more vital than these. So too are religious rituals.

As noted earlier, rituals engage religious participants with the sacred realm disclosed by the myths. In their most distinctive cosmological form, these rituals are massive collective experiences that enthrall and enchant the whole of culture and serve to integrate persons and the most important activities of their everyday commonsense world with the sacred order. In postmodern culture, the rituals that integrate citizens with the myths are those activities that allow them to experience a degree of mastery over the mysteries of the Economy; activities that are luminous witness to their own material success and achievement. As the recently popular American TV commercial affirmed: “If I could be like Mike [Michael Jordan],” I would consume a particular commodity. So, to be like Mike, I acquire, consume, and dispose of the product. Then, I acquire another. In this way, I am like Mike, the hero of the myth. I hear the narrative of what the mythic heroes acquire, consume, dispose of: houses, cars, boats; I see the clothes they wear and/or advertise; I learn about the foods and beverages they consume. They are consumers too, and the grandest consumers of all. To be like them, to be close to the sacred world they have mastered, I too consume — as often as I can, in as many ways as I can, and preferably I consume products that are like those that they consume, as well. In this way, citizens of postmodern culture are ritually integrated with the sacred order articulated in their myths and, as is typical of cosmological cultures, the highest form of this ritual integration occurs when the entire culture shares in events of consumption.

In the context of this analysis, it can be said that Ellul and Voegelin err not in their designation of certain elements in contemporary culture as cosmological, but rather in their specification of both the sacred realm and the religious dimension of this culture. In short, neither understands it quite “cosmologically” enough.

Technology is not the sacred ground because, to use Ellul’s terms, it lacks the requisite capacity to “threaten,” “protect,” “restore,” and “put [us] in tune with the universe.” While it is easy enough to grant that technology can do these things to some extent, it does not do so with the same decisiveness, enormity, and grandeur as the Economy. Technology is the servant of the Economy, as is every other institution and enterprise in contemporary culture. When the Economy foils, it brings disorder, even chaos, to every other institution and enterprise of meaning and value-education, science, the media, government, and technology. On a national scale, technological failures are resolved economically. If a nation possesses adequate economic resources, it quickly and relatively easily resolves technological challenges that may be caused by war or natural calamity. On the other hand, if a nation is not economically powerful, technological challenges are considerably more difficult to resolve. This is witnessed by the way in which the USA quickly and effectively responded to the (technological) destruction

of the events of September 11, 2001, and the inability of Serbia to respond to the destruction wrought by NATO bombing, or Turkey to the August, 1999 earthquake. Economic power can solve problems in all other enterprises that might be claimed to have a sacred significance, but those other enterprises do not exercise a similar power over the Economy. They are its servants and it does use them.

The same is true at the personal level. When my personal engagement with the Economy is interrupted (when I lose my job or am laid off, or if I take a cut in pay because my company is “downsized” or acquired by another), disorder and chaos enter my personal life. This disorder is registered in my inability to participate in the rituals of acquisition and consumption that are religiously necessary to my identity as a citizen of the postmodern world. Only when I am again able to ritually enter into the sacred world, mythically disclosed by narratives of acquisition, can I again be a legitimate member of culture.

The role of the Economy in postmodern culture is every bit the same as the role of nature in primal and archaic cosmological cultures — if not more. Its order and process are beyond my grasp, or anyone’s for that matter, including the CEOs of giant corporations and the Chair of the Federal Reserve. Its ways are at times capricious, ruthless, sudden and uncompromising; it cannot be controlled. Its interest in me is indifferent at best; it colors all of my activities, even if I am not immediately aware of it. It tells me who I am, what I am, and what I am able to do. It defines my dharma. James Carville was right when he said (regarding the need for Bill Clinton’s 1992 presidential campaign to focus on what was most important to Americans): “It’s the Economy, Stupid.”

By the same token, and I think as a consequence, politics is not the religion of postmodern culture. Politics is simply not a cosmological religion for it is too distinct an institution. It exists as a separate entity in society and is not usually a part of everyday life for most persons; in fact, for many, it is something to be avoided. Hardly an institution that promotes integrative experiences, politics is, at best, a divisive social enterprise. Likewise, technology is not sacred in a cosmological sense for it is too transcendental. It is one of the grand abstractions (even an ideal) of contemporary culture and best understood as a critical explanation for the type of societies that have emerged in the postmodern period. Yet it serves more as a term of analysis and classification of the physical/ material world as we know it than it does a sacred reality that one might experientially encounter in a religious sense.

Remember, in cosmological cultures, and in distinction to those in which transcendental systems dominate, religion is not a discrete institution and the sacred is close at hand. In such cultures, such as America’s and others at the postmodern stage of development, religion is indistinguishable from culture itself; indistinguishable from the normative way of life and living, which it legitimates as an expression of the sacred order. Ellul’s analysis of politics noted earlier may thus be modified to read:

Consumption by the postmodern citizen makes manifest the sacred of the Economy, and the fact that the consuming citizen is endowed with an exciting grandeur. Consumption has become the place of final truth, of absolute seriousness.

It seems fair to say that many (perhaps most) Americans would grant that they have at times had a sense of this grandeur while engaging in ritual consumption (acquisition-consumption-disposition) and gone about their activities with a seriousness that in earlier times was restricted to religious activity. Still, it is something that most Americans do not think about much. And this is exactly the point. It is just the way things are. What *is* is what *ought* to be. To say otherwise, or to think too hard about it, is not appropriate, not normal, not in harmony with the sacred order and process of the Economy.

This being so, although consumption is ubiquitous, as the specifically *religious* expression of postmodern, cosmological culture, it is nonetheless difficult to find. Moreover, once found, it is hard to distinguish from the rest of culture. Consumption simply is, and through myth and ritual it affirms and acts out (in a heightened and intensified sense) the truth of the cosmic (Economic) order that is already revealed in everyday life. And this truth is that the way things are is the way they ought to be; and the way things are in postmodern culture when things truly *are*, is the way things are when persons consume. Thus, like every other entity in culture, individuals serve the Economy; and when they serve rightly, they prosper. Why? Because of the sacred order and process of the Economy itself. Carville was right and more religious than he could imagine.

In seeking to isolate the religious essence of postmodern culture, our attention should not be directed to discrete, specialized institutions that can be distinguished from other institutions because they are somehow *religious*, but instead to the everyday stories (myths) and activities (rituals) shared by the whole community and communicated and experienced in heightened and intensified ways at specially designated (sacred) times. In these sacred times, we will find what may well be the actual religious phenomena of postmodern culture, and in the finding, discover just how religious it may really be and how hard it may be for its citizens to be different than they are.

### **Holidays and Holy Days**

On the basis of the foregoing, the proposed analysis of holidays as representative postmodern religious events can be briefly sketched. Central to this analysis is the specification of the sacred as the three-fold process of acquisition-consumption-disposition of objects and images; and the specification of religion as the body of myths and rituals that vivify the sacred process for society and individuals.

This being so, and following the socio-economic analysis of Jameson-Baudrillard (and in the context of the religious theories of Ellul-Voegelin), it may be argued that religion in postmodern society is that collection of culturally embedded phenomena that mediate individual and collective relationships with the sacred power of the Economy through acquisition-consumption-disposal. It is not enough to simply acquire and consume objects and images. One must do both and one must also dispose of the objects

and images for the sacred to be experienced. The entire process must be completed, for only then (in the cyclical manner that is elemental to cosmological systems) can the process begin again. The quicker the process is completed and then begun again, the greater is one's experience of the sacred, and hence the greater one's power in the socio-religious system. For this reason, popular culture venerates the person who is able to keep up with the trends in fashion, who is able to acquire a new car every year (perhaps also explaining the recent success of automobile leasing), who buys a *new* house, replaces appliances on a regular basis, installs a new lawn periodically, acquires the most innovative type of computer, and so on.

As is doubtless quite evident, the power of this process has decidedly negative consequences. It leads to waste, the destruction of the natural environment, alienation (in all the old Marxist senses of the word), and dehumanization of others (who themselves may be unfortunate enough for one reason or another to have become commodities). It also helps account for and perhaps best explain the proliferation of addictive "diseases" related to consumption. When thus deployed, the sacred significance of this process reveals such addictions (alcoholism, drug addiction, food addiction, sex addiction, shopaholism, and so on) as not only diseases of consumption, as they are often classified, but perhaps most accurately challenges related to the proper relationship with the acquisition-consumption-disposition process. Perhaps, then, they are expressions of a religious addiction.

This being said, and not to get too far into the sacred-profane dichotomy discussion, if we can specify the religious through distinction from the non-religious (or locate the sacred apart from the profane), then we can speak of it more explicitly. Thus, because the sacred is the Economy, and religion is the process of acquisition-consumption-disposal, which engages one with the sacred through myth and ritual, then the non-religious would be that which disengages one from the process. This would be production. Although this seems a rather rudimentary and perhaps inconsequential note, it is necessary to recognize the distinction because, in this context, it allows for the isolation of the religious experience itself. It also represents an inversion of the old Protestant work-ethic, which vested religious merit in economic production, thereby fueling early and middle capitalism.

Today, the cultural logic is reversed. It is no less religious, but the religious basis is different; rather than transcendental and production-validating it is cosmological and consumption-validating. Because production (labor/work) prevents one from acquisition-consumption-disposal, it is the antithesis of the sacred. Production has thus become functionally profane, where in earlier times, it was functionally sacred; and acquisition and consumption, which were once religiously restricted, if not actually profane, have become sacred. When I am working, I am not consuming, yet my working/profane endeavors bring me the substance necessary for me to consume. I thus sacrifice time and energy in the profane realm for the sake of the Economy; not because I find any particular satisfaction in contributing to production (and certainly not because of any religious merit, *per se*) but because I am equipping myself to bet-

ter perform my religious duty. My sacrifice of time and energy in profane endeavors (labor) rewards me with ritual resources (money), which then allows me to participate in the sacred process of acquisition-consumption-disposal.

This threefold process, as opposed to production (the ideal of early and middle capitalism), defines one's primary religious duty (dharma) in the late-capitalist, postmodern world. As a result, postmoderns sacralize those times and places where they can maximize the experience of acquisition-consumption-disposal, thus motivating them to reduce the realm in which they are engaged in acts of production. From this motivation is spun off popular ideals (and I would say mythic narratives) embodied in concepts such as the "golden years" of retirement, "extended vacations," "saving up 'comp' or sick time to use all at once," and a whole class of ideals related specifically to weekends: "T.G.I.F.," "living for the weekend," midweek "hump-day," the "three-day weekend," and certainly, for some, the "lost weekend." All of these richly evocative concepts express a resistance to activities of production and an idealization of leisure periods when persons can fully immerse themselves in sacred time and space-times when acquisition-consumption-disposal may be fully experienced and spaces entirely divorced from the profane sphere of work/production. What, after all, do most Americans do in leisure spaces, places, and times? While once it might have been relaxing activities or visits with family and friends, every indication is that today what they do is acquire, consume, and dispose. And although leisure time still may include traditional pursuits, such activities are often prefaced by acquisition rituals. In this regard American holidays manifest a genuine sacredness, becoming true holy days when individuals and entire communities can escape the profane realm and reaffirm the sacred truth of their personal and collective existence.

The annual cycle of American holidays, thus, comes into correspondence with a typical cosmological cycle of ritual celebrations: fixed calendric periods that are recognized as particularly sacred and specifically dedicated to mythico-ritual activity. For postmodern culture, these holidays are holy because they liberate persons from the profane realm of work/ production, ushering them into the sacred times and climes of uninhibited acquisition-consumption-disposal, and supplying the religious dynamic of postmodernity. The extent to which work/production ceases (in both time [calendar duration] and space [sectors of the productive economy]) suggests the relative sacredness of a given holiday, but the real defining feature is consumption itself -how much is spent at the temples and shrines of retail commerce during holiday periods. On this basis, I used retail spending as a measure of sacred significance and classified holidays into various categories, the greatest of which I refer to as holy days.

Using this method, the three greatest holy days are Valentine's Day, Easter, and Christmas, with Back-to-School functioning as something of a religious festival. Less significant holy days include Super Bowl Sunday, Presidents' Day, and the Fourth of July. These and other holiday-holy days are explored in more detail in *The Sacred Santa*. For now it can be observed that the underlying force behind the sacred significance of postmodern holy days is found in the relationship of myths and rituals — what

Eliade refers to as mythico-rituals. First it can be noted that rituals allow persons to participate in or otherwise affirm their proper relationship to the sacred. They are intertwined with myths in so far as rituals reenact myths and myths illuminate rituals. Through rituals, believers experience the sacred time of the myth and are brought into communion with the foundational reality of life. In ancient cosmological cultures, myths were widely communicated and fervently reaffirmed, and entire communities participated in intense and prolonged ritual celebrations of mythic reenactment — drawing all closer to the primordial reality of the meta-myth, which in archaic cultures focused on Nature and its power.

Consistent with archaic religious festivals, the key to the kinetic intensity of contemporary holy days is their capacity to energize the sacred nexus between myth and ritual. Like those of our archaic ancestors, the holy-day celebrations of postmodern culture vivify the critical sacred linkage of myth and ritual, in this case, drawing all who participate into closer contact with the primordial power of the Economy. This distinctive feature of holy days accounts for a number of other characteristic holy-day elements. It is revealed most strikingly in the proliferation of tertiary myths (advertisements) directly related to a given holiday. Although these are the shortest of all the mythic narratives, they offer powerful and compelling renditions of the meta-myth: success and happiness are gained through a proper relationship with the Economy and revealed in the ever-expanding material prosperity of society and the ever-increasing acquisition and consumption of products by individuals. They also bring persons into closest proximity with the reality of the meta-myth and the threshold of ritual itself.

During holy-day cycles, tertiary myths are widely communicated and fervently reaffirmed; one needs only consider the increased number and size of newspaper inserts on weekends in advance of holidays, TV holiday commercials, and the greater number of ads in the holiday issues of magazines. Additionally, holy-day advertisements (tertiary myths) are acutely focused on the sacred concerns of specific holidays. In these myths persons discover sacred narratives about objects appropriate or simply available for ritual acquisition during specific holy days: lawn and garden tools for Memorial Day, summer foods and beverages for The Fourth, jewelry for Valentine's Day, fall apparel for Labor Day, you-name-it at Christmas, and who-knows-what for America's newest holiday — Patriot Day, to be celebrated on September 11.<sup>45</sup> To the degree that Patriot Day becomes a genuine postmodern holy day, it will generate its own tertiary myths and Americans will respond with rituals of acquisition, for this is what happens on holy days in American culture.

Christmas is, of course, the most vivid illustration of the postmodern sacralization of holidays and the greatest holy-day cycle of postmodern culture. Christmas is, however,

---

<sup>45</sup> The U.S. Congress passed Patriot Day legislation in the Fall 2001, initially introduced by U.S. Representative, Vito Fossella (R-N.Y.) requesting that the president "issue a proclamation each year calling for state and local governments and people to observe Patriot Day [September 11] with appropriate programs and activities." See Ellen Gedalius, "Patriot Debate," in the *Tampa Tribune*, August 12, 2002, 1, 5. As of now (October, 2002) there does not appear to be any noticeable movement toward

only the most dramatic and dynamic example of neo-cosmological religiosity. It is thus different from other holy days, not so much in essence or substance as in degree and size. When it comes to cosmological religious celebrations, however, size does make a difference, and accordingly, *The Sacred Santa* devotes a full section to an analysis of the Christmas holy day cycle—including a chapter that focuses on the apotheosis of Santa Claus.

During Christmas and other holy-day cycles, pilgrimages to shrines and temples (stores and shopping malls) are more frequent. Persons may review the tertiary myths more closely and become more focused in their performance of sacred rituals of acquisition; fulfilling their dharma as consumers, reaffirming their primordial relationship with the Economy's sacred power. The nexus of myth and ritual glistens in these times; the connection between mythic narratives and ritual performances becoming more immediate, vigorous, deeply felt, and religiously significant. It is also experienced by more of the population during holy-day cycles, drawing all participants closer to the primordial power of the Economy. Taken as a whole, holy-day myths keenly remind citizens of the sacred significance of acquisition and the opportunity they have to do so in a certain sanctified period—a holy-day cycle. Thus, when one ritually acquires objects depicted in a holy-day myth, the performance is more purposeful, and the dynamic connection between myth and ritual is clearer, more vivid, more vital, and more sacred for the participant. *The Sacred Santa* is interested in this dynamic connection, why it has risen to religious prominence in postmodern culture, and how it may have replaced traditional transcendental religious practices as the functional expression of contemporary religiosity.

\* \* \* \* \*

In conclusion, it is my contention that inquiry into the religious dynamic of postmodern culture, using Jameson-Baudrillard *together* with Ellul-Voegelin, reveals the contours of a cosmological sense of the sacred. Moreover, when attention is directed to the holidays of this culture we may find, as Jack Santino tells us in a wonderful book, they take us *All Around the Year* and really are (adding his subtitle) *Celebrations in American Life*.<sup>46</sup> We may also discover that they are celebrations of American life and its cosmological essence; celebrations that uniquely reveal the religious heart of American culture, and celebrations that are more profoundly sacred than their secular guise suggests. In short, and this is the point of my inquiry in *The Sacred Santa*: When considering contemporary holidays in terms of the method outlined here, they emerge as intensely sacred events; and as such they reveal not only how thoroughly religious postmodern American culture has become but also just how difficult it may be for Americans to cease being the consumers the Economy demands that they be.

---

sacralization of Patriot Day, although informational observations revealed a considerable increase in retail sales promotions for patriotic paraphernalia (flag decals and bumper stickers, full-size flags, and apparel with various nationalistic symbols and slogans).

## The Two Faces of Religiosity in Postmodern Society by Darrell J. Fasching

It is an occasion for great pride and also a sense of humility when one's student becomes one's teacher. Dell deChant was an undergraduate in one of my courses during my first semester of teaching at the University of South Florida in 1982. From the very first week he stood out as an extraordinary student. He went on to prove his promise, finishing his undergraduate and graduate degrees in our program. More recently Dell coauthored *Comparative Religious Ethics: A Narrative Approach* (Blackwells, 2001) with me. And now he is the author of a book on religion and postmodernity — *The Sacred Santa: The Religious Dimensions of Consumer Culture* (Pilgrim Press, 2002) — that is quite provocative offers Ellul scholars much food for thought.

What does religion have to do with economics, the sacred with the secular, or postmodernity with premodernity? Unlike most who would see only “difference,” Dell deChant sees important similarities. What do modern scholars like Paul Tillich, Jacques Ellul, Eric Voegelin and Mircea Eliade have to do with postmodernists like Fredric Jameson and Jean Baudrillard? Conversant with postmodern intellectual trends, deChant is no slave to current intellectual fashions but rather places historical eras and intellectual styles (premodern, modern and postmodern) into critical dialogue with each other in order to illuminate the religiosity of contemporary postmodern secular culture.

Deeply indebted to the thinking of Paul Tillich, Eric Voegelin and especially Jacques Ellul in the way he asks questions, but not necessarily in the way he answers them, deChant probes the religious dimension of contemporary secular and postmodern culture. He attempts to understand the religiosity of the economy much the way I attempted to understand the implications of the religiosity of technology for global public policy ethics in *The Ethical Challenge of Auschwitz and Hiroshima* (SUNY, 1993). What we share above all, of course, is a deep debt to Jacques Ellul, especially his work *The New Demons* (Seabury, 1975). For it is Ellul who taught us how to put our age into question.

While Dell's interpretation puts us at odds over Ellul's thesis concerning the priority of technology over the economy, I find in Dell's work an intellectual challenge worthy of the highest respect. Dell deChant asks us to see ourselves and our society with new eyes. He helps us understand ourselves and our postmodern culture.

A dominant theme of modern thought in the 1960s was that religion would disappear to be replaced by the secular society of a scientific age. It is commonplace now to observe that a global religious resurgence since the nineteen-seventies has proved that claim false. What is still often missed is that, quite apart from the resurgence of religions, our everyday world of commerce and consumerism is saturated with religious myth and ritual. We fail to see this, says deChant, because we tend to identify religion with the transcendental religions like Judaism, Christianity and Islam, where God

is understood as different and distant from the natural world. But the religiosity of postmodern society is closer to the cosmological religiosity of premodern primal and early urban societies (as Ellul pointed out in *The New Demons*) where the sacred manifests itself, as it perhaps does in postmodern culture, through a kind of polytheistic diversity rather than uniformity. In this ancient type of society, religion is not a separate realm within society but an aspect of every cultural activity. To participate in the culture is to be religious.

In such ancient societies human beings saw nature as the overwhelming and all-encompassing environment of powers and forces that governed their destiny. Experiencing themselves as totally dependent on these powers, human beings, overwhelmed by a sacral awe, sought to be in harmony with these forces through the myths and rituals of polytheism in all their contradictory diversity. Today the postmodern world mirrors that pre-modern world, deChant argues, except that now the environment that surrounds us and governs our destiny is the postmodern, multinational, global economy. Here deChant uses Ellul to challenge Ellul's central thesis. It is the economy, not technology, he argues, that has transcended and encompassed nature in its marketing strategies. The economy has desacralized nature and turned its abundance into raw materials for commodification while reorienting society's rituals in order to render consumerism a sacred activity serving the new powers that now govern our destiny. Given that the al Qaida chose the World Trade Center in New York City as one of the sacred centers of our society to be destroyed, Dell deChant's thesis has great plausibility. On the other hand, their other target was Washington D.C. — the political/military center of our society. This too needs to be acknowledged. It appears the al Qaida recognized both as manifestations of what we hold sacred.

Despite Dell deChant's major disagreement with Ellul over the primacy of technique, his argument draws heavily upon Ellul's approach, while substituting the economy for technology. Our problem, says Dell, is that we are blinded to the religious/ritual dimension of our economic life by our identification of religion with transcendental religions, seemingly unaware that cosmological, this-worldly, religiosity has been far more typical and pervasive in the history of the human race. And so, in important ways, we fail to fully appreciate our own actions and the religious rhythms of our own culture, defined by a postmodern cycle of sacred festivals.

In his book, *The Sacred Santa* he analyses the myths and rituals that shape postmodern culture through its eclectic cycle of holidays in far more vivid detail than he has space to do in this issue of *The Ellul Forum*. Through his analysis Dell shows us that the economic rituals of our society bring us into harmony with the powers that govern our destiny, now perceived as the powers of the economy. From the mythic stories conveyed by film, television dramas and mass media advertising, on through the ritual activities of visiting shopping malls as sacred places of intense religious activity, deChant argues for the pervasive economic religiosity of postmodern culture. This postmodern religiosity is an eclectic amalgamation of postmodern myths conveyed by the mass media and the equally eclectic rituals of American postmodern holidays, from New

Years day through Super Bowl Sunday, Presidents Day, St. Patrick's Day, Easter, the Fourth of July and on to the "High Holy Days" of Halloween-Thanksgiving-Christmas, peppered with many secondary festivals along the way.

I think Dell deChant has done important work that both builds upon and also goes beyond Ellul in his analysis of postmodern religiosity and the economy. His work is important for Ellul scholars because he introduces Ellul into the postmodern debate which must surely happen if Ellul's work is to remain relevant. And his work pays Ellul the highest form of compliment, for Ellul did not want disciples but rather encouraged us all to think new thoughts in relation to the unfolding challenges of our technological civilization.

Having said all that, I do have some reservations about the way Dell characterizes Ellul's position and how he places his own thesis in relation to Ellul's work. I would challenge: (1) his argument for the primacy of economy over technology as the bearer of the sacred, (2) his argument for consumerism rather than politics as a manifestation of sacred activity, (3) his use Ellul's typological classification of the three levels of myth to make his case and (4) his account of the relation between the sacred and profane. The intent of these challenges is not to undermine the validity of Dell's critique of consumerism but to suggest that it may not put him as much at odds with Ellul's position as he suggests.

The core of Dell's provocative challenge is his argument that it is the economy and not technology that is the new bearer of the sacred in postmodern culture. To do this he uses Jameson's Marxist analysis of postmodern culture. One would scarcely guess from Dell's account of Ellul that Ellul too thought of himself as a Marxist. As such he certainly considered the Marxist thesis of the centrality of the economy but he came to the conclusion that to be a Marxist in our time one had to recognize that it is no longer the economy but technology that determines human behavior. Does this mean that economics is now unimportant? Of course not, the economy is part of the technological system, rewarding the consumer is how the system makes the necessities of efficiency palatable. But for Ellul the obvious fact of cross-cultural study was that whether societies were organized upon socialist or capitalist models, they tended to function very similarly because all modern societies were organized around technical bureaucracies oriented to using the most efficient means. With the virtual collapse of socialist societies that obvious contrast is disappearing. Consequently, while the role of technique remains pervasive it becomes more invisible while the importance of the economy, hyped twenty four hours a day by CNN and a legion of other media outlets, becomes supremely visible and obvious to all.

For Ellul the issue is the levels at which power operates to shape society and the levels of myth through which a society propagates its way of life. For purposes of sociological analysis, in both cases, one moves from the great abstraction to vivid concreteness. In *Hope in Time of Abandonment* (Seabury, 1973, pp. 280-281) he used the analogy of the ocean to identify levels of power that shape society. At the surface we have waves that can sporadically be stirred up by the wind and become powerful

enough to sink a ship. At the deepest level there is only stillness. But in between are the tides and currents that shape fundamental patterns of the ocean and our weather. Applied metaphorically, the surface level is the realm of concrete events that attract our attention especially through media. The deepest level is the abstract level of undifferentiated power. It is in the intermediate level that power becomes differentiated into the underlying patterns that influence the shape of society in a given era. And it is at this level that critical analysis must occur if we are to understand the powers that shape our destiny. In Marx's time, Ellul argued, the currents and tides that shaped societies were those of economics but then the spontaneous convergence of efficient techniques brought about a fundamental transformation that pushed economic activity toward the surface, guided by the deeper currents of technique.

With regard to myth, Ellul divides his analysis of the myths of the technological society into primary, secondary and tertiary myths. As one moves down the scale, from the first to the third, one moves from abstraction to concrete vividness. Dell challenges Ellul's contention that science and history are the basic myths of our civilization and suggests that we look to the myths of the economy — the stories of success and material acquisition promoted through the mass media. Dell thinks science and history are too abstract to function as myth. But I think he misunderstands Ellul here. The primary myths are meant to be conceptual abstractions of the underlying themes of more concrete manifestations. It is not the science of scientists nor the history of historians but the popular imagination of science and history embodied in the secondary myths like the stories of Marxism and capitalism that move people to action and most of all it is the vivid myths or stories of happiness and success (tertiary myths) propagated by the media that energize people's lives on a day to day basis. The stories and holidays that Dell analyzes belong primarily to the second and third levels of myth but they presuppose science and technique, for the economy is impotent, it cannot fulfill our desires without invention and production. Techniques, like the gods, are both invisible and all pervasive. They only become real through the stories and festivals that structure a society's way of life which occur at the less abstract and more concrete level of economic activity as promoted through the mass media as we move from the intermediate depths to the surface of our society. Without technique there are no products, no glitzy lifestyle to sell and consume.

And this brings us to Dell's third area of critique, namely that Ellul (and Voegelin) are mistaken to identify politics rather than consumerism as the locus of sacred activity in our culture. He points out that politics today is not taken nearly as seriously as consumer activity and he also points out that when Ellul (and Voegelin) talk about politics they both seem to gravitate to the transcendental religions of Judaism, Christianity and Islam with their messianic/historical orientations rather than to the cosmological pre-biblical religiosity of the ancient world that most closely parallels the religiosity of postmodernism.

Here I would make two points. First, Dell is writing from a perspective of the post-Cold War era that is barely more than a decade old. Ellul wrote in a world divided

between two political/economic ideologies that threatened global annihilation. In such a world it is hard not to take politics with ultimate seriousness. But of course that is not our situation today, or is it? We may now be entering a new global cold war defined by an age of terrorism. We may not want to take politics with religious seriousness but apparently others do.

My second point, however, is more fundamental. Dell is certainly right that although Ellul identified consumerism as a form of religious activity he did not give it the attention that he gave to politics, and so it remains an undeveloped area of Ellul's thought. Indeed it is an area that Dell deChant has brilliantly developed. Dell is inclined to put himself into an either/or relation to Ellul's work. The issue is not either technology or the economy but rather to see both as part of a comprehensive technical system. The question is: What is the relationship between them? I am inclined to see Dell's work less in opposition to Ellul's as I am as a complement to it, and a further development of Ellul's critique. Dell can be right about the religious function of the economy without Ellul having to be wrong about technique.

When Dell discusses politics and consumerism in relationship to the sacred, he tends to put it in either/or terms. He suggests the Ellul and Voegelin missed the mark by focusing on politics and transcendental religiosity rather than on consumerism and cosmological religiosity. But certainly in the case of Ellul this is not an either/or choice but a "both-and" choice. For Ellul divides propaganda into two categories, integration propaganda and agitation propaganda. Integration propaganda, says Ellul, is the way a society spontaneously advertises its way of life. Its purpose is to integrate individuals into the social order. It is in this category that Ellul places consumerism and economic activity. But the second category, agitation propaganda, has a different task — that of moving people to action.

I would argue, as Ellul did, that the religiosity of our technological society imitates the cosmological religions in integration propaganda organized around consumerism, happiness and fulfillment. But the religiosity of our technological society imitates the messianic/apocalyptic themes of the transcendental biblical religions when it needs to move its citizens to action — a point well illustrated by current apocalyptic rhetoric not only on the part of Osama bin Laden and the al Qaida but also by the "evil axis" rhetoric of the Bush administration (although the political propaganda of the latter does seem a bit inept). Perhaps an even more relevant example is the current Bush administration campaign to make war against Iraq. A cynic might say that because we are addicted to SUVs (and other oil and gas guzzlers) and the other "necessities" advertised (integration propaganda) by our consumer society and made possible by technique, we are prepared to be moved to act upon the administrations apocalyptic rhetoric (agitation propaganda) and make war to protect our sacred way of life. The integration propaganda sets us up for agitation propaganda. Consumerism and politics are two complementary faces of the sacred (cosmological and eschatological/apocalyptic) in a technical civilization.

Dell seems to recognize something like the role of agitation propaganda when he says that “politics tends not to generate community-sustaining myths and rituals, but instead, community-destroying narratives and socially disorienting activities ...” but takes this as counting against it functioning religiously. However, as Max Weber has pointed out, religion not only serves to legitimate the routine order of society but also, at times, to charismatically upset and transform society.

For Ellul, integration propaganda and agitation propaganda work in dialectical tension with each other, as do the sacred and the profane. Indeed, I would argue that Dell reads Ellul’s position on the sacred dualistically rather than dialectically as Ellul intends. When Dell says that today it is no longer “production” (technique) that is sacred but consumption, and that production is the “antithesis of the sacred” he seems to think he is putting himself in opposition to Ellul’s thesis. But he goes on to say, that the holidays of postmodern cultures “are holy because they liberate us from the profane realm of work production, ushering us into the sacred times and climes of uninhibited acquisition-consumption-disposal, and supplying the religious dynamic of postmodernity.” However, this is exactly how the sacred operates in Ellul’s account of consumerism and advertising, as brief and undeveloped as it is.

For Ellul the sacred cannot operate apart from the profane. The sacred/profane are not opposites. They form a single dialectical complex in which the profane is the permitted break with the sacred that only more thoroughly integrates us into the sacred order. We become slaves to the necessity of technique because it promises to reward our every desire. The technical society, says Ellul, will not be “a universal concentration camp” rather “our deepest instincts and or most secret passions will be analyzed, published and exploited. We shall be rewarded with everything our hearts ever desired” (*The Technological Society*, Random House, Vintage Books, 1964, p. 427). Consumerism is the way in which necessity is inserted into technique. It puts a smiling face on technological necessity and buys off our freedom with the promise of happiness.

In expressing these reservations about Dell deChant’s argument, I hope it is clear that I do not dispute what I consider to be a brilliant and insightful analysis of the religiosity of consumerism. In this regard he has built upon Ellul and gone beyond Ellul in analyzing the nuances of the cosmological religiosity of consumerism. My only dispute has been with his perception that his thesis puts him at odds with Ellul. He certainly is at odds with Ellul in claiming that it is the economy and not technique that is the more fundamental category for understanding our society but when we look at his arguments, many really support and complement Ellul’s thesis rather than discredit it. I view Dell deChant’s essay and his book, *The Sacred Santa*, upon which it is based as both an important contribution and a vital challenge to those of us who study these issues. And for Ellul scholars, perhaps his most important contribution is to bring Ellul’s work into dialogue with postmodernism.

## From the Editor

South Korea has mushroomed into the world's thirteenth largest economy. Its new President Roh Hyun Moon speaks of it as "the hub economy of Northeast Asia." It has more broadband electronic technology per capita than any country on earth. Professor Myung Su Yang positions his work on Ellul within these technological realities.

Scholarly work on Jacques Ellul occurs around the world. But Asian scholarship has not been well represented in *The Ellul Forum* before. Professor Yang's essay is excerpted from chapter 3 of his book-length treatment published in Korean, with the title translated as *Homo Technicus: Technology, Environment and Ethics*. His Ph.D. in Theology was awarded by Strasbourg University and he is a Professor in the Department of Christian Studies at Ewha Womans University in Seoul.

Utopia is an important entree into Ellul's work, but a concept with subtleties and unending complications. One of *The Ellul Forum's* Editorial Board members and frequent contributors, Gabriel Vahanian, established this territory with his *God and Utopia* in 1977. Both Myung Su Yang and Darrell Fasching have been Vahanian's students and their ability to deal adequately with utopia in Ellul is an obvious benefit. J. Wesley Baker is a veteran student of Ellul's theological work, with a special interest since his doctoral work on "the hope of intervention" in Ellul.

This issue Number 30 completes fifteen years of *The Ellul Forum*. Founding Editor Darrell Fasching carried the editorial load with extraordinary ability for the first ten years. It is emblematic of his leadership and quality scholarship that he contributes to this issue as vigorously as he did to the first.

Katherine Temple of The Catholic Worker Movement passed away on November 22, 2002, and world class scholar Ivan Illich on December 2. They understood Ellul, Temple having written her Ph.D. thesis on him in the early 70s. With him and through him, they contributed enormously to the "critique of technological civilization." Thanks to Carl Mitcham's leadership, issue Number 31 will be a memorial to their work.

## About the Ellul Forum

### History & Purpose

*The Ellul Forum* has been published twice per year since August of 1988. Our goal is to analyze and apply Jacques Ellul's thought to aspects of our technological civilization and carry forward both his sociological and theological analyses in new directions.

While *The Ellul Forum* does review and discuss Jacques Ellul, whom we consider one of the most insightful intellectuals of our era, it is not our intention to treat his writings as a body of sacred literature to be endlessly dissected. The appropriate tribute to his work is to carry forward its spirit and agenda for the critical analysis of our technical civilization. Ellul invites and provokes us to think new thoughts and enact new ideas. To that end we invite you to join the conversation in *The Ellul Forum*.

### Manuscript Submissions

Send original manuscripts (essays, responses to essays in earlier issues) to:  
Clifford Christians, Editor, *The Ellul Forum*  
Institute of Communications Research  
University of Illinois  
810 S. Wright Street, Suite 228  
Urbana, IL 61801 USA

Please send both hard copy and computer disc versions, ..indicating the software and operating system used (e.g., Microsoft Word for Windows 98). Type end notes as text (do not embed in the software footnote/endnote part of your program).

Essays should not exceed twenty pages, double-spaced, in length.

Manuscript submissions will only be returned if you enclose a self-addressed, adequately postaged envelope with your submission.

*The Ellul Forum* also welcomes suggestions of themes for future issues.

## Books & Reviews

*Books.* *The Ellul Forum* considers for review books (1) about Jacques Ellul, (2) significantly interacting with or dependent on Ellul's thought, or (3) exploring the range of sociological and theological issues at the heart of Ellul's work. We can not guarantee that every book submitted will actually be reviewed in *The Ellul Forum* nor are we able to return books so submitted.

*Book Reviews.* If you would like to review books for *The Ellul Forum*, please submit your vita/resume and a description of your reviewing interests.

Send all books, book reviews, and related correspondence to:

David W. Gill, Associate Editor, *The Ellul Forum*

P.O. Box 5365

Berkeley, CA 94705

## Subscriptions

A subscription to *The Ellul Forum* is included in the annual membership fee for the International Jacques Ellul Society. To become a member (and receive *The Ellul Forum*) send a check payable to "UES" in the amount of \$20 (U.S.). Checks or money orders must be drawn in U.S. funds. Send check with your name and complete address to

UES

## **Jacques Ellul and Technological Utopia by Myung Su Yang**

In “Le projet d’une morale sociale, christianisme sociale” Paul Ricoeur (1966) refers to ideology and technology as the most important issues modern socio-ethics must deal with. It is surely true that the “Death of Ideology” has been discussed for quite some time now, and even in Korea parts of the intelligentsia have joined this movement. However, the concept of ideology still remains the crucial issue in that we have to keep observing its impact. Koreans have confronted a particular ideological situation—the division of the country, yet on the whole have consciously or subconsciously avoided mentioning the term “ideology” in spite of this unique situation. It is essential that we equip ourselves with a broad vision that points to the most fundamental but neglected questions regarding ideology, and at the same time indicate clear answers to solve these questions.

Meanwhile, we have never lived in such a technically developed era in world history—in other words, we live in the age of technology. The environmental ground for our daily lives is no longer Nature but technology. This remarkable phenomenon has brought serious philosophical questions to human beings since the 1950s, when technologies began to develop at an unprecedented rate. Moreover, as modern philosophical ideas have been modified, technology seems to occupy a basic ground for new metaphysical questions. In other words, technology is beginning to be considered metaphysics itself, and in that sense is a substitute for the modern metaphysical question of Descartes’ cogito.

In this context, we cannot but raise this crucial but fundamental question: what is technology? In fact, this query arises from worrying about the potential side-effects that technological advance might bring up: 1) a profit-oriented economic system due to the industrialization of advanced technology; 2) the negative impact that the technical development of vehicles has on daily life; 3) the impersonalization and isolation that mechanical ways of thinking provoke; 4) various problems raised in the field of nuclear energy, the environment, and pollution; 5) ethical issues related to the development of genetic engineering; and 6) the growth of our anxiety and apprehension that the extensive power of technology may acquire dominant power over human beings in the near future.

Therefore, current tendencies to analyze technology from psychological, sociological, philosophical, and religious viewpoints are deeply rooted in a critical and anxious

gaze toward technology. Thus disparaging technology may represent criticizing the mechanical way of thinking, or mechanical metaphysics. In *The Decline of the West*, Oswald Spengler warns that Western civilization is destined to decline because it is founded on linear and mechanical ideas of improvement which are only strategies for survival. Heidegger's postmetaphysics claims that we should escape from the category of technological-scientific metaphysics. The French Marxist Henri Lefebvre also denounces the mechanical paradigm of contemporary culture in the name of the "criticism of the quotidian" (*La vie-quotidienne dans de monde moderne*, 1968).

Today, philosophy seems to pay more attention to language than to existence, probably because of the currently critical point of view toward the civilization of technology. Derrida and most of the postmodernists and poststructuralists have insisted that the autonomous signifier takes precedence over the signified; they also put more value on "écriture" — able to be inferred and assuming distance from it — than on "parole." This may represent their attempt to free themselves free from the unilaterality of mechanical language overwhelming the present. For this reason, the continental philosopher Paul Ricoeur's preference for hermeneutics over analytic philosophy is often spotlighted in America and Britain these days.

Contemporary philosophers are not only struggling to find a solution by investigating language as one of the most fundamental factors comprising human life, but they are also trying to repudiate Technological Language. Heidegger insists that modern technology is incompetent to fulfill the demand and desire of language for "zoon logon echon" (*Holzwege*, 1953, pp. 69–105). His postmetaphysics never believes in the absolute certainty of "cogito," in which the objectified and externalized world can be perceived with human senses. In other words, "cogito" assumes that the technological-scientific world can be portrayed like an object in still-life paintings. If the world exists as a passive and submissive object, then this technological-scientific language does not fit the genuine purpose of language—setting the boundaries of human beings and, at the same time, trying to elucidate our humanity beyond the boundaries, Heidegger claims.

Jacques Ellul thinks of technological language as a language of incantation. It is a language of use, both functional and objectified. Through language, we express what we want to express to express something. In other words, through language we express ourselves to express the world. Under these circumstances, language should be a language of symbols and of existence. Technological language excludes these symbols, and does not raise questions of existence. Technological language signifies the loss of language.

The loss of language means losing the possibility of changing the world. It is language itself that makes the imaginative world, which exists beyond the established boundaries, come true. For this reason, dictators will not set language free. Paul Ricoeur insists that the poetic imagination is the most essential among the three levels of symbols. In fact, metaphoric symbols are likely to be more appropriate for capturing and admitting the variation of language than any other kind of symbols, such as the

universal symbols focusing on the imagery, or the dream symbols of Freud. We can feel free only in the surplus world language brings out Symbols enable us to draw a totally different meaning from the habitual language. Through this symbolic language, we can finally imagine the completely new world. Consequently, if we lose our language in this civilization of technology, it means that we forfeit our ability to imagine other worlds different from the one we are living in. And the loss of our imagination prohibits us from seeking other alternatives to technology. At this point, technology is left as the only ideology we can choose. (Here, ideology does not mean a kind of political system or idea but an inclination to maintain and strengthen the present system with false bravado. It is used as an antonym of Utopia.)

Ethics exists where diversity exists. Ethics exists where the possibility of dreaming other worlds is allowed. Ethics comprehends the dreaming of a new world, and pursuing it. New is ethical. Therefore, if there are no possibilities for diversity, no desire to pursue new worlds, no attempt to negate and overcome the present, and no Utopian world that we can find out by going back against the stream of time, then no ethics exists. Without ethics, we will drown in overflowing materials. A society lacking the creative life and the creative person—gained only with creative views—has no ethics. False rumors—false ideologies—might overwhelm it.

I attempt to bring out the negative factors of technology by connecting it with the problems of contemporary theories regarding the philosophy of language. Actually, it is not a simple question to ask, “what is the essence of technology?” Among scholars, there are many different opinions. Some say that technology and humanism cannot exist together harmoniously. Some say that though contemporary technology goes much further than it is supposed to and carries negative results, it might have the potential to come back to its original place and heal itself. And others say that technology should be viewed with a positive and optimistic belief. These positive, negative, or detached attitudes toward modern technology coexist at present.

In my case, I understand technology from a negative point of view. It is not only because most Western philosophers have been on my side, but also because it is really important to know exactly what the negative results of technology can be. Technology has been believed in thoughtlessly in our history. Against this background, I will prove the possibility of utopia, where technology is set free from mechanics and gets closer to human beings. As we know, technology should exist for human beings. Technology should exist for improving human lives. Therefore, seeking its positive effects is as important as knowing its negative side-effects.

Actually, Korea has only a negative impression of technology, regarding it as mechanical and material. It is also true that this negative ideology has been imported from the West. In other words, Koreans have been ignorant of the revolutionary and fundamental spirit of the times when technological development was first initiated. In a way, Korea is following the West’s example; it is heading toward a technological civilization. And this situation cannot be denied. To be aware of this situation is the only way to find a solution for it. Besides, as we will see, this technological civilization might

a more humanitarian society possible, make us more humane, and make the world a better place to live. Within today's seemingly barbarian civilization, there must be these latent, if mostly unrealized, potentials. Thus, we must not forget that our most urgent task is to make these possibilities known to people. Lastly, I will seek the proper roles and responsibilities theology can take under the present circumstances.

Jacques Ellul: Did Technology' Become the Object of Idolatry?

I will begin my discussion on technology with Jacques Ellul. He has a reputation for raising comprehensive questions about the negative qualities of technology. Among his books, *La technique ou l'enjeu du siecle* (1990) and *Le systeme technicien* (1974) are especially well known as keen and discerning analyses of the technological civilization in modern society. He approaches these matters with a religious as well as a social and philosophical point of view. He regards belief in technology as a kind of religious idolatry that manipulates and dominates the modern human consciousness. I cannot completely agree with this point of view, but his attempt to understand the authority of technology with a religious angle looks quite supportable. It might show a possible solution to the struggle for establishing the thesis that the basis of technology is theological.

Ellul provides several possible answers about these problems of technology from various viewpoints. First, he points out that technological development has modified the culture of human society to an enormous degree. It takes us to the society of technology away from the society of nature, to the culture of artificiality from the culture of nature, and thus to an orientation toward technology instead of nature. This transition is such a dramatic and traumatic one that it transforms, not only the content of human culture but also the basic concept of it, into a totally different shape. Before this transition, culture was a term related to nature, but now it reminds us of something artificial, something human-made. Consequently, culture starts to imply artificiality and technology. This change accompanies the modification of humanity itself as well. Now, technology becomes *a priori* (Marcuse) for human beings, an unconscious superstructure of the human mind (A. Gelen), and the new world of human instincts. At present, discussing human nature or instinct by themselves is a futile effort. Rather, we have to pay attention to technology itself that influences both human nature and instinct.

Second, Ellul asserts that this cultural shift is caused by the de-mystification of technology. From this technological viewpoint, everything is explained mechanically. During this process, the aura of things—which is due to their unexplainableness and reconditeness—is fatally damaged. The transition in religiosity from blind worship to rational reception requires demystification of the idol. And, in a sense, this demystification is essential and indispensable for placing Christianity back in its original place. In Christianity, God is not inscrutable mystery, unreachable master, nor prohibited taboo, but love overflowing into human life through a human being in order to set humans free from the captivity of sin.

In history, the 18<sup>th</sup> century was a most dynamic and revolutionary period. Technology had developed at an unprecedented rate, and various social and religious taboos had been broken and diminished. Since then, we have experienced the sense of alienation from the traditional hierarchy our ancestors established. Technology has infiltrated today's society, shattering and dissipating the traditional system, replacing it with a newly created order.

Ellul is convinced that this new spirit resulting from technological ideology does not mean the death of religion. Though religion has been desacralized, demystified, and demythologized, human beings still remain "homo religious." He believes that the age of technology is as much religious as the medieval age, but in a different way. Therefore it demands a different form of religiosity from the medieval.

One problem is that he regards technology as the modern sacred. The sacred is, so to speak, a primitive form of religion and from a Christian point of view, a religion of idolatry. It is a process of idolizing an image or an object. However, it is surely an attractive concept to people of all times and places. The sacred itself is, in a sense, a religion that human beings have ceaselessly made up in order to protect their social system and keep living in this world of chaos. Authority, which is essential to the social system to maintain its present state, can be created, admitted and secured by being sanctified. And within this legitimated society—whose authority is secured through the acknowledgement of religion—people seize onto a protective feeling that their food and life are kept secure. Consequently, even though the sacred seems to have a dimension of the transcendental, sublime, and unworldly, actually it is closely related to the secular aims of religion that justifies people's pursuit of practical benefits. As Eliade says, the sacred has a pragmatic basis (*Traitee d'histoire des religions*, 1964). In other words, there is no biblical transcendence, or Bultmann's desacralization. Meanwhile, the religion of the sacred assumes the world is divided into two parts—the sacred world and the secular. This religion is always looking at the sacred world rather than trying to save the secular world. Hence, sanctity is not able to present any dynamic solution for transforming the world into a better state. Strictly speaking, sanctity has no sense of ethics. On the one hand, the sacred makes people move blindly toward the sacred world. On the other hand, it allows and justifies people to pursue their secular benefits. It is a poisonous form of religion, a dangerous opiate.

Jacques Ellul also senses the ambiguity and duality of the sacred. R. Caillois, called a scholar of the sacred, conceptualized the term "duality of the sacred" (*L'home et de sacre*, 1963). According to his thesis, the concepts of "le sacre du respect" and "le sacre de la transgression" constitute the sacred. "Le sacre du respect" exists in a sacred place, while, "le sacre de la transgression" creates the concept of sacred time. It is a ritual time for worship. At the festival of the sacred, the sanctified world is profaned and secularized in this ritual, though the time is limited. It is a departure from the realm of the sacred. However, "le sacre de la transgression" is allowed within a limited time span. By being allowed to participate in this ritual of sacred transgression, people have time to feel free from the strict spirit of the sacred. For that reason, the aim of

this festival is to preserve the authority of the sacred. Though it is likely to possess an emancipating mechanism allowing one to breakaway from its strictness, sanctity is actually totalitarian and ideological. It is far from biblical religiosity. Ellul asserts that the sacred cannot find even a small place in biblical revelation.

Hence, Ellul's idea of regarding technology as the modern sacred is different from Christianity. Technology has a tendency to desacralize the sacred, but at the same time it sacralizes itself and tries to occupy the domain of the sacred. The sacred itself never disappears. The object of the sacred is transferred from one to another—in other words, from nature and culture to technology. At present, human beings are sanctifying history through the backing of technology, though sanctifying history as well as nature is strictly prohibited in Christianity. In the modern world, our daily experience is deeply grounded in technology, no longer in nature. As an enchanting magic carrying out the human dream, technology is now worshipped and adored. Therefore, as science plays the trigger role for re-mythologization, technology leads to resacralization, placing itself in the most sacred and religious position.. Modern society then logically remains sacred—not profane and desecrated. Only the object of symbolization is transferred from nature to technology. Consequently, Ellul posits that the recent phenomenon of the resurrection of religion in this secularized modern society is closely connected to the idolatrous and mechanical religion caused by the sanctification of technology.

Thus, the question arises: why does Ellul insist that technology is the object of modern sacralism, and an idolatrous religion? There are several possible answers. To study them, we will look into a scholarly critical viewpoint toward technology.

#### . Technology Is the Will to Power

Like Oswald Spengler, Ellul regards technology as a will to power. The religiosity of sanctity fulfills the will to power. This will to power has a close connection-to the matter of justification.

In fact, Ellul states, technology becomes a combination of the will to power and self-justification (*L'esperance oubilee*, 1972, p. 81). Incantation, the most primitive form of technology, is a good example. Incantation objectifies nature and takes advantage of it with human power. And at the same time, it appropriates the name of God to justify itself with a spell. Thus, the first technology is the outcome of the combination of the will to power and self-justification. According to critics, technology is based on the process of objectification, and this objectification is based on the process of cognition, which itself pursues a dominant power in the end. Objectification accompanies representation. (Here, representation means *Vorstellung*—in other words, the act of putting together everything shattered and fragmented.) In *The Critique of Pure Reason*, Kant provides a detailed explanation of this concept.

For Jacques Ellul, modern technology is not so different from incantation. The desacralization of modern technology results from our attempt to acquire the right of self-justification with our own hands. Now, technology becomes the agency of justifying activity, and the supreme value in modern society. Ellul says, “the development of technology is basically the expression of the will to power of human beings. The

realization of the will to power is the purpose of technology and the attainment of materials is no more than a by-product of it” (*Le système technicieri*). People express themselves through technology because technology is the best tool for pursuing power, satisfying our instinct for power. Therefore, the religiosity of technology is actually a religiosity for justifying our activities and ourselves (casuistry). This is the essence of technology, as Ellul defines it.

Hence, the language of technology is the language of incantation as it was in the primitive age. The language of technology possesses people with a fantasy that they have omnipotent power over everything in the world. In this fantasy, people feel that every conflict and contradiction becomes reconciled and coexistent harmoniously. This is why, as Marcuse insists, technology functions as a kind of ideology in this highly developed society.

Under the name of technology, which controls the target through the process of objectifying it, everything is estimated by its usefulness or functional faculties. The thing itself and its usefulness is so mixed up that it is almost impossible to distinguish one from the other. Persons are also appreciated for functionality. Whether they have the ability to achieve what is demanded of them, determines each person’s worth. Finally, objectification gradually expands its territory from nature to human beings so as to dominate them. Technology objectifies the human species and dominates it. Dragged out of the subject’s seat, human beings become passive and impersonal objects in this enormously developed mechanical society. Now, technology is the subject. Communication is performed without “parole.” Humanity as a subject of communication is’ erased, and only an anonymous somebody as a tool for communication is left. Ellul says that the reason for the overflowing of language is to compensate for the loss of real language. The loss of real language is a loss of humanity. Because the idolatrous religiosity of sanctity victimizes and objectifies human beings, technology, according to Ellul, alienates them and opens the window for communication only to mechanical and artificial things.

## **Whether Technology Is Autonomous or Not Matters**

The self-justification of the will to power, as described above, assumes autonomy. If technology becomes autonomous, it becomes the supreme authority. And whether technology is autonomous or not really matters in approaching the problem of technology. If technology is autonomous, then it exists beyond our control.

If technology is autonomous, from what is it autonomous? The answer is from human beings. Therefore autonomous technology alienates human beings. Modern technology, set free from human beings, goes its own way. Originally, technology was a tool for achieving some purpose, but now it becomes a purpose unto itself. No one asks what technology can do for human beings’ benefits any more because this question is now meaningless. Technology operates independently in terms of its own effectiveness. As Jurgen Habermas regards technology as a system of praxis with a practical purpose,

so Ellul does not deny that technology has been instrumental. The point is that the instrument has acquired autonomous independence. The boundary between the subject and object has become blurred and only instruments remain. The epistemology that insists that the object can exist only through the subject's cognition process, or the ontological claim that beyond the subject there exists an agency which restricts the subject— these questions are voided in modern society. The instrument is the only reality. The subject is dominated by the instrument, and the object is the outcome of the instrument. Therefore, it is not correct to regard the society of technology as a kingdom of the object.

Technology objectifying itself as an instrument is characterized by exclusiveness and inclusiveness. Exclusive technology refuses to get mixed with other things, and rather likes to reign over them. The characteristic of technology is to reign wherever it goes. To the modern human, whether to appropriate technology or not is equivalent to whether to live or die. We have no choice. We are living in the age of inescapable technology. Technology is infiltrating into every domain of our society including culture, religion, politics, and even sex. The structure and the pattern of human activities have become mechanized. Truth disappears and only technical skills are left. Without technology, no race can survive in this modern world. Within a mechanized society, distinctive racial qualities become indistinctive. Social, economic, psychological, family, and industrial systems become technologically patterned. The varieties of each culture vanish as the mechanical and technical world comes into its own.

Within the domination of technology, the humane aspects are completely excluded, and human beings themselves are finally alienated from their own activities. Only producing the mathematically perfect outcome really matters. Machines replace human beings, and labor loses its voice. Thinking and working become separated from each other, and the voluntariness of labor vanishes. Technological rationality conquers every field in this world; everything is dependent on technology. Technocrats even lead modern politics. People seem to have the power for the final decision, but in reality the human mind is already set up and manipulated by technology.

In this technological society, adaptation must be one of the highest virtues. Virtuous people are required to agree to technical development, adjust to a reality grounded in technology, and accept the fact that technology produces without thinking about it. Under the technological circumstances in which "ideologic du fait" controls our daily lives, virtue loses its connection to creativity, and instead becomes related to survival. People do not have the freedom of choice any longer, and are reduced to a mechanical instrument seeking after effectiveness.

The exclusiveness and inclusiveness of autonomous technology eliminate all humane dimensions and secure the power of technology over every domain of human society. In Habermas' term, technology—in other words, instrumental action, one-sided monologue, alienated productive action—gulps down all of the channels of communicative interaction, and the praxis of humanity. Instrumental action becomes the paradigm that produces all categories. Everything is absorbed into a productive movement. Con-

sequently, the Marxian theory of explaining social ideology through a connection between productivity and production relation should be modified. Marx thinks that the latter is subordinated to the former. But in Habermas, these two terms are replaced by praxis and techne, and thus praxis is subordinated to techne.

According to critics, the fact that techne overwhelms praxis means that technology attains autonomy, and people start to be alienated from their own society—as Habermas predicts this phenomenon. In a traditional sense, technology is something associated with “poiesis,” or production. Here, production means pro-dure, or pro-duct, in other words, “Her-vor-bringen.” It is used not only with an instrumental connotation but also with an epistemological implication in that production here covers the process of seeking after truth. However, in modern society, technology is not a simple productive action, nor is it the action of elucidating something. It contains its own systematic pattern. Modern technology is independent of something it is supposed to elucidate, then establishes its own rules and systems in itself, and finally justifies them.

Accordingly, as Marcuse asserts, “it is technically impossible that human beings can decide their life voluntarily.” If so, the consideration of human responsibility becomes completely unnecessary. In this context, technology seems to bear the anti-ethical. The society of technology is neutral. Therefore we are now living in an anti-ethical society instead of un-ethical one. We cannot recognize the possibilities of the un-ethics that anti-ethics will bring out in our society in the near future. Emmanuel Levinas says it is an inevitable outcome that people start to lose the feeling of responsibility within this modern society.

## **Technology Becomes the Only Ideology**

Sanctity presumes a social connotation, that is, ideology. Ideology works through integration, totalization, and selfjustification. Especially, sanctity shows an incredible ability for self-justification. Some scholars believe that we have to move forward to a post-modern society because there is no alternative for handling the issue of justification in today’s society. But for Ellul, technology is the very alternative that can offer the answer for this problem. The self-justifying ability of technology operates classlessly, so even the proletariat regards technology as an agency of emancipation. Moreover, according to Henry Lefebvre, the technology of self-justification is so deeply rooted in the modern consciousness that we can not feel it as ideology. The ideology of technology is now clad in the armor of science.

Meanwhile, technology performs the integrative function perfectly in organizing a huge societal system. Things anti-technological are regarded as anarchic, and they are not permitted to enter the current society. Only things totalized and centralized are permitted. By computer, everything is thoroughly systematized, and democratization and decentralization become eventually impossible. No negative response can be given to this technological organization where only indiscriminate futility remains. Technology destroys creativity and oversimplifies the rhythm of life.

Henri Bergson says that life is a continuation of new happenings. However, if technology tends to oversimplify the dynamic power of society and bring it to a standstill, then we cannot have a real life with technology. Everything becomes standardized and normalized. Normality is a virtue. Unexpected departure from conventional, normal, natural things is considered anti-technological. Hence, in the realm of technology, there is no transcendence. Though it seems to progress at an unprecedented rate without recognizing its speed limit, there is absolutely no possibility of ‘transcendence. Heinrich Ott calls it “the transcendence of the black.” Technology cannot be adventurous. Rather, it is insular and parochial in that at best it can produce other kinds of technology. In human activities, purpose transcends the accumulated tools, while in the case of technology, by contrast, tools dominate purpose.

To sum up, Ellul regards technology as an idolatrous religiosity—in other words, as a sanctity—that controls the consciousness of the human mind in modern society. But another question follows: Is this enough to explain technology? In the next section, we will examine the nature of technology from a utopian viewpoint. Utopia is exactly opposite of sanctity and provides the possibility of emancipation.

## Technology and Utopia

Sometimes it seems that technology is likely to rule all over the world as sacred religion. If so, the secularity of technology would drive out the transcendence of God. Human beings have an inclination to idolize everything, to worship it. Perhaps, things that have an ability to set people free from captivity are reduced to the captivity itself through our foolish mistakes. If technology is reduced to technologism, then, the same thing would happen. If we forget to pray God for his grace, and try to solve all problems technically, then genuine religion could not possibly exist in this society.

However, technology is not always reduced to technologism. Moreover, technologism is, in a sense, a contradictory concept of technology. Generally, it presumes that its instrumental quality is the only attribute technology has. But in fact technology is a method or a manner of living, not simply a tool. In other words, technology is associated with metaphysical questions rather than economic ones. It is a “manner of life,” which betrays the truth and possible ways of life, is surely associated with transcendental qualities. Life is internally transcendental, and when this transcendence is represented to the exterior world, it becomes genuinely transcendental. It cannot exist beyond the tangibility and productivity of life. Embodying and producing the transcendence of life, this is art.

Let us call it utopia. Sanctity has religiosity; so does life. It is true that utopia reminds us of a dream world, but in Western thought utopia has been considered the adventurous spirit that pursues new and unknown truth. In *Das Prinzip Hoffnung*, Ernst Bloch says the most essential quality of utopia is “novum.” Psychologists explain that the utopian spirit lies in the unconsciousness of the human mind latently, and is strongly influenced by accumulated experiences. But their explanation cannot be

correct because the utopian spirit is not past-oriented but future-oriented. In other words, it is a kind of pro-consciousness, facing the future.

Utopia differs from metaphysics in that the latter explains things that already exist, while the former recreates the present in order to advance toward a new future. Therefore, “novum”—the utopian spirit—is bound to be critical of the present. It seeks after the possibilities of difference from the present situation. In *Ideologic et utopie*, Karl Mannheim also notes the critical qualities that the utopian spirit implies. Both ideology and utopia, as the outcomes of the social imagination, keep some distance from the present society. But, the ideological imagination is engaged in maintaining and justifying the present social system, while the utopian imagination works toward negating and deconstructing the present, and finally establishing the new system..

The fact that utopia faces toward the new, unknown truth does not mean that the essence of the utopian spirit is daydreaming or preposterous. G. Kapouge, who has studied the history of utopia, says: “Utopians did not dream with their own ideas. They vehemently wished that their idea would be satisfied.” Mannheim thinks of “*Civitas Dei*” as the essence of the utopian spirit. During the Protestant Reformation, the Reformationists longed to establish “*civitas dei*” in the world. They did not wait for the kingdom’s coming, but did believe in its coming. Waiting is passive. It assumes the postponement of the kingdom’s incarnation. But believing in it is more active. Belief makes the incarnation realized in the world. By strong belief, the future comes true at present. Bloch’s and Moltmann’s “hope” is closely associated with this belief. In a sense, belief is hope and vice versa. Utopian spirit, a hope toward the realization of the new world, is dynamic. In this spirit, the new world will come true by earnest belief in its incarnation.

In other words, the utopian spirit consists of a beginning and an ending. It is a desire to live in a new world with a new system and new values. Therefore, the transcendence of utopia is different from the transcendence of sanctity. Sanctity attempts to maintain its sacredness by separating the sacred and the secular from each other, while utopia joins the world with “incarnated transcendence,” never dividing the sacred and the secular. The transcendence of the utopian spirit seeks after a different system in order to build a new kingdom, excluding the ideological qualities of sacred transcendence. Because of the worldliness and tangibility of utopia, Bloch calls it “transcending without transcendence.” The transcendence of sanctity works for each of the selfish desires living upon totalitarian authority, while utopian transcending tends to sacrifice the self for new possibilities. In Gabriel Vahanian’s terms, the former is soteriological and the latter is eschatological. Utopian transcendence is a spirit of ‘*homo viator*,’ the biblical man, who is willing to refuse a stagnated immobility. At the same time it goes beyond ordinariness, seeking to minimize existence at the bottom and maximize ethics at the top.

I now present how technology implies the utopian spirit and takes advantage of it. First, I will propose technology’s newness.

### **2.1 *Technology, the Possibility to Be Different***

With technology, homo sapiens become human beings. That means that we have opportunities to be different. Exiting from repetitions and normal cycles is the event of life. Life is newness. Life is the repetition of newness. Thus, it is mystery. Human beings can be human beings when they become a new person. Technology is crucial in this process. In other words, technology makes human beings as a new species.

Intelligence and culture are two main traits of humankind. Intelligence is a door escaping from the instinctive cycle of nature, and culture is the product of intelligence. Intelligence and culture also relate to technology. Philosopher Henri Bergson pointed out that intelligence is artificiality. For him, artificiality, in particular, means the ability to make tools as tools.

The possibility to be different is culture. The second environment born through technology, the new artificial milieu—that is culture. Technology is also art. By creating culture, mankind can make the environment without being controlled by it. Humankind can change the first nature into the second nature. When humanity did not hold anything in its hand, nature overwhelmed mankind as a nature-god holding supernatural power. Under these circumstances, mankind and nature stand in opposition, and this confrontation yields chaos. However, when mankind hold tools in their hands, they can change nature for the sake of mankind and they live together. The transcendence of “homo technicus” is a new person and a new world. As long as it pursues newness, it is not eternal but eschatological. When we believe that anything surrounding humanity becomes its counterpart through technology, language is the first technology because people look at the world from a humanities viewpoint.

Human beings deny being a part of nature through technology. Human beings are not a part of nature, but a part of a new man. A real person is a new person. Unlike Ellul’s critique, it is not easy to say that the humanization of nature brings the isolation of mankind because it brings denaturalization. The humanization of technology takes a decisive action to escape from an instinctive cycle. Through the de-mystification of nature, technology makes a person to be manlike and nature to be nature. Thus it helps to have a good relationship between mankind and nature.

By creating nature as the de-mystified one, technology shapes nature to mankind, thus making a stage for a new world. Demystification, humanization, and newness exist together. It is the transition from the transcendence of sanctity to the transcendence of utopia. That is also the tradition of the Bible. In the Bible, God made nature. Nature exists in relationship under God. It also means that nature exists in relationship under human beings.

In fact, the responsibility of human beings for nature exists after nature is de-mystified. Technology asks endless adventures and responsibilities of human beings when it asks mankind to go beyond the natural world. For example, artificial insemination should be understood in this context. It is not right to oppose medical insemination because it disrupts existing ethics and thereby ruins mankind. That kind of attitude cannot solve a fundamental problem. In contrast, the problem of medical insemination

elicits our sense of ethics and responsibility. It asks us to demonstrate ethics rather than only discuss it.

In the case of medical insemination, the parents are not real parents of children biologically. In particular, the father is not a real father because the mother uses the spermatozoa of someone else. However, when we see that parents accept the children as their real sons and daughters, we recognize that mankind can construct life with love regardless of the biological family concept. Non-biological parenting awakens a new sense of ethics for mankind. Opening our eyes to a new ethics of love shows the possibility that we can make the world new. Medical insemination asks high-level responsibility based on one-way love instead of the responsibility based on mutual love. It shows the possibility that a person who goes with technology becomes a new human. The technological spirit asks mankind to open its eyes. As Jang Brun pointed out, technology is a human effort to escape. In other words, technology should be understood as a metaphysical philosophy that conquers the current situation of human beings.

In fact, technology itself is the continuation of newness. Several scholars studying the process of the technological development have made clear that it consists of discontinuities. Thomas Kuhn pointed out that the development of science begins with a revolution, consisting of a new paradigm that is totally different from normal science. Technology makes something incessantly, but exists over its creation. From this perspective, language is the first technology. Language designates some events through its symbols. Language, as the first technology, exposes something actualized, but consistently overcomes it. Thus this characteristic should be considered as its substance.

According to this account, Ellul's assertion that technology will eliminate a meaningful

mankind because of its autonomy is too serious. Everything belongs to the hand of human beings. Cybernetics shows this trend well, clearly demonstrating the difference between mankind and technology. The difference is the space that mankind is involved with incessantly. People worry that cybernetics, cutting-edge technology', would rein in human beings by invading their original space. However, according to scientists who examine cybernetics, cybernetics makes clear the difference between mankind and technology.

The cognition of mankind is always overall knowledge, while the program of cybernetics consists only of simple cognition. Even recently developed expert systems are helpless in the face of abruptly occurring events because they act according to pre-made programs. As long as the essence of cybernetics is reappearance, what reappears is important.

Human beings decide what is important. The final decision always depends on mankind. The development of technology therefore does not threaten mankind. It asks more responsibility of us. The self-control of technology is not acceptable. When we accept the self-control of technology, our responsibility will be lost. Schumacher preferred a middle range technology to supertechnology and pointed out as follows:

“I believe the new direction for developing technology is that it gratifies the needs of mankind” (*Small is Beautiful*).

Technology is the technology of mankind. Automation is based on patterns following the strategies that mankind pre-made. The most important thing to emphasize at this point is the way in which mankind selects. The process of decision is an ethical decision involving values. The development of technology does not create anti-ethics, but asks for a high level of ethics. In sum, technology makes us know who we are as cybernetics only hints at. And it makes us realize that we are going for a new world ourselves. Technology cannot copy mankind. Humans as beings of language exceed technology and cybernetics.

Pierre Levine, the French cybernetics scholar, points out that human beings are able to know what they do not know. They can go to the unlimited world of imagination. Humankind is not just what we currently are; it is more than that. Technology actually incites this kind of understanding of mankind. With technology, mankind looks upon a man as a real man. The hope of humans is humanity. In Ellul’s criticism, humans only know the means of technology without knowing its ends. That is a very good opinion. However, technology is not teleological, but eschatological in the sense that technology is waiting for the appearance of newness. Through breaking down the absoluteness of existing authorities, technology liberates people from social constraints and helps them to deny naturally a given society.

As G. Hottois explains, the world of technological science surrounded by a new environment is totally different from the phenomenological-analytical world or metaphysical philosophy (*Le signe et la technique*, 1984, p. 81). The phenomenological-analytical world tries to evaluate tradition and history in many ways. Metaphysical philosophy focuses on explaining a given world while thinking of nature. The technological society that thinks of transforming things focuses most intensely on the imagination of the future. Hottois expresses well the characteristics of the utopia of technology. For him, the development of technology fulfills through rapid change what we have never expected.

Whether we take advantage of technology, or produce oppression or alienation due to the characteristics of dehumanized technology, depends on our attitude. Technology itself is not the problem. For instance, we have many leisure hours because of the development of technology. Since we have spare time, we can think unusual things that differ from our daily life. Technology is very close to the transcendence of utopia that repeatedly asks new things.

. Technology, Realization of Eschatology

Our thought and imagination need technology for their realization. To be concrete something needs technology. Utopia is also realized with technology. Here, we want to examine another dimension of utopia—its eschatological aspect. And eschatology means what Bultmann says. For him, eschatology is to decide something while considering the present as the end. The end is energy to pull the future to the present and embody it. Our belief makes it so.

Imagination must be realized if it is to change the world. Materialization needs technology for effective realization. The materialization of unlimited newness that preempts the future is technology. The possibility of newness that technology predicts always considers reality. That is the directness of technology. Thanks to technology, newness is always considered as a concrete realization in the world. It is similar to language. The symbolism of language has its meaning under the condition of directness. The imaginary world that technology provides is a preliminary process that fulfills newness in the world. Materialization in the world is the characteristic of the end of technology. Technology always considers realization in a concrete situation, unlike science. Technology is more instinct than science in terms of its power to make human beings humanlike, because technology provides embodiment. With technology mankind gives up the idea of leaving this world and participates in the world.

Hottois has told us that modern philosophy considers language as its subject because it is the opposite of the directness of technological eschatology. Since technological language always directs in a clear way, modern society loses the wealth that the symbols of language bring. Therefore, the main subject of modern language philosophy—without analytical philosophy—is to emphasize that language is not something that controls directly. This trend is clearer in the language philosophy of Derrida's poststructuralism than that of Paul Ricoeur's phenomenology. For Derrida, the secondary characteristic of language is that the true meaning of language becomes blurred because original language is divided into several sub-categories. It is the autonomous signifier in contrast to the significant.

When Derrida talks about the autonomous signifier, some aspects are similar to the opposition of technological language. Marcuse also mentioned the desolateness of technological language spreading throughout today's industrial society. He thought that technical language always tries to fabricate something, so indicates something directly. For him, therefore, language is buried in the immediately correct.

This kind of criticism of technological language exaggerates, although it is true in some sense. Derrida's idea is an overstatement seeking to change modern society in a different direction. In fact, it is useless if language does not indicate the realities of life out of texts. As he pointed out, to be "deconstruction," language should be a thing that indicates something, that is, constructs as well as demolishes. The correctness of technological language should be understood as a directness that realizes certain purposes. It should not be understood as a tool to make our life dreary. The eschatological characteristic of technological language is to make something. Technology does not know the difference between theory and practice because of the character of technological language. However, since technology does not know the planner and the practitioner, it offers a new epistemology and gives unlimited imagination to the world of knowledge.

Because of its eschatological character, a technological view of the world differs from teleology. In the teleological view, the present cannot be new because it has already been designated by the given purpose of the futures. That is what physicists and biologists want to explain. F. Jacob in France speaks of the process of the development

of life, rather than the taking apart and assembling of engineering. Jacob borrows Levi-Strauss' vocabularies. Here, engineering is work with a specific purpose. Taking apart and assembling something indicates directness flowing from fortuity. J. Monod also argues that the development of life was not followed by any sequence made by nature. He says that the development of life fulfills itself through unanticipated new things. A view of the world in the field of physics is neither determinism nor probability. In sum, the world that technology wants to seek is the world that leaves our destiny in our hands. The knowledge of technology is not far from ethics. Instead, it raises ethical questions by insisting on clear responsibility. It does not demolish ethics although it creates new movements in the methodology of ethics.

Thus far, we have studied the spirit of utopia in terms of a technical view of the world that has newness and eschatology as the central concepts. The main interest of technology is not to know, but to change. It does not mean that technology changes the world without knowing the current situation. It means that technology focuses on changing the world while withholding a core knowledge of the realities of life.

. Conclusion

How do we manage these technological phenomena? It is possible when we resuscitate the spirit of utopia in Christianity. Let's answer with several propositions.

## **The Technical Phenomenon Requires Changes in Religion**

The advent of the technological world does not ask for the obliteration of religion, but for new characteristics of religion. As J. Fourastie has pointed out, if religion is a view of the world, the advent of a new view of the world requires a new religious view of the world (*L'église a-t-elle trahi? 1974*). It asks for a new view of God and a new view of the church. Revelation is always related to some time and someone. Therefore, revelation is always open. As G. Friedman argues, the crisis of mankind in technological culture is not temporary, so we need a new religious view of the world. Friedman insists that we have to expect that a new spiritual life will come into full bloom in the new technological environment (*La puissance et la sagesse, 1970*).

In any case, it is important to consider technology as a problem of religion. We cannot replace the achievement of technology with the supernatural aspects of religion. It is necessary to awaken sleeping religion by accepting the new view of the world that technology institutes.

## **Accept the World Fundamentally**

Theology should have an optimistic attitude to the world. The world is not just a place humanity enters. The world is the world of people for people. God should be the final principle for explaining the world and its people. There should be some fundamental acceptances of the world and people. Although the world is evil, although my life and the lives of others are ugly, this kind of belief accompanies the ethical

power that conquers the world. Theology persuades the public to avoid pessimistic fatalism. This pessimistic fatalism spreading through churches relates to the struggle for existence that seeks egoistic selfishness instead of interlocking human responsibility with the sacredness of God. The world is the place of God's love, and the place where the creative responsibility of people is fulfilled. In fact, waiting for a new world without doing anything with this one is equal to giving up on God.

Here, we deny any attempt to divide the area of religion and technology. This kind of attempt is the perspective of several scholars who want to take technology seriously. Their way of thinking is that technology gives learning and religion gives knowledge. In this methodology, technology makes and religion acts. The former gives material abundance and the latter gives the meaning of life. However, if we think that technology consists of modern culture, and the spiritual world of religion is different, it is possible to uphold a fundamentally optimistic attitude toward the world.

The cultural philosophy of J. Maritain does not give us any progressive solution. For him, technology itself is good, though it is important how mankind uses it. He thinks that technology brings material abundance. In other words, for him, technology makes it possible for mankind to escape material poverty, but it is not related to anything spiritual. His logic is that technology is about secular things, so it handles materials, while the arena of spirit belongs to religion. In his philosophy, he divides technology and religion. "The church is holy and the world is secular." There is no fundamental affirmation of the world. There is no effort to see the world as the condition of God.

That perspective loses the power of ethics because the transcendence or newness of the core concept of ethics comes when we affirm the world. That is also a message that the culture and ethics of Schweitzer gives. As he clearly pointed out, eventual optimism is ethics. Affirming the world and life fundamentally and eventually gives birth to the power of ethics that changes current disciplines. "Ethics is no more than fulfilling the idea of affirming the world and life." Unlike the natural philosophy of Hegel, Schweitzer believed that only an optimism affirming the fact that life is originally beautiful makes the current era new.

## **The Total Otherness of God**

The greatness of God is not in the order of the world, but God participates in the world. Technology left alone seeks a boon, one that falls into historical incoherence because it seeks a total newness. It denies that the de-mystification of nature becomes the link to the sacredness of the history. As Oscar Culmann puts it, "The New Testament does not teach religion over the world. However, it needs to have an eye for denying the current order of the world" (*Dieu et Cesar*, 1956).

The total otherness of God is the source of revolutionary iconoclasm. Thanks to the otherness of God, the people go to a new world with the hope of a new people. Theology should insist on the otherness of God to prevent technology from falling into technological determinism. That is also the spirit which technology embraces.

## **Ellul and Technological Utopianism**

A Response to Myung Su Jung  
by Darrell J. Fasching

### **Myung Su Yang's Challenge to Ellul**

Myung Su Yang is a kindred spirit, whose paper I read with great interest, for it is clear from reading his essay that we both deeply appreciate two great theological critics of technology, Jacques Ellul and Gabriel Vahanian — the first as an iconoclastic critic of technological utopianism and the second as an iconoclastic advocate of it. Yang's essay is complex and at times even a little confusing, and yet very illuminating. In the first two sections of this response I shall simply try to restate the core arguments as I understand them. In the third and final section, I will try to assess the strengths and weaknesses of his argument.

"Korea," says Myung Su Yang, "is heading toward a technological civilization... To be aware of this situation is the only way to find a solution for it." Ellul, we are told, helps us to understand the perils of technological civilization — the autonomy of technology and the dehumanization it brings in its wake. And yet Yang immediately follows this observation with an expression of optimism; namely, that technological civilization also offers new possibilities to create a more humanitarian society. To make people aware of this other possibility, says Yang, is "our most urgent task."

Myung Su Yang makes it very clear that while he appreciates Ellul's pessimistic critique of technological civilization and finds much of it valid, nevertheless he fears that Ellul's analysis tells only half the story. For technology, he argues, deconstructs one understanding of our humanity only to make way for another, more biblical understanding. Yang seems to play Ellul off against thinkers such as Ernst Bloch and Gabriel Vahanian, arguing with the latter that technology has deconstructed an understanding of our humanity based on nature only to open up the possibility of a more biblical or eschatological view. Yang lays out his understanding of Ellul's thesis and then critiques it, in order to offer his more optimistic theological view.

### **Yang's Account of Ellul's Thesis**

Myung Su Yang is appreciative of Ellul's work for showing that the central problem of a technological civilization, dehumanization, is located in religiosity. This religiosity

gives technology its autonomy by “sanctifying” it so that technology comes to be treated with the reverence reserved for the sacred. Human beings come to worship the work of their own hands as if it is something wholly other, and so end up in alienation.

Yang interprets Ellul as following R. Caillois’ thesis of the duality of sanctity in which “the religion of sanctification assumes the world is divided into two parts — the sacred world and the secular” in such a way that “the sacred of transgression” is a ritually permitted time of chaos that profanes and secularizes the world so that “people can have a time to feel free from the strict spirit of the sanctity.” Such a permitted time of revolt then passes only to more securely reaffirms “the sacred of respect” that legitimates the autonomy of technology and renders choice an illusion. As a result everyone ends up living in a society where people seem to have a choice and yet the autonomy of technology renders these choices irrelevant. It is a world in which technology orchestrates everything and nothing, new and unexpected can happen.

Such a society, says Yang, is not so much unethical as it is ‘anti ethical.’ What role could ethics possible play in a civilization in which choice is an illusion? And so this technological religiosity becomes the opiate of the people. Finally, as a result of this dialectic of respect and transgression, technology has desacralized the world as sacred order of nature only to resacralize the world as a sacred technological order whose “will to power” is justified not by the “natural superiority” of some over others as by technology and its efficiency.

## Yang’s Utopian Critique of Ellul

Having laid out Ellul’s analysis and critique of technological civilization, Myung Su Yang asks: “Is this enough for explaining technology?” and proposes to look at technological civilization from another perspective, that of utopia. “Utopia,” says Yang, “is exactly the opposite of sanctity and provides the possibility of emancipation.”

When technology is sanctified or made sacred, says Yang, it is reduced to instrumentalism or technologism, which has no place for transcendence. But technology need not be reduced to technologism for it is “not simply a tool” it is a “method or manner of living” that embodies transcendence and truth. Recalling *techne*’s root in Greek thought, as an art or skill and its association with *poesis*, meaning to make or produce — this way of life embodies *techne* as the poetic or symbolic skill of imagining and making a new world — utopia.

Unlike metaphysics, utopianism is not so much interested in “what is” as in “what is not” — in making possible something new. So utopianism is “critical of the present.” Following Karl Mannheim, Yang asserts that while ideology serves to justify the status quo, utopia seeks to “deconstruct the present” and bring into a existence something new. “Sanctity attempts to maintain its sacredness by separating the sacred and the secular from each other, while utopia joins the world with ‘incarnated transcendence,’ never dividing the sacred and the secular.” Following Gabriel Vahanian, Yang asserts that “the former is soteriological and the latter is eschatological.” Technology, in the

poetic sense, “makes human beings a new species,” an artificial or cultural creature. For culture is our second nature, the one we assume poetically when we transcend nature and realize our unique humanity as linguistic beings.

Language is the first technology, the one needed to create a human world. Technology in demystifying nature opens us up to our humanity as creatures of language and imagination. “Demystification, humanization and newness exist together. It’s the transition from the transcendence of sanctity to the transcendence of utopia” — the same transition witnessed to in biblical eschatology as fallen nature gives way to new creation. The ethical implications of this, says Yang, are exemplified in artificial insemination. An ethic oriented to protecting human nature finds such a practice problematic but an ethic oriented to new creation welcomes it, for our humanity does not reside in our biology but in our poetic capacity to make the child our son or daughter and so “we recognize that mankind can construct life with love regardless of the biological family concept.” In this way technology makes us new creatures and calls us to new levels of responsibility.

In light of such observations Myung Su Yang suggests that Ellul’s assertion that the autonomy of technology is robbing us of our humanity is overstated. The attempt to develop artificial intelligence or cybernetic “expert systems” illustrates the self-limiting character of technologism and the necessity of technology as eschatology and *poesis*. For such systems do not handle the unexpected (the new) well, nor can they decide what is important. For these things human *techno-poesis* is required — the symbolic imagination. Such technology does not eliminate our humanity but calls humans to a more demanding level of ethical responsibility. It is not, as Ellul suggests, according to Yang, a question of “means’ replacing “ends” but of new creation. Technology, says Yang, is not so much teleological as it is eschatological. It is about imagination, embodiment, transformation and the future. It is about utopia and new creation. The theological task, as Yang understands it is to affirm optimism and “avoid pessimistic fatalism” by “interlocking human responsibility with the sacredness of God” and refusing to separate religion from technology or the church from the secular. Yang’s conclusion suggests the influence of Gabriel Vahanian, for Yang argues, using Vahanian’s phraseology, that we must see “the world as the condition of God.” This does not mean we simply affirm “the current order of the world,” but rather understand “the total otherness of God is the source of revolutionary iconoclasm,” which calls this order into question in order to make everything new.

## A Response to Myung Su Yang’s Critique

Myung Su Yang’s paper on “Jacques Ellul and Technological Utopia” is filled with wonderful insights but also with some statements whose meaning seems obscure or, at times, even self-contradictory. Many of these, I suspect, may simply reflect the problem of translation from Korean to English.

*The Sacred and the Holy: A Key Problem of Interpretation*

However, a serious problem is Yang's use of the terms "sacred" and "sanctification" interchangeably in describing Ellul's thought. Ellul would never speak of sacralization as the same as sanctification, nor would he speak of "interlocking human responsibility with the sacredness of God." Ellul viewed the sacred and the holy as opposites, antonyms not synonyms. As a result Yang not only confuses the sacred with the holy but the profane with the secular.

Very early in Ellul's work in *The Presence of the Kingdom* (*Presence au monde moderne*, 1948) he made a distinction between the terms "sacred" (*le sacré*) and "holy" (*le saint*) and then in *Man and Money* (*L'Homme et L'Argent*, 1954) worked out the alignment of the sacred with the demonic and these distinctions then became definitive for the rest of his work. The sacred, for Ellul, is not a term that can be applied to God or related directly to God. It is part of the order of this world, an order which divides everything into the spheres of sacred and profane. The Holy, by contrast, is directly related to God and manifests the power of God to desacralize the world, rendering it, at the same time both secular and holy. An ethic of holiness, says Ellul, can *rehabilitate* the sacred, so that institutions become liberated from the demonic powers that distort the sacred. When this occurs institutions once more reflect God's will and God's justice. And whenever that happens, the human city becomes an eschatological anticipation of the city of God. Ellul even goes so far as to claim that the human drive for revolution can be rehabilitated and liberated from the dialectic of the sacred of respect and the profane

(i.e., the sacred of transgression) so as to introduce an apocalyptic moment of genuine change into history.

#### *Ellul on Utopia*

It is striking, given Myung Su Yang's topic, that he never refers directly to what Ellul has to say about utopia. For most of his career, Ellul considered utopian thought to be the epitome of what Yang defines (following Mannheim) as "ideology" — ideas that, while promising change, serve to maintain the status quo. Indeed, Ellul calls utopianism "a consolation in the face of slavery, and an escape from something one is unable to prevent" (*The New Demons*, p. 117). Ellul is quite blunt about this: "I fail to see a positive value in utopian views. They do humanity no good" (*Search for an Image*, pp. 24–25). Utopianism's only purpose is to feed humanity false hopes for a better world that are designed to win their allegiance to the technological order that enslaves and dehumanizes them.

For Ellul, it is apocalyptic thought that plays the role that Mannheim ascribes to "utopian thought" — that of breaking with the ideological order of the present and calling it into question so as to bring about a something new and unexpected — a transformation of all things in an eschatological moment of new creation. For Ellul, an apocalyptic ethic has the power to desacralize a technological civilization in order to sanctify it (i.e., claim it for God's service), rendering it both holy and therefore secular (i.e. no longer claiming to be sacred or to take the place of God.) When God alone is

holy, the world is truly secular, that is no longer subject to the dualism of the sacred and the profane.

The paradox here, of course, is that this leads to the conclusion that Ellul's apocalypticism is, by Mannheim's definition, is a form of utopianism. In fact, Mannheim uses Thomas Muenzer's apocalyptic revolt during the Reformation as an example of what he means by utopianism (*Ideology and Utopia*, p.213) Indeed that was what I argued in my doctoral dissertation some twenty years ago, which was eventually rewritten to become the first single-author book ever published on Ellul's work — *The Thought of Jacques Ellul* (Edwin Mellen Press, 1981).

The book was based on my doctoral thesis, written under the direction of Gabriel Vahanian, and argued that despite Ellul's protestations against utopianism, Ellul was a utopian thinker. Implicit in my argument was an attempt to reconcile the positions of Ellul and Vahanian whose rhetoric made it seem that they held polar opposite positions on technological utopianism. This argument was later made more explicit in the opening chapter of my book *The Ethical Challenge of Auschwitz and Hiroshima: Apocalypse or Utopia?* (SUNY Press, 1993). There (on p. 48) I put it this way:

If Ellul is phobic about *utopianism*, Vahanian is phobic about *apocalypticism*, which he equates with an ideological dualism more concerned With changing Worlds than with changing the world. Ellul's work, however, should serve as As reminder to Vahanian (who already acknowledges a large indebtedness to Him) that biblical apocalypticism is not about *changing worlds* but precisely About *changing the world*. Ellul's understanding of the apocalyptic narrative Tradition sounds suspiciously like Vahanian's understanding of the utopian Narrative tradition. The problem is that Ellul fails to appreciate the utopianism Of the very apocalyptic tradition which stands at the center of his thought. By Same token Vahanian fails to appreciate that Ellul's apocalypticism does Really draw on the \_ authentic utopianism of the biblical tradition. Despite their Seeming opposition it does not seem to me that the disagreement between them is substantive. For Vahanian's eschatological *novum* like Ellul's apocalypse of the eschaton is nothing other than the presence of the Wholly Other in the here and now which calls into question the sacred order of "reality," making all things new.

If I am right then Ellul might be a more constructive resource for Myung Su Yang's theological optimism regarding technological utopianism than Yang is able to envision in his essay.

To my surprise Ellul wrote me (May 2, 1982), after reading the copy of my book that I had sent him, to say that I had given a completely accurate account of the development of his thought and then went on to say: "You are quite right on the subject of Apocalypse and Utopia. That which makes me uneasy is not at all the thought of Vahanian on the subject of Utopia/Technique. On the contrary, that is very convincing. But it is the word itself, on the one hand, in its historical usage and , on the other hand, as it is used by modern intellectuals — not at all the way Vahanian understands it."

What I find underdeveloped in Yang's essay is how we make the transition from technology as our fate to technology as the advent of new creation — technological utopianism. Yang sometimes seems to say that by demythologizing the myth of our "human nature" technology automatically leads to utopianism. It would be more accurate to say that this demythologizing opens up the opportunity for new creation, provided technology itself is demythologized. For Ellul, that is the task of an apocalyptic Christian ethic and for Vahanian that is the iconoclastic task of the church in a technological age. The ideology of technologism has to be unmasked, not just in theory but in practice, before utopian possibilities can be realized or embodied in a new way of life that will be at once both holy and secular.

## Utopia and Mope: JLtResponse to Jacques Tdfrd and Mchnotofical Utopia J. 'Westey 'Baper

For those of us living in the highly technological environment of the Western world, we daily see the advantages technology has brought to our lives. Efficiencies in business, advances in medical diagnosis and treatment, changes in approaches to teaching and learning—these are a part of our everyday lives. As Porat's (1977) analysis first revealed, we have come to this point as our major economic base has moved from agricultural to industrial to informational. Those in the Eastern world, whose economies remained agriculturally-based as the West moved through these transitions, have taken note and have often adopted, as national priorities, goals to move to industrial-or information-based economies as quickly as possible. For all of us, East or West, Ellul's sociological critique of *la technique* is inconvenient. His call for us to examine the values of the technological system and the negative impact they can have stands in the way of an unreserved embrace of a system that produces such evident advantages.

, These are the kinds of struggles that I believe are at the root of Professor Yang's attempt to find a reconciliation through the concept of "Utopia." The Republic of Korea, through an aggressive program of industrialization and importation of technology, has

become one of “Four Tigers of East Asia” and its economy is currently ranked as the 13<sup>th</sup> largest in the world. Should it put the brakes on its rapid development until it can consider the potentially negative impact a technological system will have on its traditional society? In face of the seeming impracticality of this, there must be a way of finding a positive side to technology. This Professor Yang seeks to do through his “Utopian” approach—one in which we recreate “the present in order to advance toward the new future.” He suggests that human use of technology can actualize humans (“With technology, human beings become human beings.”) and, at a broader level, can open up opportunities for change, creating “a stage for a new world”—“the unlimited world of imagination” or Utopia. His What has made the study of Ellul’s position on *la technique* particularly difficult is his refusal to merge the two analyses into a single comprehensive critique (Ellul, 1970, p. 6). Rather than synthesizing them, as a dialectic thinker Ellul played these two tracks against each other, each of his sociological works countered by a theological work. His work as whole, he explained, “has from the first turned on ‘the contradictions between the evolution of the modern world [notably the technical evolution] and the biblical content of revelation” (Holloway, 1970, p. 20; brackets in the original).

In his sociological work, Ellul viewed social development in systemic terms and sought to show us how the technological system would develop apart from our intervention. “I analyze reality,” he said. “I see Its most probable course of view is that Ellul’s critique masks these possibilities. “Ellul regards technology as an idolatrous religiosity,” a position, he argues, that leads to hopelessness in the face of autonomous technology, rather than an acceptance of our responsibility and the possibility of “self-control of technology.”

Professor Yang offers a standard criticism of Ellul when he contends, “Ellul’s assertion that technology will eliminate a meaningful mankind because of its autonomy is too serious.” It is this common reading of Ellul that causes him to look for an alternate view “where technology is set free from mechanics and gets closer to human beings.” In this response, I will argue that, when viewed in its totality, Ellul’s analysis is not unrelievably pessimistic, but that Ellul presented a hope that is not far from Professor Yang’s theological optimism.

To address the question of Ellul’s pessimism, let us begin by going back to a written debate between Robert Theobald and Ellul in 1965. Theobald comes to the debate having read *The Technological Society*, so he is familiar with Ellul’s statements about the autonomy of technology. Yet, through the exchange, he is taken aback by something Ellul says, something that seems irreconcilable with his assumption of where Ellul stands.

I find Ellul’s position on this issue ambiguous: he seems at many points in his book *The Technological Society* and in his reply to deny man’s power to influence the technological environment. Indeed, at times, he appears to believe in a rather extreme technological determinism. Yet in spite of this, at the end of his reply, he quite clearly states that man can find “the path to a new freedom” (Theobald, 1965, p. 569).

What Theobald bumped up against is a common stumbling block for many of Ellul's critics—the assumption that his sociological critique of *la technique* is all there is. As I have noted elsewhere, “Ellul's work follows two separate tracks—the more widely known sociological works and the less well-known, but crucially important, theological writings” (Baker, 1991, p.10).

development, but that doesn't mean I approve of it; on the contrary, what I see is the interaction of blind forces, nature taking its course, and the human role is precisely that of mastering or preventing this chain of events” (Ellul, 1981/1982, p. 46). Thus, *The Technological Society* was written as “a warning of what may happen if man does not come to understand what is happening and makes no attempt to control the situation” (Ellul, 1965, p. 568). But, contrary to the common criticism, this did not lead him to fatalism. He did not “believe in a permanent determinism, in the inexorable course of nature” (Ellul, 1981/1982, p. 106) and “never said that technology was not dependent on anything or anyone, that it was beyond reach, etc.” (Ellul, 1977/1980b, p.139). It is only if no action is taken, if people resign themselves to what they see as the inevitable course, that Ellul speaks of things deterministically. “Fate operates when people give up,” he says (Ellul, 1981/1982,-p.106). With this background, we can now put into context the statement that caused Theobald such consternation:

So long as man lulls himself into thinking his perils imaginary, that ready-made solutions exist, or that others will devise a remedy, he will do nothing but wait. I am still convinced, however, that if we can be sufficiently awakened to the real gravity of the situation, man has within himself the necessary resources to discover by some means unforeseeable at present, the path to a new freedom (Ellul, 1965, p. 568).

To summarize, Ellul's sociological works describe how he viewed the development of the system, but—and in each of these statements he consistently adds this condition (though his critics just as consistently miss it)—that development would occur only if we do not intervene to . change it. Amid his analysis is the hope of intervention.

This hope is the theme of his religious writings which “confront” the sociological analyses. The “path to a new freedom” may be discovered by those who have been awakened to the likely course of the technological system and seek to intervene in its development. But who can intervene into a system that seems so complete and autonomous? The integrating nature of the technological system leads Ellul to argue that no one within the system can provide us with help in breaking the power of the system. Thus he called for an “exterior intervention,” a term that goes back to his 1948 work, *The Presence of the Kingdom*. At its core the call is religious.

The possibility of an “exterior intervention,” Ellul (1948/195 1) argues, “can only come from the admission of a superior authority which is imposed from outside on the mind of man, and gives him a rule, while at the same time it restores to him his genuine function” (p. 135). Writing as a Christian, Ellul (1981) says the “Christian Revelation” provides “the outside vantage point that permits the critique of the system” because God is outside the system which binds us (pp. 100, 102). He contends that “Christians in particular are called” to challenge the system of *la technique* “because

it is possible for them to see the true situation of man better than other people, and because, better than others, they can see where this ought to lead, and what is its aim” (Ellul, 1948/1951, p. 143). Rather than, as Professor Yang contends, “sanctifying the concept of technology,” Ellul’s religious argument results in what Christians (1989) calls a “prophetic witness” which “confronts technicism and insists on desacralizing it” (p. 137; cf. Ellul, 1980a, p. 247). In sum, Ellul believed that an “exterior intervention” is possible because of a God who is Wholly Other and therefore completely outside the technological system. Surely this is not far from Professor Yang’s argument: “The total otherness of God is the source of revolutionary iconoclasm. Thanks to the otherness of God, the people go to a new world with the hope of a new people. Theology should insist on the otherness of God to prevent technology from falling into technological determinism that is also the spirit which technology embraces.”

Professor Yang argues for a positive side of technology, that “(t)echnology should exist for improving human beings.” Ellul (1972/1973) recognized the positive contributions of particular technologies, as well. He readily admitted that technology (as contrasted with the technological system) does have a place, that “there is a legitimate use when it is put back into the movement of hope. That is the only place from which one might, with a great many difficulties moreover, rethink the whole problem of technology and come up with the true import of man’s tremendous discovery” (p. 237). “What we have eventually to do as Christians,” he wrote, “is certainly not to reject technology, but rather, in this technological society and at the price of whatever controversy, we have to cause hope to be bom again, and to redeem the time in relation to the times” (p. 232).

Although Ellul did not present us with a program for how to accomplish this, he did, in his religious work, provide hope that we can find a “path to a new freedom.” “In aiming a certain number of challenges, objections, and basic criticisms at the foundations,” Ellul (1981/1982) said, “we can make Technique change its orientation and begin ... what we might call a new historical period in which it will once again be in its proper place, that of a means subordinated to ends” (p. 208)—a hope, I would submit, that is the same, in spirit, at least, as Professor Yang’s “utopian imagination” which “works toward negating and deconstructing the present, and finally establishing the new system.”

## International Jacques Ellul Society

### *Berkeley, California*

☒ an association of scholars and friends

The UES links together scholars and friends of various specializations, vocations, backgrounds, and nations, who share a common interest in the legacy of Jacques Ellul (1912–94), long time professor at the University of Bordeaux. Our three objectives are (1) to preserve and disseminate his literary and intellectual heritage, (2) to extend his penetrating social critique, especially concerning technology, and (3) to extend his theological and ethical research with its special emphases on hope and freedom.

The UES is the English-language sister-society of the French-language *Association Internationale Jacques Ellul*. Together, we maintain a web site—[www.ellul.org](http://www.ellul.org)—as our common communications link and as a resource for anyone with an interest in Jacques Ellul.

☒ preserving a legacy

Jacques Ellul published more than fifty books and nearly a thousand articles and reviews. Our mission is to preserve and make broadly available this great legacy by

(1) completing the publication of Ellul’s work in French (several works remain),

(2) completing the English translation of his work and encouraging translations in other languages,

(3) republishing (in electronic as well as print formats) works that are no longer available,

(4) publishing a critical edition of Ellul’s complete works in both French and English,

(5) maintaining a current, comprehensive bibliography of works by and about Ellul,

(6) organizing and making available the audio and video recordings of Ellul’s lectures and interviews,

(7) making available an accurate biography of Ellul.

extending a critique

Jacques Ellul is best known around the world for his penetrating critique of “la technique”—of the character and impact of technology on our world. The forces and institutions which shape 21<sup>st</sup> century life and which pose the greatest challenges to the health and future of humanity and nature were Ellul’s critical interest. Our mission is to encourage continued research and critical thought in this tradition, with a special focus on technology but also including politics, economics, globalization, education, art, language, communication, religion, and popular culture. The UES is not an antiquarian society interested only in a reverent inspection of Jacques Ellul’s works; it is, in the spirit of Ellul himself, a movement to encourage the extension of a serious critique of technological civilization.

researching a hope

Jacques Ellul was not just a social critic but a theologian and activist in church and community. Because of his profound faith in the “Wholly Other” breaking into human history, he refused to become a pessimist about the predominantly negative social trends he studied. He insisted that he was above all a man of hope and freedom and searched for signs of hope in Holy Scripture and in history. Our mission is to encourage continued theological and ethical research on hope and freedom, with a special focus on the Jewish and Christian Scriptures.

Join the UES

Anyone is welcome to become an ITES member—on two conditions:

(1) agreement with the society’s statement of purpose

(2) payment of the annual membership dues of US \$20 Send bank check or money order (drawn in US dollars) with your name and complete address including postal code.

post: UES, Box 5365 Berkeley, CA 94705

Support the UES

The major publication projects which the UES is undertaking require substantial funding. The UES pursues such funding from charitable foundations, grant-making organizations, and publishers, but this is a long and unpredictable process. However, with the generous support of UES members and friends, we can achieve a great deal together. Please contact us by e-mail or letter if you would like more detailed information on our budget, plans, and giving opportunities. The UES is a 501(c)(3) non-profit corporation. All gifts are tax-deductible for U.S. taxpayers.

UES Leadership

The International Jacques Ellul Society and L’Association Internationale Jacques Ellul have been founded by a group of long-time students, scholars, and friends of Jacques Ellul, with the counsel and support of Jean, Yves, and Dominique Ellul, and as a French-American collaboration.

## From the Editor

In this issue of *The Ellul Forum* we honor our recently departed friends and colleagues, Katharine Temple and Ivan Illich. Katharine Temple (June 8, 1944 — November 22, 2002) was buried on November 30 at her home parish, the Anglican Church of St. John, Port Hope, Ontario. Ivan Illich was born in Vienna in 1926 and passed away on December 2, 2002 in Bremen, Germany. He was buried in the cemetery of Oberneuland in Bremen. They represent the spectrum of Ellul's influence, from a social activist in the Catholic Worker House in Lower Manhattan to a world class scholar in academia. In their own ways, Katharine Temple and Ivan Illich carried on Ellul's mission as emblazoned on *The Forum* masthead: "the critique of technological civilization."

Katharine Temple wrote her superb 1976 doctoral thesis (under George P. Grant) at McMaster University on "The Task of Jacques Ellul: A Proclamation of Biblical Faith as Requisite for Understanding the Modern Project." Her frequent contributions to *The Catholic Worker* often mentioned Ellul's work and ideas. We honor her memory with a sample of her short essays but Kassie's greatest legacy is her life of joyful, sacrificial service among the poor.

Ivan Illich once said that Ellul was "a master to whom I owe an orientation which has decisively affected my pilgrimage for forty years" (*Ellul Forum* 13 (July 1994): 16). Illich's own brilliance and creativity produced a significant body of work that is a wonderful complement to that of Ellul. Countless new-generation scholars of technology use the books of both side-by-side.

Special thanks are owed to Contributing Editor Carl Mitcham for his work on this special issue. From his numerous contacts around the world, and his unbelievable bibliographic skills, he assembled this material with his trademark collegiality. The

obituary Carl wrote in Spanish for the Madrid daily *El Pais* is included here in the original to honor Ivan Illich's Cuernavaca and his mastery of 14 languages.

Associate Editor David Gill, President of the International Jacques Ellul Society, provides the first of a regular series of columns in this issue of the *Forum* ("How Big Is the Tent?" p. 19), along with new "News and Notes" and "Resources" sections that will be of interest to Ellul students.

\* \* \* \*

The focus of the upcoming Fall 2003 issue of *The Ellul Forum* will be the technologies of cyberterrorism and hate. We will also review important new books on Ellul by Andrew Goddard and Jean-Luc Porquet. Our Spring 2004 issue, guest edited by Joyce Hanks, will focus on the tenth anniversary of Ellul's death.

Manuscripts you wish to have considered for *The Forum* are welcomed by the editor. Material for "News and Notes," "Ellul Resources" and queries about book reviews should be sent to David Gill.

*The Ellul Forum* and the International Jacques Ellul Society are all-volunteer activities, funded entirely by membership dues and small donations. We appreciate your solidarity and support.

*Clifford G. Christians, Editor editor@ellul.org*

## Remembering Kassie

by Jim Grote

Two characteristics come to mind whenever I think of Kassie—"personally endearing" and "intellectually combative." One of her most outstanding qualities has been a continual source of guilt for me—she was a great letter writer and I am a terrible correspondent. I first wrote her many years ago because we had a mutual friend, Phil Hanson, who, like Kassie, studied under George Grant in Canada. Also, I had lived at two Catholic Worker houses. I still owe Kassie a letter in response to her letter dated Friday the 13<sup>th</sup> in 1998. She concluded with a comical P. S. about the irony of writing a letter during Lent and on Friday the 13[th.] As Kassie never crossed the Rubicon into the Church of Rome, I'm sure she's smiling at my Catholic guilt and my five-year delay in answering her letter.

One endearing memory is Kassie hitch-hiking all the way from New York to the hills of Kentucky to attend my wedding, a method of travel I'd used to visit her a number of times. And I can never forget drinking beer together and singing Cab Calloway's "Stormy Weather" on a number of occasions. The sweet way my children used to pronounce her name in their pre-school years sticks in my mind. Their pronunciation caught something of her inner spirit.

However, when it came to the life of the mind, Kassie was not nearly so sweet! I was always a fan of Simone Weil and Kassie had little tolerance for any criticism of Judaism.

I remember going to a Simone Weil conference with Kassie and Carl Mitcham and the two of them getting into a huge argument during the question and answer session (I can't recall the source of the dispute). On the way home in the car I exclaimed, "I can't take you two anywhere together." Another time at a philosophy of technology conference in Canada, Kassie (who was the only woman in the room) stood up and attacked the speaker for his feminist tendencies, going into a long involved defense of natural law. When I expressed my surprise later about a student of Ellul defending natural law, she smiled and replied, "I just can't resist bashing liberals!"

One final admission of guilt. During a visit to the New York Catholic Worker, I spent a couple days editing a paper of Kassie's, "The Sociology of Jacques Ellul," for publication in an early issue of *Research in Philosophy and Technology*. The manuscript was fifty pages long and true to Kassie's Catholic Worker spirit, it was typed on the back of old donated stationery and there were no Xeroxed copies of the manuscript. I inadvertently lost the paper and begged her to kill me in order to assuage my guilt. She was remarkably light-hearted about the whole affair. Upon eventually finding the paper, after retracing my steps all over New York, I took pause to contemplate both Kassie's forgiving smile and Ellul's theory of universal salvation. The two still go together in my mind.

*February 2003. Louisville, Kentucky*

## **Fascinated by the Instruments of Power**

by Katharine Temple

During a news show, early on in the international military build-up in the Persian Gulf, an Egyptian correspondent opined that Arab populations might not fully support the United States, for they might see this as a colonial war. She was immediately cut off, and the scene switched to the American boys in the desert. Whether or not this was deliberate censorship, presumably it was felt she had overstepped the mark. Presumably, the American audience could not consider that their country (nor its allies, including Israel, which, although not formally part of the coalition, plays a major part in it) could be involved in an imperialist enterprise. This did not go along with the program, the concerted image projected by the media.

If we look to the past, though, there are no grounds for surprise at such a suggestion. As Paul Fussell writes in his introduction to *The Norton History of Modern Warfare*, "One need not be a cynic to understand ... that the modern union of neurotic nationalism and complex technology has defined war in a way unknown before." As for these specific preparations, the friend who sent me the Fussell article put the same point this way. "I guess Bush is determined to wage war on Saddam Hussein. I wonder exactly what is at stake? I suppose oil and national pride. The UN is behaving even

worse than usual.” And I would add in Mr. Bush’s intimate involvement with the CIA and Texas oil money.

It is true that the analysis cannot remain focused on one man and one product. Rather, we should look at the forces they represent, what President Bush himself has called “our way of life”—that union of technology (the material organization of resources) and the state (the bureaucratic organization of the nation and its resources.) This union is the new imperialism, an expansion beyond classical colonialism.

Nor can we blame only one country, for, although U.S. is in the vanguard, the development is worldwide.

In the September 1990 *CW*, we considered these ideas in the thought of Jacques Ellul, especially from his book *The Technological Society*. He sees our whole civilization as being informed by technique, that is, the totality of a technical system, based on the efficient impersonal logic of machines, and all the ways in which, in every area of life, we integrate ourselves into that logic—to the exclusion of any other way. Technique gains strength because we give our allegiance to the streamlined mastery of nature (both human and non-human) as our source for power and security. In their essence, the forces of technique are aggressive, controlling and expansionist in every direction.

In a recent book, *The Technological Bluff* (Eerdmans, 1990) Ellul has said: “We have the existence of the so-called military-industrial complex, which really ought to be called the technico-military-statist complex. The original term applies only to a capitalist organization and even there it is too narrow. Not industry, but the technical system, is to blame, along with the state, which is the engine and primary user of techniques and which organizes the military.” This account may sound abstract, but the reality of the war now going on in the Persian Gulf is anything but abstract.

The war is an all too concrete example of the domination imposed by the technico-military-statist complex, and its symbols are the car, the bomb, the TV, the computer—all essential to the parties in this conflict.

The car is the popular symbol of our needs. It is the outward sign of our highly mechanized and mobile society, whose wheels are kept turning by oil. Without oil, it is believed, the national system would be in jeopardy. Not only would the price of gas and oil company profits be affected, but beyond that, also the whole U.S. financial structure (already nervous because of expansions in information technologies in other countries). And so, if the oil supply is threatened, all other considerations, even an economic recession, back seat in the interest of technological state-power. On the other side, oil is the only leverage, in this game, that Saddam Hussein has at his disposal.

The car may well represent what we are all about, but the Pentagon is the spearhead of technique (in hardware, organization mentality) with its ever-expanding arsenal nuclear and non-nuclear weapons, whose alleged purpose seems thwarted by the end of the Cold War. As someone remarked, “All that might and personnel trained on Eastern Europe has to go somewhere to spread itself out.” If the military complex were to shrink, the whole technical infrastructure could collapse. This is indeed a war

economy, thanks to the technical primacy of the military. And a war economy tends to bring about war!

In this instance, the two forces—machines and the military—come together almost to demand a war from the state. The particular geo-political realities in the Middle East (and we cannot forget the further complexities of the Arab-Israeli conflict, which will never be ameliorated until there is an adequate response to the Palestinian *Intifade*) need to be seen in this context. It is a war needed by the technical system, a war desired by both presidents, a war made possible only by complex computer centers (“the mastery of the micro-chip over muscle” in the words of one commentator). It is also a war brought to us by television, which gives facile analyses and an illusion of participation in some strange and titillating way.

All of this adds up to expansionism. No matter what the outcome, it seems it will be a victory for the technico-military-state system and a defeat for the populations subjected, willingly or unwillingly, to it.

To go back to the news show: To suggest that Arabs, who have seen wave after wave of Western commercial expansion for resources, might see this as a colonial war is hardly outrageous. In fact, to deny the possibility adds further layers of anti-Arab racism (whether American, European or Israeli) to the imperialist pie. Probably the most accurate historical, political, economic, military and technical analysis comes in *Hosea* 8:7. “For they sow the wind and they shall reap the whirl wind.” A current sense of the same thing comes from Amos Elon (writing from Jerusalem for *The New Yorker*, Dec. 24, 1990). “The feeling of being beset by blind forces is especially strong ”

But, none of this is openly stated, for it is not material for war propaganda. We simply do not want to hear about it, for it is part of the American ethos to see itself as different from other, wicked nations, as a state that acts only as the righteous, innocent policeman for a dangerous world. George Hunsinger has called this belief the heresy of American exceptionalism. “From the genocide of Native Americans to the incineration of Hiroshima and Nagasaki, to the open veins of Central America, the myth of our exceptional virtue, backed by the blasphemy of our national divine election, has served again and again to make us tolerate the intolerable, accept the unacceptable and justify the unjustifiable.” (Quoted in *CW* Oct.,-Nov., 1988.) If this war really is an exception, it has yet to be shown. (Sad to say, this is similar to the political critique of the state of Israel—a small nation, founded as a sanctuary against murderous persecution, metamorphosed, in worldly terms, into a technico-military state to guarantee an elusive security.)

#### Means and Ends

The question comes up: Are you so naive as to think that Saddam Hussein is merely an innocent victim? Of course not. The violence he has perpetrated and threatens is what people are talking about when they call this a just war (assuming an acceptance of the theory in the first place, or its applicability to modern warfare). The arguments for a so-called “just war,” however, should be looked at more realistically, in terms of means and ends.

"Some day our children will be taught that this battle ... was fought to protect freedom and democracy. My generation was brought up to believe that Britain, France and the United States waged war against Nazi Germany to save Jews and other non-Aryans in Central Europe from extinction. Would that we had, but we didn't. The world tolerated Adolf Hitler's internal crimes and his invasions, just as it did Saddam's, until he crossed a line that had little to do with a concern for humanity and everything to do with the balance of power." (Charles Glass, *The Spectator* (London), Aug. 25, 1990). The point I see is that this war has nothing to do with justice. It seems to me, therefore, that we cannot simply hope for some inadvertent justice, such as more freedom for the people of Kuwait and Iraq, or security for Israelis, through an insatiable will-to-power. Furthermore, "the balance of power" is a euphemism for the clash between expanding powers. There are no limits, as the history of modern warfare, modern techniques and the modern state has taught us. Their power itself becomes irrational and all of us are caught up in its whirlwind. Saddam Hussein's own pursuit of technological sophistication and state power, pitched in frighteningly anti-Semitic tones against the Zionist state, will not be overcome by more of the same from the West—raised to the power of "blind forces."

It is not my point to come up with better national policies (though surely there must be some) so much as to strive for clarity about a war that has been veiled and distorted by the powers that be. This war is the way of the state. That's the hell of it. We must learn not to accept those terms, to reject the madness that leads only to further war.

How, then is it possible to proceed? It all sounds so overwhelming, beyond the reach of personal responsibility. Nevertheless, clarification is a requirement and a discipline that requires the greatest attention. Above all, we must learn the art of not being distracted. Not distracted on many levels—not by official versions shot through with lies; not by the electronic media circus which presents these versions to us; not by discussions that suck us into the web of tactics (e.g., whether chemical weapons, a small nuclear bomb, air strikes, a long siege, a simple assassination is "best") that are neither politics nor morality, but only the slippery slope to insanity through a fascination with the instruments of power.

Finally, we must develop habits to prevent us from being distracted from the deadly reality, the dominant drive, of our way of life. In the last section of the *Technological Bluff*, Jacques Ellul talks about the ways we are prone to being "fascinated people," held in thrall to technique by computers, tele-terminals, television, advertising, games, sports, etc. Interestingly, he concludes: "Those who are most susceptible to propaganda (and advertising) are the intellectuals [and on the same page he adds a list of the various shapers of public opinion] while the hardest to reach and budge are those rooted in traditions, whose ideas are fixed, who live in relatively stable environments (like farmers up to the 1950s) or those in structured relations (like members of unions)."

If we want to work to see the war in the Persian Gulf for what it is, perhaps we should take his point to heart as an admonition, and be freed from a fascination with

technique. Perhaps those of us who wish to remain rooted in the Christian tradition, to stand with those not in influential circles, could make the practice of clarification (which, in traditional terms, is the virtue of prudence) our Lenten discipline.

From *The Catholic Worker*, March-April 1991, p.3.

## Capitalist Starbucks

by Katharine Temple

The World Economic Forum (WEF) is an unofficial gathering of 3000 of the most powerful people on earth, a handful of whom must be on scholarship to add a touch of color or class. (Some of them are also religious or literary figures who, at first glance, would seem more likely to appear at the World Social Forum, a counterpart gathering of more grassroots groups who met in Porto Alegre, Brazil at the same time.) Usually, the WEF meets in Switzerland. This year it was in NYC—for reasons that vary with who is asked—at the Waldorf Astoria. On the second night they were in town, as protesters also arrived, we had a discussion at the St. Joseph House dinner about reactions from the city.

Reggie told us how many Starbucks, McDonald's and Gap stores had NYPD in front. We all wondered why. Roger said perhaps the police were getting easy overtime instead of a pay raise. Or, perhaps they thought the protesters, being barred from the hotel, would look for something else to do before their legal demonstration. The hope would be that respect for the NYPD, after September 11, would stifle any questions about anything.

It is true that these corporations, among others, have been highlighted before. I opined that, with or without the WEF, I would be glad to see an organized boycott of these stores. If I had to choose one (and I don't shop at any of them), it would be Starbucks. Someone once asked me why I do not go there, and I replied, "Let me count the ways: prices, anti-union practices, running local coffee shops out of business, involvement in the prison industry, a symbol of what is wrong with the economic system."

The general sense in the dining room was that this heightened police presence was part and parcel of the hype about the war on terrorism. After all, the WEF came on the heels of the president's warnings in his "State of the Union" speech. As the media would have it, fundamentalists abroad are the threat, while anarchists are at home. The revival of this old saw since the decline of communism is fascinating, especially as anarchism was the political ground Dorothy kept going back to, to reclaim it from negative overtones of violence. I guess we, too, have to revisit the terrain in a new context. In either case—whether the authorities were worried or opportunistic—the very visible NYPD made priorities clear: large corporations protected by force.

"This is like a movie, a f ing movie." Eleanor's refrain

(and she is a beloved NYCW matriarch now of blessed memory) came to me later, as I saw the scene Reggie had described. After a while, you get so used to it that your Pavlovian response is in those terrible mythic terms of “us” vs. “them.” (Another angle on the film triangle is “John Q,” where it is so easy to sympathize with Denzel Washington’s plight that I am a bit surprised this hostage plot got to the theaters.) Also, it gets harder and harder to distinguish between virtual reality on the screen and the suffering in real violence. That, Eleanor knew about.

The second topic at dinner that same night began when Gerry told us how many banks had uniformed guards for ATMs. Although most were from private companies, the impression was the same. (And I do recall seeing a piece about the increasing privatization of even the military!) The question this time: What is this ATM sabotage about? In a nutshell, it would not be about robbing banks, but trying to slow down robbery by the banks.

At this point, Tanya jumped in to question if such sabotage was really going on. More likely, she said, protesters are using ATMs, not making them useless. I had to confess it would be a temptation for me, if I could accept the destruction of property as a nonviolent tactic. The appeal is like the Luddites in nineteenth-century England breaking looms that were the means of their own oppression and displacement. Bank activities in the realms of credit, mortgage and debt are legion. Unrestrained usury (in the sense Marty Corbin talks about in this issue) is at the center of our economic system and is responsible for huge amounts of violence in the world. Nevertheless, this cardinal sin is seldom talked about, at least not in North America, though I gather it was more up front and center in Porto Alegre.

Then, there are advances in financial technology, On the one hand, ATMs represent the closing of small branches, with job losses for bank tellers and other low-paid workers. On the other hand, the technology is crucial for the speedy transactions that make global integration and the current concentrations of power (personified in the WEF) possible. Included in these processes is speculation as the new form of usury. Now, more than 90% of financial transactions are speculation (i.e., making money by guessing what will make money), while a few years ago, the stock market (which I never did trust) was 90% investment, however gouging, in goods and services. What a difference speed and coordination can make.

Cui bono? Look to the major players at the WEF. Cui malo? Look to countries where wars are waged, end with the most current devaluation and debt.

It is a short step to tie together the technology of financial institutions (of which the ATM is the most publicly visible and, so, a temptation for me) with the interlocking military technology—not the least of which is the abstraction in the activity. High-tech maneuvers, like the movies, distance us from results like unsanitized wars, or cut-backs from IMF controls or the destruction brought by huge hydro-electric projects. The machine and its integrated institutions shield us from these human effects. To steer as clear as possible from participation could only be a good thing.

Over the WEF weekend, the alleged threats did not materialize, not even peaceful demonstrations at the stores or banks. (One group did go to the Manhattan headquarters of Enron.) Sad to say, not a lot more talk like our table talk either. Although I heard suggestions for democratic control over corporations, I did not hear a lot about the economy itself. And, although I heard a fair amount about the ravages of capitalism, there was not much about the technological-military complex that is capitalism's hardware.

The next such discussion in the dining room was not until the Superbowl, a fitting entertainment for the fourth day of the WEF. This time, none of the themes was missing, each melded into the others: the economy of consumerism, high-tech and globalization, the pride of patriotism (underlined by shots of the American troops in Kandahar), altogether in a classic movie plot, wrapped up in the U2 half-time show. (I was sure Bono, who is a promoter of debt reduction, would have a heart attack, or else I would!)

Our modest gathering had enough people able to separate the game from propaganda (or, is that, too, self-delusion?), enough people from New England who couldn't care less about the name of their team, enough of us who always root for the underdog (and Jimmie, who supported both teams) that we managed to enjoy ourselves while we waited for the truck with the vegetable donations. It was a great show!

From *The Catholic Worker*, May 2002, p.5.

## Jacques Ellul—the Word of God in a World of Technique

*A Catholic Worker Conversation Between Jeff Dietrich and Kassie Temple*

[Folks at the Los Angeles Catholic Worker have been studying the social analysis and theology of Jacques Ellul for about a year. This spring, Jeff Dietrich got in touch with Katharine Temple at Marybouse, to discuss a three-part series planned for *The Catholic Agitator*, and especially the importance of Jacques Ellul's thought for the *CW*. We then decided on a joint effort, and the result is this conversation between Jeff and Kassie, which also appears (edited and revised slightly differently) in the July 1990 *Agitator*. — *Eds. Note*]

**JEFF DIETRICH:** I talked to you a while back, and told you how excited I was about the reading I have been doing in Jacques Ellul. I feel like a born-again Catholic Worker, if one can say that. I feel that what Jacques Ellul has done is to give us a consistent, contemporary critique of the culture in which we live, which makes what the Catholic Worker does so pertinent. I feel that sometimes people just dismiss us as "saints," or just nice people. Folks say, "Oh, you do such nice work," "You are such good people." That's not why we're doing it

To have someone like Ellul, who gives you this elaborate perspective to work from, makes me feel liberated, even though I know some people find his perspective rather depressing.

**KASSIE TEMPLE:** While you were talking, I was remembering that I knew some of the writings of Jacques Ellul before I knew much about the Catholic Worker, and I, too, was very taken with his analysis of society and his other writings about what it means to be Christian in the world in which we live. And as I learned more about the Catholic Worker movement, it seemed that its philosophy and theology were the only ones around that resonated with Ellul's kind of understanding.

**JEFF:** I feel that, as the Catholic Worker movement, we really haven't updated our analysis of the culture since Peter Maurin died. And the way Ellul talks about "the technological society," I feel as though Peter, would, if he were alive today, either be saying the same thing, or writing "Easy Essays" about Jacques Ellul.

**KASSIE:** Well, I think that's true. I think the requirement for good social analysis as necessary for social change is one thing they would have in common. At the same time, Jacques Ellul would probably see Peter Maurin's thought as focusing directly on industrial society and what it has become and what it has done to people. Ellul himself, on the other hand, has focused, since 1935, on what he calls "the question of technique." He sees industrial society as having moved to a different phase, and so the analysis would be different.

**JEFF:** What Ellul seems to be saying is that the industrial revolution has come to an end, and that we've entered a new era. For instance, if you believe what Ellul is saying, you would analyze events in Eastern Europe and the Soviet Union as having been brought about by technique. They've got to catch and retool, because the world is moving toward a uniform economic and political, technical culture that will include the Soviet Union, Europe, China, and the United States and Japan in a single system. This seems to be exactly what Ellul was saying—that revolution has come to an end, and that we've entered a new era.

**KASSIE:** Yes. Certainly he would see the changes in Eastern Europe as necessitated by the Soviet Union's economy coming into a new world environment. The relationship of production to the political and social forms cannot sustain economic growth. There needs to be change. But I think Ellul would say that it is a mistake to focus on the economic question as the main question. The economics are within this new technicized framework.

I think he would agree with Dorothy Day, who focused on the state and the large bureaucratic institutions. But, for him, even that thinking is perhaps still too much in terms of the Marxist "mode of production." The mode of production has changed and we need to describe that in a way that is more exact.

For instance, the computer shouldn't be shunned simply because Peter didn't like machines. We should examine the role of the computer; what makes them different from other machines?

**JEFF:** It seems to me that Ellul, in *The Technical System*, is saying that the computer as an information processor has brought about a completely different environment. Previous to the computer, the techniques of the state, education, propaganda and various other techniques were separate and could not be coordinated. But now they can be integrated into one smooth-running technical system through the information processing machine.

**KASSIE:** Right. And we need to analyze that, not moving away from our philosophy of what that is doing to people, how it brings about poverty. The whole emphasis on the works of mercy would not change, but rather our analysis of where the enslavement comes from, where the oppression lies; there would be a shift in emphasis to a changed situation.

**JEFF:** So often it looks like these changes liberate people, and people speak of the machines, satellite communications and information processing as personalized, liberating developments, when that's not necessarily so.

**KASSIE:** And I think we need to look precisely at the poverty in Los Angeles, the poverty in New York, at why people come to our doors, how this poverty is being shaped and formed, what this is doing to people.

**JEFF:** You realize the hypocrisy of American politicians, all politicians, who preach family values with one breath, and preach technological growth with the next, and don't recognize that the two are incompatible,

**KASSIE:** And don't recognize that this new formulation of the information society, or the technical society, is depersonalizing. You can't use impersonal means to bring a more personalist way of being.

**JEFF:** In reading Ellul's theology, I felt supported in what the Catholic Worker does in simple living, the green revolution.

Ellul makes this contrast between the "means of God" and the "means of the world"—that God very rarely works directly in the world, that God most often chooses a human medium through which to work. It would follow, then, that God does not work through the technical means of the world, and the more our culture becomes enslaved to technical means, the more difficult it is for God to work in the world.

Also, there are all those metaphors from the Gospels that are so important to Ellul—to be the leaven in the loaf, to be a light unto the world, to be wakeful and watching, the pearl of great price. All of these things are the "little way" of the Catholic Worker.

You so often feel overwhelmed by the means of the world. I know I've always had a tendency to buy into that perspective of "we're not being very effective here." So, you stick with the Catholic Worker way out of a kind of faithful, spiritual perspective.

What Ellul does is give you the ability to look critically at what the technical means are and say "no, you can't use these to bring about the Kingdom of God." You can't use mass elections to bring about the Kingdom of God, you can't use television and radio to bring about the Kingdom. Each person has to have a conversion of the heart and be open to the Word of God, and be ready to be used by the Holy Spirit. That's the only way it works and none of us wants to believe that.

**KASSIE:** That seems a clear summary of what Ellul is saying to Christians, and I think it's a clear summary, perhaps in different language, of what Peter has said. That is, the call is to all Christians, not just a select few, to witness to the way of God, the truth of God, which is different from the powers of the world. But they would both say that we need to do it in the world in which we live, and to know that world.

For instance, when Peter talked about voluntary poverty, not only is that a traditional means in Catholic thought, but ours is also a society that is unusually obsessed, dominated by money. The weight of consumerism is literally killing people, and the Christian is called to open that up and witness to another liberation. You can't be liberated from the power of money simply by spending more money. Peter said you accept voluntary poverty in order to end the enslavement to money.

Or, to take another example, if large-scale bureaucracies are the order of the day, then we need small communities which embody personalist, non-bureaucratic ways of living our lives together.

**JEFF:** This is the whole issue of personalism. It seems when we go out and talk about it or when we write about it in our papers, I feel self-conscious almost because it seems like this is a quaint kind of perspective of the world, and what we really should do is have a massive revolution, or elect Jesse Jackson president or convert the editorial board of the *L.A. Times*. That this personalist perspective of person-to-person action, doing the works of mercy—that's a nice thing to do, and if you want to do it, that's fine, but those of us who are really going to make a difference in the world and bring social justice about, or bring in the Kingdom, we're going to work through these massive means to change the world.

Ellul gives me a way of looking critically at these technological means and saying no, they're not going to work, that's not going to bring about the kind of justice that you want. In fact, these technological means are doing exactly the opposite of what you think they're doing. Fortunately or unfortunately, you have to work on this personalist level.

**KASSIE:** I think another reason we sometimes eschew personalism is that it can look like we're going to retreat into a world of ones and twos. The outside world is so overwhelming that I'm going to look after only my own well-being, that I'll try to make atmosphere where "my own personhood is affirmed," etc.

But that isn't what was meant by personalism, certainly not by Dorothy or Peter. For them, it was a public response in the world.

The means and ends are the same—this is a theme for both Ellul and Peter. If you want a society that is personalist, is communitarian, is based on the well-being of the other, you can't reach that through impersonal, bureaucratic fund-raising means. Dorothy used to quote, "All the way to heaven is heaven," another statement about the question of ends and means.

**JEFF:** And this is exactly why the Catholic Worker espouses an anarchist, non-statist perspective. But again, there hasn't been a strong intellectual groundwork for

an anarchist perspective, and we all get sucked into the cultural ritual of elections and the media surrounding it.

**KASSIE:** We've certainly had many discussions around here about whether people prefer the word "personalist" or "anarchist". But I think the importance of the anarchist critique (certainly in social theory, Ellul gives an anarchist critique of technological society, in distinction to a Marxist critique or a liberal critique) is that the form of anarchism that the Catholic Worker should espouse is a personalist anarchism. It is precisely a critique of statism—that the increasing power of the bureaucratic state is the source of domination. So that in our relationship to the state, we cannot simply say, "Well, we'll take the advantages from the state that we can and it won't have any repercussions on how we run our house." Rather, the state is a key point in our analysis of this society to see where the increasingly monolithic power structure is.

**JEFF:** I was particularly taken with Ellul's introduction in his book *The Political Illusion* where he talks about the French revolution. We tend to think of the kings of France as being absolute, total monarchs, the "Sun King" and all that. Before the French Revolution, though, the king had difficulty creating a standing army, he couldn't raise enough taxes to support a drive for empire. But after the Revolution, once the king was deposed and all people became part of the state and responsible for the state and to the state, then everybody, of course, served willingly. Then, once so-called democracy was there, people voluntarily enslaved themselves and gave themselves over to a taxation system and a system of law that they would never have done under a monarchy.

When you start looking at it that way, the whole idea of people just giving themselves over completely to the state, you need to have a stronger foundation to this anarchist-personalist perspective. I think that's what Ellul gives us.

**KASSIE:** Yes. At the end of that same book he talks about what is needed, and these are just a few little excerpts from that: "It is important, above all, never to permit one's self to ask the state to help us. Indeed, we must try to create positions in which we reject and struggle with the state, not in order to modify some element of the regime or force it to make some decision, but much more fundamentally, in order to permit the emergence of social, political, intellectual, artistic bodies, associations, interest groups or economic or Christian groups totally independent of the state. What is needed are groups capable of extreme diversification of the entire society's fundamental tendencies, capable of escaping the unitary structure, presenting themselves not as negations of the state, which would be absurd, but as something else not under the state's tutelage."

**JEFF:** It sounds exactly like something Dorothy would have written.

**KASSIE:** Yes. I think one of the great strengths of the Catholic Worker is that both Peter and Dorothy had this call to do something else, not just to do the negative, not just to say what was wrong, not just to say "no," which of course is part of it. This idea of communities that would be doing something else, is certainly the essence of the "green revolution," no matter how quaint some of Peter's plans appear.

**JEFF:** Just as you say that, talking about something else, I think one of the criticisms of Jacques Ellul is that he won't tell you what to do. It seems to me it goes to the heart of the differences between the Catholic Worker and Jacques Ellul. While I want to say that Ellul is describing the Catholic Worker, I'm very careful about making that kind of statement.

**KASSIE:** Well, I think there is a great difference between them in terms of Jacques Ellul being Protestant and Peter Maurin being Roman Catholic. It is interesting, and perhaps it is just a sign of our times, that because they are both strongly rooted in their respective traditions, that seems to draw them closer together. The idea that the strongest critique of modern society would come from something pre-modern, makes them seem remarkably similar. This includes the view that, "There is not something a little bit wrong with the world; there's something a whole lot wrong with the world."

On the specific question of their separate theologies—unlike Martin Luther, one of Ellul's favorite books is the book of James which says "faith without works is dead." And so, for Ellul, there can be no Christian theology of grace without incarnation, without works. But I think Ellul sees his particular calling as a Christian—and this is certainly within a Protestant understanding—as that of raising questions about what we are doing. We cannot formulate an alternative unless we are willing and able, through grace, to raise the most serious questions and recognize that this society is not the Kingdom. It is not going to be the Kingdom. At the same time, we must incarnate our faith within this society.

Ellul's refusal to spell out a blueprint is somewhat the difference between a Catholic and a Protestant, but also it comes from the belief that if you give an answer in advance, you have cut off the thing that is most needful for Christians today and that is the raising of the deepest questions. You know that in this society, you can hold all sorts of opinions that people can find interesting or not interesting. But if you raise a serious question on the things that matter most, then there is a complete dismissal.

You raised, for example, the question of the power of the state. You can be as critical of a particular regime as you want, but if you say, "I don't vote because voting doesn't make any difference," that goes too far. The raising of questions is something that is so rarely done, so rarely done among Christians as well.

Some of this thought comes from Jacques Ellul being Protestant. I think that Peter probably thought it was possible to separate from society, in order to build a new one along Christian principles. Perhaps Peter's is the Catholic idea that there is such a thing as a Christian society, or that society can be transformed to be Christian. Ellul, on the other hand, thinks that the Kingdom, the Presence of the Kingdom, will always be hidden, will always be the injection of the Word of God into an alien country And that will be the case until the end time.

From *The Catholic Worker*, September 1990, pp.4–5, and *The Catholic Agitator*, July 1990.

## En memoria de Ivan Illich, un anarquista entre nosotros by Carl Mitcham

Ivan Illich, uno de los mayores criticos sociales del siglo XX, acaba de morir a sus 76 anos en Bremen. Nacido en Viena en 1926, fue ordenado sacerdote en Italia y vivio gran parte de su vida en Estados Unidos y Mexico. Con una prometedora carrera dentro de la Iglesia, renuncio a ella. Rector de la Universidad de Puerto Rico, profesor en Penn State University y en la Universidad de Bremen, fue un viajero y conferenciante incansable. Con multiples licenciaturas y doctorados en ciencias y letras, plurilingue, su trabajo intelectual se puede resumir en un incansable esfuerzo por pensar hasta las ultimas consecuencias las ideas de progreso y desarrollo, tan caras a expertos y politicos.

En la decada de los setenta escribio los primeros libros que le hicieron ser conocido internacionalmente. *La sociedad desescolarizada* es un ataque al sistema educativo moderno, *La Nemesis Medical* analiza la perversion de los sistemas de salud y *La convivencialidad* somete a un despiadado escrutinio los ambiciosos programas de desarrollo de esos anos sesenta. Estos libros inciden sobre las tres "vacas sagradas" mas importantes que una izquierda progresista abandono como camino de modernidad. Carlos Barral, editor sensible y culto, entendio que Illich era uno de los criticos mas lucidos del momento y se encargo de hacer conocer en la Espana franquista y tecnocratica sus textos. *La sociedad desescolarizada* vendio varios millones de copias, se tradujo a unos veinte idiomas, convirtiendose en nuestro pais en un libro de obligada lectura para ensenantes y pedagogos. La perspicacia del autor le permitio ver con asombrosa claridad el futuro, nuestro presente, de una sociedad demasiado confiada solo en sus capacidades economicas. Entre los anos ochenta y noventa cambio el ambito de sus intereses intelectuales. *In the Vineyard of the Text*, comentario sobre el *Didascalion* de Hugo de Saint Victor, le permitio dirigir su atencion hacia el analisis de la vida actual, cada vez mas alejada de los sentidos y de la verdadera amistad. Mucho antes de la moda contemporanea de reflexionar sobre la lectura y la escritura a la luz de las nuevas tecnologí'as, Illich mostro con erudicion de historiador y consideracion critica del filosofo las implicaciones de los cambios culturales que sufre un acto tan cotidiano como leer.

A pesar de la creciente presion economicista de la sociedad posindustrial, trato de buscar los medios para poder volver a vivir una vida que se experimentara en un cuerpo, capaz ademas de aceptar a los otros como tales, como amigos. Esta es su llamada revolucionaria en la epoca de globalizacion hipertecnologizada, en la era de Windows XP. Desafortunadamente, ya no contamos con Barral para que siga ofreciendonos su trabajo en espanol. A veces el desarrollo acelerado produce olvidos significativos. Algunas ediciones como *El Genero Vernaculo* siguieron publicandose en Mexico y es dificil encontrar hoy en dia este hermoso texto sobre la antigua armoni'a entre hombres y mujeres. Tal vez sea este uno de los trabajos mas apasionantes e incomprensidos de Illich,

tal vez por ello fue injustamente marginado. *H<sub>2</sub> O o las aguas del olvido* es una joya. Su maestría de historiador nos gula por un intrincado viaje de del agua entendida como el elemento mágico que nos limpia, nos otorga el olvido, nos remueva, refresca, vivifica y sana para acabar reduciéndola a una molécula química. una abstracción insípida.

Los últimos años de su vida han sido especialmente dolorosos porque, consecuente con su pensamiento y reluctante de las innovaciones médicas, no aceptó los alivios terapéuticos, afirmando su cuerpo y lo que este le trajera. Su gran lección está ahí: siempre consecuente, es uno de los últimos intelectuales donde vida y obra, pensamiento y acción se entrelazan íntimamente. Radical, anarquista, cultivador de la amistad, pero también rechazado, mantuvo alta su talla de intelectual inconformista e insobornable.

Carl Mitcham, profesor en la Colorado School of Mines (EEUU) y coeditor de *The Challenges of Ivan Illich* (2002) / Andoni Alonso, Profesor en la Universidad de Extremadura y autor de *La Nueva Ciudad de Dios* (2002).

## **In Memoriam: Ivan Illich, 1926 — 2002**

by Aaron Falbel

Ivan Illich, a former Catholic priest, philosopher, historian, theologian, social critic, and activist, slipped away without much fanfare on Monday, December 2, at the home of a close colleague and friend in Bremen, Germany. The few obituaries that appeared pronounced him a has-been, a relic from the '60s and early '70s when his writings were briefly in vogue. However, this assessment belies his many important contributions toward a more modest, respectful, just, caring, humane, and peaceful society.

Born in Vienna in 1926 to a Catholic father of aristocratic Dalmatian descent and a mother who was a Sephardic Jew, Illich was forced to go underground in 1941 due to his mother's ethnicity. He escaped with his family to Italy, and, upon completing his university studies and ordination, he came to the United States in 1951. After spending an intense five years as a much-loved parish priest in a Puerto Rican neighborhood on the tip of Manhattan, he was appointed vice-rector of the Catholic University of Puerto Rico, a position he held for another five years until he was forced off the island due to a political controversy there. (He strongly and vociferously objected to church officials using the church's status and authority to meddle in local electoral politics.)

Illich achieved notoriety in 1961 when he opened a center in Cuernavaca, Mexico that served as the main training ground for missionaries and other do-gooders bound for Latin America. The purpose of the center, eventually called the Center for Intercultural Documentation, or CIDOC, was deeply subversive though by no means secretive: to thwart the cultural imperialism and neocolonialism inherent in such missionary initiatives as the American Catholic Church's "Alliance for Progress" and Kennedy's secular analogue, the Peace Corps. In such lectures and essays as "Yankee, Go Home,"

“The Seamy Side of Charity,” and “Violence: A Mirror for Americans,” Illich tried to dissuade American volunteers from going to Latin America to “help” the “poor.” He pointed out that their good intentions would in no way cancel out the inevitable damage they would do by being “vacationing salesmen for the middle class ‘American Way of Life,’” — a way of life not only unsustainable in the rich, overdeveloped countries but simply unattainable for the vast majority of people these programs were attempting to “help.” Unwittingly, their interventions also “maintained or swept into power military regimes in two-thirds of the Latin American countries” and helped to open Latin America as a massive market for U.S. goods and as a source of cheap labor. “The compulsion to do good,” wrote Illich, “is an innate American trait. Only North Americans seem to believe that they always should, may, and actually can choose somebody with whom to share their blessings. Ultimately this attitude leads to bombing people into the acceptance of gifts.” In response to such sarcastic criticism, Illich was beaten with chains and actually shot at—actions very likely orchestrated by the C.I.A. Fortunately, the assassination attempts failed. Clearly he had struck a nerve close to the center of power.

Indeed, the forces of power were mobilizing against him. Illich was summoned to the Vatican in 1968 to defend CIDOC’s activities and his own religious and political views, but he refused to cooperate. The Vatican responded by placing an interdict on CIDOC in early 1969, banning all religious personnel from attending its classes, lectures, and seminars. The ban had little effect; the place had achieved a magnetism all its own, and Illich had always insisted that CIDOC was a secular organization. Rather than continue to cause a political scandal within the Church, Illich, announced his “irrevocable decision to resign entirely from Church service, to suspend the exercise of priestly functions, and to renounce all titles, offices, benefits, and privileges which [were] due to [him] as a cleric.”

In the 1970s, CIDOC became a “thinkery” for broadening this sort of critique by examining the damaging side-effects of modern institutions in general. Illich became even more radical, in the etymological sense of “getting to the root” of things. His conclusions were surprising, even shocking, to many, and certainly controversial. Like Gandhi before him, Illich was a caustic critic of industrial society. He saw dangers not only in the environmental degradation caused by the industrial mode of production but also in a type of social degradation due to an overabundance of services. His critiques of education (*Deschooling Society*), of the medical establishment (*Medical Nemesis*), of technocratic, technological society (*Tools for Conviviality*), of transportation systems (*Energy & Equity*), of the helping professions (*Disabling Professions*), of commodity dependence in a market-intensive society (*The Right to Useful Unemployment*), and especially of development (*Celebration of Awareness; Church, Change, and Development* and *The Development Dictionary*, ed. W. Sachs) ruffled many feathers and earned him many detractors across the political spectrum.

Illich was one of the first to take note of the “paradoxical counterproductivity” of modern institutions when they reached a certain size and level of intensity. This

resulted in schools that made people stupid, hospitals that made people sick, prisons that made people violent, high-speed transportation that created traffic jams and ever-increasing passenger miles, development agencies that created more and more “needy” people, and so on. Once institutions grow beyond a certain threshold, Illich observed, they end up thwarting the very purposes for which they were allegedly established. They tend to become dysfunctional and to incorporate other purposes that actually impede their stated objectives.

Illich decried modern society for becoming more and more machine-like, more automated, more sewn-up, more impersonal, more pervaded by “systems” of one sort or another. Such a society, he argued, cannot help but degrade friendship, love, care, community, hospitality, learning, dwelling, and, ultimately, the art of suffering and dying, by replacing all these human acts with ministrations of professional services, bureaucracies, systems, and techniques. He saw modern society as deeply violent in its essence and not just because of its frequent recourse to military intervention. Again, his words were radically surprising: “[T] he plows of the rich can do as much harm as their swords. United States trucks can do more lasting damage than United States tanks.” As before, Illich was critical of those who, perhaps with good intentions, sought to promote peace through economic development.

”Development,” he wrote, “has always signified a violent exclusion of those who wanted to survive, without dependence on consumption, from the environment’s utilization values. *Pax economica* [or peace through economic development] bespeaks war against the commons.” Protection of the commons—from enclosure, from exploitation, from being turned into a “resource,” and from the regime of artificial scarcity—was, according to Illich, a fundamental component of *pax populi*, of the people’s peace, of true peace, throughout much of history. At times, Illich characterized the industrial age as “the war against subsistence” and culture as “unique arrangements by which a given group limits exchange relationships to specific times and places.” Such insights preceded the present anti-globalization movement by several decades.

In the latter years of his life, in the ’80s and ’90s, Illich moved away from his provocative, sometimes inflammatory critique of modern institutions to explore the historical question of how the mindset and social conditions that gave rise to these institutions came into being. No longer the political gadfly or rabble-rouser, he ceased to have entertainment value for the media and faded from public view. He now divided his time between Germany and Mexico (with short visits to the United States and elsewhere), leading seminars, lecturing, and writing. He once likened his historical method to the motion of a crab in flight: “The crab moves backward, while its popping eyes remain fixed on the object [it] flee[s]... I want to explore what happens if I begin to move backwards, with my eyes fixed on the present.” As a historian of the Middle Ages, Illich immersed himself in the past in order to see more clearly how radically different and unprecedented our modern times are from any past historical epoch. “And when I come out of the past and enter-the present,” he wrote, “I find that most of the axioms generating my mental space are tinged with economics.”

From these explorations in the historical archaeology of ideas and perceptions came a number of books: *Shadow Work*, *Gender*, *H2O and the waters of Forgetfulness*, *ABC: The Alphabetization of the Popular Mind*, *In the Mirror of the Past*, and *In the Vineyard of the Text*. In these works, Illich examined various “certainties,” “axioms,” “necessities,” or “needs” with which we live today, and he showed how each of them had an origin in history. And that which had a beginning, as Illich liked to point out, can also plausibly have an end. His historical perspective reveals that the certainties we take for granted today, such as the need for education, medical care, employment, literacy, transportation, markets, energy, police, prisons, news media, etc., were not always so certain. His crab-like journeys into the past serve to loosen the grip that modern certainties have on our perceptions and imagination. The institutional and political realities we live with today are thus neither immutable nor inevitable. This is Ivan Illich’s message of hope in these dark times.

In his essays and lectures, Ivan Illich frequently made a distinction between expectation and hope. He once remarked, “I am very pessimistic but hopeful.” He was also a man of deep faith. When asked by a student how he defined faith, Illich replied, “Faith is a readiness for the surprise. We must have a sarcastic readiness for all surprises, including the surprise of death.” The lockstep, planned, predictable, mechanical aspects of modern society are thus more than just damagingly counter-productive; their *raison d’être* lies in their attempt to wipe out and safeguard us from all the surprises in life. The institutionalization of genuine human acts replaces hope with expectation through attempting to offer us something called “security.” But for Illich, such security is an idol we worship at our peril. His life’s work dares us to have trust and faith in nature, in our own senses, and in each other. There are no guarantees with such risky, foolhardy trust. But there may be surprises, both good and bad. Are we ready?

## A Note on the Death of Ivan Illich

by Barbara Duden and Silja Samerski

On Monday, December 2, 2002, Ivan Illich died. Although he had been preparing for several years, death came as a surprise. He was in the midst of preparation for his seminar on the *corruptio optimi*, the corruption of the best. The seminar was scheduled to occur at the University of Bremen on the upcoming weekend, and Ivan had hoped to reflect with friends and students on his ideas about the ecclesiastical origin of uniquely Western certainties. These historical investigations on the perversion of the Gospel ran like a red thread through the last decade of his teaching in Bremen. With the help of friends he hoped to finish a manuscript on this subject within the next months.

On Thursday, December 5<sup>th</sup>, we buried him in the cemetery of Oberneuland in Bremen. During the preceding days many people came to his Bremen home for the death watch and to bid him farewell. At the beginning of the funeral Mass in St. Johann,

Wolfgang Sachs read the following text [“The Loss of World and Flesh”], in which Ivan bemoans the loss of the art of dying. It is a letter of congratulations Ivan wrote in 1992 to Hellmut Becker, then director of the Max-Planck Institute for Educational Research in Berlin.

At the end of January 2003, Ivan had hoped to lecture in the second winter term. Johannes Beck is preparing a convocation for February 7–8 at the University of Bremen.

There we will try to spin out further threads from Ivan’s thinking.

December 2002. Bremen, Germany

## The Loss of World and Flesh

by Ivan Illich

Formerly, one left the world by dying; until then one lived in it. Both of us belong to that generation that was still being born “into the world,” but which is now threatened by dying without a foothold in the world. Unlike any other generation, we have lived through a break with the world.

In earlier times, a dropout set off on a pilgrimage to Santiago de Compostela; or begged for *stabilitas* on the porch of a monastery; or joined the lepers. The Russian and Greek worlds also offered the possibility of becoming not a monk but a fool, and for the rest of one’s life to lodge with dogs and beggars in the atrium of a church. But even for such extreme fugitives from the world, the world remained the sensual frame of their passing existence. The world continued to be a temptation, especially for the one who wanted to renounce it. Most of those who left the world soon caught themselves cheating. The history of Christian asceticism is a record of heroic attempts to be faithful to the renunciation of a world to which every fibre of one’s being adheres. When dying, my uncle Alberto still had them serve him the *Vino santo* that was harvested in the year of his birth.

Today all this has changed. The two thousand-year epoch of Christian Europe is gone. The world into which our generation was born has passed. Not only for the young but also for us, the old, it has become impalpable, incomprehensible. The very old have always remembered better times, but that is no excuse for us, we who were alive during the regimes of Franco, Roosevelt, Hitler, and Stalin, to forget that farewell to the world we lived through.

I remember the day I became senile once and for all. I cannot forget the dark March clouds obscuring the evening sun and the vineyard on the Sommerleite between Potzleinsdorf and Salmansdorf near Vienna, two days before the *Anschluss*. Until that hour it had been a certainty for me that I would give children to the old tower on the Dalmation Island. Since that lonely walk this has seemed impossible for me. As a twelve-year-old boy, I experienced the disembedding of the flesh from the warp and weft of history, even before a command was issued from Berlin to gas all fools in the Reich.

To talk to each other about this break in the experience of world and death is a privilege of our generation who knew what had been before. Hellmut, I believe I am writing to someone who knew that.

When very young, destiny made me into a colleague, counselor, and friend of women and men several generations older. I thus learned to let myself be cultivated and shaped by people who were too old to take part in the experience of that disembodiment. By contrast, our students, without exception, are offspring of the epoch after Guernica, Leipzig, Bergen-Belsen, and Los Alamos: Genocide and the human genome project; the death of forests and hydroponics; heart transplants and medicide through insurance—all these are also tasteless, without smell, impalpable, and non-worldly. The Feast of Advent from the Erlanger Corpus celebrates the bottomlessness of the worldless non-human. We who are old and yet young enough to have lived through the End of Nature, the end of a world fit for the senses, should be able to die like no one else.

What the past composed can also decompose. Further, the past can be re-evoked. But Paul Celan knew that only smoke remains from the world-dwindling that we have experienced. It is the virtual drive of my computer that serves me as the symbol for this unretrievable disappearance, and through which the loss of world and flesh can be envisaged. The worldliness of the world is not deposited like ruins in deeper layers of the ground. It is gone, like a deleted line of the rain drive.

This is why we, seventy-year-oldsters, can be unique witnesses, not only for names but also for perceptions that no one any longer knows. Many who have stood in this break have been broken by it. I know some who themselves tore their existence to threads before the atom bomb, Auschwitz, and AIDS. Deep in their hearts in the middle of their lives they have become *viejos verdes*, old greens, who pretend it is possible to have fathers in the manageable show that has become a system. What was propaganda in the Nazi period, what could be undermined by hearsay, is now being sold: As a menu with the computer program or the insurance policy; as counseling for education, bereavement or cancer treatment; as group therapy for those at risk. We old ones belong to the generation of pioneers of that non-sense. We are the last of that generation that helped transform the systems of development, communication, and services into worldwide needs. Worldly disembodiment and the programmed helplessness we have propagated exceed by far the fallout that in our generation has been deposited in heaven and on earth, in the stratosphere above and the waters below.

We were in the key positions when TV removed daily life from people. I myself fought so that a university TV station broadcast weather predictions of rain in every village square of Puerto Rico. I did not then know how much this would inevitably reduce the range of the senses, and how much the horizon would be barricaded by administered presentation furniture. I did not consider that soon European weather from the evening news show would discolor the first light of dawn seen through the window. For decades I have been careless in handling unfathomable abstractions like one billion people in a bar chart. Since January, my account statement from the Chase Manhattan bank is decorated with a graphic chart that allows me to compare my ex-

penses for restaurants and office material at a glance. Hundreds of detailed ingratiating services in information, administration, and counselling deliver an interpretation of my *conditio humana*. When I discussed that topic with you, Hellmut, more than twenty years ago, I could not imagine that the integration of the educational enterprise into lifelong everyday life would be so smooth and slick.

Sensual reality submerges deeper and deeper under the coverage of commands on how to see and hear, feel and taste. Education in an unreal construction begins with textbooks whose content has shrunk to subtitles for graphic boxes, and ends with the dying who grasp encouraging test results about their condition. Exciting soul capturing abstractions have extended themselves over the perception of world and self like plastic pillow cases. I notice it when I speak to young people about the resurrection from the dead. Their difficulty consists not so much in a lack of faith, as in the disembodiment of their perception and life through constant distraction from their soma.

In a world that is inimical to death, you and I prepare ourselves not to come to a mortal end but to die in the intransitive sense. On the occasion of your seventieth birthday, let us celebrate that friendship in which we praise God for the sensual glory of the real world through our good-bye from it.

Translated by Barbara Duden and Silja Samerski from Ivan Illich, "Welt -abhanden," in Gerold Becker and Jurgen Zimmer, eds., *Lust und Last der Aufklärung: Ein Buch zum 80.*

*Geburtstag von Hellmut Becker* (Basel: Beltz, 1993), pp. 76–79. Used by permission.

## Ivan Illich: In Memoriam

by Pieter Tijmes

Ivan Illich was an impressive person, at once intimidating, and receptive. He had access to the great of the world and the heroes of the mind, but the less powerful and famous had access to him. He gathered them around him, he associated with them; he inspired and supported them. He was a magician in their company, and he charmed them, even when they did not always understand him. They knew what he said was important even when they were not sure what he was saying. At his funeral in Bremen these friends put in their appearance and bid him adieu, participating in the rituals of church and graveyard.

Two things in the service were noticeable: the open invitation to those present to testify briefly to their relationship with Illich, and the reading of a letter written by Illich on the occasion of Hellmut Becker's 70<sup>th</sup> birthday. In this letter Illich specifically objected to the modern loss of being able to die one's own death. In his own remembrance service, this reading was an appropriate witness to that for which Illich stood during his entire life.

Ivan Illich was born 1926 in Vienna. After the *Anschluss* of Austria with Germany, the Illich family took refuge in Italy because of his mother's Jewishness. He studied

science and philosophy in Florence, and later theology at the Gregoriana in Rome. He followed the calling to become priest and in the 1950s the slums of New York became his field of pastoral activity. Later he founded the Centro Intercultural de Documentation (CIDOC) in Cuernavaca, Mexico. After extensive debates with the Vatican, he renounced all priestly functions in 1969. This did not reduce his attachment to the Gospel as enduring inspiration in his life.

Intrigued by his permanent rebellion against contemporary political and ecclesiastical affairs, I once asked whether he really believed in God in the traditional Trinitarian terms of the Church's creed. His answer was apodictic, foreclosing all objections: "Of course, God was father, otherwise I (Ivan) could not be your brother, and vice versa." I was reduced to silence, since I did not dare question our brotherhood while a guest in his home. But the point of my question to him, as an "avant-garde revolutionary," came from my puzzlement. His acute appreciation of secularization and the historicity of the Christian faith made me wonder about his view of traditional revealed truth. Then I had to live with his existential answer to my intellectual question. It was an acutely Illichean answer, but not a response to the intention of my original concern.

Ivan Illich can be best described as a merciless critic of culture. He had no fixed station; on the contrary, he had a travelling existence. He taught at universities all over the world, especially in the United States and Germany. His early books, such as *Celebration of Awareness*, *Deschooling Society*, *Tools for Conviviality*, and *Medical Nemesis*, gave evidence of his keen eye for the discrepancies, inconsistencies, and irrationalities of our modern way of life. He designated capitalism as counter-productive. All that glitters is not gold. He wrapped his message in a vigorous and aggressive language. I could not always understand his energy, attacking people who conformed and adapted to our modern technological world. His special attention was directed to the pride of modernity, i.e., technology.

On the waves of the 1970s tide of social criticism, he became known among students. That Erich Fromm wrote a preface for one of his books made it plausible, to the outsider, that Illich belonged to the New Left. But from the beginning there was already an obvious difference in tone. He appreciated premodern ways of living in their particularity, and not just as preparatory trials that took their value from the modernity we achieved.

Let me return to Illich's 1992 letter to Becker. This document, "The Loss of World and Flesh," is representative of the last stage of his criticism of modernity. It mirrors his unremitting resistance, his refusal to surrender to what he saw as the corruption of modernity. He made clear that he had once

known a world he loved, but that he had to live in a world he abhorred. In this love and aversion, he thinks of the world of the flesh, the body and the senses, in contrast with the world today where flesh, body, and senses evaporate and have less and less meaning in themselves. In a dramatic way, he writes about a break in history he had already experienced as a young man of twelve. It was, so to say, a proleptic experience

of a disembodied future in which he found his own corporal existence set aside by history.

In articulating this break, Illich emphasizes the fact that in the modern world people have become different. They may still hear, look, and feel, but they do so no longer with natural bodies. They no longer experience the world in their flesh. This he describes as becoming disembodied or disincarnated. On the basis of his own books and articles, one might add that it is due to technology that our bodies and flesh are no longer what they once were, but are more and more altered by the electronic media with which they engage and their bio-cybernetic transformations. In the letter itself, he does not explicitly examine the cause of the historical break, but only refers to students who are children of the era of Guernica, Bergen Belsen, Los Alamos, and the era of heart transplants, genocide, medicine. These students live on the opposite side of a great historical divide.

The letter is not so much a treatise as a deeply felt response to a friend. Contemporary ills and serious troubles from atom bombs to AIDS are pressed together in one breath. In one way or another these are, in his view, all related. He places himself as a transition figure, one who was born into a world of the flesh and the senses but now lives in a world of non-sense, among people alienated from the world and senses, as part of a generation that promoted the programmed helplessness of people. The abstractions of science and technology have taken over the place of the experience of the world and the self. Abstractions are like cushion-covers that supersede the traditional sensory perception.

Illich's perceived break with the past coincides with the demise of Christianity. In some way, this is involved with the passing bimillennial age of European Christianity. But his point in the letter is not, in the first place, that the Christian faith is fading away—at least he does not elaborate on this issue. For a deeper understanding of the relationship between his Christian faith and criticism of culture, I have to quote Barbara Duden, for whom “it is impossible to understand his thinking during the last twenty-five years without attention to the flesh.” According to Duden, Illich

treats the flesh apophatically, and the clearer this becomes the better I understand that for him the flesh orients one inexorably toward the Incarnation, toward the mystery in the world of his faith, and ultimately toward the Cross [For Illich] the tradition of

Western medicine [cannot] be grasped without reference to the Cross and its denial [since], after all, the rituals fostering the myths of disincarnation — be they medical, hygienic, or other—[must also be] understood as cultural denials of the Incarnation in a society that has grown out of the Christian West. (Barbara Duden, “The Quest for Past Somatics,” in Lee Hoinacki and Carl Mitcham, eds., *The Challenges of Ivan Illich* [Albany, NY: State University of New York Press, 2002], pp. 220–221)

The reading of Illich's letter evoked a world full of nostalgia and struggle, and he ends with the words: “In a world hostile to death, we do not prepare for passing away but for dying intransitively. On the occasion of your 70<sup>th</sup> birthday, let us celebrate that

friendship in which we want to praise God for the sensual reality of the world, even by taking leave of it.”

Ivan Illich had strong views that were often not easily accessible. They were provocative, because they did not harmonize with our knowledge of past and present. Unfortunately, the time is over when we can still ask him for clarification. We have to judge for ourselves about the plausibility of his vision. His contributions to the understanding of our world undoubtedly rest with his observations of trends that have to do with our orientation in the world, and he often speaks as if dichotomies such as embodiment and disembodiment, worldliness and unworldliness, necessarily and always exclude each other. Yet it is the task of philosophy to discover what different experiences have in common. Even theology should, in my view, have a say in this debate. Illich cannot be better honoured than by a critical examination of his historical intuitions. The heritage of his ideas is now a departure for our own reflections on technology and modernity—or, as it may be, post-modernity.

January 2002. Enschede, The Netherlands

## “All Things Considered”

National Public Radio, December 4, 2002

*Carl Mitcham on Ivan Illich*

JACKI LYDEN, host: Ivan Illich, a former Catholic priest and champion iconoclast, has died in Germany. He was 76. Illich’s writings challenged mandatory schooling, even though he was an educator, and the Catholic Church, even though he’d been a priest. In the process of his questioning, he helped remake the sociological map for the baby boom generation. At one time a worldwide intellectual tour de force, Illich’s ideas were much less in vogue in the decades before his death. Carl Mitcham is professor at the Colorado School of the Mines, who’s written about Illich’s sociological theories and his turbulent relationship with the Catholic Church.

Professor CARL MITCHAM (Colorado School of the Mines): He was a radical social critic who, because of his fundamentally radical Christian commitments, saw the Catholic Church as not living up to its own ideals, and felt like he had to try to call it to account. I would compare Ivan Illich, in some ways, with Dorothy Day, who was one of the founders of the Catholic worker movement. She was a loyal member of the Catholic Church, but she felt like that in many instances, the church wasn’t living up to its own Gospel ideals and, therefore, had to criticize it.

LYDEN: But Illich didn’t just talk about the failings of the church in society. He talked about many sociological phenomena that have failed the populous, whether it was science or a more secular notion of education. He said it often made people dumb. And he came to say that hospitals created more sickness than they did health. His ideas seemed to bleed over into becoming provocative almost for the sake of being provocative.

Prof. MITCHAM: But I think that's really a misreading of Illich to say that he was just a radical provocateur for the purposes of being a provocateur. He really identified something which he called 'counterproductivity.' Oftentimes in many areas of our lives, we pursue something to the point where it becomes counterproductive; it doesn't get us what we're after. But because we're so committed to the pursuit of this—which, at one point, was effective—we failed to be able to step back and take a critical look at what we're doing. And he saw this operative in many different social institutions. And I think in a lot of areas, we now almost take some of his insights for granted.

LYDEN: Did you ever meet him?

Prof. MITCHAM: Yes. I've known Illich for 15 years.

LYDEN: And what sort of a person was he? You've undoubtedly had conversations.

Prof. MITCHAM: Well-educated, multilingual, in some sense, autodidact. He loved to have conversations around a dinner table; a little pasta, a candle, good friends, talking. But the conversation would be going on simultaneously in German, in French, in English and in Spanish. And he would be trying to translate for people who were missing things in other languages and yet carrying on the conversation, sort of like a maestro, almost like a music conductor. And at the same time, pushing everybody to think harder, to think more deeply about what they were saying. It was a remarkable experience.

LYDEN: Did he feel, in any sense, Mr. MITCHAM, at the end of his life that history had passed him by?

Prof. MITCHAM: Yes. I think that at the end of his life, he was completely ready to die because he realized that his historical role had been completed.

LYDEN: Well, thank you very much for speaking with us, Mr. MITCHAM.

Prof. MITCHAM: Thank you.

LYDEN: Carl Mitcham is co-editor of the book "The Challenges of Ivan Illich: A Collective Reflection." He spoke to us from Golden, Colorado.

## **The Death of Ivan Illich: A Personal Reflection**

by Lee Hoinacki

On Monday, December 2, 2002, Barbara Duden called me from Bremen, Germany. Here in Philadelphia where I now live it was about half-past twelve noon, and we were eating lunch. She said that Ivan Illich had died that morning.

Since I had seen Ivan in September, and since we had such a good talk at that time, I was reluctant to attend the planned funeral. Barbara would be surrounded by good friends.

That afternoon and evening I started calling and sending emails to people on this side of the Atlantic. One answer, for example, from Gustavo Esteva, contained a column for the Mexico City newspaper, *Reforma* on Ivan's death; he had already written this!

The next morning, I continued contacting people. In the afternoon a Bremen friend, Antje Menk called, saying that the young people there (Silja Samerski and Matthias Riger, I guess) were insisting that I come, and she was sending a ticket. I was unable, then, to finish going through my list of people to notify.

I called Peter Bohn, another Illich friend in Philadelphia, since we had agreed to meet downtown the next day after a demonstration against the war in front of the Federal Building; I told him I was going to Germany and would not be there to meet him.

He said he, too, would check on a ticket. Later, he called back to say he had a ticket for me that evening to Frankfurt. Then Samar Farage called from Germany to say that they couldn't buy a ticket for me from that side of the Atlantic. I explained that Peter had just bought me an electronic ticket. I had a few minutes to pack and get to the airport.

Arriving in Frankfurt, I took a train to Bremen. In the train station, I was joyfully surprised to find Michael, a young friend, there to meet me. He took a chance that I would come in on that train! We walked to Barbara's home, getting there shortly after 3 p.m.

Michael had seen Ivan early Monday morning, and they talked about a seminar Ivan was to direct on the weekend. Ivan said he was tired and lay down on a futon in the living room. Michael left and, some minutes later Silja, who lives down the street, came in (she has a key to the house), and found him dead. Barbara, who was in Hannover at her teaching job, had spoken to Ivan on the phone about noon.

When I arrived at the house, each person, Barbara especially, warmly embraced me; I felt embarrassed by such a genuine outpouring of affection. I entered the front room and found the body of Ivan resting on the futon where he had died. A burning candle and cut flowers stood nearby ... a symbol of life ... an image of death.

Using the Breviary that contained the Latin Vulgate, the one Ivan and I said each day whenever we were together, I recited some of the *Officium defunctorum*, the office of the dead.

Wednesday evening was a time to greet old friends who had come for the wake and funeral. So many good people, all of whom had been introduced to me by Ivan since the time I first visited him in Germany in 1978 ... some now close friends.

Early Thursday morning we lifted the body into a plain wooden coffin, and the lid was screwed down with finger-nuts.

The large church of St. Johann was nearly filled the next morning for the Mass. Various friends of Ivan participated in the ceremonies, well arranged by Wolfgang Sachs. The pastor, Propst Ansgar Luttel, who had been to see Ivan some days earlier, spoke the homily/eulogy, acknowledging his awareness of who the man, Ivan Illich, was.

Many of those at the Mass gathered in the chapel of the distant cemetery, Oberneulander, for a short service, then proceeded to the gravesite for the burial. I was especially impressed by the ceremony in which each person present went up to the open grave and threw a handful of dirt on the lowered coffin; some also threw flowers.

All were then directed to a hotel for coffee and a bowl of soup. For some, it was the last event of the celebration, since they had to return to their jobs and homes.

My final feeling was one of joy. Various factors together, not in any order, contributed to this feeling. From reports of those persons who were present, the meeting between Ivan and Propst Luttel, some days before Ivan's death, was most cordial and filled with understanding. In the light of this report, I must regard the visit, especially the time the two of them were together alone, as a grace-filled moment for Ivan.

At the church, just before the Mass, a young man came up to greet and embrace me. Almost ten years earlier there had been a serious break between him and Ivan ... from close intimacy to anger, distance, pain on both sides. He and Ivan never again spoke to one another.

Before and after the break, I visited him, stayed with his parents, and tried to be a friend; we had been quite close. Because of his lack of enthusiasm for my visits, several years ago I had stopped traveling to the town where he lived.

He traveled five hours to get to the funeral, and had to return home almost immediately after the ceremonies for his teaching duties the next day. He came back to Bremen to see me on Saturday and Sunday; we had long talks. I think that much of the woundedness that divided him and Ivan is now healed.

Another person, a young woman, was also bitterly estranged from Ivan. She had moved from a close friendship to a kind of smoldering anger. She and I had also been good friends, but I had not seen her for two or three years. While in Bremen, I sent her a greeting card, and received an immediate friendly reply by email (sent to the Illich email address). She was happy to hear from me, and invited me to come visit her and her family.

These three events were beyond what I could have hoped for ... they do not respond to my sense of causality ... they are, strictly speaking, gratuitous gifts, manifestations of merciful Providence.

Well, maybe. They may also represent a kind of higher superstition, that is, my superstition. True, they are signs, but signs of what? I take them to be signs of grace. But the very fact that I interpret them in this way may indicate a superstitious need in me ... I need signs of grace (there's a hard saying in the New Testament in which the Lord rebukes those who seek signs; see, e.g. Mk. 8.12).

I regard these events as a blessing on Ivan's life, as indicating a good far beyond what even the most perceptive eulogists will be able to cite. They indicate the important aspect of Ivan's stance: How he stands before God ... (again, maybe!).

Ivan suffered from physical pain which, as far as I could tell, was constant and almost unremitting ... and this for some years. I think he also suffered certain effects from the opium that he took to help bear the pain, but as I don't know anything about

the physical pain, I know even less about the effects of opium. He was also greatly and increasingly distressed in his attempts to be a friend to different people.

I think, however, beyond all the above, he experienced another terrible pain: the inability to say what he wanted to say: about the *corruptio optimi*, the *mysterium iniquitatis*, the relationship between these two realities, their respective relationships to the world and to the Church, and the interrelationships of all these complex cultural/historical/ecclesiastical, divine affairs.

In our long conversations on these themes, the struggle and frustration were evident ... and awful to witness. He who had said so much so well in his life was now unable to speak. And he was acutely aware of his inability to articulate what he vaguely felt to be the truth.

Given the other pains and sufferings, maybe especially the long-range effects of the opium, it was impossible for him ever to overcome this final confusion. Therefore, I felt it was good that he died sooner rather than later. In a sense, it was already years too late.

David Cayley is now working on some tapes he recorded in which Ivan attempts to make a last statement. I've read most of the transcripts and there are nearly insuperable problems ... of clarity and theological precision. But maybe Cayley can pull off what he did with the life and thought of Simone Weil! From her eminently difficult writings, he put together a magnificent intellectual/witness portrait.

So, my overall feeling is one of immense gratitude. Ivan Illich suffered various quite different kinds of pain in the days, weeks, months, and final years preceding his death. All that is now swallowed up in the fulfillment of his faith.

# In Review

*The Fall 2003 Ellul Forum review section will expand to include regular “re-views” of Jacques Ellul’s books along with other significant works.*

## Harvard and the Unabomber: The Education of An American Terrorist

by Alston Chase. New York: Norton, 2003. 432 pages.

Alston Chase, a writer and independent scholar specializing in intellectual history, was the author of a major article on “Harvard and the Making of the Unabomber” in *The Atlantic* in June 2000. His new book is a brilliant, extremely well-researched expansion of that article. The focus of the narrative is, of course, Theodore Kaczynski, now serving a sentence of life in prison without possibility of parole for his bombs which murdered or maimed several people during his 1978–95 “Unabomber” terrorist attacks on representative leaders of “industrial society.”

By an eerie coincidence, Kaczynski was a professor of mathematics at the University of California, Berkeley, for my final two years enrolled there, 1967–69. I was an odd combination history major and math minor, preparing at that time to be a high school teacher, but had no math classes with Kaczynski and wasn’t even aware of his existence in our huge university, embroiled in a great deal of chaos and protest those years.

More to the point for *Ellul Forum* readers, Kaczynski was a great enthusiast for Jacques Ellul from 1971 or 1972 onward. Kaczynski said about Ellul’s *Technological Society*, “when I read the book ... for the first time, I was delighted, because I thought, ‘Here is someone who is saying what I have already been thinking’” (p. 92). Kaczynski’s brother David later said that Ellul’s *Technological Society* “became Ted’s Bible” (p. 332). According to author Chase, Kaczynski even exchanged letters with Ellul. Now those would be a fascinating read!

Kaczynski, you will recall, managed to get the *Washington Post* and *New York Times* to print his very lengthy essay “Industrial Society and Its Future” (the “Unabomber Manifesto”) in September 1995 by promising to cease his terrorist killings if they did so. This “victory” led to his defeat because David Kaczynski recognized the author of the text as his brother and blew the whistle on him.

The “Manifesto” did not refer specifically to Ellul (thankfully!) but it is indisputable that Ellul’s concept of “Technique” as a way of thinking (not just a set of tools), as

an ensemble of means that had become an end in itself, ever expanding throughout the world and into every domain of life, having a virtually deterministic, necessary character, was central to Kaczynski's view of the world.

Alston Chase gets three cheers from this reviewer for the understanding of Ellul he brings to his analysis. "Despite corresponding with Ellul, Kaczynski ignored virtually all that the French philosopher had written since 1964 ... It would seem Kaczynski 'imprinted' on the early Ellul and ignored what followed... he did not even own a copy of *The Ethics of Freedom*. Kaczynski's faith in the efficacy of revolution had apparently remained unchanged despite, not because of, the later admonitions of Ellul" (p. 93).

"Curiously, Kaczynski revered Joseph Conrad and Jacques Ellul, both of whom deplored violence and advocated the spiritual life... Blinded by scientism and rage, he missed the message of Ellul, Paz, and Conrad altogether" (pp. 363364). Chase shows how Kaczynski's "revolution" illustrated precisely the phenomenon against which Ellul warned in his *Autopsy of Revolution*: a violent, technological response simply reinforces the grip of Technique!

Chase's careful personal and intellectual biography of Kaczynski delivers a read that is not only fascinating but illuminating and persuasive. It offers insights not just into Kaczynski himself but into the broader topic of terrorism. Terrorists use ideas to justify appalling acts of violence but ideas alone do not create terrorists. Families, teachers, institutions, experiences, and, finally, personal choices are all part of the true explanation. Kaczynski emerges not as a clinically insane person but as a brilliantly twisted, deluded, enraged, and evil man. Chase shows how technological society is partly, but not wholly, to blame for the creation of a Kaczynski. A remarkable book.

## **Advert: The Jacques Ellul Special Collection at Wheaton College**

### **A Report from David Malone, Librarian**

Wheaton College, a private liberal arts college founded in 1860, located just west of Chicago, has gathered the most comprehensive collection of Jacques Ellul materials outside of France. In the mid-1980s, Dr. Joyce Main Hanks began to transfer copies of Ellul materials to Wheaton College.

The Wheaton collection now includes nearly all of Ellul's published books, articles, and essays, reviews of his work, as well as various book manuscripts, course lecture notes, public lectures and addresses, and some unpublished material. It includes audio (and some video) materials, such as sixteen taped interviews of Ellul by Joyce Hanks. The most significant recent addition was nearly 200 audiotapes of Ellul's lectures and Bible studies made by Bordeaux physician Franck Brugerolle. We collect as many works

by and about Ellul as possible, regardless of form or language, including master's theses and doctoral dissertations.

Our purpose is not only to preserve Ellul's archives but to encourage the study of his works and ideas. Our hope is for increased awareness and involvement by Ellul scholars, researchers, and academicians. We invite your dialog, encouragement, recommendations, and ideas for additional materials. We would welcome the development of lectures, seminars, and study programs extending the study of Ellul and enhancing the collection's use.

Access an inventory of the Ellul collection at: <http://www.wheaton.edu/learnres/arcs/collects/sc16/> Contact staff at 630-752-5705 or [Special.Collections@wheaton.edu](mailto:Special.Collections@wheaton.edu)

## News & Notes

*Please send any news, announcements, or inquiries of interest to Ellul Forum readers. E-mail to [IJES@ellul.org](mailto:IJES@ellul.org) or mail to IJES, P.O. Box 5365, Berkeley CA 94705 USA. Deadline for Fall 2003 issue: September 15.*

—**Etienne Dravasa**, Professor Emeritus at the University of Bordeaux, recently wrote: "I was deeply touched to receive a copy of the December 2002 issue of *The Ellul Forum*. Jacques Ellul's work and his legacy deserve the exceptional homage which is paid to him in *The Forum*. It was a great honor for me to be a personal friend of Jacques Ellul for more than fifty years."

—**Grant Shoffstall** ([gwshoff@ilstu.edu](mailto:gwshoff@ilstu.edu)), a graduate student in sociology working toward the M.A. with Prof. Richard Stivers at Illinois State University, will present a paper on Jacques Ellul at the August 15–19, 2003, meeting of the American Sociological Association in Chicago. Grant welcomes contacts with other sociologists interested in Ellul and is seeking information on doctoral level sociology programs and faculty conducive to his further study of Ellul.

—**VIRGINIA LANDGRAF** ([kaencat@hotmail.com](mailto:kaencat@hotmail.com)) successfully defended her Ph.D. dissertation in Christian Ethics at Princeton Theological Seminary, "Abstract Power and the God of Love: A Critical Assessment of the Place of Institutions in Jacques Ellul's Anthropology of Dialectical Relationships" under the direction of Prof. Max Stackhouse. Ginny, a lay theologian active in the Presbyterian Church (USA), spent two years in Thailand with the Peace Corps and has an M.A. from the Graduate Theological Union. She is interested in seminary teaching, preferably abroad.

—**RANDY ATAIDE** ([rataide@MountainViewFruit.com](mailto:rataide@MountainViewFruit.com)) is receiving his M.A. in Theology (supervised by Prof. Mark Baker) from Mennonite Brethren Biblical Seminary in Fresno CA. His thesis was entitled "If We Serve a God of Productivity Is There Room for Jesus? An Analysis and Application of Jacques Ellul's Thesis of Technique in the Agri-Business World." A full-time businessman operating a group of fruit storage, distribution, sales, and marketing companies ([www.MountainViewFruit.com](http://www.MountainViewFruit.com)), Randy completed the J.D. before his M.A., and has been accepted into the Executive Edu-

cation Program for Owners/Presidents of Companies at Harvard Business School in February 2004. He plans to continue making business his primary career but welcomes contacts and opportunities to share his ideas, possibly including the publication of his thesis.

—**MAX KIRK** (maxkirk@canada.com) is a mediator in private practice in British Columbia. He is looking for conversation and dialogue about the struggle within Judaism with the religious challenge of modern technology—and how this struggle may be at the heart of the conflict concerning Jerusalem today. Max had a very brief correspondence with Jacques Ellul and would welcome contacts with others familiar with Ellul's thought.

—**ANDY BAKER** (jesusradicals@jesusradicals.com) and a few friends organized the “Jesus Radicals” web site originally as a tribute to Vieques student protesters who were detained and barred from the base. The site evolved into a place to network, discuss issues, and find resources on radical Christianity and anarchism. Many visitors to the web site are encountering and appreciating Ellul's ideas on anarchy, money, and power for the first time. Andy is headed for the M.A. program at Associated Mennonite Biblical Seminary this fall and hopes to follow that with a Ph.D. somewhere.

—**KUNIHIDE MATSUTANI** (kuni0070@yahoo.co.jp) is now finishing his Ph.D. in political theory and intellectual history at Tokyo's International Christian University. His doctoral thesis focuses on the development of Ellul's theory of technology in the context of the political and intellectual climate of France in the 1930s, with particular emphasis on anarchism, non-conformism, and personalism. Matsutani earned his B.A. from Massachusetts and his M.A. at ICU (Tokyo) with a thesis on Foucault. A few of Ellul's works have been translated into Japanese but Matsutani's thesis would be the first monograph on Ellul to appear in Japanese.

—**STEVE PEARSON** (brainy pirate@hotmail.com) informs us that a Yahoo discussion group on Jacques Ellul has been intermittently active with discussions of both Ellul's theology and his technology. No guarantees on quality in these free-for-all cyberspace discussions, of course, but if anyone is craving some interaction about Ellul ... here is a possibility. Steve, himself, is beginning a Ph.D. program in Comparative Literature at the University of Georgia with a focus on the devotional literature of prayer and spirituality. Contact Steve if you are interested in Ellul's take on the spiritual life and in what an Ellulian literary theory might look like.

—**SEBASTIAN LUPAK** (sebastian.lupak@gdansk.agora.pl) is a journalist is Gdansk, Poland, with an interest in acquiring more of Ellul's books—and in meeting or corresponding with other students of Ellul's thought.

—**CARLO CARRENHO** (carlo@carrenho.com.br) has a small publishing company in Brazil and is interested in publishing Ellul in Portuguese. Anyone interested in supporting or participating in this project should contact him.

—**MATTHEW PATTILLO** (matthewpattillo@hotmail.com) will present a paper on Jacques Ellul and Rene Girard at the June 18–21 meeting of the Colloquium on

Violence and Religion in Innsbruck. Others interested in Girard's mimetic theory and its bearing on Ellul's work should contact him.

—**JEAN-LUC PORQUET**, a journalist at the French satirical political journal *Canard enchaîné*, has just published a book entitled *Jacques Ellul: L'homme qui avait presque tout prévu* (Paris: Le cherche midi, 2003. 286 pages). The book can be purchased from Librairie Mollat ([www.mollat.com](http://www.mollat.com)) for 18 euros (plus shipping). Porquet presents Ellul as “the man who foresaw almost everything.” The heart of the book is Porquet's review of twenty ideas and phenomena of our technological civilization which Ellul discussed and analyzed well in advance of their dominance. Porquet's book will be reviewed in the Fall 2003 issue of *The Ellul Forum*

—**ANDREW GODDARD** ([andrew.goddard@wycliffe-hall.oxford.ac.uk](mailto:andrew.goddard@wycliffe-hall.oxford.ac.uk)) has recently published a new book, *Living the Word, Resisting the World: The Life and Thought of Jacques Ellul* (Paternoster Press, 2002, xxiv, 378 pages; [www.paternoster-publishing.com](http://www.paternoster-publishing.com)). It can be purchased in the US through Eisenbrauns ([www.eisenbrauns.com](http://www.eisenbrauns.com)) for about \$30 plus shipping. *Ellul Forum* review scheduled Fall 2003.

## How Big Is the Tent?

*by David W. Gill*

President, International Jacques Ellul Society

Not too long ago I attended a concert by Diana Krall and heard her make a sardonic reference to unnamed “jazz police” who had questioned her jazz authenticity. More recently a couple friends of mine in the “opera police” sputtered and fumed at a giant poster promoting the latest album from Italian singing star Andrea Bocelli, which hung just across the train platform from us.

Such experiences raise the question of whether The International Jacques Ellul Society—or any other individuals or organizations—might be tempted to act as a sort of “Ellul police,” passing judgment on who is or is not qualified as an “authentic” representative of Ellul's thought. Another way to put it is to ask whether we want a “little tent” accommodating only those with whom we agree—or a “big tent” that welcomes diversity and disagreement.

The IJES choice is to welcome anyone who in any way supports the goals of (1) preserving and disseminating the literary and intellectual heritage of Jacques Ellul, (2) extending his social critique, especially concerning technology, and (3) extending his theological and ethical research with its special emphases on hope and freedom. Affirm these goals, pay your annual dues, and you are in our “big tent” Ellul organization.

One reason for our “big tent” philosophy is tactical: all of us who care about Ellul need to work together if we want to accomplish the goals listed above. We are relatively small in number and scattered all over the globe. Publishing projects, conferences, and

the like, are costly and laborintensive. If we really care about Ellul's legacy, this is the time for collaboration, not fragmentation.

The historical reality is that an incredibly diverse group of people looks back to Jacques Ellul as a primary teacher and source of inspiration. Our current IJES leadership reflects some of that diversity: our professions range from attorney to university professor to independent scholar; our specialties range from communications to history, philosophy, language, theology, religion, ethics, political science, and law; some are active in churches (of various denominations) and some are not; we live in all regions of the United States and in England and France.

In the early 1970s, I recall being impressed at seeing Ellul's name in a catalog course description for Cal's Boalt Hall law school—as well as in sociology and theology course descriptions in other departments and schools. I was amazed at the diverse parade of Ellul admirers which I soon became aware of: mainstream Lutheran historian Martin Marty, *Brave New World* author Aldous Huxley, L'Abri evangelical intellectual Os Guinness, ex-Watergate-con, "born again" Prison Fellowship leader Chuck Colson, Anabaptist theologians John Howard Yoder and Vernard Eller, Catholic Worker leader Jeff Dietrich, counter-cultural historian Theodore Roszak, southern Christian church social activists Will Campbell and James Holloway, French professor Joyce Hanks and others now on our IJES board ... and this is just a sample. Today, the Ellul tent stretches to include Jose Bove, the French farmer and anti-globalization activist, and Andy Baker and his "Jesus Radicals," who, inspired by Ellul's version of Christian anarchy and discipleship, are out there bearing witness and getting arrested for protesting America's international violence.

This diversity among the students of Jacques Ellul is a wonderful thing in a world of partisan orthodoxies and narrow affinity groups. Little or nothing is gained, and much can be lost, by evading discussion with those different from ourselves and with whom we may disagree. Learning is rarely enhanced by narrowing our debates too soon. Whether based on fear or ignorance (two common sources), a strategy of exclusion is misguided.

The bottom line on this topic is that Jacques Ellul himself engaged all comers and viewpoints. He read widely and welcomed engagement with his critics as well as enthusiasts. He constructively stimulated the thinking and behavior of an unusually wide and diverse group of listeners and readers. He often wrote and said that his objective was not to provide a set of answers but rather to provide people with improved means to think for themselves. If Ellul's "anarchy" means anything, it allows for freedom, risk, transgression, deviance, and a readiness to be out of control.

In light of all of this, the IJES tent is designed to be big. We welcome your entry, your ideas, and your participation, and we encourage you to spread the word about the IJES to everyone you think might be interested.

# Advert: International Jacques Ellul Society

www.ellul.org

P.O. Box 5365, Berkeley CA 94705, USA IJES@ellul.org Tel/Fax: 510-653-3334

The IJES (with its francophone sister-society, L'Association Internationale Jacques Ellul) links together scholars and friends of various specializations, vocations, backgrounds, and nations, who share a common interest in the legacy of Jacques Ellul (1912–94), long time professor at the University of Bordeaux. Our objectives are (1) to preserve and disseminate his literary and intellectual heritage, (2) to extend his social critique, especially concerning technology, and (3) to extend his theological and ethical research with its special emphases on hope and freedom.

The IJES and AIJE have been founded by a group of long-time students, scholars, and friends of Jacques Ellul, with the counsel and support of Jean, Yves, and Dominique Ellul, and as a French-American collaboration.

## Board of Directors

Patrick Chastenot, University of Poitiers; Clifford Christians, University of Illinois; Andrew Goddard, Oxford University; Darrell Fasching, University of South Florida; David Gill (President), Berkeley; Joyce Hanks (Vice-President), University of Scranton; Ken Morris (Secretary-Treasurer), Berkeley; Carl Mitcham, Colorado School of Mines; Langdon Winner, Rensselaer Polytechnic Institute

## Joining the IJES

To become a member, anywhere in the world, and receive the twice-yearly Ellul Forum, submit annual dues of US \$20 to "IJES" (use an international postal money order or bank check drawn in US dollars) with your name and complete mailing address.

### WWW.ELLUL.ORG

#### An Indispensable Web Site

Julianne Chatelain, a long time student of Ellul's thought, has voluntarily, in her spare time, helped construct and maintain the joint web site of the IJES and AIJE at <http://www.ellul.org>[[www.ellul.org](http://www.ellul.org). This is where you will find • information about IJES and AIJE activities and plans, • a brief and accurate biography of Jacques Ellul, and • a complete bibliography of Ellul's books in French and English.

#### *The Ellul Forum: 1988–2002, Issues 1–30 (compact disc)*

The Ellul Forum was founded by Prof. Darrell Fasching in 1988 as a twice-yearly publication for those interested in Ellul to exchange ideas and opinions and maintain contact while scattered all over North America and beyond. The first thirty issues

of The Forum, some 500 published pages total, are now available (only) on a single compact disc which can be purchased for \$15 (postage included). Send payment with your order to "IJES," P.O. Box 5365, Berkeley CA 94705 USA.

### **Cahiers Jacques Ellul**

#### **Pour Une Critique de la Societe Technicienne**

The first volume of an annual journal called Cahiers Jacques Ellul has just appeared in France and is available for 20 euros (postage included) to individuals outside France, and for 25 euros to libraries. The theme of the initial 2003 volume is Les Annees Personalistes ("The Personalist Years"), with articles by Patrick Troude-Chastenet, and Jean-Louis Loubet del Bayle as well as from the Jacques Ellul archives.

The editor of Cahiers Jacques Ellul is Patrick Chastenet, President of L'Association Internationale Jacques Ellul, the sister society of the IJES. Cahiers Jacques Ellul promises to be an essential new reference for those seriously interested in Ellul's ideas.

#### **Librairie Mollat—new books in French**

Librairie Mollat is one of the great bookstores you will ever visit, occupying a labyrinthine building in the center of old Bordeaux. If you cannot visit in person, Mollat's web site (<http://www.mollat.com>)[[www.mollat.com](http://www.mollat.com)] is an excellent resource for finding French language books, including those by and about Ellul. Mollat accepts credit cards over the web and will mail books anywhere in the world.

#### **Jacques Ellul: An Annotated Bibliography of Primary Works**

by Joyce Main Hanks. Research in Philosophy and Technology. Supplement 5. Stamford, CT: JAI Press, 2000. xiii., 206 pages. \$87. ISBN: 076230619X.

This is the essential guide for anyone doing research in Jacques Ellul's writings. An excellent brief biography is followed by a 140-page annotated bibliography of Ellul's fifty books and thousand-plus articles and a thirty-page subject index. Hank's work is comprehensive, accurate, and invariably helpful. This may be one of the more expensive books you buy for your library; it will surely be one of the most valuable. Visit [www.elsevier.com](http://www.elsevier.com) for ordering information.

#### **Alibris—used book source**

The Alibris web site (<http://www.alibris.com>)[[www.alibris.com](http://www.alibris.com)] recently gave thirty titles of used Jacques Ellul books in English translation available to order at reasonable prices. Alibris could be the answer if you are searching for an out-of-print Ellul title.

#### **Reprints of Nine Eerdmans Books By Ellul**

The William B. Eerdmans Company published several English translations of Ellul volumes that have been out of print for a few years now. Now, by arrangement with Ingram and Spring Arbor, individual reprint copies of these volumes can be purchased and in your hands in a week or so. The books and prices listed at the Eerdmans web site are as follows: The Ethics of Freedom (\$40), The Humiliation of the Word (\$26), The Judgment of Jonah (\$13), The Meaning of the City (\$20), The Politics of God and the Politics of Man (\$19), Reason for Being: A Meditation on Ecclesiastes (\$28), The Subversion of Christianity (\$20), and The Technological Bluff (\$35). Sources and

Trajectories: Eight Early Articles by Jacques Ellul translated by Marva Dawn is also available (price unknown).

To order any of these books, go to your bookstore (or on-line book dealer) and have them “back order” the titles you want. Do not go as an individual customer to Eerdmans or Ingram/Spring Arbor. For more information visit “Books on Demand” at <http://www.eerdmans.com>][[www.eerdmans.com](http://www.eerdmans.com)].

### **For the Critique of Technological Civilization**

Jacques Ellul at age 70.

Photo by Lucia Gill, July 1982

"Liberating violence cannot establish a society's values; for if they are to be communal values they will have to be accepted as good and true by every member of the community (not only by a majority).

But that can never happen when the values are imposed by, or as the result of, violence... The Algerian war certainly has not led the Algerians to accept Western values. ”

## From the Editor

Jacques Ellul understood violence personally and came to grips with it intellectually. He lived in the maelstrom of war and violence. During World War II years, 1939–45, he was fired from his position on the Strasbourg University faculty (1940), his father was imprisoned and died under German military detention (1942), and Ellul and his family subsisted as refugee farmers while working with the Resistance in the Entredeux-Mers region outside Bourdeaux. The rancorous debates over the Algerian fight for independence from France during the Fifties, the student revolts of the Sixties, and the ongoing street-level conflicts of juvenile delinquents and gang members were among Ellul's special concerns after the War.

Ellul's *Violence: Reflections from a Christian Perspective* (1970 English; 1972 French *Contre les violents*) is a provocative analysis not confined to war in a narrow sense but ranging broadly across the spectrum from coercive political acts to revolutionary violence to institutional violence. Mennonite Professor Mark Baker "re-views" this classic on page 20.

In his major analysis of Ellul's work on violence, Andrew Goddard observes that it is "structured around the poles of freedom and necessity" (*Living the Word, Resisting the World*, Paternoster, 2002, p. 197). Certainly it is natural that *The Ellul Forum* dedicated to "carrying forward Ellul's analyses in new directions" would publish this issue on violence and terror, and do so in broader terms than war itself. From the myriad problems in this violent 21<sup>st</sup> century, we focus on three— war, terrorism, and surveillance.

In this issue, Andrew Goddard examines Ellul's refusal of just war theory, despite its dominance in the Christian tradition. As a Professor of the History and Sociology of Institutions in the Law Faculty, Ellul would have appreciated Dal Yong Jin's historical and legal analysis of the technology of cyberterrorism. David Lyon is the research director of the international Surveillance Project based at Queen's University, investigating surveillance, risk management, and social ordering in global information societies. He reflects on the rapid growth in existing surveillance trends produced by 9/11.

*The Ellul Forum* nurtures networks of discussion and learning. Interested readers are invited to engage the authors directly (contact info given at head of each major article). As always, manuscripts (or proposals) you wish to have considered for *The Ellul Forum* are welcomed by the Editor. Material for "News and Notes," "Ellul Resources," and queries about book reviews should be sent to the Associate Editor, David Gill.

Our upcoming Spring 2004 issue (#33), guest edited by Joyce Hanks, will mark the tenth anniversary of Jacques Ellul's death.

*Mea culpa*: our last issue (Spring 2003, #31) mistakenly omitted the name of Andoni Alonso from the title line as co-author (with Carl Mitcham) of the Ivan Illich obituary we republished from the Madrid daily *El Pais*. Our apologies to Andoni Alonso.

Clifford G. Christians, Editor editor@ellul.org

## Ellul on Violence and Just War

by Andrew Goddard

Andrew Goddard (andrew.goddard@wycliffe-hall.oxford.ac.uk) is Tutor in Christian Ethics at Wycliffe Hall and a member of the Theology Faculty at Oxford University. His new book *Living the Word, Resisting the World: The Life and Thought of Jacques Ellul (Paternoster, 2002)* is reviewed on page 19 of this issue of The Ellul Forum.

How should Christians respond to the violence of war? What are those, who want to be faithful disciples of Christ, to say and to do? As Ellul states in the opening sentence of his book on the subject, “The churches and theologians...have never been in unanimous agreement in their views on violence in human society”.<sup>1</sup> There has, nevertheless, been a predominant approach to the question of war, namely that of the “just war tradition”. Ellul is a trenchant critic of this way of thinking and yet, as often in his writing, his comments are lacking in detailed engagement with the specific arguments of his opponents. Instead, he provides a broad-brush account and critique. While making some strong and valid objections, this is bound to leave anyone sympathetic to the just war tradition feeling rather dis-satisfied, perhaps even that they have been subjected to the “violence” of caricature.<sup>2</sup>

Given the importance of this subject and the strong differences of opinion found among Christians which results in divided witness to the world, it is necessary to step back and identify the fundamental differences between the just war tradition and Ellul’s thinking and to ascertain whether any constructive dialogue can take place between them. This article highlights two areas in which the wider rationale and method of Ellul and the just war tradition stand in tension with each other, and it acknowledges both strengths and weaknesses that can be seen when the two approaches are placed in dialogue.

The heart of the divergence between Ellul’s account of violence and that of the mainstream Christian tradition is perhaps most easily understood by reference to the two terms which identify that tradition — “just war”. Ellul questions both the central

---

<sup>1</sup> Jacques Ellul, *Violence: Reflections from a Christian Perspective* (London: SCM Press, 1970), p. 1. All page references in the text refer to this volume.]]

<sup>2</sup> The main critiques and account of the historical origins of the tradition are found in his categorisation of this approach as one of “compromise” (*Violence*, pp. 1–9) and his appendix on conscientious objection (*Anarchy and Christianity*, Grand Rapids: Eerdmans, 1991, pp. 915). A less polemical account of the origins of the Christian just war tradition is found in his study of the history of institutions (*Histoire des Institutions Vol 2*, (Paris: PUF, 1989, pp. 506–7, 525–7). Particularly given our

moral category and frame of reference to be used in thinking about the subject and the central moral task of such moral thinking.

*Subject Matter — War or Violence?*

It is of the utmost importance that Ellul's account is focused on *violence*, and interestingly, in the original French is entitled *Contre les violents*.<sup>3</sup> The specific question of *war* is therefore set in the wider context of the phenomenon of *violence*. He does not concentrate on "hostile contention by means of armed forces, carried on between nations, states, or rulers, or between parties in the same nation or state; the employment of armed forces against a foreign power, or against an opposing party in the state."<sup>4</sup> Instead, he insists that thinking about this specific subject can only be properly done once there is, in the words of the title of his book's third chapter, "Christian realism in the face of violence".

This approach marks a significant shift in understanding the question. The great Christian theologians of the just war tradition generally approach their discussion from two angles. In some contexts, it is a question about how a confessing Christian with a particular political or military responsibility in society is to act or indeed whether they can faithfully remain in certain positions given the duties that will be incumbent upon them.<sup>5</sup> In others, it is seeking to elucidate the obligations of love and the prohibitions entailed by the specific commandment against murder.<sup>6</sup> In thinking about "war", in other words, we are being asked to reflect on a form of practical, political action that raises a fundamental moral question because it requires participants to be involved in the taking of human life.

Ellul, from the opening pages of his book, resets and critiques this tradition within his own predominant category of violence. So, categorizing this strand of Christian thinking as "compromise", he places the early Christian concerns about the state in relation to "violence". "They saw that the state used violence against its enemies, internal or external. For war certainly seemed violence pure and simple, and the police operated by violence" (p. 2). The challenge that remained even when Christians held political office and the state ceased persecution of the church is expressed in the following terms — "the political power continued to use violence" (p. 3). Ellul then explains how theologians and canonists responded to this challenge of what he insists on calling "internal violence" and "external violence" by the state.

---

current context, it is also important to note that he sees this tradition in part shaped by Islam's subversion of Christian faith (*Subversion of Christianity*, Grand Rapids: Eerdmans, 1986), pp.100–4.

<sup>3</sup> Jacques Ellul, *Contre les violents* (Le Centurion, 1972).

<sup>4</sup> Oxford English Dictionary's primary definition of 'war'.

<sup>5</sup> So, in the tradition, among the key classic texts are Augustine's letter to Count Boniface (Letter 189, from 418AD) with the counsel, "Do not think that it is impossible for any one to please God while engaged in active military service" and Luther's "Whether Soldiers, too, Can be Saved" (1526) written to respond to the concerns of Assa von Kram of Wittenberg about reconciling his Christian faith and military profession.

<sup>6</sup> Thus Aquinas' main discussions in the *Summa* are (a) *ST II-II*, q40 which is entitled "of war" and, importantly, under the discussion of charity and (b) *ST II-II*, q64 "Of Murder".

In relation to “internal violence” Ellul discerns two key redefinitions taking place. A distinction is drawn between the state and human beings, and it is held that the state “never acts by violence when it constrains, condemns and kills” (p. 3). Instead, its actions are distinguished from “violence” by being conceived of as “force” so that the state “is the institution which demonstrates the difference between violence and force. There is all the difference between violence and force” (p. 4). The issue then becomes whether or not the state’s use of force is “just” or “unjust” and conformity to the law is here the determinative factor. However, even when the state does not conform to the law it still uses force — albeit now unjust force — rather than violence. This reasoning, Ellul claims, was an attempt “to clear the state of the charge of violence by explaining that it was not violence” (p. 5).

In relation to the external violence of war, Ellul contends that the church reasoned this way: “To deny the state the right to go to war was to condemn it to extinction;” yet the state was ordained by God, and therefore the state “must have the right to wage war” (p. 5). This he claims (though without citing any supporting evidence) was the origin and fundamental rationale for “the casuistry of the just war” whose evolving tradition he sums up in terms of seven conditions to make a war just. Although Ellul acknowledges that these “have theoretical solidity” (p. 6), he questions their practicality and relevance, especially in the contemporary world.

Ellul’s own contrasting approach to the question is shaped by what he calls “Christian realism.” “The Christian who wants to find out what he ought to do, must be realistic; this is the first step”. The problem is that we need first to be clear what the Christian must be realistic about and herein lies the fundamental weakness of Ellul’s work. “Violence” we have seen to be the lens through which he re-interprets and critiques the just war tradition. It is the phenomenon about which he insists we must be realistic. But “violence” is itself never defined by Ellul.<sup>7</sup> Clearly it is broader than the just war tradition’s focus on the taking of human life, but just how broad it is remains unclear. The signs are, however, that for Ellul the term is exceedingly wide-ranging in its scope — “economic relations, class relations, are relations of violence, nothing else” (p. 86), “psychological violence...is simply violence, whether it takes the form of propaganda, biased reports, meetings of secret societies that inflate the egos of their members, brainwashing or intellectual terrorism” (p. 97). It would appear that Konyndyk is broadly correct that violent behaviour for Ellul is “coercing someone in a way that violates his personhood”.<sup>8</sup> Given that “violence” is to be the over-arching interpretive category for Christian reflection on war, and is being used to explain Christian moral assessments in history which did not themselves primarily use this category, it

---

<sup>7</sup> This is a common criticism of Ellul’s writing; for example, “The first question, then would seem to be: What is violence? But, strangely, Ellul does not address it” (Kenneth J. Konyndyk, “Violence” in Clifford G. Christians & Jay M. Van Hook (eds), *Jacques Ellul: Interpretive Essays* (University of Illinois Press, 1981), p. 256.

<sup>8</sup> Konyndyk, *op.cit.*, p. 256.

would help if such a definition — or preferably a more precise one — had been given by Ellul himself.

Despite this weakness, there are two great strengths in Ellul's approach. Firstly, it refuses to mask the fact that punitive measures taken by political authority have the same basic structure as the wrong actions to which they respond. So fines (like stealing) take away people's property without their consent, imprisonment (like kidnapping) deprives persons of their liberty. Although this should be more obvious in war, the language of "force" means that it can be effectively forgotten. As Glover comments, "It is widely held that killing in war is quite different. It is not, and we need to think about the implications of this".<sup>9</sup> But this similarity need not mean moral differentiation is impossible: materially the act of sexual intercourse has a common structure whether it is joyful marital sex, adultery, fornication or rape; the insertion of a knife into human flesh could be an act of surgery or grievous bodily harm. Ellul formulates a stark law of the identity or sameness of all violence. When it is given a moral focus in order to insist that we cannot distinguish between just and unjust violence or violence that liberates and violence that enslaves, this simply asserts what really needs to be argued for.

Secondly, Ellul also highlights the continuity between the internal coercive actions of political authority ("police functions" as we might call them) and the external actions (military functions in war). Here there is continuity with the traditional just war understanding. That tradition similarly refuses to treat these as two independent spheres with different moralities or criteria for action. Ellul thus will be sympathetic to a common critique made by just war theorists. They point out that there is a tension (if not incoherence) in being a principled advocate of nonviolent pacifism but not being a non-violent anarchist (Ellul's own position) or being committed to just war thinking but absolutely opposed in all circumstances to capital punishment. Where Ellul differs fundamentally is that the just war tradition is marked by seeing the task of political authority as one which can legitimately be fulfilled — at home and abroad, through police and through military — through the subordination of all uses of "violence" to the pursuit of justice.

Ellul himself held such views in his first published book where, in discussing biblical texts such as Romans 13 on the "use of the sword", he writes,

The use of the sword in itself is not condemned. The use is subject to eventual condemnation, which will become a reality only if the sword serves either the obstruction of justice or the spirit of power. Within this eschatological perspective, man's judgment in the realm of law assumes its rightful value. His judgment is the reason why the use of the sword will not be condemned. Any use of it apart from man's judgment runs counter to God's will. It is law which, before God, permits the use of force.<sup>10</sup>

---

<sup>9</sup> Jonathan Glover, *Causing Death and Saving Lives* (London: Penguin Books, 1977), p. 251.

<sup>10</sup> Jacques Ellul, *The Theological Foundation of Law* (London: SCM Press, 1961), p. 113.

Although it is difficult to be clear as to why Ellul departed from this viewpoint, one factor is perhaps found in his comment that the just war tradition is “based on the conviction that man can retain control of violence, that violence can be kept in the service of order and justice and even of peace” (pp. 5–6). Ellul’s realism about violence appears to have led him to reject this fundamental presupposition which is essential to just war thinking. In contrast to the just war tradition and his own early views, not only does he place all reflection about war under the broader rubric and laws of violence, he sees violence (and so war as a subset within that) as a force which rules human beings. Occasionally in this writing he relates this to his theological understanding of the principalities and powers by naming violence as “one of the ‘rudiments’ (*stoicheia*) of this world”.<sup>11</sup> This is, once again, a feature of Ellul’s work which frustratingly he does not develop but it stands as a further reminder that the just war tradition, in making judgments about war, must avoid an unrealistic picture of sovereign individuals abstracted from the reality of power making choices about their actions. In making moral judgments about particular actions it is also vitally important to consider in all our thinking the work of the powers in the wider shaping of our society and politics.

*The Purpose — Justification or Confession?*

Ellul’s differences with the just war tradition are not limited to his insistence on approaching the subject of war through the much larger category of violence then understood by him in a much more globalistic and quasi-deterministic fashion. He has a fundamental objection to just war’s attempt to provide justification for certain violent actions. This objection would appear to take two forms.

First, in his realistic analysis of violence, one of the features Ellul identifies — his fifth and final law of violence — is that “the man who uses violence always tries to justify both it and himself” (p. 103). The horror and agony caused by violence means, he claims, that everyone who uses it seeks to demonstrate that they have acted morally when they have turned to violence. More controversial still — especially given that the Augustinian strand of the just war tradition appeals to “love of neighbor” as its rationale for the use of coercive force — Ellul explains that this universality of justification derives from the fact that “violence is an expression of hatred, has its source in hatred and signifies hatred. It is absolutely essential for us to realize that there is an unbreakable link between violence and hatred” (p. 104). The just war tradition is, therefore, in Ellul’s eyes simply one of the multiple forms of self-justification inevitably developed by fallen human beings in the face of their own violence.

Second, although Ellul can apparently accept that Christians will use violence, he refuses to accept their justifications for this. Instead, he emphasizes that “as Christians we must firmly refuse to accept whatever justifications are advanced” (p. 140). He is insistent that “in their radical refusal to justify violence, Christians must not leave the smallest breach” (p. 141). Although particularly clear in his discussion of violence, this reflects a wider feature of Ellul’s approach to the task of Christian ethics. He

---

<sup>11</sup> Jacques Ellul, *Prayer and Modern Man* (New York: Seabury, 1970), p.174.

is constantly on the alert to prevent a Christian ethic from becoming a means of human self-justification that escapes God's gracious gift of justification by faith in Christ.<sup>12</sup> Violence, Ellul argues, is a sign of the fact that we have sinned and ruptured our communion with God. We must not, therefore, formulate means to justify it in certain circumstances. Instead, we must confess our sin and seek God's forgiveness. For Ellul, the important truth is that the Christian cannot have a good conscience. "The Christian, even when he permits himself to use violence in what he considers the best of causes, cannot either feel or say that he is justified; he can only confess that he is a sinner, submit to God's judgment, and hope for God's grace and forgiveness" (p. 138). It is, however, important to realize that Ellul as emphatically rejects pacifist-inspired forms of self-justification which are developed for a policy of non-violence. He is quite honest that, "in the face of the tragic problem of violence, the first truth to be discerned is that, whatever side he takes, the Christian can never have an easy conscience and never feel that he is pursuing the way of truth" (p. 138). Yoder is therefore right to describe Ellul as holding the view that "the Christian will have to use violence but will know that it is sinful",<sup>13</sup> but Ronald Ray is also correct in drawing attention to the fact that "even the Christian position of non-violence involves guilt".<sup>14</sup>

This approach to the question of a Christian attitude to war provides a necessary challenge to some of the uses Christians make of the just war tradition. That tradition too easily becomes a means by which "our side" in a military conflict is able to claim moral superiority over the enemy and believe itself not guilty. Too many politicians and Christian leaders uncritically apply the "criteria" for a just war in a simplistic manner. They can simply become a checklist of tests in order to show that the decision to go to war is justified and that right is on the side of their government. Ellul, in contrast, highlights the painful and tragic reality of living in a fallen world and being, in Luther's famous phrase, *simul justus et peccator*.

There is, however, a major weakness in Ellul's approach. This is found in the fact that in its aversion to any form of self-justification it is of little or no practical help to people faced with the harsh realities of living and acting in the real world. Two pieces of evidence show the dangers in Ellul's approach. Firstly, he appears incoherent and inconsistent when he attempts to make moral distinctions between different violent acts. He will state that as a Christian he "cannot call violence good, legitimate and just" (p. 133) and yet there are situations when he says he approves of certain violent acts (p. 69). Indeed, in the original French, he even writes of conditions in which the use

---

<sup>12</sup> The fullest account of this is his *To Will and To Do: An Ethical Research for Christians* (Philadelphia: Pilgrim Press, 1969) where (p.108), Ellul asserts, "Every honest reflection must absolutely begin by acknowledging that...there cannot be a Christian ethic". I have discussed this point more fully in my *Living the Word, Resisting the World* (Carlisle: Paternoster Press, 2002), pp. 108–112.

<sup>13</sup> John Howard Yoder, *Nevertheless* (Pennsylvania: Herald Press, 1992), p. 177. n16.

<sup>14</sup> Ronald Ray, *A Critical Examination of Jacques Ellul's Christian Ethic* (unpublished Ph.D., University of St. Andrews, 1973), p. 196, n3.

of violence is acceptable and not condemnable.<sup>15</sup> Yet later he can write that violence is always condemnable.<sup>16</sup><sup>17</sup>

Secondly, when it comes to the full and extreme horrors of war, we see the further difficulty in treating all violence as the same and refusing to offer any means of moral discrimination. Here, Ellul appears to accept that “anything goes” once war has begun and to refuse any moral constraint lest those who accept the proposed limits then believe they are justified in the limited violence that they do use. So, in conversation with Patrick Troude-Chastenet he reflected on the French experience in Algeria in these terms:

According to me, once you have decided to go to war you have to go all out and use every means at your disposal. This is the case that applied in Algeria. Everyone was shouting their heads off against the torture that was going on. But the real problem was not the torture but the war itself. There is no morality in war. If you want to win you must pull out all the stops.<sup>(2)</sup>

Ellul is thus in a paradoxical situation compared to the just war tradition. That tradition seeks to limit war by acknowledging certain carefully delineated situations in which the use of coercion is justified. In so doing, it also lays down clear boundaries and a duty in certain contexts to sue for peace rather than to use immoral means. Ellul, in contrast, stands resolutely opposed to violence. However, his refusal to distinguish between different forms and levels of violence, his rejection of anything that could be construed as justification for violence, and his emphasis instead on the need to confess our necessary sinfulness in the fallen world, means that Christians guided by his approach may find themselves ending up involved in torture as a sad necessity (or presumably dropping nuclear weapons) in military conflict.

In short, Ellul has an aversion to any approach to moral thinking that he believes risks facilitating selfjustification or denying the continuing presence of sin in all our actions. Pushed to an extreme, however, this makes his writing incapable of providing moral guidance or setting clear and realistic moral limits. As Oliver O’Donovan comments in his discussion of whether killing is a moral evil that we are bound at all costs to avoid and thus participation in war totally prohibited,

The curious hybrid notions of “sin within the realm of necessity”(J.Ellul) and “responsible assumption of guilt” (H. Thielicke) capture dramatically the subjective moral tension which belongs to a decision of such gravity, but they leave the deliberative question in paradox and so seem to have more rhetorical than conceptual persuasiveness.<sup>18</sup>

(2) Repeat of footnote 17.

Perhaps nothing illustrates the difficulty more sharply than Ellul's startling claim that "apart from the inspiration of the Holy Spirit, the use of violence is always an *a priori* contrary to the will of God".<sup>19</sup> How one discerns the Spirit's inspiration to use violence is, sadly, unelaborated. Presumably to attempt to do so would be to deny divine freedom and risk providing a means of self-justification!

## Conclusion

Ellul and the just war tradition clearly approach the subject of moral judgment in war from quite different perspectives. It is important to recognize that these different approaches to the subject then shape their different conclusions.

In the light of the valid criticisms and cautions raised by Ellul but also the serious weaknesses in his own method, the challenge is whether or not a third way is possible. This could represent a chastened form of just war thinking in the light of Ellul's critique. In contrast to Ellul's work (where his attempt to reconfigure the Christian tradition by making "violence" the controlling concept risks distorting the structure of the tradition's account of morality in war) this would recognize and build upon the strengths of the just war tradition. Rather than just subsuming war under a strong account of "violence" and eschewing anything that could amount to self-justification, this would provide a careful structured analysis of the key questions which must be addressed in thinking about going to war and conducting war: who is to wage war? why should they have recourse to war? when should they do so? how should they fight? It would draw on the wisdom of the just war tradition to discern where significant moral boundaries lie in each of these areas.

In particular, like Ellul in his earlier writing, it would be based on the conviction that the structure and limits which must be placed on any use of destructive or lethal force are defined by the fact that just judgment is not only necessary but good and the divinely ordained task of government in a fallen world. It is therefore certainly true that "violence" is a sign of the fallenness of the world — Ellul's emphasis on this must not be ignored even if it needs to be tempered — but it does not follow that all recourse to violence is the same and so moral discrimination impossible.<sup>20</sup> There is, for example, a difference between war in order to right wrongs (just cause) and war for self-aggrandisement even if the latter is sometimes masked behind a claim that it is the former. There is a difference as well as a similarity between attacking opposing armed forces and engaging in torture of prisoners of war or blanket bombing of noncombatants.

---

<sup>19</sup> *The Ethics of Freedom* (London: Mowbrays, 1976), p. 406.

<sup>20</sup> "The distinction between a moral and a non-moral evil can be rendered in terms of what is evil *as action* and what is evil *as suffering*. Not every action that involves the suffering of evil is an evil action. The non-pacifist tradition has represented the justified belligerent as suffering the evil of necessity, but not as doing evil" (O'Donovan, *op. cit.*, p. 655).

This approach would, however, need to remedy the weaknesses in the just war tradition that become evident in the light of Ellul's approach. In particular it must redress the tendency to be unrealistic about the nature of human violence. There has to be a challenge to the idealism about human control in the face of the power of violence that so often undermines just war thinking. Perhaps most important of all, Ellul's critique has highlighted the tendency of the just war pattern of thinking to be hijacked for self-justification which masks the pervasiveness of human sin. The tradition could, however, be used as a more critical and prophetic tool. It would then raise before those holding political power and claiming to act justly, the challenging questions of their own complicity in global injustice and their enthrallment to the powers of Technique and propaganda as they make decisions about war in the contemporary world.

As in so many spheres of his thought, Ellul's work on violence runs the risk of an "all or nothing" response. Those attracted to the just war tradition easily ignore him as of no relevance to the realities of international power politics. Those eager for a prophetic Christian voice easily buy uncritically into his sweeping analysis of violence and by dismissing the tradition as "casuistry" and "compromise" find they are unable to offer guidance to those — including many Christians — with the terrible responsibilities of political authority. By recognizing the deeper divergences in method and focus between Ellul and the just war tradition and outlining both his strengths and weaknesses, it is possible to go beyond Ellul's work and develop a realistic analysis of the nature of war today that draws on the majority Christian tradition Ellul himself once embraced in order to encourage a prophetic yet discriminating voice for those seeking to be faithful disciples of Christ.<sup>21</sup>

# Beyond Cyberterrorism: Cybersecurity in Everyday Life by Dal Yong Jin

*Dal Yong Jin (daljin@uiuc.edu) has degrees from Yonsei University (B.A. in Public Administration, and M.A. in Public Policy) and the University of Texas-Austin (M.P.A.). He is a Ph.D. candidate in Communications at the University of Illinois-Urbana.*

## Introduction

The attacks of September 11, 2001 against the United States reflect a growing use of the Internet as a digital and physical against terrorism. Since September 11 many computer and security experts have looked at the issue of cyberterrorism in a new light. Governments throughout the world have come to understand that terrorists and cyber criminals, such as crackers—reckless computer geeks aiming to crack codes, or bring havoc to computer traffic—are using today’s information infrastructure to bring havoc to computer traffic and threaten safety. The number, cost, and sophistication of these attacks are rising at alarming rates, with aggregate annual damage worldwide now measured in billions of dollars. The September 11 attacks have awakened the world to consider the real possibility of cyberterrorism.

There are several reasons why the Sept. 11 attacks point to cyberterrorism. One is Osama bin Laden’s networks and his use of the Internet to organize the attacks. He used laptops with satellite uplinks and heavily encrypted messages to liaison across national borders with his global underground network even before 2001. The other is the possibility of using steganography, a means by which one can hide messages in digital photographs or in music files but leave no outward trace that the files were altered. Osama bin Laden reportedly used steganography to conceal his messages for the September 11 attacks (“Veiled Messages,” 2001).

Moreover, concerns heightened that future cyber and physical attacks—not just for human targets, but for the telecommunication infrastructure as well—might be combined. Many New York citizens indeed could not use telecommunication and online systems for hours after the terrorist attacks due not only to overload but also destruction of the telecommunication infrastructure—including that in the World Trade Center. At that time, the United States narrowly avoided a complete shutdown of its critical financial transaction system—the nation’s mechanism for electronically transferring funds (Scott, 2002).

Such threats existed before the Sept. 11 attacks around the world, but the possibility of a significant attack, specifically, a combined cyber and physical assault, is being taken much more seriously since those events (Thibodeau, 2001).

The growing threat of terrorism, which has become one of the most significant global issues in recent years, raises the specter of increased security risks for informa-

tion managers—ranging from the nuisance of Web site defacements to the possibility that systems could be targeted in conjunction with a physical attack to maximize disruptions. Computer and security experts fear that cyberspace could be terrorist's next target because they saw a clear warning in the terrorists' reliance on, and expertise in, information technology. It had become clear that the computer communication infrastructure, on which wealth, information, and power in our world depend, is highly vulnerable to intrusion, interference, and disruption. Naturally, cybersecurity measures have come to the attention of governments as the most significant method to protect society from cyberterrorism.

This paper studies the development of the concept of cyberterrorism in cyberspace. In particular, it examines cultural aspects of cyberterrorism to ascertain its characteristics. This paper discusses the specific question of the relationship between cyberspace and cyberterrorism, as well as several cultural aspects, such as the relationship between humans and technology, and privacy. Then this paper addresses the significance of cybersecurity for protecting our society from cyberterrorism. Finally, it analyzes the importance of cybersurveillance and discusses the function of encryption as a valuable cybersecurity tool in everyday life in a digital society.

## **Cyberterrorism in Cyberspace**

In the wake of the September 11 attacks, many scholars, computer experts, and government officials around the world quickly jumped to conclusions that a new breed of terrorism is on the rise and that society must defend itself with all possible means. They understand that cyberattacks are sufficiently destructive to generate fear comparable to that of physical terrorism. Attacks that lead to death or bodily injury, extended power outages, plane crashes, water contamination, or major economic losses are examples.

Before developing the concept of cyberterrorism, however, it is necessary to explain the concept of terrorism. Computer experts and government officials borrowed the definition of terrorism to explain cyberterrorism, though no one definition of terrorism has gained universal acceptance. Brian Jenkins (1996), a former advisor to the National Commission on Terrorism, described terrorism as the calculated use of violence such as fear, intimidation or coercion, or the threat of such violence to attain goals that are political, religious, or ideological in nature. The U.S. Department of State (1996) defined terrorism as premeditated, politically motivated violence perpetrated against noncombatant targets by sub-national groups or clandestine agents. Meanwhile, Noam Chomsky used the term terrorism as the use of coercive means aimed at civilian populations in an effort to achieve political, religious, or other aims. He explains the World Trade Center bombing as an example of this kind of particularly horrifying terrorist crime (Barsamian, 2001, p.19).

Many security experts borrowed these different definitions to explain cyberterrorism; however they cannot agree on one single definition on cyberterrorism because

terrorism in cyberspace is difficult to define. Among these, Barry Collin (1996), a senior research fellow at the Institute for Security and Intelligence in California, defined cyberterrorism as the convergence of cybernetics and terrorism. The United States Federal Bureau of Investigation defines it as any politically motivated attack against information, computer systems, computer programs, and data which results in violence against non-combatant targets by sub-national groups or clandestine agents. Possible cyberterrorism targets, therefore, include the banking industry, military installations, power plants, air traffic control centers, and water systems (Cyberterrorism, 2001). Hence, cyberterrorism is sometimes referred to as electronic terrorism, netwar or information war.

Cyberterrorism represents a new stage in that it occurs in and with cyberspace, and means an attack on the information structure and function. Examples of cyberterrorist activity include use of information technology to organize and carry out attacks, support group activities and perception-management campaigns. Depending on their impact, attacks against critical infrastructures such as electric power or emergency services could be acts of cyberterrorism. Attacks that disrupt nonessential services or that are mainly a costly nuisance would not be (Denning, 2002). In other words, the potential impact of cyberterrorism on private corporations and government agencies goes well beyond the traditional civil and criminal definitions of damage.

The damage from cyberterrorism has not been viewed only in physical terms. In this regard, computer and security experts assess the probability of various types of cyberattacks, which will occur in the near future:

- Very likely: Electronic warfare is the threat feared most. It could come in the form of denial-of-service attacks, in which crackers overwhelm and disable Web sites with junk data. Other electronic attacks include computer worms and viruses—malicious computer programs that spread via the Internet and erase computer data or clog Internet traffic (“Experts fear,” 2001). Online harassment such as harassing email, unsolicited pornographic pictures, and online stalking is also included.
- Likely: State-sponsored computer warfare is aimed at mainly the U.S. although it targets other countries. More than 30 countries have developed asymmetrical warfare strategies targeting vulnerabilities in U.S. computer systems. Because of U.S. military superiority, the countries see electronic warfare as their best tool to puncture U.S. defenses.
- Unlikely: The cutting of hundreds of fiber-optic cables—which carry Internet traffic between major hubs—knocks out portions of the Internet. Such an operation would require intimate knowledge of where key data hubs are, which only a handful of Internet firms know. It also would require a Herculean effort: most fiber cables are underwater or buried underground, so they are not easy to attack.

- Very unlikely: The bombing of Internet facilities, such as major data hubs, cripples the Internet. However, it is nearly impossible because the Internet resembles a cobweb of geographically dispersed facilities. For instance, in the United States, there are major routing hubs in Silicon Valley, Washington, Chicago, and Dallas (“Experts fear,” 2001). Likewise, Ericsson world network is centered in Sweden, the Nokia world network is centered in Finland, and the NEC world network is centered in Japan.

As can be seen in this dichotomy, computer and security experts do not take seriously the connection between computer and physical attacks, i.e., attacks on human beings. Terrorists could coordinate a cyber attack with other forms of attacks against physical infrastructure, such as those on September 11. For computer and security experts, however, the main defense against cyberterrorism is to protect the information infrastructure. Cyberterrorism could be understood as a means to attack computer systems and infrastructure rather than to attack people.

## **Cultural Aspects of Cyberterrorism**

It is generally recognized that technological decisions are made first, and then reflect on them ethically after they are developed. Throughout the history of technological innovations its main architects have often denied their moral responsibility. In this frame of mind their solutions do not require any ethical reflection. In fact, many users of technology argue that technology is essentially amoral and an entity apart from values. They point out that, if people use technology for destruction or pollution, as in the case of nuclear weapons and chemical pollution, it should not be blamed on technology, but on its misuse by politicians, the military, big business and others.

However, the historical emergence of a technological culture has made the issue of moral responsibility for technological development increasingly urgent because technology inevitably brings significant risks, as well as great benefits. Computer and cyberspace, in which cyberterrorism occurs, also brings about risks because they were not created by sheer act of will. Computers and the Internet indeed draw attention to the commercial, political, and military interests from the beginning. Therefore, it is indispensable to seriously consider the human and social aspects of cyberterrorism in cyberspace. As Jacques Ellul (1964) emphasized, one should be looking at technology in its sociological aspect because technology is not an isolated fact in society but is related to every factor in the life of modern man. With Ellul, Clifford Christians (1989, pp. 124–125) points out, “technology is the distinct cultural activity in which human beings form and transform natural reality for practical ends with the aid of tools and procedures.” He argues that cultures are humankind’s distinctive and immediate environment built from the material order by men and women’s creative effort.

In this light, cyberterrorism could be understood based upon the relationship between man and technology. It requires understanding the relationship between commu-

nications and control together because cyberterrorism affects the relationship between communication technology and the humans who handle it. As Norbert Wiener argued (1957, p.16), society can only be understood through a study of the messages and the communication facilities which belong to it; and that in the future development of these messages and communication facilities, messages between humans and machines, between machines and humans, and between machine and machine, are destined to play an ever-increasing part. Indeed, communication and control belong to the essence of a person's inner life, even as they belong to our social life.

Regarding the relationship between people and technology, cyberterrorism occurs when humans use potentially harmful aspects of the technology. Cyberterrorism occurs because some consider cyberspace as a zone of unlimited freedom, a reference grid for free experimentation, an atmosphere in which there is no barrier (Robins and Webster, 1999, p.91). For instance, crackers try—without permission—to enter computer systems by breaking through security measures. Breaking into a computer system with criminal intentions is illegal and a case for criminal prosecution.

Meanwhile, cyberspace is a geographically unlimited, non-physical domain, in which—independent of time, distance and location—transactions take place between people, between computers, and between people and computers. Unlike physical attacks, cyberattacks are carried out from the comfort of their home and can occur in more than one place at a time through cyberspace. Cyberspace enables terrorist organizations to plan attacks more easily on multiple targets and spread their own organizations over a larger geographic area. It is not closed, but open—where we live everyday. To cyberterrorists, distance is meaningless. The Internet provides them with the ability to be halfway around the world instantly, in many places at once, and have an army of compromised machines to do their bidding (Robinson, 2001, pp.17–20).

In fact, one characteristic of cyberspace is the impossibility of pointing to the precise place and time where an activity occurs or information traffic happens to be. As Lefebvre observes, space and time are intertwined in nature and in society, and space organizes time in a network society (Lefebvre & Nicholson, 1991). This is possible because cyberspace plays a fundamental role in altering the nature of information's production, distribution, and consumption by allowing radically greater amounts and speeds of information flow (Jordan, 1999, p.117). Since more and more objects are provided via digital facilities, they acquire forms of intelligence, can communicate with each other, and thus create a permanent virtual space in which time and space lose their absolute significance. The spaces of the physical and the virtual world are closely interconnected.

Naturally, the threat of cyberterrorism, which has these cultural forms mentioned above, has increased with the development of computers, the Internet, and broadband because Internet communication allows terrorists to be decentralized, and thus harder to identify and observe their attacks. By the end of 2001, there were 455 million computers around the world. Internet users have also increased 17.5-fold between 1994 and

2002, from 38 million in 1994 to 665 million in 2002 (Computer Industry Almanac Inc, 2002). In the U.S. alone, almost 160 million United States households and businesses used the Internet for communication and commerce in 2002. With the rapid growth of computing and online systems, almost \$2.2 trillion in goods and services were sold via the Internet in 2001. That is expected to grow to \$12.2 trillion in 2006 (UN Conference on Trade and Development, 2002). Furthermore, every day, 1.4 billion emails were sent in 2001 (Swartz, 2001).

Under these circumstances, the number of cyberattacks rose to almost 35,000 during the first three quarters of 2001 alone, from 21,756 in 2000, and 2,134 in 1997, respectively. Among these, the Love Bug virus hit over 55 million computers and crippled email systems around the world in May 2000. Approximately four percent of the total computers that received the virus required human intervention to reconfigure them or in some way repair them, which resulted in \$10 billion in economic damage. The Code Red worm also infected about a million servers in July and August in 2001 and caused \$2.6 billion in damages (Denning, 2002). Cyberattacks caused \$12 billion in damage and economic losses in 2001 alone (Squitieri, 2002).

The number and damage of cyberattacks worldwide is growing with the development of broadband (high speed Internet services) in recent years. Broadband users are seen as being more vulnerable to attacks because their computers are always connected to the Internet. In particular, several East Asian countries, which are showing rapid growth of broadband, produce the most cyberattacks of any country apart from the U.S. Asian and Pacific Rim countries indeed produced 91 percent of all attacks during the fourth quarter of 2001. Among these, computer-related crime in Korea, which boasts 10 million broadband users, soared. Computer-related crimes in Korea zoomed 13.6 times higher to 33,289 cases in 2001 from 2,444 a year earlier (National Policy Agency, 2002).

The next generation of terrorists will grow up in a digital world, with ever more powerful and easy-to-use cracking tools at their disposal. They may see greater potential for cyberterrorism than do the terrorists of today, and their level of knowledge and skill relating to cracking will be greater. Cyberterrorism could also become more attractive as the real and virtual worlds become more closely coupled with automobiles, appliances, and other devices attached to the Internet. Unless these systems are carefully secured, conducting an operation that physically harms someone may be as easy as penetrating a Web site is today. In other words, societies that apply many digital systems are extremely vulnerable to cyberterrorism. With relatively simple tools the key functions of such societies can be disrupted. Therefore, cybersecurity is the essential topic in current debates on new forms of war on terrorism because the relationship between men and technology must be secure.

## Cybersecurity in Everyday Life

Security risks in digital systems can be caused by totally unpredictable factors, such as earthquakes, floods, fires, and lightning as well as cyberterrorism. Security can also be threatened by electromagnetic signals that suddenly open or close electronic gates and doors or set electronic toys in motion (Hamelink, 2000, p.116). However, the government and business have not paid much attention to security until recent years. In the business sector, corporations have spent billions of dollars for electronic security in recent years, however, companies spent, on average, only about \$250 for security measures out of every \$1 million they spent on information technology in 2001 (Lemke, 2002, p.31). At the government level, the situation was not far different. For instance, the United States government spent \$938 million in 2000 to protect federal computer systems.

Increased security concerns in the wake of the September 11 attacks have stimulated spending for cybersecurity. The U.S. government sought about \$4.5 billion in its 2003 budget request, which accounts for 8 percent of its information technology budget (Berkowitz & Hahn, 2003). Despite tight information technology spending budgets, the worldwide security software market was also projected to be at \$4.3 billion in 2002, an 18 percent increase over revenue of \$3.6 billion in 2001, according to Dataquest Inc. (2002). Meanwhile, the U.S. government created the Department of Homeland Security for protecting the country from both physical terrorism and cyberterrorism in November 2002. The department would have about 170,000 employees and \$37 billion budget. In addition, the U.S. and U.K. homeland security teams are to hold joint exercises as part of efforts to prevent simultaneous cyber terror attacks on the two countries beginning in April 2003.

Alarmed by the September 11 attacks, government and security experts are clamoring for the world to craft better cyberdefenses. They want tougher laws against crackers, more resources, and closer cooperation among agencies to thwart attacks. As noted, they worry that the threat of cyberattacks will grow seriously as business and government use the Internet more. They point out that society needs cybersecurity tools and control strategies for society's security. In fact, cybersecurity issues are so much an intrinsic part of everyday life today because most of our social encounters and almost all our economic transactions are subject to electronic recording, checking, and authorization. For instance, we unblinkingly produce passports for scanners to read at airports, feed plastic cards with personal identifiers into street bank machines, fill out warranty forms when we buy appliances, key confidential data into online transactions, or use bar-coded keys to enter offices and laboratories. However, the growth of electronic commerce and electronic recording has brought about several negative effects for society, such as property damage, and business disruption through online fraud. As Robins and Webster addressed (1999, p.122) information is thought to be the key to a new phase of economic growth, but it also causes severe damage for today's information society.

As for computerized surveillance and security issues, one of the most important is encryption. Encryption is the art of scrambling messages to a predefined code or key and thus ensuring only those who know the key can read the message. Encryption technology empowers users to protect their digital property from unauthorized use because only the intended recipient—the key holder—can access the information. In particular, the public key approach is the most powerful method of authentication. Two sets of keys are used. In the public key system, one key is publicly revealed and the other is known only to the user. The keys are linked in such a manner that information encrypted by the public key can only be deciphered by the corresponding private key. Specifically, the public key (the product) is used to encrypt a message. A message encrypted with the public key cannot be decrypted with the same key; only the corresponding private key may decrypt it.

In conventional correspondence two devices are employed to ensure security and authentication. For privacy purposes, it is customary to place a letter within an envelope. But we want the intended recipient to know that we sent the letter, not some impostor. When we sign a letter, that signature serves to confirm our identity. This is exactly what occurs in public key encryption. By applying the recipient's public key to the message, we are assured that only recipients read it.

As the significance of the Internet increases, encryption policy becomes more critical in transferring and protecting information. Under an open and nonsecure Internet system, the issue of encryption places emphasis on security, authenticity, identification, and validation in information exchange. For instance, as an effort to prevent unauthorized access or modification and to secure Internet commerce, the U.S. government indicates that a secure Global Information Infrastructure (GII) should incorporate the following aspects:

- Secure and reliable telecommunications networks.
- Effective means for protecting the information systems attached to those networks.
- Effective means for authenticating and ensuring confidentiality of electronic information to protect data from unauthorized use.
- Well-trained GII users who understand how to protect their systems and data (U.S. Government, 2000).

In order to ascertain the characteristics and merits of cybersurveillance, it is worth comparing cybersurveillance with electronics-based surveillance technology, such as Closed-Circuit TV (CCTV) technology. Electronic-based surveillance technologies are recognized as the primary surveillance technologies today. They are very useful tools in prohibiting some teenagers from entering shopping malls for shoplifting or displacing them from certain city streets. The recent growth in the use of the open-street CCTV

system has been accompanied by a proliferation in the use of visual surveillance in a wide range of different institutional settings, including hospitals, schools, high rise housing blocks, and the workplace (McCahill, 1998, p.44). It is useful because cameras in public places may deter criminals. However, CCTV surveillance is not useful in cyberspace because it is not a cybersurveillance tool that functions in cyberspace.

CCTV also raises concern about privacy. While CCTV is a useful tool for protecting shoplifting in department stores, it also keeps watch over every guest without their permission. While some government agencies and businessmen believe surveillance is more important than privacy in order to protect physical property and even life, privacy is actually part of the problem (Lyon, 2001, p.66). Hence, in many countries electronic surveillance is mushrooming; however, the sanctity of privacy has also been eroded by the increasing intrusion of surveillance technology. Although safety and security are important, privacy should not be sacrificed for society's safety.

In addition, electronic surveillance is not adequate to protect global data and money flows. As seen thus far, protecting global data and money flow in a digital society should be one of the main functions of surveillance and cybersecurity. As global flow of technology, information, people, images and symbols rise in volume, surveillance should be employed to track and monitor these movements. More delicate and effective surveillance tools, such as high level encryption technology, become essential for protecting our lives and our property.

Unlike CCTV, encryption tools reduce threats to an invasion of privacy while protecting global data and money flows. Considering personal privacy, encryption applies to medical records, personal credit ratings, and spending histories. The problems of failing security need urgent solutions, in particular, for the success of digital trading. The combination of security, privacy, and authentication should make electronic commerce, whether conducted on private networks, the Internet or even in person, the preferred medium for financial transactions of all sorts. The widespread use of encryption is necessary for safe financial transactions online (Jordan, 1999). More importantly, strong encryption hinders cyberterror because terrorists cannot interpret the message easily. Although some terrorists have some decoding skills, it is not easy for them to overcome the encoding skills of security experts. One of the most obvious signs of surveillance is the overhead "electronic eye" of the closed-circuit television camera, and encryption is one of the most effective "cyber eyes" of cyberspace. With these forces behind it, strong encryption might be thought of as an essential element of cyberspace.

## *Conclusion*

Cyberterrorism is becoming a common phenomenon. The next terrorist attack may be not physical in nature but could come through cyberspace to disrupt the communication infrastructure. Cyberattacks on the military, economic and telecommunications infrastructure around the world can be launched from anywhere in the world, and they can be used to transport the problems of a distant conflict directly to America's heart-

land, as well as other countries. However, it is true that the impact of this risk to the physical health of humankind is still minimal, at present, although the current state of cyberspace is such that information is seriously at risk. Computers do not currently control sufficient physical processes, without human intervention, to pose a significant risk of terrorism in the classic sense. Therefore, a proactive approach to protecting the information infrastructure is indispensable for preventing its becoming more seriously vulnerable.

Computer-based security technology, in particular high-level encryption, is strongly needed for securing today's society from terrorist attacks. Encryption is essential to protect the telecommunication infrastructure. This has obvious advantages for users' privacy, and it deters the members of criminal organizations accessing secret communication. Surveillance and security are not simply coercive and controlling. They are often a matter of influence and persuasion. We are all involved in our own surveillance as we leave the tracks and traces that are sensed and surveyed by different surveillance agencies. Encryption is a non-coercive security and surveillance technique in cyberspace.

In conclusion, cyberterror and cybersecurity have become part of our everyday lives. Everyday life has been conducted more and more in cyberspace in modern times, and this has strong implications for surveillance. On a daily basis, life in cyberspace entails surveillance in constantly increasing contexts.

## Surveillance After September 11: Ellul and Electronic Profiling by David Lyon

*David Lyon (lyond@post.queensu.ca) is Professor of Sociology and Coordinator of Graduate Studies at Queen's University (Canada). He is also the research director of the international Surveillance Project based at Queen's, investigating surveillance, risk management, and social ordering in global information societies (<http://qsilver.queensu.ca/sociology/Surveillance/intro.htm>).*

In a classic one-liner, Jacques Ellul once suggested that “To be sure of apprehending criminals, it is necessary that *everyone* be supervised.”<sup>22</sup> Substitute the word “terrorists” for “criminals” and we have an uncannily accurate description of the world since 9/11. Anti-“terrorist” measures, from securing airports to intercepting emails, are everywhere. The dramatic events of 2001 served to accelerate processes of general “supervision” that had been underway since Ellul’s prophetic words were written, in the early 1960s. Especially in the USA, but also in countries around the world, we are creating sophisticated surveillance societies in which everyone is supervised, or watched over.

Let me clarify two things right away. One, in this world that we help to make, what I’m calling surveillance is partly a by-product of modern bureaucratic efficiency. More mobility means that many things are done at a distance. So some ways are needed of keeping track of transactions or keeping tabs on populations. Surveillance fills that gap — PINs, barcodes, video images, and scans are tokens of trust that compensate for the fact that in a global village we can’t all know everyone else. So surveillance is not just sinister; but neither is it simply benign. It’s deeply ambiguous, and increasingly influential. In this piece, however, I focus on the risks.

Two, what follows is not just a paranoid whine about intensified intrusions, still less a plea for more privacy. In the context of today’s rampant individualism, the antidote to more surveillance is quickly seen in terms of personal space and personal solutions.

---

<sup>22</sup> Jacques Ellul, *The Technological Society* (Knopf, 1964), p. 100.

Of course, some government departments or corporations have no business prying into our personal affairs, and even traffic light cameras can pick up passenger images that should never be recognizable. But while some aspects of privacy may be important — human dignity based on the *imago dei* would make selfcommunication a voluntary, limited activity within relations of trust — the language of privacy fails to touch many crucial issues. As well, privacy is also ambiguous.

Or should domestic violence in a “private” space be exempt from public scrutiny?

9/11 produced a rapid augmenting of existing surveillance trends. Many companies, government departments and organizations (such as the American military) saw 9/11 as an opportunity to put in place measures previously proscribed because of privacy or civil liberties scruples. Multiple use smart cards, for example, have been around for over a decade, but few large scale uses have been found for them. No wonder Larry Ellison, of Oracle Corporation, quickly offered free software to the US government to create a national ID. Mercifully, despite the emotionalism and panic, he was turned down.

This reflects one major trend in surveillance, to automate and integrate systems of processing personal data. What was once done using ranks of filing cabinets and index cards in large offices could be done much more easily with computers. Add telecommunications, so they could network, and software for searching databases, and the stage was set for surveillance in its dominant twenty-first century forms. This isn't the topdown nightmare of eerie telescreens featuring *Nineteen-Eighty-Four's* Big Brother, but the Google model of homing on hits using keywords. It's algorithmic surveillance, that sorts for suspects.

But not only for suspects. The categories cover all kinds of persons, lifestyles, occupations, interests, positions and preferences. Just as the firm might fire you for failing to meet your performance requirements, the bank may well do the same if your business is worth less to it than your neighbour's. The Royal Bank of Canada does it by sending letters that explain their new financial features, which reveal that not all customers will qualify.

Still, if we're thinking about 9/11, suspects are exactly what surveillance seeks. Indeed, hasty legislation (in the USA and elsewhere) and new surveillance technologies combine to create an expanded version of what Onora O'Neill calls a “culture of suspicion.”<sup>23</sup> Vague and prejudicial definitions of “terrorist” help to widen the net, while dubious surveillance softwares serve to tighten the mesh. But those are only the first steps. The culture of suspicion spreads as trust is eroded at every level. New York Muslims called “Mohammed” are finding their American Express cards withdrawn; companies are hiring consultants to do “security” checks on people who apply for jobs; and hotlines proliferate for letting ordinary people be the “eyes and ears” of law enforcement.

---

<sup>23</sup> Onora O'Neill, *A Question of Trust* (Cambridge, 2002).

Unfortunately for those spending millions on high-tech security devices, the systems aren't really up to snuff. The brand new facial recognition cameras at Logan Airport in Boston, from which two planes containing global guerillas took off on 9/11, have been criticized by an independent security contractor for having blurred shots and excessive false positives.<sup>24</sup> In short, they won't work for the purposes stated. And this is also true of several other surveillance schemes for identifying, locating, and capturing "terrorists."<sup>25</sup>

But while the new surveillance is unlikely to prevent terrorism, this does not mean it is ineffective. Those drawn into the net include a vast range of persons — all of us, one way and another — whose personal data are extracted from us as transaction records (such as phone, credit cards), behaviours (what cameras and scanners see in car parks or airports), body indicators (iris scans or fingerprints), and other traces are transmitted to databases. True, we may falsify records on the internet, or evade the street camera, but most of us comply, cheerfully or otherwise, most days.

Notice what goes into the system. Just bits of data, fragments of information. They may be built into a larger profile but even that will scarcely be recognized as a reliable image by the person concerned. No matter, it's the fragments that count. The system isn't interested in "who" you really are. All it can do is create situational controls, momentary management opportunities. These surveillance devices are meant to channel flows, to inhibit some activities, to promote others. "Entry denied," flashes the sign; "Do you wish to redeem your points?" asks the cashier; "You have been selected..." says the SPAM. Morality does not really feature, here. Mere management has taken over.

This means that we are all targets, and that justice reduces to the actuarial. The smug response that those who have nothing to hide have nothing to fear is pernicious nonsense. The fact of being placed in a category of suspicion, or even in a marketer's niche, means that our life-chances and our choices are already affected. Systems designed to sort are there to classify our lifestyles and our proclivities, discriminating between one and another. Different insurance rates, promotional offers, treatment by police, and speed of passage — such as through airport check-in — are the result. That your neighbourhood becomes high-risk may not be your doing, and that you're a single mother on welfare not your fault. The automated label sticks, until you can find some way of removing it. So much for presumptions of innocence!

But let's go back to those global guerilla fighters. No one wants to see them succeed, and every right thinking person believes, correctly, that terrorism is a curse to be opposed. If reports of capture, whether in Pakistan, Germany, Indonesia or Canada are correct, then one checks in vain for reports of high tech devices being crucial. In fact, where terrorist cells have been busted, or dangerous individuals apprehended, it

---

<sup>24</sup> Technology and Liberty Program of the ACLU, Sept. 2, 2003 ([www.aclu.org/Privacy/Privacy.cfm](http://www.aclu.org/Privacy/Privacy.cfm))

<sup>25</sup> Details of some such failed schemes are in David Lyon, *Surveillance after September 11* (Polity Press, 2003).

seems that old-fashioned intelligence-gathering, under-cover work, and informers are responsible.

So why all the hype about technology? Well, this is where Ellul becomes relevant once more. He maintained that in the modern era an obsessive search for the one right way of doing things — the correct “technique” — was fast becoming dominant. Hence his critique of “technological society.” Appropriate goals were being obscured as the myopic quest for the best means filled the cultural horizon. The idol would bind its adherents to a single program, and blind them to its consequences and alternatives. “In displacing spirituality,” summarises Karim Karim, “technique itself becomes an object of faith.”<sup>26</sup>

Of course, Max Weber had made similar observations, much earlier in the twentieth century, but he seemed to despair of ever finding away out of this “iron cage.” His insights are indispensable, but incomplete. On the other hand, despite his apparent view that technology is an unstoppable juggernaut, Ellul actually insisted that choices could still be made. Having been a member of the French World War Two resistance movement against the apparently invincible German occupation, his position had some credibility. Ellul parted company with Weber at the crossroads of the spiritual. The latter confessed to being “religiously tonedead” while the former pursued parallel paths of sociological and theological analysis.

So what directions are suggested by this line of thinking? The first is a general point about the priority of “technique.” From the Renaissance, the idea took root that peace and prosperity could be engineered, and the Enlightenment took this notion further. Technology was among the tools for manufacturing desirable social conditions. But this is an inversion of priorities. Loving one’s neighbour and seeking social justice are stressed by the Hebrew scriptures as prior conditions for peace and prosperity. Doing technology falls under the same rubric. It is subject to norms, to morality and to ethics. You can’t engineer security or safety, although technology may play an appropriate role in achieving such goals.

Moving closer to the aftermath of 9/11, what might a socio-theological approach have to offer? Assuming there is some merit in the above argument, key issues concern what we might call “embodiment” and “embrace.” Why these?

First, the garnering of personal data fragments makes it possible to assemble profiles that proxy for persons. I may not recognize my data-image but it’s the data-image that plays a key role in my life-chances. The abstract data-image is not the embodied person, even though it seems to have taken over the task of defining me. In the twenty-first century, electronic proxies are likely to proliferate. Modern(ist) notions of the independent individual are already imperiled by such developments. But at the core of Christian commitment is the notion that persons are relational and embodied. Those

---

<sup>26</sup> Karim H. Karim, “Cyber-Utopia and the Myth of Paradise: Using Jacques Ellul’s work on propaganda to analyse information society rhetoric” *Information, Communication, and Society*, 4:1, 2001, 113–134.

relationships, echoing the sociality of God, are central. And our being “enfleshed,” which was affirmed by the “enfleshment” (incarnation) of Jesus, is equally so. So whenever a data-image is privileged over the person, damage is done.

Second, the use of searchable databases for surveillance means they act as a form of triage, screening behaviours and activities in order to assign different treatments. It’s an exclusionary process that cuts out or creams off without recourse to ethics. Loving one’s neighbour flies in the face of this, demanding instead inclusion and embrace. As Miroslav Volf poignantly notes, exclusion may be overt, flowing from domination, or it may be occluded, subtly producing abandonment.<sup>27</sup> In the twenty-first century, we have found ways of automating the practice of “passing by on the other side.” As soon as “Arab-Muslim” or “not credit-worthy” features in a database, mental sirens should sound.

None of this is meant to imply that policy makers, politicians, or technologists for that matter, have easy decisions to make. Rather, appropriate priorities should be recovered and highlighted as each issue is confronted. Equally, everyone needs to be informed and involved. In the twenty-first century, the politics of information are shifting to a much more central position than formerly, and democratic citizenship demands that all take an interest in how this plays out. We shall surely get the technologies we deserve if we do not make our voices heard in dissent and re-direction. Already, popular outcry has helped to rein in some of the most egregious aspects of the “Total Terrorist Awareness” and “Computer-Assisted Passenger Pre-Screening” programs in the USA.

Although present surveillance trends were visible well before 9/11, those events have served to accelerate and also to highlight them. Technological decisions are now far too important to be left to politicians and engineers. They affect all of us, and, at a simple level, we can all contribute to shifts in thinking and practice. It behooves those who believe that loving neighbours and seeking justice are key priorities to expose the lie that having “nothing to hide” exempts one from the consequences of today’s surveillance. Likewise, the emphasis on justice requires that mere “privacy” solutions be re-thought. Profiling, not prying; sorting not spying; these are the real issues. Whenever someone suggests that “intrusion” is the problem, remember that “exclusion” is at least equally dangerous.

Having begun with some references to Ellul, I’ll let him have the last word too. I have no special brief for Ellul; indeed, I am also a critic of some of his ideas. But his insights, developed at the dawn of the computer era, have a compelling resonance with what’s happening today. He once commented that in the antique cities of Babylon and Ninevah, peace, prosperity and security were sought through city walls and military machines. But he also reminded readers of another city, where inclusion is the key — the gates are always open — and where the light is always on.<sup>28</sup> Trust, not suspicion,

---

<sup>27</sup> Miroslav Volf, *Exclusion and Embrace* (Abingdon 1996).

<sup>28</sup> Jacques Ellul, *The Meaning of the City* (Eerdmans, 1970).

and embrace, not exclusion, are the watchwords. We don't yet see this city. But as another sage once said, it's not too much to hope for.

## **Mirror of Another Ten Years**

by Joyce Hanks, Guest Editor

Much as Ellul in 1970 surveyed the previous decade when he wrote the words on our cover, in this issue of the *Ellul Forum* we review the ten-year period since he died, on 19 May 1994. We have looked at both his sociology and his theology, in broad outline and by way of specific example, attempting to assess the relevance of his thought for our time.

Nothing had prepared me for the amazing displays of new books by and about Ellul that awaited me when I arrived in France for a spring 2003 sabbatical. The first of Patrick Chastenet’s new annual series, the *Cahiers Jacques Ellul*, providing us with previously unpublished and difficult-to-find early writings by Ellul, as well as helpful articles about him, had come out. A journalist unknown to me, Jean-Luc Porquet, had just published a book detailing connections between Ellul’s main themes and recent events, demonstrating the current importance of Ellul’s thought. This volume made

quite a splash, with standing-room-only public presentations by the author, prominent reviews in widely-read publications, and an almost immediate second printing—all giving evidence of Ellul’s ability to challenge us years after he stopped writing.

A team of three serious students of Ellul’s work crowned years of painstaking effort by publishing their first volume, also in 2003. Gerard Paul, Jean-Pierre Jezequel, and Michel Hourcade had gathered, pieced together, edited and annotated various sets of notes taken during Ellul’s lectures over many years (as well as lectures tape-recorded by Willem Vanderburg, a contributing editor of the *Ellul Forum*), to produce *La pensee marxiste*, a kind of posthumous cooperative venture between Ellul and his three editors, published by La Table Ronde. This same publisher, having previously provided us with second editions of several of Ellul’s long out-of-print books, offered another one in 2003: *Sans feu ni lieu* (originally published in English in 1970 as *The Meaning of the City*). Add to this a second edition of *Trahison de l’Occident (Betrayal of the West)*, published through the efforts of Ellul’s daughter, Dominique North, and you begin to imagine what I saw spread out in bookstores across France a year ago. More work by Ellul has been published since last spring, and more is on the way.

Why do we still consider Ellul’s ideas important, given how our world has changed? Jean-Luc Porquet, the journalist mentioned above, gives us his take on that question, as do Gerard Paul, a banker, also mentioned above, and Olivier Pigeaud, a French Reformed pastor in Bordeaux. I have requested, translated, and edited their articles, and wish to express my thanks to Clifford Christians and David Gill for agreeing to publish the original articles in French as well. As you read the reflections of these three writers who have carefully studied Ellul’s thought, you will undoubtedly find yourself taking issue with them at certain points. But I feel certain that such lively disagreement would have suited Ellul just fine!

## Ellul Today

by Jean-Luc Porquet

Why did it take me such a long time—45 years—to become aware of Ellul? I was born in 1954, the year his *The Technological Society* was issued in France.<sup>29</sup> Obviously I could not read it when it first came out. In high school, no one mentioned it to me. At the university, utter silence. I studied engineering. Although professors spoke a great deal about fluid mechanics, methodology, computer science, physics, etc., not a single course was devoted to critical reflection on the profession they were preparing us for.

My generation turned fourteen years old at the time of the pivotal events of 1968. As far as the press goes, many of us cut our political and intellectual teeth on such publications as the daily newspaper *Liberation*, launched in 1973, and sponsored by the philosopher Jean-Paul Sartre. Other formative publications included *Politique Hebdo*

---

<sup>29</sup> Trans. John Wilkinson (New York: Knopf, 1964).

(the weekly mouthpiece of the far Left), *Charlie Hebdo*, a biting witty libertarian weekly, *La Gueule Ouverte* (the first real environmentalist monthly, created by the staff of *Charlie Hebdo*), and *Actuel* (an underground monthly to which I would contribute from 1982 to 1987). Somewhat less influential was the *Nouvel Observateur* (closely affiliated with the Socialist Party), together with its ecology supplement, *Le Sauvage*. This list indicates what I, at least, was reading at the time.

These publications introduced us, helter-skelter, to the thought of Herbert Marcuse, Ivan Illich, Wilhelm Reich, Rene Dumont, Michel Foucault, the 1974 Club of Rome report on the limits of growth, etc. But none of these sources ever spoke of Ellul! True, Ellul's alter ego, Bernard Charbonneau, wrote a column for *La Gueule Ouverte*, but he scarcely mentioned his friend. The only interview with Ellul in *La Gueule Ouverte* appeared in the eleventh issue (September 1973)—a long and boring affair, with “Mr. Ellul, Doesn't What You Say Lead to Despair?” as its theme. Ellul himself sometimes contributed to *Le Monde*, the establishment daily paper, but I read only *Liberation*. At the time *Libe*, as we called it, was the “Bible” of “rebellious” youth. Like so many others of my generation, I managed for years to avoid Ellul in this way!

Of course, his name finally became familiar to me. I finally learned that he was *the* thinker in the field of Technique. So, one fine day in the year 2000, having only this scanty acquaintance with Ellul's reputation, I happened to pull *The Technological Bluff*<sup>30</sup> off a second-hand book dealer's display shelf on the Boulevard Saint-Michel in Paris. A stroke of luck, since Ellul's books are hard to find in bookstores: they seem to be reprinted by the eyedropper-full. Besides, as a second-hand book dealer once remarked to me, “We rarely handle anything by Ellul: people hang on to good books!”

When I ran across Ellul's *The Technological Bluff*, I was working as a journalist for the weekly *Le Canard*

*Enchaine*, a satirical weekly paper that will soon celebrate a century of publication. It has stayed alive by always refusing all advertising, and looks critically at current events (someone has even called it the paper that serves as a filter for the impurities of the democratic system). At the time, I wrote rather often about what we now call “the mad cow scare,” the result of thousands of cows in England falling ill after eating feed containing animal protein. Once we had proof that this bovine spongiform encephalopathy could be transmitted to human beings, all of Europe went through an earthquake-like experience of a kind never seen before. From that day on, everyone looked suspiciously at the food on his plate: will this piece of meat kill me gradually, subjecting me to excruciating pain? Parents insisted that beef be banned from schools. Experts explained that measures had been taken, that beef was safe. Politicians tried to reassure us, all the while taking care to protect themselves against any future prosecution. The media spoke of “psychosis,” but continually put more fuel on the fire.

---

<sup>30</sup> Trans. Geoffrey W. Bromiley (Grand Rapids: Eerdmans, 1990; French ed. 1988).

At the same time, I was reading in Ellul's *The Technological Bluff* that technical progress requires us "to make constant decisions about problems that are infinitely beyond us" (p. 10). Not only did his analysis clarify the situation perfectly, it enabled me to come up with a list of other such problems: global warming, the thinning of earth's protective ozone layer, nuclear waste (France depends more on nuclear reactors than any other country in the world), blood products contaminated with the HIV virus and knowingly used for transfusions to hemophiliacs, pesticides (France ranks second in the world in use of pesticides), genetically modified food, extremely dangerous industrial sites called "Seveso" sites,<sup>31</sup> mercury-contaminated plumbing, cell phones, multiplication of cellphone towers, videosnooping (it is impossible to find out how many of these video surveillance cameras we have in France: 200,000 or a million?), atmospheric pollution, cloning, sewage sludge in fields (is it toxic or not?), the explosion of allergies, hepatitis B vaccine (does it cause multiple sclerosis or not?), the Balkan syndrome, reduced male fertility, etc.

These unsolvable crises that point the finger at Technique were multiplying in the year 2000, and appearing on the front pages of newspapers. But not a single French intellectual (and so many people claim to belong to this category!) could be found who really thought through these urgent issues. I began to read other Ellul books, and each one confirmed my first impression: here was a dispeller of illusions on a grand scale, a shedder of light, a visionary, plowing the same furrow his whole life long. He had a carefully constructed, methodical way of thinking (and not just mere opinions based on idle political discussion): solid, rigorous analytical methods inspired by Karl Marx. Ellul's style was uneven, certainly, and he could be difficult to understand, but often he was brilliant (as in *A Critique of the New Commonplaces*<sup>32</sup>), or inspired (*Anarchy and Christianity*<sup>33</sup>). In any case, he wanted to make himself clear to thinking people generally, and not just to his intellectual peers. All this he applied to Technique, a subject that apparently causes thinkers to go to pieces.

I talked constantly about Ellul to people I knew, and discovered to my distress that they recognized his name, but that no one had read him. I quoted Ellul repeatedly in my articles. Then one day my friend Cabu (the cartoonist who honors me with his illustrations of my weekly column, and who regularly inquires about the subject of my next book), shot off: "So, write his biography, already!" Of course! I decided to write a kind of intellectual biography, centered around the weightiest ideas in Ellul's immense output: the ones that still have the power to enlighten us today. I would illustrate these ideas by means of examples taken from current events.

I looked over the theological side of Ellul's work. This was definitely not the aspect of his thought that interested me; only his writing on Technique did (still, I devoted a

<sup>31</sup> After the accidental explosion of a chemical factory in Toulouse that caused around thirty deaths, French citizens learned that their country had no fewer than 1,250 industrial sites dangerous enough to be classified as "Seveso."

<sup>32</sup> Trans. Helen Weaver (New York: Knopf, 1968; French ed. 1966).

<sup>33</sup> Trans. Geoffrey W. Bromiley (Grand Rapids: Eerdmans, 1991; French ed. 1988).

few pages to his theological work, which one cannot simply dismiss with a snap of the fingers!). After a difficult selection process, I settled on twenty forceful ideas. Three of them seemed overwhelmingly crucial to me. But before we look at those, here are some of Ellul's prophecies that seem striking to me. They exemplify how he functioned in his role as a veritable sentinel—a watchman who was more clairvoyant and visionary than many others:

1. On terrorism: Ellul makes a remark in *The Technological Bluff* that might have seemed crazy before September 11, 2001: we will see “Third World terrorism which can only grow worse and which cannot be stamped out so long as the terrorists are ready to sacrifice themselves. When everything becomes dangerous in our world, we will be on our knees with no power to resist” (pp. 234–235).

2. On propaganda: Ellul understood the fact that the information we are bombarded with, supposedly an extension of democracy, ends up producing a need for propaganda. We can see in our day the glaring results of that need (including “embedded” journalists, the homogenizing of the American people manipulated by the propaganda of George W. Bush, etc.).

3. On the confused thinking that equates information with culture: the appearance of the Internet (unknown to Ellul), and the rhetoric that accompanies its increasing power continually reinforce this confusion between culture and information. The current technical obsession involves continually increasing the number of channels, stuffing them with so-called cultural material, and then churning out all of this without interruption. This process is justified as a way to save us time and as a means of cultural improvement. Having access to millions of data bases is useful, of course, particularly for the purpose of training information specialists and technicians. But it adds nothing to culture, and does not affect the number or quality of cultured people.

4. On the growing numbers of those we must call “human discards.” Whether they be the homeless, the poor, the aged, or others, the technical system rejects more and more people who do not fit its criteria.

Now, three of Ellul's powerful ideas:

1. Technique creates problems that it promises to resolve by means of Technique. We can confirm this idea almost daily, in every area. Each time technical progress resolves a problem, it creates new ones, “and we need more technology, always more and more, to solve them.”<sup>34</sup> Yet such technical advances are presented to us as new successes. For instance, with each oil spill (the last one in Europe, in 2002, was caused by the oil tanker *Prestige*), we are shown wonderful machines that can clean up the petroleum oozing out over the surface of the ocean. But no one questions our insane over-consumption of oil. We respond to the loneliness of the elderly by inventing high-tech houses equipped with electronic mats that tell time when a person walks on them. As for the mounting anguish and depression stemming from the mass media

---

<sup>34</sup> Jacques Ellul, *The Technological System*, trans. Joachim Neugroschel (New York: Continuum, 1980; Fr. ed. 1977), p. 225.

and technique-induced work conditions, we offer antidepressants (of which the French consume more than any other nation). To the increasing demand for energy, we respond with massive recourse to nuclear reactors ... which leave us with the problem of nuclear waste (but we will surely find a solution!). To the pollution caused by pesticides, we counter with genetically engineered crops, etc.

Ellul singles out at least two “vast problems [that] will arise with the new stage of the technical system” (*Bluff*, p. 54): the ecological problem and the situation of the Third World. The first is well known. Anyone can draw up a list of outrageously damaging environmental events, and a shorter list of measures taken to limit such damage. But Ellul affirms that “pollution will continue to develop at the pace of technical growth” (*Bluff*, p. 232). As for international law, agreements and regulations, Ellul simply does not believe in them. And unfortunately, current difficulties over the Kyoto agreement on global warming would seem to prove him right.

What about the Third World? Noting that the “West implicitly refuses to give up its own extravagance and expansion of high tech,” Ellul prophesies that we are going to be “engaged in a true war waged by the Third World against the developed countries” (*Bluff*, p. 234). Isn't this just what is happening to us with terrorism?

2. Technique simply goes its own way, riding roughshod over democracy. Most technical choices sidestep democracy, according to Ellul: technical progress requires efficiency and speed, bypassing all democratic procedures. The public is never consulted about it! In this way, for example, France has become the most nuclear-dependent country in the world. Another example: within a three-year period, French cellular telephone interests have put together a network of 30,000 wireless towers, without ever demanding anyone's opinion.

Technicians obviously face a problem concerning their failure to consult, which they can hardly deny. They always seem to think they have resolved the difficulty by means of their repeated: “We must inform the public.” But their “informing” involves this unspoken assumption: “Once people have been informed, they will see the wisdom of our choices.” On the other hand, Ellul observes that if it were necessary to inform people about every technical issue, it would take each person a lifetime to figure things out! How could people work out reasoned positions on energy choices, cloning, biotechnology, nuclear waste, industrial agriculture, global warming, the some 30,000 different byproducts regularly spewed out in massive quantities by the chemical industry, etc.? Ellul points out the paradox that the more the public is informed, the less it can come to a conclusion one way or another.

Some have tried to get around this problem by creating “consensus groups” that empower ordinary people to choose among technological options. One begins this process by gathering a group of fifteen or so “uninformed” people who receive two weekends of instruction in the main problems involved in making a given technological decision. Then this group meets with specialists, questioning them at will, after which time the group makes its recommendations. In France, the first of these consensus groups met in 1998, in order to decide under what conditions genetically modified foods could be

grown and sold. It was a model democratic exercise. The group members made sensible recommendations, including that such organisms be prohibited if they had a certain gene that was resistant to antibiotics (such organisms would be dangerous, since they might develop bacteria that would not respond to antibiotics). But a month later, the government authorized the cultivation of two types of genetically altered corn that had this particular gene. So the consensus group was a farce. Here again, Ellul foresaw this sort of thing. He reminds us that we cannot count on the State to conduct itself honestly when it claims to act in the general interest, since the State is “a technological agent itself, both integrated into the technological system, determined by its demands, and modified in its structures by its relationship to the imperative of technological growth” (*Technological System*, p. 132).

In the months following the decision of the consensus group, people opposed to genetically engineered crops swung into action. Convinced that democratic processes had not worked in this situation, they began “harvesting” genetically altered plants. They ran into trouble with the law for this: Jose Bove and his accomplice, Rene Riesel, each received a six month prison term. Only two days after Bove began to serve his time, a group of about 800 French scientists signed a public declaration concerning the usefulness of genetically modified foods. But even today, these specialists wonder how one could arrange a genuine public debate about such foods, instead of simply imposing them on everyone. So Ellul’s analysis is utterly relevant to this burning question.

This kind of controversy continues to multiply, and sometimes has dramatic consequences. For example, in Saint-Cyr-L’Ecole, a Paris suburb, brain cancer has been diagnosed in a number of pupils from a public school located near cellphone towers. The panic-stricken parents rose up in arms, insisting that cellular telephone companies remove their towers. Although the parents finally won, the phone companies maintained that they had given in only to calm people down, and that their towers were harmless. The snag is that no study has been carried out to determine the effects of these wireless towers on health. And now thousands of people live in dread, wondering if the tower near their home can cause serious illness. After the nuclear threat and genetically engineered foods, we can expect that nanotechnologies will be next in line, trying to impose themselves by force.

3. Advertising and the technological bluff are the driving force behind the technological system. Ellul noted in 1987 that advertising had just gone through a spectacular seachange. Its budgets had begun to swell inordinately, it was becoming an enormous economic and financial power, and it no longer aimed at selling basic products, but rather high-tech gadgets, pure and simple. These had become the key to economic development. This analysis rings even truer today: the entire French audio-visual system now depends on publicity, whereas this was not true twenty years ago, before the time when almost all French public television channels fell into private hands. Advertising has become invasive, molding the consumer’s life, to the point where he believes that the new high-tech products he hears about (CD’s, DVD’s, the internet, digital cameras, etc.) are indispensable for life in the technological system. This mounting pressure

seems increasingly intolerable to a handful of French people, who have formed such groups as “ad destroyers” (following the example of American “ad busters”), and leave their graffiti in the subways. But here again, the problem seems to have no solution. How can the public resist the bombardment of advertising? How to construct a different view of the world? Or resist submitting to technological propaganda?

In 1954, Ellul said “It is only fair to wonder what consequences these propagandistic manipulations will have. The real consequences are not discernible because the mechanisms have been operating for too short a time. And, of course, when the consequences finally appear, we still will not recognize them. We will have been so absorbed and manipulated, rendered so indifferent that objective knowledge on this score will be impossible. We will no longer even have any idea of what men might once have been” (*The Technological Society*, pp. 368–369). Fifty years later, this question remains central: how can we take our distance from this world; how can we look at it objectively?

Over just the last few years, a movement of thinkers and militants has advocated “convivial growth decrease.” In France, Serge Latouche and the Association of the Friends of Francois Partant have led this effort. It has met with a growing response, especially among the “altermondialists.” This movement is utterly consistent with the thought of Ellul. Ten years after his death, he is more relevant than ever, and I believe it essential that we read his books. We need his thought in order to nourish not only a new kind of critical thinking, but also in order to arrive at new individual behavior and collective actions.

## Ellul aujourd’hui

Jean-Luc Porquet

Pourquoi m’a-t-il fallu tout ce temps, 45 ans, pour connaître Ellul? Je suis né en 1954, l’année où parut en France « la technique ». On comprendra que je n’aie pas pu lire des sa parution... Au lycée, personne pour m’en parler. À l’université, silence complet: je suivais des études d’ingénieur, et si les professeurs parlaient abondamment de mécanique des fluides, de bureau des méthodes, d’informatique, de physique, etc, pas un seul cours n’était consacré à une réflexion critique sur la profession à laquelle ils nous préparaient. Quant à la presse... Pour une grande partie de ma génération, celle qui a eu 14 ans en 1968, l’apprentissage politique et intellectuel s’est fait à partir du quotidien *Liberation*, lancé en 1973 et parrainé par Sartre, de *Politique Hebdo* (porte-voix de l’extrême-gauche), *Charlie-Hebdo*, journal libertaire, humoristique et corrosif, de la *Gueule ouverte*, premier vrai mensuel écologiste (lancé par l’équipe de *Charlie Hebdo*), d’*Actuel* (mensuel underground, auquel je devais collaborer de 1982 à 1987), et, dans une moindre mesure, du *Nouvel Observateur* (proche du parti socialiste), ainsi que de son supplément écolo, « le Sauvage ». Telles étaient en tout cas mes lectures. Et si ces journaux nous initiaient, en vrac, à la pensée de Marcuse, Ivan Illich, Reich, René Dumont, Foucault, au rapport du club de Rome, etc, aucun ne parlait jamais d’Ellul!

Certes, Bernard Charbonneau, l'alter ego d'Ellul, tint chronique dans « la Gueule ouverte », mais il n'évoquait guère son ami — celui-ci, d'ailleurs, n'eut droit qu'à une interview, longue et ennuyeuse, sur le thème « Monsieur Ellul, ce que vous dites n'est-il pas désespérant? », dans le numéro 11 de la Gueule Ouverte (septembre 73). Ellul lui-même, donnait parfois des tribunes au « Monde », quotidien institutionnel: or je ne lisais que « Libe », qui était alors la Bible de la jeunesse dite « contestataire ». Et voilà comment je suis passé durant toutes ces années à côté d'Ellul, comme tant d'autres de ma génération !

Bien sûr, ce nom a fini par me dire quelque chose... J'ai fini par savoir qu'il était « le » penseur de la technique. Et c'est équipe de ce maigre savoir qu'un beau jour de l'an 2000 je mis la main, chez un bouquiniste du boulevard Saint Michel, sur « le bluff technologique ».<sup>35</sup> Coup de chance, car, faut-il le préciser? les livres d'Ellul, réédités au compte-goutte, sont difficiles à trouver en librairie, et, comme me le disait un bouquiniste, « chez nous on les voit rarement passer: les bons livres, les gens les gardent chez eux ! ». Journaliste au Canard enchaîné, hebdomadaire satirique qui depuis bientôt un siècle, vit en refusant toute publicité et jette sur l'actualité un regard critique (on a pu dire que ce journal était le filtre des impuretés du système démocratique), j'y écrivais assez souvent à l'époque sur ce qu'on appelle aujourd'hui la « crise de la vache folle »: on sait que, nourries de farines animales, des vaches anglaises tomberent malades par milliers, et que, des le jour où il fut prouvé que l'encephalite spongiforme se transmettait à l'homme, l'Europe entière vécut un séisme d'un genre inédit.

Desormais, chacun jetait sur son assiette un regard suspicieux: ce morceau de viande allait-il nous tuer à petit feu et dans d'atroces souffrances? Des parents exigeaient que la viande de bœuf soit interdite à l'école. Des experts expliquaient que les mesures avaient été prises, et que la viande était saine. Les hommes politiques essayaient de rassurer, tout en prenant soin de se protéger des possibles suites judiciaires. Les médias parlaient de « psychose », et ne cessaient de l'alimenter.

Et au même moment, je lisais dans Ellul que le progrès technique nous sommait « de prendre constamment des décisions au sujet de problèmes ou de situations qui nous dépassent infiniment » (*Bluff*, pp. 25–26). Non seulement son analyse éclairait parfaitement la situation, mais elle me permettait d'en appréhender d'autres: réchauffement climatique, trou d'ozone, déchets nucléaires (la France est le pays le plus nucléarisé au monde), sang contaminé par le virus du sida et transfusé en toute connaissance de cause aux hémophiles, pesticides (la France est le deuxième plus gros consommateur au monde), OGM, sites Seveso (suite à l'explosion accidentelle d'une usine chimique à Toulouse, laquelle fit une trentaine de morts, les Français découvrirent que leur pays comportait pas moins de 1250 sites industriels classés Seveso, c'est-à-dire extrêmement dangereux), plombages au mercure, téléphones portables, multiplication des antennes-relais, vidéoflicage (impossible de savoir combien il existe de caméras de

---

<sup>35</sup> Jacques Ellul, *Le bluff technologique* (Paris: Hachette, 1988).

videosurveillance en France: 200 000 ou 1 million?), pollution atmospherique, clonage, boues d'epuration dans les champs (sont-elles ou non toxiques?), explosion des allergies, vaccin contre l'hepatite B (provoque-t-il ou non des scleroses en plaques), syndrome des Balkans, baisse de la fertilité masculine, etc: les crises inextricables mettant en cause la technique se multipliaient, faisaient la Une des journaux. Et aucun intellectuel francais -Dieu sait pourtant s'ils sont nombreux a revendiquer ce titre !-pour penser vraiment ces crises. Je me mis a lire d'autres ouvrages d'Ellul, et chacun m'apporta la confirmation: il etait un demystificateur de grande envergure, un eclaireur, un visionnaire, creusant le meme sillon toute sa vie, arme d'une pensee construite, methodique, (et pas uniquement d'opinions dignes du cafe du commerce), de methodes d'analyse inspirees de Marx, solides et rigoureuses, d'un style inegal, certes, parfois ardu, mais souvent brillant (exegese des lieux communs<sup>36</sup>) ou inspire (anarchie et christianisme<sup>37</sup>), de la volonte en tout cas de se faire comprendre de l' « honnete homme », et pas uniquement de ses pairs intellectuels... Et tout cela applique a la technique, un domaine devant lequel les penseurs semblent perdre leurs moyens.

Je parlais sans cesse d'Ellul autour de moi (et me desolais de m'apercevoir que son nom « disait quelque chose », mais que personne ne l'avait lu), je le citais a plusieurs reprises dans mes articles, et un jour mon ami Cabu, dessinateur qui me fait l'honneur d'illustrer ma

chronique hebdomadaire, et me demande regulierement le sujet de mon prochain bouquin, me lanca: « Ecris done sa biographie ! ». Tilt ! Je decidai d'ecrire une sorte de biographie intellectuelle, de choisir dans l'auvre abondante d'Ellul ses idees les plus fortes, celles qui aujourd'hui encore peuvent nous eclairer, et de les illustrer par des exemples pris dans l'actualite. Je jetai un oeil au versant theologique de son oeuvre: deciderement, ce n'etait pas cet aspect de sa pensee qui m'interessait ; uniquement celui sur la technique (je consacrai cependant quelques pages a l'oeuvre theologique, qu'on ne peut isoler du reste d'un claquement de doigt !). Apres un tri delicat, je distinguais vingt idees fortes. En voici trois qui me paraissent des plus cruciales. Mais auparavant, voici quelques propheties d'Ellul qui me semblent frappantes, et montrent en quoi il etait reellement une sentinelle, plus clairvoyant, plus visionnaire que beaucoup:

-sur le terrorisme, cette remarque dans « le bluff technologique » (1988), qui pouvait paraître delirante avant le 11 septembre: « Il y aura un terrorisme tiers-mondiste qui ne peut que s'accentuer et qui est imparable dans la mesure ou ces « combattants » font d'avance le sacrifice de leur vie. Quand tout, dans notre monde, sera devenu dangereux, nous finirons par etre a genoux sans avoir pu combattre » (p.

280)..

-sur la propagande et le fait que le bombardement d'informations, sense etre une avancee democratique, finit par entrainer une demande de propagande: on constate

---

<sup>36</sup> Jacques Ellul, *Exegese des nouveaux lieux communs* (Paris: Calmann-Levy, 1966; 2[e] ed Paris: La Table Ronde, 1994).

<sup>37</sup> Jacques Ellul, *Anarchie et christianisme* (Lyon: Atelier de Creation Libertaire, 1988; 2[e] ed. Paris: La Table Ronde, 1998).

aujourd'hui le retour eclatant de cette derniere (journalistes « embedded », peuple americain malaxe par la propagande de Bush Jr, etc)

-sur la culture que l'on confond avec la documentation: l'apparition d'Internet-que n'a pas connu Ellul-et les discours qui accompagnent sa montee en puissance ne cessent de renforcer cette confusion entre culture et documentation. L'obsession technicienne qui consiste a ouvrir sans cesse de nouveaux canaux, a y enfourner des produits dits culturels, et a les verser sans interruption, s'autojustifie en pretendant nous faire gagner du temps et elever le niveau culturel. Or avoir acces a des millions de banques de donnees, c'est interessant, notamment pour former des documentalistes et des techniciens, mais cela n'apporte rien a la culture, et n'accroit ni le nombre ni la qualite des gens cultives.

-sur la multiplication « de ce que l'on est obliges d'appeler des dechets humains ». Que ce soit les SDF, les pauvres, les personnes agees, etc, le systeme technicien rejette de plus en plus ceux qui ne correspondent pas a ses criteres.

Trois de ses idees fortes, maintenant:

-La technique cree des problemes qu'elle promet de resoudre par la technique. On peut verifier cette idee d'Ellul, chaque jour ou presque, dans tous les domaines. A chaque fois que le progres technique resout des problemes, il en souleve de nouveaux, « et il faut plus de technique, toujours plus de technique pour les resoudre ».<sup>38</sup> Et on nous presente ces avancees techniques comme de nouveaux triomphes.

Ainsi, a chaque maree noire (la derniere en Europe, due au Prestige, date de 2002), on nous montre de merveilleuses machines capables de nettoyer le petrole repandu a la surface de la mer (et l'on ne s'interroge pas sur notre aberrante surconsommation de petrole). A la solitude des vieillards, on repond en imaginant des maisons hi-tech (le tapis electronique qui donne l'heure quand on marche dessus). A la montee des angoisses et des depressions dues aux medias de masse et aux conditions de travail dues au progres technique, on repond par les antidepresseurs (dont les Francais sont les premiers consommateurs au monde). A la demande croissante d'energie on repond par le recours massif au nucleaire... ce qui pose le probleme des dechets nucleaires (mais on trouvera bien une solution !). A la pollution due aux pesticides, on repond par les OGM, etc. Ellul identifie au moins deux « vastes problemes qui seront soulevés lors de la nouvelle etape d'expansion du systeme technicien » (*Bluff*, p. 75): le probleme ecologique et la situation du tiers-monde. Le premier est bien connu. Chacun peut dresser la liste effarante des degats sur l'environnement, et une liste, moins fournie, des mesures prises pour limiter ces degats. Mais Ellul l'affirme: « La pollution va continuer a se developper au rythme de croissance de la technique » (*Bluff*, p. 278). Le droit international, les conventions, les reglementations? Il n'y croit tout simplement pas... et les mesaventures actuelles du protocole de Kyoto semblent malheureusement lui donner raison.

---

<sup>38</sup> Jacques Ellul, *Le systeme technicien* (Paris: Calmann-Levy, 1977), p. 245.

Le tiers-monde? Constatant le « refus implicite de l'Occident de mettre fin a ses gaspillages et a son expansion des *high tech* », il prophetise: « Nous allons etre engages dans une veritable guerre menee par le tiers monde contre les pays developpes » (*Bluff*, p. 280). N'est-ce pas ce qui nous arrive avec le terrorisme?

-La technique n'en fait qu'a sa tete et pietine la democratie. La plupart des choix techniques echappent a la democratie, dit Ellul: le progres technique exige l'efficacite, la rapidite, et contourne toutes les procedures democratiques. On ne consulte jamais le citoyen a son sujet ! Et c'est ainsi, par exemple, que la France est devenu le pays le plus nuclearise du monde, ou qu'en trois ans, les operateurs du telephone portable ont bati un reseau de 30 000 antennes-relais, cela sans jamais demander l'avis des citoyens. Ce fait, difficile a nier, pose evidemment aux techniciens un probleme qu'ils pensent toujours avoir resolu grace a ce leitmotiv: il faut informer le citoyen. Sous-entendu: lorsqu'il sera informe, il comprendra a quel point nos choix sont judicieux. Mais, note Ellul, s'il fallait informer le citoyen sur tous les choix techniques, celui-ci y passerait sa vie ! Comment pourrait-il se forger une opinion serieuse sur les choix energetiques, le clonage, les biotechnologies, les dechets nucleaires, l'agriculture industrielle, les 30 000 substances rejetees massivement par l'industrie chimique, le rechauffement climatique, etc? D'ou ce paradoxe pointe par Ellul: « Plus le citoyen sera informe moins il pourra prendre parti ». Certains ont tente de contourner cette difficulte en imaginant des « conferences de consensus » pouvant permettre a des citoyens lambda d'arbitrer des choix techniques. On commence par reunir une quinzaine de « candides », qu'on initie en deux week-ends aux principales problematiques d'un choix technique, puis on les confronte a des specialistes, qu'ils peuvent interpeller comme ils le desirent, a la suite de quoi ils forment leurs recommandations. En France, la premiere de ces « conferences de consensus » eut lieu en 1998. Elle avait pour objet de savoir selon quelles modalites les OGM (organismes genetiquement modifies) pouvaient etre mis en culture et commercialises. Ce fut un bel exercice democratique. Les citoyens firent des recommandations de bon sens, reclamant par exemple que soient interdits les OGM a gene de resistance aux antibiotiques (dangereux car risquant de developper des bacteries resistantes a ces medicaments). Mais un mois plus tard, le gouvernement donnait l'autorisation de cultiver deux mais transgeniques equipes de ce fameux gene. C'etait donc pure mascarade... Et la encore, Ellul avait prevu la chose, en rappelant qu'on ne pouvait compter sur le fait que l'Etat joue honnetement son role de garant de l'interet general, car il est lui-meme « un agent technique, a la fois integre dans le systeme technicien, determine par ses exigences, et en meme temps modifie dans ses structures par rapport a l'imperatif de croissance technique » (*Systeme technicien*, pp. 144-145).

Dans les mois qui suivirent, les opposants aux OGM, convaincus que les processus democratiques etaient inoperants en la matiere, se lancerent dans des « fauchages » de plants transgeniques. Et furent pour cela poursuivis en justice: Jose Bove et son complice Rene Riesel, ecoperent chacun de six mois de prison. C'est seulement deux jours apres que Bove soit jete en prison qu'une poignee de scientifiques lancerent une lettre ouverte sur l'utilite des OGM (appel signe par 800 chercheurs). Mais aujourd'hui

encore, ces chercheurs se demandent comment faire en sorte que les OGM fassent l'objet d'un véritable débat public, et ne soient pas purement et simplement imposés aux citoyens. L'analyse d'Ellul est donc d'une actualité brûlante.

Et ce type de controverses, qui ne cesse de se multiplier, a parfois des conséquences dramatiques. Ainsi sur les antennes-relais: à Saint-Cyr-L'école, en banlieue parisienne, plusieurs élèves d'une même école publique près de laquelle se trouvaient des antennes-relais ont été atteints d'un cancer du cerveau. Affolement des parents, mobilisation contre les opérateurs pour qu'ils retirent leurs antennes... Si les parents ont finalement eu gain de cause, les opérateurs ont affirmé qu'ils cédaient pour apaiser les esprits, mais que leurs antennes étaient inoffensives. Le hic, c'est qu'aucune étude n'a été faite sur les effets sanitaires de ces antennes-relais. Et que désormais, des milliers de gens vivent dans l'angoisse, se demandant si l'antenne près de laquelle ils vivent peut ou non les rendre gravement malades...

On peut s'attendre à ce que demain, après notamment le nucléaire et les OGM, ce soit au tour des nanotechnologies d'essayer de passer en force.

-La publicité et le bluff technologique sont le moteur du système technicien. Ellul notait en 1987 que la publicité venait de connaître un changement d'échelle spectaculaire: ses budgets s'étaient mis à enfler démesurément, elle devenait une énorme puissance économique-financière, et ne visait plus à écouler des produits de première nécessité, mais de purs et simples gadgets high tech, lesquels sont devenus la clé du développement économique. Analyse encore plus vraie aujourd'hui: l'ensemble du système audio-visuel français est désormais dépendant de la pub (ce n'était pas vrai il y a vingt ans, avant la privatisation quasi-totale des chaînes publiques). Elle est devenue envahissante, et sert à modeler le style de vie du consommateur de façon à ce qu'il soit convaincu que les nouveautés high tech qu'on lui vante (CD, DVD, Internet, appareils photos numériques, etc) sont indispensables pour vivre dans le système technicien. Cette pression de plus en plus forte paraît de plus en plus intolérable à une poignée de citoyens, d'où la naissance de groupes comme « casseurs de pub » (sur le modèle de « adbusters »), et quelques actions de graffitis dans le métro. Mais là encore, la question paraît insoluble: comment le citoyen peut-il résister à ce bombardement? se forger une autre vision du monde? ne pas se soumettre à la propagande technicienne?

En 1954, Ellul s'interrogeait: « L'on est en droit de se demander quelles conséquences entraînent ces manipulations? On ne peut pas encore les discerner complètement, car il y a trop peu de temps que ces mécanismes sont en marche pour qu'on en voie les conséquences véritables. Il est vrai que lorsque ces conséquences auront paru, nous ne les reconnaitrons pas non plus parce que nous serons tellement absorbés, tellement indifférenciés, tellement manipulés que nous ne pourrions plus objectiver cette connaissance et que nous n'aurons plus aucune idée de ce que pouvait être l'homme, avant ».<sup>39</sup> Cinquante ans plus tard, cette question reste centrale: comment prendre des distances avec ce monde, comment l'objectiver?

---

<sup>39</sup> Jacques Ellul, *La Technique ou l'enjeu du siècle* (Paris: Armand Colin, 1954), p. 333; 2[e] éd.

Depuis quelques années à peine, un mouvement de penseurs et militants (en France, notamment: Serge Latouche et l'association des amis de François Partant) prône la « décroissance conviviale ». Il trouve un écho grandissant, surtout chez les altermondialistes. Il s'inscrit dans la droite ligne de la pensée d'Ellul: dix ans après sa mort, celui-ci est plus actuel que jamais, et je suis persuadé que la lecture de son œuvre est indispensable pour nourrir non seulement une nouvelle pensée critique, mais déboucher sur de nouveaux comportements individuels ainsi que sur des actions collectives.

## A Look at Ellul the Biblical Scholar

by Olivier Pigeaud

Presentations of Jacques Ellul's work begin with Ellul the historian of institutions and Ellul the sociologist, and only then mention Ellul the theologian. In that connection, one usually refers, and rightly so, to *The Ethics of Freedom*<sup>40</sup>, but less often do we hear of Ellul's books of biblical exegesis. Many know that Ellul preached, but his leadership of Bible study groups, even during the last years of his life, is not often mentioned. I am not a professor of theology, but rather a pastor working locally with Bible study groups. Perhaps this activity I have in common with Ellul entitles me to put forward a modest interpretation and description of some of Ellul's biblical writings.

Ellul published a number of biblical studies, including *La Genèse aujourd'hui*<sup>41</sup>, *Ce Dieu injuste*, a study of Romans 9 to 11<sup>42</sup>, *Apocalypse: The Book of Revelation*<sup>43</sup>, and *Conférence sur l'Apocalypse de Jean*.<sup>44</sup> But we will concentrate on two of his books: *The Judgment of Jonah*<sup>45</sup>, and *Reason for Being: A Meditation on Ecclesiastes*.<sup>46</sup> Jonah is Ellul's first book of biblical interpretation, and Ecclesiastes is his last one. He wrote in his "Preliminary, Polemical, Nondefinitive Postscript" that this commentary on Ecclesiastes forms an "adequate conclusion" (p. 3) to his work: not just to his theological writings, but to his work overall.

### Style in Ellul's Commentaries

We will begin by looking at some formal aspects of Ellul's style in his biblical studies. The reader is immediately struck by Ellul's frequent use of the first person singular, but he does this in many of his books. More notable is his way of involving the reader.

<sup>44</sup> ([Nantes, France: AREFPPI, 1985]).

<sup>45</sup> Trans. Geoffrey W. Bromiley (Grand Rapids: Eerdmans, 1971; Fr. ed. [1952]).

<sup>46</sup> Trans. Joyce Main Hanks (Grand Rapids: Eerdmans, 1990; Fr. ed. 1987).

Instead of writing about humanity in general, or about believers and unbelievers, he says “we.” In this way he places himself alongside his readers, showing that he speaks as much to himself as to them. This is especially true in the two commentaries we have singled out. Even when we omit such turns of phrase as “we note that, in the biblical text...,” or “we conclude that...,” *Jonah* contains a good thirty passages, some of them long, of the “we” type, and *Ecclesiastes* has about forty.

Here are two examples: in the commentary on *Jonah*, in Ellul’s treatment of Matthew 12:39–41, we read: “after the resurrection of Jesus Christ, we know why this word was spoken and we take it more seriously by referring it to the sole miracle, Jesus Christ living eternally for us” (p. 67). Pages 160 and 161 of *Reason for Being* offer us some sentences with “we,” some with “I,” and others with “you”: “Since we do not know what tomorrow will bring, how could we know beyond any doubt what is good today? ... As far as the situation I am acquainted with today goes, I can play my role and make an excellent decision, but when everything has changed tomorrow, my actions may prove catastrophic

You claim you can tell a person what is good for him by means of morality? What an illusion ... We cannot tell what is good.”

This kind of language clearly contrasts sharply with the style of most biblical commentaries, except perhaps those of Alphonse Maillot, a theologian whom Ellul knew well and appreciated very much. In his commentaries, Maillot the preacher often comes through as much as Maillot the commentator. I do not consider this aspect of Ellul’s style as an attempt to make his writing more lively or to grab the attention of the reader. Instead, he gives priority to challenging the reader, rather than constructing a dogmatic system.

We must not conclude that Ellul lacks acquaintance with the “scientific” commentators, or that he looks down on them. On the contrary, he quotes them, basing his argument on them or distinguishing his views from theirs. He is more galvanizer than systematician. Underlying this is his view that faith cannot be systematically expressed. The reader reminds me of Ellul’s admiration for Karl Barth, systematic theologian par excellence? I respond that Barth’s initial dialectical thought is profoundly opposed to the construction of a closed theological system!

Perhaps you think that involving the reader is nothing new when we consider present-day leadership styles for biblical groups, where leaders make skillful use of the principles of group dynamics, and place importance on “existential” matters. But this was not really the situation in 1952. And in any case, let me repeat that Ellul’s writing style was not a technique for manipulating people, but rather a seamless part of his profound understanding of the biblical message.

## **Content in Ellul’s Commentaries**

Now let’s examine some aspects of the content in Ellul’s commentaries. We can certainly see in these works some of his strongest theological and sociological views, as

expressed, for example, in his summary work, *What I Believe*.<sup>47</sup> If we know the biblical book of Jonah, we will not feel surprised to find passages in Ellul's commentary (see p. 32, for example) in which he put forward the doctrine of universal salvation, which he felt strongly about. Although Ecclesiastes does not often treat the question of salvation explicitly, it is a universalist text. Ellul addresses the words of Georges Bernanos to everyone when he places them at the beginning of his study (after the preliminary postscript): "In order to be prepared to hope in what does not deceive, we must first lose hope in everything that deceives" (p. 47).

God's policy of non-intervention, his voluntary choice of non-power (not to be confused with imposed powerlessness), is another of Ellul's strong convictions. The whole end of the book of Jonah gives Ellul an opportunity to express this concept (see pp. 79, 93–98). In the case of Ecclesiastes, the entire text conveys the believer's confusion in the face of God's apparent failure to intervene.

We should note that in his commentaries Ellul does not use the major theological terms we have just cited. Nor does he make use of other words he holds dear, such as "transcendence" and "dialectic." He means to suggest possible directions for thought and faith, rather than to promote previously packaged theological positions.

Now that we have examined some of Ellul's theological points in these commentaries, we will consider his sociological positions. His criticism of Technique, more precisely his critique of the technological system, does indeed come through often in his biblical commentaries. As early as 1952, when Ellul's commentary on Jonah saw publication in French, he warns us against "all our organizations and techniques and works" (p. 65). In his commentary on Ecclesiastes, Ellul often develops these themes (see pp. 104, 145, 153–154, 225). In one especially relevant passage, he writes: "Technique ... has, like money, become *the mediator of everything*, whereas in itself, it is nothing. In an earlier time, the allurements of money dominated people. Today the allurements of technique plays this role" (p. 92). We can see clearly that what Ellul rejects in Technique is its all-encompassing aspect. The technological system is an absolute system, utterly closed.

His rejection of systems extends to any "system of history" (*Apocalypse*, pp. 150–151), or of justice (*What I Believe*, p. 130). One of the things he likes about the author of Ecclesiastes is that he has no philosophical system (*Reason for Being*, p. 126). All systems tend to live for and by themselves, with no purpose or external controls. Because of this they lead directly to totalitarianism in philosophical and religious thought, and to political totalitarianism.

## Conclusion

Clearly the same point of view determines both the form and the content of Ellul's biblical commentaries, and this point of view is consistent throughout his work: a

---

<sup>47</sup> Trans. Geoffrey W. Bromiley (Grand Rapids: Eerdmans, 1989; Fr. ed. 1987).

continuous struggle against all forms of absolutism that would put human work and organizations in the place reserved for God alone. This final quotation from *Reason for Being* says it best: “I must not make use of the Bible for my own ends, but rather take myself out of the picture as much as possible, in order to listen and learn. This way I may hear a word that has never entered into the human heart and that will catch me unawares” (p. 127).

## Regard sur Ellul bibliste

Olivier Pigeaud

Quand on presente Jacques Ellul, on commence par l’historien des institutions, l’analyste de la societe.. ,et on ne parle qu’ensuite du theologien. On cite alors en general, a juste titre, *Ethique de la liberte*<sup>48</sup> mais moins ses autres d’exegese des textes bibliques.

On sait en general qu’il a ete predicateur, on dit moins qu’il a ete animateur de groupes bibliques et ce jusque dans les dernieres annees de sa vie. C’est ce qui autorise peut-etre quelqu’un qui n’est pas theologien universitaire, mais animateur biblique de terrain, a proposer une modeste relecture de quelques ecrits d’Ellul bibliste pour en degager quelques caracteristiques.

Sans oublier *La Genese aujourd’hui*<sup>49</sup>, *Ce Dieu injuste*<sup>50</sup>, consacre a Romains 9 a 11, *L’Apocalypse: Architecture en mouvement*<sup>51</sup>, et *Conference sur l’Apocalypse de Jean*<sup>52</sup>, nous nous concentrerons sur *Le livre de Jonas*<sup>53</sup>, Cahier Biblique de Foi et Vie de 1952, et sur *La raison d’etre: Meditation sur l’Ecclesiaste*<sup>54</sup>, de 1987.

Jonas est le premier ouvrage ellulien de lecture biblique et l’Ecclesiaste est le dernier. Il y ecrit, dans le post-scriptum liminaire (p. 9), que ce commentaire est une « conclusion adequate » a son ouvrage non seulement theologique, mais aussi au sens le plus large.

Le Style des commentaires.

Commencons par examiner de facon tres formelle le style d’Ellul dans ses ouvrages de bibliste. Ce qui frappe tres vite c’est que Jacques Ellul ecrit souvent a la premiere personne du singulier, mais il le fait souvent dans bien de ses ecrits. Plus remarquable est sa facon d’impliquer le lecteur. Il ne parle pas de l’etre humain en general, du croyant, ou de l’incroyant, il ecrit « nous », se placant d’ailleurs lui-meme du cote des lecteurs, concerne autant qu’eux.

---

<sup>48</sup> 2 tomes (Geneve: Labor et Fides, [1973, 1974] ).

<sup>49</sup> Avec Francois Tosquelles (Ligne: AREFPPI [1987] ).

<sup>50</sup> (Paris: Arlea, 1991).

<sup>51</sup> ([Paris]: Desclee, 1975).

<sup>52</sup> ([Nantes: AREFPPI, 1985] ).

<sup>53</sup> (Paris: Cahiers Bibliques de Foi et Vie, [1952] ).

<sup>54</sup> (Paris: Le Seuil, 1987).

C'est particulièrement vrai dans les deux commentaires auxquels nous nous attachons. Sans tenir compte des phrases du style « nous constatons que, dans le texte biblique.. », ou « nous concluons que. », le commentaire de Jonas compte une bonne trentaine de passages, parfois longs, ou Ellul écrit « nous » et il y en a une quarantaine dans le commentaire de l'Ecclesiaste.

Voici deux exemples: dans le commentaire de Jonas nous lisons, page 65,: « apres la resurrection de Jesus-Christ, nous savons en plus pourquoi cette Parole a ete dite et nous pensons plus completement a la prendre au serieux en la depouillant de son caractere prodigieux, pour l'amener a ce seul miracle: Jesus-Christ vivant eternellement pour nous ». La page 155 de *La raison d'etre* nous offre et des phrases en « nous » et d'autres en « je » et en « vous »: « puisque nous ne savons pas ce que sera demain, comment

pourrions-nous savoir sans nous tromper ce qui est bon pour aujourd'hui? » « par rapport a la situation que je connais

aujourd'hui, mon role, ma decision peuvent etre excellents, mais tout ayant change pour demain, cela peut devenir catastrophique. » « Vous pretendez dire par la morale ce

qui est bon pour l'Homme? Quelle illusion. ».. « Nous ne pouvons pas « dire » le bien et le bon. »

Cela tranche bien evidemment par rapport au style de la plupart des commentaires bibliques sauf peut-etre ceux du theologien bien connu et tres apprecie d'Ellul, Alphonse Maillot, qui est souvent autant predicateur que commentateur.

Il ne s'agit pas, bien sur, d'un style « pour faire vivant », pour accrocher le lecteur, mais c'est ainsi que je l'interprete, d'un type de lecture qui vise prioritairement l'interpellation du lecteur et non la construction d'une dogmatique.

Ce n'est pas qu'il ignore, neglige ou meprise les commentateurs « scientifiques », il les cite, s'appuyant sur eux ou s'en demarquant. Mais c'est qu'il est animateur plus que systematicien. Plus profondement encore on peut dire que, pour Ellul, l'expression de la foi ne peut pas etre systematique. On me rappellera l'admiration d'Ellul pour Karl Barth, systematicien par excellence. Je repondrai que la pensee dialectique initiale de Barth est profondement opposee a une construction d'un systeme theologique ferme !

Sans doute pensez-vous qu'impliquer le lecteur n'a rien d'original dans l'animation biblique actuelle, qui maitrise bien les outils de l'animation de groupes et qui par ailleurs a le souci de l' « existentiel », mais ce n'etait sans doute pas le cas en 1952 et de toutes facons. chez Ellul, le style d'ecriture n'est pas, redisons le, un « truc » d'animateur, mais il est coherent avec sa facon profonde d'appréhender le message biblique.

Leur contenu.

Venons-en donc a l'examen de certains aspects du contenu des commentaires d'Ellul, pour constater que s'y trouvent bien quelques elements forts de ses vues theologiques

et sociales telles qu'on les retrouve, par exemple, dans son ouvrage synthétique *Ce que je crois*<sup>55</sup>, de 1987.

On ne sera pas étonné, connaissant le récit de Jonas, de trouver des passages du commentaire où Ellul met en avant l'universalisme du salut auquel il tient beaucoup. C'est le cas, par exemple, page 27. Il est peu question explicitement de salut dans le livre de l'Ecclesiaste. C'est pourtant un texte universaliste et Ellul adresse à tous cette phrase de Bernanos qu'il place en frontispice à sa méditation: « Pour être prêt à espérer en ce qui ne trompe pas, il faut d'abord désespérer de tout ce qui trompe » (p. 49).

Autre point fort des convictions elluliennes: le non-interventionnisme de Dieu, sa non-puissance volontaire (à ne pas confondre avec l'impuissance subie). Toute la fin de Jonas donne à Ellul l'occasion de s'exprimer dans ce sens, page 77, puis pages 92 et suivantes. Pour ce qui est de l'Ecclesiaste c'est l'ensemble du texte qui exprime le désarroi du croyant devant une certaine absence d'intervention de Dieu.

Notons que dans ces commentaires Ellul n'emploie pas les grands mots de la théologie que nous venons de citer, pas plus que d'autres qui lui sont chers comme transcendance ou dialectique. Il cherche plus à suggérer des mouvements de pensée et de foi qu'à promouvoir des positions théologiques étiquetées d'avance.

Après les références théologiques d'Ellul dans ses commentaires venons-en à ses positions sociales. Sa critique de la technique et plus précisément du système technicien est en effet très présente dans ses commentaires bibliques.

Déjà dans le commentaire de Jonas, page 63, il y a une mise en garde contre « nos organisations, nos techniques, nos œuvres ». Dans le commentaire de l'Ecclesiaste les développements sur ces sujets sont assez nombreux (pages 103, 140, 148, 215). Un passage particulièrement intéressant se trouve page 91: « la technique est devenue (comme l'argent) la *mediatrice de tout*, alors qu'en elle-même elle n'est rien...aujourd'hui c'est la séduction de la technique. » On saisit bien que ce qu'Ellul rejette dans la technique, c'est son caractère totalisant. Le système technicien est un système absolu et fermé.

C'est bien sûr à rapprocher du refus ellulien d'un « système de l'histoire » (*L'Apocalypse*, p. 157), de sa méfiance de la justice quand elle devient un système (*Ce que je crois*, p. 174). Une des choses qu'il aime chez l'auteur de l'Ecclesiaste c'est qu'il n'a pas de système philosophique (pages 123–124). Tout système tend à vivre par et pour lui-même, sans finalité et sans contrôle extérieurs. Cela mène directement au totalitarisme de la pensée philosophique et religieuse, au totalitarisme politique.

Conclusion.

C'est bien la même veine qui détermine et la forme et le fond des écrits d'Ellul sur les textes bibliques et elle est très cohérente avec l'ensemble de son œuvre: une lutte permanente contre toute forme d'absolutisme qui mettrait l'œuvre humaine et les organisations mondaines à la place réservée à Dieu seul.

---

<sup>55</sup> (Paris: Grasset & Fasquelle, 1987).

Cette dernière citation de *La raison d'être* (p. 125) le dit au mieux: « et je n'ai pas à utiliser la Bible mais à devenir moi-même aussi absent que possible pour me mettre à l'école, pour écouter, seulement écouter une parole qui n'est pas montée au cmur de l'homme et qui me surprendra toujours ».

## New Metamorphoses of Bourgeois Society

by Gerard Paul

For all his readers and disciples, Jacques Ellul is the philosopher, or at least the sociologist, of the technological system, rather than of Technique. And long ago, it was agreed that his work comprises a sociological component and a theological component. But Ellul's thought is too rich and has too much unity, and his different books refer to each other too often, for us to go along with this division. Even considered simply as a means of classification, this opposition oversimplifies his work.<sup>56</sup> When we consider the sociological aspect of Ellul's work, we naturally think of *The Technological Society*<sup>57</sup>, *The Technological System*<sup>58</sup>, or *The Technological Bluff*.<sup>59</sup> A common thread obviously connects them. We can more or less categorize other books by Ellul as belonging to this sociological group: *L'empire du non-sens*<sup>60</sup> and *The Humiliation of the Word*,<sup>61</sup> for instance. And theological inspiration is evidently present in Ellul's ethical studies<sup>62</sup>, in *Hope in Time of Abandonment*<sup>63</sup>, and in *Reason for Being*.<sup>64</sup> But some titles prove

---

<sup>56</sup> This remains true in spite of the fact that Ellul himself used this distinction, and thus to some degree lent it validity. See interviews in Jacques Ellul, *In Season, Out of Season: An Introduction to the Thought of Jacques Ellul: Based on Interviews by Madeleine Garrigou-Lagrange*, trans. Lani K. Niles (San Francisco: Harper & Row, 1982; Fr. ed. 1981), and *Jacques Ellul on Religion, Technology, and Politics: Conversations with Patrick Troude-Chastenet*, trans. Joan Mendes France (Atlanta: Scholars Press, 1998; Fr. ed. 1994). The sociology/theology division has become a kind of commonplace in the understanding of Ellul's thought.

more difficult to classify, such as *Money and Power*.<sup>65</sup> This is even more true of *The Meaning of the City*<sup>66</sup>, a book in a class by itself. This study resulted from thorough biblical exegesis, and refers implicitly to the earliest manifestations of Technique and human activity with a demiurgic aim.

We have paid too little attention, I believe, to Ellul as historian. History was his inclination and his choice, for both his education and his professional life. He was a historian of law—of human, social questions, and his five-volume *Histoire des institutions*<sup>67</sup> served as a basic textbook for many generations of French law students. In an interview with Madeleine Garrigou-Lagrange, when Ellul recalls which books affected him most, and had a formative influence on him, in a sense, between the age of eighteen and twenty, he cites the Bible and Karl Marx's *Capital (In Season*, pp. 1115). We cannot possibly put these two books on the same plane, but for Ellul, they remained strongly tied together. He saw them as connected simply because of their historical inspiration. In his course on Marxist thought which he taught for thirty years in the Institute for Political Studies (at the University of Bordeaux), Ellul made it clear that Marx referred to Revelation because he wrote a book of history: "history as we find it in the Bible: history filled with meaning."<sup>68</sup>

Along with Ellul's books on Technique and those connected with theology or spirituality, we find a third series of works that seem off to one side, or perhaps between his two main areas of concern. It does not really matter very much what word we use to group together these books that do not quite fit with either of Ellul's other areas of concern but have some connection with both of them. Among his less well-known works, we find one that sheds a particularly clear light on his ideas, because it deals with the profound nature of the ideology that lies at the root of the technological society: bourgeois ideology. Ellul's *Metamorphose du bourgeois*,<sup>69</sup> a reflection on the origins of Technique, also enables Ellul to analyse, understand, lay out, and foresee the evolution of the ideologies resulting from Technique.

In his lectures at the Institute for Political Studies in Bordeaux, when Ellul spoke of the central place given by Marx to economics, he rarely failed to point out that in our

---

<sup>68</sup> Jacques Ellul, *Jesus and Marx: From Gospel to Ideology*, trans. Joyce Main Hanks (Grand Rapids: Eerdmans, 1988; Fr. ed. 1979), p. 9.

<sup>69</sup> Jacques Ellul, *Metamorphose du bourgeois* (Paris: Calmann-Levy, 1967), has been little referred to, and probably rarely read or re-read by "Ellulians." It has not been translated into English (an observation that English-speaking readers of this article may take as a friendly hint!), but came out in a second French edition in 1998, in the "Petite Vermillon" collection (Paris: La Table Ronde). We find this comment among the remarks on the back cover: "Indispensable for understanding where we are,

day “it is perhaps no longer economics we should consider determinative”<sup>70</sup> It is quite clear that in Ellul’s thinking, for the second half of the twentieth century, Technique constitutes the main factor—or, more precisely, the main fact. By saying this, he does not invalidate Marx’s insight; he simply believes that the evolution of Technique and the way it has become a global system make it for now the central social fact. For Ellul, Technique is not limited to machines, or even to the increasingly close-knit combination of technical means of transportation and transformation or manufacture of objects. What makes the modern world a “technological system” is its characteristic global organization, which has an all-encompassing , or even a “totalitarian” quality. It includes and makes use of all the supplementary, non-material techniques, from the most ancient and relatively simple (such as law or accounting) to the most recent and complex (insurance, economic calculation, data processing, or advertising, which has for many years made use of the techniques of propaganda, and in the future will perhaps rely on techniques of molecular biology). Ellul is perfectly clear on this point when he writes: “What Toynbee calls *organization* and Burnham calls *managerial action*, is technique applied to social, economic, or administrative life” (*The Technological Society*, p. 11).

In his works with with a “historical” dimension, and in particular in the earliest of these, *Metamorphose du bourgeois* (1967), Ellul extends his sociological analysis much farther than what he had outlined in *The Technological Society* (1<sup>st</sup> Fr. ed. 1954). More precisely, he places the technical phenomenon and the systematization of Technique in their historical perspective, thus enriching his earlier thought by adding the basis of its true originality. In this process, Ellul offers us a coherent explanation of cultural, ideological, and philosophical transformations, and deduces from this pattern the developments most likely to occur in the future—or certain to occur. When we draw together the personal reflections that Ellul offered students in his course on Marxist thought, his pages on bourgeois society in *The Technological Society* (pp. 218–227), and finally, the entirety of *Metamorphose du bourgeois*, we discover a global analysis that resembles a philosophy of history. Although the confines of this article will limit my observations to a somewhat sketchy overview, I will try to show here (1) on the one hand, that Ellul’s philosophy of history follows a continuum that extends from Marx to the Situationists, and

(2) on the other hand, that the recent and humanly foreseeable evolution of our societies follows the direction that Ellul endeavored to describe and decipher between 1954 and 1994.

From the outset, we must try to eliminate two possible sources of misunderstanding. First, I will make no attempt to reveal Ellul as a crypto-Marxist, since he was sufficiently clear on this point to remove any possible ambiguity. He never hid or denied

---

and where we are going.”

<sup>70</sup> Jacques Ellul, *La pensee marxiste: Cours professe a llnstitut d’etudespolitiques de Bordeaux de 1947 a 1979*, ed. Michel Hourcade, Jean-Pierre Jezequel, and Gerard Paul (Paris: La Table Ronde, 2003), p. 104.

what he owed to his reading of Marx, no more than he hid or denied what separated him radically from Marx. He made it clear to his students that a person could not be both a Christian and a Marxist. Ellul's thought has stirred up controversy and differing interpretations in the past, and will surely continue to do so in the future, but at least one point cannot become a matter of debate: the depth of his faith. On the other hand, I will not claim that the writers mentioned below were influenced by Ellul's writings, making them into something like "Ellulians without knowing it." Some of them may have little or erroneous knowledge of Ellul's thought, and others no doubt disagree with him. Quite simply, the historical, economic, or social analyses they put forward serve to strengthen conclusions that Ellul, in another time, drew from his own observations. One final preliminary remark: when I refer to Ellul's thought, or compare his thought with that of other writers, I have ignored chronological considerations or possible mutual influence. My purpose is not to offer an exegesis of Ellul's sources, but simply to show the diversity of such sources, and the very useful character of his analyses for the present day.

*Metamorphose du bourgeois* was published in 1967, the same year as Guy Debord's *The Society of the Spectacle*<sup>71</sup> and Raoul Vaneigem's *The Revolution of Everyday Life*.<sup>72</sup> This is no accident: Ellul was interested in the thought of the Situationists, with whom he had some contact around the middle of the 1960's.<sup>73</sup> For, contrary to a common view, although Ellul was certainly a rather isolated man, clearly we cannot call him a "solitary thinker." Whatever subject he wrote on, Ellul read everything that mattered. Sometimes he criticized what he read, and often he maintained a certain distance from it, but he also approved, quoted, used, developed, and confirmed the thought of a large number of French and international thinkers from every imaginable outlook, who represented the most widely diverse disciplines and schools of thought.

We cannot begin to understand Ellul's interest in the Situationists' thinking unless we go back to the body of thought he had in common with them. Within Marxist thought, Ellul reserved a prominent and privileged place for the fundamental economic and social analysis of Marx, and also for what has weathered the forces of events and politics. In the course he gave for thirty years in Bordeaux, he paid special attention to Marx's presentation on commodities (the first chapter of *Capital*), alienation, and work.<sup>74</sup> And in Ellul's books, these topics constitute the main areas of borrowing from and references to Marxism (but this applies only to his positive references to Marx,

---

<sup>71</sup> Guy Debord, *The Society of the Spectacle*, trans. Donald Nicholson-Smith (New York: Zone, 1994; Fr. ed. 1967).

<sup>72</sup> Raoul Vaneigem, *The Revolution of Everyday Life*, trans. Donald Nicholson-Smith (Seattle: Left Bank Books, 1983; Fr. ed. 1967).

<sup>73</sup> We have very little information about these contacts, their nature, how long they lasted, and their extent. With whom did Ellul have contact? Did he meet with someone, or exchange letters? The only explanation we have about why contact was broken off is that there was an insurmountable disagreement over the issue of faith. That is not really surprising.

<sup>74</sup> In July 1980, Ellul wrote two articles, an introduction and a conclusion, for a theme issue on work of *Foi et Vie*, a journal of which he was editor at that time. The introductory article analyzes

since Ellul did not hesitate to criticize other aspects of Marxist philosophy, or the followers and misinterpretations of Marx).

To summarize very briefly the intellectual approach of the Situationists, essentially by means of the thought of Debord, we must begin by referring to the very first sentence of Marx's *Capital*: "The wealth of societies in which the *capitalist mode of production* prevails appears as an 'immense collection of *commodities*.'" <sup>75</sup> Here is the first sentence of Debord's *The Society of the Spectacle*: "The whole life of those societies in which *modern conditions of production* prevail presents itself as an immense accumulation of *spectacles*" (p. 12; emphasis added). The meaning and implications of the differences between these two sentences are obvious: Debord's phrase, "all of life," underscores the extent of the economy's hold over all of society. Likewise, whereas Marx analyzed "the capitalist mode of production," Debord sees, quite correctly, "modern conditions of production." It is true that when Debord wrote, any sufficiently clear-eyed, objective observer could see that the so-called socialist economies amounted in reality to state capitalism. Debord's "modern conditions of production" are fundamentally just one more manifestation of Ellul's Technique.

But Debord's first thesis leads to a second statement, just as important: "All that once was directly lived has become mere representation" (p. 12). In other words, the economy has subjected to its laws the totality of social life, and, in the last analysis, the life of each person individually. The concept of spectacle in Debord has little to do with the increasing influence of the media, which involves only one manifestation of his principle, among others—perhaps its most "spectacular" manifestation, but surely not the most fundamental. The spectacle, "whose very *manner of being concrete* is, precisely, abstraction" (p. 22), is also the supreme stage of alienation. In one of the best and clearest introductions to Debord available, the Italian Anselm Jappe writes: "Debord's analysis is based on the everyday experience of the impoverishment of life, its fragmentation into more and more widely separated spheres, and the disappearance of any unitary aspect from society. The spectacle consists in the reunification of separate aspects at the level of the *image*."<sup>76</sup> In a later section, Debord writes: "Separation is the alpha and omega of the spectacle" (p. 20).

Ellul does not make use of this concept of spectacle. Instead, he bases his thought on the historical process of the individual's alienation, stemming from the loss of control over the product of one's work. The end result is the loss of control over one's work itself, extending to the loss of mastery over one's whole being. Ellul follows this line of thought when he writes in *Metamorphose*:

---

the historical evolution of work, its place in traditional societies up to the present time. The conclusion analyzes the value of human activity from an eschatological perspective. These two articles make it clear that for Ellul, there was no radical incompatibility between objective sociological analysis (which we could call a purely materialist analysis) and considerations of faith.

<sup>75</sup> Karl Marx, *Capital: A Critique of Political Economy*, trans. Ben Fowkes (London: Penguin, 1976), p. 125. Emphasis added.

<sup>76</sup> Anselm Jappe, *Guy Debord*, trans. Donald Nicholson-Smith (Berkeley: University of California

”The individual is progressively eliminated as subject (that is, as a person able to decide, autonomous and unique) by technological growth. This growth imposes lifestyles, behaviors, and rules that are calculated, systematized, and increasingly rigid, on the individual, who is subjected to progressive ‘reification,’ as objects invade his life. He lives in a universe that teems with more and more artificial objects, and he must live, and place himself, in relation to that universe. He himself is treated as an object, whenever the need for organization, production, or consuming requires it. This leads to humanity’s notorious reification, much more so than does our feeling dispossessed from the product of our work. A hundred years ago, the Marxist theory of commodities that served to explain such reification held true. But now, that explanation amounts to a mere detail: in our day, reification extends to every sector of human activity and life. It affects our family life as well as our leisure and our culture. Reification does not result from a given economic structure, but from the growth of the technical environment. And this reification brings with it a corollary: the progressive elimination of human beings by human beings” (p. 237<sup>77</sup>; pp. 273–274<sup>78</sup>).

In fact, Ellul and Debord carry out utterly parallel analyses. We could multiply criss-crossing quotations, always keeping in mind, however, that Debord’s *The Society of the Spectacle* and Ellul’s *Metamorphose du bourgeois* were written concurrently, and therefore did not influence each other. Neither does Ellul turn his *Metamorphose* into an instrument for criticizing Debord’s propositions. But let’s examine the fundamental differences between the two writers, showing what makes Ellul original, and, from my point of view, how his analysis goes farther than the ideas of the Situationists. For Ellul, the idea of Technique’s development as the central social phenomenon of modern society is an issue that has been settled once and for all. So he is in a sense more of a materialist than Debord, who places spectacle, a single element, at the center of his social analysis. Debord is quite objective in this, but it remains true that spectacle belongs to the order of the “superstructure,” to use a Marxist term. Jappe writes: “It will be evident by this time that the spectacle is the heir of religion” (p. 8). However, Jappe refuses to see the invasion, or rather the transformation of social life into a spectacle, into a representation of a virtual society, as “a fatality [or] the inevitable result of technological development” (p. 8). For the Situationists, the remote origin of the spectacle, which separates us from the real world and gives us only a “representation” to see, lies in the earliest institutionalized separation: that of Power. The crux of the problem thus becomes identifying “Power” for our day. For, unless we give up on the transformation of society (and such transformation constitutes precisely the Situationists’ goal), the issue of Power remains central. This is true, whatever the processes of transformation may be (it is true even if the aim becomes to abolish or annihilate Power, rather than to take it up, which has up to now always been the

<sup>78</sup> *McCarthy on Trademarks* 18:65.

objective of every revolutionary). On this point, the Situationists' thought seems very weak to me: they see Power sometimes as personified in a some mythical bourgeoisie, sometimes as identified with a "social practice" that is both anonymous and collective, but rarely as something readily identifiable that would enable us to imagine the forms that any efficient action might take.

Contrary to all this, Ellul's thought enables us to go farther in understanding the mechanisms by which modernday society functions: he calls this the "technological system." According to him, it is the bourgeoisie that developed the ideology of "doing," and this ideology made possible, justified, sustained, and supported the development of technique. Of course, and Ellul was perfectly clear on this point as well, the ideology of "doing" is not the result of the thinking of several groups of intellectuals whom we could locate precisely in time and space. Ellul's "bourgeois" is both the Renaissance merchant and the nineteenth-century industrialist, and no doubt also the eighteenth-century philosopher and the member of the 1789 Convention, perhaps also Pascal and Descartes. And Racine. And the Pilgrim Fathers. Furthermore, this uncertainty concerning the origins of the bourgeoisie, along with its diversity, is probably what gave such power to the ideology of doing and gave the bourgeoisie its capacity to assimilate everything that could enable it to survive. Ellul's whole idea in *Metamorphose* is to show how bourgeois "doing," at the beginning, enabled the bourgeois to capture the reality of Power: economic power at first, then political power, and finally intellectual power. Intellectual rather than artistic power: during the industrial era, hard science is bourgeois, as is the political economy, as Marx clearly pointed out. The only opposition to the ideological bourgeois order comes from the world of art, the novel, painting, poetry, the theater, and philosophy. But, as Ellul demonstrates, the bourgeois ideology of "doing" includes precisely the unlimited ability to take over and absorb everything that at first would seem to be most opposed to it.

So with the passage of time, bourgeois "doing" leaves its mark on the whole of society. Ellul never wrote that all men became bourgeois—on the contrary. But he did maintain in everything he wrote after 1967 the idea that the technological system is essentially bourgeois by nature, and, in a sense, bourgeois "by birth." It is, after all, a system within which individuals, even titans of the economic or political world, have absolutely no power to significantly change its course.

This is because, for its part, the development of Technique moulds society in such a way that it eliminates all leeway for movement, all free spaces. We can credit the Situationists with having proposed the concept of spectacle to describe a society that is both a world of abstraction (in its intellectual, scientific, and technical foundations) and a world of appearances (in the kind of life it proposes). It is an intrinsically "false" world, in which "the detachment of the commodity from any genuine human need has succeeded, with the advent of patently useless objects, in attaining a quasi-religious level."<sup>79</sup> In fact, bourgeois "doing," which was originally the expression of an individual

---

<sup>79</sup> Jappe, p. 10. Debord suggested collections of key rings used for advertising purposes as an

will, and then of a democratic will to live together, seems to have mutated now into an autonomous “doing” in a world which has not only lost but abandoned control over its future. We can find multiplied instances of this downward spiral, the most basic doubtless being those that affect humanity itself. For this reason, we will develop three basic aspects of it: the disappearance of values, the alteration in our relationship with time, and questions concerning our biological being .

Of course, one could object that no value (in the sense of a moral category, whether positive or negative) has actually “disappeared”: Good, Evil (we have proof in the existence of an “Axis of Evil,” which implicitly supposes that we should oppose it with an “Empire of Good”), solidarity, compassion , and so on. Do we need to go on? The issue does not lie in these, but rather in the stated or proclaimed reasons for action: values in the general sense of motives. To be more specific, or even trivial about it, what are, in their own eyes, the justifications for action of modern entrepreneurs and current leaders of great nations? We must not idealise the past; most certainly, concupiscence, cupidity, and sublimation of the sexual urge were not absent from the actions of our ancestors. However, these probably remained secondary to (and no doubt often had less intensity than) loftier ambitions. But in reality, we cannot help noting the absence, or at least the near absence, of transcendent objectives. No, when I use the word “transcendent,” I do not mean to refer to the Other or the Beyond. I simply suggest a kind of motivation that would rise above the action in itself. In the not so distant past, and, ironically, in precisely decreasing order of transcendence, we had, in succession, Salvation, then the ideology of Happiness, then material well-being (with it being generally understood that this was the condition and guarantee of moral progress and spiritual improvement for the future).

We have changed all that, moving within a few centuries from the quest of Salvation to “shareholder value,” from Pascal’s wager to the most senseless technological wagers. In a world of competition, there is no other meaning than mere survival; the proof comes when one merely listens to the prevailing talk about decisions in the business world: “We have no choice,” “Forge ahead or die out.” Such language may seem acceptable and justifiable in the case of a company that, however large it may be, represents only a minuscule percentage of human society. But the same kind of language seems destined to inspire whole nations in the future. In this way “doing” is purged of any end outside of itself, and motivation (I no longer dare to use the term “value” in this context) is limited to the pursuit of survival, or of individual or collective security. However surprising it may seem when we consider the variety and the efficiency of all sorts of tools offered by Technique, the technological society no longer seems to offer to itself the possibility of changing the world. On the contrary, it imposes adaptation on a permanent basis. An extreme lack of meaning has been attained when we can read in *Le Monde* (30 September 2003) that “change becomes a value” (although we do not

---

example of commodity fetishism. On a symbolic level, he was entirely right. Unfortunately, the problem is less superficial, as the amazing changes in consumer behavior since 1967 amply demonstrate.

know if the author is recognizing the state of things or setting out a rule to follow). When will we understand that competition can have only two meanings, in the area of human relations: that of a game in which the stake is pure intellectual satisfaction, or that of the survival of the fittest and the corresponding elimination of the weakest? The second alternative is the one our distant ancestors confronted over a period of several millennia.

Of course, we would be insulting managers and other organizational consultants if we implied that they are not aware of the emptiness of the “values” put forward. This is especially true in cases where change is necessary because of the effects of inadequate strategy, and cannot be assumed to improve things except in comparison with the worst possible outcome: the loss of one’s job. But even without going into such dire possibilities, the fragmentation of activity (including that of the tertiary sector and executives) has led some to conceive of ways of organizing work that are supposed to value and develop individual qualities, autonomy, and the spirit of initiative. “The new spirit of capitalism”<sup>80</sup> thus takes mainly the form of “management by project,” which indeed seems perfectly suited to the fragmentation of skills and knowledge. But it is doubtful that this approach can long continue to delude people within the framework of a kind of business organization that has remained hierarchical and pyramid-shaped almost everywhere.

Secondly, with respect to a different matter, the evolution of the technological society has profoundly modified our relationship with time. This is true both at the level of the individual within a social organization (whether within or outside of the workplace, although sometimes the dividing line between the two seems very blurred), and with respect to the whole of society. Over the last twenty years, we have seen many books devoted to our relationship with time.<sup>81</sup> In *The Technological Society*, Ellul mentions Enrico Castelli’s *Le temps harcelant*, in which the author “shows how the man of the technical world lives without past or future and how the loss of the sense of duration deprives law and language of their meaning.... Technique, as a result of the perfection of means which it has placed at the disposal of modern man, has effectively suppressed the respite of time *indispensable to the rhythm of life*.”<sup>82</sup> All the uneasiness of modern people in their relationship with time is described in these words from more than fifty years ago (an eternity within the context of the increasingly fast passage of time as we live it now)! Fifty-six years later, Nicole Aubert merely updates the analyses of Castelli, whom she does not mention (the reader should not take this remark as a criticism, but simply as an observation that there is such an abundance of literature on this subject that books written in the midtwentieth century are no longer considered

---

<sup>80</sup> Title of a book by Luc Boltanski and Eve Chiapello (Paris: Gallimard, 1999).

<sup>81</sup> One of the most recent, for example, is Nicole Aubert, *Le culte de l’urgence: La société malade du temps* (Paris: Flammarion, 2003).

<sup>82</sup> *The Technological Society*, pp. 329–330, n.1. See Enrico Castelli, *Il tempo esaurito* (Rome: Bussola, 1947). Emphasis added.

essential references; the overwhelming majority of the more than two hundred books and articles mentioned by Aubert were published after 1990).

This uneasiness with respect to time would seem initially to affect only the individual, or at most the organizations that work in the field of economics, where the cult of urgency naturally reigns. But this time-related malaise really affects society as a whole much more profoundly in the way society situates itself in the present with respect to its past and its future. In his very recent book, Francois Hartog analyzes what he calls “historical regimes”: how societies experience different ways of being in time, the various forms of circumscribing and “connecting the past, the present, and the future.”<sup>83</sup> After an era in which the past was seen as a fixed model to be endlessly repeated, thinking evolved during the period of the philosophy of Enlightenment and the French Revolution, toward a concept in which the future was identified with the promise of continuous, guaranteed progress. Hartog notes that our current collective conception of time amounts to historicizing the present. We see the present as something self-sufficient, massive, invasive, omnipresent, “a perpetual, elusive, and almost motionless present that seeks in spite of everything to produce for itself its own historical time” (p. 28). “The present has become the horizon. With no future and no past, it generates, from one day to the next, the past and future that it needs, day after day, and it bestows value on immediacy” (p. 126). We can see signs of this concept in the way we hide death, and, at the same time, in the permanent presence of memory, in the desire to preserve our heritage and to celebrate, and in our tendency toward repentance and pardon across the centuries. All of these offer opportunities to write a new history, better adapted to the needs of the moment. The reader must pardon me for what may sound like a bad joke, but how could a person fail to feel ill at ease, when he lives in a present that is poorly connected to the past and the future, and at the same time he is obliged to adapt very quickly to non-stop technological changes?

We have seen how the modern individual is left without landmarks because he has no values by means of which he might find meaning in his actions. He is also dispossessed of the world around him, by means of the organization of spectacle, which is the height of alienation. In addition, he is deprived of temporal reference points, which he might have received from an understood and accepted past and a future that he might have had reasonable hope (although no certainty) of controlling. Finally, he is questioned in his biological being.

The theme of the elimination of the person by Technique is very present in Ellul’s writings. He emphasizes this idea in his commentary on Marxist political economy, noting that the absence of the human factor in the thought of bourgeois economists does not stem merely from a desire for ease of explanation. It also represents quite accurately the economic reality of their time. This is much more true two centuries later. But we have not yet arrived at this point in analyzing the consequences of Technique’s

---

<sup>83</sup> FranQois Hartog, *Des regimes d’historicite: Presentisme et experiences du temps* (Paris: Le Seuil, 2003), p. 27.

development. In 1967, in *Metamorphose du bourgeois*, Ellul refers to the ethnologist Andre Leroi-Gourhan: “Since the beginning, man has followed his distinctive genius by creating technical objects: he gives himself the means of dominating a hostile world, but at the same time, the entire development of the technical process consists of an elimination of man through his own techniques.”<sup>84</sup> We find this idea again, developed and amplified, in Ellul’s later works: *Autopsy of Revolution*,<sup>85</sup> *The Technological System*, and *The Technological Bluff*.

The continuous development of ancient or new techniques now touches us very directly in our very being. It is not a matter of eliminating human beings (since engineers, fighter pilots, and even more so, consumers, are still necessary) , but rather of improving our “performance,” through the contribution of techniques. The improvement of sports performance through the use of pharmaceuticals is certainly nothing new. We will just note here the utter absurdity of the widespread use of such substances, strictly from the point of view of sports achievement. But, of course, economic and financial considerations are at stake. So ... Similarly, the availability of calculators, simulators, etc., is nothing new: the difference between the Chinese abacus and a Cray 2 computer lies in the fact that the person who used an abacus increased his power, whereas the engineer has lost part of his.

But the recent tendencies we wish to emphasize have little to do with the questionable practices of certain athletes or the production of more and more powerful means of computation. Technique calls us into question biologically in two ways: on the one hand, the evolution of certain tools shows human capacity to be obviously inadequate. For example, piloting some military airplanes can no longer be done simply by relying on the “normal functioning” of human beings, on the speed of our brains’ responses and the quality of our reflexes. The time is coming when it will become necessary either to bypass human pilots (we see this tendency in the parallel development of cruise missiles and drones), or to increase the speed of the circulation of information between human beings and tools— in a sense, to improve the quality and reliability of the

”connections” between the two. On the other hand, developments in the neurosciences enable us to envisage the appearance of a new Technique, neuromarketing, based on a better understanding of the human brain, and therefore of its receptivity to certain forms of advertising. This example symbolizes the functioning of the technological system, or of what some call “technoscience.” Scientists describe a chemical, biological, or other type of law. Immediately, practical applications are searched for (in the case of neuroscience, these might be a treatment for Alzheimer’s disease, an improvement in language learning, etc., although we are not aware of such applications). But above all one must quickly find profitable applications, and this brings us to neuromarketing.

---

<sup>84</sup> *Metamorphose*, p. 237 [1967] ; p. 274 [1998] . See Andre Leroi-Gourhan, *Le geste et la parole* (Paris: Albin Michel, 1965).

<sup>85</sup> Jacques Ellul, *Autopsy of Revolution*, trans. Patricia Wolf (New York: Knopf, 1971; Fr. ed. 1969).

On this last note, we will attempt to arrive at a tentative conclusion in the form of a question. There is no questioning the issue of efficiency or profitability in the development of new techniques of neuromarketing, which we must now consider as almost a given. We should note that, since efficiency is measured primarily in terms of profitability, the only issue that might call neuromarketing into question would be inadequate profitability. Does anyone question the ethical dimension of the issue? Yes, certainly: Olivier Oullier, a researcher in neuroscience at the Center for Complex Systems and Brain Sciences at Florida Atlantic University in Boca Raton, poses the question of the legitimacy of using neuromarketing, conjuring up the specter of George Orwell. He then suggests that legislators decide the issue.<sup>86</sup> But in reality, the problem is already resolved, and in any case, it is a false problem: the techniques of neuromarketing are only an improvement, achieved through progress in scientific knowledge, of earlier traditional and practical techniques of advertising and propaganda. Since this is so, how could anyone show objectively that any great harm would be involved? In fact, there is only one question that has not been asked, and that will not be asked: what is the real usefulness of neuromarketing? But in order even to have the desire to ask this question, it would be necessary for society to have previously established its ultimate ends: the only ones that could serve to establish a standard for measuring indisputable social usefulness.

## **Nouvelles metamorphoses de la societe bourgeoise**

Gerard Paul

Pour tous ses lecteurs ou disciples, Jacques Ellul est le philosophe, ou a tout le moins le sociologue, non pas tant de la technique que du systeme technicien. Et il est depuis longtemps admis que son oeuvre comporte un versant “sociologique” et un versant “theologique”.

---

<sup>86</sup> Olivier Oullier, “Le ‘neuromarketing’ est-il l’avenir de la publicite?” (*Le Monde*, 24 October 2003).

Or la pensée d'Ellul est trop riche, comporte trop de cohérence et les différents livres trop de renvois les uns aux autres pour qu'on puisse se satisfaire de cette opposition ou même seulement classification quelque peu simplificatrice<sup>87</sup>.

Lorsqu'on évoque le "volet" sociologique de l'œuvre, on pense spontanément à *L'enjeu du siècle*, au *système* ou au *bluff*. Incontestablement, un fil court de *La technique ou l'enjeu du siècle* (1954)<sup>88</sup> au *Bluff technologique* (1988)<sup>89</sup> en passant par *Le système technicien* (1977)<sup>90</sup>. D'autres titres peuvent être plus ou moins rattachés au "versant sociologique", *L'empire du non-sens*<sup>91</sup> ou *La Parole humiliée*<sup>92</sup>. L'inspiration théologique est évidemment présente dans *Le vouloir et le faire* et les trois volumes de *L'éthique de la liberté*<sup>93</sup>, *L'espérance oubliée*<sup>94</sup> ou encore la méditation sur l'Écclésiaste<sup>95</sup>. Mais déjà, au sein de cet ensemble, quelques titres sont moins faciles à classer, *L'homme et l'argent*<sup>96</sup> et davantage *Sans feu ni lieu*<sup>97</sup> qui constitue un cas particulier, résultat d'une exégèse biblique approfondie et renvoyant implicitement aux plus anciennes manifestations de la technique et d'un "faire" humain à visée demiurgique.

Il me semble qu'on a trop oublié qu'Ellul était un historien. Par goût et par choix, de formation et de métier. Et un historien du droit, donc de l'humain, du social, l'auteur d'une *Histoire des Institutions*<sup>98</sup> ayant servi d'ouvrage de référence à plusieurs générations d'étudiants en droit. Lorsque Jacques Ellul évoque, auprès de Madeleine Garrigou-Lagrange (*A temps*, pp. 14–22), les lectures qui l'ont marqué, des lectures de formation en quelque sorte, ce sont, presque en même temps, entre sa dix-huitième et sa vingtième année, *la Bible* et *Le Capital*, deux livres qu'il n'est certes pas possible de placer sur le même plan mais qui, dans l'esprit d'Ellul, resteront fortement liés.

---

<sup>87</sup> Bien qu'elle ait été utilisée et par la même, dans une certaine mesure validée par Ellul, par exemple dans les entretiens avec Madeleine Garrigou-Lagrange ou Patrick Chastenet jusqu'à devenir en quelque sorte un lieu commun de la compréhension de la pensée ellulienne. Jacques Ellul, *A temps et à contretemps: Entretiens avec Madeleine Garrigou-Lagrange* (Paris: Le Centurion, 1981); Patrick Chastenet, *Entretiens avec Jacques Ellul* (Paris: La Table Ronde, 1994).

<sup>88</sup> Jacques Ellul, *La technique ou l'enjeu du siècle* (Paris: Armand Colin, 1954; 2[e] ed. Paris: Economica, 1990).

<sup>89</sup> Jacques Ellul, *Le bluff technologique* (Paris: Hachette, 1988).

<sup>90</sup> Jacques Ellul, *Le système technicien* (Paris: Calmann-Lévy, 1977).

<sup>92</sup> Jacques Ellul, *La Parole humiliée* (Paris: Le Seuil, 1981).

<sup>93</sup> Jacques Ellul, *Le vouloir et le faire: Recherches éthiques pour les chrétiens: Introduction (première partie)* (Geneve: Labor et Fides, 1964); *Éthique de la liberté*, 2 vols. (Geneve: Labor et Fides, [1973, 1974]); *Les combats de la liberté: Éthique de la liberté, t. 3* (Geneve: Labor et Fides; Paris: Le Centurion, 1984).

<sup>94</sup> Jacques Ellul, *L'espérance oubliée* (Paris: Gallimard, 1972).

<sup>95</sup> Jacques Ellul, *La raison d'être: Méditation sur l'Écclésiaste* (Paris: Le Seuil, 1987).

<sup>96</sup> Jacques Ellul, *L'homme et l'argent (Nova et vetera)* (Neuchâtel: Delachaux & Niestlé, 1954; 2[e] ed. Lausanne: Presses Bibliques Universitaires, 1979).

<sup>97</sup> Jacques Ellul, *Sans feu ni lieu: Signification biblique de la Grande Ville* (Paris: Gallimard, 1975; ed. en anglais 1970).

<sup>98</sup> Jacques Ellul, *Histoire des institutions*, 5 vols. (Paris: Presses Universitaires de France, 1955–1999, en multiples éditions).

Et lies tout simplement par leur inspiration historique: dans l'enseignement sur *La pensee marxiste* qu'il a dispense trente annees durant a l'Institut d'Etudes Politiques de Bordeaux, il mettait en evidence que Marx renvoyait a la Revelation pour avoir ecrit une Histoire "comme celle de la Bible, ... chargee de sens"<sup>99</sup>.

Entre les livres consacres au phenomene technicien et ceux relevant de la theologie, voire de la spiritualite, emerge une serie d'ecrits qui parait se situer quelque part a cote ou peut-etre entre les deux ordres de preoccupations. Peu importe le terme qui n'est avance que pour tenter d'unifier des titres qui ne se rattachent explicitement a aucun des deux "versants" de l'auvre mais qui ont a faire, dans une certaine mesure, a l'un et a l'autre. Et dans ces ouvrages (un peu) meconnus<sup>100</sup> d'Ellul, on trouve une reflexion particulierement eclairante de ses idees parce que portant sur la nature profonde de l'ideologie qui inspire la societe technicienne, l'ideologie bourgeoise. Cette reflexion sur les origines du developpement de la Technique permettra aussi a Ellul de mieux analyser, comprendre, exposer et prevoir l'evolution des ideologies elles-memes produites par ce developpement.

Lorsque Jacques Ellul, dans son enseignement a l'Institut d'Etudes Politiques de Bordeaux, evoque la place centrale donnee par Marx a l'economie, il manque rarement de signaler que "dans la societe actuelle, ce ne serait peut-etre plus l'economie qui serait determinante."<sup>101</sup> Il est tout a fait evident que dans l'esprit d'Ellul, parlant dans la seconde moitie du XXeme siecle, c'est a la Technique que revient le role de facteur ou plus exactement de fait preminent. Pour autant, il n'invalide pas la demarche de Marx, considerant simplement que l'evolution de la technique et sa constitution en systeme global en fait desormais le "fait social central".

La Technique, chez Ellul, ne se reduit pas a la machine, ni meme a la combinaison de plus en plus serree des moyens techniques d'extraction, de transport, de transformation et de fabrication des objets. Ce qui fait du monde moderne un "systeme technicien", c'est son caractere d'organisation globale, totalisante (on pourrait aller jusqu'a dire "totalitaire") par le fait qu'elle utilise et inclut toutes les techniques annexes immaterielles, des plus anciennes ou simples (relativement) telles que le droit ou la comptabilite, aux plus recentes ou complexes, l'assurance, le calcul economique, plus generalement le traitement de l'information, ou encore la publicite qui emprunte largement depuis longtemps aux techniques de la Propagande (et demain peut etre a celles de la biologie moleculaire). Ellul est parfaitement clair sur ce point lorsqu'il ecrit:

---

<sup>99</sup> Jacques Ellul, *L'ideologie marxiste chretienne* (Paris: Le Centurion, 1979), p. 15.

<sup>100</sup> Jacques Ellul, *Metamorphose du bourgeois* (Paris: Calman-Levy, 1967), est peu cite, probablement peu lu ou relu par les "elluliens". L'ouvrage n'a pas ete traduit en anglais (remarque que les lecteurs anglo-saxons du present article pourront prendre comme un appel amical!). Il a cependant ete reedite en 1998 (Collection "Petite Vermillon," Paris: La Table Ronde), avec en quatrieme de couverture ce commentaire lapidaire: "Indispensable pour comprendre ou nous en sommes, vers quoi nous allons".

<sup>101</sup> Jacques Ellul, *La pensee marxiste: Cours professe a l'Institut d'etudes politiques de Bordeaux de 1947 a 1979*, ed. Michel Hourcade, Jean-Pierre Jezequel, et Gerard Paul (Paris: La Table Ronde, 2003), p. 104.

“Ce que M. Toynbee appelle *organisation* ou M. Burnham *managerial action*, c’est la technique appliquée à la vie sociale, économique ou administrative” (*La technique*, p. 9).

Or, dans les ouvrages comportant une dimension “historique”, et particulièrement le premier publié, *Metamorphose du bourgeois*, Ellul pousse l’analyse sociologique bien au delà de ce qu’il avait esquissé en 1954 dans *La technique*. Plus exactement, il replace le phénomène technique et la “systematisation” du fait technique dans une perspective historique, donnant ainsi à sa pensée ce qui fait sa véritable originalité. Dans cette démarche, Ellul donne une explication cohérente des transformations culturelles, idéologiques, philosophiques et en déduit leurs évolutions futures les plus probables sinon certaines.

Lorsqu’on rapproche les réflexions personnelles que Jacques Ellul livrait aux auditeurs de son cours sur *La pensée marxiste*, quelques pages sur la société bourgeoise dans *La technique* (pp. 198–206<sup>102</sup>; pp. 200–208<sup>103</sup>), enfin le propos tout entier de *Metamorphose du bourgeois*, on découvre une analyse globale qui s’apparente à une philosophie de l’Histoire. Nous nous proposons d’essayer de montrer — très superficiellement dans le cadre de cet article — d’une part que cette philosophie de l’Histoire s’inscrit dans une continuité qui va de Marx aux situationnistes, d’autre part que l’évolution récente et prévisible à vue humaine de nos sociétés est dans la ligne du mouvement qu’Ellul s’est efforcé de décrire et de décrypter entre 1954 et 1994.

Efforçons-nous de dissiper d’emblée deux sources possibles de malentendus. Tout d’abord, il n’est pas question d’essayer de dévoiler en Jacques Ellul un crypto-marxiste, l’intérêt ayant été suffisamment clair sur ce point pour que toute ambiguïté soit levée. Il n’a jamais ni caché ni renié ce qu’il devait à sa lecture de Marx, pas davantage ce qui l’en séparait radicalement lorsqu’il déclarait à ses étudiants qu’on ne pouvait être à la fois chrétien et marxiste. Or si Jacques Ellul a suscité et suscitera encore certainement des interprétations divergentes et des controverses, un point au moins ne fera pas débat: la profondeur de sa foi. Symétriquement, il ne peut être davantage question de prétendre que les quelques auteurs cités ci-après aient pu être influencés par les écrits de Jacques Ellul, d’en faire d’une certaine manière des “elluliens qui s’ignorent”. Certains d’entre eux peut-être connaissent peu ou mal la pensée d’Ellul, d’autres sans doute la contestent. Simplement, les éléments d’analyse historique, économique ou sociale qu’ils mettent en évidence sont de nature à conforter les conclusions qu’en d’autres temps Ellul avait tirées de ses propres observations. Un dernier point mérite une remarque préliminaire: en me référant à la pensée d’Ellul, de même qu’en effectuant des rapprochements de sa pensée à celle d’autres auteurs, je me suis affranchi de toute considération temporelle et de toute recherche du sens dans lequel a pu s’opérer l’influence réciproque. Mon propos n’est pas de livrer une exégèse des sources de la pensée d’Ellul

mais plus simplement de montrer la diversité de ces sources et le caractère toujours aujourd'hui très opérationnel des analyses elluliennes.

\* \* \*

*Metamorphose du bourgeois* paraît en 1967, la même année que *La société du spectacle* de Guy Debord<sup>104</sup>, et le *Traité de savoir-vivre à l'usage des jeunes générations* de Raoul Vaneigem<sup>105</sup>. Ce n'est pas un hasard: Ellul s'est intéressé à la réflexion menée par les situationnistes avec lesquels il eut des contacts vers le milieu des années soixante<sup>106</sup>. Car, contrairement à un autre lieu commun bien établi, si Ellul était très certainement un homme assez isolé, on ne peut à l'évidence pas le qualifier de "penseur solitaire". Ellul écrivant, sur quelque thème que ce soit, a lu tout ce qui compte, critique parfois, prend ses distances souvent, mais aussi approuve, cite, utilise, prolonge, conforte les réflexions d'un grand nombre de penseurs français et étrangers, de tous les horizons, et représentants des disciplines et des écoles les plus diverses.

On ne peut rien comprendre de l'intérêt qu'a pu susciter chez Ellul la démarche intellectuelle des situationnistes sans remonter au "tronc commun" des deux réflexions. Dans l'ensemble de la pensée marxiste, Ellul accordait une place prééminente et privilégiée à ce qui est au fondement de l'analyse économique et sociale de Marx et qui est aussi ce qui a résisté à l'épreuve des événements et des politiques. Dans le cours donné pendant trente ans à Bordeaux, l'exposé des réflexions sur la marchandise (le Chapitre 1[er] du Capital), sur l'aliénation et sur le travail<sup>107</sup> est particulièrement développé. Et dans le reste de l'œuvre, c'est sur ces thèmes qu'on retrouve l'essentiel des emprunts et des références au marxisme (références positives et emprunts revendiqués car Ellul ne se prive pas par ailleurs de critiquer d'autres aspects de la philosophie marxiste, de ses prolongements et de ses déviations).

Pour résumer très sommairement la démarche intellectuelle des situationnistes, essentiellement à travers la pensée de Debord, il faut en premier lieu se référer à la toute première phrase du Chapitre 1[er] du *Capital*: "La richesse des sociétés dans lesquelles règne le mode de production capitaliste s'annonce comme une immense accumulation de marchandises"<sup>108</sup>. La première thèse de *La société du spectacle* est ainsi rédigée:

---

<sup>104</sup> Guy Debord, *La société du spectacle* (Paris: Buchet/Chastel, 1967; 3[e] ed.: Paris: Gallimard, 1992). Nous citons la troisième édition.

<sup>105</sup> Raoul Vaneigem, *Traité de savoir-vivre à l'usage des jeunes générations* (Paris: Gallimard, 1967).

<sup>106</sup> Très peu d'informations existent sur ces contacts, sur leur nature, leur durée, leur étendue. Avec qui Ellul a-t-il eu des contacts? Sous quelle forme, entretiens ou échanges de lettres? Le seul élément explicatif de leur interruption qui ait été fourni est que le désaccord a été insurmontable sur la question de la foi. Ce qui n'est pas véritablement surprenant.

<sup>107</sup> En juillet 1980, Jacques Ellul écrit, pour un numéro spécial consacré au thème du Travail de la revue *Foi et Vie* dont il était alors le directeur, deux articles d'introduction et de conclusion. Le premier analyse l'évolution historique du travail, de sa place dans les sociétés traditionnelles jusqu'à l'époque contemporaine, le deuxième la valeur de l'activité humaine dans une perspective eschatologique. Ces deux textes font apparaître clairement que dans l'esprit d'Ellul, il n'y avait pas d'incompatibilité radicale entre une analyse sociologique objective (purement matérialiste pourrait-on dire) et une démarche de foi.

<sup>108</sup> Karl Marx, *Oeuvres*, tome I, *Economie*, Bibliothèque de la Pleiade, trad. Joseph Roy, ed. Max-

“Toute la vie des sociétés dans lesquelles regnent *les conditions modernes de production* s’annonce comme une immense accumulation de *spectacles*” (p. 3; c’est nous qui soulignons). Le sens et la portée des différences entre les deux phrases sont évidents: la formulation de Debord, “toute la vie”, marque l’extension de l’emprise de l’économie sur la société toute entière. De même, là où Marx analysait “le mode de production capitaliste”, Debord voit, fort justement, “les conditions modernes de production”: il est vrai qu’à l’époque où il écrit, tout observateur suffisamment lucide et objectif a compris que les économies dites socialistes ne sont pas autre chose que des “capitalismes d’État”. “Les conditions modernes de production” de Debord ne sont pas fondamentalement autre chose qu’une des manifestations de “la Technique” ellulienne.

Mais cette première thèse comporte une seconde phrase, tout aussi importante: “Tout ce qui était directement vécu s’est éloigné dans une représentation” (p. 3). En d’autres termes, l’économie a soumis à ses lois l’ensemble de la vie sociale et pour tout dire la vie de chaque personne individuellement. Le concept de spectacle chez Debord a peu à voir avec la montée de l’influence des médias, laquelle n’en est qu’une manifestation parmi d’autres, la plus “spectaculaire” sans doute mais non la plus fondamentale. Le spectacle, “dont le *mode d’être concret* est justement l’abstraction” (p. 15) est aussi le stade suprême de l’aliénation. Dans une des meilleures et plus claires introductions à Debord qu’on puisse trouver, l’italien Anselm Jappe écrit que: “L’analyse de Debord s’appuie sur l’expérience quotidienne de l’appauvrissement de la vie vécue, de sa fragmentation en sphères de plus en plus séparées, ainsi que de la perte de tout aspect unitaire dans la société. Le spectacle consiste dans la recombinaison des aspects séparés sur le plan de l’image”<sup>109</sup>.

Et plus loin Debord ajoute: “La *separation* est l’alpha et l’omega du spectacle” (p. 13).

Sans utiliser cette catégorie du spectacle, s’appuyant historiquement sur le processus d’aliénation de l’individu du fait de sa perte de maîtrise du produit de son travail, donc de son travail lui-même, jusqu’à la perte de la maîtrise de son être tout entier, Ellul est exactement dans la même ligne lorsqu’il écrit dans *Metamorphose*: “L’homme est progressivement éliminé en tant que sujet (apte à décider, autonome, singulier), par la croissance technicienne, qui lui impose des modes de vie, des comportements, des règles calculées, systématisées, de plus en plus rigoureuses. L’homme est soumis à une “réification” progressive par l’invasion des objets. Il vit dans un univers de plus en plus fourmillant d’objets artificiels, et se doit d’être, de se situer par rapport à cela. Il est traité lui-même en objet lorsque la nécessité d’organisation, de production, de consommation l’exige. Et c’est en cela que consiste la fameuse réification bien plus qu’en une dépossession de son travail produisant des marchandises. La théorie marxiste de la marchandise pour expliquer cette réification était exacte il y a un siècle. Elle n’est plus qu’un détail. La réification porte maintenant sur l’ensemble des secteurs de

imilien Rubel (Paris: Gallimard, 1965), p. 561. C’est nous qui soulignons.

<sup>109</sup> Anselm Jappe, *Guy Debord*, 2<sup>e</sup> éd. (Arles: Sulliver; Marseille: Via Valeriana, 1998), p. 22.

l'activite, de l'etre de l'homme. Elle concerne aussi bien sa vie familiale que ses loisirs, que sa culture. La reification n'est pas liee a une certaine organisation economique, mais a la croissance du milieu technicien. Et cette reification comporte un corollaire sur l'elimination progressive de l'homme par lui-meme" (p. 237<sup>110</sup>; pp. 273–274<sup>111</sup>).

En fait, Ellul et Debord menent des analyses tout a fait paralleles. On pourrait multiplier les citations croisees en ayant bien toujours a l'esprit que les deux textes, *La societe du spectacle* et *Metamorphose du bourgeois* ont ete ecrits en meme temps donc n'ont pas ete influences l'un par l'autre. Et Ellul ne fait pas davantage de *Metamorphose* un instrument critique des theses de Debord. Pourtant, il faut bien en venir aux differences fondamentales et mettre en evidence ce qui fait l'originalite d'Ellul et — de mon point de vue — la plus grande portee de son analyse par rapport aux idees des situationnistes.

Pour Ellul, est posee une fois pour toutes l'idee que le developpement de la Technique est le phenomene social central des societes modernes. Ainsi Ellul se montre d'une certaine maniere plus materialiste que Debord qui, lui, met au centre de son analyse sociale un element, le spectacle, qui est parfaitement objectif mais n'en demeure pas moins de l'ordre de la "superstructure" pour utiliser le vocabulaire marxiste. "...Il devient evident, ecrit Anselm Jappe, que le spectacle est l'heritier de la *religion*" (p. 24). Cependant, le meme Jappe refuse de voir dans "tout ceci" (p. 25), c'est-a-dire l'envahissement de la vie sociale ou bien plutot la transformation de la vie sociale en spectacle, en representation d'une societe virtuelle "ni un destin, ni un produit inevitable du developpement de la technique" (p. 25). Pour les situationnistes, l'origine lointaine du spectacle qui separe l'homme du monde reel en ne lui donnant a voir qu'une "representation" se situe dans la separation la plus anciennement institutionnalisee, celle du Pouvoir.

Le fond du probleme devient alors de savoir ce qu'est aujourd'hui le "Pouvoir". Car sauf a renoncer a la transformation de la societe — transformation que precisement les situationnistes posent en objectif — et quels que soient les processus de cette transformation, la question du Pouvoir demeure centrale (quand bien meme on se fixerait pour but de l'abolir, de l'aneantir plutot que de le prendre, ce qui a toujours ete jusqu'a ce jour l'objectif de tout revolutionnaire). Et sur ce point, la pensee des situationnistes me parait extremement faible: le Pouvoir est tantot personnalise dans une bourgeoisie mythique, tantot identifie a une "pratique sociale" aussi anonyme que collective, rarement quelque chose de bien identifiable permettant d'imaginer les formes d'une action efficiente.

A l'oppose, la pensee d'Ellul permet d'aller plus loin dans la comprehension des mecanismes de fonctionnement de la societe actuelle, celle qui merite l'appellation de "systeme technicien". Pour lui, c'est le bourgeois qui a produit l'ideologie du "faire" et

---

<sup>110</sup> Jacques Ellul, *The Ethics of Freedom*. Trans. and ed. Geoffrey W. Bromiley (Grand Rapids, MI: Eerdmans, 1976).

<sup>111</sup> *McCarthy on Trademarks* 18:65.

c'est cette ideologie qui a permis, justifie, soutenu, supporte le developpement de la technique. Bien entendu, et sur ce point aussi Ellul a ete parfaitement clair, l'ideologie du "faire" n'est pas le produit de la reflexion menee par quelques cercles d'intellectuels qu'il serait possible de situer tres precisement dans l'espace et dans le temps. Le "bourgeois" d'Ellul est a la fois le marchand de la Renaissance et l'industriel du XIXeme siecle, et sans aucun doute le philosophe des Lumieres et le Conventionnel de 1789 ; et peut etre aussi Pascal et Descartes. Et Racine. Et les Pilgrim Fathers. C'est probablement d'ailleurs cette incertitude des origines et leur diversite qui a fait la puissance de l'ideologie du faire et la capacite du bourgeois a assimiler tout ce qui peut servir a sa survie.

Tout le propos d'Ellul dans *Metamorphose du bourgeois* est precisement de montrer comment le "faire" bourgeois a, dans un premier temps, permis a celui-ci de prendre la realite du Pouvoir, economique d'abord, puis politique, puis intellectuel. Intellectuel, pas artistique: dans toute la periode industrielle, les sciences "dures" sont bourgeoises ; et meme l'economie politique, Marx le dira suffisamment. La seule contestation de l'ordre (ideologique) bourgeois vient du monde de l'art, le roman, la peinture, la poesie, le theatre, la philosophie. Or, Ellul demontre que l'ideologie bourgeoise du "faire" comporte precisement la faculte infinie de s'approprier, phagocyter tout ce qui a premiere vue semble lui etre le plus contraire.

Ainsi au fil du temps, le "faire" bourgeois imprime sa marque a la societe toute entiere. Jamais Ellul n'ecrira — au contraire — que tout le monde est devenu bourgeois. En revanche il maintiendra dans tous les ecrits posterieurs a 1967 l'idee que le "systeme technicien" est "bourgeois" par essence et en quelque sorte "de naissance". Et il s'agit bien d'un systeme au sein duquel les individus, fussent-ils des potentats du monde economique ou politique, n'ont strictement aucun pouvoir d'en inflechir sensiblement la marche.

\* \* \*

Car en retour, le developpement de la technique faconne la societe de telle sorte qu'elle elimine les marges de manœuvre, les espaces de liberte. On peut donner acte aux situationnistes d'avoir mis en evidence le concept de spectacle pour qualifier une societe qui est a la fois un monde de l'abstraction (dans ses fondements intellectuels, scientifiques et techniques), un monde de l'apparence (dans le mode de vie qu'elle propose), enfin un monde intrinsequement "faux" dans lequel "le detachement de la marchandise de tout besoin humain authentique atteint finalement un niveau pseudo-religieux avec les objets manifestement inutiles"<sup>112</sup> En fait, le "faire" bourgeois qui etait a l'origine la manifestation d'une volonte individuelle, puis d'un "vouloir-vivre ensemble" democratique, semble s'etre desormais mue en un "faire" autonome dans un monde qui n'aurait pas seulement perdu mais abandonne la maitrise de son avenir.

---

<sup>112</sup> Jappe, p. 27. Debord citait en exemple du fetichisme de la marchandise les collections de portecles publicitaires. Au niveau symbolique, il avait tout a fait raison. Le probleme est malheureusement moins superficiel, les modifications phenomenales des comportements de consommation depuis 1967 le demontrent amplement (*La societe du spectacle*, pp. 43-44).

On peut trouver de multiples manifestations de cette derive, les plus fondamentales etant sans doute celles qui desormais touchent l'etre humain lui-meme. C'est pourquoi nous nous attacherons a trois elements qui nous paraissent fondamentaux: la disparition des valeurs, la modification du rapport au temps, la mise en question de notre etre biologique.

Bien entendu, on pourra objecter qu'aucune valeur (au sens de categorie morale, positive ou negative) n'a "disparu": le Bien, le Mal (la preuve, il existe meme un "Axe du Mal" qui suppose implicitement qu'on doive lui opposer un "Empire du Bien"), la solidarite, la compassion, ... Faut-il en citer davantage? Ce n'est pas de cela qu'il s'agit mais d'objectifs a l'action affiches, proclames, des valeurs au sens general de motivations. Pour etre plus concret, sinon trivial, quelles sont, a leurs propres yeux, les justifications d'action des entrepreneurs modernes ou des dirigeants actuels des grandes nations? Il ne saurait etre question d'idealiser le passe: tres certainement, concupiscence, cupidite, sublimation de la pulsion sexuelle n'etaient pas absents de l'agir de nos peres mais au cote vraisemblablement (et sans doute souvent au-dessus en intensite) d'ambitions d'un ordre plus eleve.

Mais en realite, on ne peut que constater l'absence ou au moins la quasi-absence de transcendance des objectifs. Oh, lorsque nous employons le mot de transcendance, nous n'entendons faire aucune reference a un Autre ou un Au-dela. Nous visons seulement une nature de motivation qui depasserait l'action en elle-meme. Dans un passe pas si lointain, et dans l'ordre decroissant precisement de transcendance, on a evoque successivement le Salut, puis l'ideologie du Bonheur, puis encore le bien-etre materiel (etant generalement sous-entendu qu'il etait pour l'avenir la condition et le garant du progres moral et de l'elevation spirituelle).

Nous avons change tout cela, passant en quelques siecles de la quete du Salut a la "valeur pour l'actionnaire", du pari de Pascal aux paris technologiques les plus insensés. Dans un monde de competition, il n'y a pas d'autre sens que la simple survie ; il suffit pour s'en convaincre d'ecouter le discours dominant du monde de l'entreprise sur la justification des decisions: "Nous n'avons pas le choix", "Aller de l'avant ou disparaitre". Or, si ce discours est acceptable, justifie, s'agissant d'une entreprise qui, si grande soit-elle, ne represente toujours qu'une part minuscule de la societe humaine, le meme discours semble etre desormais celui destine a inspirer les nations. Le "faire" est ainsi purifie de tout objectif autre que lui-meme et la motivation (je n'ose plus ici employer le terme de valeur) se limite a la recherche de la survie ou de la securite individuelle ou collective. Aussi surprenant que cela puisse paraître lorsqu'on considere la variete et les performances des outils de toutes natures qu'elle offre, la societe technicienne semble ne plus offrir la possibilite de changer le monde. En revanche elle impose l'adaptation permanente. Le sommet du non-signifiant est atteint lorsqu'on peut lire dans *Le Monde* du 30 septembre 2003 que "le changement devient une valeur" (sans qu'on sache d'ailleurs tres bien si l'auteur constate un etat de fait ou enonce une regle de conduite). Prendra-t-on conscience rapidement que sur le plan des relations humaines, la competition ne peut avoir que deux significations: celle d'un jeu dans

lequel l'enjeu est de pure satisfaction intellectuelle, celle de la survie des plus forts et de l'élimination correlative des plus faibles. Le second cas de figure est celui que nos lointains ancêtres ont affronté pendant quelques millénaires...

Bien entendu, ce serait faire injure aux managers et autres conseils en organisation que de laisser croire qu'ils n'ont pas conscience de la vacuité des "valeurs" mises en avant, particulièrement dans les cas où le changement, imposé par les conséquences d'une stratégie déficiente, ne peut être affecté d'un signe positif qu'au regard du pire, en l'occurrence la perte de l'emploi. Mais sans même aller jusqu'à évoquer des hypothèses aussi noires, l'émiettement de l'activité, y compris dans le secteur tertiaire et chez les cadres, a conduit à imaginer des modes d'organisation du travail censés valoriser et développer les qualités individuelles, l'autonomie, l'esprit d'initiative. "Le nouvel esprit du capitalisme"<sup>113</sup> s'incarne donc principalement dans le "mode de gestion par projet" qui apparaît en effet parfaitement adapté à l'émiettement des compétences et des savoirs. Il est douteux qu'il puisse longtemps faire illusion dans le cadre d'une organisation de l'entreprise demeurée presque partout hiérarchisée et pyramidale.

Dans un autre ordre d'idée, l'évolution de la société technicienne a modifié profondément le rapport au temps, que ce soit au niveau de l'individu intégré dans une organisation sociale incluant à la fois le travail et le nontravail (parfois d'ailleurs en laissant très floue la séparation entre les deux), ou au niveau de la société toute entière. On a vu depuis une vingtaine d'années se multiplier les ouvrages consacrés à ce sujet sensible du rapport au temps<sup>114</sup>. Or, dans *La technique*, Jacques Ellul évoquait l'ouvrage intitulé *Le temps harcelant* dont l'auteur, Enrico Castelli, montrait "comment l'homme du monde technique vit sans passé et sans avenir, comment la perte du sens de la durée ôte son sens au droit et au langage". Et encore: ". la technique, grâce aux moyens perfectionnés qu'elle met à la disposition de l'homme, supprime effectivement tous les délais qui étaient indispensables au rythme de vie"<sup>115</sup>.

Tout le malaise de l'homme moderne dans son rapport au temps est contenu dans ces mots datant maintenant de plus de 50 ans (une éternité dans le contexte d'accélération du déroulement temporel tel que nous le vivons maintenant !). Cinquante-six ans plus tard, Nicole Aubert ne fait qu'actualiser les analyses de Castelli qu'elle ne cite d'ailleurs pas (qu'on ne voie pas dans cette notation un reproche mais le simple constat que l'abondance de la littérature sur le sujet est telle que des ouvrages écrits vers le milieu du vingtième siècle ne constituent plus des références obligées — l'immense majorité des titres référencés par Mme Aubert, plus de 200 livres et articles, sont datés après 1990).

Or, ce malaise par rapport au temps, qui, dans une première approche, semble ne toucher que l'individu, ou tout au plus les organisations œuvrant dans le champ de

---

<sup>113</sup> Titre d'un livre de Luc Boltanski et Eve Chiapello (Paris: Gallimard, 1999).

<sup>114</sup> L'un des derniers en date: *Le culte de l'urgence*, sous-titre *La société malade du temps*, de Nicole Aubert (Paris: Flammarion, 2003).

<sup>115</sup> *La technique*, p. 297-298, n.1 [1954] ; p.298, n.1 [1990] . V. Enrico Castelli, *Il tempo esaurito* (Rome: Bussola, 1947). C'est nous qui soulignons.

l'économique ou regne justement ce "culte de l'urgence", affecte en réalité beaucoup plus profondément le corps social dans la manière dont il se situe dans le présent par rapport à son passé et à son avenir. Dans son livre très récent<sup>116</sup>, François Hartog analyse les différentes manières, ce qu'il appelle les "régimes d'historicité", c'est-à-dire comment les sociétés vivent les différentes manières d'être dans le temps, les diverses formes de délimitation et "d'articulation du passé, du présent et du futur" (p. 27). D'une époque où le passé était vu comme le modèle indépassable à répéter sans fin, on avait évolué, avec la philosophie des Lumières et la Révolution française, vers une conception dans laquelle l'avenir était identifié à la promesse d'un progrès continu et garanti. Or, constate Hartog, notre conception collective du temps est celle de l'historicisation d'un présent qui se suffit à lui-même, un présent massif, envahissant, omniprésent, "un présent perpétuel, insaisissable et quasiment immobile, cherchant malgré tout à produire pour lui-même son propre temps historique" (p. 28).

"Le présent est devenu l'horizon. Sans futur et sans passé, il génère, au jour le jour, le passé et le futur dont il

a, jour après jour besoin et valorise l'immédiat" (p. 126). Signes de cette conception, la mort escamotée et, en même temps, la présence permanente de la mémoire, le goût de la conservation du patrimoine, de la célébration, du repentir et du pardon par-delà les siècles, toutes occasions de réécrire une histoire nouvelle, mieux adaptée aux besoins du moment.

Qu'on veuille bien me pardonner ce qui pourrait passer pour une plaisanterie facile. Mais comment pourrait-il échapper au malaise, cet individu qui survit dans un présent mal relié au passé comme au futur, et est en même temps contraint de s'adapter à toute vitesse à des changements techniques permanents?

Privé des repères que sont les valeurs par lesquelles il pourrait trouver un sens à ses actes, dépossédé du monde qui l'entoure par l'organisation du spectacle, paroxysme de l'aliénation, privé des repères temporels que lui donneraient un passé compris et assumé et un avenir qu'il aurait, sinon la certitude, au moins une espérance raisonnable de maîtriser, l'être humain est enfin remis en question dans son être biologique.

Le thème de "l'élimination de la personne" par la technique est très présent chez Ellul. Il met déjà cette idée en valeur dans son commentaire de l'économie politique marxiste en notant que l'absence du facteur humain dans la pensée des économistes bourgeois ne répond pas seulement à une commodité d'exposition mais traduit très précisément la réalité économique du temps. A fortiori, la réalité économique deux siècles plus tard. Mais nous ne sommes pas encore là dans l'analyse des conséquences du développement de la technique. Des 1967, dans *Metamorphose du bourgeois*, Ellul invoque l'ethnologue Leroi-Gourhan (*Le geste et la parole*) en écrivant: ". l'homme depuis l'origine en créant des objets techniques obéit à son génie particulier, il se donne les moyens de dominer un monde hostile, mais *en même temps* tout le développement du processus technique

---

<sup>116</sup> François Hartog, *Des régimes d'historicité: Présentisme et expériences du temps* (Paris: Le Seuil, 2003).

consiste en une élimination de l'homme par ses propres techniques"<sup>117</sup>. On retrouve cette idée, développée et amplifiée, dans tous les ouvrages ultérieurs, *Autopsie de la Revolution*<sup>118</sup>, *Le système technicien*, *Le bluff technologique*.

Or, le développement continu d'anciennes ou de nouvelles techniques touche maintenant très directement la personne dans son être: il ne s'agit plus de l'éliminer (pour l'instant on ne se passe pas — pas encore — de l'ingénieur, du pilote de chasse, moins encore du consommateur) mais d'améliorer la "performance" par l'apport des techniques. L'amélioration des performances sportives par l'apport de substances pharmaceutiques n'a rien d'un phénomène nouveau. On notera seulement ici le caractère totalement absurde de la généralisation de telles pratiques, du point de vue strict de l'exploit sportif. Mais bien entendu, des considérations économiques et financières sont en jeu. Alors ... De même, la mise à disposition d'outils de calcul, de simulation, etc. n'a rien de plus de très nouveau: la différence entre le boulier chinois et un ordinateur Cray 2 tient à ce que l'utilisateur du boulier accroissait son pouvoir tandis que l'ingénieur a perdu une part du sien.

Mais les tendances récentes que nous voulons mettre en lumière ont peu à voir avec les pratiques douteuses de certains sportifs ou la production de moyens de calcul de plus en plus puissants. La technique met en question l'être humain biologique sous deux aspects:

-d'une part, l'évolution de certains outils met en évidence l'insuffisance des capacités humaines: le pilotage de certains avions militaires ne peut plus être assuré seulement en s'appuyant sur le "fonctionnement normal" d'un être humain, sur la rapidité de son système neuronal, la qualité de ses réflexes. Le temps est proche où il deviendra nécessaire, soit de se passer du pilotage humain (c'est la tendance au développement parallèle des missiles de croisière et des drones), soit d'accroître la vitesse de circulation de l'information entre nous et les outils, en quelque sorte d'améliorer la qualité et la fiabilité des "connexions" entre les deux. D'autre part, le développement des neurosciences permet d'envisager qu'apparaisse une technique nouvelle, celle du neuromarketing fondée sur une meilleure compréhension du cerveau humain, donc de sa réceptivité à telle ou telle forme de publicité. Or, cet exemple est emblématique du fonctionnement du système technicien ou de ce que certains nomment "Technoscience". Des scientifiques mettent en évidence telle ou telle loi physique, chimique, biologique, etc. On met immédiatement à l'étude quelques applications positives (dans le cas présent des neurosciences, ce pourrait être — mais nous n'en avons pas entendu parler — la thérapeutique d'Alzheimer, l'amélioration de l'apprentissage des langues, etc.). Mais il faut surtout trouver très vite des applications "rentables", d'où le neuromarketing.

\* \* \*

---

<sup>117</sup> *Metamorphose*, p. 237 [1967] ; p. 274 [1998] . V. André Leroi-Gourhan, *Le geste et la parole* (Paris: Albin Michel, 1965).

<sup>118</sup> Jacques Ellul, *Autopsie de la révolution* (Paris: Calmann-Lévy, 1979).

C'est sur cette dernière notation que nous nous essaierons à une conclusion toute provisoire en forme de question. Dans la mise en œuvre, qu'il faut considérer maintenant comme quasi acquise, des techniques nouvelles du neuromarketing, l'idée de l'efficacité ne fait pas débat. Sa rentabilité non plus. Il convient de remarquer que l'efficacité étant mesurée principalement à l'aune de la rentabilité, le seul élément de nature à provoquer une remise en cause du neuromarketing serait le constat d'une rentabilité insuffisante. S'interroge-t-on sur la dimension éthique de la question? Certes, et M. Olivier Oullier, chercheur en neurosciences au Center for Complex Systems and Brain Sciences à la Florida Atlantic University de Boca Raton, pose la question de la légitimité de l'usage du neuromarketing, et évoquant le spectre d'Orwell, renvoie finalement la balle au législateur<sup>119</sup>. Mais en réalité le problème est déjà résolu et c'est d'ailleurs un faux problème: les techniques du neuromarketing ne sont qu'un perfectionnement, apporté par les progrès de la connaissance scientifique, aux vieilles techniques artisanales et empiriques de la publicité et de la propagande; comment pourrait-on, dans ces conditions, en démontrer objectivement la plus grande nocivité?

En fait, il n'est qu'une question qui n'a pas été posée et qu'on ne posera pas: quelle est l'utilité réelle du neuromarketing? Mais pour avoir seulement envie de poser cette question, il serait préalablement nécessaire que la société ait établi les fins supérieures qui seules pourraient constituer l'étalon de mesure d'une utilité sociale incontestable.

# Re-Viewing Ellul

## Presence of the Kingdom

by Jacques Ellul

Reviewed by Virginia Landgraf

*Presence au monde moderne: problemes de la civilisation post-chretienne.* Geneva: Roulet, 1948. English translation by Olive Wyon published with a foreword by William Stringfellow as *The Presence of the Kingdom* (New York: Seabury, 1967). Second edition of Wyon's translation, with a new preface and afterword by the author and an introduction by Daniel B. Clendenin, published under the same English title (Colorado Springs: Helmers & Howard, 1989).

This 1948 book is Ellul's manifesto. Declaring an opposition between the spirit of "this present age," which he believes is always a will to death, and the spirit of Christ which Christians are called to bear in this world, he announces his diagnosis of the problems of contemporary civilization and sketches what Christian resistance might look like.

The diagnosis of civilization's problems will look familiar to those who know Ellul's later work. A vicious circle is operating based on the reverence for facts (even dreadful realities such as the atomic bomb); technical, political, and social activities aimed at material effectiveness; and the drowning out of communication between persons by mass media and ideological myths. The elements of this circle rob people of transcendent reference points by which to question these facts, activities, or noises. Means for material success have become ends in themselves, altars on which are sacrificed the time, freedom, and lives of flesh-and-blood human beings.

In face of this vicious circle, Ellul criticizes some common approaches of the churches as unbiblical and ineffectual. Spiritualization of the Christian message, as if the material world did not matter, denies the calling of Christians to live *in* the world. Baptism by the churches of worldly projects, such as socialism or post-war reconstruction, denies their calling to be not *of* the world. Either of these options destroys the tension between the "already" and the "not yet" in this world prior to the eschaton. Christians may be called to withdraw from worldly projects or to join them, but their refusal should never be escapism, and their cooperation should never be confused with identification of a given activity as the one Christian way.

Ellul believes that the true calling of Christians is to bear the eschatological presence of Christ here and now. This presence is a truly revolutionary force because it brings

judgment to bear on the forces of the world and hope for a future beyond the vicious circle of material facts. This presence should issue in a Christian “style of life” which appears as a sign to those outside the church, an alternative to the way things are currently going. Ellul is reluctant to give programmatic specifics about this style of life, except to say that it involves one’s material commitments, personal relationships, and involvements in the wider society.

Because this is one of Ellul’s earliest books, he sometimes makes arguments which he developed at length elsewhere, such as the autonomy of technique. Even one who knows the details of these arguments may question the hyperbolic nature of some of his statements. Do the workings of the world always lead towards suicide? One may agree that many forces today drive the world towards self-destruction without being able to isolate a diabolical element in every phenomenon. It is ultimately a theological assumption to believe that this world is ruled by powers opposed to God. Without such an assumption, many of Ellul’s arguments would not make sense. One might believe that these forces will reach a point of exhaustion and right themselves.

Similarly, one may disagree with the positive side of his proclamation if one holds different theological assumptions. A theology of gradual improvement may have no use for a tension between the “already” and “not yet.” One who does not believe in the decisiveness of Jesus Christ may question whether that event can bring a transcendent perspective to bear on a closed system.

However, if one accepts that the world is fallen and that the incarnation, death, and resurrection of Jesus Christ are decisive for the redemption of creation, Ellul’s argument still holds appeal today. Even if technique is not as autonomous from human ends as Ellul thought, technique still manifests a kind of excess, and the desire to create more powerful means leads to the forced adjustment of human beings to these means. Consider the obsolescence of computer hardware and software which are in good working order. Desires for technical effectiveness, power over others, and economic wealth are probably mixed in most people’s psyches into a more generalized desire for security or safety. Attempts to isolate any one of these desires as *the* driving force of society in a given time may be mistaken. However, analysis of the ways in which technical effectiveness, political power, or financial capital become ends in themselves is still helpful.

## News & Notes

*Please submit news, announcements, and inquiries of interest to Ellul Forum readers. E-mail to IJES@ellul.org or mail to IJES, P.O. Box 5365, Berkeley CA 94705 USA. Deadline for Fall 2004 issue: September 15, 2004.*

—**International Colloquium on Ellul: POITIERS, 21–22 OCTOBER 2004**

Patrick Chastenet, AIJE President and Professor of Political Science at the University of Poitiers, has announced the program for the international colloquium taking

place 21–22 October 2004. The overall title of the program is “Jacques Ellul: Libre examen d’une pensée sans frontières.” The nineteen scheduled papers will cover explore a wide range of topics including technology, politics, law, art, propaganda and ethics. For further information, including how to register, visit [www.ellul.org](http://www.ellul.org) or [www.jacques-ellul.org](http://www.jacques-ellul.org).

—**ALPHONSE MAILLOT**, a pastor and theologian in the Reformed Church of France died on December 5, 2003 at the age of 83. Maillot was a good friend and colleague of Jacques Ellul in the Reformed Church and one of Ellul’s favorite biblical scholars. Among his many published books were a three-volume commentary on the Psalms, an exposition of Romans, and a study of the Beatitudes. In his own forthcoming book on the Ten Commandments, David Gill writes that Maillot’s book on the Decalogue is by far the best and most insightful work he has ever read on the topic.

—**XNASTS SYMPOSIUM ON ELLUL**. Bill Vanderburg informs us that a special symposium on Jacques Ellul took place February 21, 2004, at the annual meeting of the National Association for Science, Technology, and Society in Baltimore. Some or all of the ten papers presented at the meeting will be published in a future issue of the *Bulletin of Science, Technology, and Society*. More information available at [www.nasts.org](http://www.nasts.org).

—**SOCIALCRITIC.ORG**. The *Social Criticism Review*, (Hans Talmon, Editor), web site [www.socialcritic.org](http://www.socialcritic.org), is a “forum for ideas that go against the current.” Based in the Netherlands, SCR offers an outstanding selection of over 1000 online readings on the crisis of modernity, including material by Jacques Ellul. Check out this terrific resource.

—**MEDIA ECOLOGY ASSOCIATION CONFERENCE**, 1013 JUNE 2004. Joyce Hanks will be a speaker on “Media Education in a Technological Society” at the annual convention of the MEA at Rochester Institute of Technology in New York. The MEA is an association of media and communications scholars interested in the work of thinkers like Jacques Ellul, Neil Postman, Walter Ong, Marshall McLuhan, and Harold Innis.

—**CHRISTIANITY & ANARCHISM CONFERENCE**, 31 JULY 2004. Andy Baker invites all interested to participate in a one-day conference on “Engaging the Powers: Anarchism, Christianity, and Social Change,” July 31, 2004, in New York City. Topics will include voting, imprisonment, social change, and the Catholic Worker movement. More info by writing Andy at 332 East 19<sup>th</sup> Street, #14, New York NY 10003, by visiting <http://conference.jesusradicals.com>, or by telephoning 646-425-3272.

## **Advert: International Jacques Ellul Society**

[www.ellul.org](http://www.ellul.org)

P.O. Box 5365, Berkeley CA 94705, USA [IJES@ellul.org](mailto:IJES@ellul.org) Tel/Fax: 510-653-3334

The IJES (with its francophone sister-society, L’Association Internationale Jacques Ellul) links together scholars and friends of various specializations, vocations, back-

grounds, and nations, who share a common interest in the legacy of Jacques Ellul (1912-94), long time professor at the University of Bordeaux. Our objectives are (1) to preserve and disseminate his literary and intellectual heritage, (2) to extend his social critique, especially concerning technology, and (3) to extend his theological and ethical research with its special emphases on hope and freedom.

The IJES and AIJE have been founded by a group of long-time students, scholars, and friends of Jacques Ellul, with the counsel and support of Jean, Yves, and Dominique Ellul, and as a French-American collaboration.

#### **Board of Directors**

Patrick Chastenet, University of Poitiers; Clifford Christians, University of Illinois; Dell DeChant, University of South Florida; Andrew Goddard, Oxford University; Darrell Fasching (Vice-President), University of South Florida; David Gill (President), Berkeley; Joyce Hanks, University of Scranton; Ken Morris (Secretary-Treasurer), Berkeley; Carl Mitcham, Colorado School of Mines; Langdon Winner, Rensselaer Polytechnic Institute

### **Joining the IJES**

To become a member, anywhere in the world, and receive the twice-yearly Ellul Forum, submit annual dues of US \$20 to "IJES" (use an international postal money order or bank check drawn in US dollars—or pay electronically with a credit card to "IJES@ellul.org" at [www.paypal.com](http://www.paypal.com)) making sure to note your name, complete mailing address, and purpose of payment.

## Editorial

Le premier numéro des *Cahiers Jacques Ellul* a trouvé son public. Ce succès est un encouragement pour son éditeur, l'Association Internationale Jacques Ellul. Paradoxalement, cette réussite nourrit aussi chez certains quelques inquiétudes. Didier Nordon a fait un (mauvais) rêve: la pensée d'Ellul, ou du moins son ersatz, citée à tort et à travers par l'ensemble de la classe politico-médiatique. Pour éviter sa banalisation et sa trahison, il encourage l'A.I.J.E. à rester ellulienne, donc petite !

À l'inverse, notre ami David W. Gill s'inquiète moins du déviationnisme que des risques de division en petites chapelles recroquevillées sur elles-mêmes. Il milite résolument en faveur de l'ouverture et du pluralisme. La publication en version originale (outre l'occasion d'entretenir notre lecture de l'anglais et de rendre la politesse à *The Ellul Forum*) de l'article du président de l'*International Jacques Ellul Society* a valeur de symbole. Elle renforce les liens qui nous unissent aux amis américains d'Ellul par-delà toute considération de politique internationale.

Les attentats du 11 septembre 2001 et le déclenchement de la « guerre contre le terrorisme » en Afghanistan, en Irak et ailleurs, sont l'occasion de rappeler l'exigence chrétienne radicale d'Ellul en la matière. Non seulement il réfute la fameuse théorie de « la guerre juste » qui légitime le recours à la violence mais il plaide aussi en faveur de la « non-puissance », c'est-à-dire le refus délibéré d'exercer sa puissance. Si la guerre peut s'avérer inévitable du point de vue politique, elle ne peut jamais se justifier au regard de la foi en Christ.

Sur le même sujet, Patrick Troude-Chastenet se demande si l'on peut vouloir faire la guerre au nom (de la défense) du Droit sans risquer soit de perdre la première soit de bafouer le second. Le traitement que l'Amérique réserve à ses prisonniers — au nom de l'efficacité ! — illustre selon lui la difficulté des démocraties pluralistes à respecter leurs propres règles lorsqu'elles sont confrontées à la menace terroriste.

Il est toujours question des Etats-Unis avec Franck Bousquet qui décrit les films hollywoodiens comme l'illustration parfaite de la société technicienne analysée par Ellul. Ne retrouve-t-on pas en effet le principe technique — la recherche de l'efficacité et donc la valorisation du spécialiste — à l'origine de la plupart des scénarios des *blockbusters*?

Daniel Cerezuelle s'est intéressé pour sa part à deux films de science-fiction symptomatiques de notre fascination pour les techniques informatiques. À la manière complaisante de *The Matrix* ou plus distanciée de *Avalon*, cette plongée dans le monde virtuel flatterait nos desirs régressifs et nous éloignerait aussi dangereusement du « sens des réalités » que le ferait une drogue.

Le *Dossier special* de cette livraison est consacré à la technique. Il débute par ce que Jacques Ellul lui-même présentait comme le résumé d'un livre longtemps introuvable *Le Système technicien* (1977).

Si Dominique Bourg reconnaît volontiers à l'auteur de *La Technique ou l'enjeu du siècle* (1954) la primauté d'une réflexion sociologique argumentée sur la question de l'autonomie de la technique, il ne partage ni ses prémisses ni ses conclusions. Sa méthode reposerait, selon lui, sur un substrat moral qui en réduirait singulièrement la validité. Cette interprétation critique confirme la pertinence et l'actualité de la pensée d'Ellul en cette année marquant le dixième anniversaire de sa mort. Alain Gras souhaite pour sa part compléter la critique ellulienne en soulignant l'importance du problème énergétique et le privilège accordé au feu dans notre modèle de développement. Réfutant la thèse évolutionniste d'un progrès technique continu, il considère que la bifurcation nous ayant conduit à la « société thermo-industrielle » n'avait rien d'inéluctable, et que seule la voie de la décroissance nous fera sortir de cette impasse.

Le milieu technicien dans lequel nous vivons permet-il encore la réflexion indispensable à une culture véritable? La culture technicienne se réduit en fait à une masse d'informations placées sous le signe de l'éclaté et de l'éphémère. Jacques Ellul rejoint ici Edgar Morin pour diagnostiquer « le déferlement d'un nouveau type d'ignorance dans l'accumulation des connaissances ». La culture n'existe selon Ellul que si elle soulève la question du sens de la vie: la question du pourquoi et non pas celle du comment.

La rubrique *Archives* s'ouvre par un texte tiré d'un manuscrit encore inédit intitulé: *Theologie et Technique*. Nous sommes reconnaissants à ses enfants de nous avoir autorisé à en publier un premier extrait dans lequel notamment Jacques Ellul confronte ses propres recherches aux travaux de René Girard.

Alors que l'œuvre de Max Weber continue de susciter de nouvelles traductions, il nous a paru intéressant de publier la recension de la première édition en français de *L'éthique protestante et l'esprit du capitalisme* (1964). Après avoir exposé fidèlement la thèse weberienne, Ellul écarte les critiques traditionnelles résultant pour la plupart d'une lecture hâtive et leur substitue ses objections personnelles qui n'invalident pas pour autant la démonstration générale du grand sociologue allemand.

Enfin, Jacques Ellul formule quatre propositions pour tenter de fonder une éthique dans une société technicienne. S'appuyant pour commencer sur les notions de seuils et de limites chères à Ivan Illich, il prône une éthique de non-puissance, de liberté, de tension et de transgression.

## Resources for Ellul Studies

[www.ellul.org](http://www.ellul.org) & [www.jacques-ellul.org](http://www.jacques-ellul.org)

### **Two indispensable web sites**

The IJES/AIJE web site at [www.ellul.org](http://www.ellul.org) contains (1) news about IJES and AIJE activities and plans, (2) a brief and accurate biography of Jacques Ellul, (3) a complete bibliography of Ellul's books in French and English, and (4) links and information on other resources for students of Jacques Ellul. The new AIJE web site at [www.jacques-ellul.org](http://www.jacques-ellul.org) offers a French language supplement.

### **The Ellul Forum CD: 1988–2002**

The first thirty issues of *The Ellul Forum*, some 500 published pages total, are now available (only) on a single compact disc which can be purchased for US \$15 (postage included). Send payment with your order to "IJES," P.O. Box 5365, Berkeley CA 94705 USA.

### **Cahiers Jacques Ellul**

*Pour Une Critique de la Société Technicienne*

The second issue of *Cahiers Jacques Ellul*, an annual journal edited by Patrick Chastenot and published by our sister society, L'Association Internationale Jacques Ellul, is now off the press. It is available for 20 euros (postage included) to individuals outside France, and for 25 euros to libraries. The theme of the second issue just released is "La Technique."

*Cahiers Jacques Ellul* is an essential new reference for those interested in Ellul's ideas.

**Jacques Ellul: An Annotated Bibliography of Primary Works** by Joyce Main Hanks. *Research in Philosophy and Technology*. Supplement 5. Stamford, CT: JAI Press, 2000. xiii., 206 pages. \$87. ISBN: 076230619X.

This is the essential guide for anyone doing research in Jacques Ellul's writings. An excellent brief biography is followed by a 140-page annotated bibliography of Ellul's fifty books and thousand-plus articles and a thirty-page subject index. Hank's work is comprehensive, accurate, and invariably helpful. This may be one of the more expensive books you buy for your library; it will surely be one of the most valuable. Visit [www.elsevier.com](http://www.elsevier.com) for ordering information.

### **Alibris—used books in English**

The Alibris web site ([www.alibris.com](http://www.alibris.com)) recently gave thirty titles of used and out-of-print Jacques Ellul books in English translation available to order at reasonable prices.

**Librairie Mollat—new books in French**

Librairie Mollat in the center of old Bordeaux ([www.mollat.com](http://www.mollat.com)) is an excellent resource for French language books, including those by and about Ellul. Mollat accepts credit cards over the web and will mail books anywhere in the world.

**Used books in French:**

**two web resources**

Two web sites that will be of help in finding used books in French by Jacques Ellul (and others) are [www.chapitre.com](http://www.chapitre.com) and [www.livre-rare-book.com](http://www.livre-rare-book.com).

**Reprints of Nine Ellul Books**

By arrangement with Ingram and Spring Arbor, individual reprint copies of several Ellul books originally published by William B. Eerdmans can now be purchased. The books and prices listed at the Eerdmans web site are as follows: *The Ethics of Freedom* (\$40), *The Humiliation of the Word* (\$26), *The Judgment of Jonah* (\$13), *The Meaning of the City* (\$20), *The Politics of God and the Politics of Man* (\$19), *Reason for Being: A Meditation on Ecclesiastes* (\$28), *The Subversion of Christianity* (\$20), and *The Technological Bluff* (\$35). *Sources and Trajectories: Eight Early Articles by Jacques Ellul* translated by Marva Dawn is also available (price unknown).

Have your bookstore (or on-line book dealer) “back order” the titles you want. Do not go as an individual customer to Eerdmans or Ingram/Spring Arbor. For more information visit “Books on Demand” at [www.eerdmans.com](http://www.eerdmans.com).

**Ellul on Video**

French film maker Serge Steyer’s film “Jacques Ellul: L’homme entier” (52 minutes) is available for 25 euros at the web site [www.meromedia.com](http://www.meromedia.com). Ellul is himself interviewed as are several commentators on Ellul’s ideas.

Another hour-length film/video that is focused entirely on Ellul’s commentary on technique in our society, “The Treachery of Technology,” was produced by Dutch film maker Jan van Boekel for ReRun Produkties (mail to: Postbus 43021, 1009 ZA Amsterdam).

If you try to purchase either of these excellent films, be sure to check on compatibility with your video system and on whether English subtitles are provided, if that is desired.

## Cover

Jacques Ellul in the 1960s

”The mechanization of actions is accompanied by the mechanization of sporting goods—stop watches, starting machines, and so on... The individual, by means of the discipline imposed on him by sport, not only plays and finds relaxation from the various compulsions to which he is subjected, but without knowing it trains himself for new compulsions... [R]eal play and enjoyment... improvisation and spontaneity all disappear.”

Jacques Ellul

*The Technological Society* (1954; ET 1964), p. 383

## Information on The Editorial Board & More

**The Ellul Forum**

**For the Critique of Technological Civilization**

**Founded 1988**

The Ellul Forum is published twice per year, in the Spring and Fall. Its purpose is to analyze and apply Jacques Ellul’s thought to our technological civilization and carry forward both his sociological and theological analyses in new directions.

**Editor**

Clifford G. Christians, Univ. of Illinois, Urbana Associate Editor

David W. Gill, Berkeley, California

**Contributing Editors**

Patrick Chastenet, University of Poitiers, France Dan Clendenin, Stanford, California

Peter F. W. Davies, Buckinghamshire College, UK Marva Dawn, Vancouver, Washington

Dues, Subscriptions, & Payment Options The Ellul Forum is sent twice per year to all members of the IJES. An annual membership/ subscription, anywhere in the world, costs US \$20. Please send check or money order (e.g., international postal money order) drawn in US funds for \$20 to “IJES”, P.O.Box 5365, Berkeley CA 94705 USA—or make payment to “IJES@ellul.org” electronically at [www.paypal.com](http://www.paypal.com). Be sure to note your address and the purpose of your payment.

### **Change of Address**

Please notify IJES of any change in your address. Our mailings are infrequent and postal forwarding orders expire.

### **Manuscript Submissions**

For Ellul Forum writers’ guidelines, visit [www.ellul.org](http://www.ellul.org)—or e-mail: [Editor@ellul.org](mailto:Editor@ellul.org)—or write Cliff Christians, EF Editor, Institute of Communications Research, University of Illinois, 810 S. Wright St., # 228, Urbana IL 61801 USA We welcome your proposals.

### **Books, Reviews, News**

Send books for review, book reviews, and news to David Gill, EF Assoc. Editor, P.O. Box 5365, Berkeley CA 94705. E-mail: [IJES@ellul.org](mailto:IJES@ellul.org)

### **Back Issues**

Visit [www.ellul.org](http://www.ellul.org) for a complete index of back issues. Issues #1–30 are available (only) as a complete collection on a compact disc for US \$15. Issues #31 onward are available for \$5 per copy.

© 2004 International Jacques Ellul Society Contact IJES for permission to copy EF material.

## **From the Editor**

From 1935 until his death in 1994, Jacques Ellul argued for *la technique* as the twentieth century’s most distinctive phenomenon and its most powerful, defining force. Technique, he wrote, is “the totality of methods rationally arrived at and have absolute

efficiency in every field of human knowledge” (*Technological Society*, (1954) ET 1964, p. xxv.).

Developed most conspicuously in his classic trilogy (*Technological Society*, *Political Illusion*, and *Propaganda*), rearticulated and extended in *Technological System* and *Technological Bluff*, *la technique* is the organizing idea for all of Ellul’s work. He exhaustively portrays one thesis—that industrialized nations are beguiled enough by machine productivity to reconstruct all their social institutions on this model. The technical mystique so captivates our thinking that we cast aside all other imperatives “as in ancient days men put out the eyes of nightingales in order to make them sing better” (p. 75).

In coming to grips with Technique, Ellul addressed a wide-ranging audience of practitioners as well as theorists, thoughtful people both inside and outside the academy. In this issue Michel Hourcade and Boyan Koutevski continue that tradition, both academically-trained but serving also as a government official (Hourcade) and media professional (Koutevski). Hourcade wants to understand sports decisively and chooses Technique as his critical lens, rather than professionalization, money, and media spectacle. Koutevski explores the Internet in terms of Technique.

Little needs to be said about the importance of assessing the explosive growth and challenge of the Internet in the decade since Ellul’s death. With the record-setting attendance and skyrocketing economics of sport in our era, with the Tour de France, Wimbledon, Olympic Games, U.S. baseball World Series, the popular film “Bend it Like Beckham,” the influential book *How Soccer Explains the World*, and many other evidences, it is also timely to focus some Ellulian attention on sport.

We are also honored to have Professor Rustum Roy’s “review” of *The Technological Society* in this fiftieth year after its initial publication (p. 19). Associate Editor David Gill is provoked both by the contentious and superficial political contest this fall in the U.S. and by the fortieth anniversary of the Free Speech Movement at his alma mater, UC Berkeley, to reflect on Ellul’s contribution to a better politics (p. 23). Gill also provides a review of *Ellul Forum* Contributing Editor Bill Vanderburg’s newly reissued *Perspectives on Our Age: Jacques Ellul Speaks on His Life and Work*, a fine little introduction to Ellul’s thought that Vanderburg edited from his interviews twenty-five years ago (p. 21).

Next up (Spring 2005, Issue 35) we will be thinking about the relationship of Rene Girard’s ideas to those of Ellul. In Fall 2005 (Issue 36) we are planning an issue on Ellul’s biblical studies. We gratefully welcome your ideas, news, manuscripts, feedback, support, and ongoing participation in the IJES.

*Clifford G. Christians, Editor editor@ellul.org*

## **Sport, Technique, & Society: Ellul on Sports**

by Michel Hourcade

*Michel Hourcade is a comptroller for the French government, having served 20 years previously at the French ministry of Youth and Sport. He is a graduate of the Institute of Political Studies at the University of Bordeaux, co-editor of Jacques Ellul's course lectures on Marxist Thought (Paris: La Table Ronde, 2003), and author of articles on sports.*

"I find sports boring." This admission by Jacques Ellul, expressed in the course of his correspondence with Didier Nordon<sup>1</sup>, seems like a sufficient reason for ruling out any effort to study his opinions and ideas on the subject of sports. Also, of course, sufficient to discourage the reader from venturing beyond the first few lines of this article. However, the context of Ellul's words deserves attention, because it reveals a thought process that is both critical and self-critical.

Here is the context of Ellul's statement: "I do not go to the trouble of making a critical analysis of social phenomena that bore me, that I have nothing to do with. I find sports boring, but I can conceive of someone taking pleasure in going in for a sport. I do not understand how someone can feel passionate as a spectator, however. But since I am not involved with them, I take care not to write about sports as sports I did so once, and made huge mistakes!" So ( to quote the title of a recent book on Ellul<sup>2</sup>), "the one who foresaw (almost) everything," once took the liberty of writing about sports, and later recognized that he had gone far afield.

Should such a modest effort (just one text on sports, and mistaken at that!) cause us to consider closed the subject of Ellul on sports? Or, on the contrary, should we keep the issue on the table, and try to locate Ellul's comments on sports, and, secondarily, his "huge mistakes"? The second option naturally appeals more to me, considering that in 2004 Ellul is still an important author, and sports remain a major facet of our civilization.

My reading in Ellul so far (probably incomplete) has uncovered five separate references that would constitute his "sports bibliography":

1. Brief references in two of his very early writings, in the mid-1930's;
2. A section in one chapter of a major book, *The Technological Society*<sup>3</sup>;
3. A section in one chapter of *The Technological Bluff*<sup>4</sup>;
4. An aside in one of his last books (see above);
5. An article requested by a critical sports journal in French.

---

<sup>4</sup> Jacques Ellul, *The Technological Bluff*, trans. Geoffrey W. Bromiley (Grand Rapids: Eerdmans, 1990; Fr. ed. 1988).

The publication in 2003 of the first issue of the *Cahiers Jacques Ellul*<sup>5</sup> gives us access to some of Ellul's earliest writings, written as he was finishing his studies. It seems worthwhile to place ourselves at least briefly in the center of his thinking at that time in his life.

Ellul's seventeen-page essay "Fatality in the modern world"<sup>6</sup> shows the weight of new forces that press heavily on man and leave him with only one possible response: passivity. Centralization; gigantic size; Technique (already a concern of Ellul's!) which makes centralization and hugeness possible; and the powerlessness of politics—all of these serve as examples of this fatality that turns all men into proletarians.

What strikes Ellul about this society is the importance of the masses, a concept he takes care to define, and then goes on to illustrate, in particular by means of references to the phenomenon of sport. Ellul states that "man becomes part of the crowd. He will become an element within a mass, that is, within a grouping of men, which has come together under some external pressure, for a given purpose they share. Such a grouping lasts only a short time, but such masses occur again and again, almost without interruption, in our society. They are constantly re-formed: the individual becomes part of a mass in the workplace, whether office or factory, he belongs to the mass of readers of the same evening paper, the mass of moviegoers, the mass of *sports enthusiasts*" (p. 110; emphasis added). These words, in a text to which we can assign a date of 1936 or 1937 (p. 95, n. 1), probably constitute one of the first references to sports in Ellul's work. As we saw above, sports are not Ellul's favorite topic, but that does not keep them from surfacing spontaneously in his mind when he is describing society.

Ellul's second reference to sports comes in an essay written around the same time as the above text, in 1937: "Le fascisme, fils du libéralisme" ("Fascism, Offspring of Liberalism").<sup>7</sup> The very subject of fascism offers a hint as to Ellul's probable inspiration in making a reference to sports: the Berlin Olympic Games of 1936 and their context, the Nazi regime and its propaganda display. In this essay also, Ellul points out the role of the masses in human submission. But in this case he offers a more expanded study (some 25 pages in the *Cahiers Jacques Ellul*), intentionally based on Emile Durkheim's sociology, with some references to Georges Gurvitch. The essay concludes with a quotation from Alexis de Tocqueville.

Ellul approaches Fascism and liberalism by means of Durkheim's classical distinction between the two forms of solidarity: mechanical and organic. In mechanical solidarity, an individual is subject to society, whose collective consciousness overlays individual consciousness, and penal law is the juridical expression of society. In organic solidarity,

<sup>7</sup> Jacques Ellul, "Le fascisme, fils du libéralisme," *Esprit*, vol. 5, no. 53 (1 Feb. 1937), pp. 761–797; reprinted in *Cahiers Jacques Ellul*, ed. Patrick Troude-Chastenet, no. 1 (2003), pp. 113–137.

society breaks down into many subgroups, and the will of the individual plays an important role. The individual is not directly connected to society as a whole, but rather to its parts. The juridical expression of this society is civil, contractual law.

Another distinction, based on duration, is added to this distinction between mechanical and organic solidarity: the masses, distinguished by their temporary character, are seen as distinct from more permanent arrangements, such as groups, the abstract collective, etc. Ellul identifies still another group: the abstract masses, which passively receive external influences, and can transform themselves into concrete masses, thus giving birth to Fascism. As for sports, “liberalism has brought about a social passivity unprecedented in history. It has permitted the creation of abstract masses [ ...] in which the life of a man is covered over by a series of overlapping circles that completely engulf the individual: the cafe group, the club group, *the sports group*, and the trade or professional group” (pp. 135-136; emphasis added).

In *The Technological Society*, first published in French in 1954, Ellul devotes a separate section to “Sport” in his fifth chapter, in which he deals with human techniques. Between sections entitled “Amusement” and “Medicine,” he devotes two pages to the many aspects of sport, using a distinctly critical tone.<sup>8</sup> Two main themes are taken up, illustrated by examples that initially seem disconcerting. First of all, Ellul notes that sports are connected with big cities (perhaps an allusion to English “rural sports” in the 17<sup>th</sup> century, such as hunting), and with industrialization: first English, then American, and finally Soviet. We should note that this correlation between industrialization and the appearance and development of modern sports is quite commonly laid out in modern studies on sports. Most authors limit themselves to mentioning the historical co-existence of these two developments, with only a few writers daring to answer the question: is the appearance of sports inevitable in a society in the process of industrialization? The boldest writers emphasize the relationship between the gymnasium and the factory. Some more careful ones enumerate the inventions (in transportation and telecommunications) that have enabled different disciplines or sports events to reach the level of fame, passion, or myth (for example, football, baseball, the Olympic Games, and the Tour de France). Still other authors search out possible cultural or national factors. Richard D. Mandell does this: “The same forces that made the young nation a populous industrial power made American sport.”<sup>9</sup> Although Ellul did not originate the idea of a connection between industrialization and sports, we should recognize that he pointed it out, half a century ago. Perhaps he discovered it in reading the history or sociology of sport, or, just as likely, he may have come up with this linkage on the basis of his own reflection on the history of Technique.

Ellul continues in *The Technological Society* by saying that sport is also connected with the world of Technique, and is itself a Technique. Here we enter Ellul’s preferred

---

<sup>8</sup> *The Technological Society*, pp. 382–384.

<sup>9</sup> Richard D. Mandell, *Sport, a Cultural History* (New York: Columbia University Press, 1984), p. 184.

domain, in which he proceeds pretty much on his own, since his keen understanding of the technical phenomenon constitutes an original approach to sport. For instance, the distinction he makes between swimming and the competitive sport of swimming is quite clear and appropriate. The degree to which sports involve technical skill is only rarely noticed and commented on by others,<sup>10</sup> implicitly confirming Ellul's understanding of Technique as omnipresent in society, to such a degree that it becomes invisible.

We could extend Ellul's principles by noting that physical exercise initially constitutes the least technical human activity. For this reason, it is the most susceptible to Technique. The nude Greek athlete apparently shocked the Romans and then the Church; according to etymology, the gymnast was similarly nude. Modern athletes wear scarcely more clothes, but their scanty attire has been carefully designed to offer the least possible aerodynamic resistance. Such clothing is made of the most efficient new fiber blends. This modern athlete's movements and stride have been filmed, dissected, compared, and improved. His food intake obeys the dictates of dieticians, he is medically monitored, and his real or perceived deficiencies are offset by inventions straight from the laboratory. A psychologist completes this medical engineering of sport.

Swimming vs. natation: the athlete is Technique in human form. Should we soften this statement by thinking about diversity in the practice of sports? For example, the difference between high-level sports and recreational sports, or between professional and amateur sports? I am not inclined to think so. The most anonymous athlete, even the beginner, will choose equipment that imitates the champion's. He buys performance enhancing agents at the drugstore or online, and wears tiny electronic devices that measure his pulse and keep track of how far he has run. A study in November 2003 revealed that ten percent of French teenagers who take part in sports use stimulants. According to this same study, young French athletes begin to use such substances at the age of fourteen; Americans apparently begin at eight years of age.

Ellul continues with a reference to the use of equipment such as stopwatches: "This mechanization of actions is accompanied by the mechanization of sporting goods [...] In this exact measurement of time, in this precision training of muscular actions, and in the principle of the 'record,' we find repeated in sport one of the essential elements of industrial life" (p. 383). So when science and budding industrial technique met in England, sport very quickly became infused with a modern mentality that would lead to amazing consequences. After all, expressions we commonly use today, such as: "running the hundred meter dash in ten seconds," presuppose that we have previously defined the length of the meter, and that we can measure in seconds. None of this was scientifically and technologically possible before the end of the eighteenth century, which saw the measurement of the earth's meridian and the invention of the Swiss watch. Unexpectedly, but significantly, we can observe these same aspects of modern

---

<sup>10</sup> See, however, "Presence de la technique," in Georges Vigarello, *Du jeu ancien au show sportif: La naissance d'un mythe* (Paris: Le Seuil, 2002).

mentality, and therefore of sport mentality, in the early days of mountain climbing,<sup>11</sup> at about the same time.

After considering the relationship of sports, industry, and Technique, Ellul comes to the question of the subjection of man to totalitarian society through sports. At this point Ellul's analysis converges with that of an active minority among sociologists who are critical of sport, represented in France by Jean-Marie Brohm, of whom we will speak later. Ellul states that sports enable a man to relax from the pressures he experiences, but at the same time, surreptitiously, they adapt him to new constraints. This "insidious Technique" extends to the masses. In the guise of team spirit, sports prepare people for the totalitarian spirit, so that sports are essential for Fascist, Nazi, and Communist dictatorships. In "developing" countries, we can see the concurrent penetration of techniques and sports.

Ellul is scarcely gentler in speaking of the United States as the country that first developed sport as Technique, and in calling it "the most conformist of all countries" (p. 383; here Ellul apparently takes up an observation usually attributed to Tocqueville). What can we say to this indictment? As noted above, the analysis of sports by means of Technique is rather uncommon, and radical critique of sports comes only from a minority of voices. Clearly, it is dangerous to pontificate on the degree of conformity among Americans. We can point out simply that there are arguments both for and against. A significant amount of sports sociology, especially in America, follows a functional approach that tends to recognize the role, implicitly positive, of sports in adapting people to social values and in socializing them. As Aesop might have said, sports are the best thing and the worst thing.

Leaving this debate behind momentarily, I suggest to the reader that we examine the sometimes disconcerting examples cited by Ellul to support his argument. He offers three, all related to the relationship between sports, industry, and Technique. Here is the first: "The only country in central Europe which had organized sport, Czechoslovakia, was the only one which was industrialized" (p. 382). Since we have no additional precise references from Ellul here, we can speculate that Ellul had in mind the "sokol" movement, founded in 1862 in what would become Czechoslovakia. It was an organization that aimed at developing "a healthy mind in a healthy body." This movement took root in the United States beginning in 1865, and apparently continues to flourish. Ellul's rather abrupt statement thus seems to refer to an established episode in the history of sport. In this example we can see something of the extent and the diversity of his knowledge, which casts some doubt on his claim to have no interest in sports.

The second example, from ancient history, seems less surprising coming from the pen of Ellul the historian: "The enormous contrast between the athletes of Greece and those of Rome is well known. For the Greeks, physical exercise was an ethic for

---

<sup>11</sup> Nicolas Giudici, *La philosophie du Mont Blanc: De l'alpinisme a l'economie immaterielle* (Paris: Grasset, 2000).

developing freely and harmoniously the form and strength of the human body. For the Romans, it was a technique for increasing the legionnaire's efficiency" (pp. 382–383). Evidently, Ellul knew at least some of the many studies on physical exercise in antiquity, which conclude that the Romans had a concept of physical activity different from the Greeks, a concept directly oriented toward its military application. On the other hand, historians of ancient Greece emphasize the very strong religious connotation of physical activity, especially the Olympic Games. In descriptions of modern sports, and not only of the Olympics, the parallel between sports and religion recurs often. We might consider it paradoxical that Ellul, who devoted much of his writing to religious issues, did not note this comparison, which has become almost a cliché.

The third and final example Ellul offers is the most disconcerting: "The best athletes come from workingclass environments. Peasants, woodsmen, and the like, may be more vigorous than the proletariat, but they are not as good athletes. In part, the reason for this is that machine work develops the musculature necessary for sport, which is very different from peasant musculature. Machine work also develops the speed and precision of actions and reflexes" (p. 382). We probably cannot uncover the sources that enabled Ellul to arrive at this clear distinction between worker and peasant performance. We can credit him with considerable knowledge of lumberjacks' capacities, since he is known to have occasionally borrowed an ax to chop down a tree, for relaxation and exercise. But "the one who foresaw (almost) everything" may still have surprises in store for us. French statistics dating for the most part after Ellul's writing of *The Technological Society* indeed demonstrate, on the one hand, that workers go in much more for sports than peasants, and, on the other hand, that physical aptitudes are correlated with height. Also, according to statistics, peasants tend to be smaller than workers.

In Ellul's trilogy on Technique, *The Technological System*<sup>12</sup> and *The Technological Bluff*<sup>13</sup> follow *The Technological Society*. Although absent from *The Technological System*, sports surface again in the "Bluff," as a six-page section inserted between those on games and the automobile, in a chapter on diversions. By way of introduction, Ellul refers briefly to *The Technological Society* and outlines his dual approach involving spectacle and technological discourse, which "has transformed sport into an enormous spectacle" (p. 366).

Clearly, by "spectacle" Ellul means television, and the overwhelming presence of sport in this medium, as illustrated by many statistics. We can also suggest that Ellul may have borrowed at this point from *The Society of the Spectacle*,<sup>14</sup> the best seller of Situationist literature, published in 1967, and well known to Ellul (who was cited in the sacred texts of the *Internationale Situationniste*). Technological discourse is the

---

<sup>13</sup> See note 4.

<sup>14</sup> Guy Debord, *The Society of the Spectacle*, trans. Donald Nicholson-Smith (New York: Zone, 1994; Fr. ed. 1967).

key term underlying this third part of Ellul's trilogy, following his earlier volumes on the technological society and the technological system.

As in his earlier book, Ellul amazes us in the "*Bluff*" with the multiplicity of his examples, which prove that he did pay attention to sports, in clear contradiction to the lack of interest in them that he claims elsewhere. We also note some naive touches or throwbacks ("Originally a city team used to be made up of people from that city," p. 368; "But where is the tennis of yesteryear ...?," p. 368), and this unassailable title quoted from the discerning anarchist Cavanna: "Dying as a Fool for Paris-Dakar" (p. 370). Ellul mentions the place of sports in the media, professionalism, money, and violence, offering an abundance of examples and figures, in keeping with the overall tendency of this book, which overflows with statistics and references. But Ellul does not draw only on current events. Comparisons with antiquity mushroom as he writes. The sale of professional soccer players "reminds us of the auctioning of gladiators, pugilists, and chariot drivers at Rome" (p. 368, n.11). The Olympic Games of antiquity (another backwardlooking touch?) "were something quite different ... there was a truce, fighting stopped, Greek unity was restored" (p. 369), in precise contrast with modern-day Olympic boycotts applied to the United States, the Soviet Union, and South Africa. Ellul suggests that the Games have become an expression of conflict "due to the technicizing of society (not its politicizing, for no world was more political than the Greek)!" (p. 370).

I find three of his observations especially striking because of their relevance or their originality. First, Ellul (who knew sailing well from time spent at the Arcachon Basin, a favorite spot for the sport not far from Bordeaux) describes the racing of yachts, which have become a medium of advertising and "monstrous gadgets" (p. 367, n.9). They are outfitted with satellite navigation systems, weather decoders, on-board computers, and television cameras for retransmission by the media—all presented by the press without irony as "Technology in the Service of Fantasy" (p. 371). A fine example of technological discourse that masks the technical reality and leads us to confuse the real with the virtual, the cause with the effect.

Next, the creation of events: no empty slots may be left in the feeding of the spectacle-hungry public. Does such creation stem, as Ellul suggests (for example, an event "has to be staged," p. 370) from the will of mysterious forces, from the constraints of implacable Technique, or simply from the logic of media programming, which abhors a vacuum and loves publicity revenue? The observation of a so-called journalist shouting out his lungs, with heavy use of hyperbole, in his commentary on the retransmission of a dull but expensive sporting event, can serve as evidence in this debate. Note that this staging of events mentioned in Ellul's section on sports could take its place just as well in other parts of the book: Games, Diversions, Information, etc.

Finally, in counterpoint to this downward spiral in sports and the media, Ellul surprises us with a rather unexpected reference to bullfighting: "the barbarous game has been ritualized," and its "collective behavior set within a kind of communal ethic" (p. 369).

We will conclude this consideration of sports in *The Technological Bluff* with a passage that shows Ellul's originality in reflection and action. In connection with the inordinately high cost of signing professional soccer players, he mentions the financial difficulties of soccer clubs (a problem that was just beginning when Ellul's book came out, but which has continued in its importance since then), the generous subsidies offered to them by municipalities, and the use for this purpose of taxes levied on many taxpayers who have no passionate interest in sports at all. In 1988, Ellul was certainly one of the first to have identified and raised this problem of subsidies to professional clubs. Beginning in 1994, it would become the object of sharp debates and decisions aimed at limiting such generosity by local governments. But in particular, as he mentions in a footnote, Ellul had proposed a tax reduction for those who did not care about sports clubs (p. 367, n.10). As a pioneer of "think globally, act locally," whether or not he invented the slogan, Ellul singled out sports for his participation in local affairs, along with the environment in Aquitaine and its coastline, and action to prevent young people from becoming delinquents.

In April 1991, the journal *Quel Corps?* published its 41<sup>st</sup> issue, entitled "The Cannibalism of Sports." In this number of more than two hundred pages, Ellul had an article that ran to seven pages: "Sport et technique" (Sports and Technique).<sup>15</sup> The journal's director, Jean-Marie Brohm, wrote two articles for the same journal issue: "La guerre olympique" (The Olympic War) and "Le sport est un assassin" (Sport is an Assassin), whose very titles give evidence of the existence in France of the critical school of sports sociologists mentioned above. Can we find in this article by Ellul the "huge mistakes" he admitted to in his 1992 correspondence with Nordon? In any case, we probably owe this article in *Quel Corps?* to Nordon, a friend of both Ellul and Brohm.

After explaining his understanding of Technique, in the introduction to this article, Ellul sets out the image of sports prevalent in 1930, and then describes the impact of the technological society: on sports, on the bodies of those who practice sports, and on sports equipment. He concludes with the role of money. According to Ellul, around 1930, when the era of Technique really began, the image of sports was that of a game played locally, to act on the imperative of "a healthy mind in a healthy body." There were sports for the rich, and other sports for everybody else. For all, sports meant fair play, according to rules that prepared one for life in society (note here the function of sports in socialization, mentioned above).

In this passage, Ellul is careful to look at sport objectively. He limits himself to describing the image of sport at the time, since it quickly became an ideological, idealized concept. As in the material from *The Technological Society* and *The Technological Bluff* we have examined, Ellul here illustrates his ideas with many specific examples. He calls boxing "one of the first sports to be regulated" (p. 78), and indeed, although it was not the first sport to be organized and to have rules, boxing was organized as a sports association in England in 1884, on the basis of the Marquis of Queensberry

---

<sup>15</sup> Jacques Ellul, "Sport et Technique," *Quel Corps?*, no. 41 (April 1991), pp. 77–83.

rules. Ellul cites another example, from soccer, which he says already existed professionally in Great Britain in 1900–1930. Here also, Ellul is right, since soccer became a professional sport in Great Britain in 1885. We cannot fault him in this first part of the article. In his enthusiasm, he cannot resist the pleasure of adding a few historical details, which curious readers would surely try to verify: “of course, fair play was not always observed: cyclists in the second Tour de France were knocked senseless by regional fans of another team” (p. 78 n.1). Here is another one: “in auto races, people sometimes put nails on the track” (p. 78 n.1).

What happened to sport as it was practiced at the beginning of the twentieth century? Ellul indicates that in the technological society, winning, and thus competition, became decisive values. In sports, a competitor must choose the winning method at all costs, because Technique teaches us we must always win. Images broadcast around the world by means of new techniques, coupled with our hunger for entertainment, have encouraged aggressiveness, replacing the earlier value accorded to beauty and elegance of movement. Perhaps idealizing the past a bit, Ellul offers the boxer Georges Carpentier as an example. He makes a perceptive observation, however, when he applies this aspect of Technique to tennis: “muscles that pack a powerful punch” (p. 79). What would Ellul have said about tennis in the new millenium, and especially women’s tennis?

Next, Ellul examines techniques of the athletic body as a development of Taylorism. He refers to the use of film, physical and psychological preparation, dietetics, and chemical agents and drugs. His thoughts on the banning of illegal drugs need to be quoted in full: “This prohibition can be perfectly understood in the case of two men (or two teams) opposing each other, who would have been like all the others, for whom sports were a hobby, much as other people might take part in amateur theater. But is this prohibition really so understandable in the case of two opposing machines, whose only purpose is to show their power and win?” (p. 80).

Ellul’s point of view calls for two comments. First of all, the article was published in 1991, well before 1998. In that fateful year, the Tour de France, the bicycle race that had been exalted to mythical status, and that enjoyed international renown, was the object of devastating revelations concerning the massive use of illegal drugs in both professional and amateur cycling. Since 1998, drug use in sports has become a matter of widespread public interest. Its existence is divulged from time to time in detailed revelations which prove embarrassing for the sports world, whereas earlier, the mere suggestion of such a thing was often considered obscene or sacriligious (“sportingly incorrect” as well as “politically incorrect”). Now drug use is no longer such a taboo subject. The year 1998 enables us, then, to make a ruthless distinction between those who had enough perception and intellectual honesty to deal with the drug problem, and those who merely got on the train after it had already begun to roll, or who even discovered the existence and the importance of the sports phenomenon by means of attention paid by the media to the drug scandal. And we must note that Ellul belongs to the first group.

Secondly, the use of chemical substances, as part of the mobilization of all possible technical resources for the purpose of improving performance and achieving victory, may indeed seem perfectly consistent. Drug use is just one more demonstration of the impact of Technique on our society. Its tacit acceptance in sports circles and the relative indifference of public opinion show rather clearly the moral standards that prevail in a technological society. Sports in general, and drug use in particular, fit in perfectly with Ellul's analysis.

His article continues with a denunciation of the ridiculous precision involved in the calculation of records and the use of sophisticated devices to distinguish between competitors when the human eye cannot detect any difference between them; he calls this "the irony of a human spectacle utterly outclassed by human technical inventions" (p. 81). Ellul mentions another gadget: the racing car, "a strange instrument that resembles a car only in that it has four wheels" (p. 81). Then he assesses automobile research, carried out by people who are "more and more specialized, in typical technical fashion" (p. 81). In reality, Ellul's commentary sheds little light on the subject of auto racing and does not really enrich his analysis of Technique.

On the other hand, he spends considerable time on the bicycle, which he believes has undergone the most spectacular transformation. And it is true that the bicycle used in racing or in the time trials of the Tour de France has undergone very visible changes. But Vigarello<sup>16</sup> would no doubt remind us that the bicycle underwent a series of important changes right after it was invented: the free wheel, pressurized tires, and the gear shift. This last invention was long banned for reasons of "sportsmanship." So perhaps the distinction between the early period and the advent of the technological society should be sought in the change from concern with the perfecting of machines to concern with obtaining the maximum performance from the human machine. After examining these concrete examples, Ellul alludes briefly to developments in pole vaulting and skiing. Then he questions the meaning of such "progress" in performance, the supposed reality of the superiority of contemporary athletes over earlier ones, or over ordinary people in previous historical periods. He concludes that sports records become values in themselves, and that they demonstrate the triumph of techniques over bodies and equipment.

Ellul closes his article by considering how money has become the ultimate justification for sport. He spells out the reciprocal relationships, the "self-augmentation" (alluding to one of the characteristics of Technique that he has outlined in his books) resulting from the media, advertising, rebroadcasting rights, sponsorship, sports organizations, spectators and TV viewers. Ellul also mentions the role of government authorities in the construction of sports venues. The end result of the interaction of these different players parallels the conclusions of current economic and sociological analyses of trends in sport. In his conclusion, Ellul defines sports as "entertainment that allows us to absorb unused passions (in a society that no longer has any values),

---

<sup>16</sup> See note 10.

in the midst of millions of men who no longer believe in anything” (p. 83). In this way sports fall into “this empty space with no meaning that characterizes our time, and that stems from the replacement of personal action with the spectacle of collective expression” (p. 83).

What main impressions can we gain from Ellul’s views on sports, spread out over more than fifty years, from his first to his last writings? Clearly, his alleged lack of interest and the mistakes he claims to have made are largely contradicted by his remarks, which go to the heart of the subject, with accurate aim. Except for some examples we cannot confirm and an occasional hasty word, Ellul makes use of established arguments based on current events and important books. It is perhaps surprising that he fails to refer to Norbert Elias, a historian and sociologist like Ellul, but fifteen years older. There are other parallels between them: both treat the subject of sports in summary fashion in a major work (*The Technological Society* in French in 1954 in Ellul’s case; *The Civilizing Process* for Elias<sup>17</sup>). But of the two, only Elias would return at length to the subject of sports, which he considered a key for understanding the evolution of modern societies. He wrote a number of articles since gathered into a single volume in translation.<sup>18</sup>

Another item we note as missing, already referred to, is the importance of religion in sports, and the role of sport as a possible substitute for religion: Pierre de Coubertin proclaimed this, and many have suspected it. Paradoxically, Ellul barely touches on the matter, merely mentioning the “millions of men who no longer believe in anything.” In reality, for Ellul sport is only a technical epiphenomenon in a world in which man “transfers his sense of the sacred to the very thing that has destroyed its former object: to technique itself.”<sup>19</sup>

*Translated by Joyce Hanks, University of Scranton.]]*

## **Sport, technique et societe Le sport vu par Jacques Ellul**

**Michel Hourcade**

« Le sport m’ennuie »...

Exprime au detour d’une de ses correspondances, cet aveu suffirait a disqualifier toute tentative d’etude des opinions et reflexions de Jacques Ellul sur le phenomene sportif et, accessoirement, a dissuader tout lecteur d’aller au-dela des premieres lignes

---

<sup>17</sup> Norbert Elias, *The Civilizing Process* (New York: Urizen, 1978); *La civilisation des moeurs* ([Paris]: Calmann-Levy, 1973; original German ed. 1939).

<sup>18</sup> Norbert Elias, *Quest for Excitement: Sport and Leisure in the Civilizing Process* (New York: B. Blackwell, 1986); *Sport, violence et societe: La violence maitrisee* (Paris: Fayard, 1994). The title of one of the articles in this volume, “The Quest for Excitement in Unexciting Society,” seems to parallel Ellul’s words.

<sup>19</sup> *The Technological Society*, p. 143.

du present texte. Le contexte de la citation merite toutefois d'etre mentionne car revelateur d'une demarche a la fois critique et autocritique.

« Je ne me donne pas la peine », nous dit Ellul, « de proceder a une analyse critique de phenomenes sociaux qui m'ennuient, ou je me sens etranger. Le sport m'ennuie, je con<sup>^</sup>ois qu'on prenne plaisir a pratiquer un sport — moins a le regarder et a se passionner. La, je ne comprends pas. Mais dans la mesure ou il m'est etranger, je me garde d'ecrire sur le sport en tant que tel (je l'ai fait une fois et j'avais commis de belles erreurs!) ».

« Celui qui avait (presque) tout prevu », pour reprendre le titre d'un ouvrage recent qui lui est consacre,<sup>20</sup> se serait donc laisse aller a ecire sur le sport (une fois) et reconnaitrait s'etre fourvoye.

Tant de modestie (un seul texte, et errone de surcroit!) doit-il nous inciter a refermer le chapitre du sport vu par Ellul ou au contraire a le garder ouvert en recherchant les ecrits elluliens sur le sport et, subsidiairement, ses belles erreurs? La seconde option m'a naturellement paru plus stimulante si l'on veut bien considerer qu'en 2004 Jacques Ellul est toujours un auteur important et que le phenomene sportif reste une manifestation majeure de notre civilisation.

La « bibliographie sportive » attribuable a Jacques Ellul recouvre, en l'etat actuel (probablement incomplet) de mes lectures, cinq references bien distinctes:

- Une breve reference dans deux ecrits “de jeunesse” (vers 1936)
- Un sous-chapitre dans son ouvrage majeur *La technique ou l'enjeu du siecle* (1954)<sup>21</sup><sup>22</sup>
- Un sous-chapitre dans *Le bluff technologique* (1988)<sup>23</sup>
- Une contribution sollicitée par une revue critique du sport fran<sup>^</sup>aise (1991)
- Une mention dans un de ses derniers ecrits (1992; voir ci-dessus)

La publication en 2003 du premier numero des *Cahiers Jacques Ellul*<sup>24</sup> permet d'accéder a des textes qui comptent parmi les plus anciens sous la plume d'Ellul, qui achevait alors ses etudes. Il n'est pas sans interet de se replacer, au moins succinctement, au cwur de la reflexion qui l'anime alors.

<sup>24</sup> Cahiers Jacques Ellul: Pour une Critique de la Societe Technicienne, no. 1, “Les annees personalistes,” ed. Patrick Troude-Chastenet (2003).

Le texte *Fatalite du monde moderne*<sup>25</sup> enonce en dix-sept pages le poids des forces nouvelles qui pesent sur l'homme et ne lui laissent qu'une possibilite: la passivite. La centralisation, le gigantisme, la technique (deja!) qui permet leur realisation, l'impuissance de la politique, illustrent cette fatalite qui fait de tous les hommes des proletaires. Ce qui frappe Ellul dans cette societe, c'est l'importance des masses, concept qu'il s'attache a definir et qu'il va illustrer, notamment, par reference au phenomene sportif. L'homme, nous dit Ellul, « rentre desormais dans la foule. Il sera l'element d'une masse, c'est-a-dire d'une reunion d'hommes, faite sous une pression exterieure dans un but determine pour chacun d'eux, et qui ne dure que peu de temps — mais ces masses se renouvellent presque sans interruption dans notre societe — elles sont incessamment refaites — l'individu fait partie de la masse de son travail — au bureau ou dans l'usine — de la masse des lecteurs de Paris-Soir, de la masse des spectateurs de cinema, de la masse de la *societe sportive* » (p. 110; c'est nous qui soulignons).

Voila pour ce qui est probablement une des premieres mentions du sport dans l'oeuvre ellulienne a travers ce texte que l'on peut dater de 1936 ou de 1937 (p. 95, n. 1). On l'a vu plus haut, le sport n'est pas le sujet de predilection de Jacques Ellul, ce qui n'empeche pas qu'il lui vienne assez spontanement a l'esprit dans sa description de la societe.

Le second texte a mentionner le sport, intitule *Le fascisme, fils du liberalisme*,<sup>26</sup> a ete ecrit a la meme epoque (1937) que le precedent. Le sujet meme du fascisme nous fournit un indice assez vraisemblable des origines de l'inspiration d'Ellul faisant reference au sport: l'organisation des Jeux Olympiques de Berlin en 1936, dans le cadre du regime nazi et de son deferlement de propagande. La masse est ici encore le groupe humain designe pour son role de soumission de l'homme, mais a travers un developpement plus etoffe (vingt-cinq pages dans les *Cahiers Jacques Ellul*) d'inspiration deliberelement sociologique, empruntant pour l'essentiel a Durkheim, ponctuellement a Gurvitch et concluant sur une citation de Tocqueville.

Fascisme et liberalisme sont abordes a travers la distinction classique formulee par Durkheim entre les deux formes de solidarite, mecanique et organique. Dans la solidarite mecanique, l'individu est soumis a la societe, la conscience collective recouvre les consciences individuelles. Le droit penal est l'expression juridique de la societe. Dans la solidarite organique, la societe se fractionne en sous-groupes nombreux et la volonte individuelle y joue un role important. L'individu n'est pas rattache directement a la societe globale mais a ses parties. L'expression juridique de cette societe est le droit civil, contractuel.

Sur la division solidarite mecanique-solidarite organique vient se greffer une autre division selon la duree, la masse qui se distingue par son caractere passager d'autres

notions plus permanentes (le groupe, le collectif abstrait). Ellul distingue en outre les masses abstraites, qui reçoivent passivement des influences de l'extérieur, et peuvent se transformer en masses concrètes, donnant alors naissance au fascisme. Quant au sport: « le libéralisme a entraîné un amorphisme social probablement sans précédent dans l'histoire. Il a permis la création de ces masses abstraites [...] où la vie de l'homme se recouvre d'une série de cercles qui se recoupent et qui absorbent totalement l'individu. Groupe du café et groupe du club, *groupe du sport* et groupe du métier » (p. 795, 1937; pp. 135–136, 2003; c'est nous qui soulignons).

Dans *La technique ou l'enjeu du siècle* publiée en 1954, le sport fait l'objet d'un traitement spécifique à l'intérieur du chapitre V consacré aux techniques de l'homme. Entre *divertissement* et *médecine*, deux pages sont consacrées au sport sous ses multiples facettes et dans une tonalité nettement critique.<sup>27</sup>

Deux thèmes principaux sont abordés, émaillés d'illustrations et d'exemples à première vue déconcertants.

Le sport, note d'abord Ellul, est lié à la grande ville (allusion possible aux *rural sports* anglais du 17<sup>e</sup> siècle, comme la chasse à courre) et à l'industrialisation, anglaise, américaine puis soviétique. On observera que cette corrélation entre industrialisation et apparition et développement du sport moderne est aujourd'hui très couramment exposée dans la littérature consacrée au sport. Si la plupart des auteurs se bornent à mentionner la concomitance historique des deux événements, peu se hasardent à répondre à la question: l'apparition du sport était-elle inévitable dans une société en cours d'industrialisation? Les plus hardis souligneront la parenté entre gymnase et manufacture. Plus prudents, d'autres énumèrent les inventions (transports, télécommunications) qui ont permis à des disciplines ou des manifestations sportives (que l'on songe au football, au base-ball, aux Jeux Olympiques ou au Tour de France) d'accéder à la notoriété, à la passion ou au mythe. D'autres encore recherchent une tracabilité culturelle ou nationale. Ainsi R.D. Mandell: « the same forces that made the young nation a populous industrial power made American sport ». <sup>28</sup> À défaut d'originalité, il faut sans doute reconnaître à l'auteur de *La technique* le mérite d'avoir, il y a un demi-siècle, identifié ce lien, que ce soit à partir de lectures sur l'histoire ou la sociologie du sport ou, tout aussi vraisemblablement, sur la base de sa propre réflexion sur l'histoire de la technique.

Le sport, poursuit Ellul, est aussi lié au monde technique, il est lui-même une technique. Nous sommes évidemment ici dans son domaine de prédilection, où il évolue un peu seul il est vrai, tant sa perception aiguë du phénomène technique constitue une approche spécifique du sport. La distinction qu'il opère entre, par exemple, nage et natation, est tout à fait explicite et pertinente. La part de technicité incorporée au sport est rarement perdue et commentée,<sup>29</sup> confirmation implicite de la perception ellulienne

---

<sup>27</sup> *La technique*, pp. 346–348 (1954, 1990).

<sup>28</sup> Richard D. Mandell, *Sport, a Cultural History* (New York: Columbia University Press, 1984), p. 184.

<sup>29</sup> Voir cependant "Presence de la technique," in Georges Vigarello, *Du jeu ancien au show sportif:*

d'une technique omniprésente dans la société et qui finit par devenir invisible. Dans le prolongement du texte, on pourrait avancer que l'exercice physique est au départ l'activité humaine la moins technicisée et qu'elle recèle donc le plus fort potentiel de technicisation. L'athlète grec était nu, ce qui choqua parait-il les Romains, puis l'Eglise. Le gymnaste, étymologiquement, arborait la même nudité. L'athlète moderne est à peine plus vêtu. Mais le peu de vêtement qu'il porte a été soigneusement étudié pour ne pas offrir de prise au vent. Son matériel utilise les matériaux nouveaux les plus performants. Son geste, sa foulée, ont été filmés, décortiqués, comparés et améliorés. Son alimentation observe les prescriptions du diététicien, son suivi médical est assuré, ses carences réelles ou supposées compensées par des produits conçus en laboratoire. Le psychologue vient parachever cette ingénierie médico-sportive.

La nage et la natation. Le sportif est la technique faite homme.

Convient-il de relativiser le propos en ayant présenté à l'esprit la diversité des pratiques sportives, par exemple la séparation entre le haut niveau et le sport de masse, le professionnalisme et l'amateurisme? Je ne suis pas enclin à le penser. Le sportif le plus anonyme, et même le débutant, copie leur équipement sur celui du champion, achète en pharmacie ou sur l'internet les « aliments de l'effort », annexent à leur corps de minuscules capteurs électroniques qui mesurent leur pouls et calculent les distances parcourues. Une étude révélait en novembre 2003 que les adolescents français qui pratiquent un sport sont 10% à recourir à des substances dopantes. Selon la même étude, c'est à quatorze ans que les jeunes sportifs français commenceraient à recourir à ces produits ; pour les jeunes Américains, ce serait à huit ans...

La mécanisation des gestes poursuit Ellul, correspond à la mécanisation des appareils utilisés pour le sport (chronomètres.). La mesure de précision, la formation des gestes, le principe du record, qui sont des éléments importants de l'industrie, se retrouvent donc dans le sport (p. 347). Au confluent de la science et de la technique industrielle naissantes en Angleterre, le sport s'impregnerait ainsi très tôt d'une mentalité moderne appelée à de fameux prolongements. Après tout, l'expression aujourd'hui banale « courir le 100 mètres en dix secondes » suppose bien que l'on ait préalablement défini la notion de mètre et que l'on soit capable de chronométrer en secondes, ce qui ne fut scientifiquement et techniquement possible qu'à partir de la fin du 18<sup>[ème]</sup> siècle avec la mesure du méridien terrestre et l'invention de la montre suisse. De façon inattendue mais assez significative, on retrouve ces ingrédients de la mentalité moderne, et donc sportive, dès les balbutiements de l'alpinisme, à la même époque.<sup>30</sup>

Après avoir abordé le thème des rapports entre sport, industrie et technique, Ellul en vient au thème de l'assujettissement de l'homme à la société totalitaire par le sport. Nous sommes ici résolument dans une approche critique du sport, approche qui correspond à un courant minoritaire mais actif à l'intérieur de la sociologie du sport,

represente en France notamment par Jean-Marie Brohm dont nous reparlerons plus loin.

Le sport, indique Ellul, permet a l'homme de se delasser de ses contraintes mais l'adapte aussi a son insu a de nouvelles contraintes, et cette « technique insidieuse » s'etend a la grande masse. Sous couvert d'esprit d'equipe, le sport preparerait a l'esprit totalitaire. Il est indispensable aux dictatures fascistes, nazies et communistes. Dans les pays « nouveaux », on assiste a une penetration conjointe des techniques et du sport. Guere plus tendre avec les Etats-Unis, Ellul constate que le sport technicise s'y est developpe d'abord en leur qualite de « pays le plus conformiste ».<sup>31</sup>

Que repondre a cette charge? Comme indique plus haut, l'analyse du sport a travers la technique est assez peu repandue et la critique radicale du sport n'est le fait que de courants minoritaires. Il est evidemment perilleux de dissenter sur le caractere plus ou moins conformiste des Americains. Avancons simplement que les arguments peuvent etre reversibles. Une bonne part de la sociologie du sport, et de la sociologie americaine en particulier, obeit a une approche fonctionnaliste qui se plait a reconnaitre le role -implicitement positif — du sport dans l'adaptation aux valeurs sociales et la socialisation. Le sport, aurait dit Esope, est la meilleure et la pire des choses.

Pour quitter provisoirement le debat d'idees, je propose au lecteur de revenir sur les exemples parfois deconcertants apportees par Ellul a l'appui de son raisonnement.

Ils sont au nombre de trois, tous lies a la relation entre sport, industrie et technique.

Premier exemple: « le seul pays d'Europe centrale ayant une organisation sportive etait le seul industrialise: la Tchechoslovaquie » (p. 346). En l'absence de toute reference ou indication plus precises dans le texte, on peut avancer l'hypothese qu'Ellul avait a l'esprit le mouvement sokol, fonde en 1862 dans ce qui allait devenir la Tchechoslovaquie, mouvement visant a developper « un esprit sain dans un corps sain ». Ce mouvement s'est implante aux Etats-Unis des 1865 et il semble y etre toujours vivace. L'affirmation un peu abrupte d'Ellul correspondrait ainsi a un episode avere dans l'histoire du sport ce qui donne une idee de l'etendue et de la diversite de ses informations et relativise le pretendu desinteret qu'il professait a l'egard du sport.

Le second exemple, emprunte a l'histoire de l'Antiquite, surprendra moins sous la plume de l'historien qu'etait Ellul: « on sait la grande opposition qui a ete faite entre les athletes grecs et les athletes romains. Pour les premiers, l'exercice corporel etait un jeu qui tendait a developper harmonieusement et librement les formes et les puissances corporelles. Pour les seconds, il s'agissait d'une technique pour avoir plus d'efficacite et vaincre » (p. 346, 1954; p. 347, 1990). Visiblement, Ellul avait connaissance d'une partie au moins des abondantes etudes relatives aux exercices physiques de l'Antiquite dont il ressort, effectivement, que les Romains avaient une conception des activites corporelles differente de celle des Grecs, et directement tournee vers l'usage militaire. En revanche, les historiens de l'Antiquite grecque ne manquent pas de souligner la tres

---

<sup>31</sup> P. 347, 1954; p. 348, 1990. Ellul reprendrait ici un constat que l'on prete habituellement a Tocqueville.

forte connotation religieuse des activités physiques, et des Jeux Olympiques en particulier. Dans la description du sport moderne, et pas seulement des Jeux Olympiques, le parallèle entre sport et religion revient fréquemment. On pourra juger paradoxal qu'un auteur qui a consacré une partie considérable de son œuvre au problème religieux n'ait pas manifesté de sensibilité à ce rapprochement devenu presque un cliché.

Le troisième et dernier exemple proposé par Ellul est le plus déconcertant: « Les meilleurs sportifs sortent des milieux ouvriers: les paysans, les forestiers, qui peuvent être plus vigoureux, sont de moins bons athlètes. Cela tient au fait que le travail à la machine développe une certaine musculature, juste celle qu'il faut pour le sport, très différente de la musculature paysanne; et d'autre part ce travail développe la rapidité, la précision des gestes, des réflexes » (p. 346, 1954; p. 347, 1990).

Les sources qui permirent à l'auteur de proposer cette distinction tranchée entre performances ouvrières et paysannes resteront probablement inconnues. Nous porterons à son crédit qu'il était sans doute bon connaisseur des aptitudes des forestiers puisque l'on sait qu'il ne dédaignait pas d'emprunter une hache pour abattre un arbre, à l'occasion, à titre de détente et d'exercice physique. Mais « celui qui avait (presque) tout prévu » pourrait encore nous réserver une surprise. Des données statistiques françaises largement postérieures à l'époque de rédaction de *La technique* montrent en effet d'une part que les ouvriers pratiquent beaucoup plus le sport que les paysans, d'autre part que les aptitudes physiques sont liées à une taille élevée. Or, toujours selon les statistiques, les paysans seraient plus petits que les ouvriers...

Dans la trilogie ellulienne consacrée à la technique, *Le système technicien*<sup>32</sup> et *Le bluff technologique*<sup>33</sup> font suite à *La technique*.<sup>34</sup> Absent du *Système technicien*, le sport est à nouveau à l'honneur dans *Le bluff technologique*, avec un sous-chapitre de sept pages intercalé entre le jeu et l'auto, à l'intérieur d'un chapitre consacré au divertissement.

En introduction, une brève référence à “mon premier livre” (*La technique*, donc) et une double approche à travers le spectacle et le discours technologique: “le discours technologique a transformé le sport en énorme spectacle” (p. 430). Le spectacle, c'est évidemment la télévision, et l'omniprésence du sport dans ce média illustrée par de nombreuses statistiques. Avancons aussi l'hypothèse d'un emprunt à *La société du spectacle*<sup>35</sup> best-seller de la littérature situationniste publiée en 1967, bien connu d'un Ellul lui-même cité dans les textes sacrés de l'Internationale Situationniste. Le discours technologique, c'est, après la société technicienne et le système technicien, le maître mot qui sous-tend le troisième volet de la trilogie.

Comme dans l'ouvrage précédent, Ellul étonne par la multiplicité des exemples choisis, preuve d'une attention portée au sport en parfaite contradiction avec le désintérêt

---

<sup>32</sup> Jacques Ellul, *Le système technicien* (Paris: Calmann-Lévy, 1977; 2[e] éd. Paris: Le Cherche-Midi, 2004, avec une préface de Jean-Luc Porquet).

<sup>33</sup> V. la note 4.

<sup>34</sup> V. la note 3.

<sup>35</sup> Guy Debord, *La société du spectacle* (Paris: Buchet/Chastel, 1967; 3[e] éd. Paris: Gallimard,

et l'ennui professes ailleurs. On relevera aussi quelques notations naïves ou passeistes ("autrefois, l'association bordelaise pour le football était composée de Bordelais," p. 432; "mais où est donc le tennis d'antan?," p. 432), et cette formule sans appel empruntée au subtil anarchiste Cavanna: "mourir comme un con pour le Paris-Dakar" (p. 434).

La place du sport dans les médias, le professionnalisme, l'argent, la violence, sont évoqués avec abondance d'exemples et de chiffres, à l'image de l'ensemble de l'ouvrage qui regorge de statistiques et de références. Mais Ellul ne puise pas seulement dans l'actualité. Les comparaisons avec l'Antiquité

flourissent sous sa plume. Les achats de footballeurs professionnels "rappellent exactement la vente à l'encan, à Rome, des gladiateurs, des pugilistes, des conducteurs de char" (p. 432, n. 8). Les Jeux Olympiques de l'Antiquité (autre notation passeiste?) "étaient tout autre chose" (p. 433): la guerre s'arrêtait et l'unité de la Grèce était reconstituée, à l'inverse des boycotts américains, soviétiques et sud-africains. Les Jeux, avance Ellul, sont devenus un moyen de combat du fait de la technicisation de la société, et non de sa politisation "car il n'y avait pas de monde plus politisé que le monde grec!" (pp. 433-434).

Trois observations d'Ellul me frappent par leur pertinence ou leur originalité. Il décrit d'abord les courses de ces voiliers (le bassin d'Arcachon, proche de Bordeaux et prise par les adeptes de la voile, lui était familier), qui sont devenus des supports publicitaires et des "monstres de gadgets" (p. 430, n. 6) équipés d'appareils de navigation par satellite, de decodeurs météo, d'ordinateurs de bord, de caméras pour la retransmission médiatique et que la presse présente sans rire comme "la technologie au service de l'imaginaire" (p. 435)! Bel exemple de ce discours technologique qui masque la réalité technicienne et nous amène à confondre le réel et le virtuel, la cause et l'effet.

La création d'événements ensuite: ne pas laisser de vide dans l'alimentation spectaculaire du public. Cette création résulte-t-elle, comme le suggère Ellul ("il faut" créer; "on" crée) de la volonté de forces mystérieuses, des contraintes d'une technique implacable, ou plus simplement de la logique d'une programmation médiatique qui a horreur du vide et adore les recettes publicitaires? L'observation du journaliste (sic) s'époumonant à commenter, à grand renfort d'hyperboles, la retransmission d'une rencontre sportive languissante mais chèrement payée peut servir à alimenter ce débat. Notons que cette création d'événements mise en évidence dans la partie de l'ouvrage consacrée au sport s'appliquerait avec autant de pertinence à bien d'autres chapitres de l'ouvrage (jeux, divertissement, information...).

En contrepoint des dérives sportives et médiatique, Ellul nous surprend enfin par une référence un peu inattendue: la corrida, "jeu barbare ... ritualisé" (p. 433), ou encore "comportements collectifs intégrés dans une sorte d'éthique commune" (p. 433).

Terminons cette présentation des pages du *Bluff technologique* consacrées au sport par un passage qui campe Ellul dans l'originalité de sa réflexion et de son action.

---

1992).

A propos de l'achat a prix d'or des joueurs professionnels de football, il mentionne les difficultes financieres des clubs (probleme naissant a la sortie de l'ouvrage et qui n'a cesse d'etre d'actualite depuis), les subventions genereuses que leur versent les municipalites et le prelevement fiscal qui en resulte pour des contribuables qui ne sont pas tous des passionnes de sport. En 1988, Ellul etait certainement l'un des premiers a avoir identifie et souleve le probleme des subventions aux clubs professionnels qui devait faire l'objet, a partir de 1994, de vifs debats politiques et de decisions visant a limiter la generosite des collectivites territoriales. Mais surtout, il avait, comme il le rappelle en note, propose une reduction fiscale pour les contribuables qui ne s'interessaient pas aux clubs sportifs (p. 431, n. 7). Pionnier, sinon createur, du *think global, act local*, Ellul avait choisi le sport pour sa participation a la vie locale, au meme titre que la protection de l'environnement aquitain et de son littoral ou l'action en direction des jeunes delinquants.

En avril 1991, la revue *Quel corps?* publiait son numero 41 intitule « Anthropophage du sport » (sic). Riche de plus de deux cents pages, ce numero incluait un article de sept pages intitule « Sport et technique » signe de Jacques Ellul.<sup>36</sup> Le responsable de la publication, Jean-Marie Brohm, signait pour sa part deux articles (*La guerre olympique ; Le sport est un assassin*), dont l'intitule meme illustre assez bien l'existence en France du courant critique evoque plus haut.

Trouvera-t-on dans cet article les « belles erreurs » qu'il reconnaissait dans sa correspondance de 1992 avec Didier Nordon? C'est en tous cas a ce dernier, ami commun de Jacques Ellul et de Jean-Marie Brohm, que l'on doit probablement cette contribution a *Quel corps?*.

Après avoir rappele en introduction ce qu'il entend par technique, Ellul expose l'image que l'on donnait du sport vers 1930, decrit ensuite l'impact de la societe technicienne sur le sport, le corps du sportif et son materiel, pour achever son expose avec le role de l'argent.

L'image que l'on donnait du sport vers 1930, lorsque commence vraiment l'ere technicienne, nous dit Ellul, etait d'abord celle d'un jeu pratique au niveau local, avec un imperatif de « mens sana in corpore sano ». Le sport, qui se divisait en sports de riches et sports pour tous etait alors synonyme de fair play, avec des regles a respecter qui favorisaient l'apprentissage de la vie en societe (notons que l'on retrouve ici la fonction de socialisation evoquee plus haut).

Dans ce passage, Ellul prend soin de garder ses distances avec le sport. Il se borne a decrire l'image que l'on en faisait, tant il est vrai que le sport est rapidement devenu une representation ideologique et idealisee.

Comme dans les textes tires de *La technique* et du *Bluff technologique*, l'expose des idees s'appuie sur des exemples precis particulierement nombreux. Ainsi de la boxe, « un des premiers sports a etre regle ». Effectivement, sans etre la plus ancienne dans son organisation et ses regles, la boxe fut constituee en association sportive en Angleterre

---

<sup>36</sup> Jacques Ellul, "Sport et Technique," *Quel corps?*, no. 41 (avril 1991), pp. 77-83.

des 1884, sur la base de la codification effectuee par le marquis de Queensberry. Autre exemple de l'auteur relatif au football, le professionnalisme en Grande Bretagne qui existait « deja » en 1900–1930. Mention encore une fois exacte, le football y etant devenu sport professionnel en 1885. Incollable dans cette premiere partie de l'article, notre auteur, decidement tres en verve, ne resiste pas au plaisir de l'anecdote, que les lecteurs les plus curieux ne manqueront pas d'aller verifier: « bien entendu, le fair play n'etait pas applique partout: des coureurs du second Tour de France furent assommes par des partisans regionaux d'une autre equipe ». Ou encore: « dans des courses automobiles, on placait des clous sur la piste... ! ».

Qu'est-il advenu du sport tel qu'on le representait au debut du 20[eme] siecle? Dans une societe technicienne, indique Ellul, la reussite, donc la competitivite sont devenues des valeurs decisives. En sport, il faut choisir a tout prix le moyen de gagner car la technique nous a appris a toujours gagner. La diffusion mondiale des images par les techniques nouvelles, le gout pour le divertissement, ont encourage l'agressivite, releguant le beau jeu et l'elegance. Et de citer (idealisant peut-etre un peu le passe) l'exemple du boxeur Georges Carpentier. Observation lucide en revanche sur l'extension au tennis « des muscles qui tapent avec violence » (qu'aurait dit Ellul du tennis du troisieme millenaire, et particulierement du tennis feminin?).

Les techniques en rapport avec le corps sont ensuite examinees dans leur filiation avec le taylorisme. Ellul cite l'usage du film, la preparation physique et psychologique, la dietetique, et aborde les produits chimiques et les dopants. Sur l'interdiction des produits dopants, sa pensee merite d'etre reprise dans son integralite: « Cette interdiction se comprend

parfaitement lorsqu'il s'agissait de l'affrontement de deux hommes, (ou d'equipes) comparables a tous les autres, et qui pratiquaient le sport comme une sorte de distraction, comme d'autres font du theatre amateur. Mais est-ce encore tout a fait aussi comprehensible lorsqu'il s'agit de l'affrontement de deux machines uniquement destinees a montrer leur puissance et a gagner? ».

Une telle prise de position merite un double commentaire. En premier lieu, l'article a ete publie en 1990, soit bien avant 1998, annee fatidique au cours de laquelle le Tour de France, epreuve cycliste erigee en mythe et de notoriete internationale fut l'objet de revelations accablantes sur l'usage massif du dopage dans le cyclisme professionnel et amateur. Depuis 1998, le dopage dans le sport est devenu un sujet “grand public”. Son existence est divulguee periodiquement par des revelations circonstanciees, embarrassantes pour le milieu sportif, alors que sa seule evocation etait auparavant souvent consideree comme indecente ou sacrilege (« sportivement incorrecte » aussi bien que « politiquement incorrecte »). Le dopage n'est plus tout a fait un sujet tabou. L'annee 1998 permet des lors d'operer une distinction impitoyable entre ceux qui avaient eu assez de lucidite et d'honnetete intellectuelle pour aborder le probleme du dopage, et ceux qui se sont contentes de prendre le train en marche, voire qui ont decouvert l'existence et l'importance du phenomene sportif a travers le scandale mediatise du dopage. Et force est de constater qu'Ellul se range dans la premiere categorie.

En second lieu, dans la mobilisation de toutes les ressources techniques au service de la performance et de la victoire, l'absorption de substances chimiques peut en effet paraître parfaitement cohérente. Le dopage est une démonstration supplémentaire de la technicisation de notre société. Son acceptation tacite par les milieux sportifs et la relative indifférence de l'opinion illustrent assez bien la morale qui prévaut dans une société technicienne. Le sport en général, le dopage en particulier, s'inscrivent parfaitement dans l'analyse ellulienne.

L'article se poursuit par la dénonciation du caractère dérisoire de la précision apportée au chiffrage des records et du recours à des engins sophistiqués pour départager des concurrents que *Trail* humain est incapable de différencier: « dérision du spectacle de l'homme parfaitement déclassé par ses engins techniques ».

Autre engin évoqué, l'automobile de compétition « instrument étrange qui n'a plus de l'auto que les quatre roues ». S'ensuit une appréciation sur la recherche en matière automobile par des chercheurs « de plus en plus spécialisés, ce qui est le processus typique de la technique ». À vrai dire, le commentaire d'Ellul apporte peu sur le sujet de la course automobile et n'enrichit pas véritablement son analyse de la technique. Il s'attarde en revanche sur la bicyclette qui aurait selon lui connu la mutation la plus spectaculaire. Et il est vrai que l'engin utilisé sur piste ou dans les étapes contre la montre du Tour de France a connu des modifications très visibles. Georges Vigarello<sup>37</sup> ferait sans doute observer que, dès les premières années de son invention, la bicyclette connut également des modifications successives notables avec l'apport de la roue libre, du pneumatique et du dérailleur. Ce dernier mécanisme, on le sait, fut d'ailleurs longtemps prohibé pour des raisons propres à « l'esprit sportif ». Peut-être alors la distinction entre les deux époques (la première précédant l'avènement de la société technicienne, comme indiqué plus haut) serait-elle à rechercher dans le passage d'un souci de perfectionnement de la machine à un souci d'obtention de la performance maximum de l'homme-machine.

Après l'examen de ces exemples précis, complétés par une brève allusion à l'évolution du saut à la perche et du ski, Ellul se livre à une interrogation sur le sens de ce « progrès » des performances, sur la réalité de la supériorité des sportifs contemporains sur leurs prédécesseurs ou sur l'homme quelconque à d'autres périodes de l'histoire. Le record, conclut-il, devient une valeur en soi et atteste du triomphe des techniques sur le corps et sur les instruments.

L'article se termine sur l'évocation de l'argent dans le sport, devenu sa « raison dernière ». Ellul développe les liens, « l'auto accroissement » (par référence aux caractéristiques de la technique qu'il a définies dans ses ouvrages) entre médias, publicité, droits de retransmission, sponsoring, organismes sportifs, spectateurs et téléspectateurs. Est en outre mentionné le rôle des pouvoirs publics dans la construction des équipements sportifs. Le cumul de ces différents intervenants correspond bien, en effet, aux analyses économiques et sociologiques actuelles sur le développement du sport.

---

<sup>37</sup> V. la note 10.

Citons les phrases conclusives de l'article qui définissent le sport comme « un divertissement qui permet d'investir des passions inemployées (dans une société qui n'a plus de valeurs) face à des millions d'hommes qui ne croient plus à rien ». Le sport est ainsi tombé dans « ce vide de sens qui caractérise notre époque, provenant du remplacement de l'action personnelle par le spectacle d'une manifestation collective ».

Quelles impressions dominantes retirer de ce discours sur le sport échelonné sur une période de plus d'un demi-siècle, des premiers aux derniers écrits?

Il est assez clair que le désintérêt affiché et les prétendues erreurs commises sont largement contredits par une réflexion qui porte sur l'essentiel du sujet, qui vise juste et qui apporte à la démonstration, à côté de quelques illustrations invérifiables et de formules parfois hatives, des arguments avérés recueillis dans l'actualité aussi bien que dans des ouvrages. Parmi ces derniers, il est peut-être étonnant de ne trouver ni mention ni allusion à Norbert Elias, de quinze ans l'aîné d'Ellul et comme lui historien et sociologue. Le parallèle pourrait être poussé plus loin: chez les deux auteurs, le sport est abordé rapidement dans une œuvre maîtresse (*La technique* pour Ellul en 1954, *La civilisation des mœurs* en 1939 avec une traduction française en 1973 et anglaise en 1978 pour Elias<sup>38</sup>). Mais seul ce dernier reviendra longuement sur le sport, dont il fait une clef pour la compréhension de l'évolution de nos sociétés à travers différents articles repris en traduction française sous le titre *Sport, violence et société, la violence maîtrisée*.<sup>39</sup>

Autre absence, déjà relevée, la part du religieux dans le phénomène sportif, son rôle possible de substitut de la religion; Coubertin le proclamait, beaucoup en ont l'intuition. Paradoxalement, Ellul effleure à peine le sujet, mentionnant simplement ces « millions d'hommes qui ne croient plus à rien ». C'est qu'en réalité, le sport n'est pour lui qu'un épiphénomène technique dans un monde où l'homme « reporte son sens du sacré sur cela même qui a détruit tout ce qui en était l'objet: sur la technique ».<sup>40</sup>

## Ellul & the Internet

by Boyan Koutevski

*Boyan Koutevski is a senior creative executive with MAG Communications, Bulgaria. He is completing his Ph.D. in Communications and Public Relations at the University of Sofia.*

Forecasts of the future usually reflect the fortune teller's mysticism, and we tend to doubt them. The main reason for our distrust is the claim of their authors that these are prophecies; that they, but no one else, has "the gift" to see far into the coming future. In describing and defending themselves, they actually identify with the mage of James Frazer's "social magician."

Jacques Ellul didn't make for himself this common claim for prophecy—he didn't need to. His prophecy emanated from his very personality. His ideas were clearly enough explained and argued. There are no absolute formulas. The skilled scientist cannot afford to have a passion different from the passion toward knowledge. Ellul didn't make glamorous statements. He didn't produce neologisms. So much social phenomena needed clear and simple, but at the same time, precise explanations. Ellul never hesitated to express his point of view; he never made critics by simply mentioning different theories or others' viewpoints. Explanation and persuasion are for me the two keywords that describe his scientific approach.

Ellul foresaw the estrangement among people caused by emerging technologies and by the bewildering consumption of goods and symbols. He warned us against the depersonalization of the individual; against the scarce knowledge resulting from image-based culture; against the opportunities, which overinformation have provided the propagandists for disabling one's critical judgments; against the equalization of truth and reality in a society ruled by fake images. The French philosopher examined in depth the transition from industrialism to the technological age—an age, which today has become a vast evolution of information technologies. Though the Internet form of those technologies emerged after Ellul's death, it is relevant to ask how his thinking comprehends it.

Let's not forget that the Internet started its existence simultaneously in the university and in military research centers in the USA, hence its "parents" are totally different. Meanwhile, we shall note that for Ellul technologies go beyond the control of their physical creators and owners. Therefore, we need a broader perspective than to see the Internet in terms of its parentage, which have become synonyms for the freedom of the mind and oppression respectively.

In *The Technological Society* (1954) and its "up-grade" *The Technological Bluff* (1990) Ellul argued one of the main ideas in his works— technologies push people into compliance and the chase for perpetual effectiveness, transforming individual personalities into an obedient mass. The inevitable consequence of this malfunction of civilization is the emergence of the mass-man. Ellul gave the example of advertising's technique, whose main goal has always been the creation of artificial needs as emotional

desires among the biggest possible target group, without paying any attention to the negative results of this influence. Ellul implied that the notion “technological society” is an evolution of Raymond Aron’s “industrial society.” We can define the Internet society along the same logical lines.

After this brief survey of information in the past, we must now assess the complete change in our own day. Confronted with what now passes for information, we note at once the intellectual and conceptual gulf that separates us from the computer. What is information for the computer? Information is defined as data. Facts and ideas are formalized in such a way that they can be communicated or manipulated by different procedures. But that data have first to be represented. This representation is used throughout. The process consists of handling the data, which may or may not be memorized. It is interesting to note that in analyses of the information handled by the computer, we find again the ideas of knowledge-information and service-information, but the words have now changed their meaning. The knowledge at issue here is comparable merely to the predigested knowledge of an encyclopedia, which gives a certain picture of the world but bears no reference to reality<sup>41</sup>.

Ellul spoke against the transformation of technologies from being an instrument for human progress in society and the final objective of this progress. The Internet has been mutating menacingly from the means of communication among people into communication for the sake of the process itself— alienating people and making them an easy prey for attempts to bring compliance. As knowledge media become over-informative media, they exhaust the mind in their attempt to convert this information into a subjective judgment. Ellul summarized the common principles, which drive the technologies, especially media technologies and explained their impact on culture. Technologies themselves have been emerging on a cultural base, making them adaptive to the culture system and allowing them to change it. The scientist doesn’t resist technological progress, he only warns that technologies have been developing beyond human control and progress becomes a goal in itself. Internet as practically unlimited emerging media fits this definition and that’s the reason it has been chosen as the research object of this retrospective study. The easy mass access to the Internet, which doesn’t require some scarcely spread technical equipment, draws the problem out of the technique of physical actuality. The analysis of the Internet must get more and more philosophical rather than be only technological in nature.

A similar evolution in understanding technological innovations has been observed with any new revolutionary means of communication: steam printing press, telegraph, phone, radio, TV, and lately, with the emergence of the global electronic network. However, in contrast to its predecessors, the Internet relies more on the already existing infrastructure and industrial capacities. Therefore, its technological destiny and development dynamics, including virtual “social processing,” have been foreseen.

---

<sup>41</sup> Ellul, J. *The Technological Bluff* <http://t2100.dct.Kippona.net/public/ellul>, 19.01.2004.

As noted earlier, the Internet went through several stages of development to build the infrastructure that would support networking innovations. The Department of Defense, the military, the National Science Foundation, and many more, financed and helped develop the infrastructure that would eventually become today's Internet. The Internet was not immediately successful. But, as time passed, its users and builders found ways to implement the technology, slowly changing its character<sup>42</sup>.

Ellul developed a way of thinking and acting that is necessary when thinking of technology, but is not necessarily connected with machinery. *Technique*, as described by Ellul, refers to governments as well as to artifacts. In fact, it is, *the ensemble of practices by which one uses available resources to achieve certain valued ends*. The printing press is technique. Slavery is technique. The alphabet is technique. Government is technique. Steam power is technique. Ellul claims the key characteristics of technique are rationality, artificiality, the automatism of technical choice, selfaugmentation, monism, universalism, and autonomy<sup>43</sup>.

These are the Internet's basic features which are unique for this medium: it's the answer to the rational needs of the globalizing world; it creates artificial reality; consumption becomes a stereotype; it grows from the human desire not to stay apart from the technological advantages of computer networks; it's an autonomic medium; it covers every aspect of life; the development limitations are minimal. Ellul's view of technology is that once it is let out of the laboratory, technology cannot be turned off. Technology begets more technology. The modern world, therefore, is one in which more technology is inevitable. "Fixing" or remediating the impact of a technology like water pollution requires—you guessed it—more technology<sup>44</sup>.

To the science of persuasion, Ellul's biggest contribution was the analysis of technology's social development and being. In contrast to American researchers, he didn't stick with proving the "technologies-propaganda" interaction, using examples from social practice and strict definitions of the persuasion approaches. What he did was search for the deeper psychological and social prime movers leading to propaganda's success. As a sociologist, Ellul didn't limit his effort to the standard process: the subject uses persuasion technique with X results. He researched the process as complex interaction in its systematic specificity; in so doing, he opposed the theory that only via influence and attitude change is propaganda effective. Ellul's point of view was that a person or social group could be pushed toward certain desires by the propagandist's action without being preliminarily convinced of its correctness. This decision-making pattern appeared to Ellul to be caused very much by the influence of technique.

Marshall McLuhan's review of *Propaganda: The Formation of Men's Attitudes* for *Book Week* summarized Ellul's general finding: "...when a new technology encompasses any culture or society, the result is propaganda"<sup>45</sup>. Blocking critical thinking, together

<sup>45</sup> Ellul, J. *Propaganda: The Formation of Men's Attitudes*, New York, 1973.

with the belief that the machinery (including computers) is totally reliable, are ideal premises for successful persuasion. Professor Robert B. Cialdini also demonstrates this interconnection and defined it as “primitive automaticity” similar to animals’ instinct. We are likely to use those lone cues when we don’t have the inclination, time, energy or cognitive resources to undertake a complete analysis of the situation. When we are rushed, stressed, uncertain, indifferent, distracted, or fatigued, we tend to focus on less of the information available to us. When making decisions under these circumstances, we often revert to the rather primitive but necessary single-piece-of-good-evidence approach<sup>46</sup>.

The total technological foundation of contemporary society has also made the propaganda total—totally pervasive, presented in every form of public communication. Ellul rejected all attempts to research propaganda in small experimental groups. To him propaganda was a unique phenomenon, springing out of almighty powers, pushing the persons in the technological society in a way that could not be reproduced in an experimental environment. The most powerful form of propaganda—sociological propaganda—has found in the Internet an excellent medium. Sociological propaganda is a phenomenon much more difficult to grasp than political propaganda, and is rarely discussed. *Basically it is the penetration of an ideology into its sociological context*<sup>47</sup>.

In his conversations with the French journalist Patrick Troude-Chastenet, featured in the book *Jacques Ellul on Religion, Technology and Politics*, the social philosopher made a precarious balance which was unknown to the book’s readers and to researchers. Ellul summarized his analysis of technological developments during his lifetime, and in the process gave his forecast for the Internet’s unseen future:

I would say that I have tried to show how technology is developing completely independently of any human control. Carried away in some Promethean dream, modern man has always thought he could harness Nature, whereas what is happening is that he is building an artificial universe for himself where he is increasingly being constrained. He thought he would achieve this goal by using technology but he has ended up its slave. The means have become the goals and necessity is a virtue<sup>48</sup>.

I merely have tried to start analyzing the determinist characteristics of technology with this essay. The main problem of the vast majority of texts critically examining the men-and-technology interconnection is that they are limited to human labor activity and the concrete negative ends for people in their relations with technology. I have tried to analyze it in the way Ellul did—developing the problem in more general terms, while researching also the changes in real time. In this way, he destroyed the utopia of balanced control in society, executed via some kind of technology in the way Aldous Huxley had done with his *Brave New World*. But keep in mind that Huxley’s

work is conditioned by and is clearly anti-utopian, in contrast to Ellul's describing real processes in contemporary society.

Jacques Ellul left this world before the Internet had shown its true social power. Mentioning here its drawbacks to social development, mainly caused by its nature as a technologically based medium, it is fair to praise its ability to change technology's role in the social process. The combination of image, sound, text and the hyperlink have brought back the opportunity to choose the messages received. Internet isn't simply one of the electronic media—it limits information access only minimally. The development of search machines containing artificial intellectual elements could not only improve the quality of the information found but also lead to its critical interpretation. The critical analysis of the global network shouldn't be done in a retrograde mode. The lack of technological progress or its violent delay or stop has always led to a distortion of the principles of democracy, not just technically but also in their very core. This analysis is necessary for society, to protect it from becoming a mass of consumer spectacles in real time, and to leave the anti-utopia nightmares of Geroge Orwell, Aldous Huxley and Robert Sheckley in the sci-fi thriller genre. The critical point of view plays its role of "socially-tolerated pessimism." It always tries to find problems (real or imagined) as if obsessed by paranoia, but it guarantees the transparency of the processes and the development of human-oriented technologies. Maybe the critical perspective is on its way to transform the technologically determined society into a society determining its technologies.

# Re-Viewing Ellul

*Fifty years ago, in 1954, Jacques Ellul published what would become his most famous and influential book, La Technique, which in 1964 was published in an English translation as The Technological Society. To mark this half-century milestone, the Ellul Forum asked the distinguished Penn State University professor of materials science, Rustum Roy, to re-view Ellul's great book and its contribution to our thinking.*

## The Technological Society

by **Jacques Ellul**

Translated by John Wilkinson. New York: Alfred Knopf, 1964. Revised American edition, New York: Knopf/Vintage Books, 1967.

Original edition *La Technique ou l'enjeu du siecle*. Paris: Armand Colin, 1954. Second ed. Paris: Economic, 1990.

**Reviewed by Rustum Roy**

Founding Director STS Program, Penn State University; Founding Director, Materials Research Laboratory, Penn State University

Master Jacques Ellul: A Tribute\*

In the euphoric time surrounding the release of Pope John XXIII<sup>rd</sup>'s "Pacem in Terris" at a symposium in New York, John Wilkinson mentioned a book creating a stir in Europe called *La Technique* by a Professor of Law named Jacques Ellul. These comments made no connection for me until the conversation turned to the content of the book and the summary of its thesis. Put crudely: Ellul, it was said, claimed that "Technology" was not controllable by human society. That in a sense technology was ultimately an enemy of human development.

As the only working high tech scientist usually present in such theological groups, I had become accustomed to the next question, "And how would Rustum Roy respond?" In this case my interlocutors were surprised by both my reply, and the tone of delivery. My response then, as it remains today was: Ellul not only was right, but he had *underestimated* the size of the problem, and how great a danger to the future of the human race the scientific/technological enterprise *as practiced today*, posed.

I had been introduced to the thoughts of Jacques Ellul through his slim volume *The Presence of the Kingdom* (1948; ET 1953). In the radical new Christianity emerging after WWII, Dietrich Bonhoeffer had emerged as its prophet — with his "religionless Christianity." And here was Ellul expressing very similar ideas. So when his *Techno-*

*logical Society* painted similar ideas on a broader canvas, it was clearly destined to be a masterpiece. Notice I do not identify “science” or “technology” *per se* as dangers to humanity, only the *present “system,”* Ellul’s clearly identified “technological society” which has emerged in our time.

All great societies have had science and “technology” — much of it very sophisticated. From the Egyptian pyramids to Brunelleschi’s Florentine cathedral there were dramatic technological achievements. The great insight Ellul brought into play was that in the contemporary technological society, technology had surreptitiously usurped the function of mythopoesis. Why? Because it had become something quite new: a *system*; thence: the “Technological-Society”—technology completely integrated into the warp and woof of culture. That remains Ellul’s and this book’s greatest insight, still hardly appreciated, even in academia.

The technological society was a conspiracy without conspirators. As Ellul clearly understood, our collective universal conspiracy is to allow our baser personal desires to be manipulated to undercut the collective good. Why? Because we had abandoned the transcendent values: we had dethroned all gods and God. Over the years I have phrased it thus: Technology is America’s religion— with rigid practices, rituals, and liturgies— and Science has become its rather onedimensional theology. It is surely necessary for academics never to discuss together incommensurable units such as “science and religion”: one can not measure volume (the three dimensions of religion) in the units of length, linear science (cm). Our arguments should pit technology against religion as they interface in Ellul’s *Technological Society*.

The other great insight of Ellul was that modern technology had mastered the art of using appropriate feedback loops to take over larger and larger spheres of human activity. Technology gives humans what their hearts desire, and for which humans will gladly sacrifice all their cherished values.

As we at Penn State helped seed and shape what was to become the national (and later international) Science, Technology & Society movement, it became clear that Ellul was in some ways the philosophical rock on which our call rested. I therefore approached him to join our fledgling movement to bridge the divide in C. P. Snow’s “Two Cultures” world. He joined me as a CoEditor in Chief for the *Bulletin of Science, Technology & Society*. At an early national Conference of the National

Association for STS, Ellul sent over a 45 minute speech in French for the opening plenary lecture. We played it, as I remember, with an English translation in voice-over. It appeared in the *Bulletin of Science, Technology & Society*. That surely was appropriate, for in “STS” as an emerging academic field no one could be more relevant than Jacques Ellul and now as his various updates of the Technological Society have emerged, I would hope that no one can get any degree in STS without a real familiarity with Ellul’s Technological Society concept. It is particularly fitting that Ellul’s Canadian protege, Prof. W. Vanderburg has succeeded both of us as Editor in Chief of that Journal.

But there is another way in which Ellul underestimates the danger we stand in — that is the danger, not only from technology, but from “science” of various degrees of “basicity.” Unlike Ellul, I have lived 100% immersed in that world of academic basic science *and* its applications in the real world for, six decades, while being, like Ellul, simultaneously a committed socially-and-politically *active* liberal, inclusivist Christian and, also like Ellul, an active but “outsider” participant in established church circles. I have very little patience for the esoteric *academic* science — religion dialogues about the Big Bang, evolution, etc. distracting citizens and even believers from the full bodied nature of religion and the Gospel imperatives of feeding the poor or loving enemies. Ellul, to the best of my knowledge, never discussed the fine points of evolution or string theory, and its relevance to the nature of God!! Nothing would be more irrelevant to the existential relation of “S/T” to religion as practiced. My experience is that modern science *as practiced today* has become, in fact, “scientism”. It has created in the West an oxymoronic “culture of disbelief”; since all other cultures cohere around a set of beliefs (*resultant practices and rituals*). “Scientism”, by actual acknowledgement or default, seduces most regular scientists into a frame of reference that has *all* reality subjected to evaluation by scientific measurements however narrow or irrelevant they may be. With the incredible degree of reductionist fragmentation, (disciplinary specialization in the common parlance) which creates a hitherto unknown condition: where no one “specializes” in the whole, i.e. in the biggest overarching issues of life in Society—in a word— religion. This is what Ellul did. He put together *in his life* his academic and theological insights with his actions — his praxis.

The part (science) is claiming, putting on airs, indeed positioning itself as the whole (Religious behavior), while entering into so-called conversations on “Science & Religion.” Among the world’s theologians, only Huston Smith (see his book *Religion Matters*) has clearly spotted this trend and attacked it vigorously. Among distinguished scientists, only C.F. von Weisacker has identified the danger. In the closing paragraphs of “The History of Nature” Weisacker writes:

*But when knowledge without love becomes the hireling of the resistance against love, then it assumes the role which in the Christian mythical imagery is the role of the devil. The serpent in paradise urges on man knowledge without love.*

*Anti-Christ is the power in history that leads loveless knowledge into the battle of destruction against love. But it is at the same time also the power that destroys itself in its triumph. The battle is still raging. We are in the midst of it, at a post not of our choosing where we must prove ourselves.*

Ellul was at his post proving himself!!

Yet a final topic which must be addressed is the Janus-like character of Ellul’s work: his deep, voluminous theological works on the one hand, and his “STS” writings including his cornerstone, *The Technological Society* on the other. There was little cross-referencing between the two realms in Ellul’s own writing. I have not seen this commented on widely by others. Perhaps only Willem Vanderburg, with his five year apprenticeship under Ellul, could fill out this story for the community. And in fact

in a short second Appendix to his recent book “Perspectives on our Age” Vanderburg has given his very sound hypothesis on why Ellul did not link his two foci explicitly. I found the case very well argued. Contemporary culture simply cannot be mapped on to a Christian mythos. These worlds remain separated, with the rare working participants in both shuttling between them, fitting in, incognito, in both camps — rarely betraying their other allegiances. Like Kierkegaard’s Knight of Faith, the sensitized believer appears no different from other knights in the ordinary world (of technology.) Like Petru Dumitriu’s believers living in the even more constrained communist bloc, described in his great classic work, “Incognito,” they learn to use a special, largely unspoken, language when communicating among themselves.

In summary: Ellul is with little doubt the most significant author for the STS field; the unchallenged philosopher of technology, and the theologian providing a “Guide for the Perplexed” for believers living in a “Technological Society.” \*This appellation, “Master Jacques” used by my friend and colleague, Ivan Illich, at a celebrating event shortly before Ellul’s death, has a great ring to it.

# In Review

## Enough: Staying Human in an Engineered Age by Bill McKibben.

New York: Henry Holt, Times Books, 2003. xiii., 272 pp. Reviewed by David W. Gill

Bill McKibben writes regularly for the *New York Review of Books*, *The New York Times*, *The Atlantic*, and many other publications. Among his previous books are *The End of Nature* and *The Age of Missing Information*. McKibben's *Enough* is an impassioned call for debate on whether we should set limits on developments in human genetic engineering and advanced forms of robotics and nanotechnology. His belief is that these technologies "may alter our relationship not just with the rest of nature but with ourselves" and "call into question, often quite explicitly, our understanding of what it means to be a human being." (xii).

McKibben fends off the possible charge of impeding progress and playing the Ludite by saying such charges are "as silly as accusing someone of being a prohibitionist because he'd rather leave a barroom with a warm glow than a spinning head" (xii). Is it possible that our technological reach is now far enough? Can we limit ourselves? Should we do so?

McKibben is especially concerned about germline genetic engineering and cloning. So far this has not been successfully done on humans but recent progress on both plants and animals and the lack of public discussion is an ominous portent. Part of McKibben's concern is with the potential for unintended, dangerous, even macabre consequences. But the center of his argument is with the erosion of our humanity as we turn ourselves into technical objects, devices, engineered phenomena. Part of what it means to be human is to struggle against our limits; to transgress all limits by technological decisions would be to erase one of the essential features of our humanity.

Echoing Bill Joy's famous article, McKibben also argues that nanotechnology, miniaturization, selfreplicating assemblers, and robotics are to inanimate matter what biotechnology is to animate matter. The two realms are threatening—and converging.

McKibben's answer is that we say "enough" and pronounce the world we live in "good." He quotes technophile futurist Lee Silver as saying we are on a "journey into a rapidly evolving future that no man, or woman, could stop" (p. 163). It is this arrogance and assumption of inevitability that McKibben challenges. McKibben gives examples of how various societies and groups have said "no" at various points. The

Amish lifestyle, the European rejection of genetically modified food, the rejection of DDT, the resistance to nuclear power plants, some progress in controlling population growth ... there are examples of a human capacity to resist what looks like inevitable scientific-technological prescriptions for our lives.

The scientists and their business investors are unlikely to be willing to stop on their own; a broader social debate is necessary. The answer is most certainly not to stop all scientific and technological advance; rather, it is to set some boundaries at critical points where our humanity is clearly at stake. McKibben's argument is well-written, provocative, and deserving of careful consideration.

## **Perspectives on Our Age: Jacques Ellul Speaks on His Life and Work Edited by Willem H. Vanderburg**

Revised edition. Toronto: House of Anansi Press, 2004. xvii, 131 pp.. Original edition , 1981.

Reviewed by David W. Gill

Bill Vanderburg is the founding director of the Centre for Technology and Social Development at the University of Toronto and the author of *The Growth of Minds and Cultures* and *The Labyrinth of Technology*. Vanderburg is one of a long procession of students, researchers, and activists from North America and around the world to travel to Bordeaux for shorter or longer periods of study with Jacques Ellul. Vanderburg carried out "four-and-a-half years of postdoctoral work" with Ellul during the 1970s (p. x) and has continued to ponder and extend the ideas of Ellul during a quarter century as a professor working with engineering students and others.

*Perspectives on Our Age* is a superb introduction to Jacques Ellul's core ideas and perspectives and we can be grateful that it has now been republished. Vanderburg first worked with the Canadian Broadcasting Corporation to create a series of radio programs on Ellul with interviews of Ellul himself and commentary by others. (It would be great if these programs could be reissued on a compact disc). Following the radio broadcasts in 1979 and 1980, Vanderburg developed the material into the present manuscript. Vanderburg mapped out the organization and questions; Ellul provided the answers and narrative.

*Perspectives* has four main sections: (1) The Questions of My Life, (2) Understanding our Age, (3) The Present and the Future, and (4) Faith or Religion? Ellul's basic perspectives on technique/technology, Marx and Marxism, politics and the state, and Christianity and religion are all sketched out in an understandable way, with a lot of helpful personal and historical context.

The original preface to the first edition was not included in the Seabury Press publication of 1981 for some reason. It is now included along with a new preface

and two additional appendices from Bill Vanderburg. Appendix 1 gives Vanderburg's understanding of Ellul's concept of technique; appendix 2 gives his understanding of the relation of Ellul's sociology to his Christian faith and theology. Some readers will, no doubt, find the Vanderburg additions helpful.

## **Advert: International Jacques Ellul Society**

www.ellul.org

P.O. Box 5365, Berkeley CA 94705, USA IJES@ellul.org Tel/Fax: 510-653-3334

The IJES (with its francophone sister-society, L'Association Internationale Jacques Ellul) links together scholars and friends of various specializations, vocations, backgrounds, and nations, who share a common interest in the legacy of Jacques Ellul (1912–94), long time professor at the University of Bordeaux. Our objectives are (1) to preserve and disseminate his literary and intellectual heritage, (2) to extend his social critique, especially concerning technology, and (3) to extend his theological and ethical research with its special emphases on hope and freedom.

The IJES and AIJE have been founded by a group of long-time students, scholars, and friends of Jacques Ellul, with the counsel and support of Jean, Yves, and Dominique Ellul, and as a French-American collaboration.

### **Board of Directors**

Patrick Chastenet, University of Poitiers; Clifford Christians, University of Illinois; Dell DeChant, University of South Florida; Andrew Goddard, Oxford University; Darrell Fasching (Vice-President), University of South Florida; David Gill (President), Berkeley; Joyce Hanks, University of Scranton; Ken Morris (Secretary-Treasurer), Boulder; Carl Mitcham, Colorado School of Mines; Langdon Winner, Rensselaer Polytechnic Institute

### **Joining the IJES**

To become a member, anywhere in the world, and receive the twice-yearly Ellul Forum, submit annual dues of US \$20 to "IJES" (use an international postal money order or bank check drawn in US dollars—

or pay electronically with a credit card to "IJES@ellul.org" at [www.paypal.com](http://www.paypal.com)) making sure to note your name, complete mailing address, and purpose of payment.

## **Political Illusions & Realities**

by David W. Gill

President, International Jacques Ellul Society

In this year of great anniversaries, a local one that has special meaning for me has been the 40<sup>th</sup> anniversary of the Free Speech Movement at the University of California. This past month in Berkeley we have had various reunions, reminiscences, panel discussions, speeches, rallies, and even a reenactment of Mario Savio's speech standing on top of a police car surrounded by thousands of seated demonstrators on Sproul Plaza.

I was an 18-year-old freshman student just starting at Berkeley when the student movement started in October 1964. I often joke that it is hard for me to study without the smell of tear gas in the air because the two are so closely associated in my experience! I loved the Free Speech Movement (and, for that matter, I was an enthusiastic participant in most of the movements that followed: demanding multicultural studies options, more diversity in the student body and on the faculty, a more thoughtful university development approach ("People's Park!"), and a rejection of the catastrophic Vietnam war).

The university was dramatically improved by these movements and the forty-year celebration is fully warranted. But there were two aspects to these movements that began to trouble me within a year of the launch of the Free Speech Movement.

Two Weaknesses in the Student Movement

The first problem was the *inconsistency*, even hypocrisy, of some of the movement and leadership. "Free speech for me, but not for thee"—was one way this played out. No, I didn't like Dow Chemical or R.O.T.C., either, but authentic free speech means having debates, not shouting down those we don't agree with. I was then, and am now, an advocate of radically free speech, not a selectively permitted speech (one reason why the IJES is a "big tent," inclusivist group rather than a sectarian elite as some would have it).

Same with violence: the Free Speech Movement, like much of the Civil Rights Movement, was nonviolent, using tactics like administrative office sit-ins, class disruptions, campus work stoppages, and the like. But when these non-violent tactics were replaced by some violence against people (including some innocent bystanders)—and truly idiotic destruction of property—I had to protest against the protesters.

The second problem was *naivete*. We needed social challenge and change and there was some great thinking that went on in those days. But there was also some truly awesome naivete regarding human nature, communities, tradition, and social and political change.

Enter Ellul

This is where Jacques Ellul stepped into my picture. I had heard about him in the mid-1960s but it was only in 1971 that I finally read *The Meaning of the City* for an article on urbanization I was writing. Then in 1972 I read four of his books in quick succession: *The Political Illusion*, *The Politics of God and the Politics of Man*, *Presence of the Kingdom*, and *False Presence of the Kingdom*. I had seen these titles listed on the fly-leaf to *The Meaning of the City* and now read them to help me prepare

to cover the Democratic Convention in Miami Beach in summer 1972 (with a press pass from *Radix Magazine* in Berkeley).

To say that I was “blown away” by the stunning political insight of Ellul is an understatement. With Ellul’s help I was able to see much more clearly the political illusion and reality of the McGovern/Nixon contest and the larger society which hosted it. (Almost on a whim I sent some of my book reviews and articles to Ellul in the fall of 1972; his encouraging letter back to me was the beginning of a 22-year correspondence and what I recently added up as about 24 months of residence in Bordeaux over the years).

#### Deeper Forces Driving Political Reality

Jacques Ellul’s political insight struck me first of all with its *depth*. Most political discussion and thought today is conducted in the world of images, he explained. Ephemeral current events, news sound bites, slogans, and image management—this is where the political passions of the citizens are engaged. Since Ellul’s analyses of forty to fifty years ago, all of this has become more blatant than ever, embraced by journalists, politicians, and voters alike.

Meanwhile, underneath this surface froth the actual directions of our society and world are set by the deeper forces of technique, bureaucratization, the globalizing-technological-corporate economic order, the desperate search for survival, social order, and meaning by Islamic societies, and so on. Failing to insist that we explore, understand, and engage these deeper forces—rather than just adding rhetorical fuel to the fires passing for today’s political debate—is a betrayal of our calling as thoughtful, reflective people in our world.

#### Self-criticism and the Search for a Third Way

The second contribution Ellul made to my political thinking was his continual call for self-criticism and an end to hypocrisy. We must help our “side” to understand the other side and to recognize and address our own failures and inconsistencies, not just those of our opponents. Christians, especially, should search for a “third way” beyond the standard options of Left and Right.

Radical, deep, courageous, self-critical, liberating, innovative, humane ... these are some of the central characteristics of Ellul’s political orientation. In the era of Bush, Kerry, Nader & Co. (to speak only of the American context) ... it is of the highest urgency that some voices be raised for a different political path with these characteristics.

## Resources for Ellul Studies

[www.ellul.org](http://www.ellul.org) & [www.jacques-ellul.org](http://www.jacques-ellul.org)

**Two indispensable web sites**

The IJES/AIJE web site at [www.ellul.org](http://www.ellul.org) contains (1) news about IJES and AIJE activities and plans, (2) a brief and accurate biography of Jacques Ellul, (3) a complete bibliography of Ellul's books in French and English, and (4) links and information on other resources for students of Jacques Ellul. The new AIJE web site at [www.jacques-ellul.org](http://www.jacques-ellul.org) offers a French language supplement.

#### **The Ellul Forum CD: 1988–2002**

The first thirty issues of *The Ellul Forum*, some 500 published pages total, are now available (only) on a single compact disc which can be purchased for US \$15 (postage included). Send payment with your order to "IJES," P.O. Box 5365, Berkeley CA 94705 USA.

#### **Cahiers Jacques Ellul**

*Pour Une Critique de la Societe Technicienne*

The second issue of *Cahiers Jacques Ellul*, an annual journal edited by Patrick Chastenet and published by our sister society, L'Association Internationale Jacques Ellul, is now available for 20 euros (postage included) to individuals outside France, and for 25 euros to libraries. The theme of the second issue is "La Technque."

*Cahiers Jacques Ellul* is an essential new reference for those interested in Ellul's ideas.

**Jacques Ellul: An Annotated Bibliography of Primary Works** by Joyce Main Hanks. Research in Philosophy and Technology. Supplement 5. Stamford, CT: JAI Press, 2000. xiii., 206 pages. \$87. ISBN: 076230619X.

This is the essential guide for anyone doing research in Jacques Ellul's writings. An excellent brief biography is followed by a 140-page annotated bibliography of Ellul's fifty books and thousand-plus articles and a thirtypage subject index. Hank's work is comprehensive, accurate, and invariably helpful. This may be one of the more expensive books you buy for your library; it will surely be one of the most valuable. Visit [www.elsevier.com](http://www.elsevier.com) for ordering information.

#### **Alibris—used books in English**

The Alibris web site ([www.alibris.com](http://www.alibris.com)) lists thirty titles of used and out-of-print Jacques Ellul books in English translation available to order at reasonable prices.

**Librairie Mollat—new books in French** Librairie Mollat in the center of old Bordeaux ([www.mollat.com](http://www.mollat.com)) is an excellent resource for French language books, including those by and about Ellul.

Mollat accepts credit cards over the web and will mail books anywhere in the world.

#### **Used books in French:**

##### **two web resources**

Two web sites that will be of help in finding used books in French by Jacques Ellul (and others) are [www.chapitre.com](http://www.chapitre.com) and [www.livre-rare-book.com](http://www.livre-rare-book.com).

#### **Reprints of Nine Ellul Books**

By arrangement with Ingram and Spring Arbor, individual reprint copies of several Ellul books originally published by William B. Eerdmans can now be purchased. The books and prices listed at the Eerdmans web site are as follows: *The Ethics of Freedom*

(\$40), *The Humiliation of the Word* (\$26), *The Judgment of Jonah* (\$13), *The Meaning of the City* (\$20), *The Politics of God and the Politics of Man* (\$19), *Reason for Being: A Meditation on Ecclesiastes* (\$28), *The Subversion of Christianity* (\$20), and *The Technological Bluff* (\$35). *Sources and Trajectories: Eight Early Articles by Jacques Ellul* translated by Marva Dawn is also available (price unknown).

Have your bookstore (or on-line book dealer) “back order” the titles you want. Do not go as an individual customer to Eerdmans or Ingram/Spring Arbor. For more information visit “Books on Demand” at [www.eerdmans.com](http://www.eerdmans.com).

### **Ellul on Video**

French film maker Serge Steyer’s film “Jacques Ellul: L’homme entier” (52 minutes) is available for 25 euros at the web site [www.meromedia.com](http://www.meromedia.com). Ellul is himself interviewed as are several commentators on Ellul’s ideas.

Another hour-length film/video that is focused entirely on Ellul’s commentary on technique in our society, “The Treachery of Technology,” was produced by Dutch film maker Jan van Boekel for ReRun Produkties (mail to: Postbus 43021, 1009 ZA Amsterdam).

If you try to purchase either of these excellent films, be sure to check on compatibility with your video system and on whether English subtitles are provided, if that is desired.

# Cover

”In the area of scriptural interpretation we are clearly faced with ideological choices... Recently we have witnessed the appearance of a new interpretive grill presented by Rene Girard... Rather than presenting merely another interpretation, Girard gives us a genuine method. Since it fits no ideological canon, I feel certain it will never attract notice or be taken into account by biblical scholars. ”

Jacques Ellul

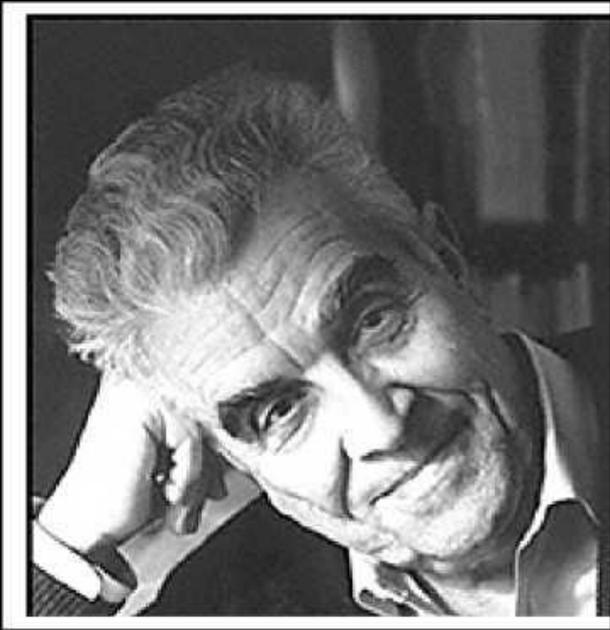

in *Jesus and Marx: From Gospel to Ideology* (1979; ET 1988), p. 86 n2.

# Information on The Editorial Board & More

**The Ellul Forum**

**For the Critique of Technological Civilization**

**Founded 1988**

The Ellul Forum is published twice per year, in the Spring and Fall. Its purpose is to analyze and apply Jacques Ellul's thought to our technological civilization and carry forward both his sociological and theological analyses in new directions.

## **Editorial Board**

### **Editor**

Clifford G. Christians, Univ. of Illinois, Urbana Associate Editor

David W. Gill, Berkeley, California

### **Contributing Editors**

Patrick Chastenot, University of Poitiers, France Dan Clendenin, Stanford, California

Peter F. W. Davies, Buckinghamshire College, UK Marva Dawn, Vancouver, Washington

Dues, Subscriptions, & Payment Options The Ellul Forum is sent twice per year to all members of the IJES. An annual membership/ subscription, anywhere in the world, costs US \$20. Please send check or money order (e.g., international postal money order) drawn in US funds for \$20 to "IJES", P.O.Box 5365, Berkeley CA 94705 USA—or make payment to "IJES@ellul.org" electronically at [www.paypal.com](http://www.paypal.com). Be sure to note your address and the purpose of your payment.

### **Change of Address**

Please notify IJES of any change in your address. Our mailings are infrequent and postal forwarding orders expire.

### **Manuscript Submissions**

For Ellul Forum writers' guidelines, visit [www.ellul.org](http://www.ellul.org)—or e-mail: [Editor@ellul.org](mailto:Editor@ellul.org)—or write Cliff Christians, EF Editor, Institute of Communications Research, University of Illinois, 810 S. Wright St., # 228, Urbana IL 61801 USA We welcome your proposals.

### **Books, Reviews, News**

Send books for review, book reviews, and news to David Gill, EF Assoc. Editor, P.O. Box 5365, Berkeley CA 94705. E-mail: [IJES@ellul.org](mailto:IJES@ellul.org)

### **Back Issues**

Visit [www.ellul.org](http://www.ellul.org) for a complete index of back issues. Issues #1–30 are available (only) as a complete collection on a compact disc for US \$15. Issues #31 onward are available for \$5 per copy.

© 2005 International Jacques Ellul Society Contact IJES for permission to copy EF material.

## From the Editor

This issue illustrates how *The Ellul Forum* carries out its mission. One purpose is to advance Ellul's "sociological and theological analyses in new directions." In order to accomplish that goal, *The Forum* feeds from a world network of Ellul scholars and friends, even as it nurtures that society in return.

Months ago, contributing editor Carl Mitcham proposed an issue on Ellul and Girard. Jim Grote knows Ellul's work and Rene Girard personally, so he became our point man in moving this good idea forward. In Innsbruck, Jim hears an ambitious and authoritative paper by Matthew Pattillo, a young Ellul scholar, on this very topic. And with this issue, a version of that paper becomes part of the network and invigorates our thinking. Pattillo demonstrates how Girard provides "theoretical underpinnings for Ellul's theology" while Ellul offers him a "more biblically consistent content" for the life of faith. In the process of establishing these interconnections, the importance of human relationships (and Christians would say "of the Body of Christ") vis-a-vis the global state becomes transparent.

French scholar Michel Hourcade on Sport and Technique, Korean scholar Myung Su Yang on Utopia, and American scholar Dell DeChant on the Sacred and Postmodernism, illustrated the same process in other recent issues of *The Ellul Forum*. The editors will depend on the idea-specialist cycle for enhancing our mission in the future.

In addition to Jim Grote's introduction and Matthew Pattillo's marvelous essay, we have Darrell Fasching's interesting "re-view" of Ellul's *New Demons* and a brief interview of Rene Girard by David Gill. David also reviews Jim Grote and John McGeeney's Girardian business ethics text, *Clever as Serpents*, and Jacques Ellul's new book on Islam, made available posthumously through the efforts of Jacques Ellul's daughter, Dominique.

The theme for *Ellul Forum* Issue 36 (Fall 2005) is Ellul's biblical interpretation. Ellul published several biblical studies and commentaries—always "edgy" and provocative, sometimes maddening, always valuable and illuminating. We welcome your ideas and input on this and future issues of the *Forum*.

Our back page "News and Notes" reports on two great colloquia on Ellul in France last Fall. We would love to sponsor something similar in North America but must wait for funding, timing, location, and other issues to be resolved.

*Clifford G. Christians, Editor editor@ellul.org*

# Introducing Rene Girard

by Jim Grote

*Jim Grote, CFP, a financial writer with over 20 years experience as a development officer, has been an adjunct professor in business ethics and philosophy at several universities. His book on Girardian business ethics (co-authored with John McGeeney),* *Clever as Serpents: Business Ethics and Office Politics* (reviewed on p. 22 below), *was recently translated and published in Germany and Indonesia. [jimgrote@hotmail.com]*

Born on Christmas Day, 1923, in Avignon, France, Rene Girard's work has been a blend of history, literature, anthropology and theology with implications for science, technology, and ethics that have only begun to be appreciated. He graduated from the Ecole des Chartes in Paris in 1947 (as a specialist in medieval studies) with a thesis on private life in his hometown of Avignon in the second half of the fifteenth century. A year's trip abroad turned into a Ph.D. in history from Indiana University, after which Girard remained in the United States, where he retired as a professor of French Language, Literature, and Civilization from Stanford University in 1995.

Girard's early historiographic publications soon gave way to an avalanche of literary criticism. His first book, *Deceit, Desire and the Novel* (1966), contrasted the romantic lie of individualism with the novelistic truth of what he called "imitative" or "mimetic desire." Among five major novelists (Cervantes, Stehnhel, Flaubert, Proust and Dostoevsky) Girard discovered a triangular structure to desire where the protagonists struggle with the realization that their deepest aspirations were mere imitations of a model or rival — hence the infamous love triangle. Adultery remains the archetype for this phenomenon as illustrated in Dostoevsky's novella, *The Eternal Husband*. The husband is obsessed by his wife's lovers, who inflame, validate and aggravate his own desire. Girard's students have likened his discovery of imitation in the social sciences to Newton's discovery of gravity in the physical sciences. The vast secondary literature on mimetic desire now extends these early insights into the diverse fields of economics, sociology, psychology, theology and anthropology.

*Violence and the Sacred* (1977), an anthropological study, offers a rational explanation for sacrificial rituals (as well as religious myths and prohibitions) in what he terms the "victimage mechanism." Mimetic desire is inevitably conflictual. "Rivalry does not arise because of the fortuitous convergence of two desires on a single object; rather, *the subject desires the object because the rival desires it*" (1977, p. 145). Ancient religion developed as an unconscious method of keeping the peace where the mimetic war of all against all is replaced by the more efficient war of all against one — the community's sacrifice of a scapegoat. Sacrifice acts as a kind of vaccination whose small doses of violence inoculate the community against greater violence.

This sacrificial mechanism is examined in more detail in a work of biblical criticism, *The Scapegoat* (1986). While the mimetic conflict of model and disciple cannot be resolved by sharing the same object of desire (which is a source of the conflict), it may be resolved or at least mitigated by sharing the same object of revulsion — the

scapegoat. Nothing unites people like a common enemy. “This is the terrible paradox of human desires. They can never be reconciled in the preservation of their object but only through its destruction; they can only find agreement at the expense of a victim” (1986, p. 146).

*Things Hidden Since the Foundation of the World* (1987), a conversation between Girard and two French psychiatrists, explores an anthropological foundation for Girard’s theories. The discussion includes a hypothesis of a “founding murder” among mimetically hysterical primates that initiated the long, slow process of hominization as well as sacrificial mechanisms. Girard sheds new light on the often-discarded speculations on primal murders found in Freud’s *Totem and Taboo*. He also proposes the controversial thesis that the Judeo-Christian revelation of the victimage mechanism provides the anthropological tools necessary to demythologize pagan religious practices, which for Girard includes much of Western Christianity. According to Girard, Christ’s death was not a sacrifice willed by an angry God to atone for an original sin, but simply a revelation of human brutality and violence by a loving God.

The remainder of Girard’s major work includes two works of literary criticism, *A Theater of Envy: William Shakespeare* (1991) and *Oedipus Unbound: Selected Writings on Rivalry and Desire* (2004) as well as two works of biblical criticism, *Job: The Victim of His People* (1987) and *I See Satan Fall Like Lightning* (2001). Girard’s recent book on Satan may seem worlds removed from his first work on novelistic love triangles. But it was the recurring patterns of seduction in the novel that led Girard to take the idea of Satan seriously — not as a prudish rejection of the world or a projection of childhood fears, but as an explanatory (one is tempted to say, scientific) principle. Throughout his works, Girard contrasts the Hebrew word Satan, the technical term referring to the accuser before a tribunal, with the Greek word for the Holy Spirit, the *parakletos* or defense attorney.

For Girard, modern science and technology are an inevitable consequence of the demythologization of sacrificial violence and magical thought. Magical thought always seeks a social/moral explanation for pain. For example, the Black Plague was often attributed to the Jews poisoning the water supply. As Girard quips, “Those who are suffering are not interested in natural causes” (1986, p. 53). However, with a loosening of magical thought, the search for natural causes slowly becomes a more reasonable path toward the “relief of man’s estate” (Francis Bacon). “The invention of science is not the reason that there are no longer witch hunts, but the fact that there are no longer witch hunts is the reason that science has been invented. The scientific spirit, like the spirit of enterprise in an economy, is a by-product of the profound action of the Gospel text” (1986, p. 204).

Yet Girard’s attitude toward science contains a certain Freudian ambivalence. Science is necessarily part of the Christian concern for victims and is a consequence of this charitable impulse. At the same time, modern technology has an apocalyptic edge to it. With the loosening of ancient sacred restraints and prohibitions, modern technology like modern economy, unleashes the phenomenon of mimetic desire in a wave of con-

sumerism, ethnic rivalry, media frenzy and politically correct victimology. For Girard it is no accident that names for nuclear weapons are “taken from the direst divinities in Greek mythology, like Titan, Poseidon, and Saturn, the god who devoured his own children” (1987, p. 256).

## Christianity, Violence, & Anarchy: Girard and Ellul

by Matthew Pattillo

Matthew Pattillo is a founding member of Munkhaus, a Christian anarchist collective. He is currently completing his M.Div. at Princeton Seminary. matthew.pattillo@ptsem.edu

This essay will examine the personal and social consequences of sin, biblically defined, and will contend that Christian faith necessitates a rejection of the secular political order. Exploring and contrasting the thought of Rene Girard and Jacques

Ellul, we will demonstrate that Girard's mimetic theory supplies crucial theoretical underpinnings for Ellul's theology. Ellul, in turn, sequencing the Biblical narrative somewhat differently, provides Girard the more biblically consistent content of the life of faith.

The ethical content of the life of faith is a continuation of the salvation narrative inaugurated in Genesis 1–2, incarnated and perpetuated in Israel and later, the universalized community of the Abrahamic blessing. The historical content of this faith demonstrates the incompatibility of political power with freedom in Christ, and the Christian church's ill-fated attempts to maintain an authentic practice of faith while legitimizing the secular order are exposed by the Biblical critique of power. While the growth of the global state has made a total withdrawal from the political order inconceivable, it is precisely its utter domination today that makes critical the continued defiance of the Body of Christ.

#### Original Sin

Girard observes that when the snake first appears in the Genesis account of the humanity's primal sin, it is already in conflict with God, opposing him as a jealous rival. Eve is enticed by it to covet what belongs to God — the knowledge of good and evil — and to herself become his rival.<sup>1</sup> Her imitation of the serpent's covetousness forms "an alliance of two against one,"<sup>2</sup> and God is expelled from the relationship. The contagion of metaphysical desire, or mimesis, soon claims Adam and what began as a relationship of obedience without conflict between God and human beings is forever changed. An acquisitive mimesis turns antagonistic and rivalrous.<sup>3</sup> When called to account for her disobedience, Eve blames the serpent. Adam in turn blames Eve, implying that God is himself at least partially culpable: "The woman whom *You* gave to be with me, she gave me of the tree, and I ate."<sup>4</sup>

In the earliest account of human origins then, rivalry with God produces rivalry between people. Girard argues that although conflict must inevitably lead to violence, here "God takes the violence upon himself and founds humanity by driving Adam and Eve far away from him."<sup>5</sup> God's banishment of the first humans only mirrors the expulsion implied by human collusion with the snake.

"Now we know that covetousness is the crux of the whole affair," Ellul writes, "since sin always depends on it. 'You shall not covet' (Exodus 20:17) is the last of the commandments because it summarizes *everything* — all the other sins."<sup>6</sup> Prior to the Fall, Adam and Eve are not required to choose between good and evil. "All that counted

was the relation to God and its expression in action.”<sup>7</sup> Here Ellul understands freedom as obedience to God’s commandments *within the context of a relationship with God*. Independence from God is mere slavery: “Adam seeks to liberate himself from the limits which God has set for him and in so doing he enters into rivalry with other forces and becomes subject to sin.”<sup>8</sup> The knowledge that Adam and Eve covet and usurp from God is “the power to *decide* on one’s own *what is good and what is evil*.”<sup>9</sup> Consequently, human morality is seen as founded on the order of the Fall, and Girard concurs: the ethical always derives from victimary unanimity,<sup>10</sup> in this case the rejection of God.

For Ellul “covetousness is equivalent to the spirit of power or domination,”<sup>11</sup> and “no society is possible among people who compete for power or who covet and find themselves coveting the same thing.”<sup>12</sup> Civil order between rivals in the Genesis prehistory can only be founded on blood. All the elements of the violent origin of civilization are present in this text. Cain murders his brother and rival, Abel, becoming the founder of the first city. The threat of contagious violence is described by the multiplication of Cain’s murder into a sevenfold revenge, which becomes his descendant Lamech’s seventy-seven-fold revenge, so that by the time of Noah violence engulfs the world. The acceptability of Abel’s blood sacrifice is read by Girard as an adumbration of the sacrificial protection on which all social order will be founded: the violence of all against all will be kept in check by the ritualized violence of all against one. For Girard, Cain represents the chaotic mob in the grip of a violent frenzy, uniting against a single victim, a scapegoat. This unity achieves a real peace and allows for the development of all that is collectively termed civilization.<sup>13</sup> In the emergent order legal codes address that which must be prohibited to maintain that peace, and ritual describes the action by which it was first secured.<sup>14</sup> For Girard the fundamental character of ritual is reenactment of the immolation of the victim,<sup>15</sup> as it is this act that first brought concord out of chaos. Culture in all its expressions, the arts and sciences, every mode

<sup>8</sup> Ellul, *Ethics*, 49.

<sup>9</sup> Ellul, *Humiliation*, 96n (emphasis Ellul’s).

<sup>10</sup> Girard, *Things Hidden*, 236.

<sup>11</sup> Ellul, *Humiliation*, 101; cf also Jacques Ellul, *Anarchy and Christianity* (Eerdmans, 1991), 20: “Sin is a break with God and all that this entails. When I say that people are not good, I am not adopting a Christian or a moral standpoint. I am saying that their two great characteristics, no matter what their society or education, are covetousness and the desire for power. Rene Girard has fully shown what the implications of covetousness are.” Note Ellul’s humble confession, p. 7: “I do not pretend to be able to unveil things hidden from the beginning of the world.”

<sup>12</sup> Jacques Ellul, *Anarchy and Christianity* (Eerdmans, 1991), 20.

<sup>13</sup> Jacques Ellul, *What I Believe* (Eerdmans, 1989), 59: “For years now we have been playing the scapegoat game. It has a profound source, as Girard has recalled. the possibility of universalizing it is the exclusive work of television, the radio, and the press. These attach the label and thereby justify whole nations and each and every individual.”

<sup>14</sup> Rene Girard, *Violent Origins: Walter Burkert, Rene Girard & Jonathan Z. Smith on Ritual Killing and Cultural Formation*, ed. Robert G. Hamerton-Kelly (Stanford University, 1987), 93.

<sup>15</sup> Girard, *Violent Origins*, 107; compare Jacques Ellul, *The New Demons* (Seabury, 1975), 9: “We

of communication, is seen as having as its *fons et origo* the same ritualized coaxing of order from disorder.<sup>16</sup>

Arguing in a similar fashion, Ellul represents the first city as founded on Cain's rejection of God, specifically his offer of protection against vengeance,<sup>17</sup> and his choosing instead to create his own protection — the city. The city “expresses the attempt to exclude God, to shut oneself off from him, to fabricate a world which is purely and exclusively human.”<sup>18</sup> Such an exclusively human world is necessarily founded and maintained through force,<sup>19</sup> which is legalized and ritualized:

In its origin law is religious. This is confirmed by almost all sociological findings. Law is the expression of the will of a god; it is formulated by the priest: it is given religious sanction, it is accompanied by magic ritual. Reciprocally, religious precepts are presented in juridical garb. The relationship with the god is established by man in the form of a contract.

The priest guarantees religion with the occult authority of law.<sup>20</sup>

The civil or secular order is understood as founded on violence and maintained by force.<sup>21</sup> The clear implication is that what humans esteem as “law and order” is established by a crime, and is therefore fundamentally *unjust*. Inasmuch as the founding murder is *arbitrary* violence, there can be no authentic *justice* in the city.<sup>22</sup> The victim upon whom the city is founded is innocent, and what is believed just is itself only the legitimization of an unjust order, the illusion of justice serving to suppress all consciousness of its criminal origins. In the city “justice” can only mean that the victim of arbitrary violence is also given credit for the establishment of (temporary) peace.<sup>23</sup> Justice comes too late for the victim, but is timely enough for the consciences of the perpetrators, for whom the ensuing peace confirms the correctness of the original divi-

---

all know, obviously, the close link between religion and violence..The psychological reasons for this have been a matter of question..The fact that Christianity, the revelation of the God of love, could have so changed..sets one thinking..Religion *always* produces violence. When violence comes first, it requires the appearance of a religion.”

<sup>16</sup> Jacques Ellul, *Autopsy of Revolution* (Knopf, 1971), 246: “Human society is based on the creative violence which has engendered individual consciousness as well as social order.”

<sup>17</sup> Ellul's is the more literal reading of Gen 4:15: “And the Lord said to him, ‘Therefore, whoever kills Cain, vengeance shall be taken on him sevenfold.’ And the Lord set a mark on Cain, lest anyone finding him should kill him.”

<sup>18</sup> Ellul, *Ethics*, 39.

<sup>19</sup> Jacques Ellul, *Violence: Reflections from a Christian Perspective* (Seabury, 1969), 84: “Every state is founded on violence and cannot maintain itself save by and through violence.”

<sup>20</sup> Jacques Ellul, *The Theological Foundation of Law* (Doubleday, 1960), 18.

<sup>21</sup> No distinction can be made between force and violence. Jacques Ellul, *False Presence of the Kingdom* (Seabury, 1971), 151: “It is shortsighted, both politically and spiritually, to say that there is a violence which liberates and another which subjugates. All violence is a crime before the eternal.” Compare Girard, *Things Hidden*, 266: “The illusion that there is difference within the heart of violence is the key to the sacrificial way of thinking.”

<sup>22</sup> Legal execution, for example, is only ritualized violence (Girard, *Things Hidden*, 173).

<sup>23</sup> Girard, “From Ritual to Science,” 185.

sion. Still, the memory of the victim is never effaced and he becomes with time a sort of god, a sacred being who is simultaneously, mysteriously malevolent *and* benevolent. The deification of the victim and the ritualized reenactment of the crime establishing peace serve to suppress from memory the malevolence of the perpetrators and the victim's innocence. The legal system is thus revealed as a religious phenomenon and its charter becomes the seal of our bondage to the secular order.<sup>24</sup> Ellul writes:

Why, after all, does one obey the state? Beyond factors that may be understood and analyzed, not everything can be accounted for, as in the case of the soul that the scalpel cannot find no matter how close the analysis. The residue is a spiritual power, an exousia, that inhabits the body of the state.<sup>25</sup>

#### Society of Technique & the Sacrificial Order

The Biblical narrative confirms the necessity of law in a fallen world — social laws, moral laws, physical laws that govern every aspect of life but which are all forms of the same necessity. “From the moment when Adam separated himself from God,” Ellul writes, “when his freedom was no longer love but the choice between two possibilities, from that moment Adam moved from the realm of freedom into the realm of necessity.”<sup>26</sup>

The immediate relationship of the Garden is broken in the Fall, disrupting the relation between humans and God, between man and woman, and between man and nature. No longer in the fellowship of love with God, humans are subjected [[to the laws of necessity, and begin to learn and master them, altering their world according to these laws. They adopt means of mediation in their approach to one another, to nature, and to God. Cain's descendants are read by Ellul as inventors of these mediating techniques — the domestication of animals, music-making, and the fashioning of tools. These means are derivative of the first successful technique mentioned in the Genesis account, Abel's blood sacrifice, which serves as both a screen between humanity and God and an approach.<sup>27</sup> Girard, too, sees that the sciences and arts, and every form of human communication have their origins in ritual violence.<sup>28</sup> Once the connection

<sup>26</sup> Jacques Ellul, “Technique and the Opening Chapters of Genesis,” in *Theology and Technology*, ed. Carl Mitcham and Jim Grote (Lanham, MD: University of America Press, 1984), 134.

<sup>27</sup> Ellul, “Technique,” 132. Compare Ellul, *Jesus and Marx*, 86n: “Recently we have witnessed the appearance of a new interpretation grill presented by Rene Girard ...Rather than presenting merely another interpretation, Girard gives us a genuine method. Since it fits no ideological canon, I feel certain it will never attract notice or be taken into account by biblical scholars.” Also, p. 87n: “Concerning the contrast of two themes, pollution and debt, I must underline, as a point of comparison, Girard's much more profound interpretation.with respect to the sacrificial and nonsacrificial reading of biblical texts. But Girard's approach involves no socioeconomic infrastructure that would permit a Marxist interpretation. The sacrificial interpretation springs from more fundamental facts about human beings and society!”

<sup>28</sup> Girard, “From Ritual to Science,” 171–185.

between ritual and culture becomes clear, the truly religious nature of all human civilization is made plain. The denial of sacrificial origins for the arts and sciences is an indication of the veiled and veiling character of ritual violence. Suppression of the knowledge of its origins enables human culture to flourish.

The Biblical revelation, then, by unveiling the sacred violence at the heart of religion, poses a threat to human society. The demythologizing effect of revelation undermines the sacred structures of our world. Girard sees the progressive influence of the Biblical revelation in the now universal concern for victims and the growing inability of persecutors to impose their own perspectives on others by fiat. “Centuries were needed to demystify medieval persecutors,” he writes, “a few years suffice to discredit contemporary persecutors.”<sup>29</sup> This does not mean that our world knows less persecution or violence, only that the myths that once protected the persecutors and blinded people to the innocence of their victims have been eroded by the demythologizing power of the Biblical revelation. The world becomes “increasingly apocalyptic,”<sup>30</sup> as time wears on, for without “sacrificial protections,” without a means of limiting it, humans are faced with the unhappy prospect of a global deluge of violence. By unveiling the violent foundations of human society, the Biblical revelation robs it of the only means it has ever known for maintaining order. After the proclamation of the innocence of sacrificial victims the violent order can only be maintained by the naked will to power. Girard observes that because of the Biblical revelation, we save and, paradoxically, produce more victims than ever before. This latter result is the meaning of Christ’s warning, “I did not come to bring peace but a sword.”<sup>31</sup> Both are evidence of the “unrelenting historical advance” of Christian truth in our world.<sup>32</sup>

Ellul also traces the historical desacralization of religious forms accomplished by the Biblical revelation — including the desacralization of “Christian religion.”<sup>33</sup> But he contends that the primitive sacred has been replaced by a modern sacred, a secular religion whose myths are Progress, Work, and Happiness, and whose ideologies include Nationalism, Socialism, Democracy, and Capitalism.<sup>34</sup>

For Ellul, this “desacralization permitted the development of technology and the unlimited exploitation of the world.”<sup>35</sup> In *The Technological Society*,<sup>36</sup> he argues that

<sup>34</sup> *Ibid.*, 112: “The myth of progress as man’s seizure of history in order to make it serve him is probably the greatest success ever brought off by a myth. The myth of work as an affirmation of man’s transcendence and everlastingness in the face of, and in relation to, history; the myth of happiness as the joy of participating in a glorious time, which is outside the time in which we now participate, hence both a reality and a promise at the same time — all that appears to be at the very heart of these creations of the modern consciousness. In truth, it is all simply the mythical response to the person in the new situation.”

<sup>35</sup> Ellul, *Subversion*, 143.

<sup>36</sup> *The Technological Society* (Knopf, 1965) was first published in French in 1954, the same year

the modern world is increasingly dominated by Technique: not merely technology, but the collection of means — political, economic, scientific, etc. — by which humans utilize and master nature and one another. The Society of Technique is concerned above all with efficiency, and elevates means above ends. The magical nature of primitive ritual has been replaced by the conscious design of social engineering.<sup>37</sup> The worldwide domination of the State, which centralizes and integrates all of the various techniques, is creating a kind of global concentration camp in which individuals are valued only for the “role” each plays in the proper functioning of society. Humans no longer control the means but are controlled by them. When technical developments become possible, people are no longer able to ask whether these developments ought or ought not be pursued. If it can be done, it will be done, and if, for example, the development of nuclear energy and weaponry creates unforeseen environmental and human consequences, the hope is always expressed that future technical progress will at last propose a remedy. Technique always advances according to its own irreversible logic.

Where Ellul saw Efficiency as the defining goal and characteristic of the global society, Girard argues that it is precisely the “the concern for victims... [that] dominates the total planetary culture in which we live The world becoming

one culture is the fruit of this concern and not the reverse.”<sup>38</sup> The ineluctable advance of the Biblical revelation renders “new” myths incapable of survival.<sup>39</sup> He considers the principle challenge to the Biblical revelation today to be a kind of “false concern for the victim,” the political appropriation of concern for the victims that turns the accusation of victimization against Christians and against the Biblical revelation itself.<sup>40</sup> The result is that the status of victim is eagerly sought, since it is deemed a position of power and a source of political capital. Consider, for example, the debate over abortion rights framed on both sides as concern for the victim, or the American capitalization of its victim-status in the wake of terrorist attacks on its World Trade Center since the turn of the century.

Ellul, too, saw that the great secular metanarratives since the Enlightenment had been largely discredited. Of Kant and Hegel, he writes:

---

that Heidegger’s 1949 lecture “The Question Concerning Technology” was first published. The two reach many of the same conclusions.

<sup>37</sup> Jacques Ellul, *Autopsy of Revolution* (Knopf, 1971), 259.

<sup>38</sup> Girard, *I See Satan*, 178; Compare Jean Baudrillard, “The Violence of the Global,” available from [http://www.ctheory.net/text\\_file.asp?pick=385](http://www.ctheory.net/text_file.asp?pick=385); Internet; accessed 23 May 2003: “The analogy between the terms ‘global’ and ‘universal’ is misleading. Universalization has to do with human rights, liberty, culture, and democracy. By contrast, globalization is about technology, the market, tourism, and information. Globalization appears to be irreversible whereas universalization is likely to be on its way out. At least, it appears to be retreating as a value system which developed in the context of Western modernity and was unmatched by any other culture.”

<sup>39</sup> Girard, *Scapegoat*, 201: “Even if some totalitarian system were to control the entire planet tomorrow, it would not succeed in making its own myth, or the magical aspect of its persecution, prevail.”

<sup>40</sup> Girard, *I See Satan*, 180: “ *The other totalitarianism* ...does not oppose Judeo-Christian aspirations but claims them as its own and questions the concern for victims on the part of Christians.(It)

It was wonderful to set forth an attractive outline of history and its development, but what a fraud, what a swindle, when the only decisive result was the relentless strengthening of the State, the very place where man should have concentrated all his forces to prevent such a thing.<sup>41</sup>

The same could be said, of course, for Marx, and a host of utopian dreamers since, Christian and otherwise. The history of the twentieth century is an especially cluttered graveyard of capsized myths of progress and new world ideologies run aground. Most of those that made serious claims on the age in which Ellul lived and wrote are little more than historical curiosities today. But even today, in the global-capitalist aftermath of the last century's ideology wars, Ellul's analysis tolls true:

Capitalism has progressively subordinated all of life — individual and collective — to money. Money has become the sole criterion for judging man and his activity...money, the source of power and freedom, must take priority over everything else. This belief is well supported on the one hand by a general loss of spiritual sensitivity (if not of faith itself) and on the other by the incredible growth of technology. Money, which allows us to obtain everything material progress offers (in truth, everything our fallen nature desires), is no longer merely an economic value. It has become a moral value and an ethical standard.<sup>42</sup>

Recent years have witnessed the rise and fall of the "Information Age," with its promise of decentralized power and freedom for individuals through the supposed egalitarianism of the Internet. The vastly increased technical power of the State to house and reference information on the lives of individual citizens, the rabid proliferation of electronic surveillance and identification systems since the early nineties, to name just a couple of recent "advances," have made such short work of this craze that it was scarcely uttered before it was dead in the water. Ellul is again prophetic: "Technical aggrandizement of the state...is the only condition under which a contract between state and individual is possible."<sup>43</sup>

Genesis 1–2, Contingency and Chaos

The seeming inevitability of a world dominated by political power has left humanity very little room to hope for a different social reality. In a world where freedom is limited to "freedom of choice" between good and evil, law or chaos, "the true is a moment of the false."<sup>44</sup> The exigencies of life within the Society of the Spectacle make it difficult to imagine any action one might take that would not merely strengthen the present order.

We have demonstrated the close connection between the Fall and the foundation of the state. In the same sense that justice within the secular order is strictly relative, so

---

does not openly oppose Christianity but outflanks it on its left wing"(emphasis Girard's).

<sup>41</sup> Jacques Ellul, *Hope in Time of Abandonment* (Seabury, 1973), 278.

<sup>42</sup> Jacques Ellul, *Money and Power* (Inter-Varsity Press, 1984), 20.

<sup>43</sup> Ellul, *The Technological Society*, 309.

<sup>44</sup> Guy Debord, *Society of the Spectacle* (Detroit: Black & Red, 1983), 9; Ellul, *Anarchy*, 3: "In 1964 I was attracted by a movement very close to anarchism, that is, situationism. I had very friendly

virtue within the state, too, has use-value only as the personal legitimization of secular power. The personal and the social consequences of the Fall cannot be abstracted from one another: the external secular power is maintained by those who have internalized its constraints and its justifications, while secular power “reinforces human sinfulness and conceals our fallen character from view.”<sup>45</sup>

The Genesis narrative places the birth of secular morality (the knowledge of good and evil) before the violent foundation of the civil order, implying that political domination or sovereignty is an external manifestation of the internal rejection of God. Rivalry with God leads to rivalry among people, which leads to the violent contagion of all against all checked only by the violence of all against one. It is thus the civil order emerges.

However, morality or civic virtue is *also* the internalization of the coercive peace of the secular city. As the sacrifice of a scapegoat stills the chaos of unrestrained social violence, so morality is the (violent) inhibition of the supposed chaos of the passions. Ellul writes, “The more complex and refined civilization becomes the greater is the ‘interiorizing’ of determinations. These become less and less visible, external, constricting and offensive. They are instead invisible, interior, benevolent, and insidious.”<sup>46</sup> This interiorization of the political order manifests itself in asceticism, a heroic self-restraint of the passions, and personal enforcement of moral law. As with the “exchangerelations of arbitrary power,” freedom is granted only as a concession of power, and a certain mechanical and repetitive peace is imposed; selfdenial and the repression of desire produce an artificial calm but never succeed in uprooting the unruly passions.<sup>47</sup>

On both the social and individual levels, then, fallen humanity *seems* constrained by only two options: “law and order,” or chaos; morality, or depravity. Girard writes, “We cannot postulate the existence in man of a desire radically disruptive of human relations without simultaneously postulating the means of keeping this desire in check.”<sup>48</sup> John Milbank argues instead that “desire” is not *necessarily* “radically disruptive of human relations.” Primeval chaos is an element of the myth that sustains the civil order. Equally tenable, he argues, is the postulation of an already existing hierarchical order justified and maintained with the help of the myth of a chaos always threatening resurgence. The mythical chaos is feared, yet idolized and celebrated in violent spec-

---

contacts with Guy Debord, and one day I asked him bluntly whether I could join his movement and work with him. He said that he would ask his comrades. Their answer was frank. Since I was a Christian I could not belong to their movement. For my part, I could not renounce my faith.”

<sup>45</sup> John Milbank, “An Essay against Secular Order,” *The Journal of Religious Ethics* 15/2 (1987): 209.

<sup>46</sup> Ellul, *Ethics*, 41

<sup>47</sup> Milbank, “Essay,” 221; cf. 208–9: “Augustine is then able to show that all Roman virtue is a merely relative matter because it is only possible within a circle bounded by arbitrary violence: a circle however, which more and more recedes from view as time goes on and political coercion assumes more and more ‘commuted’ and legally regular forms.”

<sup>48</sup> Rene Girard, *Violence & the Sacred* (Johns Hopkins, 1977), 218.

tacles, e. g. the ultra-violence of Hollywood films, or the public spectacle of American football.<sup>49</sup>

Following Milbank's argument, if the passions are thought to be an interior disorder brought to order by the interiorized sacrificial order of "fighting virtue," then the notion of a chaos of desire might be just a "mythic" element of the internal coercive order. This is not to say that people are naturally "good" and that removal of personal and social restraint will produce an ideal society. We merely point out that the absence of alternatives to "law and order, or anarchy" is precisely the enslavement of humanity to the "knowledge of good and evil" described in the Bible. We are concerned in this essay to demonstrate that the Biblical narrative insists on a "third" way beyond law, beyond morality, and beyond chaos.

Girard convincingly traces the violent origins of the secular political order, but what seems less clear is the shape the way out of this order might take. We contend that by ignoring the narrative priorities of the Biblical text Girard makes it difficult to recover the form anti-sacrificial practice takes. Girard privileges the Fall-Cain narrative over the Genesis 1–2 narrative, so that the sacrificial order he so clearly identifies takes on a predetermined quality. Given the covetous nature of humanity, the resulting sacrificial order of Cain is inevitable. However, the Biblical sequencing is the more ontologically correct. Adam's Fall obviously implies a fall *from* something, and the prior condition is described in Genesis 1–2.

Ellul, too, contends the creation story describes an origin fundamentally different than foundational violence. Genesis 1–2 illustrate "no relationship of exploitation, utilization, or subordination," but rather a "directing which nevertheless leaves the other intact."<sup>50</sup> God's word, the power of creation, is not an intellectual analysis that divides and separates, but the language of union and love. Adam's naming of the animals is no mere technique in the Ellulian sense, but "the continuation of the word of God."<sup>51</sup> Christian tradition often places the expulsion of Satan from heaven between days one and two in the creation account, but such an expulsion is not in the Hebrew text. Creation emerges from what is "formless and void," not by violence but by the word of God.<sup>52</sup> The later insertion of Satan's expulsion into the creation narrative may be the result of a "sacrificial reading" of the Hebrew Scriptures<sup>53</sup> via a sacrificial reading of the Gospels — the work of Christian exegetes who fundamentally misunderstood the Gospel revelation.<sup>54</sup>

---

<sup>49</sup> Milbank, "Essay," 208–9; *Theology and Social Theory: Beyond Secular Reason* (Blackwell, 1991), 394–5.

<sup>50</sup> Ellul, "Technique," 131.

<sup>51</sup> *Ibid.*

<sup>52</sup> Girard, "From Ritual," 183–4: Following Michel Serres, Girard traces in the distinction between void and matter the violence of expulsion, or purge.

<sup>53</sup> Girard, *Things Hidden*, 268: "The Old Testament is far from being dominated by sacred violence. It actually moves away from violence, although in its most primitive sections it still remains sufficiently wedded to violence for people to be able to brand it as violent without appearing totally implausible."

<sup>54</sup> Girard, "From Ritual to Science," 171–185; compare Jacques Ellul, *Subversion of Christianity*

Genesis 1–2 describe an “immediate relationship of love and knowledge”<sup>55</sup> among those who are different: God and humans, man and woman, humankind and nature. Adam and Eve “needed to follow no method, to apply no technique, because there was no force to exert, no need to fulfill, no necessity to overcome.”<sup>56</sup> There was “no protocol or sacrifices”<sup>57</sup> because there was no disorder, only order. Genesis 1–2 argue that the sacrificial mechanisms Girard identifies as maintaining law and order do not *necessitate* a primeval chaos from which order emerged. The hypothesis of an original, divine order prior to the Fall de-naturalizes the sacrificial order of Cain; the creation story insists “it didn’t have to be this way,” and announces, *from the beginning*, the existence of a different way of life. Moreover, the seventhday creation of the Sabbath marking Jewish practice signals that the Jew-Gentile distinction is not incidental but *inherent* to the “other way of life” embodied in Israel and later, the Church.<sup>58</sup> The record of God’s original intentions for humanity and creation contextualizes all of the Biblical narratives, up to and including the Gospel revelation. Biblical salvation is not a *return* to Eden, but rather the *inclusion* of the individual into the narrative inaugurated in Genesis 1–2.

## Narrative and Idiom

No mere hypothesis of freedom, the Scriptures insert the individual into the narrative itself — the continuing historical embodiment of the divine revelation in time and space. The Gospel revelation is then first received by members of a community not unfamiliar with its themes. We have mentioned the stories of Adam and Eve, Cain and Abel. The authors of these “have recast a preexistent mythology, adapting it in the spirit of their special concerns...inverting the relationship between the victim and the persecuting community.” In fact the Hebrew Bible brims with demythologizing reversals of sacred narrative. The book of Job, perhaps the oldest of the Hebrew texts, depicts persecution from the perspective of a victim who protests his innocence, refusing the accusations of his interlocutors, and is at last vindicated by God. The story of Joseph and his brothers previews the self-sacrifice of Christ and the Father’s forgiveness in Judah’s offer to substitute himself for Benjamin and Joseph’s compassion for the brothers who once victimized and expelled him. The Exodus of Israel from slavery in Egypt identifies the community of faith as those who have been set free from bondage to the pagan political order and not merely as those who are free by nature or divine right. The story of Solomon’s judgment between two prostitutes depicts the judgment

---

(Eerdmans, 1986), 159: “Grace excludes sacrifice. Girard is quite right when he shows how basic sacrifice is to humanity. There can be no accepted life or social relation without sacrifice. But gracious grace rejects the validity of all human sacrifice. It ruins a basic element in human psychology.”

<sup>55</sup> Ellul, “Technique,” 128.

<sup>56</sup> *Ibid.*, 129.

<sup>57</sup> *Ibid.*

<sup>58</sup> R. Kendall Soulen, *The God of Israel and Christian Theology* (Fortress Press, 1996), 118.

of God in favor of she who would sacrifice herself to save another, and against the one who preferred the violent sacrifice productive of victims. The binding of Isaac, David's penitential Psalms, Isaiah's songs of the Suffering Servant, the story of Jonah — each in its own way contravenes and reverses the mythic pattern of the secular order.

The revelation of the Hebrew Scriptures is then numerous recapitulated by the Gospels. "Do not think that I came to destroy the Law or the Prophets. I did not come to destroy but to fulfill," Jesus tells those gathered for the Sermon on the Mount. Conversion implies a concomitant break with the pagan narrative, and the reaffirmation of Hebrew Scriptural revelation. Jesus is called "the second Adam," and is represented as taking up the cause of immemorial victims, beginning with "righteous Abel." The creation story begins with a social order radically differentiated from that later inaugurated by Cain, an order historically preserved through the descendants of Adam. Cain kills Abel, but Seth replaces Abel. Violence floods the earth, but Noah and his family escape. Abraham is called out of a pagan culture to become the father of faith for all the world. As a consequence, Gentile converts to the Christian faith are deemed "grafted in" to the historical embodiment of the Biblical revelation, forming an organic unity with Israel and not merely as having superseded it. The Jewish followers of Jesus are not called out of Israel as from a pagan political order, but to a restoration of a way of life consistent with Torah and with the counter-sacrificial practice established by Abraham.

#### Akedah and the Counter-Sacrificial Gospel

The counter-sacrificial revelation of the Hebrew Scriptures begins in the Genesis prehistory but takes a radical turn when God calls Abraham into a relationship with himself. The epidemic consequences of the Fall are here opposed by an act of divine and world-historical conciliation. Where Adam and Eve are evicted from the Garden, Abraham is led by God to a promised land.<sup>59</sup> Flouting the one, modest prohibition in paradise the first humans seize for themselves the right to decide good and evil. Abraham is found on Mount Moriah submitting to God's demand of something monstrous, an obedience beyond morality. Abraham will inaugurate the historical reversal of the Fall, with the promise in Genesis 12:1–3 that this "other way of life" would be offered to all the world.

Abraham's obedience to God's demand for the sacrifice of his son Isaac (the Akedah, or "binding" of Isaac) stands at once for the reversal of human rivalry with God and of God's expulsion of humankind from his presence. Abraham reestablishes a relationship with God based on obedience and submission. His descendants are the continuing incarnation of this relationship. God gives a son to Abraham with the promise that Isaac will be the vehicle of blessing to Israel and the nations. Abraham's future and the fulfillment of God's promises to him turn on Isaac, so that his offering of Isaac is an offering of his own very hope and life, a return to God who initiated the gift.<sup>60</sup>

---

<sup>59</sup> Cf. Gen. 12:3.

<sup>60</sup> The New Testament confirms that Abraham's offering was not a *disinterested* sacrifice, but that

Obedying God *for no other reason than simply to obey*, Abraham repudiates the pride of usurpation and Adam's grasping after divinity. He renounces the rivalry of Adam and Eve and refounds submission as the model for human relationship with God. For his part God recapitulates the avowal of Genesis 12:1–3, enlarging it to incorporate Abraham's obedience.<sup>61</sup>

The prohibition against murder in the Noachide laws and the condemnation of Cain's fratricide argue against the view that the Akedah is a mere polemic against murder or human sacrifice. Furthermore, the tacit approval of animal sacrifice earlier in the Genesis text by Abraham, Noah, Abel and even God himself when he covers the man and woman with animal skins in the Garden renders the deflection of violence from human to animal victims inessential to the meaning of the Akedah. Similarly, Torah's prohibition of child sacrifice<sup>62</sup> makes the Akedah superfluous as a condemnation of the practice.

Neither Abraham nor Isaac was divinized in Israel, nor were they found guilty of any crime, arguing against the Akedah as an instance of the ubiquitous sacred violence. Although God intervenes at the last moment to prevent Abraham from immolating his beloved son, it is not because God is himself bound to a higher moral law. The Hebrew Scriptures know nothing of "natural law" or a set of universally valid ethical claims independent of God's command. Isaac is liberated from his bondage and rescued from death by the offering "God will provide for Himself,"<sup>63</sup> the self-offering of God in response to Abraham's obedience. Abraham and Isaac are rescued from obligation to the sacrificial order of Cain and freed from the slavery of sin. All future sacrifice in Israel will recall both their forgiveness and the high cost of liberation.<sup>64</sup>

Abraham's obedience to God is mirrored and magnified in Isaac's obedience to Abraham. Isaac takes the form of the victim in the Akedah. Israel is identified with Abraham in his radical obedience to the commandment of God, but is further identified

---

he also expected a return of Isaac; Heb 11:19: "(Abraham) considered that God was able to raise men even from the dead; figuratively speaking, he did receive him back." The idea of return can also be seen in God's offering Christ in response to Abraham's offering of Isaac.

<sup>61</sup> Gen. 22:15–18: "And the angel of the Lord called to Abraham a second time from heaven, and said, 'By myself I have sworn, says the Lord, because you have done this, and have not withheld your son, your only son, I will indeed bless you, and I will multiply your descendants as the stars of heaven and as the sand which is on the seashore. And your descendants shall possess the gate of their enemies, and by your descendants shall all the nations of the earth bless themselves, because you have obeyed my voice.'"

<sup>62</sup> Lev 20:1–5: "The Lord said to Moses, 'Say to the people of Israel, Any man of the people of Israel, or of the strangers that sojourn in Israel, who gives any of his children to Molech shall be put to death; the people of the land shall stone him with stones. I myself will set my face against that man, and will cut him off from among his people, because he has given one of his children to Molech, defiling my sanctuary and profaning my holy name. And if the people of the land do at all hide their eyes from that man, when he gives one of his children to Molech, and do not put him to death, then I will set my face against that man and against his family, and will cut them off from among their people, him and all who follow him in playing the harlot after Molech.'"

<sup>63</sup> Gen 22:8.

<sup>64</sup> One tradition puts Isaac's age at 37 at the time of the Akedah. The reasoning is as follows: Sarah

with Isaac as the innocent victim. Even though Abraham's hand was stayed against Isaac, Jewish tradition credits Abraham for the sacrifice of his son. Similarly, although Isaac is spared, it is as though he had been immolated, and he becomes a "resurrected" sacrifice. Where Israel is described as a priestly nation in identification with Abraham, the high priest of the human race, it is likewise a nation of living sacrifices through Isaac.<sup>65</sup> After the Akedah, God incorporates identification with the victim into the divine promise of Genesis 12:13.

We see then that "all social structure, the entire scapegoating machinery, is revealed as delusional, a delusional quality we are not permitted to see fully unless we observe the victim 'after death' so to speak."<sup>66</sup> It is the resurrection of Isaac that converts Abraham. Isaac's "apparent resurrection is the subjective correlative of something most objective and real, (Abraham's) renunciation of (Adam's) bad desire."<sup>67</sup> The innocence of the victim upon which Cain founded the first city is forever revealed *for Israel* in the resurrection of Isaac, and the people of Israel become the incarnation of the Akedah revelation.

The Levitical sacrifices prescribed by the Torah have meaning to the extent that they participate in the meaning of Isaac's self-offering, and are offered in the spirit of Abraham's self-sacrificial obedience. The nature of the Levitical sacrifices — innocent animals, kosher and unblemished — strengthens the identification with Isaac as innocent victim. The insistence that the sacrifices be offered only on Mount Moriah, the present day Temple Mount, underscores the physical connection between the Akedah and the Levitical sacrifices. The Temple sacrificial system contemporizes the Akedah in Israel's history. God's revelation is thereby preserved until the coming of the Messiah when revelation is proclaimed to the entire world. The Levitical sacrifices are of a qualitatively different nature than those practiced among the nations for the temporary expulsion of violence, pointing back in time to the Akedah and forward to the Messiah's sacrifice.

Careful analysis of the later prophetic critique of sacrifice reveals they were directed at sacrifices without repentance and not at sacrifices as such. The prophetic critique condemns sacrifice that has renounced the spirit of the Akedah and has become instead a mere imitation of what mimetic theory terms the single victim mechanism. However, alongside the many prophetic passages condemning sacrifices<sup>68</sup> stand many extolling

---

was 90 years old when she gave birth, 127 years old at her death. When Abraham told Sarah what he had been commanded to do, Sarah dropped dead at the thought. 127-90=37.

<sup>65</sup> Paul may also allude to Isaac in Rom 12:1: "I appeal to you therefore, brethren, by the mercies of God, to present your bodies as a living sacrifice, holy and acceptable to God, which is your spiritual worship."

<sup>66</sup> Sandor Goodhart, "Response to Willard Swartley's Book," paper presented at 2001 COV&R Conference, available from [http://www.ufsia.ac.be/flw/nieuws/Sandor\\_Goodhart.doc](http://www.ufsia.ac.be/flw/nieuws/Sandor_Goodhart.doc); Internet; accessed 31 October 2001.

<sup>67</sup> Rene Girard, "The Crime and Conversion of Leontes in *The Winter's Tale*," *Religion & Literature* 22/2-3 (1990): 218.

<sup>68</sup> See, for example, Mic 6:6-8; Is 1:10-17; Jer 6:20; Hos 5:6, 6:6, 9:11-13; Amos 5:21-25.

the virtue of obedient sacrifice and predicting the triumphant return of faithful sacrifice in Israel.<sup>69</sup> The prophets are here seen to condemn sacrifice to the extent that it does not partake of the meaning of the Akedah revelation.

The Gospel revelation is that Jesus entered and brought to light that dark place in our culture where we accuse and execute innocent victims to relieve our own confusion, violence and sin. The heart of the single victim mechanism is dark because its true nature is concealed, as it must be in order to be effective. The veiled reality of this mechanism finds a parallel in the holiest place of the Temple, set apart by a veil, and the Gospels record the rending of the veil at the moment of Jesus' death, and the revelation of that dark place by the light of truth. Israel, of course, always knew what was going on behind the veil in the Temple, even if the revelation remained mysterious in its effects: when the veil was finally removed, the mystery of the Akedah was exposed to all the world. The Gospel revelation is a mystery, but it, too, is a mystery patified. The once-secret knowledge of the single victim mechanism is now forever brought to light: the Akedah was the Gospel announced to Israel; the Gospel is the Akedah for the nations.

In his life, death, and resurrection Jesus Christ echoes and confirms all of the great realities of the Akedah: self-offering, obedience, identification with victims, and salvation from the sacrificial order of Cain. In his perfect submission to the will of God and self-sacrificial love towards all Jesus embodies positive mimesis, mirroring and magnifying Abraham's, and amplifying the blessings of the Akedah from Israel to the nations, as promised in Genesis 12:1–3. Christ's resurrection fulfills the meaning of the Akedah and announces the counter-sacrificial revelation to all the world.

The relationship of interdependence between Israel and the nations is ultimately intrinsic to God's revelation to the world. God's invitation goes out from Israel to all the families of the earth to embrace the self-sacrificial character of the innocent victim and to join the family of God in submission and obedience to God. The differentiated unity of the Akedah and the Gospel mirrors the divinely intended and enduring relationship between Israel and the nations. The localized Temple sacrifice is universalized in Christ. The temporary sacrifices of Israel are made eternal in Christ. It is in this sense that Christ has come to *complete* the Torah, by the universal extension in time and space of the Biblical revelation and the inclusion of all people across history in the family of God.

#### Torah and Law

Israel is the continuing incarnation of the salvation of Abraham out of the existing political order and his passage from the compulsory morality of the Fall to the freedom of obedience to God's commandment. The story of Joseph marks the transition from Abraham to Israel in the Biblical narrative. Here the elements of the divine revelation are all clearly discernible. Joseph's brothers covet his favored status and conspire against him, selling him into slavery. The brothers are then forced by famine many

---

<sup>69</sup> See Mic 4:1–2; Is 56:6–7; Jer 17:24–26; Jer 33:17–18.

years later to seek aid from the Egyptian government, of which Joseph is now second in command. Joseph insists that the brothers bring Benjamin, the youngest son and now his father's favorite, in exchange for assistance, at which point his brother Judah volunteers to take Benjamin's place. Joseph, moved by his brother's offer, forgives his brothers and the family is reconciled. Even so, his brothers' initial jealousy and their expulsion of Joseph result in their descendants' eventual enslavement in Egypt. Giving in to covetousness and rivalry brings the family into the bondage of the pagan political order of Cain. Self-offering and forgiveness mark the way of redemption.

Israel is the community then of the Exodus from Egyptian captivity. The Passover lamb refers to the lamb of the Akedah "which God will provide for Himself." It signals redemption from slavery and forgiveness for sin. Having been liberated, the Israelites are able to respond to the Torah given by God, not as to a legal document, but as to the commandment spoken by God to a people who freely answer.<sup>70</sup>

Their liberation exposes the sacrificial order of Cain as well as the content of the "other way of life" God intends for Adam, Abraham, and his descendants. God does not deliver the Israelites from slavery in Egypt only to obligate them again under a contractual serfdom. The heart of the Torah is the Levitical sacrificial system that incarnates the salvation and conversion of Abraham and Isaac. The Levitical sacrifices describe God's forgiveness of sins not in the simple stroke of an accountant's pen, but at the cost of bearing one another's burdens. The Ten Commandments define a way of life free from rivalry with God: "I am the LORD your God, who brought you out of the land of Egypt, out of the house of bondage. You shall have no other gods before Me"; and free of conflict among people: "You shall not covet your neighbor's house; you shall not covet your neighbor's wife, nor his male servant, nor his female servant, nor his ox, nor his donkey, nor anything that is your neighbor's."<sup>71</sup>

Girard points out that the Torah contains prohibitions that subvert prohibition. The Torah offers prohibitions like those resulting from sacred violence, yet also contains prohibitions that controvert ritual prohibition, e. g. "You shall love your neighbor as yourself,"<sup>72</sup> which precludes covetousness, interrupts rivalry, and obviates prohibition. In fact the Torah regularly upsets the secular order of exchange relations: the seventh day Sabbath depreciates the brutal necessity of work; the seventh year redemption of slaves and rest from cultivation of fields undermines the compulsion to exhaust nature and other people as if they had only utilitarian value; the prescriptions for fasting and tithing challenge the determination to consume and to possess.

Salvation in Christ, the "living Torah," is salvation out of the pagan political order into the Jewish familial order, conversion from the coercive legalism of the Fall into

---

<sup>70</sup> The well-known tradition that God offered the Torah to all peoples, but the Israelites were the only ones who responded and accepted, indicates that obedience to the Law was not *imposed* upon Israel, but rather freely given.

<sup>71</sup> Ex 20:1-2, 17.

<sup>72</sup> Lv 19:18; Girard, *Things Hidden*, 155.

the freedom of obedience to God. Again, Jesus did not come to destroy the Torah and the Prophets, but to fulfill. St. Paul's "all things are lawful" does not contradict the correct practice of the Torah.<sup>73</sup> Rather, the same freedom beyond morality originally attributed to Adam before the Fall is reestablished by Abraham, offered to Israel in the Torah, and extended through Christ to all the world. The offer of grace has been extended from Israel to the nations, and those who respond are grafted onto the tree, Israel.

Fallen humanity by long habit and a stubborn blindness garbles the radical nature of this liberation, inverting it to fit the sacrificial pattern inherited from Cain. It is precisely this misapplication of the Torah Jesus condemns in his scathing indictments of the Pharisees, Sadducees, and others who make "the commandment of God of no effect."<sup>74</sup> The individual is not set free by God only to submit to slavery under the political order. "Legalism" is a common term in American evangelical circles referring to a kind of sham obedience that seeks to appease an unforgiving god. Unfortunately, legalism is often attributed to the Torah, from which, it is argued, Christ has set us free. The perversity of this reasoning is exposed by putative "Christian Values" that erect a new legality while suppressing their pagan origins by scapegoating the Torah. Compelling Jewish converts to eat pork as proof of their renunciation of "the Law" provides us an especially egregious and risible instance of this tendency from early church history. No less uncomprehending are modern American efforts to legislate Christian morality (prayer in schools, abortion, the debate over posting the Ten Commandments in courtrooms), as if the Christian revelation consisted, like the secular order it oppugns and reverses, in the "restraint of beasts," those afoot in society at large and lurking in oneself.

#### Salvation and Conversion

The concealed and concealing nature of the secular order is its strength. The innocence of the victims of arbitrary violence is denied and the unjust foundation of law and order suppressed. A godless and self-righteous morality is masked by the appearance of false gods of violence whose anger must be continuously appeased.<sup>75</sup> The individual

---

<sup>73</sup> The ongoing formation of halakhah testifies to the Jewish understanding of Torah not as a disembodied and absolute document, but as a living word from God to be constantly reappropriated and renewed. Halakhah corresponds to the relative Christian ethics Jacques Ellul ceaselessly championed that would prevent examples of relative ethics or halakhah from the New Testament from becoming ossified into absolute law. An example would be Paul's instructions concerning female headdress and behavior in the church, which were apparently important issues in certain early congregations but have little relevance today beyond a general need for order within the community. Like Christian morality, halakhah had a propensity to become legalistic, and it is this legalistic misinterpretation, not Torah itself, that Jesus condemns.

<sup>74</sup> Mt 15:6; Girard, *Girard Reader*, 281: "The mythical mentality can take (the Gospels) and construe them mythically, but quintessentially they are the destruction of myth." The complicity in the condemnation of Jesus on the part of the Jewish people, who were in possession of the revelation of the Hebrew scriptures, indicates that the Biblical narratives, including the Gospels, can be misconstrued.

<sup>75</sup> Girard, *Things Hidden*, 255: "Humans have always found peace in the shadow of their idols —

is deceived and self-deceiving, both a victim of and a participant in the structures that enslave him. Salvation for the individual consists then in the overcoming of personal “legalism” and his deliverance from secular power,<sup>76</sup> but emerging from the obfuscations of the sacrificial order requires the intervention of something or someone from outside of its closed system.<sup>77</sup>

The Biblical stories are mythic in form yet subvert myth. From Abel onwards, they reveal the innocence of the victims of sacred violence and take their side, disrupting the victimary unanimity upon which the proper functioning of the sacrificial mechanisms depend. In the Gospels, God himself takes the form of the victim and suffers the predictable and fatal outcome of his encounter with the secular order. By unveiling the complicity of myth and ritual in the maintenance of an unjust order, the Biblical narrative decodes mythology and desacralizes the gods and rituals of the violent sacred.<sup>78</sup> It is only in terms of its own truth that the Bible can be interpreted, while at the same time it deconstructs all other mythologies. Milbank observes:

The relationship of the Biblical narratives to the pagan myths is necessarily asymmetric: the former could not be critically read through the latter because it belongs to the mythic grammar to conceal and not to expose arbitrary and fundamental violence. The latter can be critically read through the former because the Biblical narratives constitute and renew themselves through a breaking with sacrificial violence which exposes its social reality.<sup>79</sup>

Both the political order and the legalistic consciousness of the individual are the result of the original sin, rejection of God. The Biblical narrative represents a break with and an exposure of the secular order. It then invites the individual to make that same break.<sup>80</sup> This break, or conversion, involves an identification with the victim and the simultaneous disavowal of complicity with the murderous mob.<sup>81</sup> The individual emerges from the mob when he takes the side of the victim *against* the violence of the

---

that is to say, of human violence in sacralized form.”

<sup>76</sup> Milbank, “Essay,” 220: “Salvation is precisely, *out of* this political domain which constantly reproduces ‘original’ sin.”

<sup>77</sup> Girard, *Things Hidden*, 153: “Rehabilitating the victim has a desacralizing effect.” Also, Rene Girard, “Is There Anti-Semitism in the Gospels?” *Biblical Interpretation* 1/3 (1993): 350: “If the first Christians managed to secede from the mimetic consensus, it was not their own strength that did it, according to the Gospels, but God’s own Spirit ... he dismantles the consensus against the victims.”

<sup>78</sup> Ellul, *New Demons*, 121: “Behind and beyond the myths one discerns the sacred of which they are an expression. It is by a kind of geography of the myths that one can discover the axes of the sacral world.”

<sup>79</sup> Milbank, “Essay,” 213; compare Girard, *Things Hidden*: “The three great pillars of primitive religion — myth, sacrifice, and prohibitions — are subverted by the thought of the Prophets.” And Ellul, *False Presence*, 206: “How can we fail to realize that scripture, *in precisely the same way in which the myths contained in scripture itself are treated*, is the true destroyer of myths?”

<sup>80</sup> Ellul, *Subversion*, 133: “Just as conversion always means a break in individual life, so the intervention of revelation means a break in the whole group, in all society, and it unavoidably challenges the institution and established power, no matter what form this may take.”

<sup>81</sup> Girard, *Girard Reader*, 279: “Faith emerges when individuals come out of the mob.”

political order<sup>82</sup> and *against* the coercive morality of the Fall. “The proclamation of the Gospel implies, for the liberation of the person to whom it is proclaimed, the indictment of that which holds him captive.”<sup>83</sup> In the encounter with the Gospel revelation, the individual is persuaded to take the side of Jesus, the innocent victim, and to admit his own participation in the persecution of innocents. Jesus’ forgiveness of his persecutors enables the individual to forgive others, and to be forgiven for his own complicity. The fatal necessity of the pagan order is set aside in the witness of the Biblical narrative that invites the individual, liberated from the political order and from a sinful consciousness, to participate in that witness.<sup>84</sup>

#### Positive Content of the Life of Faith

The crucifixion of Jesus unmasks the violent nature of the political order, and this revelation sets the individual free from the necessity of that order. The individual may decline the “way of the Cross,” and still the offer is made. He is presented with another option and may respond to God’s love made manifest in the suffering atonement of Christ, or continue as best as he can to “sleep peacefully in his religious dream.”<sup>85</sup> God’s forgiveness in Christ interrupts the “pagan sacrificial chain of offense and revenge”<sup>86</sup> binding individuals to the legal requirements of the city of Cain and its vindictive gods. Christ is the incarnation of a love that cannot be integrated into the Society of Technique. He opposes to its means and ends a perfectly ‘useless’ truth, something fatal to its order, *ipso facto*.<sup>87</sup>

The Gospels are the record of a small minority who disassociated themselves from the social order that executed Christ and instead proclaimed his innocence, his cancellation of the fatal necessity of that order, and his victory over the finality of death. The Gospels and other New Testament writings bear witness to a community who participate in Christ’s crucifixion through a penitential way of life and a forgiving practice that liberates and preserves freedom in opposition to the political order.<sup>88</sup> The imitation of Christ in his refusal of violence, his concern for victims, and his suffering endurance of evil constitute the freedom of life “in Christ.”<sup>89</sup>

---

<sup>82</sup> Ellul, *Violence*, 86: “Masked violence is found at all levels of society. Economic relations, class relations, are relations of violence, nothing else.”

<sup>83</sup> Ellul, *False Presence*, 208.

<sup>84</sup> John Milbank, *Theology and Social Theory*, 397: “Knowing the shape of sin, and the shape of its refusal, we can at last be radically changed.”

<sup>85</sup> Ellul, *New Demons*, 207–8; compare Girard, *Girard Reader*, 278: “The Gospels cannot guarantee that people will act the right way; they are not some kind of recipe for the good society. What the Gospels do is to offer more freedom and to set the example.”

<sup>86</sup> Milbank, “Essay,” 215.

<sup>87</sup> Ellul, *What I Believe*, 182.

<sup>88</sup> Girard, *Girard Reader*, 278: “What are the prescriptions of the Kingdom of God? Basically, give up a dispute when mimetic rivalry is taking over. Provide help to victims and refuse all violence.”

<sup>89</sup> Ellul, *Ethics*, 15: “In Jesus Christ, who is fully obedient and also fully free, the will of God is freedom... The action of Christ takes effect in daily life through the mediation of our freedom.”

Given the divine unveiling of the secular legal system, the followers of Christ understand the contradiction inherent to Christian participation in the legal order.<sup>90</sup> Writing to the church at Corinth, Paul asks, “Dare any of you, having a matter against one another, go to law before the unrighteous, and not before the saints?”<sup>91</sup> Paul harbored no illusions about the nature of secular power or its “convertibility.”<sup>92</sup> All surveys of the Biblical critique of power, however, come up against Paul because Romans 13:1–7 seems to challenge all that the Bible, including Paul, has to say on the matter.

Some exegetes have reasoned that Paul’s comments in 13:1–7 are too radical a departure from the subject matter surrounding the verses, so that these verses must be a later insertion by redactors. If these verses are deleted, 13:8 seems to follow reasonably from 12:21. Others attribute the traditional interpretation of the verses to Paul, but add counsel concerning extreme cases of political evil not accounted for in Paul’s apparently absolute consecration of the powers. Ellul agrees that the verses do come from Paul, but must be properly contextualized both within the epistle and within Paul’s other writings. The discussion prior to Romans 13 concerns loving and being at peace with others, both friend and enemy. The last verse of chapter twelve, “Do not be overcome by evil, but overcome evil with good,”<sup>93</sup> leads into the discussion of political power, which is an evil that must be endured. Paul is far from advocating revolution or violent resistance, counseling submission instead. If we owe taxes, we pay them, nothing more. We recognize that these *exousia*, or powers are ultimately subject to God alone, but we know, too, that as Christians we have been called to struggle against these *exousia*.<sup>94</sup> While these powers are already defeated by Christ, for the time being we experience and admit their necessity, but never their legitimacy.

Mark D. Nanos has recently suggested Paul’s epistle has to do with the ordering of the community of faith at Rome, which at the time was a synagogue community consisting of Gentile Christians along with both believing and nonbelieving Jews. In the context of the letter, then, Romans 13:1–7 is “not concerned with the state, empire, or any other such organization of secular government.”<sup>95</sup> Instead, Paul’s concern is “to address the obligation of Christians, particularly Christian *Gentiles* ...to subordinate themselves to the leaders of the synagogues and to the customary ‘rules of behavior’ that had been developed in Diaspora synagogues for defining the appropri-

---

<sup>90</sup> Ellul, *Subversion*, 158: “(Christian faith) does not change either the structure or the functioning of the state or politics. It sets up a relationship of conflict.”

<sup>91</sup> I Cor 6:1; compare Rene Girard, “*To Double Business Bound*”: *Essays on Literature, Mimesis, and Anthropology* (Johns Hopkins, 1978), 228: “‘Violent excess’ on the one hand, ‘law and order’ on the other have always fed on each other. What else could they feed upon? If they did not, we would be rid, by now, of both of them.”

<sup>92</sup> Ellul, *Jesus and Marx*, 172–3: “There is no given Christian form of power... the only Christian political position consistent with revelation is the negation of power: the radical, total refusal of its existence, a fundamental questioning of it, no matter what form it may take.”

<sup>93</sup> Rm 12:21.

<sup>94</sup> Eph 6:12.

<sup>95</sup> Mark D. Nanos, *The Mystery of Romans* (Fortress, 1996), 291.

ate behavior of ‘righteous Gentiles’ seeking association with Jews and their God.”<sup>96</sup> Paul’s advice is based not on arguments for the legitimacy of power, but rather on his previous arguments in chapters 9–11 concerning the historical, present, and future relationship between Jews and Gentiles. Paul is concerned to insure that the community in Rome continues to maintain a “different way of doing things,” that the witness of the reconciled community against the secular order is not undermined by a failure to demonstrate the present reality of its eschatological hope.

In any case, Paul does not suggest that the community of faith will or should seek to overthrow secular government, or that the Kingdom of God will either suddenly or by steady advance appear as the inevitable progression of earthly affairs. His imagery in the letter to the Romans suggests instead the Church as a remnant, a minority whose encounter with the political order will inevitably produce results in “the way of the cross.”<sup>97</sup> These seven verses in Romans have become *the* text on secular power and the conduct of the church toward it, in spite of the overwhelming witness of the Biblical record *against* political power. It is unsettling to speculate on the sociological and psychological reasons that lead exegetes to value a few verses more highly than the vast collection of contradictory passages, and allow one brief passage to neutralize the entire thrust of the Scriptures on this matter. In light of our arguments in this essay, the traditional interpretation of the passage results from internalization of the violent order of the state and a secret reflection and validation of secular power. Christian statism is correlative to the “sacrificial reading” of the Gospels. Although they never advocate a fugitive or criminal practice toward the state, both Jesus and Paul consider the state to be neither legitimate nor divinely constituted. Paul was arrested, tried, and executed by the same court system that condemned and crucified Jesus. Their witness attests that the exigencies of secular power are to be suffered rather than sanctioned.<sup>98</sup>

#### Conclusion

”You know that the rulers of the Gentiles lord it over them, and those who are great exercise authority over them,” Jesus says, [”] *Yet it shall not be so among you.*”<sup>99</sup> Jesus’ refusal of power resulted in his crucifixion, a signal of his failure to overturn the secular

---

<sup>96</sup> Ibid.; It is beyond the scope of this paper to detail Nanos’ recontextualization of Paul’s letter, but it is worth noting that Nanos is principally concerned with a coherent reading of Paul’s letter, not a polemic against the state. Even so, Nanos concurs that “the call to subordination in Judaism carries an implicit, if not always explicit, judgment against foreign governments, even if God was somehow using their evil intentions to accomplish his ultimate goals.”(Nanos, *Mystery*, 299).

<sup>97</sup> Ellul, *False Presence*, 209: “The church should always be the breach in an enclosed world: in the world of Sartre’s private individual as well as in the world of the perfection of technology, the totalism of politics or the strongbox of the kingdom of money.”

<sup>98</sup> Ellul, *New Demons*, 177: “If Christianity remains faithful to its inspiration and object, the God of love, it is incompatible with the exercise of political power. The combination of the two came about by accident.”

<sup>99</sup> Mt 20:25–6, emphasis mine.

order. Paradoxically, it is this failure which is also the victory over the powers,<sup>100</sup> and the Church is called to participate in that failure. Ellul writes:

It is truly a *fight* ...against a power that can be changed only by means which are the opposite of its own. Jesus overcame the powers — of the state, the authorities, the rulers, the law, etc. — not by being more powerful than they but by surrendering himself even unto death.<sup>101</sup>

The Biblical revelation calls the Church to be the continuing incarnation of God's atonement, to endure the powers rather than sanctify them,<sup>102</sup> and to bear the burdens of those who inevitably suffer under secular power: "In every situation of injustice and oppression, the Christian — who cannot deal with it by violence — must make himself completely a part of it as *representative of the victims*."<sup>103</sup> Apart from God resistance to the powers amounts to mere Stoic self-denial and masochistic self-sacrifice. Our confrontation of the powers instead proceeds from *concern for the victims* of secular dominion:

Freedom can be obtained only when we strive for it; no power can give freedom to people. Challenging power is the only way to make freedom a reality. Freedom exists if the negation of political power is strong enough, and when people refuse to be taken in by the idea that freedom will surely come tomorrow, if only.No, there is no tomorrow. Freedom exists today or not at all. When we shake the edifice, we produce a crack, a gap in the structure, in which a human being can briefly find his freedom, which is always threatened. In order to bring this bit of play into the system, however, we must bring to it a radical, total refusal. Any concession to power enables the totality of power to rush into the small space we have opened.<sup>104</sup>

Political power cannot self-limit and tends in every case to expand beyond all bounds. The *myth* of its necessity clears the way by paralyzing all resistance. Into this world of fatal necessity, Christ comes announcing liberty to captives: deliverance from the harsh supervision of unmerciful morality and freedom to refuse power's exchange of happiness for servitude. Christ's resurrection defeated death, the true end of all necessity. In Christ we know that *our lives will not always be this way*, and the present hope of our resurrection enables the Church (Jew and Gentile) to insinuate freedom into an otherwise ironclad system. We proclaim by our words and demonstrate in our action that another path exists beyond the constraints of the illusory "freedom" purchased or wrested by force from the hand of power. Freedom is realized only when we create it by our radical negation of power and our absolute refusal to submit again to a yoke of slavery under the state.

The IJES (with its francophone sister-society, L’Association Internationale Jacques Ellul) links together scholars and friends of various specializations, vocations, backgrounds, and nations, who share a common interest in the legacy of Jacques Ellul (1912–94), long time professor at the University of Bordeaux. Our objectives are (1) to preserve and disseminate his literary and intellectual heritage, (2) to extend his social critique, especially concerning technology, and (3) to extend his theological and ethical research with its special emphases on hope and freedom.

The IJES and AIJE have been founded by a group of long-time students, scholars, and friends of Jacques Ellul, with the counsel and support of Jean, Yves, and Dominique Ellul, and as a French-American collaboration.

<sup>105</sup> Deut 30:15.

## A Conversation With Rene Girard

*David W. Gill made the pilgrimage from Berkeley to Stanford on April 12, 2005, to interview Professor Girard at his home.*

David W. Gill: Professor Girard, you and Jacques Ellul have been two of our most creative and penetrating analysts of contemporary society with all of its religion, technology, conflict and ferment. And you were both Christian in a deep way. This is not a normal situation among French intellectuals. Did you and Ellul ever meet each other?

Rene Girard: In 1970 I sat next to him at a dinner party organized by some friends. We had a nice interaction then and at several other brief contacts over the years but always in circumstances where we were interrupted a lot. So I never had a real, serious conversation with him.

I am mostly interested in his views as a sociologist of religion in the modern world. By contrast, I am an anthropologist of religion interested in the contact and opposition between archaic religious phenomena and Christianity. But I find in Ellul many ideas that I share with him completely. In some ways I am trying to do something similar to what he has done.

Gill: Is it true that you became a Christian as an adult?

Girard: My mother raised me as a Catholic but I abandoned it when I was about thirteen. She was quite liberal and didn't force her children to go to church. I didn't return until about 1961 at age thirty-five and then it was because of my work. But I am now a fairly active member of the St. Thomas Aquinas parish here at Stanford.

About the time I returned to the church is when I also encountered Ellul's work. So I'm a little rusty but I have re-read some of his work recently, including *Ce Que Je Crois [What I Believe]*, a powerful book which hasn't lost any of its relevance since it was first written.

Gill: Your work places a central emphasis on sacrifice and the scapegoat—whereas Ellul places a central emphasis on Scripture and the word.

Could this be because Ellul was Reformed while you are Catholic?

Girard: I don't think so. The reason is that the relationship between archaic religions and the biblical religion is fundamental in my view. I am very interested in religious anthropology and I believe that there is an enormous break that comes with the Bible and Christianity. I believe in the basic unity of all religions. Religion is always oriented towards peace. Archaic religious phenomena are primarily scapegoat phenomena, a kind of mimetic gathering against victims that are fundamentally random. The killing of the initial scapegoat reconciles the disrupted, divided community. Sacrifice is fundamentally, deliberately reenacting that pattern, with carefully chosen victims, in order to make peace.

Christianity begins fundamentally with that same phenomenon. Jesus is the innocent victim, the scapegoat. But in archaic religion, the victim is believed to be powerful because he too is guilty and violent. Christianity tells us that it's not true. God is totally different from what we think. He is nonviolent. Fundamentally he is himself the

innocent victim who dies for us. So Christianity is both the same and radically different from archaic religion.

Gill: Does this ultimate sacrificial act liberate us to make peace without finding another scapegoat to blame?

Girard: That's what Christianity should be.

Gill: Do we recapitulate that sacrifice by forgiving and bearing the pain of a conflict rather than blaming others (like the Muslims are often blamed today for all that is wrong)?

Girard: Not only the Bible but all of human religion is prophetic in somewhat the same sense—the victim is innocent, whether Joseph, or Job, or the innocent victim of a lynching. It is always prophetic of Christ.

Gill: With this long and continuing story of sacrifice, blame, violence, and threats, and with a contemporary culture that evades responsibility and searches for scapegoats, what do you say?

Girard: We are always practicing some kind of expulsion and victimization and this is becoming increasingly violent because of technology, bringing us closer and closer to total destruction. But the Bible and Christianity direct us against victimization, against viewing the enemy as less than ourselves. Those faced with conflict have to face the truth. There is no shortcut. We cannot be satisfied with half measures and compromises and not looking at the oneness of the world.

Gill: So authentic Christianity should unmask the reality of life so that we can face the truth and cease scapegoating others, especially the innocent?

Girard: Authentic Christianity explicates this truth. Much of the anti-Christian feeling of our own era is because of the way today's church often replicates archaic religious practices. We must see the similarity—as well as the difference—in Christianity. Christianity must denounce its own scapegoating and say it is people who act this way, not God.

Gill: Regarding technology, you have

suggested that it only became possible when people stopped looking for scapegoats (for disease and other misfortunes of life) and developed science and technology.

Girard: In an archaic community, if a roof falls in there must be a culprit somewhere. But as long as you think that way you will not improve your building and construction techniques. Magical explanations are always scapegoating phenomena. The old anthropologists like Fraser often made this point. Christianity preconditioned the type of rationality required by technology. Far from being anti-scientific or anti-technology, Christianity made them possible.

Gill: In *The New Demons* Jacques Ellul argues that Technique has become our new sacred, at the center of our culture. The old religious demons have been exorcised but there are new ones. People look to technology as they used to look to God. Questioning technology is treated as profaning God's name used to be. Ellul would say we must desacralize technology.

Girard: *The New Demons* was very

prophetic. Religion is back in a big way. All the cliches of the Enlightenment are collapsing. Our technology is like the sorcerer's apprentice. It threatens us and must be controlled or restrained in some way.

Gill: How would you describe the "sacred" in today's society?

Girard: The sacred always has aspects of violence mixed up in it. The shift in Christianity was from a violent sacred to love. The great mystery and paradox is that religions begin with a violent sacred in order to suppress violence. If we stay in an archaic atmosphere we sacralize technology, we sacralize power, which means that ultimately we sacralize violence. So to worship technology today, rather than being modern, is really to return to the archaic. The danger from our technology is becoming very obvious.

Gill: What do you make of the rise of Islam? This was something that concerned Ellul.

Girard: For Islam, God is essentially power. There is a great distance between the people and the omnipotent God. With Ellul, I would argue that Christianity shows us a God of non-power, something very different even from nonviolence. God chooses not to use the power he has but instead to leave humanity free. The question is whether people will be capable of exercising this freedom. I think the great mistake of Christianity today is to try to reassure people, to make things more palatable. They think that people want to be reassured. No. They want the truth!

# Re-View

## The New Demons

### Ellul's Genius: Unmasking the New Demons of Postmodernity

by Darrell J. Fasching

*The New Demons* by Jacques Ellul. Translated by C. Edward Hopkin. Crossroad Book, The Seabury Press (NY: Crossroad Books, Seabury Press, 1975.) *Les Nouveaux Possedes* (Librairie Artheme Fayard, 1973).

Twenty four years ago, when I first published my book on *The Thought of Jacques Ellul*. I footnoted my first citation of *The New Demons* with this comment: "This book contains Ellul's sociological analysis of the religiosity of the technological society. It is, I believe, the key to unlocking and understanding the relationship between his sociology and his theology and in that sense his most important work." I still hold that view. And it certainly has been the book that has had the most impact on my own publishing career. If there is one work of Ellul's that has formed the backbone of virtually every one of the seven books I have written it is Ellul's *The New Demons*.

When Ellul's work first began to be published in United States in the sixties and seventies, his readers *were* grouped into two camps — his sociological fans and his theological fans, each often unaware of Ellul's "other side". This was especially true of those who followed Ellul's sociological works. They were typically unaware of his theological writings and many would not have known what to make of them if they had been aware. For Ellul, the separation was deliberate. Science should not be confused with theology and vice versa.

Ellul explained his dual authorship identities by saying that in his sociological works he was simply analyzing the challenges of the new technological society that had emerged since Marx. Ellul's analysis was typically branded deterministic and hopelessly pessimistic. But for Ellul, human beings do not live by science alone. The business of science is to analyze the causal chains that determine our lives. This, however, does not mean that there can be no constructive response to such determinisms. But the response is not something that can be accounted for in terms of sociological causal interactions. Human freedom is not rooted in necessities but the apocalyptic eruption of the Wholly Other in Christian freedom through faith and hope. Necessity is the product of the sacralization of society which seduces humans into placing all their hope in technique and so makes them unable to challenge its necessities. The eruption of the holy, he argued, challenges and desacralizes the human social world. Freedom occurs

when hope becomes apocalyptic. This is a hope that breaks with this world and places its hope in the Wholly Other, manifesting itself in a life of holiness that invites the transgression and desacralization of the supposed necessities of a technological society.

To the best of my knowledge it was in *The New Demons* that Ellul, for the first time brought his two identities together. The book is a sociological analysis of the religiosity of a technological society but at the end he added a postscript entitled “Coda for Christians.” I have often called *The New Demons* the Rosetta Stone of Ellul’s work because it offered the key to understanding Ellul’s total strategy by finally directly interfacing his sociology and his theology. Up until I read *The New Demons* I had not really grasped the significance to the constant references to the sacred in his book *The Technological Society*. I had noted them in passing as if they were “just metaphors.” Now it was as if the lights were turned on and I could really see what he was doing. Ellul was a revolutionary who understood the power of the word made flesh.

For some time now I have been puzzling over what relationship there may be between Ellul’s work and postmodernism. I have finally come to the conclusion that Ellul’s work is even more revolutionary than I gave him credit for. Ellul’s analysis of the religiosity of technological civilization is a description of the shift from a modern to a postmodern society. Postmodernity is defined, says Jean-Francois Lyotard by the collapse of metanarratives (*The Postmodern Condition*, University of Minnesota Press, 1979)..

The emergence of a mass media technological consumer society has inundated all civilizations with an acute and intimate awareness of the pluralism of cultures, values and religions. This awareness results in a sociological relativizing of every culture’s metanarratives, so that the grand public stories of a Christian civilization, a Hindu civilization, or an Islamic civilization, and even modern secular civilization, are reduced to the private stories that individuals embrace at their option. As a result every culture is threatened with the loss of its normative center, including the modern cultures integrated around the Enlightenment myths of science and progress.

This realization in its Western cultural form has often been expressed in terms of “the death of God” and the resurgence of a kind of polytheism of values in its place. This is a key theme of *The New Demons*. When Ellul analyzes a technological civilization by comparing into to ancient polytheistic civilizations he is really mapping the new terrain of postmodern civilization created by the emergence of a consumerist technological society. The response to the powers of technology is analogized to the sacral awe attributed to the powers of nature in polytheism. The function of politics is analogized to the function of ritual in polytheistic societies and the function of mass media is analogized to the materialist/consumerist elements of polytheistic myths that invoke the gods to bring prosperity and the acquisition of the goods of life.

By drawing these analogies, Ellul shows that modern secular technological civilization really leads back into the “sacred heart” of the kind of society once found in ancient polytheism — a decentered, pluralistic and relativistic society. These qualities in turn provoke the reactionary ascendancies of various forms of absolutism –of dominance

through the will to power. So we vacillate between vicious political absolutism (today often taking the form of fundamentalism and even terrorism) and vacuous relativistic consumerism. The fear of relativism breeds absolutism as a reaction and the fear of absolutism breeds the counter-reaction of relativism. This is the unending dialectic of the sacred and the profane, Ellul argues, from which only the way of holiness can liberate us.

This leads us into the second way in which *The New Demons* might be considered postmodern — a postmodern critique of postmodern relativism and the propensities to absolutism that it feeds. I can only be suggestive here. I am still working out the details in my new book which I am currently writing on sabbatical — tentatively entitled: *Deconstructing Terrorism*. Ellul's theology and ethics interfaces the sacred and the holy whose dynamics are first detailed with clarity in *The New Demons*. The defining quality of the sacred is that it always generates its opposite the profane. The sacred divides the world into polar opposites and by polarizing society invites violence. The holy desacralizes the sacred in order to protect and welcome the alien and the stranger who are rendered profane in a sacralized society. The holy undermines the dialectics of necessity (the dialectic of the sacred and profane) leading to the apocalypse of freedom and introduces a justice that escapes this dialectic and makes all things new.

This is where I see Ellul's work, predicated on the distinctions made in *The New Demons*, intersecting with the deconstructionism of Jacques Derrida. A recent book *Philosophy in a Time of Terror* (University of Chicago Press, 2003) by Giovanna Borradori publishes interviews with Jurgen Habermas and Jacques Derrida, followed by her own commentary on each. Borradori summarizes Derrida's deconstructive project as involving four steps: (1) identify the dualisms operative in the text and in society (the one leads to the other), (2) identify the hierarchy of the dualisms in the text and in society, (3) invert or subvert the dualistic hierarchies by showing what would happen if the negative and positive sides of each dualism were reversed as a way of exposing the ideology of the will to power involved in the dualistic classifications, and finally (4) produce a third term "which complicates the original load-bearing structure beyond recognition" and so deforms and reforms into a new a liberating configuration. To make my case as briefly as possible — steps one and two are what Ellul accomplishes when he analyzes the sacred sociologically, steps three and four are accomplished when he responds theologically and ethically and transgresses the sacred in the name of the holy, introducing transcendence, freedom and justice.

Now justice is not a word that immediately comes to mind when I think of postmodernism. For years I have dismissed deconstruction as irresponsible relativism. In the hands of many of its practitioners it probably is. But I have changed my mind on this with respect to Derrida after I began reading some of his later work, which is deeply indebted to Immanuel Levinas. Derrida's later work is dominated by the themes of grace (the gift), hospitality, the messianic — and also the surprising insistence that justice is the one thing that cannot be deconstructed (*Deconstruction and the Possibility of Jus-*

*tice*, edited by Drucilla Cornell, Michel Rosenfeld and David Gray Carlson, (Routledge, 1992), Chp. 1). The law can be deconstructed but only in the name of the demand for justice. In fact Derrida insists that justice is the driving force of deconstruction — that they are one and the same. For Derrida, justice, like Ellul’s apocalypse of the holy, comes from the outside, as a gift — a gift that subverts all dualisms and makes new beginnings possible. In the concluding chapter of *Deconstructing Terrorism* I hope to make the case that Ellul is a religious postmodernist and that religious postmodernism is able to deconstruct the endless dialectic of absolutism and relativism that plagues secular postmodernism and so exorcise the “new demons” of the postmodern world.

## Clever as Serpents: Business Ethics and Office Politics

by Jim Grote & John McGeeney.

Collegeville MN: Liturgical Press, 1997.viii, 149 pp.

Reviewed by David W. Gill

*Clever as Serpents* was first published eight years ago but it deserves review in this issue of *The Ellul Forum* as an insightful, “Girardian” approach to business ethics.

In Part One of *Clever as Serpents*, “Theory,” Grote and McGeeney use Rene Girard’s insights to analyze workplace dynamics. At almost every turn the authors challenge the conventional wisdom and propose a different way of looking at things. Rather than a market that thrives on freedom and is inhibited by regulation, today’s markets exist only because of various regulations. Governments are not disinterested spectators but active participants in markets. Like “freedom,” “competition” is also a myth. In reality, cooperation is at least as productive as competition (business reality as well as ecological reality).

If not free competition, what is the secret of market economics? Grote and McGeeney propose Girard’s concept of “borrowed desire” or “mimetic desire.” It is envy and covetousness, exacerbated by marketing and advertising. We are motivated by desire to keep up with the Joneses and have what someone else has, or thinks desirable. Internally, the secret of management is to assign blame or even to find a scapegoat who can be sacrificed.

In Part Two, Grote and McGeeney turn to “Practice” and provide a great deal of practical counsel on how to survive and perhaps even find happiness in this toxic environment. The “currency of blame and credit” is gossip. The authors counsel detachment “from the fear of blame and the craving for credit” to “avoid being swallowed up (p. 80). They teach the “ethics of survival” (dealing with the boss and the mob) through “low visibility and high utility.” Don’t crave anything too much (wages, credit, visibility) but be sure you are of significant value to others.

The “ethics of success” (dealing with competitors) revolves around pursuing your true goals rather than being sidetracked by craving for others’ goals. Grote and McGeeney give lots of practical “political” advice here. A bit too calculating and even cynical for my taste but maybe they are right. The “ethics of service” (dealing with

customers) requires true leadership and the meeting of the needs of others, especially the need to be free; now this I like!

Survival, success, and service: this three-fold practical ethics culminates in a reflection on “the wisdom of tradition: work.” The purpose of work is not just to transform the earth but to transform the self. The authors provide great discussion questions to go with each chapter, which makes this not just a good individual read but a great choice for a group study—maybe by your nearest or your favorite executive team. The power of Rene Girard’s insights to illuminate our daily reality is certainly made clear in *Clever as Serpents*. This is not about a literary theory but about life.

## Islam et judeo-christianisme

by Jacques Ellul.

Paris: Presses universitaires de France (6, avenue Reille, 75014 Paris), 2004. 108 pages

Reviewed by David W. Gill

Thanks to the tireless efforts of Dominique Ellul, a new book by her late father has recently appeared in France. *Islam et judeo-christianisme* [*Islam and Judeo-Christianity*] contains a 20-page Preface by Alain Besancon, an 8-page Foreword by Dominique Ellul, a previously unpublished 50-page essay on Islam by Jacques Ellul, “The Three Pillars of Conformism,” and a 15-page reprint of Ellul’s introduction to a 1985 book on the Dhimmi (non-Muslims living in Muslim countries). In discussions of a possible publication of an English translation (no contract just yet!), some of us have urged that Ellul’s 20-page chapter on “The Influence of Islam” in *The Subversion of Christianity* be reprinted as part of any English-language edition. We’ll see.

During the 1980s Ellul often spoke of a book he was preparing on Islam but found publishers reluctant to publish the sort of critical perspective he felt essential. Events also moved rapidly and his manuscript needed substantial updating after these publishers’ delays. In the end the chapter in *Subversion* (and the rather obscure introduction to the book on the Dhimmi) was all we had on Islam from Ellul. The new book is therefore a great help in more fully understanding Ellul’s take on Islam.

Ellul’s essay addresses three common assertions about Islam and its relations with Christianity and Judaism. First, Ellul disputes the value of the assertion that “we are all the children of Abraham.” The three “Abrahamic religions” are often claimed to share an affinity. Ellul insists that Isaac alone of Abraham’s children received the divine and paternal blessing—not Ishmael or the other children. Moreover, according to Jesus, it is not blood lineage but living faith that renders one a true child of Abraham.

Second, Ellul disagrees that avowing “monotheism” brings Christianity, Judaism, and Islam into a close and positive relationship. To begin with, Muslims and Jews often dispute that trinitarian Christians are monotheists. More importantly, it is not the fact of having one god that unites people (other religions and even secular “religions”

sometimes have one sacred center, one object of worship and center of meaning). No, it is the *identity* of that God that decides everything. Ellul shows how the Muslim Allah is dissimilar to the God known in Jesus Christ and the Bible.

Third, Ellul rejects the idea that Islam, Judaism, and Christianity are united in being “religions of the book.” It is partly about the nature of the holy writing and how it is viewed that establishes big differences; it is supremely about the content of the books—including the ways the Koran contradicts the teaching of the Bible.

Ellul’s Introduction to Bat Ye’or’s *The Dhimmi: Jews and Christians under Islam* (1985) reviews and defends the author’s research which carefully examined a long history and found that Jews and Christians had a varied experience under Islam, some good, some bad situations. It is not correct to say that they were always protected and flourishing under Islam (today’s politically-correct viewpoint), nor were they always persecuted.

Ellul’s writings on Islam display his usual passion and intensity. He is taking an unpopular position in a French intellectual milieu that, partly out of guilt over a colonial past and the presence of large numbers of impoverished Muslim immigrants, tended to go to extremes to glorify Islam in an uncritical way. Ellul, on the other hand, fought to protect Jews during the Nazi occupation and for biblical and theological reasons saw a special place for Israel in history. This is a context in which straight talk and candid opinions can be difficult. To have Ellul’s views on Islam in this new book is a welcome addition.

What new readers of Ellul need to be aware of is that he was by nature and choice very dialectical in thought and expression. He felt free to express in extreme form either pole in a given controversy. Thus, his criticism of Islam is harsh. But remember that Ellul wrote ten times as much in harsh criticism of the subversion of Christianity, of its mediocrity, conformism, and guilt. And his critique of the religion of Technique is even stronger. In any case, Ellul had no use for violence or nationalism (common reactions to fears of Islam or Christianity in today’s world).

*Islam et judeo-christianisme* is a challenge to re-think Islam (and Judaism and Christianity), to cast off political correctness and comforting myths we may hold, to face the truth with courage, to speak with candor, and then to move forward toward a genuine peace and understanding.

## News & Notes

— **International Colloquium on Ellul: POITIERS, 21–22 OCTOBER 2004**

More than 150 scholars gathered at the University of Poitiers for a colloquium on Jacques Ellul’s thought and its continuing importance, ten years after his death. Organized by our sister society, the Association Internationale Jacques Ellul, led by Poitiers Professor of Political Science, Patrick Chastenet, the Poitiers colloquium was characterized by excellent papers and animated discussion. Randall Marlin (Ontario),

David Gill (California), and Jean Robert (Mexico) were among the program participants. Veteran scholars such as Ellul's friend and colleague, Prof. Etienne Dravasa, were side-by-side with a number of younger scholars now finishing graduate studies in various universities. Sociologists, political scientists, and communications theorists interacted with pastors, ethicists, and theologians. The papers from the colloquium are now being edited for publication in book form. Bravo to Patrick and our AIJE friends.

— CONFERENCE AT BEGLES

Just a few weeks after the Poitiers colloquium, the regional Ellul-Charbonneau Association sponsored a colloquium in Begles, a town near Bordeaux. IJES member Joyce Hanks (University of Scranton) reports that the Begles meeting was also attended by more than 150 people and was "absolutely terrific." Plans are underway to publish the colloquium papers.

— CHRiSTiANiTY & ANARCHiSM CoNFERENCE AuGuST 5–6, 2005, CHiCAGo

IJES member Andy Baker invites IJES members and friends to a two-day conference "Practically Speaking: Anarchism and Christianity in Word and Deed" to be held August 5–6 at the International Conference Center, 4750 North Sheridan Road, Chicago IL.

For information visit: [www.JesusRadicals.com](http://www.JesusRadicals.com)

— CAHiERS JACQuES ELLuL

*Pour Une Critique de la Societe Technicienne*

The third issue of *Cahiers Jacques Ellul*, an annual journal edited by Patrick Chastenet and published by our sister society, L'Association Internationale Jacques Ellul, is now off the press. It is available for 20 euros (postage included) to individuals outside France, and for 25 euros to libraries. Further information at [www.jacques-ellul.org](http://www.jacques-ellul.org). Write: *Cahiers Ellul*, 21, rue Brun, 33800 Bordeaux.

—**Special Issue of Reforme**

A special issue of the French publication *Reforms* was devoted to Jacques Ellul in December 2004. The first half (20 pages or so) is devoted to biography, bibliography, and recollections of Ellul by Patrick Chastenet and others. The second half is a reprint of various short articles Ellul published in *Reforms* between 1945 and 1989. A fascinating collection. Web site: [www.reforme.net](http://www.reforme.net) E-mail: [reforme@reforme.net](mailto:reforme@reforme.net). Write: Reforme, 53–55, avenue du Maine, 75014 Paris, France. Six euros plus postage and handling.

## Resources for Ellul Studies

[www.ellul.org](http://www.ellul.org)

& [www.jacques-ellul.org](http://www.jacques-ellul.org)

Two indispensable web sites

The IJES/AIJE web site at [www.ellul.org](http://www.ellul.org) contains (1) news about IJES and AIJE activities and plans, (2) a brief and accurate biography of Jacques Ellul, (3) a complete bibliography of Ellul's books in French and English, and (4) links and information on other resources for students of Jacques Ellul. The new AIJE web site at [www.jacques-ellul.org](http://www.jacques-ellul.org) offers a French language supplement.

**The Ellul Forum CD: 1988–2002**

The first thirty issues of *The Ellul Forum*, some 500 published pages total, are now available (only) on a single compact disc which can be purchased for US \$15 (postage included). Send payment with your order to "IJES," P.O. Box 5365, Berkeley CA 94705 USA.

**Jacques Ellul: An Annotated Bibliography of Primary Works** by Joyce Main Hanks. Research in Philosophy and Technology. Supplement 5. Stamford, CT: JAI Press, 2000. xiii., 206 pages. \$87. ISBN: 076230619X.

This is the essential guide for anyone doing research in Jacques Ellul's writings. An excellent brief biography is followed by a 140-page annotated bibliography of Ellul's fifty books and thousand-plus articles and a thirty-page subject index. Hank's work is comprehensive, accurate, and invariably helpful. This may be one of the more expensive books you buy for your library; it will surely be one of the most valuable. Visit [www.elsevier.com](http://www.elsevier.com) for ordering information.

*"[T]he criterion of my thought is the biblical revelation, the content of my thought is the biblical revelation, the point of departure is supplied by the biblical revelation, the method is the dialectic in accordance with which the biblical revelation is given to us, and the purpose is a search for the significance of the biblical revelation concerning ethics.*

*"This rigor in no wise implies that this is a book for Christians. To the contrary, I would expect all its value to come from a confrontation... Every man in our decaying Western civilization is asking questions about the rules of his life. Still less, finally, is the biblical revelation limited to the narrow circle of the elect. It speaks first about all the others. "*

## From the Editor

The special focus of Issue 36 of *The Ellul Forum* is Jacques Ellul's use of the Jewish and Christian Scriptures. The quotation that graces our cover, from the beginning of Ellul's introduction to ethics, *To Will and To Do*, provides a typical sample of Ellul's passion for the message of the Bible. And yet, as the quotation makes clear, Ellul never thought the Bible was simply for the edification of some holy club withdrawn from the world.

Although Ellul published many studies of biblical themes and passages, he remains much better known for his sociological critique of technique (and its implications for politics, economics, social change, communications, etc.) than for this side of his work. But, just as we don't fully understand Kierkegaard's philosophical works without his edifying discourses (and vice versa), the living dialectic between Ellul's theological and sociological works cannot be ignored.

Ellul's biblical studies are always provocative at the same time they are extraordinarily learned. Many of his readers attest to an experience of finding themselves in disagreement with Ellul on various points—and yet naming him the most helpful, illuminating Bible teacher they ever knew. It is almost impossible to ever view a biblical text the same way after Ellul gets done with it. The secret? Ellul gets us to a place where we can truly hear the text, where the living word comes through the forms of the written word.

We are honored to have a wide range of contributors in this issue, several for the first time. These authors come from very different places but all have an informed, critical appreciation of Ellul's biblical studies. Both older and younger scholars are represented, clergy as well as laity, Christian and otherwise. Their articles and reviews range across many different studies by Ellul. We have also included reviews of theological and biblical studies by four of Ellul's own favorite discussion-partners and fellow students of theology and Scripture: Claude Tresmontant, Gabriel Vahanian, Alphonse Maillot, and Andre Chouraqui.

After volunteering to "guest edit" this issue for our intrepid Editor, Cliff Christians, I can only say "welcome back" to Cliff. He and Darrell Fasching before him have performed an awesome service to us all these past 18 years as editors of *The Ellul Forum*. I can hardly wait to have only my "Associate Editor" and "publisher" hats on again.

*David W. Gill, Associate Editor IJES@ellul.org*

## Jacques Ellul as a Reader of Scripture

by Anthony J. Petrotta

*Re-view of Jacques Ellul, Reason for Being: A Meditation on Ecclesiastes (Eerdmans, 1990), translated by Joyce Main Hanks from La Raison d’Etre: Meditation sur l’ecclésiaste (Paris: Editions du Seuil, 1987).*

*Anthony J. Petrotta is Rector of St. Francis of Assisi Episcopal Church (Wilsonville OR) and long-time adjunct professor of Old Testament for Fuller Theological Seminary. He is a graduate of Fuller Seminary (M.A.) and the University of Sheffield (UK)(Ph.D.). He is co-author of the Pocket Dictionary of Biblical Studies (InterVarsity Press, 2002) and author of many articles and reviews.*

When I started my studies at Fuller Seminary nearly thirty years ago, I took an elective class, “The Ethics of Jacques Ellul,” taught by David Gill, then finishing his Ph.D. studies on Ellul across town at USC. At that time I was taking classes mostly in Semitic Languages and wanted to go on in Old Testament studies. Ethics and theology were “recreational” reading for me. I had some interest in Ellul since a friend was urging me to read his books and the class fit my schedule. I managed to talk Professor Gill into allowing me to write a paper on Ellul’s hermeneutics and he enthusiastically—as David often does!—accepted my proposal.

I found Ellul to be not only a sociologist, ethicist, and theologian, but somebody who had a deep interest in the biblical text and was conversant with the field. I found that a number of his concerns about interpretation were also being voiced by prominent biblical theologians (in particular, Brevard Childs).

Now, a generation later and with all that has gone on in the field of biblical studies, how does Ellul stand as an exegete, as a reader of Scripture?

I want to center my thoughts on Ellul as a reader of Scripture by looking at *Reason For Being*, his “meditation” on Ecclesiastes. Ellul says that Ecclesiastes is the book of the Bible that he has explored more than any other book. It is a book he read, meditated upon, and taught for more than fifty years. I also want to compare what Ellul has said against two more recent (and more traditional) commentaries on Ecclesiastes: Ellen Davis, *Proverbs, Ecclesiastes, and the Song of Songs* and Michael Fox, *Ecclesiastes*.

Ellul begins by reflecting on his reason and method for writing *Reason For Being* in his “Preliminary, Polemical, Nondefinitive Postscript,” which, of course, appears as Chapter One, an instance of paradox that fits with Ecclesiastes’ program of throwing contradictions together for the effect and truth they create. This chapter is very instructive; he reveals a lot about *how* he reads, and by implication, reveals some of what he considers the shortcomings of commenting upon Scripture in the modern sense of the term (Ellul *is* polemical).

Ellul is keenly aware that he is not going about his task as an academician might. He has not compiled an extensive bibliography and he has not interacted with the literature on Ecclesiastes during his writing of *Being*. That is not to say, though, that

he has not done the requisite work for writing an informed book on Ecclesiastes. Over the years he has read important studies on Ecclesiastes, and he notes those. More importantly, he “slogged” through the Hebrew text and *nine* other translations as he was writing. After writing *Being* he went back and read through the literature again on Ecclesiastes and though he saw no reason to change what he had written, he did check his thoughts against others who also have studied and written on the book. His reactions to these “historians and exegetes” he put in footnotes after the manuscript was completed.

Ellul says: “This approach seemed to me to be consistent with Ecclesiastes: once you have acquired a certain knowledge and experience, you must walk alone, without repeating what others have said” (p. 3).

I’m not sure that Ellul has “walked alone,” at least in this sense: he has read the studies by those who have spent a lifetime reading Ecclesiastes (Pedersen, von Rad, among others). But I think his point is well taken. Ellul has absorbed the thoughts of others *into his thoughts*, arranged them, and set them down through his own extensive—and slow! (“slogged”)—reading of the text itself. Ellul is not simply writing what he “feels” but what he has experienced as a reader; his experience of the text itself involves listening to those who have read the text and written through their knowledge and experience. Ellul is in a company of readers, but writing out of his own voice. The distinction is important because he thus steers clear of merely reflecting the studies or opinions of others or lapsing into a pietism.

In an important footnote, Ellul spells this approach out a bit more by invoking the Jewish tradition of four kinds of interpretation: literal, allegorical, homiletical, and the “seed of life, from which new mysteries of meaning continually spring up.” He believes that Qoheleth (the Hebrew term for the “preacher” and the name of Ecclesiastes often used in Jewish writings regarding this book) has given us a text where “new mysteries of meaning spring up, with or without new scientific methods” (p. 7). Here quite clearly Ellul points to what he considers the limits of modern commentary and hints at why he writes without those aids ready at hand. Ellul recognizes that however important philological and historical research is, and he clearly values these researches, a text is brought to life as readers open themselves to the forms and thought of the book, and then respond thoughtfully.

The point that reading a text is more than simply understanding the words on the page is worth belaboring a tad. Nicholas Lash talks of “performing” Scripture, of taking the marks on the page and making them alive in our life much as a musician takes the notes of a sonata and realizes them in a recital. “The performance of scripture

is the life of the church”<sup>12</sup>. Ellul does not use this language, but it is implicit in his reading. In his discussion of this point, Lash similarly adheres to the importance of the historical-critical method, but also its limitation. Ellul and Lash (and others) see the reader doing more than making critical notes on a biblical text; as readers of Scripture, we move beyond simple comment to truths that must be lived out in our lives.

It is worth noting that both Davis and Fox make similar assertions about the role of interpretation. Fox, interacting with the tradition of Jewish *midrash*, recognizes that one role of an interpreter is to draw out “the fullness of meaning potential” in a passage (Fox, *Ecclesiastes*, p. xxii)<sup>3</sup>. Davis speaks of the medieval practice of “chewing” on the words of scripture. She wisely writes, “We are now a society that ‘processes’ words rather than one that ponders them” (Davis, *Proverbs*, p. 3). They are, however, more restrained in their comments than Ellul, as we shall see, but this is an editorial constraint I suspect, more than an authorial one.

An example might help show how the subtle differences between Davis, Fox, and Ellul play themselves out. Ecclesiastes 12: 12–14, the “epilogue” to the book, poses problems. For one, Qoheleth is spoken of in the third person and no longer in the reflective first person that we find throughout most of the book (e.g., Ecclesiastes 1:13–14). There are also interpretive problems, what certain words mean in this context, and what they refer to beyond simple translation of a term.

Davis, Fox, and Ellul all agree that these verses are not a “pious” conclusion that is tacked on to an otherwise radical book, as has often been a line of interpretation with the rise of historical criticism<sup>4</sup>. Rather, these words are in keeping with the scope of the book; fearing God and God’s judgment are not alien to the book. Fox cites Ecclesiastes 3:17 and 11:9 on the judgment of God and 5:5 and 7:18 on the fear of God. In adopting this approach, all three are trying to come to terms with the complexity of the book as a literary document, but also the complexity of the thought of Qoheleth.

To what, however, do the words “they were given by *one shepherd*” refer? The translation is transparent (there is nothing ambiguous about the words). But to whom do they refer? We find different ways of explaining the “one shepherd” in Davis, Fox, and Ellul. Davis appeals to the shepherd as a moral authority, one who “goads” the sheep to new pastures where they will thrive and not overgraze the very ground that feeds them. She goes on to ask who might fulfill this role in our society. She answers,

---

<sup>1</sup> Ellen F. Davis, *Proverbs, Ecclesiastes, and the Song of Songs* (Louisville: Westminster John Knox, 2000). Michael V. Fox, *Ecclesiastes* (Philadelphia: Jewish Publication Society, 2004). These commentaries are not randomly chosen. They are commentaries in a more traditional sense than Ellul’s study, but both authors are writing for lay people, pastors, and rabbis, and I know both to be very good readers of Scripture.

<sup>2</sup> Nicholas Lash, “Performing the Scriptures,” in *Theology on the Way to Emmaus* (London: SCM, 1986), p. 43.

<sup>3</sup> *Midrash* refers to both ancient Jewish writings on Scripture and to a method of interpretation.

<sup>4</sup> See, for example, G.A. Barton, *Ecclesiastes* (Edinburgh: T. & T. Clark, 1908). Barton calls the whole section a “late editor’s praise of Qoheleth, and the final verses as a “Chasid’s [a pious person’s] last gloss” (p. 197).

“Few teachers or clergy, or even fewer politicians”( Davis, *Proverbs*, p. 226). She reflects on the role advertising has had on our attention to words and how slogans, euphemisms, and so forth have curtailed our ability to grapple with the complexity of truth, and to change our way of thinking and acting. These reflections, I think, would delight Ellul, though it is not the line of interpretation that he takes with this passage.

Fox has a rather lengthy discussion of “shepherd.” In the traditional interpretations of the rabbis, the term almost always referred to God. Even, Fox informs us, the words of someone as unconventional as Qoheleth derive from God, say the rabbis. The rabbis often have this “extraordinary openness” to different interpretations of *Torah*. Fox questions this interpretation, however. Rather, the metaphor of shepherd usually refers to protecting and providing, not the giving of words. The words of the wise are not, in Fox’s view, like that of law or prophecy. Fox settles on “sages” (not God) prodding people; hence the warning that follows: be careful, sages can overwhelm you with all their ideas (vs. 12). This interpretation is similar to Davis in saying that the “shepherd” are the sages, not God, but differs in that Davis is lamenting the lack of sage advice in our society, whereas Fox focuses on the warning of endlessly listening to other people’s advice. Ellul, I think, would find this last part sage advice from Fox, but again, this is not the approach that he takes.

Ellul goes in another direction. He focuses on the words “all has been heard,” and interprets this line in two ways and at considerable length. First, God has heard all and “collects” these words, for which you will be judged (citing Matthew 12:37). Second, all has been heard, we cannot go beyond the words of Qoheleth; we have reached “Land’s End.” From this interpretation, the injunction to fear God and keep his commandments is all that need be said, and Ellul reflects on what “fear-respect” and “listeningobedience” mean for the Christian. It is from these two poles that “the truth and being of a person burst forth” (p. 299).

However, in a footnote (presumably written after Ellul’s initial meditation on the text), Ellul draws upon a doctoral dissertation by Jacques Chopineau who ties the phrase *one* shepherd to Ps 80:1, “O Shepherd of Israel, hear ... “ and interprets the reference to God (as in the traditional interpretation). Ellul admits that he “spontaneously wanted” to interpret these words as a reference to God (and, hence, God’s revelation), but felt “uncertain” and therefore did not mention that in the reflection proper (p. 291–2, n. 56).

Ellul then goes on in the footnote to reflect on this interpretation<sup>5</sup>. If God is the *true* shepherd (“one”; Hebrew *‘echad*), then this ties and contrasts with Abel/*hevel* (“vanity”), Abel being a shepherd also. God, the true shepherd, is the opposite of *hevel*/vanity. The book is thematically structured around the various vanities, but God is opposite by giving us his commandments, which constitute the “whole person” when we live by them. Chopineau, thus, gives Ellul further support for his interpretation

---

<sup>5</sup> It is not clear to me if this reflection is part of Chopineau’s interpretation or Ellul carrying it forward in his own inimitable way. I suspect the latter.

of the Epilogue as a whole, that fearobedience, the encounter with God, and our listeningobedience liberates our whole being. God as the One Shepherd gives us the commandments. In this respect Ellul goes beyond both Davis and Fox, though Davis might be more sympathetic to the revelatory nature of the shepherd/sage and the connection with the commandments.

Davis, Fox, and Ellul agree that fear of God and keeping commandments are the sum of the teaching of Ecclesiastes. Davis concludes her comments by invoking the *Book of Common Prayer*: “Therefore, orienting our lives toward the commandments enables us, ‘while we are placed among things that are passing away, to hold fast to those who endure” (Davis, *Proverbs*, p. 228; the citation comes on p. 234 of the *Book of Common Prayer*). Ellul would quite agree, and Fox says, “The book allows readers to probe the ways of God and man, wherever this may lead, so long as we make the fear of God and obedience to the Commandments the final standard of behavior” (Fox, *Ecclesiastes*, p. 85).

To answer my question at the beginning, how does Ellul stand the test of time, the answer, I think, is that he stands rather well. Granted, in picking Davis and Fox I am perhaps not being entirely fair since they are both interested in writing for the laity and clergy of the Church and Synagogue, but that is Ellul’s audience as well.

Ellul lingers more in his reflections than either Davis or Fox. His is, after all, a “meditation” and not a commentary in the narrow sense. Ellul, though, stays close to the text, the Hebrew text in this case. Even in his “gutlevel” interpretation of “shepherd” as God, he relegates his comments to a footnote; he is fully aware that this interpretation is not universally accepted, but still in consonant with critical possibilities (a point that Fox makes more sharply than Davis).

I do find it a bit curious that Davis and Fox do not entertain the shepherd-God connection more than they do. That the shepherd is described as “one” seems suggestive in a book that uses words carefully and even “playfully” in the sense that Qoheleth wants to tease the reader to consider that the obvious and the not obvious can occupy the same space. Certainly God as the shepherd is not obvious or necessary; but the fact that commentators have long split on this issue keeps it as a live option to consider. Curiously, Barton notes the options and says that since “shepherd” is usually an epithet of God, it is “probably so here” (*Ecclesiastes*, p. 198).

A final note on my reading of Ellul this time. In my journey as a reader of Scripture, I have found that good readers of Scripture are often those who have honed their skills as readers generally, not just those who are trained to do exegesis in the narrow sense that is taught in books on exegesis for seminary students. What I mean is that a good reader is one who is not just a technician, but one who has, as Proverbs teaches, learned to “acquire skill, to understand a proverb and a figure, the words of the wise and their riddles” (Proverbs 1: 5b-6). Ellul weaves into his meditations thoughts and interactions with biblical scholars (Christian and Jewish), as we should expect, but philosophers, anthropologists, novelists, poets, and so forth. Ellul’s reading experiences are wide and

that is why he can bring his experiences to the task of writing on Scripture, and write with the depth and thoughtfulness that he does.

Ellul's skill as a reader comes out again in his "Preliminary, Polemical, and Non-definitive Postscript." Ellul objects to commentators that *must* find a "formal, logical coherence" in Ecclesiastes. This text is not like any other; scholars treat works on Roman law with more "congeniality" than many biblical scholars treat Ecclesiastes. The scholars would have a "purer, more authentic text" than the one we have received in Scripture (I think Ellul has his tongue firmly in cheek at this point!)<sup>6</sup>.

Ellul does not say it this way, but the issue at stake is *receiving* this text as a Hebraic text, I think, and not as a Western text. However much Qoheleth may be interacting with Greek philosophical thought, he is still very much a Hebrew and employs Hebrew forms and Hebrew "logic." The ability to receive a text as it is written is a skill that most of us need to develop as readers of the Bible, especially since our current translations often go out of the way to obscure the differences between the world of biblical texts and our world<sup>7</sup>. We need to learn the language, structure, forms, conventions, and so forth before we can become competent readers of Scripture<sup>8</sup>.

The end of the matter is this: Ellul is a model reader for all of us, though he would be disappointed if we merely repeated what he has taught us and not built upon his work.

## Ellul on Scripture and Idolatry

by Andrew Goddard

*Andrew Goddard is Tutor in Christian Ethics and a member of the Theology Faculty at Oxford University. His Ph.D. dissertation was published as Living the Word, Resisting the World: The Life and Thought of Jacques Ellul (Paternoster Press, 2002).*

One of the distinctive features of Ellul's theological work is his conviction that it is Scripture that enables us to see the world aright. Rather than "demythologizing" the Bible, the Bible is the means by which God "demythologizes" our world. The classic example of this approach is undoubtedly his canonical, Christocentric study of the city in Scripture, *The Meaning of the City* (Eerdmans, 1970), but the same approach underlies his approach to many other phenomena. This article provides a brief introductory overview of how Ellul's reading of some biblical texts shapes his understanding

---

<sup>6</sup> See pp. 6–16, *Being*, for a fuller treatment of Ellul's objections to some of the critical stances by biblical scholars.

<sup>7</sup> Everett Fox, *The Five Books of Moses*. (NY: Schocken, 1995), is a wonderful counter example to the trend to be "contemporary."

<sup>8</sup> I am thinking here not so much of form-criticism but Hebraic rhetorical forms of narrative and poetry. Form criticism often becomes reductionist rather than illuminating the poetic elements in a psalm, for example.

of idols and idolatry and how, in turn, that understanding leads to a critique of certain attitudes to the Bible and explains the heart of his biblical hermeneutic<sup>9</sup>.

Ellul's biblical discussion of idols and idolatry is not as thorough and focussed as his study of the city but it is particularly in *The Ethics of Freedom* and *The Humiliation of the Word* that we find his interpretations of key texts in — as one would expect from Ellul — both Old and New Testaments. Of particular interest is one Pauline text that shapes his account of the idols in relation to the powers<sup>10</sup>. On first glance, we Christians may want to treat idols and powers as synonymous terms and it must be admitted that Ellul himself (here, as in many other areas) is not always consistent and does not always strictly follow his own distinctions that he draws from the biblical text. Nevertheless, when he is careful, he does distinguish his understanding of these two phenomena and he does so because he believes Scripture does so.

The crucial biblical text for Ellul is Paul's discussion of food offered to idols in 1 Corinthians 8, especially verses 4 to 6. There the apostle writes, "Hence, as to the eating of food offered to idols, we know that 'no idol in the world really exists,' and that 'there is no God but one.' Indeed, even though there may be so-called gods in heaven or on earth—as in fact there are many gods and many lords—yet for us there is one God, the Father, from whom are all things and for whom we exist, and one Lord, Jesus Christ, through whom are all things and through whom we exist."

Ellul takes great care in his analysis of this text, drawing attention to the paradox that Paul here seems to say both (a) that no idol really exists and (b) that there are many gods. Rather than dismiss Paul's statements as incoherent and confused, Ellul seeks to clarify why Paul affirms both these statements. He claims that gods exist in the following sense: "They are part of the powers that claim to be allpowerful or salvific, etc, and that attract people's love and religious belief. They exist. And they pass themselves off as gods" (*The Humiliation of the Word* (Eerdmans, 1985), p 89). Thus Ellul believes that in order to understand the text and the world we have to see that the language of 'gods' is equivalent to (or, perhaps better, a subset of) the category of the powers. As a result, Ellul insists — against the demythologizers and with such writers as Caird, Berkhof, Wink and Stringfellow — that there are real, spiritual powers and forces which influence human lives and societies. These, we learn from Scripture, set themselves up as powerful and redemptive and, by being viewed as such by humans, they stand as a challenge to the one true God.

In his interpretation of Scripture on the powers, Ellul rejects the Bultmannian demythologization project (that dismisses the language of powers as a worldview we must now reject in the light of modern knowledge) but he also refuses to embrace the common popular evangelical and fundamentalist belief in traditional demons that is often understood as the main alternative. Instead he moves between two other ways

---

<sup>9</sup> For a fuller discussion of this, on which this article partially draws, see my forthcoming article in Stephen Barton (ed), *Idolatry in the Bible, Early Judaism and Christianity* (T&T Clark, 2005).

<sup>10</sup> The powers are a subject on which Ellul wrote much more extensively and which, particularly through the work of Marva Dawn, have become prominent in recent Ellul studies.

of interpreting this biblical language of “gods” and “powers.” At times he views them as “less precise powers (thrones and dominions) which still have an existence, reality, and... objectivity of their own.” Here they are seen as authentic, spiritual realities which are independent of human decision and whose power is not constituted by human decision. At other times — particularly in his later writings — the powers are viewed more as “a disposition of man which constitutes this or that human factor a power by exalting it as such” (*The Ethics of Freedom* (Eerdmans, 1976), p 151) and so “not objective realities which influence man from without. They exist only by the determination of man which allows them to exist in their subjugating otherness and transcendence” (*Ethics*, pp. 151–2).

Ellul’s concern in this understanding is to avoid the idea of powers or demons doing their own work apart from human beings. He therefore stresses that the powers find expression in human works and enterprises. It is this important link between the spiritual powers and the material world, especially of human works, that helps us to understand his view of idols. “The powers seem to be able to transform a natural, social, intellectual or economic reality into a force which man has no ability either to resist or to control. This force ejects man from his divinely given position as governor of creation. It gives life and autonomy to institutions and structures. It attacks man both inwardly and outwardly by playing on the whole setting of human life. It finally alienates man by bringing him into the possession of objects which would not normally possess him” (*Ethics*, pp 152–3).

These powers are the false gods that Paul says in 1 Cor 8 really exist. But what are “idols” and why does Paul say that they do not exist? The key feature of idols — in contrast to the powers to which they are linked — is that they are visible and material entities. Although this would seem to give them a more substantial existence, Ellul argues that idols do not exist because “the visible portrayal of these powers which is perceived by the senses, has no value, no consistency, and no existence” (*Humiliation*, p. 89). Any idol is really just “a natural, social intellectual or economic reality.” It is strictly a material object under human control. Ellul therefore believes that Scripture distinguishes false gods from idols because the latter are simply “a creation of man which he invests with a value and authority they do not have in themselves” (*Ethics*, p. 156). Idols, according to Scripture, are simply part of the visible created reality and though linked to the gods or spiritual powers they are to be distinguished from them.

In explaining how it is that, in Paul’s words, “no idol in the world really exists,” Ellul gives the example of money. He claims that money as a power (Mammon) certainly exists. However, a banknote — the material means by which the power works — strictly does not exist because “it is never anything but a piece of paper” (*Humiliation*, p. 89). Here we see a central paradox: idols seek to make the invisible false gods and powers visible and concrete but by this very fact of seeking to mediate a spiritual power in the material world they do not themselves exist. We may today think of the Nike Swoosh, the McDonalds Golden Arches or other symbols and logos as contemporary idols which

on their own are meaningless and powerless but are mediators of some of the global powers of our age<sup>11</sup>.

Faced with them we need to remember that idols are not only part of the ancient biblical world but still a reality in our post-modern “secular” world and to recall Ellul’s judgment based on Paul’s words: “They exist neither as something visible and concrete (since in this sense they are really nothing) nor as something spirituals (since they cannot reach this level). They have no kind of existence precisely because they have tried to obtain indispensable existence beyond the uncertainty of the word” (*Humiliation*, p. 89).

Idols therefore, according to Scripture, lack existence per se and are the attempt by humans to domesticate and bring into the visible, material world the invisible spiritual powers that do exist. “Idols are indispensable for mankind. We need to see things represented and make the powers enter our domain of reality. It is a sort of kidnapping. False gods are powers of all sorts that human beings discern in the world. The Bible clearly distinguishes these from the idol, which is the visualization of these powers and mysterious forces ... Things that can be seen and grasped are certain and at our disposition. It is fundamentally unacceptable for us to be at the disposition of these gods ourselves, and unable to have power over them. Prayer or offering cannot satisfy, since they provide no sure domination. If, on the contrary, a person makes his own image and can certify that it is truly the deity, he is no longer afraid. Idols quiet our fears” (*Humiliation*, pp. 86–7).

This linking of idols to the material or visual, as distinct from the spiritual powers, leads to the second emphasis in Ellul’s interpretation of the biblical witness: the priority of listening over seeing.

Ellul reads the narrative of humanity’s primal rebellion in Genesis 3 as demonstrating the significance of this — the spoken word is doubted and visible reality is taken as the source of truth (see *Humiliation*, pp. 97ff). The same problem is repeated within God’s people Israel. Here Ellul’s interpretation of the narrative of the golden calf (Exodus 32) is of crucial importance. It also illustrates that, although (as in relation to 1 Cor 8) Ellul can take great care and wrestle with the literal or plain sense of the biblical text he is also willing to offer a more spiritual interpretation in order to discern Scripture’s message. Thus, drawing on a study of Fernand Ryser (a French translator of two of the great influences on Ellul’s theology and biblical interpretation — Barth and Bonhoeffer), he highlights that a source of the gold for the calf is the Israelite’s ear-rings (v2). He quotes Ryser, “Aaron dishonours the ear; it no longer counts; now just the eye matters. Hear the Word of God no longer matters; now seeing and looking at an image are central. Sight replaces faith” (*Humiliation*, p. 87). It is this attempt to argue for a biblical basis for the priority of the word and hearing over the material image and sight that is a central theme of *The Humiliation of the Word* as a whole and of its exegesis of key biblical passages.

---

<sup>11</sup> I am grateful to Alain Coralie for his work on Nike Culture that has helped me make this

Finally, Ellul's claim for a biblically based prioritization of hearing over seeing must also be applied to the Bible itself. Although Scripture and biblical interpretation play a central part in Ellul's theology and ethics he is clear that Scripture, as a permanent, written record has the ambiguity of all written words. Drawing on the biblical narrative of Moses breaking the stone tablets (Exodus 32.19), Ellul is adamant that this challenges a common Christian attitude to the Bible for the Bible "is never automatically and in itself the Word of God, but is always capable of becoming that Word — and as a Christian I would add: in a way denied to all other writings" (*Living Faith* (Harper & Row, 1983), p 128).

Rather, than treating the Bible as a visible divine word Ellul insists that "The destruction of this single, visible, material representation of God ought to remind us continually that the Bible in its materiality is not the Word of God made visible through reading. God has not made his Word visible. The Bible is not a sort of visible representation of God's Word must remain a fleeting spoken Word, inscribed only in the human hear ..." (*Humiliation*, p. 63).

Of course, as Ellul acknowledges elsewhere, God has in fact made his Word visible but he has done so uniquely in the person of Jesus Christ and it is, therefore, Christ the incarnate Word who is the key to the Scriptures.

Ellul, therefore throughout his interpretation of biblical texts works with a thoroughly theological and Christo-centric hermeneutic and a relative disregard for the tools of historical-critical study<sup>12</sup>.

Ellul's biblical interpretation of some texts relating to idols and idolatry demonstrates that although Scripture plays a central role in his theology, his theological interpretation of those texts also makes him aware of the danger that Scripture may itself become an idol, a means of escaping the spoken Word of the living God. Ellul therefore challenges us to take Scripture seriously but not ultimately seriously, for ultimate seriousness is to be paid to the Word become flesh to whom Scripture — the Word written — bears witness and it is the living Word not the dead letter that is to be our concern. As a result, Christians are called to participate in a believing and attentive listening to hear the Word of God address us in and through the words of Scripture and to be confident that that Word is one which liberates us from the powers and unmask all our idols as simply "the works of our hands".

## If You Are the Son of God

by Andy Alexis-Baker

---

connection.

<sup>12</sup> For Ellul's fullest account of hermeneutics see his "Innocent Notes on 'The Hermeneutic Question'" in Marva Dawn's translation and commentary on a number of Ellul articles, *Sources and Trajectories* (Eerdmans, 1997), pp 184-203.

*Review of Jacques Ellul, Si tu es le Fils de Dieu: Souffrances et tentations de Jesus. Paris: Centurion & Zurich: Brockhaus Verlag, 1991. 110 pp.*

*Andy Alexis-Baker is currently a student at the Associated Mennonite Theological Seminaries in Elkhart, Indiana. He is also an organizer among Christian anarchists inspired by the work of Jacques Ellul. For more information visit [www.jesusradicals.org](http://www.jesusradicals.org).*

*Si tu es le Fils de Dieu: Souffrances et tentations de Jesus (If You Are the Son of God: The Sufferings and Temptations of Jesus)* is probably one of Jacques Ellul's least read works. A search through the WorldCat database indicated that only fifteen libraries worldwide own a copy. When I went to the Notre Dame library, which has a copy, I found it snug in the shelf, with crisp clear pages, as if it had never been moved since initial shelving, let alone read by a single soul. Perhaps this is partially due to the fact that this work has never been translated into English. I have taken up that task and have completed a version and hope to get it published before long. I will be using my own English translation when I quote Ellul in this review.

Having lived with this work for some time now, I am convinced that it is one of Ellul's most important works. First, this book is his most extended meditation on the life and work of Jesus Christ. Second, this particular meditation on the sufferings and temptations of Jesus provides some rather unique biblical interpretations that add a lot to our understanding. Finally, this book makes a great introduction to Ellul's thought. All of the themes found in his other works are found here: technique, arguments for a kind of biblically based anarchism, placing Jesus at the center of every thought, personalism, etc.

The book is divided into three parts: Introduction; Sufferings; Temptations. At the outset of the book, Ellul claims that Christians have not retained the "total life and teachings of Jesus, the reality: He suffered." This can be seen for example in the way we recite and write down the Creed. We say that, "He suffered under Pontius Pilate" (p. 9). But Ellul claims that this is a distortion of the Latin construction and theologically unsound. The Latin construction is: "He suffered; under Pontius Pilate he was crucified." This reading brings out the fact that Jesus was the Suffering Servant throughout his life. Our version makes suffering a momentary event for Jesus, that is salvific in and of itself.

But Ellul's purpose in this meditation is not to create a "theology of suffering." For Ellul it is not a question of us participating in Jesus' sufferings, but of Jesus participating in ours. A theology of suffering leads to a kind of "morbid orientation" in Christianity: we focus on the gore of the cross and make Jesus into an ethereal creature who could endure great suffering, suffering which in and of itself saves us.

For Ellul, salvation comes through the life, death and resurrection of Jesus in its entirety. So he directs most of his attention to the life of Jesus and the ways he suffered throughout his life. He focuses on the way Jesus suffered because of rejection, being the object of ridicule, and the ways in which he suffered through the normal pain of living, such as hunger. For Ellul it is important that Jesus experienced and lived a truly human experience.

Suffering is fundamentally changed by Jesus in two ways. First, when we suffer we can know that we are not alone in our suffering any longer. Lest we think Ellul is engaging in some sentimentality, he likens this knowledge to a friend who stays at the death bed of another and holds their hand until they pass. This is an act of profound mercy and comfort. God is that friend at our death bed.

The second way suffering is actually changed by Jesus' actual sufferings is that suffering is no longer a condemnation but a fact of material forces and absurdities. Jesus took on the real significance of suffering so that we no longer have to live in the shadow of eternal damnation. Our suffering takes on a temporal aspect, some of which we can overcome but some of which we must learn to live with and become more like Jesus.

Ellul's meditation on Jesus' temptations is just as insightful and relevant. All temptations boil down to two main categories as revealed in the Gospels: Covetousness, or greed, and lust for power. These two temptations are bound up with one another. We can only overcome them by a radical reading of the Gospel and following Jesus' way of "non-power."

For Ellul, all temptation is about humanity tempting God. We tempted Jesus precisely because he was the son of God: He had power and an ability to increase his earthly power; therefore we demanded that he use it. In doing so we tempt the God of love not to be the God of love anymore, but a God of terrible violence.

This book provides a welcome correction to many theological and popular meditations on Jesus and his suffering and temptation. Theologians are loathe to remember that Jesus refused to take power to rule over others, and that he demanded that his disciples do likewise. Ellul does not shy away from this aspect of Jesus but points out that it is central to his mission. It might be helpful to put Ellul in dialogue with a friendly reader such as John Howard Yoder who also examines the three temptations of Jesus in the desert in terms of their political and economic significance.

Yoder wrote that "all the options laid before Jesus by the tempter are ways of being king" (*The Politics of Jesus* (Eerdmans, 2<sup>nd</sup> ed., 1994), p. 25). For Yoder, Jesus' temptation was to set up a kind of welfare kingdom, in which he would rule as a benevolent head of state. But Ellul, goes farther than Yoder does, and examines this temptation in terms of techniques of production. Since Jesus had the ability to satisfy his hunger, we therefore demand that he use his power for himself. Thus Jesus is tempted to prove his divinity in the same way we today "prove" our own divinity: through production. We think we are divine because we are able to transform raw materials to satisfy needs that are also created. "By the miracle of production humanity *proved* that it was divine!" (p. 73). So the temptation for Ellul is both Yoder's welfare king, and also a temptation to power that is godlike and therefore religious.

Likewise, Ellul goes beyond Yoder when he examines the way in which Jesus is tempted to political power. Yoder comments that the temptation to "bow" before Satan is a discernment of the idolatrous nature of state politics. Ellul makes a similar claim but in much more stark terms: "all those who have political power, even if they

use it well ... have acquired it by demonic mediation and even if they are not conscious of it, they are worshippers of *diabolos*” (p.76).

Ellul provides helpful corrections to popular understandings of the sufferings and temptations of Jesus as well. Mel Gibson’s recent film, *The Passion*, perhaps exemplifies popular treatments of the sufferings of Jesus: a fixation on gore and a view of suffering as salvific in and of itself. Jesus is thereby reduced to an entertaining and momentary event, who is less than God but not quite human. Ellul’s entire work provides a correction because he examines Jesus entire life rather than just the passion narratives. How much did Jesus suffer when his own family misunderstood him? How much must Jesus have suffered when his own disciples repeatedly tempted him to power, misunderstood him, and finally left him alone and abandoned? Ellul examines in detail how Jesus experienced physical, moral and psychological sufferings throughout his entire life. The cross was merely the culmination of a life of suffering and temptation.

I cannot resist mentioning one point in his treatment on suffering that brought up contemporary images for me. In his reflection on the way Jesus was ridiculed and mocked, Ellul points out that the soldiers who mocked him at his arrest, put a veil (a hood) over his head and then proceeded to punch him, all the while taunting him to do a superfluous miracle...to simply tell them which one just hit him, knowing he could not see. The images of Iraqis in American-run prisons in Iraq immediately comes to my mind. “When we are tempted to make fun of our fellow people, we should always remember that Jesus was the object of mockery” (p. 55).

This is a valuable book. It deserves more attention than it has heretofore been given: this work deserves and needs an English translation. This book might introduce Ellul’s thought to a wider Christian audience, and provide a powerful tool for dialogue with others for those of us who believe Ellul’s works are still of contemporary importance.

## Ellul’s Apocalypse

by Virginia W. Landgraf

*Re-view of Jacques Ellul, Apocalypse: the Book of Revelation (Seabury Press, 1977), translated by George W. Schreiner from L’Apocalypse: architecture en mouvement (Desclee, 1975).*

*Virginia W. Landgraf (Ph. D., Princeton Theological Seminary) works for the American Theological Library Association in Chicago, Illinois. Her doctoral dissertation was on the work of Jacques Ellul.*

Jacques Ellul’s eschatology deserves to be better known, because it offers an alternative to some popular eschatologies which seem to negate either the truth of God’s love for humanity and creation in Jesus Christ or the reality of God’s judgment. However, the style in which Ellul’s commentary on Revelation is written may be forbidding to a newcomer. (A more prosaic exposition of some of his eschatological beliefs is avail-

able in *What I Believe*). It could be termed “prismatic,” because he tosses up multiple meanings for a given symbol depending on the angle from which it is viewed. The French subtitle, “architecture in movement,” indicates that the five sections into which he divides the book — of seven churches, seven seals, seven trumpets, seven bowls, and seven visions of the new creation, framed by doxologies — are in dynamic relationship with each other.

Appropriately, the book is written not as a verse-by-verse commentary from beginning to end, but starting at the middle, where he thinks that the meaning of the work and person of Jesus Christ are shown “as in silhouette.” The sections on either side — of the church with its Lord, of the meaning of history as revealed only by Jesus Christ, of divine judgment (yet executed by the Son of Man!) as stripping human beings of their works, and of the new creation — are inexplicable without this core. He presumes that the author of Revelation meant to write “a theological book” which is “a Christian book,” saying that the relative absence of Jesus Christ in this section shows precisely God’s non-power in history. One may doubt that such a move makes exegetical or theological sense. Yet the vision of eschatology which follows is worth wrestling with, because it is more compelling than some others which have either popular Christian or secular currency.

*First*, Ellul’s eschatology can provide a healthy antidote to premillennialist eschatologies which emphasize the “rapture” of the church away from the earth and God’s destruction of creation. Such an eschatology seems to go against both the love of God shown in Jesus Christ and the Noachic covenant. Often these theologies are associated with a belief in Revelation as a chronological prophecy of future events. By contrast, Ellul sees Revelation as expressing a recurring dialectical movement of witness, judgment, and new creation, made possible by the atonement achieved by Jesus Christ. The catastrophes in Revelation are not primarily inflicted by God upon humanity but arise because of creation’s shocked reception of the news that God has become human and because people are so bound up with works and powers and principalities which are destroyed by God’s judgment. The church and Israel (the two witnesses) are separated from the world not to escape worldly tribulation in a physically removed heaven but to witness to God’s truth within a world which rejects them. The New Jerusalem is not a substitute for the old creation but God’s assumption of those human works which are fit to enter it (a motif which Ellul developed earlier in *The Meaning of the City*).

*Second*, Ellul’s doctrine contrasts with an eschatology of human progress, whereby human beings incrementally build up God’s kingdom on earth and derive meaning and optimism from this task. Whether in the Christian form of “postmillennialism” or as a secular doctrine of progress, this kind of belief seems to contradict the reality of radical evil. Advances in healing power may be accompanied by advances in killing power, and so forth. Ellul rejects a doctrine of progress and disconnects hope from optimism (a theme he took up in *Hope in Time of Abandonment*). He sees Revelation as “the unique example ... of the meaning of the work of humanity and, equally, of its

nonmeaning.” There is no sure way to know which human works will go into the New Jerusalem. But that is not to say that they should not be done; he compares them to eating, which should be done, but is still “strictly relative.”

History, Ellul believes, does not reveal any meaning by itself. This revelation must be provided by Jesus Christ, who comes from outside this history to reveal the catastrophes that would have had to occur upon the world if he had not taken God’s judgment upon himself. Only because witnesses to the Word of God testify to something from beyond the play of forces in history can they introduce freedom into history. Similarly, Ellul distinguishes hope (contrary to visible evidence) from optimism about the products of human effort. (This contrast reflects his distinction between truth, communicable by the Word, and reality, manifested by visible evidence, which he treated most fully in *The Humiliation of the Word*). It is precisely because God seems to be absent in the central section of Revelation (punctuated by the seven trumpets) that Ellul can call this a section expressing hope. The “pessimistic” stance of Ellul’s sociological works, which often show vicious cycles that seem closed in terms of worldly developments (of technique, politics, religiosity, revolutions, etc.), does not contradict this hope but rather provides a context for it.

*Third*, Ellul’s theology provides relief from belief systems (whether religious or secular) that try so hard to be non-judgmental that they cannot acknowledge the existence of personal or structural sin in the world. When these kinds of doctrines predominate among Christians, they often take the form of ignoring eschatology entirely, perhaps seeing Revelation as a book whose catastrophic visions are strictly the result of historical persecutions. This kind of theology does justice neither to prophetic calls for repentance and promises of liberation throughout the Bible, nor to persons’ and systems’ real needs for repentance and redirection, nor to the impossibility of achieving the repentance needed without God’s action. Against this impasse, Ellul strictly distinguishes judgment from condemnation. Judgment is an expression of God’s love and is liberation, because human beings will be stripped from the works by which they have tried to save themselves and the powers which enslave them. The spirit of rebellion against God and trying to save oneself, the subordinate powers which it breeds (political power, sexual lust, etc.), and the historic incarnations of these powers (such as political empires) will be condemned. But all of the people and some of their works (without the people’s previous relationship of idolatry vis-a-vis their works) will be taken into the New Jerusalem. He sees mentions in the text of people left outside the new creation as referring to their *previous conditions* as idolaters, fornicators, etc., not to the people themselves. (Ellul believes in universal salvation, but he identifies this belief as a “conviction,” not a “doctrine” — meaning that his position on what the church should teach as doctrine is perhaps closer to what George Hunsinger calls “reverent agnosticism” with regard to salvation — universal salvation is possible, but the decision belongs to God).

*Fourth*, Ellul’s thought contradicts any tribalism or theology of political conquest, whereby the people on “God’s side” will win over “God’s enemies” and establish the

kingdom of God on earth politically. Such a doctrine — rarely held so simplistically by serious Christian thinkers (e.g., careful liberation theologians) as their ecclesiastical opponents would have us believe — risks denying the universality of sin, the universality of God’s love, and the limits of the ability of external structures to change the heart. Not only does such a doctrine raise some of the same problems as the doctrine of progress treated above, but in Ellul’s thought, *all* people are in need of judgment. *No* human beings can be presumed to be condemned. God may surprise us by taking some works which we frowned upon as good religious or political people into the New Jerusalem (which is not an excuse for license in things which do not build up — cf. Ellul’s dialectic between “All things are permitted” and “Not every thing builds up” in *The Ethics of Freedom*). In fact, according to Ellul, it is as non-power that God enters history and introduces freedom into history. Political conquest can never bring freedom. Empire building, by whatever side, is not the way to defeat the “axis of evil” but feeds into it. (The absolute contrast between freedom and love, on the one hand, and power, on the other hand, does raise problems which will be addressed below.)

*Fifth*, Ellul’s doctrine of judgment breaking into history contrasts with simplistic popular misunderstandings of Christian eschatology which one might label “creeping works-righteousness” even if they are not based upon external works. In these schemas, God keeps a balance and rewards people after death based on various criteria: their works, or right beliefs (faith as works), or perhaps right religious experiences (although any of these might be alternatively seen as gifts within this life from an arbitrary God who rewards some people and not others). By contrast, for Ellul, works do not save, either in this life or the next. Faith is witness to the living God and a relationship venturing forth with this God, and it is not reducible to a set of static beliefs (although, despite his contrast between belief and faith in *Living Faith*, one can analyze Ellul’s beliefs about God and find that they do have cognitive content — which he seems to have admitted by writing *What I Believe*). God’s decision to seem particularist in choosing Israel and the church is not a matter of saving some and not others, but of revealing God’s self to some so that they can witness to others. And the new creation is not something to be hoped for only beyond death but may break into our life here and now, although it is not presumed to be a completed process in this life. Jesus Christ has already won the victory, and it is that from which we are to live; yet we are still in a world which, by visible evidence, is in bondage to the spirit of power and its consequences.

Thus a sketch of Ellul’s eschatology can be drawn by means of contrast (for the full prismatic treatment, which is rewarding not only as an intellectual but also a devotional exercise, read the book). It should take its place with serious Christian alternatives to the popular eschatologies listed above. Yet its attractive features do not mean that it does not have problems. One searches in vain for a systematic resolution of the already and the not yet. Is it in the future? Ellul denies that the sequence in the book of Revelation is meant to be chronological, so the new creation does not occur at some future end time. Does it occur after death? Ellul might dismiss such a

presumption, or even the wish for such a resolution, as speculation not provided for by the biblical witness. A more problematic issue for this-worldly ethics is the absolute contrast between love and freedom (which are of God, and of witnessing to God's Word in the world) and power (which is rebellion against God and enslaves both its exercisers and their victims). As this essay is being written, physical, technical power is badly needed to restrain flood waters on the United States' southern coast. It may be true that God appears in history as non-power, but does that mean that God never wants technical power to be exercised? Is there not a third option between love which can only witness, waiting for a free response, and power which crushes — something akin to artistic creation respectful of one's materials? (The argument that human beings should have built in a way more respectful of wetlands' capacity to act as flood buffers comes to mind.) Such are the questions raised by Ellul's treatment of the Apocalypse. Nevertheless, we are all in his debt for a beautiful, provocative book.

## Is God Truly Just?

by Patrick Chastenet

*Re-view of Jacques Ellul, Ce Dieu injuste...? Theologie chretienne pour le peuple d'Israel (Paris: Arlea, 1991; Reedition Poche/Arlea, 1999)*

*Patrick Chastenet is Professor of Political Science at the University of Poitiers in France. He is the author of Lire Ellul: Introduction a l'oeuvre socio-politique de Jacques Ellul (1992), editor of the journal Cahiers Jacques-Ellul, and President of the Association Internationale Jacques Ellul, the sister society of the IJES. His interviews with Ellul have recently been republished in English translation as Jacques Ellul on Politics, Technology, and Christianity (Wipf & Stock, 2005)*

"For God has imprisoned all in disobedience so that he may be merciful to all." (Romans 11:32)

Why, if God determines everything, would He punish those forebears he himself created to serve as witnesses to his wrath? If God, exercising his sovereignty as he thinks best, "saves" some and "rejects" the others, how can we accept that those foreordained to be irresponsible should suffer damnation? If God is good, He can do no evil; if he allows evil to be done, he is not good.

But can we really measure out God's goodness or justice? God is "arbitrary," just as love is "arbitrary." To claim that God is "unjust" would imply that there are values over and beyond the values of he who was characterized by Kierkegaard as the "Unconditioned One," the "Wholly Other": God, in other words, is not God.

The Bible, however, makes plain that what is good is wrought by God alone — as Jacques Ellul, the nonconformist Protestant theologian, reminds us in the last book he was to publish during his lifetime. Making full use of all his finely-honed dialectical

skills, he develops a masterly analysis of three of the most neglected and misunderstood chapters 9–11 of Paul’s Epistle to the Romans.

In *Ce Dieu injuste ...?* Ellul does not forget that he is also –perhaps even primarily – a historian and sociologist. His exegesis, in sum, eschews the purely intellectual exercise. What Ellul sketches out here amounts, instead, to a Christian theology for the people of Israel, in which he confronts the spiritual roots of anti-Semitism: a highly useful project indeed when we realize that certain sectors of the Catholic Church have still not relinquished their old demons.

What has become of the Jewish people? Has it been cast aside ever since the coming of the Messiah? No! Far from being deicidal, the people of Israel serves as the bearer of God in Jesus Christ. The chosen people remains the “chosen” people. This, however, does not mean “saved,” but specially “set apart to bear witness,” to confirm that the God of the Bible is One, that he is the Lord of the Ages, and that his love is the only truth. Israel’s vocation, therefore, is to live out, in accordance with the Law, a historical adventure whose goal is the desire to change the world.

There have, however, been three errors: (1) The Jews have mistakenly considered that the Torah embodies God’s will and justice, though God himself refuses to be imprisoned within any text. His justice is not some perfect recompense for “pious deeds,” nor can his will ever be fully known. (2) Though entrusted with proclaiming that God’s liberation includes everyone, they forgot just how universal this message was. (3) The Jews reserved the Revelation, Covenant and Election for themselves alone.

Hence the “temporary, partial” rejection of Israel which, found wanting in the divine plan to broadcast God’s will to set all people free, was replaced by Jesus Christ, the ultimate “remnant of Israel.” Whereas the Torah itself is set aside for the Jewish people, Jesus Christ, the Torah’s fulfillment, is a gift offered to all people. However, even if it still refuses to consider the Lord as the “Eternal One,” Israel–chosen by God for its weaknesses and not its virtues–is not guilty, according to Ellul.

It was, indeed, the ‘fall’ of the Jews which was to bring about the salvation of pagans. “There, where sin abounded, grace abounded even more.” Isaac and Ishmael, Moses and Pharaoh, the “Yes” and the “No”: each complements the other. Israel is always both simultaneously chosen and rejected: the “positivity of negativity,” as it were, inasmuch as such disobedience serves God’s ultimate design. If most Jews have not recognized the Messiah in Christ, it is so that all shall know divine grace and election.

The onus now is on the church to stir up Israel’s jealousy by proclaiming an ethic of human liberation. But, as Ellul has previously demonstrated, as long as Christians continue preaching morality, dogmatics, constraint and austerity, instead of salvation, joy, freedom and love, the Jews can legitimately refuse to recognize in Jesus the Son of God.

The Holocaust must force us to undertake a radical rethinking of the whole of Christian theology, condemned to remain a very rickety construct if Israel is left out. Ellul goes on to conclude by establishing a link between Judaism and the end of time:

the Jewish people is, “willingly or unwillingly, the wedge lodged within humanity’s heart of oak, and it will stay right there until that selfsame heart of oak has been changed into a heart of flesh.”

## Dieu et-il injuste?

by Patrick Chastenet

*Jacques Ellul, Ce Dieu injuste...? Theologie chretienne pour le peuple d’Israel (Paris, Arlea: 1991; Reedition Poche/Arlea, 1999).*

« Car Dieu a enferme tous les hommes dans i’infideiite afin de faire misericorde a tous » (Rom. XI, 32).

Si Dieu decide de tout, pourquoi punirait-Il ceux qu’Ii a crees d’avance pour temoigner de sa coiere? Si Dieu — absolument libre dans sa souverainete — “sauve” les uns et “rejette” ies autres, comment accepter que de teis irresponsabies soient damnes? Si Dieu est Bon Ii ne peut faire ie Mai, s’Ii iaisse faire ie Mai c’est qu’Ii n’est pas Bon.

Mais pouvons-nous juger de ia bonte ou de ia justice de Dieu? Dieu est “arbitraire” exactement comme i’amour est arbitraire... Pretendre que Dieu est “injuste” signifierait qu’ii existe des vaieurs au-dessus de ceui que Kierkegaard nomme precisement *l’Inconditionne*; ce qui reviendrait a dire que Dieu n’est pas Dieu !

La Bibie nous montre que ie Bien c’est uniquement ce que Dieu fait, rappeiie Jacques Eiiui qui tente de sortir de cette serie de contradictions iogiques par une pensee diaiectique deja soiidement eprouvee (Cf. notamment *La raison d’etre. Meditation sur l’Ecclesiaste*, Paris, Seuii, 1987, reedition Seuii, 1995). Ce theiogieien protestant non conformiste a consacre ie dernier iivre publiie de son vivant a i’analyse des trois chapitres (IX, X, XI) de i’Eptre de saint Paui aux Romains ies plus ignores ou ies plus mai compris.

Eiiui dans ce texte n’oubiie pas qu’ii est aussi -et peut-etre avant tout- historien et socioiogue. Son exegese a donc fort peu a voir avec un simpie exercice inteiiectuei. Ii s’agit ni plus ni moins dans ce texte d’esquisser une theiogie chretienne pour ie peupie d’Israei et de combattre ies racines spiritueiies de i’antisemitisme. Projet particuliere-ment utiie iorsque i’on sait que certains secteurs de i’Egiise cathoiique n’ont toujours pas renonce a ieurs vieux demons.

Que devient donc ie peupie juif depuis i’avenement du Messie? Est-ii rejete? Loin d’etre decide, Israei est ie peupie porteur de Dieu en Jesus-Christ. Le peupie eiu reste ie peupie “eiu”. Ce qui ne veut pas dire “sauve” mais « mis a part pour temoigner ». Sa mission est d’attester, que ie Dieu biblique est unique, que ce Dieu est maitre de i’Histoire et que son Amour constitue ia seuie verite. Ainsi ia vocation d’Israei est de vivre seion ia Loi une aventure historique caracterisee par ie desir de changer ie monde.

Mais trois erreurs ont été commises: 1) les juifs ont confondu la Torah avec la justice et la volonté de Dieu, or Dieu ne se laisse pas enfermer dans un texte. Sa Justice n'est pas l'exacte retribution des "œuvres" et Sa Volonté est impossible à connaître dans son entier 2) chargés de la proclamation du Dieu libérateur pour tous, ils ont oublié l'universalité de leur message 3) les juifs se sont appropriés la Révélation, l'Alliance et l'Élection.

D'où le rejet « temporaire et partiel » d'Israël qui a déçu le projet divin de transmettre Sa volonté libératrice à tous, et son remplacement par Jésus-Christ: l'ultime reste d'Israël. Alors que la Torah est réservée au seul peuple juif, Jésus-Christ est un don offert à tous les hommes, autrement dit la Torah accomplie. Malgré cela les juifs refusent toujours de considérer le Seigneur comme l'"Éternel". Choisi par Dieu pour ses faiblesses et non pour ses vertus, Israël n'est pas coupable selon Eïlül.

La "chute" des juifs a en effet permis le "sauveté" des païens. « La où le péché a abondé, la grâce a surabondé. » Isaac et Ismaël, Moïse et Pharaon, le "oui" et le "non", vont de pair. Israël est toujours et en même temps le peuple élu et rejeté. On peut alors parler de "positivité de la négativité" dans la mesure où cette désobéissance même sert le dessein ultime. Si la majorité des juifs n'a pas reconnu le Messie en Christ, c'est pour permettre à tous les hommes de connaître la grâce et l'élection.

Il revient donc à l'Église, aujourd'hui, de susciter la jalousie d'Israël par une éthique d'homme libre. Or, comme il avait déjà montré (Eïlül *La subversion du christianisme*, Paris, Seuil, 1984 ; réédition Paris, La Table Ronde/ La petite vermine, 2001), tant que les chrétiens prêcheront une morale, une dogmatique, une contrainte, une austérité en lieu et place du sauveté, de la joie, de la liberté et de l'amour, les juifs pourront légitimement refuser de reconnaître le Fils de Dieu en Jésus.

La Shoah doit nous conduire à penser autrement toute la théologie chrétienne, théologie à jamais bancale sans Israël. Et l'auteur de conclure en établissant un lien entre le judaïsme et la fin de l'Histoire: qu'il le veuille ou non, le peuple juif « est le coin enfoncé dans le cœur de chêne du monde et il y restera jusqu'à ce que le cœur de chêne soit changé en cœur de chair ».

# Ellul's God's Politics

by Chris Friesen

*Re-View of Jacques Ellul, The Politics of God and the Politics of Man (Grand Rapids: Eerdmans, 1972), translated by G. W. Bromiley from Politique de Dieu, politiques de l'homme (Paris: Nouvelle Alliance, 1966).*

*Chris Friesen serves as a pastor in Edmonton, Alberta. He is completing an MA in theology at Mennonite Brethren Biblical Seminary, Fresno, California.*

Once a person has tasted some of Jacques Ellul's biblical interpretation, he or she looks to another of his studies with the expectation, Okay, he's going to crack this text open for me. He's going to think through it as far as anyone can and press beautiful new meanings out of it, some of which will become lodged in my own imagination as the actual Word of God contained in this or that biblical passage. Yes, I'm going to have to read and re-read to keep pace with the surge of his rhetoric, and I'm going to raise an eyebrow here and there, sometimes even become downright annoyed, but in the end he's going to win me over to many of his interpretations because of the vibrant God-and neighbor-loving place at which they arrive.

In all these respects, *The Politics of God and the Politics of Man* does not disappoint. It is in fact a classic example of Ellulian hermeneutics. The same familiar features are here: the non-negotiable (though not un-nuanced) high view of the text's origin and authority, the trans-canonical reasoning, the robust Christocentrism, the constant thrust of existential application. Jacques Ellul takes the Bible as a richly-intertwined, self-illuminating unity of divine revelation intended to speak concrete direction to the desires, decisions, and actions of individuals and communities today the same as ever; with Jesus Christ, and God's saving work in Jesus Christ, as primary interpretive key.

Ellul's essential method of study in this volume, an idiosyncratic commentary/meditation on the Old Testament book of Second Kings, is outlined in an early footnote: "We shall adopt the simple attitude of the believer with his Bible who through the text that he reads is ultimately trying to discover what is the Word of God, and what is the final meaning of his life in the presence of this text" (p.12). Readers are advised to listen for some polemical tone in and around that statement. Ellul had little patience for either the methodological dogmas of historical and form criticism or the orthodoxy of skepticism embodied in Rudolf Bultmann's program of demythologization. Thus, although he gives the nod here and there to historical approaches and has clearly enriched his own store of knowledge by them, Ellul in the main handily sets aside a scientific orientation as he does his own critically incorrect work of extemporizing (so it seems) on the narrative as if his life, and ours, depended on it.

The particular aspect of life's meaning that Ellul as believer constantly chews on is the possibility for authentic action in this world on the part of both individual Christians and the gathered church. What is to be done? How is it to be done, and why? What can it accomplish? What is the world's typical mode of action, especially in its politics? What is God's? If God in Christ has already done everything, what is

left to do? What is life for, anyway? These are the questions that drive Ellul's "simple" turning to the text of Second Kings in *The Politics of God/Man*. (Incidentally, for a consideration of similar issues from a secular, sociological perspective, an inquirer should turn to this book's antecedent companion volume, *The Political Illusion* [Knopf, 1967]).

The introduction of *Politics* identifies the primary revelatory significance of Second Kings as twofold. Firstly, as "the most political of all the books of the Bible," Second Kings specially demonstrates the interventions of God in, and the judgment of God upon, human politics (defined by Ellul as, properly, "the discharge of a directive function in a party or state organism"). Secondly, Second Kings displays a live-action, historical elaboration of the old problem of human freedom within and over against divine sovereignty. The main body of Ellul's work investigates these two elements, politics and freedom, in a selective study of major personalities in Second Kings, which, for its part, presents a theo-historical narrative of Israel and Judah's international relations from the death of Ahab to the Exile, in counterpoint with the activity of the prophets Elijah and Elisha.

Ellul reflects deeply upon the careers of Naaman, leprous general of Aram; Joram, abdicating and faithless king in besieged Samaria; Hazael, scourge of Israel; Jehu, genocidal "religious cleanser"; Ahaz, pragmatic political deal-maker; Rabshakeh, Assyrian propagandist; and finally Hezekiah, paragon of prayerful humility. Interspersed throughout the virtuosic demonstration of paradigm-oriented hermeneutics (type three of ethicist Richard Hays' four modes of appeal to Scripture; cf. Hays, *The Moral Vision of the New Testament* [HarperCollins, 1996]) are reflections on the crucial role of the prophet within and beside the maelstrom of political events, as well as dense excurses on themes such as the ultimate salvation of those undergoing judgment in earthly life ("They are put outside God's work but not his love" [p. 54]), the problem of Christian efficacy ("We have simply to be... a question put within the world and to the world" [p. 141]), and the role of the supernatural in history ("All other miracles receive their significance from this. that God enters into the life of man even to the point of this death" [p. 186]). The book concludes with a brief "Meditation on Inutility" that flirts with the pessimism of which Ellul is prone to be accused but ultimately issues in an encouraging affirmation of the true character of Christian freedom.

Of particular interest in the series of personality studies is the chapter on Jehu, both for its occasional hermeneutical fragility (e.g. the attribution of Jehu's whole murderous career to the supposed unauthorized modification of Elisha's message by an intermediary) and for its poignant relevance to our own time. "[Jehu] is a man of God, but he uses all the methods of the devil" (p. 99), judges Ellul. "He wants to do what God has revealed but he confuses what God has shown will come to pass with what God really loves" (p. 115). Indeed, we meet in Jehu the prototype of religious voluntarism who substitutes his own efficient means for God's, who "uses prophecy in the interest of politics while pretending to use politics in the service of prophecy."

Notwithstanding Ellul's convincing reading of the man, however, Jehu's adventure poses a significant interpretive challenge for Ellul because of his equally strong convictions about both biblical authority and violence. Ultimately, his attempt to insulate Elisha and God from specific responsibility for Jehu's purges retires to a daring theodicy, in what is one of the most memorable passages in the book: "When Jehu fulfilled the prophecy, it was on God himself that his violence fell. It was God whom he massacred in the priests of Baal, none of whom was a stranger or unimportant to God, since the Father had numbered all the hairs of their heads too. All the violence of Jehu is assumed by Jesus Christ... It is in this way and in these conditions that Jehu does the will of God. In his zeal for God, it is God himself that he strikes" (p. 110).

How does Ellul resolve the focal issue of his study, that is, the question about the interaction of human and divine freedom? Does the God of Second Kings boss people and history around? In paraphrase, the richly-argued sequence of positive and negative character paradigms comes together to communicate the following: God does indeed act (God's "politics"!) within human history, but not in a coercive manner and rarely even in an obviously supernatural manner. Rather, God relies on a whole nexus of real human decisions taken in the presence of his sometimes ambivalent and always contestable word (which, for its part, can be transmitted by the humblest of folks). Many human acts done according to purely human calculations (e.g. the reconnaissance of the Syrian camp by the four lepers) accomplish "just what God had decided and was expecting," while many others, particularly those which aim for assured results and appear most successful (e.g. Ahaz' adoption of an Assyrian altar) accomplish nothing at all and are swallowed up in the crushing fatality of history. Nevertheless, "in this medley, this swarm, this chaos, this proliferating incoherence of man, there is a choice that is God's choice" (p. 70); and so, like Elisha and Naaman and Hezekiah, we must make it, accepting the humble means of the kingdom and leaving the results to the Holy Spirit.

Particularly for the Christian this choice has become authentically possible. For through the once-for-all-time, redounding Event of the cross, Jesus Christ has shattered fatality and set in motion the power and possibility of true freedom within the course of history. A preminent sign of its appropriation, surprisingly enough, will be the apparent uselessness of actions subsequently undertaken. Ellul avers, "To be controlled by utility and the pursuit of efficacy is to be subject to the strictest determination of the actual world" (197). By contrast, "To do a gratuitous, ineffective, and useless act is the first sign of our freedom and perhaps the last" (p. 198). Thus, in the teeth of a world that values only the measurable accomplishment, Christians perform their childlike acts of prayer and witness with the joy of unconcerned, freely chosen obedience, living out a love that does not seek "results." Life exists to provide scope for this freedom in love.

To whom would I recommend this book? I should confess that, in terms of my own ongoing sojourn as a believer trying to discover the final meaning of his life in the presence of the Bible, it was an interesting time to read both Second Kings and

Ellul's meditation on it. I found myself continually distracted by critical concerns in my preliminary study of the Old Testament chapters: Who wrote these things down? When and why? How did they come to know or conceive of the events and explanations they related? Underneath my fitful deconstructive speculation ran the unspoken question, What can be trusted in all this? What is really true here? I realize these are the typical and chronic symptoms of that modern affliction, "looking at the beam" (cf. C. S. Lewis's "Meditation in a Toolshed"), but it seems to happen all by itself. Nevertheless, forthwith Ellul comes along and says, by his own example, Look *along* the beam. The story itself can be trusted. The story is true. As a heuristic discipline, give the narrative the benefit of the doubt, taking it on its own terms. In its movement "we are in the presence of life itself at its most profound and most significant. We must not let it slip away from us" (p. 16). In this way Ellul refocuses one's literary attention to a depth of field closer to the surface of the text, making the narrative itself sharp for real-time signification.

That being said, I do have a persevering critical question. That is, If God really deals with human beings in the way Ellul describes (and I believe that God does), then did not the same flexibility, the same tolerance for error, the same non-coerciveness, the same incomprehensibly humble willingness to adapt to human choice and preference and to assume human attempt and aspiration, obtain for those human beings who spoke and inscribed the words of human language which have become our Scripture? Saying so would not be to imply that those words can't limn our faith and practice reliably, can't witness to capital-T truth and capital-D doctrine; but it would be to imply that the absolute non-negotiable of Revelation which often gives Ellul's interpretive debate a certain punch might need to be held a little more loosely. Is there authentic Christian faith that takes the Bible less as an unbreakable rock and more as a kind of river or wind or vegetable garden? What does such faith look like in practice? I'm not exactly sure, but I realize that Jacques Ellul acts as a kind of helpful tether on my leg as I wander out and back trying to find examples.

I need to tie up my earlier question: Who should read *The Politics of God and the Politics of Man*? Remember, one doesn't pick up one of Ellul's biblical studies for a careful reconstruction of historical and redactive contexts or a catalogue of alternative critical perspectives autographed with his own judicious vote; one picks it up to see just what variety of narrative details will get caught in his widely-flung, imaginative hermeneutical net and how he will gut, fillet, and fry them up in a vigorous flurry of argument that never fears to imply, "Thus saith the Lord." Therefore to "Who should read?" I would answer, in partial echo of Ellul himself, both Evangelical deists who fancy themselves saving souls from eternal hell while the Father files his nails in the study, and all manner of other good-hearted people strung out on too much responsibility for establishing the shalom of the kingdom. I would also answer, Bible-olatrous theocrats pulling strings to get the right flags saluted in the public squares of villages local and global. And I would especially suggest, people like me, who may experience Holy Scripture's Word-of-God-ness as a variable phenomenon and who are

always deeply grateful when a flaming mind like Jacques Ellul's takes the text and reveals revelation in it once again.

## Judging Ellul's Jonah by Victor Shepherd

*Re-view of Jacques Ellul, The Judgment of Jonah (Grand Rapids: Eerdmans, 1971), translated by G. W. Bromiley from Le Livre de Jonas (Paris: Cahiers biblique de Foi et Vie, 1952).*

*Victor Shepherd is Professor of Systematic and Historical Theology, Tyndale University College & Seminary, Toronto, Ontario, and Professor Ordinarius, University of Oxford.*

Repeatedly Jacques Ellul's *Judgment of Jonah* reflects his characteristic love/grief relationship with the church, the church's lack of discernment, and an ecclesiastical agenda that finds the church somnolent, feckless and desultory. As sad as he is scathing, Ellul notes, "A remarkable thing about even the active Christian is that he (*sic*) never has much more than a vague idea about reality. He is lost in the slumber of his activities, his good works, his chorales, his theology, his evangelizing, his communities. He always skirts reality. \_ ..It is non-Christians who have to waken him out of his sleep to share actively in the common lot" (p.31).

More foundationally, *Judgment* exudes Ellul's characteristic conviction concerning the pre-eminence of Jesus Christ. While the book of Jonah is deemed "prophetic" among Jewish and Christian thinkers, Ellul understands prophecy strictly as an Israelite pronouncement fulfilled in Jesus Christ.

As readers of Ellul know from his other books (e.g., *Apocalypse* and *The Political Illusion*, commentaries on the books of Revelation and 2<sup>nd</sup> Kings respectively), Ellul has little confidence in the expositions of the "historical-critical" guild of exegetes insofar as their preoccupation with speculative minutiae blinds them to the substance of the text; namely, the word that God may wish to speak to us through that text.. Unlike many in the the professional exegetical guild, Ellul sees Jesus Christ present in the Older Testament. Ellul regards the guild's preoccupation with the history of the formation and transmission of the text as a nefarious work wherein the guild "dissects Scripture to set it against Scripture".(p.74) Exegetes often deploy their "expertise" just as the Bible describes the tempter in both the Garden of Eden and the temptation of Jesus in the wilderness—undermining its status as God's word. In light of this it's no surprise that only three-quarters' way through *Judgment* Ellul left-handedly admits that the book of Jonah was "rightly composed to affirm the universalism of salvation" (p.77), when exegetes customarily insist that the sole purpose of the book of Jonah was to protest the shrivelling of post-exilic Israel's concern, even to protest the apparent narrowness, exclusiveness and concern for self-preservation found in the books of Ezra and Nehemiah.

If what is crucial to most is peripheral to Ellul, then what is the epicentre of the book of Jonah? It is certainly not a compendium of moral truths, let alone a test of credulity (which test Christian apologetics paradoxically attempts to eliminate by finding rational explanations for the miracle of the great fish). Neither is the book an extended allegory; nor even an instance of the prophetic literature found in Scripture since the book shares few of the concerns of the prophetic books (e.g., no prophetic address is spoken to Israel) while features of the book aren't found in prophetic literature (e.g., the books named after Jeremiah and Amos don't feature biographical portrayals). The core of the book lies, rather, in its depiction of Jonah himself as a figure, a type, of Christ. Having argued for this position, Ellul brooks no disagreement: "If one rejects this sense, there is no other." (p.17)

As *Judgment* unfolds it reflects the major themes of Ellul's social and theological thought as well as aspects of his own spiritual development. With respect to the latter, Ellul's understanding of Jonah's vocation mirrors his own self-effacing, autobiographical statements in *In Season, Out of Season* and *What I Believe*: "Everything begins the moment God decides to choose... We can begin to apprehend only when a relation is set up between God and us, when he reveals his decision concerning us" (p21).

As for characteristic aspects of Ellul's thinking, *Judgment* re-states and develops them on every page. For instance, those whom God summons are freed from the world's clutches and conformities in order to be free to address and spend themselves for a world that no longer "hooks" them even as the same world deems them "useless" to it. In this regard Ellul writes of Jonah, "The matter is so important that everything which previously shaped the life of this man humanly and sociologically fades from the scene..Anything that might impel him to obey according to the world has lost its value and weight for him" (p..21). In other words, any Christian's commission at the hand of their crucified Lord is necessary *and sufficient* explanation for taking up one's work and witness.

While vocation is sufficient explanation for taking up their appointed work, Christians cannot pretend their summons may be ignored or laid aside, for in their particular vocations *all* Christians have been appointed to "watch" in the sense of Ezekiel 33. Disregarding one's vocation is dereliction, and all the more damnable in that the destiny of the world hangs on any one Christian's honouring her summons: "Christians have to realize that they hold in their hands the fate of their companions in adventure" (p.35).

Readers of Ellul have long been startled at, persuaded of, and helped by his exploration of the "abyss," the virulent, insatiable power of evil to beguile, seduce, and always and everywhere destroy. (See *Money and Power* and *Propaganda*). Ellul's depiction of evil in terms of death-as-power — rather than in terms of "a kind of lottery...turning up as heart failure" (p.51) — finds kindred understanding and exposition in the work of William Stringfellow and Daniel Berrigan.) The "great fish" *sent* to swallow Jonah (God uses evil insofar as he is determined to punish) is a manifestation of such power.

While in the "belly of the great fish" Jonah is subject to God's judgment upon his abdication as he is confronted defencelessly with the undisguised horror of the abyss.

Awakened now to his culpable folly, Jonah understands that even as he is exposed to “absolute hell”(p.45) he hasn’t been abandoned to it. At no point has he ceased being the beneficiary of God’s grace. *Now* Jonah exclaims, “Thou hast delivered me” — i.e., *before* the “great fish” has vomited him to safety. Deliverance for all of us, Ellul herein announces characteristically, occurs when we grasp God’s presence and purpose for us (and through us for others) in the midst of the isolation that our vocation, compounded by our equivocating, has brought upon us. Percipiently [new word?] Ellul adds, “[T]he abyss is the crisis of life at any moment.”(p.52)

Typically Ellul points out ersatz means of resolving the crisis: we look to “technical instruments, the state, society, money, and science. idols, magic, philosophy, spiritualism..As long as there is a glimmer of confidence in these means man prefers to stake his life on them rather than handing it over to God.”(p.57) While these instruments can give us much, they can’t give us the one thing we need in the face of the all-consuming abyss: mercy. No relation of love exists between these instruments and us; they merely possess us. The person who “loves” money, for instance, is merely owned. The crisis is resolved incipiently when we “beg in any empty world for the mercy which cannot come to [us] from the world.”(p.58) The crisis is resolved definitively as we hear and heed the summons to discipleship and thereafter obey the one who can legitimately (and beneficently) claim us inasmuch as he has betaken himself to the abyss with us.

Here Ellul’s Christological reading of the book of Jonah surfaces unambiguously: “The real question is not that of the fish which swallowed Jonah; it is that of the hell where I am going and already am. The real question is not that of the strange obedience of the fish to God’s command; it is that of the resurrection of Jesus Christ and my resurrection.”(p.63)

Just because the book of Jonah is a prolepsis of Jesus Christ, the book is full of hope. To be sure, signs of grace come and go in all of us — even as grace never disappears. (Recall the gourd given to provide shade for Jonah, even as the gourd soon withered.) While God’s people frequently and foolishly clutch at the sign instead of trusting the grace therein signified, the day has been appointed when the sign is superfluous as faith gives way to sight and hope to its fulfilment. At this point the “miracles” that were signs of grace for us will be gathered up in “the sole miracle, Jesus Christ living eternally for us”.(p.67)

The note of hope eschatologically permeating the book of Jonah (and Ellul’s exposition of it) recalls the conclusion to *The Meaning of the City*. There Ellul invites the reader to share his vivid “experience” of finding himself amidst a wretched urban slum in France yet “seeing” *the* city, the New Jerusalem. While Ellul’s “exegesis” of the book of Jonah will be regarded as idiosyncratic in several places, its strength is its consistent orientation to the One who remains the “open secret” of the world and of that community bound to the world. For decades Ellul’s own life illustrated a statement he made in *Judgment* concerning the prophet Jonah: “Everything circles around the man who has been chosen. A tempest is unleashed”(p.25). Ellul’s writings indicate *passim*

that as much characterizes all who discern their vocation and pledge themselves to it without qualification, reservation or hesitation.

## In Review: Tresmontant, Vahanian, Mailot, & Chouraqui

Claude Tresmontant, *The Hebrew Christ: Language in the Age of the Gospels* (Chicago: Franciscan Herald Press, 1989); Trans. By Kenneth D. Whitehead from *Le Christ Hebreu: La*

*Langue et l'Age de Evangiles* (Paris: O.E.I.L., 1983).

Reviewed by John L. Gwin

John Gwin lives in Beloit, Wisconsin, where he does some building security and maintenance work while pursuing his interests in language and culture.

By the fall of 1990 I had read and admired Jacques Ellul for perhaps 20 years and had occasionally corresponded, asking questions about his works and related topics. He graciously responded, often taking the time to answer my questions. With the buildup for the Gulf War nearing completion, and concerned that it might lead to a world war, I decided to take a week off work, and bought a cheap, night flight, round trip ticket to Paris.

An interesting side note to this, which reflects poorly on me, but favorably on JE, is that after I bought my ticket, I wrote to him of my plans and asked if I might visit him. He responded by return mail, "No, do not come. My wife is ill, I am busy with preparation for a conference that weekend, and with the hierarchy of the protestant denomination that has closed our little congregation. Can you please rearrange your visit for another date." My ticket, being non refundable, I quickly wrote him back asking if I might attend the conference, but for the whole month preceding my scheduled departure. I heard nothing. I chose to take the flight anyway, and arrived at about 8AM on a Thursday in Paris. I made my way to the little Librairie Protestante which was going out of business, and they so kindly, without charge, made several long distance calls. One was to Prof. Ellul to arrange for me to attend the conference on "Man and the Sacred" at the Andre Malraux Center in Bordeaux. The second call was to Dr. Brenot, chairman of the conference. "We have around 1000 signed up for the 800 openings. What's one more?" was his generous verdict.

At the conference I met a number of very kind and gracious people. At the book table on Sunday, the last day of the conference, Prof. Ellul invited me to meet with him the following day. During our 2-hour visit at his home, professor Ellul spoke with me at length. He introduced me to his wife, who had recently had a stroke. He also gave me copies in French of two books of his, *L'impossible priere*, *La genese aujourd'hui*, and a copy of his friend Bernard Charbonneau's book, *Je fus, essai sur la liberte*, for which he had arranged the printing. Professor Ellul also recommended that I get a copy of

a new book by Claude Tresmontant, entitled *Le Christ hebreu*. While in Bordeaux, I picked one up at the Librairie Mollat. I worked through it in the next few months, and located by library loan a copy of Tresmontant's retroversion and notes of *L'Evangile de Jean*. I was delighted by what I found.

Contrary to that which is taught in Sunday School, and in New Testament classes in college and seminary, Tresmontant presents an alternative hypothesis as to the origins of the gospels that makes such perfect sense that I wonder why I had never heard it before.

We know that those who first heard Jesus of Nazareth included at least a few scribes, and Pharisees. Why have we assumed that no one took notes? According to the teachings of the late 19<sup>th</sup> and early 20<sup>th</sup> century form critical school in Germany, a long oral tradition of 40 or 50 years preceded the step of setting pen to papyrus or parchment to record the memorable words of this most unusual rabbi. Does it not tax the imagination to think of the People of the Book waiting years before actually writing something down! The prevalence of anti-Semitism in Europe of that time provides a perhaps, more or less, unconscious motive for impugning the accuracy of the writing of the gospels and epistles, and the belief in a long oral tradition removing the written record farther from its Source could serve this end.

Tresmontant presents evidence for the hypothesis that the gospels were written first, and early, in Hebrew and almost simultaneously, and literally, into Greek. This was done, not esthetically to please the Greek ear, but literally, to accurately convey the original meaning to the Diaspora readers no longer fluent in Hebrew.

Jean Psichari, Professor of Greek in the Ecole des Langues Orientales Vivantes, himself of Greek origin, described the literal Greek rendering of the Septuagint as very different from the normal Greek of that time. In his *Essai sur le Grec de la Septuagint* he writes, "It is not just the syntax, it is not only the word order that follows Hebrew use. The style itself is perpetually contaminated. It is not Greek."

Tresmontant has proposed that the translators of the Gospels into Greek of the First Century AD used essentially the same Hebrew/Greek lexicon used by the translators of the Hebrew Scriptures into the Greek of the Septuagint. He proposes that the Gospels were derived from notes of Jesus' talks taken during or shortly after they were spoken, and later assembled into collections by various members of His audience, and almost immediately translated into Greek for the Diaspora.

Tresmontant, in four separate volumes translates in reverse the Greek of each of the gospels into Hebrew using the corresponding Hebrew words from which the Greek of the Septuagint was translated and then into French using the insights and meanings gleaned in the process. The wealth of meaning restored to, and depth of insight into long familiar as well as difficult passages; the great amount of information restored to the sacred text, and even the accuracy of words used to translate are all part of what is gained in this process

Tresmontant compares the effect of this uncovering of the Hebrew meaning to uncovering a work of art. "If you put the Venus de Milo beneath a covering, it is difficult

to see her form. Passing from the modern (French or English) translations to the originals, that is of the Greek Gospels is a first uncovering. When one uncovers the Hebrew that one finds beneath the Greek translation, one has made a second discovery. The equivalent of the living woman who sat as model for the Venus de Milo" (*Le Christ hebreu*, p. 36).

Several years ago, I found that *Le Christ Hebreu* had been published in English in 1989, the year before I visited Prof. Ellul, as *The Hebrew Christ* (trans. Kenneth D. Whitehead; Chicago: Franciscan Herald Press).

Tresmontant has done a remarkable work of service both to the world of biblical scholarship and to all those interested in the content of the gospels and related writings. His *Evangile de Matthieu: Traduction et Notes*, is also available in English as *The Gospel of Matthew, Translation and Notes* (Front Royal, VA: Christendom Press, 1986). A volume containing his French versions of all four gospels was published by F.X. De Guibert/ O.E.I.L. but is now out of print,

In at least two of Tresmontant's other major works, *Essai sur la pensee hebraique*, and *L 'histoire de l'universe et le sens de la creation*, he compares and contrasts Greek and Hebrew philosophy, and posits that the predominant and continuing dualism of Western (Greek) thought includes a total misunderstanding of the Hebrew ideas of creation, incarnation, freedom, etc. The former philosophy, fostering an ongoing devaluation of the physical world seen as illusory, evil, "descended" from and a shadow of the "Ideal" and resulting in a more or less low-level depression, frustration, and lack of hope for anything new and "creative" in the future. The latter, Hebrew revelation, with its understanding of all things as "created" and declared to be "good" by a transcendent Creator, gives life an ongoing "real" meaning and content and hope of a future completely new and unexpected.

In *The Hebrew Christ*, Tresmontant mentions several other authors, including John A. T. Robinson, whose *Redating the New Testament* is "absolutely decisive" in its argument for the earlier dating of the New Testament texts, and Fr. Jean Carmignac, whose *Naissance des evangiles* (Paris: O.E.I.L., 1984; ET: *Birth of the Synoptics*, Franciscan Herald Press, 1987) presents arguments also supporting the Hebrew origins of the NT.

While translating the Dead Sea Scrolls, Jean Carmignac frequently noticed connections with the New Testament. Upon completion of the translation he had so many notes of correlations that he thought of making a commentary on the NT in light of the Dead Sea documents. Beginning with the Gospel of Mark, and in order to more easily compare the Greek Gospels to the Qumran Hebrew, he began on his own to retranslate Mark into Qumran Hebrew. He became convinced of Mark's derivation from a Hebrew original. Not knowing Hebrew well enough to be incapable of making errors, and so that competent scholars would not dismiss his effort, he had to assure himself that no errors of Hebrew usage got by him. To do this he decided to compare his work of retroversion with many other translations of the NT into Hebrew, beginning with Delitsch's of 1877. Carmignac also began editing and publishing a multi-volume series

of Hebrew translations of the New Testament. He died in October of 1987 hoping that this work would be taken up by others.

All this seems to be an example of certain Catholic theologians paying close attention to the Scriptures in ways that perhaps many Protestant theologians, taking these Scriptures for granted, had not considered. This is reminiscent of the favorable reception by many Roman Catholic theologians of the work of Karl Barth, especially his enormous *Church Dogmatics*. And in a similar vein, I am grateful for Karl Barth's reminder in his *Protestant Theology in the Nineteenth Century*, that no age is ever "dead." "There is no past in the Church, so there is no past in theology. 'In him they all live. '... The theology of any period must be strong and free enough to give a calm, attentive and open hearing not only to the voices of the Church Fathers, not only to favorite voices, not only to the voices of the classical past, but to all the voices of the past. God is the Lord of the Church. He is also the Lord of theology. We cannot anticipate which of your fellow-workers from the past are welcome in our own work and which are not. It may always be that we have especial need of quite unsuspected (and among these, of quite unwelcome) voices in one sense or another."

## **Gabriel Vahanian, *Anonymous God***

(Aurora, Colorado: The Davies Group, 2001)

Reviewed by Darrell J. Fasching

Professor of Religious Studies, University of South Florida, Tampa; founding editor of *The Ellul Forum*.

From his earliest best seller at the beginning of the 1960s, *The Death of God*, through *God and Utopia* (1977) to his most recent *Anonymous God* (2001), to name three of his many books over the last forty years, Gabriel Vahanian's message has become consistently clearer, more forceful and more poetic. In the first we learned of our "cultural incapacity for God" in a scientific and technological civilization. In the second we learned that biblical faith is capable of migrating from one cultural world to another in its journey toward a new heaven and a new earth. This journey of faith can carry

us beyond the death of God through its utopian capacity to transform human self-understanding, whether that understanding is in terms of nature (ancient & medieval), history (modern) or technology (postmodern).

Now in *Anonymous God* (translated by Noelle Vahanian), Gabriel Vahanian teaches us how to be poets, speaking a new language of faith, a technological utopianism. *Anonymous God* is both a translation and revision of his 1989 book *Dieu anonyme, ou la peur des mots* (Desclee de Brouwer, Paris 1989). It is a fearless poetic exploration of the utopianism of our humanity in trinitarian terms, unfolding in four densely packed stanzas (or chapters) over one hundred and fifty-five pages. Chapter One explores the iconoclasm of language in relation to technology and the utopianism of faith. Chapters Two, Three and Four show how this iconoclasm of the word—in which we live, move and have our becoming—is one yet three as we move from “Language and Utopia: God” to “Salvation and Utopia: The Christ” to “Utopianism of the Body and the Social Order: the Spirit.”

“The Bible,” says Vahanian, “is not a book to be read but to read through” like a pair of glasses (xv). The task is not to accommodate our selves to some foreign and long gone cosmology that asks us to choose the past over the future but to see in our present world in a new way, in an iconoclastic way that will allow us to invent our humanity anew. Whether we are speaking of the ancient, medieval, modern or post-modern worlds—the world is always in danger of becoming our fate—a prison from which we can escape only by changing worlds. The task today is to do for our technological civilization what those of the first century’s eschatologically oriented biblical communities did for theirs, open one’s world to an “other” world, a new world rather than “another” world. In any age, we can only be human, Vahanian seems to say, when we have the imagination, courage, ingenuity and grace to invent ourselves anew and so end up changing the world to facilitate our humanity rather than giving up and seeking to change worlds. This biblical eschatological task is the utopian heritage of the West—“eschatology prevails over cosmogony, even over cosmology. And, in short, utopia prevails over the sacred” (xviii).

As human beings, our capacity for technology is given with out capacity for language, which is to say, for God. Faith has no language of its own (27) and so in every age must iconoclastically appropriate what is available, whether it be the medieval language of metaphysics, the modern language of history or the postmodern language of technique. The advent of technological civilization, Vahanian seems to say, in important ways makes this task easier rather than more difficult. For far from being totally alien to the eschatic orientation of Christian faith, technological civilization has a greater affinity with it than either the medieval language of metaphysics or the modern language of history, for technology like eschatology shares the utopian orientation toward making all things new. And utopia is not some impossible ideal but the iconoclastic possibility of realizing the impossible, of reinventing one’s humanity in any world, especially a technological one.

This utopianism is predicated on an understanding that always and everywhere –in the beginning is the word and the word is God. God is given with our capacity for language. God is the God who speaks. We do not claim language, language claims us. “We do not speak for God but are spoken for” (2). Metaphor is not one type of language, language is metaphor — using and yet contesting established meanings to invent the new, and so give birth to a language without precedent. Such language unleashes the utopian possibilities of the human that body forth into culture, making all things new.

Prophecy, *poesis* and *techne* are but three faces of the same capacity, the capacity to invent our humanity and in the process reinvent the world as a new creation — the word made flesh. Being “spoken for,” Vahanian tells us, we must “speak up.” We must speak up prophetically to change the world, and yet must do this poetically. The poet, as the ancient Greek language testifies, is a wordsmith, someone who has the *techne* (technique or skill) “to make or do.” Our humanity comes to expression in and through the word, and is not so much natural or historical, or even technological, as it is utopian –a new beginning that encourages us not to change worlds but to change the world.

This “good news” is not news reserved for some sacred saving remnant but rather given once for all. It is good news for the whole human race. All language, says Vahanian, presupposes otherness. The appeal to any god who excludes others is an appeal to an idol. Whenever and wherever language is iconoclastic, there is no other God than the God of others. Indeed, being “in Christ” is just having this God in common so that Christ “is the designation of our common denominator instead of only the Christian’s mere Jesus” (91).

For Vahanian, the God of the biblical tradition is a God who can neither be named or imaged and so remains always “anonymous” — the God of others and the God for others. And so for him, “Christ is much less a believer’s Christ than he is a Christ for the unbeliever” (82), for every person whose flesh is claimed by the iconoclasm of the word that makes the invention of our humanity ever and again possible as the “worlding” of the word — the Word made flesh in the structures of our world (87). When the word is made flesh the kingdom of God draws near and God reigns, all in all.

For Vahanian eschatology prevails not only over cosmogony, cosmology and the sacred but also over soteriology. Far from being a religion of salvation, he argues, Christian faith liberates us from obsession with salvation, to embrace our new humanity and new creation, here and now. Christ cannot be reduced to Jesus any more than Jesus can be identified with God. For Vahanian, Jesus is no half-god-half-man but rather, as the Council of Chalcedon insisted, without confusion or mixture Christ is where the radical alterity of God and humanity meet, giving both the words “God” and “human” their authentic meaning (97). “God is the measure of humanity even as our humanity is the measure of God” (96).

When the church assumes its iconoclastic and utopian vocation as body of Christ it becomes the “the laboratory for the kingdom of God,” desacralizing both the world

and religion. As such its liturgy or “public work” invites both believer and unbeliever to bring to this new world their talents. The public work of the church is to create jobs that hallow and therefore desacralize the social order, and so further social justice by making the invention of our humanity once more possible. Even as the church once created monasteries, hospitals and universities that transformed the human landscape, so today, far from being asked to reject or escape our technological civilization, the church, is called to embrace those “skills and crafts through which the human being is being human” (134) and so demonstrate that even (or especially) in a technological civilization our humanity can be reinvented. The biological process of evolutionary hominization, says Vahanian should not be confused with the utopian project of humanization. Indeed, only by continual reinvention, he suggests, can we really be human.

This is not a book for the theologically timid who only want to think “orthodox” thoughts and so betray the tradition by repeating it instead of continuing it. To repeat the tradition is to bring it to an end and make it seem as if our only option is to “change worlds.” But Abrahamic faith is, after all, a setting out on a journey without knowing where we are going (Hebrews 11: 8). Vahanian’s iconoclasm overturns everything in such a way as to make possible the tradition’s continuance and in the process encourages us to change the world instead of abandoning it.

The theologically adventurous will find this a book rich with insight. From this perspective, I have only one quibble with Vahanian’s poetic adventure — he is more convincing in what he affirms than in what he sometimes denies. His occasional comparative reflections are not nearly as nuanced as those aimed at Christianity. He tells us, for instance, that “the Western tradition is beckoned by the utopian paradigm of religion, in its Greek as well as in its Hebrew (Judeo-Christian) version. While for Eastern religions the spiritual life aims at exchanging worlds, the West, for its part, came and still comes under the preview of a diametrically opposed approach which aims at changing the world” (xvii-xviii).

Later in his argument he makes this observation specifically with reference to Buddhism. Such large contrasts ignore the profound shift from an “otherworldly” to a “this worldly” orientation that came fairly early with the shift from Theravada to Mahayana Buddhism and is also typical of Neo-Confucianism in China. To make his claim work, even for Western religion, Vahanian has had to elevate the eschatological strand and reject the soteriological within Christianity, but he does not seem to see similar strategies at work in other traditions. For example, I think one could argue that Thich Nhat Hanh’s “socially engaged Buddhism” does in its own way for Buddhism what Vahanian does for Christianity.

*Anonymous God* is an extraordinary poetic work of metaphorical transformation. The words are all familiar and yet what is said is quite unfamiliar, new and unprecedented. In a typical book, one might expect the author to offer one, two or possibly three new insights per chapter. In this book one finds one, two or three per paragraph. The poetic density therefore is at times overwhelming. One feels the need to stop fre-

quently and come up for air, lest one get dizzy from an overload of insight. It is a book that is best read slowly and then revisited if you wish to avoid the vertigo that comes with having everything that seems so familiar rendered unfamiliar too suddenly. The final outcome of that patience — -startlingly illumination of the new world that surrounds us —makes it all worth while.

## **Advert: International Jacques Ellul Society**

**www.ellul.org**

P.O. Box 5365, Berkeley CA 94705, USA IJES@ellul.org Tel/Fax: 510-653-3334

The IJES (with its francophone sister-society, L'Association Internationale Jacques Ellul) links together scholars and friends of various specializations, vocations, backgrounds, and nations, who share a common interest in the legacy of Jacques Ellul (1912–94), long time professor at the University of Bordeaux. Our objectives are (1) to preserve and disseminate his literary and intellectual heritage, (2) to extend his social critique, especially concerning technology, and (3) to extend his theological and ethical research with its special emphases on hope and freedom.

### **Board of Directors**

Patrick Chastenet, University of Poitiers; Clifford Christians, University of Illinois; Dell DeChant, University of South Florida; Andrew Goddard, Oxford University; Darrell Fasching (Vice-President), University of South Florida; David Gill (President), Berkeley; Joyce Hanks, University of Scranton; Ken Morris (Secretary-Treasurer), Boulder; Carl Mitcham, Colorado School of Mines; Langdon Winner, Rensselaer Polytechnic Institute

Anyone who supports the objectives of the IJES is invited to join the society for an annual dues payment of US\$20.00. Membership includes a subscription to the Ellul Forum.

## **Andre Chouraqui, Les Dix Commandments Aujourd'hui: Dix Paroles pour reconcilier I'Homme avec I'humain (Paris: Robert Laffont, 2000).**

Alphonse Maillot, *Le Decalogue: Une Morale pour notre temps* (Paris: Librairie Protestante and Geneve: Labor et Fides, 1985).

Reviewed by David W. Gill

President, International Jacques Ellul Society

In my recent book *Doing Right: Practicing Ethical Principles* (InterVarsity Press, 2005), the two authors with the most citations in my author index were Alphonse Maillot (37 citations) and Andre Chouraqui (34 citations). *Doing Right*, part two of

my introduction to Christian ethics, is structured around the Decalogue, seen through the lenses of the double Love Commandment and the biblical calls to justice and freedom. I see the Ten Commandments as the ten basic ways to love either God or a neighbor (“made in God’s image and likeness, therefore...”), the ten basic principles of justice, and the ten fundamental guidelines in a life of freedom.

During my 1984–85 sabbatical in Bordeaux I actually started working on this project (sidetracked a lot by other projects for fifteen years but picked up again with passion and attention during a study leave in Bordeaux the first half of 2000—there’s something about Bordeaux and ethical research, I have to conclude!). I shared some of my early chapter drafts with Jacques Ellul during our Friday afternoon meetings at his home that year. I specifically remember him urging me to start acquiring and studying the writings of Alphonse Maillot. In subsequent years, Ellul also mentioned Andre Chouraqui to me. These authors became two of the three most important modern sources for my understanding of the ethics of the Decalogue (the other was Czech theologian Jan Milic Lochman).

Alphonse Maillot (1920–2003) was a pastor and theologian in the Reformed Church of France. He published several biblical commentaries, including three volumes on the Psalms, a major study of Romans, and a brilliant little work on the Beatitudes.

*Le Decalogue: Une morale pour notre temps* begins with Maillot rejecting the simplistic and false association of the Decalogue with a legalistic attitude. “We forget that legalism was not created by the Decalogue but by the listener ... Above all we forget the liberating character of the Decalogue: promise, future, and joy. The Torah (I reject the term ‘Law’) is not only holy and just, it is *good*. Good for us. It is this liberating goodness of the Decalogue, expressed in particular by the first commandment, that I don’t find very often among the commentators” (pp. 7–8; my translation).

Among Maillot’s emphases as he works his way through the Decalogue: this is guidance addressed to laity, not just clergy; there is no separation between the religious or worship side of life and one’s affairs out in the world—and Maillot warns against a too-strict division of two table in the Decalogue, something that has always seemed misguided to me as well; despite an initial impression of negativity (“Thou shalt not”), the Decalogue opens up a hundred positives for every negative; while the Decalogue is given to the Covenant people liberated from Egyptian slavery, and it must never be imposed on those around us, the message is for “all who have ears to hear”; the first command (“no other gods before me”), is the critical foundation—the next nine spell out the implications of have Yahweh as God.

In discussing the command against idols and images Maillot shows how far-reaching are its implications—rejecting our theological and philosophical images of God as much as our physical ones, and warning against viewing people through images and stereotypes. It is a question of life and vitality being replaced by narrow, lifeless substitutes, for God or for others.

In every discussion, Maillot shows his grasp of the historical and linguistic issues but then he takes his readers to the heart, the essential message, of each commandment,

both in its negative and positive reach. His discussions and applications are brilliantly insightful and even exhilarating. I never got to meet Maillot in person but I did have the pleasure of reaching him by telephone at the retirement home where he spent the last years of his life, and thanking him for his extraordinary gifts to his readers.

In February of 2000, taking a short break from my work in Bordeaux, on a visit to Sarlat, east of Bordeaux, I was surprised to see in the window of a little book store the title *Les Dix Commandements Aujourd'hui*. This is not a popular theme of retail books in France (or the USA!). I was further surprised and pleased to see that it was written by Andre Chouraqui, whose name I knew thanks to Ellul.

Chouraqui (born 1917 in Algeria) studied law and rabbinical studies in Paris and worked with the French Resistance during WWII. He settled in Jerusalem in 1958 and served as an advisor to David Ben-Gurion (1959–63) and later in the 60s as elected Deputy Mayor of Jerusalem under Teddy Kollek. Chouraqui is the only person to have published original translations of the Hebrew Bible, New Testament, and Koran. He is the author of many other books.

*Les Dix Commandements* is a remarkable study by any measure. Chouraqui was friends with Rene Cassin, the primary editor of the UN Declaration of Universal Human Rights and dedicated this book to him. Chouraqui says that we need a declaration of universal human *duties* to go along with the *rights*—and the Ten Commands serve that purpose. Chouraqui reviews how each of the ten has been interpreted and applied in Judaism, Christianity, and Islam—and how each could help us today. The Decalogue should be a helpful foundation for common understanding and reconciliation. This is a brilliant and wise contribution.

## News & Notes

— JEAN-FRANCOIS MEDARD

Professor Jean-Francois Medard died on September 23, 2005, at the age of 71. Medard was a student of Jacques Ellul and later a colleague at the Institute for Political Studies at the University of Bordeaux. He was an expert in sub-Saharan African history, politics, and culture, as any bibliographic or web search will quickly show. He was the founding president of the local “association Jacques Ellul” and, more recently an active member of the Association Internationale Jacques Ellul. The conversation and debate were animated and the welcome warm for legions of visitors to the home of Jean-Francois and his wife Burney over the years. Our sincere condolences go to Burney and the family.

— JACQUES ELLUL, PENSEUR SANS FRONTIERES

A collection of articles from the fall 2004 colloquium at Poitiers on Jacques Ellul’s thought and its continuing importance, ten years after his death is now available for purchase from Editions l’Esprit du Temps, BP 107, 33491 Le Bouscat Cedex, France. Send 21 euros plus 5 euros for shipping and handling.

Edited by Patrick Chastenet, the collection includes “Jacques Ellul’s Ethics: Legacy and Promise” by David W. Gill, “Some Problems in Ellul’s Treatment of Propaganda” by Randall Marlin, “Peut-on lire sans trahir” by Didier Nordon, “La Technique et la chair” by Daniel Cerezuelle, “Jacques Ellul et la décroissance” by Alain Gras, “L’Idee de revolution dans l’oeuvre de Jacques Ellul” by Liberte Crozon, “Le Droit technicien” by Claude Ducouloux-Favard, “Critique de la Politique dans l’oeuvre de Jacques Ellul” by Patrick Chastenet, “L’historicite de l’ere technologique: convergences et differences entre Ellul et Illich” by Jean Robert, “La Pensee juridique de Jacques Ellul” by Sylvain Dujancourt, and other essays. This is an essential volume for students of Ellul’s thought.

— WIPF & STOCK TO PUBLISH ELLUL SERIES

Wipf & Stock Publishers (199 W. 8<sup>th</sup> Avenue, Suite 3, Eugene OR 97401, USA) has recently published the first two volume of their project “Ellul Library” series. Patrick Chastenet’s interviews of Ellul are now available as *Jacques Ellul on Politics, Technology, and Christianity* (Wipf & Stock, 2005) after being expensive, unavailable, or very difficult to find for several years. Marva Dawn’s translation and edited introduction to *Sources and Trajectories: Eight Early Articles by Jacques Ellul That Set the Stage* has also been reprinted by Wipf & Stock (previously published by Eerdmans).

The IJES is working with our friends at Wipf & Stock to return as many Ellul books into print as possible. Stay tuned for further announcements.

— DOES YOUR LIBRARY SUBSCRIBE TO THE ELLUL FORUM?

Does your library subscribe to The Ellul Forum? Princeton Seminary, the University of South Florida, and Wheaton College all have ongoing subscriptions (among others). But what about Penn State? Cal Berkeley? Notre Dame? Illinois? Scranton? Ohio State? Fuller Seminary? What about your school library? Your alma mater?

Many schools have a standard form for faculty members to submit a request that the library subscribe to a publication. Another strategy would be to donate a subscription for two or three years to help them get the habit.

**Hommage a Jacques Ellul**

Dominique Ellul, with the help of Jean-Charles Bertholet, has now published a beautiful little 100 page volume entitled *Hommage a Jacques Ellul*. The occasion was a conference in May 2004, ten years after Ellul’s death. Included are reflections on Ellul’s importance by Michel Leplay, Michel Bertrand, Sebastien Morillon, and Jean Coulardeau. Yves Ellul provides some introduction to Ellul’s long—and long-awaited—ethics of holiness, on which manuscript Yves has been working for several years. Brief testimonials are included from Jean-Francois Medard, Alphonse Maillot, Andre Chouraqui, Elizabeth Viort and others. For more information contact:

*diffusion.ellul@wanadoo.fr.*

## Resources for Ellul Studies

[www.ellul.org](http://www.ellul.org) & [www.jacques-ellul.org](http://www.jacques-ellul.org)

Two indispensable web sites

The IJES/AIJE web site at [www.ellul.org](http://www.ellul.org) contains (1) news about IJES and AIJE activities and plans, (2) a brief and accurate biography of Jacques Ellul, (3) a complete bibliography of Ellul's books in French and English, (4) a complete index of the contents of all 36 issues of *The Ellul Forum*, and (5) links and information on other resources for students of Jacques Ellul. The new AIJE web site at [www.jacques-ellul.org](http://www.jacques-ellul.org) offers a French language supplement.

### **The Ellul Forum CD: 1988–2002**

The first thirty issues of *The Ellul Forum*, some 500 published pages total, are now available (only) on a single compact disc which can be purchased for US \$15 (postage included). Send payment with your order to "IJES," P.O. Box 5365, Berkeley CA 94705 USA.

Back issues #31 — #35 of *The Ellul Forum* are available for \$5 each (postage and shipping included).

### **Cahiers Jacques Ellul**

*Pour Une Critique de la Societe Technicienne*

The annual journal, *Cahiers Jacques Ellul*, is edited by Patrick Chastenet and now published by Editions L'Esprit du Temps, distributed by Presses Universitaires de France; write to Editions L'Esprit du Temps, BP 107, 33491 Le Bouscat Cedex, France. The theme of Volume 1 was "L'Annees personnalistes" (cost 15 euros); Volume 2 was on "La Technique" (15 euros); the current Volume 3 focuses on "L'Economie" (21 euros). Next year's volume 4 will focus on "La Propagande" (21 euros). Shipping costs 5 euros for the first volume ordered; add 2 euros for each additional volume ordered.

**Jacques Ellul: An Annotated Bibliography of Primary Works** by Joyce Main Hanks. Research in Philosophy and Technology. Supplement 5. Stamford, CT: JAI Press, 2000. xiii., 206 pages. \$87. ISBN: 076230619X.

This is the essential guide for anyone doing research in Jacques Ellul's writings. An excellent brief biography is followed by a 140-page annotated bibliography of Ellul's fifty books and thousand-plus articles and a thirty-page subject index. Hank's work is comprehensive, accurate, and invariably helpful. This may be one of the more expensive books you buy for your library; it will surely be one of the most valuable. Visit [www.elsevier.com](http://www.elsevier.com) for ordering information.

### **Alibris—used books in English**

The Alibris web site ([www.alibris.com](http://www.alibris.com)) lists thirty titles of used and out-of-print Jacques Ellul books in English translation available to order at reasonable prices.

### **Librairie Mollat—new books in French**

Librairie Mollat in the center of old Bordeaux ([www.mollat.com](http://www.mollat.com)) is an excellent resource for French language books, including those by and about Ellul. Mollat accepts credit cards over the web and will mail books anywhere in the world.

**Used books in French:  
two web resources**

Two web sites that will be of help in finding used books in French by Jacques Ellul (and others) are [www.chapitre.com](http://www.chapitre.com) and [www.livre-rare-book.com](http://www.livre-rare-book.com).

**Reprints of Nine Ellul Books**

By arrangement with Ingram and Spring Arbor, individual reprint copies of several Ellul books originally published by William B. Eerdmans can now be purchased. The books and prices listed at the Eerdmans web site are as follows: *The Ethics of Freedom* (\$40), *The Humiliation of the Word* (\$26), *The Judgment of Jonah* (\$13), *The Meaning of the City* (\$20), *The Politics of God and the Politics of Man* (\$19), *Reason for Being: A Meditation on Ecclesiastes* (\$28), *The Subversion of Christianity* (\$20), and *The Technological Bluff* (\$35). *Sources and Trajectories: Eight Early Articles by Jacques Ellul* translated by Marva Dawn is also available (price unknown).

Have your bookstore (or on-line book dealer) “back order” the titles you want. Do not go as an individual customer to Eerdmans or Ingram/Spring Arbor. For more information visit “Books on Demand” at [www.eerdmans.com](http://www.eerdmans.com).

**Ellul on Video**

French film maker Serge Steyer’s film “Jacques Ellul: L’homme entier” (52 minutes) is available for 25 euros at the web site [www.meromedia.com](http://www.meromedia.com). Ellul is himself interviewed as are several commentators on Ellul’s ideas.

Another hour-length film/video that is focused entirely on Ellul’s commentary on technique in our society, “The Treachery of Technology,” was produced by Dutch film maker Jan van Boekel for ReRun Produkties (mail to: Postbox 93021, 1090 BA Amsterdam).

If you try to purchase either of these excellent films, be sure to check on compatibility with your video system and on whether English subtitles are provided, if that is desired.

"Propaganda seems therefore to be, as is the case for most technical elements, a purely neutral instrument in itself, and one which therefore can be used for any kind of cause—a 'good cause' such as peace or the reconciliation of classes or Christianity, an 'evil cause' such as militarism, revolution, or atheism. In reality, nothing is further from the truth!

"No technical instrument is neutral; it carries its own logic within itself and... the most beautiful ideal, once it is carried by propaganda, is modified in its very essence and nature. "

-Jacques Ellul

"The Ethics of Propaganda" (1981)

### Information on The Editorial Board & More

The Ellul Forum

For the Critique of Technological Civilization

### **Founded 1988**

The Ellul Forum is published twice per year, in the Spring and Fall. Its purpose is to analyze and apply Jacques Ellul's thought to our technological civilization and carry forward both his sociological and theological analyses in new directions.

### **Editor**

Clifford G. Christians, Univ. of Illinois, Urbana Associate Editor

David W. Gill, Berkeley, California

### **Contributing Editors**

## From the Editor

*Propaganda* was the first of Ellul's books I ever read, now more than three decades ago. It was required reading then for students of communications and it hasn't yet been surpassed. *Propaganda*, along with *The Technological Society*, and *Political Illusion*, has always been one of the critical foundations of his sociology of the modern world.

Ellul's programmatic little 1948 manifesto, *The Presence of the Kingdom*, already devoted a brilliant chapter to "The Problem of Communication" (which inspired IJES President David Gill's column on p. 23 below). Ellul followed his original publication of *Propagandes* (1962), with many other studies of communication, including an 83-page article on public relations, information, and propaganda in *L'Annee sociologique* (1963), *Histoire de la Propagande* (1967; Reviewed in this issue of the *Ellul Forum*), and *The Humiliation of the Word* (1981, ET 1985; also Reviewed in this issue). *Humiliation* is of particular interest in that it adds a theological counterpoint to the sociology of communication.

In 1981, Ellul wrote an essay on the "Ethics of Propaganda" for *Communication*, a small, theory-oriented journal that is no longer published. This essay circulated among communication scholars, but not much beyond. We are delighted to give it a wider circulation here as our lead article. It is not an easy read, partly because of the rather wooden literalism of the translation, and partly because of Ellul's long, complex sentences. But it is full of challenging, illuminating insights and observations and well worth our study.

Randal Marlin, whom we also welcome as a new member of our IJES Board, is an expert on propaganda and communication studies. He translated (and published as a pamphlet) Ellul's essay on *FLN Propaganda in France During the Algerian War* (Ontario, Canada: By Books, 1982), which Ellul had handed to him in person during his 1979–80 research year in Bordeaux. Prof. Marlin's re-view of Ellul's *Histoire de la Propagande* and his major paper on "Problems in Ellul's Treatment of Propaganda" are two major gifts to this issue of the *Forum*. Marlin's appreciative but critical back-and-forth with Ellul's ideas is exactly the sort of constructive conversation Ellul loved and the sort of thing the *Ellul Forum* is all about.

Also in this issue, Prof. Jay Black provides a superb introduction to the larger context of propaganda studies over the past century, and shows us where Ellul fits in this tradition. Russell Heddendorf re-views Ellul's *Humiliation*, and J. Wesley Baker and David Gunkel review important new books in communication and media studies in this issue.

Our next (Fall 2006) issue of the *Ellul Forum* has "politics" for its main theme. Our world could use some helpful insight on this topic and we know a great figure to get us started on our reflections. Issue 39 in Spring 2007 will focus on Ellul's ethics. Your contributions and ideas are always welcome.

This Spring, in addition to Randal Marlin, we are delighted to welcome Dr. Virginia Landgraf (ATLA, Chicago) and Prof. Mark Baker (Mennonite Seminary, Fresno) to our IJES Board of Directors.

## The Ethics of Propaganda

by Jacques Ellul

*This article first appeared in Communication, 6 (1981): 159175. Translated from the French by D. Raymond Tourville.*

At first glance, the question of ethics and propaganda, or of “the ethics of propaganda,” seems to be readily resolved: there is no morality in the propaganda game, and therefore it serves no purpose to render a moral judgment on propaganda. It belongs to one of those closed and impenetrable areas where ethics loses its rights. To declare that “to make propaganda” is wrong is irrelevant: the propagandist does not concern himself with such judgments and the propagandee lives with the fact that what his leader or his group says is not propaganda. Ethics in a moral or philosophical sense is strictly without power in this politicosocial activity, and a positive or negative judgment can in no way change this fact. Yet, one can quickly enough realize that this very fact raises a certain number of difficulties.

Propaganda does indeed obey a certain ethic, not taken in the moral sense, but rather as a rule of behavior. Moreover, it, itself, in short constitutes a morality for crowds, for peoples, for groups, for classes, for nations. Finally, and this is the most important fact, it appears more and more that what propaganda builds in man cannot be destroyed by the experience of facts, contrary to what has been normally believed or falsely proven. All this leads me to unveil the ethical criteria which I myself use to underscore the amorality of propaganda.

### Propaganda Is a Morality

Propaganda obviously obeys a certain number of working rules. I have studied it as a technique. But as is the case each time one is dealing with a technique affecting men, it can no longer be a question of purely abstract and mechanical rules as if one were dealing in techniques to change a physical or chemical environment. One has to take into account the specific reactions of its being on the one hand and of the human being on the other. In other words, even though for the propagandist or the publicist it is simply a question of applying seemingly rigorous and technical methods, this whole procedure must take on an ideologico-moral appearance, because man does not react in a neutral manner: he cannot admit to being or consider himself simply a manipulated object: in order for him to believe, to follow the desired path, he must receive a satisfaction which is moral in nature.

Thus, in itself, propaganda doesn't follow an ethic, but it is obliged to use one and to build one. As a system of intervention, it is purely practico-formal; as an integrated

part of social reality, it needs to have a content of a moral nature, which in no way means that it obeys its content. But it must carry it and have it assimilated. Nor can it be only an ideological content. It is not only a question of the person who is being swayed receiving ideas, an interpretation of the world: in addition, he must be convinced that he himself, his party, his class, his nation are right, that they represent Good and Justice. It is this conviction that is decisive and which effectively sways man into the field of propaganda.

We are, in this situation, in the presence of one of the conditions required for the efficacy of propaganda, and there is no recurrence of this “good” to propaganda itself. Consequently we must now eliminate a prior question: propaganda seems therefore to be, as is the case for most technical elements, a purely neutral instrument in itself, and one which therefore can be used for any kind of cause—a “good cause” such as peace or the reconciliation of classes or Christianity, an “evil cause” such as militarism, revolution, or atheism. In reality, nothing is further from the truth! No technical instrument is neutral; it carries its own logic within itself, and I have already shown in *Propaganda* that the most beautiful ideal, once it is carried by propaganda, is modified in its very essence and nature. In reality, a positive “ideal” has no meaning unless man personally accedes, conquers, and adheres to it through deep conviction and becomes himself a germ of this truth. Otherwise, he is nothing more than a robot, “beyond dignity and freedom,” which removes all positive value to this adherence, and by this very fact, to the ideal to which one adheres. For if one adheres to an ideal in such a manner, this means that one could accept any other content, and could uphold, with the same conviction, the opposite ideal.

If, therefore, we are sure that a cause is just, not by measuring it against an infinite ideal, or against some absolute reigning in an Empyrean, but rather in the exact measure in which its supporters themselves are just, and where their own justice renders the cause itself just (and not the reverse), then all propaganda action, which tends to make man act without even being aware of his actions and aware he has chosen, destroys in itself justice and good.

But we are obviously here at a crossroads: 1) Either we consider humanity as a simple means to a superior action, and it is therefore legitimate to manipulate it, to modify the human brain, to artificially produce behavior— but this means that one obeys some sort of in-human truth, which is in no way a guarantee that this truth is super-human (and if it is super-human we have but two choices: either it is unknown to us, and this is what was called the way of negative theology, or it has come down to our level of comprehension, and that is what biblical theology calls the Word (of God) and incarnation); 2) Or one considers that truth can only be human, but in this case, it implies that the particular truth in question cannot be transmitted by means of manipulation, nor by treating man as a pure object, but only by a voluntary adherence. In other words, one can in no way disassociate the means of propaganda from what it claims to carry. It is a particular example of the great debate over “the

ends justifies the means,” or “the means corrupt the end,” a debate accentuated by the fact that, here, the object upon which the means act is man.

I am certainly not going to take up the entire problem again here, but rather point out the conclusion I reached a long time ago (in *Presence of the Kingdom*): that is to say, that the end never justifies the means because there isn't a differentiation in nature between the two, but, on the contrary, a continuity: that is to say, that no abyss exists between the means and the point to which these means lead us, but rather that the end is the exact result of the means used. In other words, violent means will produce a violent situation and never one of peace. Unjust means will produce an unjust regime and never one capable of exercising justice, and corrupt means will bring about corruption of the final result.

There is, therefore, no distinction to be made between the instrument, that would be neutral, and the cause, which would be good or not good. The instrument participates in the cause, and the latter is shaped by the instrument. To the extent that propaganda rests on a contempt for man viewed as an object to shape and not as a person to respect, this signifies that the cause defended by propaganda implies a de-gradation of man, the impossibility of his acceding to his majority, to his personal responsibility, and that propaganda is evidently a negation of a freedom, either natural, acquired, or to be acquired. Now, propaganda cannot be anything other than what it is: an instrument of manipulation to obtain an objectively conforming behavior (orthopraxy). That is to say, that it obeys, exclusively, principles of efficacy, technical rules of a psychological or sociological nature, the usage of instruments which are themselves techniques.

It is, therefore, necessarily part of the means that corrupt the ends. It cannot be subordinated to anything but its own end, which is efficacy. Propaganda, in reality, includes in itself both the “apparatus” and “techniques” of propaganda and the message which is transmitted. For it is very evident that in addressing men, it carries a message. It is not merely a signal (although at times it can be reduced to this!). But this message can only be chosen, calculated, combined in relation to and with respect to the efficacy of the complex apparatus. In other words, even if the message is apparently noble and generous, it is integrated into a whole which rests on the one and only concept of “man as object.” Propaganda can have no other reference point, no other external value to which it could be subject and from which one could judge it. It is nothing less than its end integrated into its means. And that is why there is no way to make an ethical judgment on it, and those that one could formulate have no common measure with its reality.

#### Propaganda Creates An Ethic

But here we touch upon a new dimension of the problem: propaganda itself creates a morality, an ethic, a certain type of wished-for behavior. It furnishes man with a criterion for good and evil. This is therefore a rather new situation with respect to traditional societies. We are out of the normal framework of reflection on morality, both the one suggested by Bergson as well as that of Max Weber, the “morality of responsibility—the morality of conviction.” We are in the presence of the making of

an artificial and ideological morality, and I mean by that a morality which imposes itself upon a group of humans who have not chosen it; neither was it developed slowly through usages and customs, trials and errors, uncertainties and choices, nor was it passed on from generation to generation by a slow cultural transmission, but rather as a whole of systematic behaviors obtained by rapid and active technical means (from whence comes the great difference from the “reproduction” of morality through the flow of the generations), and always with a totalitarian goal, that is to say, encompassing all of man, leaving no latitude of choice nor any field undetermined, which would be completely destructive to propaganda.

It is indeed a question of morality, since, based upon this infusion, man is going to judge what is good and evil; he is going to choose his conduct (but it is simply a question of a choice programmed by his conviction which allows no hesitation on the behavior to be followed, the whole concept having been integrated). But it is a morality with roots neither in personal experience, nor in the past, nor in thought; it is a purely artificial morality, created and diffused outside any context of conviction. The conviction is produced by the system. And it is an ideological morality insofar as the behaviors demanded result from ideological choice.

There is a comparison with religion to be made here. A religion supposes a faithful adherence to certain truths, and this adherence brings with it certain actions, a certain practice. “Christian faith” must translate into “works.” In the same manner, political ideology (nationalist, communist, fascist, etc.) or economic ideology (of productivity, of profit, of profit-earning capacity) require certain behaviors: sacrifice for the cause, consumption, work, etc. These are narrowly determined by the ideology one was successful in implanting. There are no choices, there is no distance, much less than in the religious domain, where, even in non-liberating and inveigling religions, the distance between God and the faithful brings about the possibility for the latter to choose certain behavior patterns rather than others. In propaganda, the exact identity of the group ideology and of its behavior excludes any deviations. And we arrive thus at the conclusion announced in the beginning: it is by nature impossible to render a significant moral judgment from the outside on the work of propaganda which is itself a creator of a new type ethics.

We are, therefore, in the presence of a dilemma comparable to the one in which Kautsky had trapped Bernstein, when the latter was making a critique of Marx: Marx created a new *Weltanschauung*, a global conception. To be able to make a useful criticism of it, one has to situate oneself within the system or vision. It is in applying Marx’s method that one can criticize it; it is by using its own premises and its own system as a point of departure that the criticism can become meaningful and efficacious. If not, if one situates one-self in a different perspective, for example religious or liberal or idealist, one can say what one wants to, it would in no way begin to touch Marx’s system. That is why philosophical objections based on a dualist or idealist perspective could in no way modify Marx’s thought, just as criticism based on a liberal economy as

a starting point simply had no common measure with the goal of a socialist economy: therefore, the entire procedure was useless.

It is exactly the same in this case for propaganda: it constitutes a psycho-political universe, it unleashes an “imaginary” (in the strongest meaning of modern thought) producer of myths and a reconstitution of the universe for whomever adheres to it, which means that if one situates one’s self in this universe (for example, in the consumer world, when it is a question of that commercial propaganda known as advertising) and the criticisms that one can make will surely be heard and efficacious, but they will simply add to the reproduction, the reinforcement, and the growth of propaganda. They will bring about a greater interiorization of the imperatives and the rules of conduct, but, of course, no revision of the morality of the propaganda. On the other hand, if one situates oneself on the outside, one can make a very accurate, judicious, and exact moral (or intellectual) critique but which will never begin to touch any structure erected by propaganda, whether on the psychological or sociological level.

Morality and ethics have no power over the results of propaganda action because the latter makes the propagandee live in an ethical rather than in a political or economic universe; these indeed are the realities of the matter, but propaganda has as its goal to hide this reality within an ideological discourse which acts as a justifier because it is moral. To the democrats, Hitler affirmed unceasingly that national-socialism permitted access to a superior type of democracy, one that was more total, more egalitarian, etc. And reciprocally, a “capitalistic” morality has never touched a Soviet. We have witnessed religious conversions which are of another kind. And if there is at the moment a challenge to the universe of Soviet propaganda, this can happen only through the intermediary of those who, having been in this universe, have left it (by conversion) and can speak the exact language which is appropriate, but which has nothing to do with an ethical language: it isn’t starting with morality, but rather, on the one hand, with the facts that were revealed (a typically Marxist process!), and on the other hand, with the opposition of one religious attitude to another. The cases of Solzhenitsyn, Maksimov, Sakharov, Vlasov, A. Zinoviev, Yuli Daniel, Sinyaysky, etc., are precisely characteristic of this.

#### The Useless Experience

There is an affirmation often proposed in these domains, namely, that faced with the facts, propaganda is useless, and that its results are quickly destroyed. It suffices to make known the facts. But it is precisely propaganda that prevents the facts from being perceived as such. The unveiling to which I alluded can only be brought about by those who have been through this universe.

But there is another aspect of the problem which I would like to discuss: that is the renewal of those who are taken in by propaganda, the continual apparition of new generations for whom the experience of their elders is of absolutely no use. And this is a moral problem; in a universe which tends towards anomie, no values are passed from one generation to the other, and by this very fact no experience of the preceding generation is validated in the eyes of the succeeding generation. We have

made political mistakes and would like to have our sons profit from the lesson learned from our mistakes. That is impossible; our discourse goes unheard because it is not inscribed in a commensurate ethical universe, and we see them going down the same paths we did. We can't spare them their mistakes. Popular wisdom has long said: each generation must experience things for themselves. But in a traditional society, this is limited. In our society of global and accelerated changes, this attitude is disastrous, and yet now it is even more widespread than before. I shall take an example relative to propaganda bearing on this triple phenomenon: confrontation of propaganda and fact—the impossibility of transmitting experience to a new generation—the innocence of this new generation given over to propaganda.

The example is the relation of the young people in France to communist propaganda. The young people of my generation, in the years around 1930, were extremely seduced by marxism, by the success of the revolution, by the fantastic accomplishments of the USSR, by the criticisms leveled against the weaknesses of democracy and the injustices of capitalism, and finally by the fact that communism seemed to be the only valid answer to fascism. We were completely sensitive to the communist propaganda and an entire generation drew nearer to the Party.

Then a number of experiences frightened us. First of all, there were the Moscow trials of 1936—the trials in which we saw the great ones whom we had learned to admire, Zinoviev, Kamenev, and subsequently Bukharin himself, condemned to death in trials which immediately appeared to us as scandalous and deceitful. It was absolutely unbelievable to have accused these men of complicity with capitalism, and to have brought them to the point of accusing themselves.

Now during the same period, we experienced other events just as upsetting: the frightening attitude of the Spanish communists toward the anarchists during the Spanish war. It has been said, but it can never be said enough, that Franco's best ally was the Spanish communist party. For the true resistance by the Republic was led by the anarchists. But the communists have such a hatred of the anarchists (and also of the socialists) that, during the war, they preferred to attack the anarchists from behind and resolve the differences between them by violence, rather than help them fight against the fascist rebellion. Now, all those who took part in the republican resistance were able to see this. We came out of these experiences desperate and hostile toward communism.

One last experience: the German-Soviet treaty of 1938 by which, in reality, Stalin left Hitler free to attack Europe. Curiously, there was a progression in the influence of these facts: the trials left the communist mass indifferent; it, in fact, accepted the explanations and believed the propaganda. The anti-anarchist activity upset only those who participated in the war; on the other hand the "pact" provoked a great crisis in the entire party, and countless members left. Be that as it may, the men of my generation, after this triple experience, could be lucid and would never again be entrapped by communist propaganda.

This wasn't to be, for everything was renewed: the war and the Resistance, the fraternal cooperation with the communist resistors, their heroic actions, the admiration. Older people such as myself remained more distrustful, but powerless; we saw the young people in their twenties enter into an entirely new relationship with the Communist Party: to speak to them of our experience in 1935–1939 meant nothing to them.

Buried memories: what could these do against an all new and fresh propaganda, both by word and ex-ample; we were making moral judgments, and if one had to draw the line, we were the ones who were not to be trusted. We suspected these pure heroes of sinister designs. When the Liberation came, these young people, moralized by the propaganda and the actions, refused to see the “mistakes” the communists were guilty of (massive executions without trials, liquidation of the rightist under-ground by the communist underground), and, when Tito committed the abominable treason of having the real leader of the Yugoslav resistance, Mihailovic (who was clearly anti-communist), arrested and shot, the young people accepted without flinching the idea that this man, who had reorganized the Yugoslav army as early as 1941, and engaged in the resistance a year before Tito, was a traitor and was in the pay of the imperialists. One had to be forewarned as we were to see, simply to see, what was happening.

Now this young generation of the resistance knew in turn some psychological shocks which, for many, led them to abandon the illusions of their youth and of the resistance: the worker's revolt in Berlin in 1953 against the Soviet regime, the Hungarian and Polish revolts of 1956, and finally the revelations of Khrushchev to the XXth congress. What shocks, what disillusiones. Many in turn dropped out of the party. The astonishing thing was that it wasn't a complete rout. That shows the weakness of fact against the morality acquired by propaganda, for in all these cases it is a question of a recuperation by morality: communism committed errors, but it was the only one to defend the poor and oppressed, to want liberation of peoples; therefore all that was critical of the party was a betrayal of these poor.

This propaganda argument, apparently superficial, but playing on the moral sentiment also created by propaganda, reached even intellectuals such as J. P. Sartre; and one can find the same explanations that were given in 1938 on the legitimacy of the proletarian revolution, on the threat of imperialism which is the true menace to mankind, and which is responsible for the riots in Berlin and Hungary: the USSR having done nothing more than to limit itself to respond and to protect peoples who had been wronged by a handful of traitors.

It is remarkable to see how little propaganda renews itself. It is exactly the same moral and justifying discourse which was used in 1938, in 1956, in 1968: morality and virtue are integrated in the propaganda which appears simply to make them explicit. And all will soon be erased by a new generation, for those who were twenty in 1958, for example, the events of the last ten years were totally unknown to them; the only thing left, for example, in France was the evidence of the Algerian war where the Communist Party became once again the protector of the poor, of the colonized, the evidence that

the theory of Lenin on imperialism was correct, and that the only abomination was capitalism: propaganda had digested the facts.

But in turn, this new generation of pure and innocent militants, who saw everything through images furnished by the party, received a profound and double shock: the revolt of the young people in 1968 and the invasion of Czechoslovakia. Faced with the young people's revolt, the French Communist Party took an attitude of extreme harshness, of condemnation, and this was in perfect conformity with the attitude it had always held with respect to anything which might have an anarchist orientation. The Communist Party fears being overwhelmed from the left; it prefers to ally itself with the reactionary right than to allow a leftist and spontaneous revolution to take place. Lenin always condemned leftist tendencies (a childhood disease of communism) and worker spontaneity, for which he had a profound distrust.

But it was difficult for the hard-core militants of the French Communist Party not to be sensitive to the call of the revolution, to the vigor of the slogans and to the authenticity of youth in the streets, who seemed capable of overthrowing the power structure. There was at that point a very strong tension, and the discipline of the party had a most difficult time imposing itself, exactly as in 1938 or in 1956. And even more so, since at the same time the hope of a "socialism with a more humane appearance" was suddenly shattered by the Soviet invasion. It seemed totally unjust to prevent Czechoslovakia from choosing its own way and the argument of a "menacing imperialism" seemed to be miscarrying.

However, in spite of many criticisms and a few rejections, the Communist Party remained stable, and in no way changed its line and propaganda, and decided in favor of a purely formal "disapproval" of the Russian invasion of Czechoslovakia. These "disapprovals" are part and parcel of the "integrated propaganda" to valorize morally the subsequent resumption of contact. The French Communist Party continues to affirm itself in the "general line" with a purely formal divergence. But the militants are disturbed. Nevertheless, from 1970 on, there is no more discussion; the whole affair is dead.

Except for the appearance of Solzhenitsyn. And here we are in the presence of a moral phenomenon of great importance: we have just shown that facts change nothing in the attitude produced by propaganda. The most evident facts submitted to a moral judgment, contrary to all moral norms, are completely helpless faced with their reinterpretation by propaganda. Or more exactly, on the one hand, for adults, we note a certain instantaneous puzzlement, certain questions which arise, which for an insignificant minority mean a rejection and an abandoning of the party; but for the majority, the explanation will produce a situation of moral justification and of sufficient satisfaction. On the other hand, we are dealing here particularly with the new levels, the new generation, and the problem here is simply to obliterate, to have disappear into a continuous history, without contradiction, the facts which had caused the scandal and the moral judgment.

Propaganda has, therefore, as its essential task, to reproduce innocence from generation to generation (in both meanings of the word: ignorance and non-moral culpability). And it can do this precisely insofar as the generations succeed each other, while the apparatus of the party, which makes the propaganda work, remains constant and the party, as in the USSR, believes that communism has eternity in front of it to win the battle. What will bring about the real crisis of the intellectuals and of the leaders of the French Communist Party will not be the fact itself, but the publication of books whose time has arrived (contrary to Kravehenko's), in a favorable climate, and, especially, supported by a remarkable propaganda, which is going to require certain moral questions, heretofore completely hidden by propaganda., to be asked.

In other words, it is the apparition of a "credible" propaganda which is going to arouse the good moral conscience. It was made "credible" by the personality of the witness. Solzhenitsyn's analysis and testimonial are going to brusquely provoke a crisis of moral conscience among communist intellectuals. But it isn't the discovery of the fact itself (the fact of the existence of Soviet concentration camps has been very well known ever since 1948 at least); it is the impact of the propaganda on a humanitarian and moral base.

Communist intellectuals who have been examining moral problems since 1968 are going to make a critique of what they have lived and believed for more than twenty years. But it is that very generation that experienced the period of the resistance: the innocents of 1940–1944. Their departure from the party, their criticisms, are going to have great repercussions and are going to cause great discussions, but only insofar as it is a question of intellectuals using the media. Their departure is spectacular. But there are large factions of the party which disappear thusly at each crisis. It is estimated that about 70,000 members of the French Communist Party leave it each year. And in times of crisis, such as we have previously mentioned, the figures reach 200,000. We don't speak about these defectors because they are ordinary people, obscure people; they hold no rank, and they are immediately replaced by new adherents, ardent and innocent militants, young people who discover the universe through the truth of communism, and they ignore everything, the trials, the Pact, the Hungarian revolt, and the crushing of Czechoslovakia. And now they ignore everything about Solzhenitsyn: the whole matter is settled. The moral shock caused by his books is over. The party had to become a little more liberal, in appearance, for a few years, and the new intellectuals who now adhere to the party no longer feel the need to critique it; the generation of Gar-audy, P. Daix, etc., is gone.

I have just seen a television program on the Communist Youth Congress. I saw the young innocent faces that I have always seen there, the same enthusiasm, the same absolute confidence in the words of the leaders, the same certitude about the revolution and about the excellence of the USSR, and the same admiration for the revolution of 1917. Everything has disappeared. So much so that the Afghanistan invasion raises for these neophytes, once again, an agonizing problem: how can the country of justice, of the struggle against imperialism, of anticapitalism, conduct itself thusly? A stupor

seizes the world: "Never before has this been seen." It has been forgotten that all this has been seen ten times before. And we find anew exactly the same laborious explanations: it's the fault of the Americans who occupy Pakistan; it's the fault of the Pakistanis who are the true aggressors; it's the fault of the rebel minorities; it's the Afghan "people" who have called to the USSR for help. Why bother to make a correct analysis and to invent new arguments since experience shows that this propaganda, in the long run, snuffs out all moral indignation and erases the facts? Yes, there will be a few thousand defectors from the party. And a new generation will appear; they will ignore Afghanistan as well as the rest. In other words, propaganda being strictly anti-moral, spread out over the years, is at the same time creator of a new morality and of a new mental universe founded on instantaneousness, and on the absence of the past.

#### From Ethics to the Amorality of Propaganda

It is evident that to judge the amorality of propaganda, and the incompatibility between ethics and propaganda, one must admit to the existence of an ethic founded on values; one must construct a certain type of human existence; one must have a certain idea of man. That is why I could say earlier that propaganda is also a conferrer of morality, while at the same time being essentially amoral. To go back to the Marxist-Leninist example, it is evident that if one adopts Lenin's criteria for behavior, one builds a certain morality. Criteria: "All that is favorable to the proletariat in the struggle between classes is good, and all that is unfavorable to it is evil" (the State and the Revolution). And it will justify propaganda favorable to the proletariat, but what we have here is a utilitarianism without values. I am certainly not going to furnish a catalogue of the values by which I was able to appreciate the amorality of propaganda, but rather present the existential attitudes in which I situated myself.

First of all, there is the question of autojustification. Propaganda functions in the following manner: it represents the passage from "there is power" to "it is right and just that there be this power." In other words, it has, in effect, a justifying moral content. Always, even when it is revolutionary and contestant, all propaganda is a process of autojustification (by the denunciation of the other as being evil). It offers justification to the individual adherent as well as being the justification of the group which organizes and diffuses it. But by this very fact, it leads inevitably towards totalitarianism, because, from the moment it is granted that "it is just and good that there be this power," one passes immediately to: "therefore there can only be this power, and all others are consequently unacceptable and to be eliminated."

Each propaganda is by nature totalitarian, and tends to disclaim all pluralism. Now, it appeals to a need, to a request, to a desire of modern man who is looking first and foremost to justify himself, to be justified, to be declared just precisely because he lives in a universe which is very disputed, because he feels himself being drawn into unjust acts and also because he no longer has the resource of a religious reference, for example Christianity, which was precisely a religion of justification. But the great difference is due to the fact that Christianity never gives a justification as such; it never declares to

man that he is just, but only saved, pardoned, justified; and that this is not something acquired but a gift. But modern man, the modern parties, want to be declared just.

#### A Threefold Critique

I would say that therein lies my first element of appraisal: All processes of autojustification, at whatever level they might be, appear to me to be false, dangerous, and entrapping. It's the gateway to all the present destruction of values and of ethics. All ethical behavior seems to me to imply a questioning of self, a reassessment, and the acceptance of one's values being questioned by others. It is the price that must be paid both to measure oneself to the value, and to have a possible relation in truth. Here, it is neither a question of auto-criticism as it can be practiced in the communist party (in the Middle Ages it was in the Church) nor of culpability as understood in psychoanalysis. One can very well recognize oneself as a liar or as being vain without living in some sort of morbid culpability. But the self-examination, the examination of conscience (as it was called in the old Christian vocabulary), the acknowledgment of one's faults, and the refusal to search at any cost to be just, seem to me to be constituent elements of any ethical life, of any relationship.

It was first of all based upon my objection to autojustification that I was brought to view propaganda as amoral and leading the propagandee to a dangerous behavior (which fact was verified for all propaganda, included among these advertising, which developed consumer bulimia as a being's justification, with all the dangers that carried at all levels, and which are revealing themselves now, in the area of hygiene or in the economy!).

The second axis of my ethical reflection is closely related to my description of the second paragraph of this article: there is no moral existence unless it be rooted in the past, situated in a continuity—the continuity of one's own life just as much as that of one's group or of the history of one's country. There is no morality of instantaneousness. It is false to think that man is in a zero stage and that at each moment he must choose and make decisions. It would be a freedom like that of Buridan's ass.

Man has no moral existence except with reference to the totality of his experiences, or of those which were handed down to him and from which a "lesson" is drawn; and the "Widsom of nations" is a sort of composite of these reflections. This supposes, therefore, a historical continuity, a recall, a recapitulation, an anamnesis, as the experience occurs, an explanation of what has taken place. I'm not speaking here of the great moral principles and values, but of moral existence. And in the area of faith (Christian), ethical existence supposes "repetition" (in the Kierkegaardian sense of the term). No morality exists when one pre-tends to situate one's self simply in the present, in the instantaneous.

This was clearly evident when around the 1930's the idea of a morality of "successive sincerities" was spread by Andre Gide, for example, but also by T. H. Lawrence. "When I say this today, I am completely sincere and true, but in an hour, or tomorrow, I shall feel otherwise, I shall understand other things; I shall therefore be able to say and do the opposite and still be just as sincere" (a very serious problem, for example, of

fidelity towards the other in the couple). This is the very negation at one and the same time of ethics and or moral existence.

Yet, it is precisely in this state of actuality, of the immediate present, of the obliteration of the words and acts of the past, that propaganda places us. There is no greater obstacle to propaganda than history (continuity of generations) and philosophy (explicative reflection on the experience of events). Propaganda is, therefore, destructive of the possibilities, of the foundations, of the basic premises of ethics. But if I judge it thusly, it is, evidently, because I believe that morality exists only in this process (already mentioned) of rootedness and of reflection or anamnesis.

Finally, the third critical theme, the third criterion of ethics (valid for everyone, for I'm not speaking here specifically of a Christian ethic), is the fact that for me there is no possibility of the building of ethics and moral existence except with reference to others, in dialogue and in reciprocal participation in a common life. All ethics is necessarily an ethics of encounter. One doesn't have a moral behavior alone. And it is the exchange of words which allows me to construct myself on the moral level, while at the same time my words allow the other to behave. Together, we choose an orientation (even if it's a question of breaking off, of separating, of differentiating). Ethics presupposes the interplay of differences without exclusions. It dies when it becomes a rigid law imposed from with-out. The process which permits sociability is the interiorization of the law by the child, but this law is not made up of abstract, objective, anonymous commandments; it can only be acquired and interiorized if there is relationship, dialogue, research together and, first and foremost, between the child and his parents. Relationship to the other is creator at the same time of both personality and moral existence.

Yet, we have seen specifically that propaganda substitutes for this relationship a sort of collectivity, where each person remains completely alone and yet still belongs to a collective mass, where there are no interiorizations of a law, where behaviors stem from an external impetus, from a manipulation of which man remains completely unconscious. It is, therefore, by its nature the very opposite of any moral existence; and by this very fact, at least according to the three criteria which I have adopted, it can in no way produce an ethic nor be submitted to an ethic. It is the very opposite of any possible ethic.

## **Problems in Ellul's Treatment of Propaganda**

by Randal Marlin

*Randal Marlin is an Adjunct Professor at Carleton University, Ottawa, Canada. A second edition of his book, Propaganda and the Ethics of Persuasion, will be published this summer. This article with minor revisions is from Patrick Troude-Chasteney, editor,*

Jacques Ellul, *Penseur sans frontieres (LeBouscat: L'Esprit du Temps, PUF, 2005) 370 pp. ISBN 2-84793-068-0.*

That Jacques Ellul is one of the world's leading thinkers in the area of propaganda becomes clearer with each passing decade. Not only has his book, *Propaganda*, stayed continuously in print, but the output of works taking account of his views continues in a formidable stream. What is special about his approach to the subject is the way in which it becomes incorporated into a whole vision of the human being, with all the material and spiritual needs connected with that being. So we find Ellul exploring not just the most extreme and obvious forms of propaganda such as can be found in Nazi tyranny, but also the myths widespread in nominally democratic societies. These myths, of progress, happiness, work, race, the hero, and suchlike, operate on a broader spectrum than merely the political, but they can also diminish human freedom. Witness the person who struggles to keep up payments on the fancy car, which was purchased out of a false sense of the happiness it would bring.

Ellul's most valuable contributions to the study of propaganda include his notion of pre-propaganda, meaning the dissemination and acceptance of certain myths or general assumptions that are especially useful for the purpose of mobilizing human action. Another is his classification of propaganda into eight different types, consisting of two opposed sets of four groupings. The first set readily encompasses what is easily recognized as propaganda: the political, vertical, agitative, and irrational forms. The second set is less readily so recognized: the sociological, horizontal, integrative, and rational forms. Particularly with the movement of deconstruction, it has become clearer over the decades how minds have been manipulated through the use of various strong images, deliberately fostered to create affinities or aversions to some authority, policy, or commercial product. Various symbols create feelings of national pride and serve to integrate a population to the nation-state. Other symbols can fuel hatreds of other people and can foment wars. Ellul has put us on guard against seemingly rational facts and figures when these are presented in a form that does not allow for proper analysis, so that the rational form gives way to an irrational effect in a given audience. Much has already been written in appreciation of Ellul's contributions to propaganda theory, and as I have intimated his contribution is of immense and enduring value. He has spotlighted the phenomenon of modern technological society, with the self-augmentation of different applications of "la technique" and the misplaced faith in the power of politics, science, law and economic activity to solve our problems. As with all genuinely creative thinkers who deal extensively with difficult subjects, there are problems with his theory, and I believe it will be rewarding to focus on these problems both as a means of clarifying inherent and inescapable difficulties, or as a means of finding solutions where such exist.

The problems fall into two categories. The first is that of interpretation. It is not difficult to find inconsistencies between what he says about the phenomenon of propaganda and the way in which he defines the term. How should we react to these inconsistencies? Is this careless thinking? Can his ideas be re-expressed in ways that

avoid inconsistency? The second problem concerns the ethics of propaganda. In a nutshell, he sometimes treats propaganda as amoral, at other times as immoral. Yet he also feels that under some circumstances propaganda cannot be avoided. Can we derive from all that he says about the subject of propaganda some ethical norms and clear guidance as to how one should deal with the pervasive phenomenon of propaganda in our time?

Before attempting to answer these questions it is appropriate to describe the overall purpose and plan in Ellul's writings. He was not an ivory-tower academic. He wrote for general as well as academic audiences, and he seems to have tailored his language carefully to his different audiences, in true rhetorical style. If Ellul had one single mission, it was to liberate his contemporaries and perhaps future readers as well, from the many, sometimes subtle, ways in which human beings are enslaved. In true Christian fashion, he does not divide the world into one evil group that wants to dominate a good group. As Camus wrote, we all carry the plague within us, and if people are enslaved by propaganda, it is partly because they want to be. So he has importantly drawn attention to the fact that the modern human being, cut loose from so many family, religious and community ties, is looking for some kind of security anchor and finds it by fitting in with the mass consciousness shaped by the current media. Ellul's aim is to shake his contemporaries out of the passive frame of mind, and he does this with various tropes of language. To persuade and give dispassionate analysis are two different things, each of which has ethical pluses and minuses. Which should be uppermost will generally depend on circumstances. Because his writings engage with his readers, tropes suitable for persuasion sometimes take precedence over the philosopher's demands for consistency. Perhaps that is one reason why Ellul preferred not to call himself a philosopher, and seemed to think, like Emerson, that a foolish consistency is the hobgoblin of little minds. But if a consistent theory can be constructed which incorporates both the theoretical and pragmatic aspects of his writings, then there will be a better basis for theoretical evaluation of his work.

#### Consistency of Definition and Interpretation

I turn now to the problem of consistency, starting with the problem of definition. An example is the following: Ellul defines "propaganda" as a "means of gaining power by the psychological manipulation of groups or masses, or of using this power with the support of the masses" (Larousse, *La Grande Encyclopedie*, 1975, p. 9888), yet his discussion of the phenomenon of propaganda appears to extend the boundaries of the concept so-defined. It's not clear, for example, that sociological propaganda is always disseminated for the specific purpose of manipulating the masses to acquire or maintain power. This may be one reason why he distances himself, in *Propaganda*, from the project of defining the term., saying in the Preface "I will not give a definition of my own here" (xii).

Some of his statements about propaganda have definitional implications that are at odds with both his stated definition and some of his discussions of the subject. He writes: "Propaganda must be total" in a context where he is not just saying that

propaganda will be more effective if it is total. For he continues with “The propagandist must utilize all of the technical means at his disposal...” and “There is no propaganda as long as one makes use, in sporadic fashion and at random, of a newspaper article here, a poster or a radio program there..” (9). My point is that psychological manipulation of the masses can be partial in its means and in its effect and still contribute to the gaining of power, thus satisfying the definition. I think most of us would concede, for example, that Michael Moore’s documentary film *Fahrenheit 9/11* can be viewed in some of its aspects, as propaganda (even though it exposes a lot of propaganda on the “other side,” and might on balance be better described as counter-propaganda).

The principle of charity in interpretation requires us to look for the best possible resolution of apparent contradictions. One explanation is that Ellul operates with different understandings of “propaganda” in different contexts. He himself has allowed that “propaganda” has a broad and a narrow sense (xiii). He also makes reference to “extreme propaganda” (11) when he refers to Nazi or Soviet propaganda. So it makes sense that when talking about the impact propaganda has on the human psyche, he should have in mind propaganda that is pervasive. A second reason why he should make statements about the necessity for propaganda being total is that he has his eye on the everexpanding political and commercial public relations specialists, spin-doctors, advertisers and the like. As with “la technique” generally there is an inherent expansionist tendency.

So there is an Aristotelian and Hegelian component to his definition, one which looks organically at a phenomenon, projecting how it will develop according to its inherent nature. Its nature is such that it is impelled toward total domination of the human psyche. This explanation is also applicable to another oddity in Ellul’s treatment of propaganda: his claim that modern propaganda is totally different from persuasion in previous centuries. Surely, it might be said, Aristotle’s treatment of rhetoric deals with some of the basic ideas governing propaganda as well. Differences there surely are, but they are not “total.” Not so, on this interpretation of Ellul. There really is a striking difference, in that the ancient rhetorician might want to praise a person or promote a policy, but was not bent on reconstituting another person’s whole mind. By contrast, modern technological society shows a remarkable convergence of the political, ideological and commercial as Disney takes over the news and McDonald’s engages in myth-making, as its Ronald character rivals Santa Claus for recognition by young children. Were it not for the power of the Internet I suspect that the whole myth about saving Private Jessica Lynch might have gained acceptance instead of being repudiated as it was in the end.. Art and entertainment have become commercialized and politicized. Ellul was right about the direction in which propaganda was headed.

On this interpretation, Ellul does not have to deny that devious presentations, sly presentation of facts an imagery, are propaganda. All he needs to say is that while these are usefully designated as manifestations of propaganda, they don’t reveal propaganda in its essence, which is expansionist and totalitarian. Put another way, one might consider misleading presentations aimed at gaining power over large audiences

to fit the definition of propaganda as commonly conceived, but in saying this an important reality about propaganda becomes, to use Heideggerian terms, covered over. In trying to uncover the truth about propaganda, Ellul looks more profoundly into the phenomenon as it has existed with the advent of modern industrial civilization.

Other questions connected with Ellul's definition remain, but are not especially difficult to resolve. Are propagandists necessarily power hungry? For Ellul it is important to distinguish between the Christian message as propounded by crusaders seeking wealth and glory, from that disseminated by monks at Cluny who believed their message would lead to liberation of souls from slavery to false values. The latter is not propaganda for Ellul. Other propaganda theorists would demur, either because they accept a definition according to which propaganda is value neutral (thus including both) or because they believe that sincerity and belief in an influence as liberating is not sufficient to disqualify persuasive communication from being propaganda (thus also including both, but not by reason of value neutrality). The case of the sincere Nazi can be adduced. My attitude on these questions joins Ellul's where he observes (xii) that there is simply no agreed upon definition of propaganda. How one defines the term, explicitly or implicitly, may vary according to the context and circumstances of a given communication. A person should use the word with caution. One who describes certain materials as propaganda, meaning it in a neutral sense, may convey the wrong message to an audience that believes propaganda is inescapably tied to wrong-doing.

#### On the Ethics of Propaganda

More formidable still is the question of the ethics of propaganda, about which Ellul again seems to have had views of contradictory import. Propaganda is opposed to human freedom. On the face of things, this should make it wrong. Yet Ellul appears in places to accept that propaganda is amoral. It isn't immoral, it just is, he claims. Supporting this position is his view that propaganda is necessary in the modern world. Without, so far as I know, him spelling out the reasoning, there are philosophical arguments that can support this position. If we follow Kant and his "ought" implies "can," along with its *modus tollens* that "cannot" implies that there is no "ought," (meaning for example that I'm not obliged to jump into deep water to save a drowning person when I cannot swim) then necessity frees us from a moral obligation. If I have no option but to engage in propaganda then I can't be blamed for doing so.

This view is very problematic, both as an interpretation of Ellul's overall considered view, and as an account of the truth about the ethics of propaganda. For example, Kant's stated views about lying might lead us to question whether "we have no option" when it comes to engaging in propaganda. It is hard to accept that Ellul would dissociate propaganda completely from morality. He has made it clear that propaganda, considered in its entirety, is deeply antithetical to human freedom. So one would think that a proper ethical stance should not be to dismiss it as amoral, but rather to expose it and thereby detoxify its pernicious effects. Since propaganda on one side of an issue generates counter-propaganda on the other side, any foray into it should be governed by principles akin to those applicable to so-called just wars. "Dirty hands"

ethics requires one to limit such activity to the minimum necessary to accomplish a just objective, and to seek at the same time to offset the bad effects of one's own norm-violations when the opportunity arises.

In my conversation with Ellul (in 1980), he appeared to agree with this. As an example, he thought that the French government might have offset Nazi propaganda in France in the late 1930s by subsidizing those Leftist publications in France that were foundering with the victory of Franco. These publications were the natural rallying grounds for anti-Nazi feeling in France and with help would have kept alive an important source of opinion formation there, and provided greater support for resistance to Hitler during the period of the "phoney war" before the May Blitzkrieg. Supporting groups who freely express themselves would be less intrusive on freedom than the government directly imposing its own viewpoint upon the public. In calculating the effects of a government engaging in propaganda, one would need to factor in the likelihood of a discounting effect if the source of this propaganda were to be known to the public. The result of this factoring would likely be a need for an increase of propaganda to counter that discounting.

How then do we account for his statement that propaganda is amoral? The resolution to this exegetical question can be convincingly found in his article, "The ethics of propaganda: propaganda, innocence, and amorality" (*Communication* 6 (1981): 159–175; reprinted in this issue of the *Ellul Forum*), where he makes it clear from the beginning that he thinks propaganda is profoundly related to morality, or more precisely (I would add) to immorality. At the conclusion of that essay, he sketches the nature of ethics and moral existence, maintaining that these are only possible "with reference to others, in dialogue and in reciprocal participation in a common life. All ethics is necessarily an ethics of encounter." Ethics requires the "interplay of differences without exclusions" and it "dies when it becomes a rigid law imposed from without." Yet propaganda "substitutes for this relationship a sort of collectivity, where each person remains completely alone and yet still belongs to a collective mass, where there are no interiorizations of a law, where behaviors stem from an external impetus, from a manipulation of which man remains completely unconscious." (174–5). So propaganda appears to be the antithesis of morality. Why not, then, call it immoral?

One answer to why he chooses not to treat propaganda as simply immoral is connected to the definitional question dealt with earlier. If we think of propaganda as something total and pervasive, which in its essence, in Ellul's view, it is, then we need to take into account that it incorporates its own moral system. It becomes an ideological system impervious to critique from without. If we compare it to a legal system it is like the basic norms which form the constitution. The constitution can be changed, but legally only within the structure and norms provided by the constitution itself. The system which propaganda imposes, bearing in mind that the propaganda is total, contains its own morality with it, whether we speak of Communism, Nazism, or any other highly propagandized societies, whether theocracies or technique-dominated liberal and commercial democracies.

That being the case the propagandized system cannot be effectively criticized on the basis of moral philosophies which do not accept the premises of that system. It would be like going to a court of law in the United States and arguing on the basis of Soviet legal practice. To take another pertinent analogy, the propaganda system is like one of Kierkegaard's three spheres of existence. Within each sphere the argumentative base cannot be effectively argued against from the standpoint of one of the other spheres. The aesthete's ideological framework is insulated from the ethical, and the ethical from the religious. One is tempted to say that the relation to Kierkegaard's spheres of existence is not just analogical: propaganda institutes its own ethical sphere. Even a theocracy when established by propaganda negates true faith, which in its essence involves free embracing of beliefs. One recalls Kierkegaard again, and his statement that the truth established by 10,000 yelling men becomes by the means of its dissemination the very opposite of truth.

This account seems to me one way to satisfy the exegetical problem. Ellul believes propaganda to be the reverse of morality, but he can call it amoral insofar as he recognizes that like absolute monarchs and God it is above the law which it imposes. This or that propaganda system is in play, with the consequent morality that it establishes, and any critique based on opposing values will simply not get a hearing, assuming it could even find a way of expressing itself. (If I may be permitted a political aside here I notice that in the presidential debates the idea that the United States should forgo any claim to Iraq's oil so as to prove the purity of its intentions in invading Iraq simply is not raised. The underlying premise of the need for continued U.S. dominance of the world is not subject to debate.)

But this is not the whole story. Traditional thinking about immorality links us with intentional wrong-doing, the deliberate transgression of moral norms. There is room also for wilful blindness, recklessness and negligence. But so-called invincible ignorance has been held to remove the stigma of guilt. Ellul's message is often to the effect that we are deceived, not necessarily through our fault, about the effects of technology ("la technique" more precisely) and of propaganda on ourselves. So that would be a different reason for treating propaganda as amoral. But it is not a reason that can persist in cases where invincible ignorance turns into wilful blindness, and Ellul's efforts help to bring about such a transformation.

When we come to pass from the exegetical question to the substantial question about the ethics of propaganda, then I believe we need to make adjustments to the Ellulian account. We do have freedom of expression, though it is curtailed or devalued by many different influences coming from concealed sources. Among the competing propagandas we still have the freedom to pursue our different faiths with their spiritual and moral messages. From that moral dimension, we can indeed treat propaganda as antithetical to morality, and immoral for that very reason. As Ellul himself says, echoing St. Augustine, the good end does not justify the bad means; rather the means chosen tells us something about the ends and are not to be separated from those ends (recall also Camus on this point).

If we return to the idea that not all of what we term propaganda is total, and that what goes by that name does not always exclude respect for the freedom and integrity of the other, then we have a basis for evaluating each propaganda exercise in its context on a case-by-case basis. What Ellul would have us do is think about the danger of, for example, shortcuts to persuading mass audiences, and to concentrate on the phenomenon of propaganda as a whole, in the context of modern technological society.

I believe that the reason he did not take the case-by-case approach is that he was acutely aware of the imperviousness of his audience, particularly in the 1950s and 1960s, to arguments based on moral principles. Positivism was still a reigning influence. To reach and affect an audience, appeal to scientific arguments were needed. By claiming to eschew morality, and by setting up propaganda as an amoral phenomenon to be analysed scientifically, he had exactly the right approach to gain a sympathetic hearing. The moral message comes through in that book, though somewhat problematically, and it helps to have his elucidation in 1981 to reinforce that message. It is a message that bears pondering as we confront a world where the leader of a country with the most powerful military weaponry wants to spend huge amounts to expand its technological capabilities while his opponent would like to expand scientific stem cell research to combat illnesses. In neither case are the moral implications thoroughly confronted in the public debate, and the power of various myths, of freedom, progress and the like, appear once again to be uppermost. Without presuming the answers to these policy matters, one can at least recognize the poverty of the discourse in which they are presented to the public.

## Semantics and Ethics of Propaganda

by Jay Black

*Jay Black is Poynter-Jamison Professor of Journalism Ethics Emeritus at the University of South Florida-St. Petersburg. He is Editor of the Journal of Mass Media Ethics. This is an abbreviated version of an essay originally published in the Journal of Mass Media Ethics, 16: 2-3 (2001): 121-137.*

Early Approaches to Propaganda

One implication of the term propaganda, when it was first used in the sociological sense by the Roman Catholic Church, was to the spreading of ideas that would not occur naturally, but only via a cultivated or artificial generation. In 1622, the Vatican established the Congregatio de Propaganda Fide, to harmonize the content and teaching of faith in its missions and consolidate its power. As Combs and Nimmo maintained (1993, p. 201), this early form of propaganda was considered by the Church to be a moral endeavor.

Over time the term took on more negative connotations; in a semantic sense, propaganda became value laden, and in an ethical sense, it was seen as immoral. In 1842 W. T. Brande, writing in the Dictionary of Science, Literature and Art, called propaganda something “applied to modern political language as a term of reproach to secret associations for the spread of opinions and principles which are viewed by most governments with horror and aversion” (Qualter, 1962, p. 4).

Following World War I, R. Wreford (1923) maintained that propaganda had retained its pejorative connotations as “a hideous word” typical of an age noted for its “etymological bastardy” (Qualter, 1962, p. 7). At that time, the forces of propaganda, public relations, and psychological warfare had become inextricably intertwined in the public’s mind. Social scientists and propaganda analysts, strongly influenced by models of behaviorism, tended to depict a gullible public readily manipulated by forces over which it had little control (Institute for Propaganda Analysis, 1937; Lee & Lee, 1988). This depiction offended humanists and progressives who feared propaganda as a threat to democracy and saw public enlightenment through education as the best defense against the inevitability of propaganda (see Michael Sproule, 1989 & 1997). In 1929, for instance, Everett Martin wrote (p 145):

Education aims at independence of judgment. Propaganda offers ready-made opinions for the unthinking herd. Education and propaganda are directly opposed both in aim and method. The educator aims at a slow process of development; the propagandist, at quick results. The educator tries to tell people how to think; the propagandist, what to think. The educator strives to develop individual responsibility; the propagandist, mass effects. The educator fails unless he achieves an open mind; the propagandist unless he achieves a closed mind.

In a 1935 book, Leonard Doob drew a further distinction between education and propaganda by saying that

If individuals are controlled through the use of suggestion ... then the process may be called propaganda, regardless of whether or not the propagandist intends to exercise the control. On the other hand if individuals are affected in such a way that the same result would be obtained with or without the aid of suggestion, then this process maybe called education, regardless of the intention of the educator. (p. 80).

Harold Lasswell (1927) offered the first attempt to systematically define propaganda to assure some degree of validity and reliability in studies of the phenomenon. Propaganda, Lasswell wrote, is “the control of opinion by significant symbols, or, so to speak, more concretely and less accurately, by stories, rumors, reports, pictures, and other forms of social communications” (p. 627). A year later George Catlin (1936) defined propaganda as the mental instillation by any appropriate means, emotional or intellectual, of certain views. He said the “instillation of views may be animated by no strong sense of moral or political urgency,” and that “it may amount to little more than the distribution of information, public acquaintance with which is advantageous to the institution concerned” (pp. 127–128). The 1930s and 1940s saw propaganda’s definitions reflecting social science’s struggles between behaviorism (the “stimulus response”

model) and a more value neutral stance. At the same time, propaganda was applied to increasingly broad categories of social and political phenomena.

Edgar Henderson (1943) proposed that no definition of propaganda can succeed unless it meets several requirements: (a) it must be objective; (b) it must be psychological, or at least sociopsychological, rather than sociological or axiological; (c) it must include all the cases without being so broad as to become fuzzy; (d) it must differentiate the phenomenon from both similar and related phenomena; and (e) it must throw new light on the phenomenon itself, making possible a new understanding of known facts concerning the phenomenon and suggesting new problems for investigation (p. 71). Given these criteria, Henderson claimed previous definitions fell short, and proposed that “propaganda is a process which deliberately attempts through persuasion-techniques to secure from the propagandee, before he can deliberate freely, the responses desired by the propagandist” (p. 83).

Doob (1948) defined propaganda as “the attempt to affect the personalities and to control the behavior of individuals toward ends considered unscientific or of doubtful value in a society at a particular time” (p. 240). Doob employed propaganda in a neutral sense “to describe the influence of one person upon other persons when scientific knowledge and survival values are uncertain,” indicating that “propaganda is absolutely inevitable and cannot be exorcised by calling it evil-sounding names” (1948, p. 244).

#### Past Half Century

Following World War II, propaganda was often defined in accordance with constantly shifting perspectives on political theory and the processes / effects and structures / functions of mass communication. Some scholars, such as Alfred McClung Lee (1952), stubbornly held to earlier models of humanity-as-victim when defining propaganda as something that was vivid, emotional, and attempted to override common sense. Increasingly, however, as media and organized persuasion enterprises in and of themselves were seen to have diminished mind-molding influences, definitions (and, we presume, fears) of propaganda softened.

Many of the midcentury explorations of propaganda considered the phenomenon in terms of the totality of persuasive characteristics of a culture or society. More recently, definitions have incorporated concerns about subtle, long-term but difficult to measure media effects. Also, many modern approaches to the subject have allowed that propaganda need not necessarily be deliberately and systematically manipulative of consumers-cum-victims, but may merely be the incidental by-product of our contemporary technological and/or information society.

Terrence Qualter, in his 1962 book on propaganda and psychological warfare, called propaganda

The deliberate attempt by some individual or group to form, control, or alter the attitudes of other groups by the use of the instruments of communication, with the intention that in any given situation the reaction of those so influenced will be that desired by the propagandist. (p. 27)

Qualter (1962) argued that the phrase “the deliberate attempt” was the key to his concept of propaganda, because, as he claimed, he had established “beyond doubt” that anything may be used as propaganda and that nothing belongs exclusively to propaganda. The significance, he said, was that any act of promotion can be propaganda “only if and when it becomes part of a deliberate campaign to induce action through the control of attitudes” (p. 27).

French social philosopher Jacques Ellul (1964, 1965), whose ideas have significantly informed the propaganda research agenda in recent decades, held a sophisticated view construing propaganda as a popular euphemism for the totality of persuasive components of culture. Ellul (1965) saw a world in which numerous elements of society were oriented toward the manipulation of individuals and groups, and thereby defined propaganda as “a set of methods employed by an organized group that wants to bring about the active or passive participation in its actions of a mass of individuals, psychologically unified through psychological manipulations and incorporated in an organization” (p. 61). Propaganda performs an

indispensable function in society, according to Ellul (1965):

Propaganda is the inevitable result of the various components of the technological society, and plays so central a role in the life of that society that no economic or political development can take place without the influence of its great power. Human Relations in social relationships, advertising or Human Engineering in the economy, propaganda in the strictest sense in the field of politics—the need for psychological influence to spur allegiance and action is everywhere the decisive factor, which progress demands and which the individual seeks in order to be delivered from his own self. (p. 160)

Although recognizing the significance of the traditional forms of propaganda utilized by revolutionaries and the heavy-handed types of propaganda employed by despots and totalitarian regimes—“agitation” and “political” propaganda, Ellul (1965) focused more on the culturally pervasive nature of what he called “sociological” and “integration” propaganda. What Ellul (1965) defined as “the penetration of an ideology by means of its sociological context” (p. 63) is particularly germane to a study of mass media persuasion. Advertising, public relations, and the culturally persuasive components of entertainment media are all involved in the “spreading of a certain style of life” (p. 63), and all converge toward the same point.

In a sense, sociological propaganda is reversed from political propaganda because in political propaganda the ideology is spread through the mass media to get the public to accept some political or economic structure or to participate in some action, whereas in sociological propaganda, the existing economic, political, and sociological factors progressively allow an ideology to penetrate individuals or masses. Ellul (1965) called the latter a sort of persuasion from within, “essentially diffuse, rarely conveyed by catchwords or expressed intentions” (p. 64). He added that it is instead “based on a general climate, atmosphere that influences people imperceptibly without having the appearance of propaganda” (Ellul, 1965, p. 64). The result is that the public adopts new

criteria of judgment and choice, adopting them spontaneously, almost as if choosing them via free will—which means that sociological propaganda produces “a progressive adaptation to a certain order of things, a certain concept of human relations, which unconsciously molds individuals and makes them conform to society” (Ellul, 1965, pp. 63–64). In contemporary society this is “long-term propaganda, a self-reproducing propaganda that seeks to obtain stable behavior, to adapt the individual to his everyday life, to reshape his thoughts and behavior in terms of the permanent social setting” (Ellul, 1964, p. 74)

It is significant to point out that those who produce sociological or integration propaganda often do so unconsciously, given how thoroughly (and perhaps blindly) they themselves are invested in the values and belief systems being promulgated. Besides, if one is an unintentional “integration” propagandist merely seeking to maintain the status quo, one’s efforts would seem to be *prima facie* praiseworthy and educational. However, when considering propaganda as a whole, Ellul (1981) concluded that the enterprise was pernicious and immoral—a view shared by many but not all other students of the subject. Ellul (1981) argued that pervasive and potent propaganda that creates a world of fantasy, myth, and delusion is anathema to ethics because (a) the existence of power in the hands of propagandists does not mean it is right for them to use it (the is-ought problem); (b) propaganda destroys a sense of history and continuity and philosophy so necessary for a moral life; and (c) by supplanting the search for truth with imposed truth, propaganda destroys the basis for mutual thoughtful interpersonal communication and thus the essential ingredients of an ethical existence (Combs & Nimmo, 1993, p. 202; Cunningham, 1992; Ellul, 1981, pp. 159–177; Johannesen, 1983, p. 116).

Persuasion researcher George Gordon’s (1971) eclectic definition of propaganda suggested that most teachers and most textbooks, except those involved in teaching abstract skills, are inherently propagandistic. (In his chapter on “Education, Indoctrination, and Training,” Gordon argued that one failure of the American educational system is that there is not enough propaganda in the lower grades, and too much in graduate schools.)

John C. Merrill and Ralph Lowenstein (1971) published the first mass media textbook in the modern era that seriously analyzed propaganda and its employment in media. The authors generalized that from the numerous definitions of propaganda they had read they discerned certain recurring themes or statements or core ideas, among them “manipulation,” “purposeful management,” “preconceived plan,” “creation of desires,” “reinforcement of biases,” “arousal of preexisting attitudes,” “irrational appeal,” “specific objective,” “arousal to action,” “predetermined end,” “suggestion,” and “creation of dispositions” (pp. 221–226). They concluded:

It seems that propaganda is related to an attempt (implies intent) on the part of somebody to manipulate somebody else. By manipulate we mean to control—to control not only the attitudes of others but also their actions. Somebody (or some *group*)—the

propagandist—is predisposed to cause others to think a certain way, so that they may, on some cases, take a certain action. (p. 214)

Notwithstanding the work of Gordon, Merrill, and a few others whose textbooks containing observations about propaganda were published in the 1970s, an honest appraisal of propaganda scholarship shows a void of what Cunningham (2000) called “front-line academic research” between the 1950s and early 1980s. Cunningham (2000) went so far as to call propaganda a “theoretically undeveloped notion” during that period, and lauded the recent Ellulian-motivated resurgence of propaganda scholarship (p. 2). Some of that recent research and commentary (see especially Combs & Nimmo, 1993; Edelstein, 1997; Jowett & O’Donnell, 1999; Pratkanis & Aronson, 1992; Smith, 1989) has painted propaganda with a wider brush that covers the canvas of media, popular culture, and politics, and posits that propaganda need not necessarily be as systematic and purposive as earlier definitions demanded. Indeed, the likelihood of unconscious or accidental propaganda, produced by unwitting agents of the persuasion industry, makes the ethical analysis of contemporary propaganda ever more intriguing.

Consider only a few of the most recent definitions and discussions of propaganda (Cole, 1998). Ted Smith (1989), editor of *Propaganda: A Pluralist Perspective*, called propaganda “Any conscious and open attempt to influence the beliefs of an individual or group, guided by a predetermined end and characterized by the systematic use of irrational and often unethical techniques of persuasion” (p. 80). Jowett and O’Donnell (1999) recently echoed that perspective, calling propaganda “The deliberate and systematic attempt to shape perceptions, manipulate cognitions, and direct behavior to achieve a response that furthers the desired intent of the propagandist” (p. 279). In Smith’s (1989) edited volume Nicholas Burnett (1989) defined propaganda simply as “discourse in the service of ideology” (p. 127).

Pratkanis and Aronson (1992), in *Age of Propaganda: The Everyday Use and Abuse of Persuasion*, used the term propaganda to refer to “the mass persuasion techniques that have come to characterize our postindustrial society,” and “the communication of a point of view with the ultimate goal of having the recipient of the appeal come to ‘voluntarily’ accept this position as if it were his or her own” (p. 8). Media scholar Alex Edelstein, in his 1997 book *Total Propaganda: From Mass Culture to Popular Culture*, said “old propaganda” is traditionally employed by the government or the socially and economically influential members in “a hierarchical mass culture, in which only a few speak to many”(p. 5). It is intended for “the control and manipulation of mass cultures” (p. 4). He contrasts this with the “new propaganda” inherent in a broadly participant popular culture “with its bedrock of First Amendment rights, knowledge, egalitarianism, and access to communication” (p. 5).

#### Social Psychology of Propaganda

Scholarly analyses of propaganda tend to focus on either the political or semantic/rhetorical nature of the beast. An equally intriguing set of insights has been offered by social psychologists, concerned as they are with the nature of belief and value systems

and the various psychological needs that a phenomenon such as propaganda tends to fulfill. Until recently, philosophers have been noticeably absent from the fray.

Throughout the 20<sup>th</sup> century, various schools of sociology and psychology (and, recently, the hyphenated pairing of the two) have concluded that propaganda is produced and consumed by individuals with particular sociopsychological characteristics. What Ellul (1965) has described as sociological and integration propaganda has been the focus of their attention, as it is ours.

The past half-century's concerns over media propaganda have been based on the often stated assumption that one responsibility of a democratic media system is to encourage an open-minded citizenry—that is, a people who are curious, questioning, unwilling to accept simple pat answers to complex situations, and so forth. Mental freedom, the argument goes, comes when people have the capacity, and exercise the capacity, to weigh numerous sides of controversies (political, personal, economic, etc.) and come to their own rational decisions, relatively free of outside constraints.

#### Open and Closed Mind

A growing body of research on perception and belief systems seems to be concluding that individuals constantly strive for cognitive balance as they view and communicate about the world, and that individuals will select and rely on information consistent with their basic perceptions. This holds true for mass media practitioners as well as for their audiences. A *Journalism Quarterly* study by Donohew and Palmgreen (1971), for instance, showed that open-minded journalists underwent a great deal of stress when having to report information they weren't inclined to believe or agree with because the open-minded journalists' self-concepts demanded that they fairly evaluate all issues. Closed-minded journalists, on the other hand, underwent much less stress because it was easy for them to make snap decisions consistent with their basic world views—especially because they were inclined to go along with whatever information was given to them by authoritative sources (Donohew & Palmgreen, 1971, pp. 627–39, 666).

Social psychologist Milton Rokeach (1960), in his seminal work *The Open and Closed Mind*, concluded empirically that the degree to which a person's belief system is open or closed is the extent to which the person can receive, evaluate, and act on relevant information received from the outside on its own intrinsic merits, unencumbered by irrelevant factors in the situation arising from within the person or from the outside (p. 57). To Rokeach (1960), open-minded individuals seek out sources (media and otherwise) that challenge them to think for themselves rather than sources that offer overly simplified answers to complex problems. Open-minded media consumers seek independent and pluralistic media because they value independence and pluralism—even, on occasion, dissonance—in their own cosmology, interpersonal relationships, and political life. Closed-minded or dogmatic media consumers, on the other hand, seek out and relish the opposite kinds of messages, taking comfort in simplified, pat answers (usually relayed by “authoritative sources”), in conformity, in a world in which the good guys and the bad guys are readily identifiable, in which there is a simplistic and direct connection between causes and effects (Rokeach, 1954, 1960, 1964).

## Belief Systems and Media Propaganda

One of the dominant themes in media criticism for much of the past half century or so has been the tendency of media to mitigate against open-mindedness. Recent assessments reinforce the 1922 lamentations of Walter Lippmann concerning the stereotypical pictures in the heads of people, the incomplete reflections of political, economic, and social reality from which individuals make choices and public opinion is produced. If people lack time, opportunity, and inclination to become fully acquainted with one another and with their environment, it is only natural for them to act as Rokeach's (1954, 1960, 1964) dogmatic, closed-minded media consumers—prompted and fulfilled by media whose stock in trade is production of such public opinion-molding propaganda.

There is, of course, an argument that people need media to provide them with predigested views because they can't experience all of life first-hand. By definition, media come between realities and media consumers, and we are certainly not arguing for the elimination of those media. (Some have noted that online media and the Internet may appear to eliminate the mediating, and hence propagandistic, function of traditional media, but that argument falls when one considers that a prime reason to use new media is to pander to self-interest and to reinforce preexisting prejudices.)

The logic of Ellul (1965) is compelling in this regard, as he argued that people in a technological society need to be propagandized, to be "integrated into society" via media. As Ellul (1965) saw it, people with such a need get carried along unconsciously on the surface of events, not thinking about them but rather "feeling" them. Modern citizens, Ellul (1965) concluded, therefore condemn themselves to lives of successive moments, discontinuous and fragmented—and the media are largely responsible. The hapless victims of information overload seek out propaganda as a means of ordering the chaos, according to Ellul (1965). If our nature is to eschew dissonance and move toward a homeostatic mental set, the crazy quilt patterns of information we receive from our mass media would certainly drive us to some superior authority of information or belief that would help us make more sense of our world. Propaganda thus becomes inevitable.

Most of the foregoing emphasizes the propagandee's belief system, showing parallels between dogmatic personality types and the "typical" propagandee. Not much of a case has been made to maintain that propagandists themselves possess the basic characteristics of the dogmatist, but there is much evidence suggesting that communicators who are intentionally and consciously operating as propagandists recognize that one of their basic tasks is to keep the minds of their propagandees closed. The conscious propagandists can operate most successfully by raising themselves above their messages and goals, conducting propaganda campaigns as a master conductor plays with an orchestra. (As Eric Hoffer, 1951, reminded us, Jesus was not a Christian, nor was Marx a Marxist [p. 128]). Unconscious propagandists are another matter; they may have unconsciously absorbed the belief and value system that they propagate in their daily integration or socialization propaganda. Their unexamined propagandistic lives

reflect a cognitive system that has slammed shut every bit as tightly as the authorities for whom they blindly “spin” and as the most gullible of their propaganda’s recipients.

As Donohew and Palmgreen (1971) implied, it appears to be very difficult and stressful for both media practitioners and media consumers to retain pluralistic orientations. If people are not undergoing any mental stress, it may be that they aren’t opening their minds long enough to allow discrepant information to enter. This is not to say that stress and strain in and of themselves make for open-minded media behavior. They may just make for confusion and result from confusion. However, if media personnel and audiences never find themselves concerned over contradictory information, facts that don’t add up, opinions that don’t cause them to stop and think, then they are being closed-minded purveyors and passive receivers of propaganda.

#### Propaganda Revisited

At this juncture, insights from propaganda analysts, media critics, social psychologists, and semanticists can be amalgamated into reasonably objective insights into the propagandistic nature of contemporary society. The insights can be applied to the producers of propaganda, the contents of propaganda, and the consumers of propaganda.

The emerging picture of propagandists / propaganda / propagandees and their opposites, as uncovered by the preceding discussions, reveals several definite patterns of semantic/belief systems/ethical/and so forth behavior. Note that on one hand the dogmatist (typical of propagandist and propagandee, and revealed in the manifest content of propaganda) seeks psychological closure whether rational or not; appears to be driven by irrational inner forces; has an extreme reliance on authority figures; reflects a narrow time perspective; and displays little sense of discrimination among fact/inference/value judgment. On the other hand, the nondogmatist faces a constant struggle to remain open-minded by evaluating information on its own merits; is governed by self-actualizing forces rather than irrational inner forces; discriminates between and among messages and sources and has tentative reliance on authority figures; recognizes and deals with contradictions, incomplete pictures of reality, and the interrelation of past, present, and future; and moves comfortably and rationally among levels of abstraction (fact, inference, and value judgment).

The preceding typologies help lead us to an original synopsis of propaganda, one meeting the criteria laid down by Henderson in 1943. It is sociopsychological, broad without being fuzzy, differentiates propaganda from similar and related phenomena, and sheds new light on the phenomena. In addition, it describes the characteristics of propagandists, the propaganda they produce, and propagandees—something sorely lacking in most other definitions. The synopsis is as follows:

Although it may or may not emanate from individuals or institutions with demonstrably closed minds, the manifest content of propaganda contains characteristics one associates with dogmatism or closed-mindedness. Although it may or may not be intended as propaganda, this type of communication seems noncreative and appears to have as its purpose the evaluative narrowing of its receivers. Whereas creative communication accepts pluralism and displays expectations that its receivers should conduct

further investigations of its observations, allegations, and conclusions, propaganda does not appear to do so. Rather, propaganda is characterized by at least the following six specific characteristics:

1. A heavy or undue reliance on authority figures and spokespersons, rather than empirical validation, to establish its truths, conclusions, or impressions.
2. The utilization of unverified and perhaps unverifiable abstract nouns, adjectives, adverbs, and physical representations rather than empirical validation to establish its truths, conclusions, or impressions
3. A finalistic or fixed view of people, institutions, and situations divided into broad, all-inclusive categories of in-groups (friends) and out-groups (enemies), beliefs and disbeliefs, and situations to be accepted or rejected in toto.
4. A reduction of situations into simplistic and readily identifiable cause and effect relations, ignoring multiple causality of events.
5. A time perspective characterized by an overemphasis or underemphasis on the past, present, or future as disconnected periods rather than a demonstrated consciousness of time flow.
6. A greater emphasis on conflict than on cooperation among people, institutions, and situations.

This synopsis encourages a broad-based investigation of public communications behavior along a propaganda -nonpropaganda continuum. Practitioners and observers of media and persuasion could use this definition to assess their own and their media's performance (Black, 1977–1978). The definition applies to the news and information as well as to entertainment and persuasion functions in the media. Many criticisms of the supposedly objective aspects of media are entirely compatible with the aforementioned standards. Meanwhile, because most people expect advertisements, public relations programs, editorials, and opinion columns to be nonobjective and persuasive, if not outright biased, they may tend to avoid analyzing such messages for propagandistic content. However, because those persuasive messages can and should be able to meet their basic objectives without being unduly propagandistic, they should be held to the higher standards of nonpropaganda. (For what it's worth, persuasive media that are propagandistic, as defined herein, would seem to be less likely to attract and convince open-minded media consumers than to reinforce the biases of the closed-minded true believers, which raises an intriguing question about persuaders' ethical motives.)

#### Conclusions

We are not suggesting that the necessity for mediating reality and merchandising ideas, goods, and services inevitably results in propaganda. Far from it. Yet we do suggest that when there is a pattern of behavior on the part of participants in the communications exchange that repeatedly finds them dogmatically jumping to conclusions, making undue use of authority, basing assumptions on faulty premises, and otherwise engaging in inappropriate semantic behavior, then we can say they are engaging in propaganda. They may be doing it unconsciously. They may not be attempting to propagandize, or even be aware that their efforts can be seen as propagandistic, or

know that they are falling victim to propaganda. It may just be that their view of the world, their belief systems, their personal and institutional loyalties, and their semantic behaviors are propagandistic. But this doesn't excuse them.

It is sometimes said, among ethicists, that we should never attribute to malice what can be explained by ignorance. That aphorism certainly applies to propaganda, a phenomenon too many observers have defined as an inherently immoral enterprise that corrupts all who go near it. If instead we consider propaganda in less value-laden terms, we are better able to recognize ways all participants in the communications exchange can proceed intelligently through the swamp, and we can make informed judgments about the ethics of particular aspects of our communications rather than indicting the entire enterprise.

It is possible to conduct public relations, advertising, and persuasion campaigns, plus the vast gamut of informational journalism efforts, without being unduly propagandistic. In a politically competitive democracy and a commercially competitive free enterprise system, mass communication functions by allowing a competitive arena in which the advocates of all can do battle. What many call propaganda therefore becomes part of that open marketplace of ideas; it is not only inevitable, but may be desirable that there are openly recognizable and competing propagandas in a democratic society, propagandas that challenge all of us—producers and consumers—to wisely sift and sort through them.

A fully functioning democratic society needs pluralism in its persuasion and information, and not the narrow-minded, self-serving propaganda that some communicators inject—wittingly or unwittingly—into their communications and which, it seems, far too many media audience members unconsciously and uncritically consume. Open-mindedness and mass communications efforts need not be mutually exclusive.

# Re-Viewing Ellul

## Histoire de la Propagande

Jacques Ellul

Presses universitaires de France (Que sais-je?), 1967. 2<sup>nd</sup> ed. 1976. 128 pp.

Reviewed by Randal Marlin

*Carleton University, Ottawa, Canada*

This immensely useful, highly compact historical study of propaganda somehow never made it into English translation, but perhaps that situation will one day be remedied. The book is a classic, in the sense that one can revisit it thirty years later and still find insights newly applicable to changing historical circumstances. His earlier *Propaganda* shared this feature and continues to sell well today, more than 40 years after first publication. Ellul's *Histoire de la Propagande* was published in 1967 by P.U.F. as part of its *Que Sais-Je* series, with a second edition appearing in 1976. The series put a premium on highly concise, well-organized writing and Ellul delivers superbly well.

The book spans a European time frame from Ancient Greece to World War I, giving us many stimulating and sometimes provocative judgments along the way. As he defines propaganda for purposes of his study, it involves the sum of methods used by a political or religious power (he doesn't include commercial communication) with a view to obtaining ideological or psychological effects. Was Greek tragedy propaganda? It might have helped mould Hellenic identity and thereby shape political power, but he sees it as more existentially than politically motivated. Pisistratus on the other hand qualifies as propagandist with his false news, creation and exploitation of victim status, and portrayal of himself as under Athena's special protection –an early version of "God on his side."

He traces propaganda from Roman imperial times through the rise of Christianity to the development of the nation state, the French revolution, and the postrevolutionary need to address the general population. Propaganda in the fullest sense he links to the arrival of modern means of mass communication and the ability, first seen in the Soviet Union, of sustained and more or less total control of communication by a centralized body.

Ellul is very careful to distinguish politically motivated discourse and action, which he includes as propaganda, from that which is driven by religious or other motivations.

Some crusades were the result of propaganda, others not. Histories can be propaganda, as when the history of a crusade was written in such a way as to stimulate another.

What is freshly relevant? In a passage with uncanny resemblance to what some people see transpiring in the current U.S. situation under President George W. Bush, Ellul writes how Rome originally appealed to other peoples not only by its administrative efficiency, but also by virtue of its democratic and liberating character, its overthrow of tyranny, and its goal of making people responsible for themselves. But just at the time when Roman virtues were fading and freedom disappearing, the myth about these things was expanding. In my moments of pessimism I also anticipate that Ellul's sharp observations about Inquisition propaganda may have special application in years ahead, if they have not already done so.

## The Humiliation of the Word

Jacques Ellul,

Grand Rapids: William B. Eerdmans, 1985. xiii, 285 pp. Translated by Joyce Main Hanks from

*La Parole humiliée* (Paris: Editions du Seuil, 1981)

Reviewed by Russell Heddendorff

Professor Emeritus of Sociology,

Covenant College, Lookout Mountain, Georgia

In this book, Ellul returns to a theme first presented in *The Presence of the Kingdom*; communication loses the meaning it had in Creation as it is dominated by the technical. This is because words are humiliated as they are devalued by media and people are denied the truth they were promised. Gradually, these broken promises have led to a broken humanity.

The dominant influence of technology in our modern world has led to this confusion of reality and truth. The meaning of Creation is inverted as we come to believe that truth is found in the image rather than in the word. For this reason, we give priority to seeing the image rather than hearing the word. The result has been "the triumphal progress of the image and the regression of the word in our society."

Ellul does not intend a complete condemnation of images. Rather, his concern is for the distortion of the place images have assumed in modern communication. Words have been "humiliated" by images when they are considered necessary for the proper interpretation of the word. Thus, we affirm the belief that a picture is worth a thousand words. Although Ellul tries to distance himself from the role of a prophet, his understanding clearly anticipates the increased influence of technological control of images and, consequently, the control of people who accept the reality conveyed by the image.

Ellul claims the unique value of language lies in truth which is created by the word and is not limited by public opinion. For this reason, the word has iconoclastic and

paradoxical power while the image becomes idolatrous as it conforms to opinion. There is no mystery in the image and the Wholly Other no longer exists. Ultimately, there is a struggle between “religions of sight” and the “proclamations of the Word”, a struggle which favors the former in a culture controlled by technology.

With this struggle, Ellul returns to the important distinction he makes in his work between “created reality” (the Word) and “constructed reality” (the image.) It is a struggle between the artificiality of man’s work expressed in culture and the transcendent quality found in God’s work expressed in dialogue. And it is in the paradoxical quality of language that the Word “is true to itself when it refers to Truth instead of Reality.”

It is as “the Creator, founder, and producer of truth” that the word finds its most important expression and provides the speaker with a “call to freedom.” This freedom is possible because the second most important characteristic of the word is that it is paradoxical; it always falls outside of accepted opinion and calls that opinion into question. It is this paradoxical quality which produces the final characteristic of the word; the fact that it is mystery whenever it transcends the assumptions about God or the person and we hear an “echo, knowing that there is something more.”

Ellul reminds us that the struggle between image and word is not new; for centuries, the Church has allowed sculpture and glass to arouse religious imagination. But the intended mystery has been replaced by efficacy as images replaced the word in piety and theology. Paradoxically, the Church, as an institution, stimulated the humiliation of the word and the negation of Christian faith. With an emphasis on visible reality, “the illusion of images becomes our ultimate reference point for living.”

This illusion has become so dominant in our culture that “the image-oriented person” now relies on an intellectual process that depends more on emotion than reason. Facts are grasped because of intuition, not logic. Consequently, reality is defined in terms of the image so that “whatever is not transmitted audiovisually does not matter.”

Ellul is characteristically hopeful despite the pessimism he brings to the problem of modern communication. The image and word may be reconciled but not with any reliance on technology. Rather, there must be an iconoclastic spirit which separates the image from any claims to truth. Further, language must remain open; “it must remain susceptible of being newly filled with unexpected content.” In this way, language “permits a continual adventure.” And it is in this adventure that Ellul finds the hope that will move us to a genuinely religious dialogue of man with God.

# In Review

## **Perspectives on Culture, Technology and Communication: The Media Ecology Tradition** edited by Casey Man Kong Lum

(Cresskill, NJ: Hampton Press, Inc., 2006).

**Reviewed by J. Wesley Baker** Professor of Communication Arts, Cedarville University, Cedarville, Ohio

The thought of Jacques Ellul is most often ignored in the fields of communication and media studies. The few references to him in that literature tend to be dismissive, writing him off as a pessimistic technological determinist based upon a reading of the most familiar of his sociological analyses. It is refreshing, then, to find a group of communication and media scholars who consider Ellul to be “one of their own” and who have a good grasp of the whole of his work—sociological and religious. In this collection of essays, edited by Professor Casey Man Kong Lum of William Paterson University, Ellul is embraced as one of the seminal thinkers whose writings contributed to the development of media ecology as a way of understanding media. This embrace is not surprising when one considers that the eclecticism in sources and unorthodoxy in methodology which leave Ellul at the fringes of media scholarship mirror media ecology’s “pulling together likeminded ideas and theories from disparate academic disciplines under one roof” (pp. 22–23) in a conscious “revolt against ... the dominant paradigm in communication” (p. 25).

Lum is among a small group of scholars uniquely positioned to write and edit a volume on media ecology because of his work as a graduate student at New York University with Neil Postman (to whom he credits the naming of the approach) and his close involvement in the development of media ecology as a branch of communication studies in its own right (he was one of the five founders of the Media Ecology Association). His introductory chapter, “Notes Toward an Intellectual History of Media Ecology,” provides both an introduction to the approach and a history of its development. Since this “intellectual tradition” largely developed through the Media Ecology program at NYU under Postman, it may be unfamiliar to those who are unfamiliar with that program. Lum’s essay thus provides an important contribution in chronicling the emergence of media ecology. “This book was conceived,” Lum explains, “to give the readers a general historiographic framework for understanding some of the

issues, theories, or themes, as well as some of the major thinkers behind them that define the paradigm content of media ecology as a theory group and an intellectual tradition” (pp. 38–39).

Lum’s introduction is followed by twelve chapters that “focus on a short list of media ecology’s foundational thinkers and some of the key theoretical issues they share” (p. 39). Postman’s important contribution is recognized in a chapter that publishes remarks he originally delivered as a keynote address to the first convention of the Media Ecology Association. The next set of chapters tend to follow the same structure: provide a “brief intellectual biography” of one of the theorists, then explain the “themes or theories” of that writer and how they contribute to the media ecology tradition (p. 40). Mumford, Ellul (covered in two chapters), Innis, McLuhan, Postman, Carey, and Worf and Langer each receive this treatment. The next two chapters are more integrative as the organizing principle changes from intellectual biographies to communication epochs—Orality & Literacy and Typography. In a short final chapter, Lum describes the current state of the media ecology tradition and suggests future directions for it as a theory group.

The rationale for two chapters on Ellul illustrates the degree to which the media ecologists (unlike most other media scholars) understand Ellul’s dialectic approach. Randy Kluver of Nanyang Technological University in Singapore focuses on Ellul’s sociological works while Ellul Forum Editor Clifford Christians examines how those sociological works relate to his theological writings.

Although Kluver concentrates on the sociological works, he does not present the kind of limited reading of Ellul that comes from those who have read only those works. His explication of *la technique* and propaganda are informed by a solid understanding of Ellul’s theology and his citations include the less read works in which Ellul more explicitly describes what he is about and how his works are in interplay. While Kluver’s review will go over familiar ground for most readers of *The Ellul Forum*, it is refreshing to find such a well-informed and balanced approach to Ellul finding circulation to a wider audience. His section “Criticisms of Ellul and His Work” clearly lays out four common criticisms of Ellul and thoughtfully counters each. He points out the adverse effect the clash in methodology and orientation between the “social scientific bent” of the field and Ellul’s “humanistic, critical approach” has on an understanding of Ellul (p. 111). Kluver also rejects the characterization of Ellul as a pessimist and a technological determinist by drawing from the religious works in which Ellul argues that a “realistic” view from outside the technological system provides an opportunity for hope. Kluver is weakest in dealing with the criticism that Ellul’s negative treatments of *la technique* “don’t correspond with our positive responses to technology” (p. 111). Here he tries to extrapolate a position from his assumption that “Ellul, undoubtedly, made use of the best medical technology he could when he was ill” and that he “used the modern media system to disseminate his own writings” (p. 111). Kluver’s argument would be bolstered by some statements from Ellul that suggest a tentatively positive view of the potential of “microcomputers” and the networked communication they provide for local groups

of citizens. If networked personal computers could be used for decentralized decision-making, Ellul suggested, they could be “a tool which will allow the society to transform itself.” (Interestingly enough, Ellul makes this assessment in an interview published in *Etc.*, *A Review of General Semantics*, in 1983—when Postman was serving as editor.) Kluver’s “Suggestions for Further Exploration” provide suggestions that resonate with the Forum’s purpose of “carry[ing] forward both [Ellul’s] sociological and theological analyses in new directions.”

While Kluver provides an overview of Ellul’s thought, Christians plumbs the depths of the personal and intellectual roots that inform that thought. His essay and Kluver’s, he notes, enable “readers of this anthology to evaluate Ellul in the terms he himself has specified” (p. 119). Christians chronicles how Ellul’s conversion first to Marxism and shortly thereafter to Christianity set up the sociological and theological poles for his dialectic to be dealt with in counterpoint and never reconciled. He then develops Ellul’s “theology of confrontation” in *The Meaning of the City* (which served as a counterpoint to *The Technological Society*) (p. 120). From there Christians moves to the impact of Karl Barth’s neo-orthodoxy on Ellul, with its theme of freedom and “biblical dialectic” of “both the No and the Yes of God’s word over the world” (p. 124).

The depth of Christians’ work in human intellectual history are revealed in his discussion of Ellul’s development of *la technique* and the triumph of means. Here Christians looks to Galileo as the figure that establishes the materialist assumptions of modern science which privilege empiricism as the test of truth, severing science from philosophy and “relegat[ing] all supernaturalism to the fringes of human experience” (p. 126). Christians then develops in much greater detail what Kluver had time to only touch upon—the “revitalization” (p. 128) that a religious perspective makes possible. But Ellul’s Christian understanding of the effects of the Fall sets up yet another dialectic—between “necessity” and “freedom” (p. 131). In order to break free of the triumph of the means and necessity, desacralization of *la technique* is necessary. Once again, what Kluver introduces Christians is able to develop more thoroughly—those who “attack Ellul’s pessimism fail to realize that his vigorous desacralization is but one element in a larger perspective, the first step in a longer journey” (p. 133). Christians ties together the threads developed over the course of the essay to show how they offer a hope that such desacralization is possible through a “spiritual reality” (p. 133).

In terms of presenting an intellectual biography of Ellul, Kluver and Christians combine to provide a full and rich understanding of him. Kluver provides more of an overview and summary, while Christians develops this understanding in a way that is often limited to volumes that are dedicated exclusively to a study of Ellul. In terms of making connections between Ellul and the development of the media ecology analysis, Kluver is much more specific. Christians deals with Ellul’s connections with Mumford and McLuhan briefly (and often on general points rather than the media in particular; see esp. pp. 119 & 126–127) and provides an even briefer discussion of Postman and Innis (p. 134). Kluver, on the other hand, has a section headed “Ellul and Media Ecology” (pp. 106–110) in which he does much more to explicate the connections. He identifies

three points of connection between Ellul and McLuhan, Postman, Innis, Mumford and Ong. The first is agreement on “the ubiquity of media and its necessary degeneration into propaganda” (p. 108). The second is the common “emphasis on technology as the defining characteristic of modern society” (p. 108). The third is “the issue of the word, or the means of different technologies of communication” (p. 108), which Kluver develops in some detail. The difference in the directness of connections to media ecology is also reflected in the conclusions at which each of the two authors arrive. While Kluver bemoans the “absence of response to Ellul” (p. 114) by media scholars and suggests specific ways in which Ellul’s analysis could be incorporated into media scholarship today, Christians concludes more generally, arguing that “Ellul’s explicitly Christian framework” (p. 135) “must meet the standard of religious diversity to be credible” (p. 136).

The essays in this volume suggest the opportunity for Ellul scholars to find a sympathetic and interested audience among media ecologists. One disappointment is that that has not already occurred to a greater degree. Amidst all of the discussion of Ellul, there is only one reference to an article from the Forum—and that was an article dealing with Mumford, rather than Ellul—even though articles that could inform a greater understanding of Ellul’s thought and analysis have appeared in the Forum. Conversely, I don’t recall having read anything in the Forum that indicated the

degree to which Ellul’s ideas form a part of this school of media studies. It is to be hoped that the essays in this volume will help encourage further dialog and provoke continued scholarship that accomplishes the Forum’s goals.

## Digital Matters: The Theory and Culture of the Matrix

by Paul A. Taylor and Jan Harris  
(Routledge, 2005), 210 pp.

Reviewed by David J. Gunkel

Associate Professor of Communication,  
Northern Illinois University. dgunkel@niu.edu

*Digital Matters: The Theory and Culture of the Matrix* is one of those books where the title says everything. In the first place, *digital matters* is a deliberate oxymoron, pregnant with ambiguity. It denotes, on the one hand, a concern with the subject matter of digital technology and culture. And in indicating this, the phrase inevitably calls to mind the essential immateriality that has been the subject of so much theorizing about new media technology and computer systems. Being digital, as individuals like Nicholas Negroponte have argued, is all about a transformation from the antiquated culture and slow-moving economy of atoms—large, heavy, and inert masses—to a new

world of weightless and ephemeral bits of information that circulate through global networks at the speed of light.

On the other hand, *digital matters* can also be interpreted in a much more literal and material sense. In this way, the title names the inescapable and often ignored material circumstances (e.g. the working and living conditions of individuals involved in chip manufacturing, the unequal distribution of and access to information technology, the environmental impact of toxic waste from discarded IT components) that make the digital and its utopian promises of immateriality possible in the first place. *Digital Matters* is a book that not only plays on this double meaning but, most importantly, demonstrates how and why the material conditions of digital technology do in fact matter for all things digital. In this way, the book identifies and critically examines techno-culture's *im/materiality*, a neologism introduced by Taylor and Harris in order to name and give expression to this complex issue.

Second, the subtitle deploys and trades on the polysemia that has accrued to the word "matrix." Clearly the immediate reference for many readers will be the Wachowski brother's cinematic trilogy, not just because of the films' popularity but also because of the numerous academic books and articles that have offered interpretations of the narrative's social and philosophical significance. *Digital Matters*, although employing these popculture materials as a recognizable point of departure, does not mount a direct critical assault on the film and its interpretations. Instead Taylor and Harris address the trilogy indirectly by investigating the larger cultural and theoretical matrices that already inform, animate, and structure the im/material ideology that is articulated by this particular techno-myth.

For this reason, *Digital Matters* understands and deploys "matrix" in the full range of its multifarious meanings, including: environment that shapes, supporting structure of organic form, signal transposition, and the place of reproduction. Understood in this way, Taylor and Harris's investigation can be categorized as an innovative and more sophisticated articulation of *media ecology*, where media technology does not just frame new social environments but innovations in technology are also situated in and informed by a socio-cultural matrix that already shapes and informs technical developments. In other words, *Digital Matters* tracks down and examines both the social and cultural material in which digital technology has developed and the very real social and cultural environments that this immaterial information helps to create.

In order to get at this, Taylor and Harris marshal an impressive array of theorists, many of whom are not usually considered part of the official pantheon of cyberstudies and new media technology. Instead of concentrating on the work of self-stylized techno-theorists like Lev Manovich, Nicholas Negroponte, N. Katherine Hayles, et al., Taylor and Harris turn their critical eye toward Jacques Ellul, Martin Heidegger, Friedrich Kittler, Michel de Certeau, and Walter Benjamin. This is not just an exercise in "old school" theorizing. Instead Taylor and Harris demonstrate how these thinkers' ideas already structure our understanding of digital technology and how they might be repurposed to introduce innovative methods for critically rewiring the matrix of our

technological present. Consequently, *Digital Matters* does not simply apply, for example, Ellul's work to digital technology, but opens up a critical dialogue between Ellul's theorizing and contemporary media *praxis* that has the effect of transforming both. In the final analysis, *Digital Matters* is a remarkable book that pushes the envelope in new media theory. It should be of interest to anyone concerned with media, technology, and contemporary theory.

## **Advert: International Jacques Ellul Society**

**www.ellul.org**

P.O. Box 5365, Berkeley CA 94705, USA IJES@ellul.org Tel/Fax: 510-653-3334

The IJES (with its francophone sister-society, L'Association Internationale Jacques Ellul) links together scholars and friends of various specializations, vocations, backgrounds, and nations, who share a common interest in the legacy of Jacques Ellul (1912–94), long time professor at the University of Bordeaux. Our objectives are (1) to preserve and disseminate his literary and intellectual heritage, (2) to extend his social critique, especially concerning technology, and (3) to extend his theological and ethical research with its special emphases on hope and freedom.

### **Board of Directors**

Mark Baker, Mennonite Brethren Biblical Seminary, Fresno; Patrick Chastenet, University of Poitiers; Clifford Christians, University of Illinois; Dell DeChant, University of South Florida; Andrew Goddard, Oxford University; Darrell Fasching (Vice-President), University of South Florida; David Gill (President), Berkeley; Joyce Hanks, University of Scranton; Virginia Landgraf, American Theological Library Association, Chicago; Randall Marlin, Carlton University, Ottawa; Ken Morris (Secretary-Treasurer), Boulder; Carl Mitcham, Colorado School of Mines; Langdon Winner, Rensselaer Polytechnic Institute

Anyone who supports the objectives of the IJES is invited to join the society for an annual dues payment of US\$20.00. Membership includes a subscription to the Ellul Forum.

## **The Word of Jacques Ellul**

by David W. Gill

### **President, International Jacques Ellul Society**

"In the sphere of the intellectual life, the major fact of our day is a sort of refusal, unconscious but widespread, to become aware of reality. Man does not want to see himself in the real situation which the world constitutes for him. He refuses to see what it is that really constitutes our world. This is true especially for intellectuals, but

it is also true for all the people of our day, and of our civilization as a whole" (*Presence of the Kingdom* (1948), p. 99).

We live in a world of shadows and myths, Ellul says, oscillating back and forth between the particular and the general, both of which poles are detached from reality. On the one hand, there are particular phenomena, "facts," which come at us like a tsunami. News bites, slogans, bits and pieces of information, survey numbers, a flood of images: this is our normal environment. But it is a world of shadows because these "facts" have no connection to a past or present, and rarely are they verified by our own lived experiences and relationships. In fact, they are a distraction and substitute for lived experiences and relationships.

But people cannot navigate through this flood of images and shadows without seeking some kind of interpretive help. Our psychological survival requires it. And this is where the "explanatory myth" comes in. Ellul mentions the popular post-WWII "bourgeois myth of the Hand of Moscow" (exhibited in the American McCarthy era) and the "Fascist myth of the Jews," among others.

In today's USA, the myth of "the Liberals" (the source of all evil) is embraced by millions; the myth of the "Religious Right" is embraced by others. The myths of technological salvation, of consumer happiness, and of global free market capitalism have great power alongside the myths the advertising and entertainment industries play on. The myth provides a ready-made, simple framework for evaluating all bits of information that one encounters.

One of the most remarkable insights of Ellul's *Propaganda* is that propaganda does not just foist lies and falsehoods on its target audiences. It mobilizes its audiences to embrace and act upon accepted "facts" and the orientation of their mythologies. Propaganda plays on prejudices, it doesn't just create them.

We need to remember Ellul's challenge to the intellectual classes here: this vulnerability to drowning in shadows and being misled by myths is not just a problem of couch potato cable television watchers, Google-happy celebrity gossip addicts, and check-out counter tabloid purchasers. It is not just a problem for dazed worshippers listening to ranting Elmer Ganttrys.

Propaganda is everyone's challenge, including IJES members and friends. So Ellul writes that "the first duty of a Christian intellectual today is the duty of awareness: that is to say, the duty of understanding the world and oneself ... in their reality" (*Presence of the Kingdom*, p. 118). And this challenge is certainly not confined to Christians.

Ellul gives us a fivefold strategy to get past the blur of shadowy images and the lure of dehumanizing explanatory myths. *First*, he says, is "a fierce and passionate destruction of myths." "Myth-buster" is our first role. It's about raising critical, uncomfortable questions, questioning authority, leaving the "Amen Corner" of our own enclaves, profaning what has been exalted to sacred status in our society, and fulfilling a more critical/constructive role.

But we must not be satisfied with an exclusively negative stance and strategy. The *second* move is "the will to find objective reality, to discover the facts of the life led by

the people who surround me” (p. 119). Not shadows, not abstractions, but reality. The will not just to deconstruct and demythologize but to penetrate past the shadows and myths to reality—that’s the second step.

*Third*, this reality of our civilization must be grasped on the human level. We don’t just seek to understand what life is like for a generic “neighbor” but for our actual “neighbor Mario,” Ellul writes, a man with flesh and blood, a face and a name. The implications are very clear: let’s get out of our ivory towers and spend time with the people. Let’s get to know our actual neighbors, the people we work with, our students, even those we may think of as our enemies. Any time any of us prefers to treat a colleague through a stereotype or image, rather than actually get to know that person through two-way conversation and common experiences, we are yielding to the veil of ignorance, which begets fear, which begets conflict ...

The *fourth* part of Ellul’s counsel is to look at “present problems as profoundly as possible ... to find, behind the facts presented to us, the reality on which they are based ... the true structure or framework of our civilization” (p. 121). Ellul sometimes used the metaphor of the ocean: the surface waves can be so mesmerizing that we fail to look at the great maincurrents below which are the real drivers in the occurrence of storms and surface events.

Faithfully reading “McNews” or watching the bits or pieces of CNN/HNN, or similar activities, isn’t going to take us to the deeper awareness of social reality. Among the strategies are reading more history, seeking longer, deeper analyses of topics, learning other languages and listening to what others outside of our linguistic, cultural, philosophical, vocational enclave have to say. It’s about depth, breadth, and comparative perspectives. It takes time and reflection.

This is where Ellul’s writings have such a brilliant and unique impact: he takes us toward an understanding of the maincurrents of our civilization (concerning technique, the state, propaganda, the sacred, etc.) and also in biblical studies (dialectic, the city, money, hope, freedom, etc.).

The *fifth* element is an “engagement (or act of resolute commital” (121). We are not done when we write our books or give our speeches. We must act upon the truth in the reality of our neighborhood—or we are still part of the problem.

## Resources for Ellul Studies

**[www.ellul.org](http://www.ellul.org) & [www.jacques-ellul.org](http://www.jacques-ellul.org)** The IJES web site at [www.ellul.org](http://www.ellul.org) contains (1) news about IJES and AIJE activities and plans, (2) a brief and accurate biography of Jacques Ellul, (3) a complete bibliography of Ellul’s books in French and English, (4) a complete index of the contents of all *Ellul Forum* back issues; and (5) links and information on other resources for students of Jacques Ellul. The new French AIJE web site at [www.jacques-ellul.org](http://www.jacques-ellul.org) is also a superb resource.

### **The Ellul Forum CD: 1988–2002**

The first thirty issues of *The Ellul Forum*, some 500 published pages total, are now available (only) on a single compact disc which can be purchased for US \$15 (postage included). Send payment with your order to “IJES,” P.O. Box 5365, Berkeley CA 94705 USA.

Back issues #31 — #36 of *The Ellul Forum* are available for \$5 each (postage and shipping included).

### **Cahiers Jacques Ellul**

*Pour Une Critique de la Societe Technicienne*

An essential annual journal for students of Ellul is *Cahiers Jacques Ellul*, edited by Patrick Chastenet, published by Editions L’Esprit du Temps, and distributed by Presses Universitaires de France. Send orders to Editions L’Esprit du Temps, BP 107, 33491 Le Bouscat Cedex, France. Postage and shipping is 5 euros for the first volume ordered; add 2 euros for each additional volume ordered.

Volume 1: “L’Annees personnalistes” (15 euros)

Volume 2: “La Technique” (15 euros)

Volume 3: “L’Economie” (21 euros).

Volume 4 (forthcoming): “La Propagande” (21 euros).

**Jacques Ellul: An Annotated Bibliography of Primary Works** by Joyce Main Hanks. Research in Philosophy and Technology. Supplement 5. Stamford, CT: JAI Press, 2000. xiii., 206 pages. \$87. ISBN: 076230619X.

This is the essential guide for anyone doing research in Jacques Ellul’s writings. An excellent brief biography is followed by a 140-page annotated bibliography of Ellul’s fifty books and thousand-plus articles and a thirty-page subject index. Hank’s work is comprehensive, accurate, and invariably helpful. This may be one of the more expensive books you buy for your library; it will surely be one of the most valuable. Visit [www.elsevier.com](http://www.elsevier.com) for ordering information.

### **Librairie Mollat—new books in French**

Librairie Mollat in the center of old Bordeaux ([www.mollat.com](http://www.mollat.com)) is an excellent resource for French language books, including those by and about Ellul. Mollat accepts credit cards over the web and will mail books anywhere in the world.

### **Alibris—used books in English**

The Alibris web site ([www.alibris.com](http://www.alibris.com)) lists thirty titles of used and out-of-print Jacques Ellul books in English translation available to order at reasonable prices.

### **Used books in French:**

#### **two web resources**

Two web sites that will be of help in finding used books in French by Jacques Ellul (and others) are [www.chapitre.com](http://www.chapitre.com) and [www.livre-rare-book.com](http://www.livre-rare-book.com).

### **Reprints of Nine Ellul Books**

By arrangement with Ingram and Spring Arbor, individual reprint copies of several Ellul books originally published by William B. Eerdmans can now be purchased. The books and prices listed at the Eerdmans web site are as follows: *The Ethics of Freedom*

(\$40), *The Humiliation of the Word* (\$26), *The Judgment of Jonah* (\$13), *The Meaning of the City* (\$20), *The Politics of God and the Politics of Man* (\$19), *Reason for Being: A Meditation on Ecclesiastes* (\$28), *The Subversion of Christianity* (\$20), and *The Technological Bluff* (\$35). *Sources and Trajectories: Eight Early Articles by Jacques Ellul* translated by Marva Dawn is also available (price unknown).

Have your bookstore (or on-line book dealer) “back order” the titles you want. Do not go as an individual customer to Eerdmans or Ingram/Spring Arbor. For more information visit “Books on Demand” at [www.eerdmans.com](http://www.eerdmans.com).

### **Ellul on Video**

French film maker Serge Steyer’s film “Jacques Ellul: L’homme entier” (52 minutes) is available for 25 euros at the web site [www.meromedia.com](http://www.meromedia.com). Ellul is himself interviewed as are several commentators on Ellul’s ideas.

Another hour-length film/video that is focused entirely on Ellul’s commentary on technique in our society, “The Treachery of Technology,” was produced by Dutch film maker Jan van Boekel for ReRun Produkties (mail to: Postbox 93021, 1090 BA Amsterdam).

If you try to purchase either of these excellent films, be sure to check on compatibility with your video system and on whether English subtitles are provided, if that is desired.

"We must try to create positions in which we reject and struggle with the state, not in order to modify some element of the regime or force it to make some decision but, much more fundamentally, in order to permit the emergence of social, political, intellectual, or artistic bodies, associations, interest groups, ... totally independent of the state, yet capable of opposing it, able to reject its pressures as well as its controls, and even its gifts. These organizations must be completely independent, not only materially but also intellectually and morally, i.e., able to deny that the nation is the supreme value and that the state is the incarnation of the nation. "

-Jacques Ellul

*The Political Illusion* (1965; et 1967), p. 222

## Information on The Editorial Board & More

**The Ellul Forum**

**For the Critique of Technological Civilization**

**Founded 1988**

The Ellul Forum is published twice per year, in the Spring and Fall. Its purpose is to analyze and apply Jacques Ellul's thought to our technological civilization and carry forward both his sociological and theological analyses in new directions.

**Editor**

Clifford G. Christians, Univ. of Illinois, Urbana Associate Editor

David W. Gill, Berkeley, California

## From the Editors

In this issue of the *Ellul Forum* we barely scratch the surface of a large arena for study: Jacques Ellul on politics and the state. While Ellul is rightly known best for his work on technique/technology, the topic of politics and the state is never far from sight.

*The Political Illusion* is his best known analysis of modern politics and its illusions. *The Technological Society* had a major section on “Technique and the State,” of course. The volumes on propaganda, revolution, violence, and the sociology of religion all address politics and the state at length from one angle or another. The untranslated, multi-volume *Histoire des Institutions* demonstrated Ellul’s profound grasp of the history of political ideas and institutions.

*The Politics of God, the Politics of Man* was Ellul’s primary biblical study of politics, focusing on II Kings in the Hebrew Bible. But *Apocalypse, Meaning of the City*, and other theological-biblical writings often addressed political topics as well.

Ellul’s ethical and other writings emphasize the threat of a growing, technicized state and political milieu. The first task is to understand this reality and dispense with rhetoric and illusions. What is at stake is nothing less than our humanity, individuality, and freedom. For a Christian, the challenge is to recover one’s identity as prophetic ambassador of another way of life and truth—and reject all forms of this-worldly political illusion, nationalisms, etc.. And for everyone, it is to recover a life outside the state, outside ordinary politics. Anarchism is the only sufficiently radical strategic position to take, Ellul argues.

We remember Ellul’s oft-repeated point that his purpose was to provide his readers with some assistance in figuring out the meaning and direction of their own existence in the world; there is no “Ellulian” orthodoxy in politics. Ellul also loved the Christian theme of “incarnation”—that God comes into a given historical milieu, “appropriates” aspects of the situation, then creates a dialectical contradiction, and finally “expropriates” aspects of the old into a greater new reality.

We are grateful to AIJE President (and IJES Board member), University of Poitiers Professor of Political Science, Patrick Chastenet for his masterful lead article in this issue. Four colleagues offer their personal reflections on how Ellul has affected their politics; and we re-view four of Ellul’s important political books.

Next issue (Spring 2007) our focus will be on Ellul’s ethics. And we will return to the political topic by 2008.

*Clifford G. Christians, Editor editor@ellul.org*

*David W. Gill, Associate Editor IJES@ellul.org*

# The Political Thought of Jacques Ellul A 20<sup>th</sup> Century Man

by Patrick Troude-Chastenet

*Patrick Chastenet is Professor of Political Science at the University of Poitiers, founding President of the Association Internationale Jacques Ellul (www.jacques-ellul.org), editor of the annual review Cahiers Jacques Ellul, and author or editor of several books on Jacques Ellul. This article was translated from the French by Eugenia A. Tumanova*

We'll start with the banal suggestion that political thought cannot be understood without considering the context which gave rise to it. In the case of Jacques Ellul, this context was at once rich and tragic. The fact that he was born in Bordeaux, on January 6, 1912, might be of interest only to historians. Still, it is tempting to point out that the author of *The Technological Society* was born six months prior to the sinking of the largest ship in the world, considered unsinkable! In its effect on public opinion, the *Titanic* catastrophe, which claimed 2,196 lives, could be easily likened to a kind of aquatic 9/11. The shipwreck occurred at a time when blind faith in technological progress prevailed and was soon to experience its first gory disillusion. As for the rest, Ellul would be witness to two World Wars, the 1929 economic crisis, the Paris riots of February 6, 1934, the Spanish Civil War, the Popular Front, the German Occupation, the Holocaust, the French Resistance, Liberation and purge trials, the Cold War, the French Fourth Republic, the crisis of May 13, 1958, Gaullism in French government, May 1968, the list goes on.

What else should we note, as we probe deeper for elements that may have defined his relationship to political thought, which for now we will temporarily refer to as “detachment through action”<sup>1</sup>?

Since his high-school days, Ellul retained a strong aversion to xenophobic nationalism, the brutal effects of which he saw first-hand. His “cosmopolitan” roots — son of a French-Portuguese mother (*ne* Mendes) and an Italian-Serbian father born in Vienna — made him immune to the virus of nationalism which reigned in those days. At the Law Faculty, where the great majority of his fellow students sympathized with the far right and demanded “France for the French!,” his individualism let his disagreement show. Jacques Ellul had been involved with minority movements since the early 1930s, since by that time he was already engaged in the personalist movement (more on that later). He found himself on a search for a middle path between American-style liberal individualism and mass-produced “political soldiers,” branded Fascist or Communist, resulting in his well-known decision to never join the ranks of the French Communist Party.

---

<sup>1</sup> Patrick Troude-Chastenet, *Lire Ellul. Introduction a l'oeuvre socio-politique de Jacques Ellul*, 1992, p. 185.

The great economic crisis plunged his family into poverty. In fact, the first time Ellul heard about Marx was at the university in 1929. For young Ellul, Marx's work, which he read voraciously, provided a theoretical explanation for his father's unemployment: capitalism as a factor in crises, a condemnable regime condemned by history. With great enthusiasm, he read *The German Ideology* and established contacts with communist workers which, to his great disappointment, turned out to be more preoccupied with the party line than with Marxist hermeneutics. Thus, Ellul became "Marxian," not "Marxist," in his thinking method. Moreover, he always insisted that Marx was the one who asked the good questions and that he owed a great part of his intellectual development to him (along with Kierkegaard and Barth).

Despite never having joined the Communist Party, he often joined militant socialists and voted for the Popular Front during the 1936 legislative elections (the one and only time in his life he voted). Together with his spouse Yvette and likeminded Bordeaux natives, he helped the Spanish republicans procure weapons, even though he disapproved of the "internal" strife, which pitted the Anarchists against the Communists.

Under the Occupation, when the Strasburg Faculty was moved to Clermont-Ferrand, Ellul criticized Petain. He was denounced to the French police by one of his students, but was ultimately dismissed by the Vichy government because of his father's status as a foreigner under a law that sought to "Frenchify" the French civil service<sup>2</sup>. On his return to Gironde in the summer of 1940, he settled in a small village to do subsistence farming and prepare for university instructor examinations in Roman law. He also aided the Resistance efforts. He hid escaped prisoners and Jewish families in his house, supplied false documents, served as a mailbox for Gironde resistance fighters, and as a guide to the demarcation line located nearby. He maintained contact with the *Combat* movement, whose motto he liked: "From Resistance to the Revolution."

With the Liberation, he presided over several trials of collaborators and worked to keep the purges from leading to any excesses. He was a member of the Bordeaux city council, presided over by the socialist Fernand Audeguil. This experience lasted just six months, from October 1944 to April 1945, but it is essential for understanding his perception of politics. His brief involvement with the Bordeaux city hall permanently left him with the belief that elected officials were at the mercy of "committees," and that political professionals were powerless in the face of technocrats, the influence of the civil service, and the experts. This conclusion explains his frequent absences from public city council meetings (the important decisions were being made elsewhere and earlier!) and his militant abstentionism (what was the point of voting in a system where elected officials did not govern and in which citizens could not exert any control over the decision-making system?).

Although he refused to be on the list of socialist candidates in municipal elections in the spring of 1945, Ellul actively participated in the October 1945 general elections.

---

<sup>2</sup> Jacques Ellul's paternal grandfather was born in Malta and Joseph, Jacques' father, held a British passport.

That was the one and only time when he participated in “politician” politics! He was third on the list of candidates from the Democratic and Socialist Union of the Resistance<sup>3</sup>. He was completely committed to this electoral campaign. The results were not commensurate with the effort he expended. The UDSR won less than 5% of the cast votes and not a single deputy seat. At 33 years of age, he watched helplessly as the old parties of the Third Republic returned to power. This experience left him with a profound sense of defiance vis-a-vis politics, and would later lead him to refuse to be a running mate of Jacques Chaban-Delmas during the Bordeaux city elections of 1947. However, in reality, his distrust targeted (political) power in general, leading him to decline the post of prefect in the Nord department of France. Ultimately, Ellul would choose an oblique path, one he had already picked during his personalist years.

### **Personalism of the 1930s**

Ellul’s political thought was deeply influenced by two movements/reviews: *Ordre Nouveau* and *Esprit*. Far from being simple provincial clones of the non-conformist intellectuals in Paris, Ellul and his friend Charbonneau would lead a third trend within the personalism movement. This “Gascon” approach was resolutely half-way between the *Ordre Nouveau* and *Esprit* approaches. When Alexandre Marc writes that Christianity is “the source of all revolutions,” Ellul can only acquiesce, which does not mean that the “Bordeaux group” would not make its own voice heard over the personalist hubbub of the 1930s.

This third kind of personalism sought a path between liberal individualism and collective tyranny, between capitalism and totalitarianism. These young bourgeois revolting against the “established disorder” were keenly aware of their position as a “minority within an aged society.” Ellul and Charbonneau seemed to be marginal in a movement that in itself was very much a minority. They met Mounier in Paris in 1933 and decided to merge their little group with *Esprit*. With time, they moved closer to the leaders of *Ordre Nouveau* and had a falling out with Mounier in 1937, caused by the latter’s centralist authoritarianism and uncompromising Catholicism.

What distinguished them was their belief that the political process is rendered powerless by science and technology: what Bernard Charbonneau called the “Great Shedding” [“la Grande Mue”] and Ellul “Technique.” At twenty years of age, they already had that fundamental intuition that would tie together their entire body of work. The two friends would come to represent the most individualist, libertarian, regionalist, federalist, and above all, the most environmentalist faction of the personalist movement. They sought to develop an appreciation of nature in the most concrete sense of the word, to protect diversity, to create households that can lead autonomous lives but remain connected to others through networks.

How? By organizing camps in the Pyrenees. By encouraging regional encounters and building horizontal connections between these small selfmanaged groups. These camps,

---

<sup>3</sup> The UDSR was created in June 1945 to unite noncommunist elements of the Resistance. Francois Mitterrand is one notable member.

placed in the natural environment, demonstrated defiance towards Parisian centralism and were the first practical implementation of that winning slogan: “Think globally, act locally.” They stressed the “carnal” aspect of the revolution. They condemned contrived escapes, individual judgment yielding to that of the “crowd” conditioned by propaganda. The authentic revolution must start “inside each individual,” revolution of oneself and together with others, a permanent revolution. To change the political regime, first “start by changing people’s lives.” The true struggle is spiritual in nature, and the political dimension is secondary.

Therefore, the “necessary revolution” does not happen by taking power at the helm of the State, but through the creation—at the local level—of small, self-managed groups, federated amongst themselves. Functioning like counter-societies, within a global society, these exemplary small groups would embody the new social order that needs to be built and would serve as a testament, here and now, to the immediate revolution. Bit by bit, like a contagion, a beneficial virus or a universal *patch*, this from-the-ground-up network would be capable of extending itself beyond national borders destined to disappear off the face of the earth.

Utopian? Nonetheless, from here on Ellul would advocate “down to earth” political realism and daily resistance to the fatalities of modern society. “It is when revolution becomes impossible that it becomes necessary,” affirmed Denis de Rougemont. This vision is summarized in a 1935 text cosigned by Ellul and Charbonneau: “Directives for a Personalist Manifesto.” This manifesto expounds the thesis that made Ellul famous in the United States thirty years later: the powerlessness of politics in the face of the supremacy of technology.

### **The Primacy of Technique**

Differences between political regimes are secondary to the universality of technique. Fourteen years before Heidegger’s first lectures on the subject, Ellul already thought that technique and not politics was now at the “heart of things.” The ends intersect, even while the means diverge! Heidegger’s work included metaphysical questioning of the essence of modern technique, the *Gestell*, the framework, while Ellul proposed a sociological description of the traits of the technical system based on the construction of a Weber-style ideal type.

Technique gives rise to a society characterized by its “fatalities” and its “gigantism”<sup>4</sup>. The fatality of war: technology renders death banal! The fatality of Fascism: the fruit of the marriage of economic liberalism and technology. The fatality of inequality between different levels of production caused by technological progress and urbanization. Gigantism, signifying the concentration of production, capital, the State, and the population. In the modern city, nature’s primary needs are replaced with even more oppressive (in-)human constraints. “When man resigns to living in a world not built on a human scale, he is dispossessed of all sense of measure.” Put the economy at the service of

---

<sup>4</sup> P. Troude-Chastenet, « Jaques Ellul: une jeunesse personaliste », *Revue Francaise d’Histoire des Idees Politiques*, n° 9, 1<sup>st</sup> semestre 1999.

mankind, not vice versa! Starting from the mid-1930s, Ellul thinks of technology as a general process and not simply an industrial tool symbolized by the use of mechanization. The Ellulian concept of technology had already gone beyond a simple critique of mechanization as found in Duhamel's *Scenes de la vie future* (1930) and in less grotesque form in Aron and Dandieu, *Le cancer americain* (1931). According to Ellul, technological progress brings about widespread proletarianization, which goes beyond the one-dimensional economic analysis offered by Marx, and affects *all* people as well as *all* aspects of their life. As he will show later in *The echnological Society* (1954; ET 1964), technological progress is characterized by its ambivalence, not by its ambiguity. Technique is ambivalent because it frees as much as it alienates. It creates problems as soon as it resolves them and it feeds off itself through the solutions that it brings. What autonomous growth means is that in the context of a technical society, all human problems are transformed into technical problems and technique creates new problems for which humans try to systematically find technical solutions.

Gradually, Ellul would refine his own definition of technique but *The Manifesto* can be used to not only verify the prophetic aspect of Ellulian theses but also to show that, from the beginning, he was opposed not to technique itself, but to its autonomy. He recommended “reorienting technique” so that difficult tasks could be carried out by the “collective sector” in the form of “civil service.” His definition of technique—“the search for methods having absolute efficiency in every field of human activity” —belongs to a historian doubling as a sociologist, not a philosopher. This also means that Ellul is not Heidegger and that he was not opposed to Technique for ontological reasons.

Not only would it be belittling to just call him a “technophobe,” but it would also mean refusing to take into consideration the diachronic aspect of his work. In the mid-1930s, was it not Ellul who maintained that technique, which contributed to the rise of Fascism, could also work in the opposite direction and become an instrument of liberation?<sup>5</sup> This point of view was reaffirmed in 1982: “I kept showing that technique was autonomous; I never said that it could not be mastered.”<sup>6</sup> Ellul explained how microcomputing provides self-management and council theories with the material means they seek. This new technique could be used to freely coordinate the free work of small self-managed groups which could lead to the creation of alternative networks and the institution of an authentic local democracy.

From the 1930s to the 1980s, reaffirming the primacy of technique over politics remained a constant: “Purely political movements are outdated” (1935). “Politics in its current form has no effect on technique and is perfectly predetermined” (1982). Ellul's thought remained faithful to itself while continuing to perpetually evolve. The adversaries of *Changer de revolution* (technophobes that were more Ellulian than Ellul himself) and those who looked at his work piecemeal, to make it easier to fossilize

and to caricature its author as a reactionary writer, did not admit or understand this aspect of him. Which is why the historical element is so important!

### **From Hitler's Victory to Newfound Hope?**

Historically, the combination of totalitarianism and technological power gave rise to the Moloch State. We should never overlook the fact that Ellul was the direct witness of the advent of the Italian Fascist state and of Nazism (before the war he had even attended a Nationalist Socialist meeting in Germany) and was a contemporary of the Communist dictatorships. With regard to technique and the State, Ellul adopted a comparable point of view: "Technique does not enslave us; rather, it is the sacred that is transferred to the technique" (1973). Without the sacred, without this process of divinization that paralyses our critical sense, technique could be made to serve human development. "The State does not enslave us, nor does the police state or the centralized state; rather, it is its sacramental transformation that makes us worship this amalgam of bureaucracy."

For better or for worse, just thirty years later, in 1973, mankind would adore the State, but this assertion should be reinterpreted in light of the paradoxical proposition according to which, ultimately, "Hitler won the war." This statement, at least mildly troubling, coming from a direct

witness doubling as a historian, should not be taken lightly. This is not a statement out of context or a misprint! This observation was first formulated in 1945, then repeated in two successive editions of *The Political Illusion*, and reaffirmed once more in 1987, in *What I Believe*: "Far from disappearing following the victory over Hitler, the Nazi model has spread across the entire world." To say that, is to say that the defeated had literally corrupted the victors. By choosing power, by opting for total war, to fight evil with evil, democracies perverted themselves by betraying their vital principles. Is it irreversible?

"The law of politics is efficiency. The one who wins is not the best, it is the strongest. In a technical world, efficiency becomes the only criterion for government legitimacy." Ellul concludes that in order to resist competition, "one must adopt the adversarial system...Hitler won the war after all!" Hitler showed the way to sacrifice man to the Moloch State, "this was his Satanic mission in the world."<sup>7</sup> To defeat him, the Allies used his own methods. His military undoing masked his political and moral victory. We are inexorably moving toward dictatorship (absolute power of the State, the primacy of the technicians) and toward universal totalitarianism.

In 1945, Ellul saw no political or technical means to stem this movement, which does not mean he advocated apolitism, "the telltale sign of a prefascist mentality." On the contrary, according to him, "what democracy begins in provoking a distaste for politics, a dictatorship brings to completion by eliminating this preoccupation altogether." This somber, if not desperate, vision should be put in perspective by juxtaposing it with another from 1982, found in the last chapter of *Changer de revolution*: "Toward an end

---

<sup>7</sup> J. Ellul, "Victoire d'Hitler?", *Reforme*, June 23, 1945, N°14.

of the proletariat?" Undeniably, here he gives the impression of opening a door, when his entire life he was reproached for being the prophet of misfortune, a pessimist puritan contemptuous of technological progress and modernity in all its forms. A puritan who, by the way, insisted that it was possible to work just two hours per day for thirty years! After having shown how the technical society produced new forms of proletarianization — in addition to Marx's proletariat there was an

"impoverished proletariat" (unemployed, immigrants, fringe elements) and a "cultural proletariat" (the whole population with the exception of the technical aristocracy) — Ellul maintained that not all was lost.

The essence of socialism, that is to say the abolition of the proletariat and the end of alienation, remains the permanent objective, despite the adulterated means used to achieve it until now. Despite the mockeries of it in existence around the world, "socialism is the only possible political direction." But not just any kind! Not that of the regimes, not that of the socialist parties. He wants an ascetic socialism, founded on want and the refusal of the power of technique; socialism of freedom, which is revolutionary at the same time. Ellul is aware that here he is using concepts emptied of their meaning, having devoted two of his works to them, and this chapter provoked rancor and disappointment among many of his readers! Despite it all, he observes the transformations within the technical system and within socialism. In particular, what can politics still do to counter technique?

### **Politics in Technical Societies**

What are the consequences, in the political arena, of the search for efficiency at all costs, of the primacy of the means over the ends? What outcome is provoked by the combination of the existing political system and technical power? In the technical society, people believe technique is serving them and are serving it instead. Modern people have become the instruments of their instruments. The means has been transformed into the end; necessity has been elevated to a virtue! We live not in a "post-modern" society, but in a "technical society," a society where a technical system has established itself. This living society tends to increasingly blend in with the "technical system": the product of the union between technical phenomenon and technical progress. But it should be noted that for Ellul, the technical society cannot be reduced to a technical system and there are tensions between the two. The technical "system" is to the technical society what cancer is to the human organism. The existence of these tensions is what keeps hope alive that change is possible... change that is radical but which would not take the ways of political illusion, meaning, those of traditional politics! He concludes with an anarchist-inspired: "To commit oneself is to indenture oneself"<sup>8</sup>. Partisan political activism has deeper roots in sociological coagulation than in personal liberty.

In the technical society, politics is based on the Necessary and the Ephemeral. Those governing bustle about to preserve the appearance of initiative, which in reality is

---

<sup>8</sup> "L'engagement, c'est la mise en gage", J. Ellul, *L'illusion politique*, 1977, p.239.

left to the experts. With marked Weberian undertones, Ellul condemns the rendering useless of politics through the use of bureaucracy. He observes the inversion of the democratic model where the administration was subject to the authority of elected officials, and where efficiency is now the only criterion for legitimacy. The technical society also confuses the political and social. Everything is political but politics are only an illusion! Politics has supplanted religion; the modern State has taken the place of God! “Everything is politics” expresses both “the ideology and this reality” where the entire social body is absorbed by politics. This politicization of society necessarily leads to State totalitarianism.

The State is totalitarian by its essence, no matter what its form! “The State regulates all aspects of people’s lives and decides what is true; it assumes all the functions. It penetrates to the most profound aspects of our consciousness... and it defines what Good is ”<sup>9</sup> State power is made more absolute by the fact that it refuses all constraints, whether legal or moral. In fact, not only is the State not subject to Law but it manipulates law as it sees fit.

This systematic defiance towards the State is one of the principal constants of Ellulian discourse. In a technical society, popular sovereignty is but a myth and universal suffrage becomes incapable of selecting good governments and keeping control over their actions. It is also an illusion to believe that people have control over their representatives, just as it is an illusion to believe that elected figures can exert control over the administration and the experts. The technical State is totalitarian by nature, independent of its legal or institutional form and its ideological or political outer skin. At night, it all looks the same! This has been a recurring theme in Ellul’s work since the 1930s... This explains his (relative) indifference to the East/West conflict, his refusal to pick one form of dictatorship over another, because *all* regimes pursue identical ends: efficiency and power. In other words, the combination of the modern State and the technical ideology makes politics illusory and also dangerous. Still, far from making a plea in favor of apolitism—just as illusory—which would only reinforce the grip of the State, Ellul’s message seeks to rehabilitate the virtues of a personal resistance to Leviathan. For mankind, existing is resisting! Therefore, we should build up the “tensions”—one of the key words in the personalist discourses—and encourage tensions against all attempts at social integration. He concedes that he is reinventing democracy which “has disappeared a long time ago.” And this is where we come to one of the most problematic aspects of his relationship with politics.

We can only agree when he insists on the intrinsic fragility of democracy: it is a formidable perpetual conquest, not a “normal, natural, spontaneous regime.” But then, although he had always called for a down-to-earth political realism, he repeats the same error as all idealists since Rousseau: due to his exceedingly demanding vision of democracy, he abandons the idea of distinguishing between its empirical manifestations—admittedly imperfect—and perfectly totalitarian regimes. Instead of admitting with

---

<sup>9</sup> J. Ellul, *Exegese des nouveaux lieux communs*, 1966, p.110.

R. Dahl that democratic doctrine has a potentially—because never fully realized—revolutionary dimension, or instead of stressing like C. Lefort its essentially indeterminate character, its permanent invention, its structural incompleteness, Ellul seems to believe that polyarchies, or pluralist democracies, are masked dictatorships. Even modern democracy itself is found lacking in his eyes!

In reality, what Ellul is very deeply opposed to is violence contained in all forms of political power, including when this violence claims to be legitimate, like that of the modern State according to Weber's realist definition. He would have none of it from either the great German sociologist or from Leon Duguit, the Dean of the Law Faculty in Bordeaux. Ellul refused violence as a specific means, as *ultima ratio*, not only of the State but of politics in general. Politics which, as Weber reminds us once again, has power as its only stake; politics which obeys merciless laws that are dangerous to ignore as an actor and naive to deny as an observer.

Ellul insisted on the catalytic role of the Christians, on this unique role of a sheep among the wolves. Ellul advocated not only non-violence, but also non-power, and he could have never shared Weber's admiration for the character in the *Florentine Tales* that declared that those who preferred the grandeur of their City to the salvation of their souls, should be congratulated. In reality, having turned his back on Weber, Ellul is even further from another illustrious realist: Machiavelli.

For Ellul, it is absolutely impossible to create a just society with unjust means. Evil shall not beget Good, and same goes for politics. Why? Simply because he had placed his faith, once and for all, in the Wholly Other, in the Unknowable, in the revelation of God in Jesus-Christ. For those who find it convenient to ignore the theological side of his work, let us remember that Ellul himself referred to his Christian beliefs in some of his sociology books<sup>10</sup>. Thus, we need to look further in his system of values if we wish to shed light on his relationship with politics. As the authors of *Melanges* justly observed: "The concept of totalitarianism as applied to all States has no meaning for Ellul except in relation to a religious belief."<sup>11</sup>

## The Theological Explanation

The metaphysical backdrop to Ellul's political thought takes us in two contradictory directions. We can focus equally on the hostile and pejorative description of this aspect of social activity or on the opposite, the positive role played by Christians in the modern world. This caricature-like vision of politics reduced to all that is underhanded and vain, was put into words during two colloquia and in Ellul's *A Meditation on Ecclesiastes*. "In the Western world of today, politics is the incarnation of the most profound evil." It is "the place of demons, the place of lies, and place of power" (1979). These statements

---

<sup>10</sup> Cf. for example the last pages of *Changer de revolution*. Op. Cit.

<sup>11</sup> E. Dravasa, C. Emeri, J-L. Seurin, *Religion, societe et politique, Melanges en hommage a Jacques Ellul*, 1983, p.XIII.

echo others from a year earlier: “the essence of politics remains the same, and I say that in today’s world, in these times, it is demonic.”<sup>12</sup>

The modern man finds himself caught in-between. To take refuge in apoliticism, is to accept the State as one’s destiny; by losing interest in politics, one plays the game of “the demonic divination of the State.” Plunged into militant activism, he is surrounded by rivaling ideologies, that of the “diabolos” of the New Testament or the “divisor”, and accentuates “diabolical politics.”

## Terrorism and Politics

In the same way that the works of Marx could be re-read with the knowledge of the Gulag, Ellul tries to interpret the nature of modern politics through the prism of terrorism in Europe of the 1970s. The terrorists and their methods were not diabolical, by themselves, but politics brought it out of them. Terrorism unveiled what politics had become, here and now. Terrorism expresses absolute hatred of absolute power. Because State power tends toward absolutism the means to fight it cannot remain relative. The political enemy is considered to be like the religious incarnation of Evil. The refusal to discriminate among potential victims is the consequence of identifying the social body with the political body. Everyone is guilty! Collective responsibility, of the class, the race, or the nation! “Over time the indiscriminate moral or theoretical accusation of all necessarily turns into the execution of anyone, for lack of means to kill everyone.” Any means are good as long as they are efficient! Terrorism is but a somewhat more brutal expression of the collective credo. “If we recoil in horror before terrorism, we should recoil in horror before our entire politics.”

With *La raison d’être*, we leave the limited scope of the colloquia for what appears to be, to all appearances, the general conclusion of his work<sup>13</sup>. After having spent 50 years of his life examining texts that were rich in meaning, but all too often laconically simple, he picked his words for a final bouquet. And so, what does Qohelet say of political power? That power is always absolute, power is always power, whatever the constitutional form might be, power brings nothing new, and the adage “*vox populi, vox dei*” is not a lie. Power is nothing but malice, injustice, and oppression! The further one goes up the power hierarchy, the worse the people are. Chapter V starts with a long chain of tyranny described by La Boetie in the *Discours de la servitude volontaire*. Power of one man over another makes him unhappy. “The foolishness was placed at the highest summits.” Vanity, oppression, foolishness! “*All power* is thus qualified—without reserve and without nuance!”<sup>14</sup>

But, though Ellul had fully integrated the radical pessimism of the Ecclesiastes, he draws no conclusions with respect to human power to invite his readers to turn back

---

<sup>12</sup> J-L. Seurin notes that in a democracy politics is not reduced to a desire for power but it is also searching for an equitable order in P. Troude-Chastenet, *Sur Jacques Ellul*, 1994.

<sup>13</sup> J. Ellul, *La raison d’être, Meditation sur l’Ecclesiaste*, 1987.

<sup>14</sup> Op. Cit. p. 84. Italics from Ellul.

from the political path. He only considers it as absolute and relative and stresses that this is not the path to freedom! This is the thesis that he defends in *The Politics of God, the Politics of Man*<sup>15</sup>. The Church is not a spiritual affair and the politics is not devoid of interest for the Christian or for the modern man. Politics is even where the greatest affirmation of man's desire for autonomy manifests itself. The Christian, therefore, should neither become disinterested in it nor make it his chief preoccupation.

The position of Christians in the modern world is necessarily revolutionary. According to Ellul, the despair of modern man arises primarily from the fact that he no longer hears the promise of salvation and recapitulation; the purpose of Christians is precisely to announce the "good news." Thus, Christians are irreplaceable in this world. On one hand, they cannot make this world less sinful; on the other hand, they also cannot accept it as it is. They must permanently live with this tension! Salt of this earth, light of this world, the sheep among the wolves, Christians are the living sign of God's "politics." They must be God's ambassador and be the prophet of the return of Christ<sup>16</sup>. Christians are revolutionary for saving the world whose logical course leads inexorably towards suicide. They belong to two Cities that can never coincide. They are active in this world and at the same time are citizens of another kingdom. All the human solutions are temporary and marked with sin; Christians find themselves in a permanent revolutionary state, because they must tirelessly renew the divine demand, which is to try to bring a bit of freedom into the society in which they live. They are like leaven: a substance that determines the fermentation of another substance without being changed by the process.

With respect to politics, the role of Christians is that of a catalyst. They also play the roles of watchmen, sentries, as Ezekiel shows<sup>17</sup>. They are tasked with warning people, and they will be condemned if they do not fulfill this mission. The sentry is called to look for signs where the natural man only sees events. The Church is there to light the way and give direction to the human adventure, not to reproduce the divides found in traditional politics, nor to allow itself to be absorbed into the social body. Instead of behaving like a reactionary force faced with a progressive government or like a revolutionary force faced with a conservative regime, the Church must stand out by insisting on the decisive, but uncontested, point: the universal worship of power.

The Christian relationship with politics is characterized by a dialectical contradiction between taking politics seriously and also acknowledging its absolute and relative nature; between respecting the authorities and taking revolutionary action at the same time. From the Christian point of view, Ellul condemns liberal capitalism the same way he does apolitism, just as he had done in his secular writings.

What is really at stake is the ability to exercise choice, since no political Christian doctrine founded on the Revelation exists! The Christian does not need to look for

---

<sup>15</sup> J. Ellul, *Politique de Dieu, politiques de l'homme*, 1966.

<sup>17</sup> J. Ellul, *Les combats de la liberte*, 1984.

theological legitimacy for his partisan engagement. The key is that he serves as witness to the word of Christ by being present among people, without forgetting that one cannot serve two masters at once. During periods of intense politicization, he must contribute by putting politics in perspective, not to devalue it, but to cleanse it. The Christian's role is that of reconciliation and resolution, which he fulfills by refusing passion, hate, and exclusion. Ellul thus calls for a demystification and de-ideolization of politics, for finding an adversary behind the enemy, and a neighbor behind the political adversary. *If* democracy is the recognition that politics are relative, that competing viewpoints are valid, that power should be limited, minorities respected, *then* this regime offers a Christian a greater possibility for expressing his liberty in Christ.

But, as we have already noticed in his sociological writings, Ellul calls for revolution because he does not consider polyarchies as authentic democracies. This call seems to be a leitmotiv: "In order to save the world, an authentic revolution is now necessary" (1948), "the Christian attitude in the face of History is necessarily revolutionary" (1950), "the duty of every Christian is to be revolutionary" (1969). Although, to be sure, the meaning of this word as penned by Ellul does not refer to either the theology of freedom or any communist or conservative revolution.

### **"Necessary" Revolution & Ascetic Socialism**

A close evaluation shows that for Ellul, the actor and the observer, the Christian and the scientist, become one! Faced with the "established disorder" the revolution is urgently needed<sup>18</sup>. Since their "Directives for a Personalist Manifesto" in 1935, Ellul and Charbonneau proposed the creation of a personalist society within the global society. In light of the impending self-destruction of the current society, this counter-society will prepare the leaders of tomorrow. Its members, who must maximally limit their participation in the technical society, will be guided by a new mentality inspired by a different life style.

This daily behavior, a true incarnation of the doctrine, will be the only external sign of this engagement. A revolution without uniforms, banners, or flags! Elective communities would replace large urban centers. Within these small groups of volunteers, the individual could feel he is rooted somewhere, and in this "city on a human scale," authentic politics, founded on direct communication between those who govern and those who are governed, would exist in full transparency. Federalism alone can be used to fight against "gigantism" and "universalism," or the triumph of a single model of society. The "large countries" will be divided into sovereign, "autonomous regions," to the detriment of the central State, which would only carry out the simple functions of providing council and arbitration. The federal structure will enable both greater

---

<sup>18</sup> The term "the necessary revolution" already appeared in the work of Aron and Dandieu, *Décadence de la nation française* (1931) before being used as the title of their crowning work published in 1933.

internal participation of the citizens and, by reducing the power of the states, it will reduce the risk of armed conflicts. Technique would be used to reduce time spent on work and the race for growth.

This text precedes essays on political ecology of the 1970s (Illich, Castoriadis, Schumacher) centered around the principle of “voluntary austerity,” and the more recent writings from the supporters of *decroissance*, or “de-growth/reverse growth.” While the idea of reducing time spent working is a topic that is already relevant to the left’s ideological universe, here the ecological aspect dominates the view of the whole.

For example, Directive 61 provides for control of technique intended to hamper certain types of production “the growth of which would be useless from the human point of view.” This text very openly affirms that economic growth is not synonymous with personal development and closes with a call in favor of building an “Ascetic city where people could live...” Here, a “free vital minimum” is available to all and a “minimum of balanced life” for everyone, both material and spiritual. In addition to the idea of “universal allocation”, this text contains two classic elements which will later constitute the ecological argument: defense of the quality of life and the principle of social solidarity. “Man is consumed by the intense desire for material pleasure, and for certain others to not have this pleasure.”

Isn’t it hard not to think of theories that would later examine the concepts of the consumer society and the dual economy? One should also note the process of productivism in a period of global crisis where France’s industrial production was still much lower than its 1928 levels. Their idea of the “ascetic city” focuses on the qualitative and anticipates the notion of “voluntary austerity” currently developed by supporters of “degrowth.” Consume less to live better! This text cannot be disqualified for being the product of youthful thinking, because the same ideas inspire works written later in life, like *Changer de revolution*. In this major work, Ellul, conscious of using tired terminology, nonetheless advocates for a “revolutionary socialism of freedom” and pins his hopes on small self-managed groups. “Various fringe elements, apolitical ecologists, separatists, feminist movements, Christians seeking to restore themselves, new hippies, spontaneous communities” to which he adds certain intellectuals, “would permit” us to leave behind the two socialisms that have failed.<sup>19</sup>

Ellul explicitly inscribes his revolutionary project in the affiliation of non-violent anarchism, revolutionary socialism, and the word of Christ. He simultaneously castigates the vacuity of political activism in any form and also condemns mystical withdrawal. On one hand, he affirms that awareness is a necessary stage but not sufficient for effective change (he laughs at those who claim “internal freedom”), on the other hand, he elevates contemplation to the position of the only authentic revolutionary attitude. On one hand, he exhorts Christians to become involved in the revolutionary enterprise, and on the other, he condemns movements rooted in the theology of freedom by reminding us that the Second Coming should not be confused with the proletarian

---

<sup>19</sup> J. Ellul, Op. Cit. p.245

revolution and that the biblical condemnation of Mammon cannot be reduced to the anti-capitalist struggle.

Ellul puts the person at the center of his thought, in conformance with his anarchist convictions and secular view, and with his Christological perspective and theological view. In conclusion, it matters less whether Ellul should be labeled a Christian anarchist or an anarchist Christian, but to understand that his way of being both Christian *and* anarchist at once perfectly illustrates the permanent tension that drives his work and his life. Perpetually doing a balancing act, ever the eternal foreigner, the incarnation of otherness, an anarchist among the Reformed and a Christian among situationists, on the fringes of his own church, and alone among the minorities Politics

should be taken seriously and, at the same time, be kept in perspective. Political illusion is reprehensible in the same way as blissful apolitism. Politics must be desacralized. Ellul invites us to make our detachment visible in action, which is to say, do not stay away from the struggles of the City, just keep your distance!

## Jacques Ellul on Politics & the State

From the political, social, and human points of view, this conjunction of state and technique is by far the most important phenomenon of history. It is astonishing to note that no one, to the best of my knowledge, has emphasized this fact. It is likewise astonishing that we still apply ourselves to the study of political theories or parties which no longer possess anything but episodic importance, yet we bypass the technical fact which explains the totality of modern political events, and which indicates the general line which our society has taken ...

*Technological Society* (1954; ET 1964), p. 233.

The transformation of the state and the consequent predominance of technicians involves two elements: First, the technician considers the nation very differently from the politician. For the technician, the nation is essentially an affair to be managed ... All that the technician can take into account is the application of his instruments—whether in the service of the state or something else is of small importance. For him the state is not the expression of popular will, or a creation of God, or the essence of humanity, or a modality of the class war. It is an enterprise with certain services which ought to function properly. It is an enterprise which ought to be profitable, yield a maximum of efficiency, and have the nation for its working capital...

The second element ... is the progressive suppression of ideological and moral barriers to technical progress. The old techniques of the state were a compound of purely technical elements and moral elements such as justice... It therefore imposes limits on the pure technique of private persons... But when technique became state technique, when technical instrumentalities passed into the hands of the state, did the state adhere to its old wisdom? Experience must answer in the negative. The techniques, to

which the state opposed checks when they were in the hands of private persons, became unchecked for the state itself. There is no self-limitation in this respect.

*Technological Society* (1954; ET 1964), pp. 263–6.

Finally, technique causes the state to become totalitarian, to absorb the citizens' life completely. We have noted that this occurs as a result of the accumulation of techniques in the hands of the state. Techniques are mutually engendered and hence interconnected, forming a system that tightly encloses all our activities. When the state takes hold of a single thread of this network of techniques, little by little it draws to itself all the matter and the method, whether or not it consciously wills to do so.

*Technological Society* (1954; ET 1964), p. 284.

The modern western technical and scientific world is a sacral world the modern sacred is ordered

entirely around two axes, each involving two poles, one pole being respect and order, the other transgression. The first axis is that of "technique/sex," the second is the "nation-state/revolution" axis

The nation-state is the second ordering phenomenon of our society. That and technology are the only two...

That the state is one of the sacred phenomena of this age seems hard to dispute... The state is the ultimate value which gives everything its meaning. It is a providence of which everything is expected, a supreme power which pronounces truth and justice and has the power of life and death over its members. It is an arbiter which is neither arbitrary nor arbitrated, which declares the law, the supreme objective code on which the whole game of society depends...

Finally, this sacral status will be carried to the summit, to the point of incandescence, through the fusion of the state with the nation to form the nationstate.... the state is taking the nation in hand It

resolves all national problems. Conversely the nation finds its expression only in a powerful state, which is the coordinator if not the centralizer and the orderer. The fusion is complete. Nothing national exists outside the state, and the latter has force and meaning only if it is national.

*The New Demons* (1973; ET 1975), pp. 70–71, 80–83.

It is a stereotype in our day to say that everything is political... Politization is represented by the importance and growing frequency of ideological debates; and it is manifested by the tendency to treat all social problems in the world according to patterns and procedures found in the political world...

The essential element that must be taken into consideration if we want to understand the *total* phenomenon of politization is a fact that is, if not the cause, at least the moving force of this phenomenon. The fact is the growth of the state itself... The nationstate is the most important reality in our day.

*The Political Illusion* (1965; ET 1967), pp. 8–9.

In fact, values no longer serve us as criteria of judgment to determine good or evil: political considerations are now the pre-eminent value and all others must adjust

to them... For example, women finally become human beings because they receive “political rights.” ... A person without the right (in reality magical) to place a paper ballot in a box is nothing, not even a person. To progress is to receive this power, this mythical share in a theoretical sovereignty that consists in surrendering one’s decisions for the benefit of someone else who will make them in one’s place.

*The Political Illusion* (1965; ET 1967), pp. 16–17.

The idea that the citizen should control the state rests on the assumption that, within the state, parliament effectively directs the political body, the administrative organs, and the technicians. But this is pure illusion...

When we talk of a president, ministers, or an assembly, we have not yet said anything, for the state has become a vast body, dealing with everything, possessing a multitude of centers, bureaus, services, and establishments

A modern state is *not* primarily a centralized organ of decision, a set of political organs. It is primarily an enormous machinery of bureaus. It is composed of two contradictory elements—on the one hand, political personnel, assemblies, and councils, and, on the other, administrative personnel in the bureaus—whose distinction, incidentally, is becoming less and less clear.

*The Political Illusion* (1965; ET 1967), pp. 138–41.

We are therefore in the presence of the following dilemma: either we must continue to believe that the road to solving our problems is the traditional road of politics, with all sorts of constitutional reforms and “revolutions” of the Right and the Left—and I have already demonstrated that all that no longer has any significance, but merely represents shadow-boxing—or we turn away from the illusory debate and admit, for example, that public liberties are but “resistances,” admit that for man “to exist is to resist,” and that, far from committing oneself to calculating the course of history it is important above all never to permit oneself to ask the state to help us.

*The Political Illusion* (1965; ET 1967), pp. 221–22.

I have long affirmed the anarchist position as the only acceptable stance in the modern world. This in no way means that I believe in the possibility of the realization and existence of an anarchist society. All my position means is that the present center of conflict is the state, so that we must adopt a radical position with respect to this unfeeling monster.

*Jesus and Marx* (1979; ET 1988), p. 156n.

Christians allow themselves to be taken in by the prevailing vogue. They see everybody expressing their own ideas, so why shouldn’t they do the same? That’s all right, as far as I am concerned, only let them be less pretentious about it, less authoritative, less inclined to expect everyone to follow in their wake. And let them not claim to be representing Jesus Christ! ...

[I]ncompetence, evident in writings and proclamations, is even more apparent in encounters with the Christian who is actively involved in a party or union. His beginner’s training is usually very deficient, both from the point of view of biblical theology and

from the point of view of politics and economics. But once he is involved the situation becomes worse, for participation in politics is very fascinating and absorbing.

*False Presence of the Kingdom* (1963; ET 1972), pp. 155–7.

Naturally it is better to run a city well than badly. If a Christian has a hand in this and is a good administrator, that is all to the good. But any person can be a good administrator. Being a Christian is no absolute guarantee that one will be a better politician or administrator. Seeking the good of a city is not a specifically Christian thing

Christians are needed in all parties and movements. All opinions should have Christian representatives... If ... Christians take up different positions knowing that these are only human, and having it as their primary goal to bear witness to Jesus Christ wherever they are, their splitting up into various movements, far from manifesting the incompetence of Christian thought or the inconsistency of faith, will be a striking expression of Christian freedom.

*Ethics of Freedom* (1973; ET 1976), p. 379.

# How Ellul Influenced My Political Thought and Behavior

## Four Personal Reflections

### Mark Mayhle

*Mark Mayhle is a physician and former Boeing engineer in Seattle, who thanks another Boeing engineer, Arek Shakarian, for introducing him to Jacques Ellul.*

The year was 1980. I was 22, a newlywed and finishing up graduate school. The Carter “malaise” was under assault from the Reagan “optimism.” My father, nothing if not a patriotic American, was an administrator in a nearby school district and for a number of years it had been his responsibility to run the annual campaign for the district’s tax levy request. Under Washington law this required a supermajority of 60% to pass, and failure could be devastating to the afflicted district. Some years earlier, his district had passed their levy with *exactly* 60% of the vote—a single “yes” vote fewer would have doomed them to larger class sizes, loss of music and athletic programs, God knows what. So when he asked if I was planning to vote in the upcoming presidential election, it was mutually understood to be fraught with his passionate belief in the import of every individual vote. I replied to the effect that there was not a candidate I felt I could in clear conscience support. His somewhat sarcastic and largely rhetorical rejoinder was, “So, do you think *nobody* should vote?”

I thought for a moment and then answered, “Well, I don’t think it’s *necessarily* a sin to vote.” Needless to say, Dad was not amused. Regrettably, he passed away two years later, and we never had occasion to revisit the issue in any depth. But 26 years on, largely thanks to Jacques Ellul, I am inclined to stand by this offhanded and somewhat flippant remark of my more callow self. It was a few years after this episode that a friend loaned me *Jesus and Marx*, launching what I anticipate to be a lifelong engagement with Ellul’s thought. Intrigued as I was by that work, it was a few passing references to anarchism, even the seemingly-oxymoronic “Christian anarchism,” that especially piqued my interest.

When *Anarchy and Christianity* appeared in translation at the local bookstore a few years later, I was not disappointed. Ellul had given substantive articulation to my inchoate political philosophy. Here was (to me) a convincing argument that *choosing* not to vote could be, if not “responsible” in the Niebuhrian sense, certainly a faithful

response to the incredulity toward worldly power structures so evident in the teaching and example of Jesus (and, for that matter, of the apostle Paul.) This was reinforced by an encounter around the same time with the work of John Howard Yoder, and the combination resulted in a quiet conversion from the conservative evangelicalism of my youth to an Anabaptist orientation. That urban Mennonites too often these days seem to fall captive to what passes for the liberal wing of the current American political mainstream perhaps serves as a prudent reminder that no “ism” is ever truly our home, but that’s a story for another place and time.

## Randal Marlin

*Professor Randal Marlin teaches in the communication/media program at Carleton University, Ottawa, Canada.*

Ellul has certainly had an important and continuing influence on my political views, but it is hard to characterize this influence in definite terms. When I first encountered Ellul’s ideas in the 1970s I had already been deeply immersed in civic activism. Our project had been to tame traffic in an older central residential area of Ottawa in order to reverse the decline of the neighbourhood. I had also been teaching existentialism and the debate between Sartre and Camus on violence was very much on my mind, inasmuch as the FLQ (Front de Liberation du Quebec) crisis involving a kidnapping of the British Trade Commissioner and murder of a Quebec Liberal cabinet minister in 1970 was part of recent Canadian history.

On just about any of the politically-oriented topics Ellul has dealt with, I find strong congeniality with my own views, but I frequently find some sticking point that stops me from wholeheartedly accepting the position he appears to be supporting. So, for example, I think I have more optimism than he has shown about the ability of democratic processes to deliver acceptable solutions to societal problems. I do not consider myself an anarcho-syndicalist. But I do agree (as mentioned in my re-view of *The Political Illusion*) that the process alone is not sufficient and must be supplemented by an alert and organized citizenry. I also support whole-heartedly the need to respect political opponents and to try to understand their points of view in a spirit of co-operation rather than hostility.

I have always been critical of some aspects of Sartre’s political philosophy, even while approving of his struggle against discrimination and colonial oppression. But I was taken aback somewhat by the vehemence of Ellul’s attack on Sartre in one of his lectures at the EUP (Institut d’Etudes politiques) in 1979–80. Likewise, in “FLN Propaganda in France during the Algerian War,” he wrote about Sartre: “Knowledge of these matters was of particular importance in an affair of this kind: the Algerian question was extraordinarily difficult, and it was a person unqualified in this area who decided on a whole orientation of essential propaganda.” This assessment of Sartre’s lack of historical awareness was confirmed in my own mind when I read an article in

which Sartre gave his support for the FLQ. I thank Ellul for reinforcing in my mind the need for careful assessment of factual realities before supporting a political cause, however attractively worded the cause may be.

Post-independence developments in Algeria have amply vindicated Ellul's position, and Sartre later conceded that Camus had been right on the issue of violence and Algerian independence.

I have found in Ellul a useful counterpoise to Sartre on other points as well. Both have freedom as central components of their ethical philosophy. But Sartre's vision of the human is egocentric, while Ellul's is other-and God-oriented. While Ellul guards against complacency, over-optimism, and disguised selfseeking, in the end his vision is hopeful and encouraging for those bent on making a political contribution to their community, in whatever form they choose to make it. I take from Ellul a very human-oriented political attitude, distrustful not only of myth-supported enslaving institutions, but also of threats to freedom that supposed liberators may bring along with their alternate set of myths.

## Sharon Gallagher

*Sharon Gallagher is editor of Radix Magazine (Berkeley CA). She interviewed Jacques Ellul at his Bordeaux home in 1988.*

Jacques Ellul's *The Meaning of the City* changed the way I view politics. The Christian subculture I grew up in was apolitical—as part of a general stance of suspicion and separation from “the secular culture,” years before Evangelicals began wielding political power.

By the time I was living in Berkeley in the 1970s I'd become politicized and was passionately opposed to the Vietnam war. But reading *Meaning of the City* transformed my understanding of citizenship. My political stance at that time was mostly “anti”—anti-war, anti-racism, anti-sexism, anti-nuke, etc. *The City* gave me a sense of dual citizenship that that called for a positive response—working for the “welfare of the city.”

One of Ellul's main texts for *Meaning of the City* was Jeremiah 29, which contains an exhortation to Israelite exiles living in Babylon. It concludes: “But seek the welfare of the city where I have sent you into exile, and pray to the Lord on its behalf, for in its welfare you will find your welfare.”

Here's part of Ellul's commentary on the text: “We are clearly told to participate materially in the life of the city and to foster its welfare. The *welfare*, not the destruction. And the welfare of the *city*, not our own. Yes, we are to share in the prosperity of the city, do business in it, and increase its population ... We must make it beautiful, because it is a work of man. And because it is such, God looks down even on it with love.” (p.74)

In a city like Berkeley with its own foreign and domestic policies (the city council recently voted to impeach George W. Bush) the distinction between local and national issues isn't always clear. But it's often on a local level where we can actually make a difference—making sure that the poor can find places to live, that trees are planted, that all the old, beautiful buildings aren't torn down and replaced by strip malls.

Ellul's exposition of Jeremiah's text is rich. It addresses the individualism that marks American political and religious life—we're to seek the *common* good. We're to care about quality of life and to work toward it. This is a welcome antidote to the dispensationalist view of a doomed world that doesn't really matter. The question is not whether or not we'll be "left behind" but what good we're going to do while we're here.

## John Gwin

*John Gwin lives in Beloit, Wisconsin, where he does some building security and maintenance work while pursuing his interests in language and culture.*

Jacques Ellul is for me a witness of the Truth and of the power the love of God in Christ. All of his many works, both the theological and the scientific or sociological served as profound testimony of God's faithfulness and remind me that faith in Christ is a solid foundation for life today. In a sterile age of science and technology, here was a writer who courageously explored every aspect of this world and our frantic life in it. He saw, and explored the darkest, most terrifying realities and seductive falsehoods of modern life in his sociological writings, and through his many studies of the Hebrew Scriptures elaborated many instances in which God breaks into our world precisely where we have bricked up the doors and windows to keep God out. Ellul credited faith in God with permitting him to rigorously explore and question humanity's commonplace assumptions and to consider fearful realities.

In reading the work of Wm Stringfellow, I came across the forward that he had written to Ellul's English edition of *The Presence of the Kingdom*. I took to heart his recommendation to read Ellul and am thankful that I did.

In *Presence of the Kingdom*, he emphasizes the vital but neglected work of the Christian layman in preserving the world by resisting the temptations to simply follow the world's agenda of action, action and more action. When we neglect wisdom, study of Scripture, discernment and prayer guided by the Holy Spirit we fail to fulfill our God-given calling. In reference to the "terrible triumph of the Nazi spirit that we see everywhere in the world today," Ellul writes, "We have conquered (in WWII) on the material level, but we have been spiritually defeated. Christians alone could wage the spiritual conflict: They did not do so. They did not play their part in the preservation of the world." (p. 25) Quoting Paul in Colossians 4:5–6 and Ephesians 5:15–17, he finds "...an astonishingly living suggestion for the study of the situation of the Christian in the world .placed, as we might say, at the vital point, as a link between conduct

and preaching (or one's witness), between good works, the fruit of wisdom, and the knowledge of the will of God (p. 26), (which confronts us both as judgment and as pardon, as law and as grace, as commandment and as promise, (and) is revealed to us in the Scriptures, illuminated by the Spirit of God. P. 27)

Ellul saw the will of the world as "a will to death, a will to suicide," which we must not accept and which we must act to prevent. We are "obliged to understand the depth and the spiritual reality of the mortal tendency of this world; it is to this that we ought to direct all our efforts, and not to the false problems which the world raises, or to an unfortunate application of an 'order of God' which has become abstract; if we act thus we understand that the work of preaching necessarily accompanies all the work of changing material conditions.

"Thus it is always by placing himself at this point of contact (between the will of the Lord and the will of the world), that the Christian can be truly 'present' in the world, and can carry on effective social or political work, by the grace of God." (p. 28,29)

Early on, I read Ellul's *Violence*. My miserable cynicism concerning war and violence and the nation was turned on its head, and I was left to rethink my and my generation's capture by the multiple layers of propaganda flooding our world.

His *Violence* deals with the issues of war and peace and faith and illusion, and the church's tendency to conform to the ideologies of the time, whether they be the royalist, nationalist, leftist anti-war, or rightist pro-war ideology. Ellul also exposes various misunderstandings of the gospel such as the identification of the publicans and harlots with the "poor" and the Pharisees with the "rich." The assumption that the politically correct "poor" are the only poor, forgetting the misery of those who are scorned for their position in society. Also one of the most remarkable lessons I learned from this work in regard to violence is that "whatever its milieu, its motif, its basis or orientation, idealism always leads to the adoption of a false and dangerous position. The first duty of a Christian is to reject idealism." (p. 125)

If I had to personally sum up the impact of Ellul's work, it would be "Relief of Misery." His works, both sociological and scriptural in focus, resulted for me in a renewed comprehension of Biblical Faith and Hope in the midst of the world. Ellul's *Presence of the Kingdom* delineated a coherent and sensible explication of the call of a believer in this world so confusing to me. His *Violence* helped me see more clearly in the fog of the over-simplifications born of the various propagandas obscuring the complex issues of the Vietnam War. His as yet untranslated *Jeunesse Delinquant* describing the work of a club for "unadapted" street youth in Bordeaux gave a respectful portrayal of their lives and outlined the methods used to enable them, without patronizing them, to find their own way forward in a life that had been one of genuine misery.

# Re-Viewing Ellul

## The Political Illusion by Jacques Ellul

New York: Alfred A Knopf, Inc., 1967 and Random House, Vintage Books, 1972.  
Original edition *l'Illusionpolitique* (Paris: Robert Laffont, 1965).

Reviewed by Randal Marlin

*Carleton University, Ottawa, Canada*

Forty years ago Konrad Kellen gave the American public a fine translation of *The Political Illusion*, along with an insightful introduction. This work builds upon Ellul's earlier *Technological Society* and *Propaganda*. A central question here is: How can a conscientious citizen in a modern democracy contribute to good government? Those with technical expertise can be expected to look out for their own special interests, not necessarily the public good. Withstanding corruption requires proper checks and balances. But this requires the appropriate knowledge, and who will supply that?

Ellul commonly devotes the bulk of his energies, in his social and political writings, to trenchant diagnosis of social problems. He points the way to solutions, but is careful above all not to encourage complacency. He sounds the alarm, saying in effect: beware the fancy imagery of democracy, behind which the mechanisms of tyranny may be crafted.

Passage of time has shown Ellul to be prescient. Certainly in the United States the Watergate debacle, the Iran-Contra dealings, and the current deceptions of the administration of President George W. Bush to bring his country and a coalition into war with Iraq, followed by use of torture and rights violations of detainees, surveillance of U.S. citizens without court authority, and the like, all reinforce the main claims in this book.

Central among these claims is the idea that uncritical faith in democratic processes, such as the party system and elections, to provide us with good government, is misplaced. The idea that such processes will guarantee democracy is undermined by awareness that votes are valuable only to the extent voters are informed. Once it becomes clear that government, technocrats and co-operative media shape the information and imagery reaching the public, the idea that the ordinary voters are the real determinants of political becomes very dubious.

Upton Sinclair and, more recently, Noam Chomsky have presented us with similar insights, but Ellul goes further in locating the problems as having their source in

popular attitudes and in the dominance of myths concerning progress, happiness, and the ability of the right technique to solve our problems.

The true source of democracy, for Ellul, lies in the attitudes of the people. "A personal conscience," he writes, "... is the only thing that can save both democracy and what is real in political affairs." (204) Enemies of democracy can be found even among those who profess to favour it. These enemies are fanaticism on one side, and inertia, leading to opting out of politics, on the other. You can't have genuine democracy without a deep-set respect for the opinions and aspirations of others, including minorities within the larger society.

The idea that happiness will be guaranteed if only we can get people to adjust and adapt to majority views, and if we can maximize material comforts, is one of those myths that emboldens political powers to intrude in the private sphere to encourage uniformity. Ellul refers here to Bernard Charbonneau (to whom he dedicates this book) and what Charbonneau calls the "lie of liberty," namely, liberty conceived as offered to the individual on a platter by a benevolent society. By contrast, "There is no liberty except liberty achieved in the face of some constraint or rule." (211) The aptness of the Saint-Just quotation at the front of the book makes itself felt here: "The people will fancy an appearance of freedom; illusion will be their native land."

Among the many wry observations about Bush's failed (as is currently acknowledged even by original supporters) Iraq war is that the supposed exporters of democracy were simultaneously undermining it at home. The recent November election switched the congressional power from Republicans to Democrats, but it remains to be seen whether much can now be done to reverse the beginnings of civil war there. What good is an election when the die, in the form of a quagmire, has already been cast?

Ellul thinks that unity in a political system means that life has gone out of it. Tension and conflict form personality, "not only on the loftiest, most personal plane, but also on the collective plane." I see a resemblance to Emmanuel Levinas and the latter's perception that the goal of ataraxy conflicts with the obligation to respect the otherness of the other. To avoid disturbances to our tranquillity we would like to make others the same as ourselves. But one only has to look at Canadian history and the effect of Lord Durham's goal of assimilating the French Canadians to see what enduring resentments this attitude can cause.

Ellul is conscious of writing largely from the experience of France since Louis XIV, but he need not apologize for thinking his ideas might have larger application. Centralizing forces exist the world over, and they need to be kept in check. He thinks it important to permit the emergence of social, political, intellectual, artistic, religious and other groups, totally independent of the state, "yet capable of opposing it, able to reject its pressures as well as its controls and even its gifts." (222)

He thinks these organizations and associations should be able to deny that "the nation is the supreme value and that the state is the incarnation of the nation." He allows that there is a risk in reducing the central power but sees this as "the condition of life."

Ellul wrote before the arrival of the Internet. We have seen that the ability of the centralized powers in the United States to shape opinion by false imagery failed spectacularly in the attempts to make war heroes out of Jessica Lynch and Pat Tillman — the latter former professional football star having been in fact a victim of “friendly fire.” Contrary credible evidence circulating through Web sites such as Truthout, Common Dreams, PRWatch and the like was sufficient to force the image-makers to backtrack.

But there is no guarantee that the freedom exercised by those Web site operators will continue indefinitely, and we can expect battles in this area as well as on other fronts, such as the attempts to force television stations that show government video news releases to acknowledge their provenance in a way that will minimize their deceptive propensities.

The trouble with illusions is that they are comforting, and if our vision of life is to maximize comfort, why bother attacking them? One reason is that illusions can lead to political mistakes which can have most uncomfortable outcomes. Another reason, though, is that other goals and conditions of a good life include such things as such as honesty, freedom, integrity, and respect for the Other, and these are incompatible with the pertinent illusions.

We have to be willing to engage in political life and work for our desired goals, but always in such a way as to preserve our respect for the freedom and dignity of others, even when our goals collide. “We should forever be concerned with the means used by the state, the politicians, our group, ourselves.” (238) We also have to track down those stereotypes and myths in our own thinking so as to free ourselves from them, for as long as they exist “no freedom or democratic creativity is possible.” (240) Coming from Ellul, the message is not new, but time and events (including dire environmental forecasts) have merely reinforced its urgency.

## Autopsy of Revolution

Jacques Ellul

New York: Knopf, 1971

Original edition *Autopsie de la Revolution* (Paris: Calmann-Levy, 1969)

Reviewed by Andy Alexis-Baker

Associated Menonite Biblical Seminary, Elkhart IN

In this book Ellul delves into history arguing that until the 18<sup>th</sup> century revolt had been conservative and opposed to political and social change. These upheavals revolted against unbearable situations resulting from increased state functions. As such, revolution (or revolt) reacted *against* the expected course of history and usually wanted to restore a previous situation.

Then came the French Revolution which changed traditional revolt in two ways: a future oriented outlook and belief in the state as the bearer of freedom. The aristo-

cratic leaders envisioned a utopian society which a scientific outlook would bring about. Inspired by the French Revolution, Karl Marx made revolution part of history's evolution. Thus revolution became normalized and predictable. All that was needed were the right techniques to predict the conditions under which the masses would explode and to direct the explosions into seizing control of the state, which under the direction of new management would take on a totally new character: communist.

Ellul argues that in reality the state has its own internal logic and structure so that those who think they can control the state are under an illusion, instead that logic and structure controls the revolutionary. Revolution, rather than decreasing state power, has increased the state's reach. The dehumanizing, rationalized gaze of the state has penetrated into every area of life. It is state power, more than colonialism or class conflict, that truly threatens human freedom. Here Ellul becomes relentless in his attack on every aspect of the nation-state.

Ellul suggest that the alternative to state fetishism is a revolution invoking "direct personal responsibility" (282). Much contemporary discourse is still based upon the notion that where real "politics" or action occurs is in the impersonal machinery in Paris or Washington D.C. Ellul, however, insists that the only real thing is the person—spiritual, physical and mental. Call it anarchism, personalism or situationism (Ellul uses all these terms while recognizing differences), the idea is the same. Real change happens where people begin to take responsibility. For Ellul modern electoral democracy attempts to tame the inherent anarchy and unruliness contained in democracy.

Ellul does not call for traditional individualism. He makes clear how statism and the technological society *create* individuals who are incapable of making decisions that run against nationalist or technological ends. Yet because of his polemic against a herd mentality, he fails to make clear that rootedness and loyalty to a certain type of community helps individuals become whole persons, without which the lures of the technological society quickly overwhelm. For me—a Mennonite—Ellul's failure to place individuals in community is inexcusable. The state is primarily about creating individuals without attachment to healthy community and loyalties that make it possible to fight the technological society. At times Ellul seems to forget that while the great Fascist and Communist regimes depended upon massive public support, our own democracies depend upon mass apathy and individualization.

Despite his failure to name types of community that resist state expansion and the technological society, this book is valuable for *Ellul Forum* readers to re-read. The dominant emphasis from the *Ellul Forum* has been the pitfalls of the technological society. Yet Ellul insists, "Any revolution against the perils and the bondage of technological society implies an attempt to disassemble the state" (268).

Ellul's claim that the state is the object of revolution is also true for advocates of nonviolent techniques. Gene Sharp and others tout the great "nonviolent revolutions," but using Ellul's outlines it is best to point out that this is just another vulgarization of the word. No revolution has occurred in any Western nation since Ellul's book. What happened were in-house regime changes. No Western "revolution" has success-

fully dismantled the state and the technological apparatus (the Zapatistas in Chiapas, however, come closer to Ellul's vision).

Finally, if a future edition of this book were printed, it would benefit from a critical apparatus and an index. Ellul mentions and discusses numerous names, places and movements that North American readers cannot understand without editorial footnotes. Despite these flaws in the apparatus of the book, the content remains relevant for those of us concerned about the expected course of history. Ellul's call is for revolt against this dark future looming over us. And it remains as dark as Ellul ever predicted it would be.

## False Presence of the Kingdom

Jacques Ellul

New York: Seabury, 1972

Original edition, *Fausse presence au monde moderne*

(Paris: Les Bergers et les Mages, 1963)

Reviewed by Virginia W. Landgraf

American Theological Library Association, Chicago IL

*False Presence of the Kingdom* is a critique of certain kinds of Christian political activity as failing to live up to Christians' true calling. This failure has theological and sociological dimensions. Ellul goes into both aspects in more depth elsewhere. He admits that the book is best understood in the context of *The Political Illusion* and his work on Christian ethics (later published as *To Will and To Do* and *The Ethics of Freedom*). Also, the distinction between truth and reality, not fully elaborated until *The Humiliation of the Word*, is helpful for understanding this book, as is the image from *Apocalypse* of the Word of God (the white horse) providing counterpoint to the forces of history (the other three horses) in Rev. 6:2-7.

At this period in his thought, as developed in the essay "Rappels et reflexions sur une theologie de l'Etat," Ellul allows a legitimate role for political authority (not necessarily the abstract state) as administrator of common patrimony. Thus its responsibilities are within the realm of reality (visible, measurable results, accomplished by power); it goes beyond its bounds if it arrogates to itself the realm of truth (values and ultimate human destiny, communicated by personal words, the precondition for which is freedom). How far one agrees with Ellul's arguments depends largely on how far one agrees with his opposition between freedom and power. Legitimate political authority is in an awkward position: it needs to have a modicum of power over reality (in terms of administrative results), but it should not become possessed by that power, lest it give that power ultimate status, shut out freedom, and claim that reality is truth. Such legitimacy may be a chimera, since, as he states in *The Humiliation of the Word*, when we see reality we want to have power over it.

Once those presuppositions are clear, *False Presence* is the story of Christians grasping at reality instead of listening for truth. Ellul uses examples from the French Reformed Church in 1962. Although the “hot issue” was Algeria, the scenarios are familiar. Polarizing issues seem urgent, and a political solution is demanded. Christians on either side claim that their faith demands these reforms. Ellul thinks that such moralization is irrelevant to the actual world faced by political actors. Because politics is based on power, which is opposed to freedom, political action cannot make decisions based on values. And when Christians plunge fully into politics, they fail to speak a transcendent word because they are co-opted into the world’s assumptions: that increased technical power is an improvement; that the state can cure social ills; etc. Co-optation fails to provide the tension which Ellul thinks is necessary for a society to avoid entropy and have the resilience to meet challenges (an argument from secular information theory used in *The Political Illusion*). Therefore, Ellul thinks that this kind of Christian social action functions as the opiate of the people (Marx), “provid[ing] ideological and moral satisfactions to those who are in fact *incapable* of changing the situation” (49, ET 51). Theologically, identification of Christian living with political action betrays the biblical witness about the perils of political power and loses the dialectic between the “already” and the “not yet” of Christ’s lordship. Christ is by rights Lord over creation, and his resurrection is the first fruits of his triumph over death, but the prince of death is still the evident ruler of this world.

However, Ellul denies that withdrawal from the world is a Christian option. As in *The Ethics of Freedom*, he identifies specific tasks for Christians in the political realm. Among them are long-term thought about likely future problems; dialogue with political actors on their own terms, showing them the consequences of their positions; and involvement in political organizations on all sides, as people *relatively* committed to causes, ready to risk reconciliation and dialogue. Such practices do not require being convinced of the total opposition between freedom and power. Their presupposition is that legitimate administration of the reality we all face should be capable of long-term, self-critical, reconciling thought and action.

## Anarchy and Christianity

Jacques Ellul

Grand Rapids: Eerdmans, 1991.

Original edition *Anarchie et christianisme* (Lyon: Atelier de creation libertaire, 1988)

Reviewed by Don Surrency

University of South Florida

*Anarchy and Christianity*, in title alone, is undoubtedly controversial and contentious. However, in this book, as is common in all of Ellul’s work, we find a theological analysis of society and religion that still warrants evaluation nearly 20 years

after publication. This retrospective critique of *Anarchy and Christianity* will offer a brief summary of Ellul's argument, followed by a critique, and then concluded with some general remarks regarding the usefulness and importance of Ellul's theory in light of contemporary culture.

Ellul believed that the attacks on religion commonly launched by anarchists, which accuse all religions of leading to violence, are accurate. However, he makes the curious assertion that "the revelation of Christ ought not to give rise to a religion...the Word of God is not a religion..." (26). Ellul argues that the true Christian faith is not adhering to dogmas or doctrines, but trusting in Christ. Thus the Christianity that is present in the world is merely the "sociological and institutional aspect of the church...not the church." (10).

It is this position, fully articulated in his earlier work, *The Subversion of Christianity*, which serves as the premise for Ellul's critique of society and the Church, and his belief that the true political spirit of the Christian Bible, is a spirit of anarchy. This argument is based on the exegesis of various narratives found in the Hebrew Bible and the New Testament that demonstrate the anarchist sentiment found at the core of Christianity. While this is not the proper place, nor is there adequate space, to engage in a hermeneutical critique of Ellul's idiosyncratic exegesis, it is important to note that his interpretation of Jesus as the silent anarchist who portrays "irony, scorn, noncooperation, indifference, and sometimes accusation" (71) in regard to political authority, probably would not be met with agreement in mainline Christianity.

It is in the distinction between "the true Christian faith" and the socio-historical Christian faith where Ellul's methodology is the most problematic. One can go to the sacred text of any religion that has sacred texts, and find differences between the values and teachings within the text and the present state of that religion, but this is not sufficient grounds to argue that the present manifestation of the religion is false. While this approach is common to religionists of many traditions, it is neither helpful nor particularly novel, even in the deployment of Jacques Ellul. The more significant critique might be whether Christian ideals are any more prone to failed embodiment, or, if any historical embodiments of those ideals have been more accurate than others.

*Anarchy and Christianity* is, indeed, a provocative and compelling analysis of society, politics, and Christianity that is as relevant now, if not more so, than it was when Ellul wrote it. In the post-9/11 world that we find ourselves in, the relationship between religion and political power is both problematic and pervasive. In this work, as well as his others, Ellul does a masterful job of analyzing this relationship, and forcing individuals to evaluate the contemporary cultural situation. In trying to establish a common ground between anarchists and Christians, Ellul illustrates the pivotal role religion has played, and can play within society.

What can be gathered from Ellul's thought is in line with the following observation made by Graham Ward in his critique of culture, *Theology and Contemporary Critical Theory*, "Religion is, once more, haunting the imagination of the West" (vi). This observation is given further analysis by Vincent Pecora in his recent work *Secularization*

*and Cultural Criticism* when he suggests that “there may be broader and deeper links than we generally acknowledge between the Western intellectual’s struggle with the semantic resonances of religious thought (as in Habermas) and the avowedly oppositional perspectives of various intellectuals (from Dipesh Chakrabarty and Asad to Nandy) struggling with the problem of secularization in the postcolonial world” (24). Both the function and the form of religion in postmodernity that is articulated in the aforementioned work, as well as various other current works, can, perhaps, be better understood when Ellul’s thought, particularly his idea of the proliferating sacred, is applied.

*Anarchy and Christianity* is an excellent example of Ellul’s attempt to understand the relationship between religion and society. His astute observations and insightful critiques of the Christian church and politics are important and applicable for any cultural critic. Thus, *Anarchy and Christianity* serves as evidence that Ellul’s thought can be applied as well today, as when Ellul applied it himself.

## **Advert: International Jacques Ellul Society**

**www.ellul.org**

P.O. Box 5365, Berkeley CA 94705, USA IJES@ellul.org Tel/Fax: 510-653-3334

The IJES (with its francophone sister-society, L’Association Internationale Jacques Ellul) links together scholars and friends of various specializations, vocations, backgrounds, and nations, who share a common interest in the legacy of Jacques Ellul (1912–94), long time professor at the University of Bordeaux. Our objectives are (1) to preserve and disseminate his literary and intellectual heritage, (2) to extend his social critique, especially concerning technology, and (3) to extend his theological and ethical research with its special emphases on hope and freedom.

### **Membership**

Anyone who supports the objectives of the IJES is invited to join the society for an annual dues payment of US\$20.00. Membership includes a subscription to the Ellul Forum.

### **Board of Directors**

Mark Baker, Mennonite Brethren Biblical Seminary, Fresno; Patrick Chastenet, University of Poitiers; Clifford Christians, University of Illinois; Dell DeChant, University of South Florida; Andrew Goddard, Oxford University; Darrell Fasching (Vice-President), University of South Florida; David Gill (President), Berkeley; Joyce Hanks, University of Scranton; Virginia Landgraf, American Theological Library Association, Chicago, Randall Marlin, Carlton University, Ottawa, Ken Morris (Secretary-Treasurer), Boulder; Carl Mitcham, Colorado School of Mines; Langdon Winner, Rensselaer Polytechnic Institute

## Suspicion, Accusation, Fragmentation by David W. Gill

*President, International Jacques Ellul Society*

One of my favorite Ellul books is *Hope in Time of Abandonment* (1972; ET 1973). I love the reflections on hope, of course. But a section of the book on “the age of suspicion” has always struck me as especially insightful.

Ellul writes: “Nothing is any longer itself. We have learned to look behind and beyond for the nameless, the elusive, the wriggly depths, the hidden forces, the secrets. Such is the supreme lucidity to which we are condemned. It is a strange evolution whereby, beginning with the thinking of a few, suspicion has spread through all the intellectuals, and from there is taking hold of everyone” (*Hope*, p. 48).

The three great “malefactors” here, according to Ellul, are Marx, Nietzsche, and Freud. Marx taught us to look beneath the surface and discern the economic class interests which are the true reality and agenda behind our surface words and acts. Nietzsche taught us to see a manipulative quest for power behind everything. And Freud urged us to see unconscious sexual and psychological forces beneath the surface.

”School of suspicion—that, in fact, is what it all comes back to. We have learned no longer to place our confidence in anything, no longer to have faith in anyone, no longer to believe a person's word, nor in a sentiment, no longer to accept the lasting quality of a relationship, no longer to believe that it could be authentic or truly representative of the person. We have learned that every good feeling merely expresses some self-satisfaction or some hypocrisy, that all virtue is a lie, that all morality is false, that all devotion is vain or a sham, that all speech hides the truth” (p. 50).

”The era of a chance to hope is gone, for there is no hope where suspicion is king. Every time a possibility, a breakthrough, or a meaning takes shape, immediately the question bursts in on us, ‘From what social class, from what complex, from what ideology, from what myth, from what interest does this hope spring, since it is nothing but the falsification of a situation one has refused to face?’” (p. 52).

Alas, the loss of hope is not yet the end of suspicion's trail. When one does not keep one's suspicion to oneself but voices it as an *accusation*, the consequences are still more dire.

In *Apocalypse*, Ellul comments on the important text about the cosmic war between the angelic and demonic forces: “The Satan, the accuser, completes the work of the Devil in launching accusation, either before God to accuse men, or between men. *Every accusation is the work of Satan*” (*Apocalypse* (1975; ET 1977), p. 87; italics added).

Martin Luther is reported to have said that the Christian thing to do is always to “put the best possible construction” on other people’s words and deeds.

”People look on the outward appearance—the Lord looks on the heart,” God said to the prophet Samuel when he visited Jesse’s family looking for a future king to anoint. Of course, the heart, the feelings, intentions, and internal side, are critically important. But only God knows this reality. We human beings are pathetically off base in making judgments about people’s motives and intentions.

If we care about someone’s motivations, we should *ask them* about it—not just speculate and project our paranoid thinking on them—and then make it worse by spouting off our libelous accusations to those around us.

We don’t want to be gullible and naive but when there really is no *concrete* evidence of another’s bad faith, it is wrong and bad to go this route. It is incredibly destructive to go through life as a paranoid, suspicious accuser of others. It is anti-Ellulian and anti-Christian, if either of those matter. It is destructive of families, friendships, projects, churches, organizations, and important causes. It is withering and destructive of the paranoid self per se, which lives in darkness and bitterness.

Suspicion and accusation have poisoned and paralyzed political discourse. Example: Because former Clinton V-P Al Gore was the narrator, paranoid, suspicious American neo-cons reject without a hearing the photos, temperature readings, etc., regarding global warming in the recent documentary film *An Inconvenient Truth* (as though Gore himself faked the photos of receding glaciers and polar ice caps!).

But it’s not just a disease of big time politics: family members, colleagues who could be working together, people who should be on the same side, same team, sometimes allow their suspicion, paranoia, and accusation to fragment relationships. Whenever it’s up to us, let’s choose grace, hope, and community.

## Resources for Ellul Studies

**www.ellul.org & www.jacques-ellul.org** The IJES web site at [www.ellul.org](http://www.ellul.org) contains (1) news about IJES and AIJE activities and plans, (2) a brief and accurate biography of Jacques Ellul, (3) a complete bibliography of Ellul’s books in French and English, (4) a complete index of the contents of all *Ellul Forum* back issues; and (5) links and information on other resources for students of Jacques Ellul. The new French AIJE web site at [www.jacques-ellul.org](http://www.jacques-ellul.org) is also a superb resource.

### **The Ellul Forum CD: 1988–2002**

The first thirty issues of *The Ellul Forum*, some 500 published pages total, are now available (only) on a single compact disc which can be purchased for US \$15 (postage

included). Send payment with your order to “IJES,” P.O. Box 5365, Berkeley CA 94705 USA.

Back issues #31 — #36 of *The Ellul Forum* are available for \$5 each (postage and shipping included).

### **Cahiers Jacques Ellul**

*Pour Une Critique de la Societe Technicienne*

An essential annual journal for students of Ellul is *Cahiers Jacques Ellul*, edited by Patrick Chastenot, published by Editions L’Esprit du Temps, and distributed by Presses Universitaires de France. Send orders to Editions L’Esprit du Temps, BP 107, 33491 Le Bouscat Cedex, France. Postage and shipping is 5 euros for the first volume ordered; add 2 euros for each additional volume ordered.

Volume 1: “L’Annees personalistes” (15 euros)

Volume 2: “La Technique” (15 euros)

Volume 3: “L’Economie” (21 euros).

Volume 4 (forthcoming): “La Propagande” (21 euros).

**Jacques Ellul: An Annotated Bibliography of Primary Works** by Joyce Main Hanks. Research in Philosophy and Technology. Supplement 5. Stamford, CT: JAI Press, 2000. xiii., 206 pages. \$87. ISBN: 076230619X.

This is the essential guide for anyone doing research in Jacques Ellul’s writings. An excellent brief biography is followed by a 140-page annotated bibliography of Ellul’s fifty books and thousand-plus articles and a thirty-page subject index. Hank’s work is comprehensive, accurate, and invariably helpful. This may be one of the more expensive books you buy for your library; it will surely be one of the most valuable. Visit [www.elsevier.com](http://www.elsevier.com) for ordering information.

### **Librairie Mollat—new books in French**

Librairie Mollat in the center of old Bordeaux ([www.mollat.com](http://www.mollat.com)) is an excellent resource for French language books, including those by and about Ellul. Mollat accepts credit cards over the web and will mail books anywhere in the world.

### **Alibris—used books in English**

The Alibris web site ([www.alibris.com](http://www.alibris.com)) lists thirty titles of used and out-of-print Jacques Ellul books in English translation available to order at reasonable prices.

### **Used books in French:**

#### **two web resources**

Two web sites that will be of help in finding used books in French by Jacques Ellul (and others) are [www.chapitre.com](http://www.chapitre.com) and [www.livre-rare-book.com](http://www.livre-rare-book.com).

### **Reprints of Nine Ellul Books**

By arrangement with Ingram and Spring Arbor, individual reprint copies of several Ellul books originally published by William B. Eerdmans can now be purchased. The books and prices listed at the Eerdmans web site are as follows: *The Ethics of Freedom* (\$40), *The Humiliation of the Word* (\$26), *The Judgment of Jonah* (\$13), *The Meaning of the City* (\$20), *The Politics of God and the Politics of Man* (\$19), *Reason for Being: A Meditation on Ecclesiastes* (\$28), *The Subversion of Christianity* (\$20), and *The*

*Technological Bluff* (\$35). *Sources and Trajectories: Eight Early Articles by Jacques Ellul* translated by Marva Dawn is also available (price unknown).

Have your bookstore (or on-line book dealer) “back order” the titles you want. Do not go as an individual customer to Eerdmans or Ingram/Spring Arbor. For more information visit “Books on Demand” at [www.eerdmans.com](http://www.eerdmans.com).

### **Ellul on Video**

French film maker Serge Steyer’s film “Jacques Ellul: L’homme entier” (52 minutes) is available for 25 euros at the web site [www.meromedia.com](http://www.meromedia.com). Ellul is himself interviewed as are several commentators on Ellul’s ideas.

Another hour-length film/video that is focused entirely on Ellul’s commentary on technique in our society, “The Treachery of Technology,” was produced by Dutch film maker Jan van Boekel for ReRun Produkties (mail to: Postbox 93021, 1090 BA Amsterdam).

If you try to purchase either of these excellent films, be sure to check on compatibility with your video system and on whether English subtitles are provided, if that is desired

**Issue #39 Spring 2007 — The  
Ethics of Jacques Ellul**

- [Click to view the original PDF](#)

**For the Critique of Technological Civilization**

Jacques Ellul in his twenties

”We are entering into a new form of morality which could be called technological morality [Fr. morale technicienne], since it tends to bring human behavior into harmony with the technological world [au monde technique], to set up a new scale of values in terms of technology [en fonction de la technique], and to create new virtues. ”

-Jacques Ellul
